    - 89d8faaeb1 Added python_shell=True, quoted user input
- **PR** #26058: (opdude) Fix choco version on chocolatey versions below 0.9.9 @ *2015-08-06 18:50:10 UTC*
  - aa023f25b8 Merge pull request #26058 from Unity-Technologies/hotfix/fix-choco-pkg-version-2015-5
  - beddb96b2b Fix choco version on chocolatey versions below 0.9.9
- **PR** #26068: (jfindlay) fix autoruns.list looking in wrong directory @ *2015-08-06 18:49:48 UTC*
  - fbe2584abe Merge pull request #26068 from jfindlay/auto_fix
  - 1e9a850e23 fix autoruns.list looking in wrong directory
- **ISSUE** saltstack/salt-bootstrap#640: (Deshke) salt-minion install bug on ubuntu 14.04 tornado>=4.0 (refs: #26065)
- **ISSUE** saltstack/salt-bootstrap#633: (neilmb) Bootstrap install fails on python-requests dependency (refs: #26065)
- **ISSUE** saltstack/salt-bootstrap#632: (JulianGindi) python-requests : Depends: python-urllib3 (>= 1.7.1) but it is not installable (refs: #26065)
- **ISSUE** saltstack/salt-bootstrap#631: (DavidJFelix) Stable broken in 15.04 even with -P (refs: #26065)
- **ISSUE** #636: (pille) restict access to salt:// filesystem (refs: #`saltstack/salt-bootstrap#638`_)
- **ISSUE** #613: (thatch45) Add timeout option to publish.publish (refs: #`saltstack/salt-bootstrap#634`_)
  - **PR** saltstack/salt-bootstrap#638: (stanislavb) Use prefix /usr for centos git install (refs: #26065)
  - **PR** saltstack/salt-bootstrap#634: (BretFisher) bugfix: exit git root before removing it (refs: #26065)

- **PR** #26065: (s0undt3ch) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ *2015-08-06 17:09:35 UTC*
  - 5570408597 Merge pull request #26065 from s0undt3ch/hotfix/bootstrap-script-2015.5
  - a430a62b01 Update to latest bootstrap stable release v2015.06.08
- **ISSUE** #25994: (gmcwhistler) module.ilo tempfile creation in __execute_cmd results in TypeError: cannot concatenate 'str' and 'int' objects (refs: #26061)
- **PR** #26061: (gmcwhistler) Patch for issue #25994 @ *2015-08-06 17:07:34 UTC*
  - 83a1922196 Merge pull request #26061 from gmcwhistler/2015.5
  - b9e89d0f2d Patch for issue #25994
- **ISSUE** #26063: (saltstack-bot) not working with salt-cloud shows unknown locale error (refs: #26064)
- **PR** #26064: (s0undt3ch) Don't stacktrace when trying to get the default locale. @ *2015-08-06 16:11:05 UTC*
  - 073fb2bdea Merge pull request #26064 from s0undt3ch/issues/26063-unknown-locale
  - 8c6ab78b1d Don't stacktrace when trying to get the default locale.
- **PR** #26048: (jacobhammons) Updated windows download links in the docs to https://repo.saltstack.com @ *2015-08-05 22:59:50 UTC*
  - 0f44761d6e Merge pull request #26048 from jacobhammons/win-downloads2
  - 75243b61cf Updated windows download links in the docs to https://repo.saltstack.com
- **ISSUE** #25616: (rallytime) [2015.5] Provisioning Linodes Stacktraces (refs: #26044)
- **PR** #26044: (rallytime) Make sure the key we're comparing is also lowercase @ *2015-08-05 19:23:54 UTC*
  - dedcadc37e Merge pull request #26044 from rallytime/fix-25616
  - c2e3803810 Make sure the key we're comparing is also lowercase
- **PR** #26042: (jfindlay) fix test mode logic in state docs @ *2015-08-05 19:23:07 UTC*
  - f005bdfce6 Merge pull request #26042 from jfindlay/result
  - a83059ca01 fix test mode logic in state docs
- **ISSUE** #24460: (nicholascapo) Survey runner does not follow *--out* flag (refs: #26036)
- **PR** #26036: (nicholascapo) survey.hash: Remove manually printed text @ *2015-08-05 19:21:59 UTC*
  - 51ab6864b7 Merge pull request #26036 from nicholascapo/survey.hash_follow_out_flag
  - 439ee9831c survey.hash: Remove manually printed text
- **PR** #26030: (opdude) Fix a bug in choco version that returned odd data @ *2015-08-05 16:30:25 UTC*
  - 6a4d18eba6 Merge pull request #26030 from Unity-Technologies/hotfix/fix-choco-pkg-version-2015-5
  - 3dd96c0638 Fix a bug in choco version that returned odd data
- **PR** #26032: (jfindlay) add test logic to state reult doc @ *2015-08-05 16:28:32 UTC*
  - c96d3bb55e Merge pull request #26032 from jfindlay/result
  - 0fd180e106 add test logic to state reult doc
- **ISSUE** #23764: (es1o) source_hash from local file is not supported. (refs: #26031, #25750)
- **PR** #26031: (alekti) Revert "Add file as supported protocol for file source_hash. Fixes #23764" @ *2015-08-05 15:32:01 UTC*

  - bd14d85636 Merge pull request #26031 from alekti/merge-pull-25750-to-2015.5
  - 5a7cab4dcc Revert "Add file as supported protocol for file source_hash. Fixes #23764."
- **PR** #26021: (anlutro) Documentation: Specify versionadded for git.present shared argument @ *2015-08-05 14:17:38 UTC*
  - d55e6e5fe9 Merge pull request #26021 from alprs/docs-git_present_shared_versionadded
  - 8fa678aaa7 specify versionadded for git.present shared argument
- **ISSUE** #25701: (alekti) Issue #23764 regression (refs: #25750)
- **ISSUE** #23764: (es1o) source_hash from local file is not supported. (refs: #26031, #25750)
- **PR** #26020: (alekti) Correctly resolve conflict merging pull 25750 to 2015.5 @ *2015-08-05 14:16:58 UTC*
  - **PR** #25750: (alekti) Add file as supported protocol for file source_hash. Fixes #25701. (refs: #26020)
  - 5e17c5d230 Merge pull request #26020 from alekti/merge-pull-25750-to-2015.5
  - 4b9d7426cc Add file as supported protocol for file source_hash. Fixes #23764.
- **ISSUE** #22241: (masterkorp) Salt master not properly generating the map (refs: #25358)
- **PR** #26016: (basepi) Revert "Deep merge of pillar lists" @ *2015-08-05 04:59:52 UTC*
  - **PR** #25358: (dkiser) Deep merge of pillar lists (refs: #26016)
  - 53f7aadcd7 Merge pull request #26016 from basepi/revert.25358
  - 8a0e8e0460 Revert "Deep merge of pillar lists"
- **ISSUE** #12255: (eliasp) 'system.set_computer_desc' fails with non-ASCII chars (refs: #25992)
- **PR** #25992: (twangboy) Refactor win_system.py @ *2015-08-05 04:54:18 UTC*
  - 200bff7538 Merge pull request #25992 from twangboy/fix_12255
  - 0502897635 Fixed the lint... again
  - 6f85d6b9af Fixed some lint
  - 4195803e56 Merge pull request #3 from jfindlay/win_sys
    - 9156bbd33e update win_system exec mod unit tests
  - c92add95b5 Gated ctypes import, fixed some lint
  - d7670fda0a Refactor win_service.py
- **ISSUE** #25948: (twangboy) Fix uncomment function to handle spaces (refs: #26002)
- **PR** #26002: (twangboy) Fixed regex to account for comment character followed by whitespace @ *2015-08-04 22:28:11 UTC*
  - c168159750 Merge pull request #26002 from twangboy/fix_25948
  - ba1a57e582 Fixed regex to account for comment character followed by whitespace
- **ISSUE** #25949: (godlike64) layman.add does not work with unofficial overlays (refs: #25970)
- **PR** #25970: (jfindlay) accept addition of layman overlay @ *2015-08-04 15:42:28 UTC*
  - 4ad2422da1 Merge pull request #25970 from jfindlay/layman
  - 237a9e18b3 accept addition of layman overlay
- **PR** #25971: (basepi) [2015.5] salt.modules.reg Add spaces for strings split across multiple lines @ *2015-08-04 15:39:48 UTC*

  - f136c6c1c0 Merge pull request #25971 from basepi/reg.typos
  - bb001a6c0e Add spaces for strings split across multiple lines
- **PR** #25990: (rallytime) Back-port #25976 to 2015.5 @ *2015-08-04 14:36:53 UTC*
  - **PR** #25976: (fleaflicker) Typo in help output (refs: #25990)
  - 6383dd8a7d Merge pull request #25990 from rallytime/bp-25976
  - 5f6dc0cc85 Typo in help output
- **PR** #25996: (attiasr) fix msiexec package remove @ *2015-08-04 14:36:31 UTC*
  - 9f8bf75dc0 Merge pull request #25996 from attiasr/patch-1
  - 5fbc5fcd94 fix msiexec package remove
- **ISSUE** #25863: (peterdemin) pkg.installed fails on already installed package if it is in versionlock.list (refs: #25864)
- **PR** #25966: (rallytime) Back-port #25864 to 2015.5 @ *2015-08-03 18:48:26 UTC*
  - **PR** #25864: (peterdemin) #25863 state.pkg.installed fix (refs: #25966)
  - 2dca8d959b Merge pull request #25966 from rallytime/bp-25864
  - 0f7f9637b4 #25863 fix - state.pkg: do preflight check only for non-installed packages
- **PR** #25967: (rallytime) Back-port #25917 to 2015.5 @ *2015-08-03 18:48:02 UTC*
  - **PR** #25917: (jmdcal) adding missing format string (refs: #25967)
  - a6d8e541ed Merge pull request #25967 from rallytime/bp-25917
  - 82b7e14a1f adding missing format string
- **PR** #25895: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-03 17:12:37 UTC*
  - 87d028b302 Merge pull request #25895 from basepi/merge-forward-2015.5
  - 56e43c8f88 Fix lint
  - 93a182d9ea Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
    * d93eb87c16 Merge pull request #25750 from alekti/2014.7
      · 9ec3ae96d4 Add file as supported protocol for file source_hash. Fixes #23764.
    * 3a15df22ac Merge pull request #25704 from cachedout/master_type_2014_7
      · c95886c9a7 Ensure prior alignment with master_type in 2014.7
    * d1b9362a73 Merge pull request #25657 from MrCitron/pattern-carbon-returner-2014.7
      · f8b2f8079f Add the ability to specify a base pattern for metrics path used by the carbon returner
    * 9634351fc2 Merge pull request #25633 from AkhterAli/2014.7
      · 29be4bbe11 Update loader.py
- **ISSUE** #25850: (ssgward) Need to add packages to --versions-report (refs: #25941)
- **PR** #25941: (jfindlay) add timelib to dependency versions @ *2015-08-03 12:23:42 UTC*
  - 98955057e0 Merge pull request #25941 from jfindlay/time_lib
  - 464f7a404c add timelib to dependency versions
- **PR** #25951: (garethgreenaway) Log when event.fire and event.fire_master fail. @ *2015-08-03 00:19:45 UTC*

  - dcc6883b24 Merge pull request #25951 from garethgreenaway/event_fire_failed_log_why
  - 7f20454427 If we're unable to fire an event, log the cause so we know what happened
- **ISSUE** #25838: (grep4linux) docs disable_modules documentation typo (refs: #25942)
- **PR** #25942: (jfindlay) typo in minion doc @ *2015-07-31 23:34:55 UTC*
  - 4143cec3bf Merge pull request #25942 from saltstack/lover
  - 7e121de907 Update minion.rst
- **PR** #25938: (jacobhammons) Doc on using syndic with multimaster @ *2015-07-31 23:05:05 UTC*
  - **PR** #14690: (jacksontj) Multi syndic (refs: #25938)
  - 1f20c065b8 Merge pull request #25938 from jacobhammons/syndic-multimaster
  - ac0a8ff711 Doc on using syndic with multimaster
- **ISSUE** #25839: (twangboy) ALLUSERS="1" should be a default when installing MSI's (refs: #25848)
- **PR** #25848: (twangboy) Added allusers="1" when installing msi @ *2015-07-31 20:33:17 UTC*
  - 18a9e65e1f Merge pull request #25848 from twangboy/fix_25839
  - e797739a1b Removed normalize_name function
  - ad7fdda68b Adder allusers="1" when installing msi
- **PR** #25898: (jfindlay) clarify and expand syndic docs @ *2015-07-31 20:01:23 UTC*
  - de0a0593c2 Merge pull request #25898 from jfindlay/syndic_doc
  - 4795952847 rework syndic doc
  - a25d0eabef update syndic doc to conform to style
- **ISSUE** #25852: (UtahDave) Salt loader is not loading Salt vars in reactor python renderer (refs: #25927)
- **PR** #25927: (jacksontj) Pass actual renderers to the Reactor's Compiler @ *2015-07-31 20:00:17 UTC*
  - d1f3da548a Merge pull request #25927 from jacksontj/2015.5
  - cf7479aa0a Pass actual renderers to the Reactor's Compiler
- **ISSUE** #25810: (nvx) winpkg highstate fails when a new package name contains a unicide character (refs: #25921)

  - d9ab4bb989 Merge pull request #25833 from jahamn/fix-cp.push-not-recreating-empty-files
  - eac19fbf33 Allows cp.push to recreate empty files
- **ISSUE** #11474: (JensRantil) pkgrepo.managed key_url: salt:// always use *base* env (refs: #25831)
- **PR** #25831: (rallytime) Add salt:// to key_url options to docs for pkgrepo.managed @ *2015-07-29 15:38:43 UTC*
  - 6f93d64784 Merge pull request #25831 from rallytime/fix-11474
  - 067ea788e9 Add salt:// to key_url options to docs for pkgrepo.managed
- **ISSUE** #22699: (arthurlogilab) salt-cloud fails on KeyError when given a nonexistent action (refs: #25807)
- **PR** #25807: (rallytime) Provide helpful error when using actions with a mapfile @ *2015-07-29 15:30:15 UTC*
  - 72b3633383 Merge pull request #25807 from rallytime/fix-22699
  - 3f3005c746 Use handle_exception function in cloud cli.py
  - f91edf3a33 Provide helpful error when using actions with a mapfile
- **PR** #25818: (jfindlay) fix autoruns list @ *2015-07-29 15:29:20 UTC*
  - 71497adc0d Merge pull request #25818 from jfindlay/autoruns_users
  - c2dbb65982 fix autoruns list for modern windowsen
- **PR** #25826: (anlutro) Check that ”onchanges” is a list @ *2015-07-29 15:00:28 UTC*
  - 98b324c5f8 Merge pull request #25826 from alprs/fix-onchanges_type_check
  - 7992a3f0f4 state.py: check that ”onchanges” is a list
- **ISSUE** #25258: (nickw8) windows minion repo not updating (refs: #25798)
- **PR** #25798: (twangboy) Fixed stacktrace on package name not found @ *2015-07-28 22:40:14 UTC*
  - ad07dc1e27 Merge pull request #25798 from twangboy/fix_25258
  - aa19c2bf8f Fixed stacktrace on package name not found
- **ISSUE** #25437: (lorengordon) Stacktrace on Windows when running pkg.list_pkgs (refs: #25598, #25763)
- **PR** #25797: (twangboy) Changed repocache back to cached_repo @ *2015-07-28 22:39:32 UTC*
  - **PR** #25763: (twangboy) Fix 25437 (refs: #25797)
  - 4a38d4a606 Merge pull request #25797 from twangboy/fix_revert_in_25763
  - 81d5b5ee55 Changed repocache back to cached_repo
- **PR** #25793: (rallytime) Back-port #25730 to 2015.5 @ *2015-07-28 19:37:34 UTC*
  - **PR** #25730: (sjorge) patchelf lives in pkgsrc (refs: #25793)
  - 823f0ce350 Merge pull request #25793 from rallytime/bp-25730
  - 937779eb51 patchelf lives in pkgsrc
- **PR** #25792: (rallytime) Back-port #25688 to 2015.5 @ *2015-07-28 19:37:17 UTC*
  - **PR** #25688: (bclermont) Don't acquire lock if there is no formatter (refs: #25792)
  - 4109ae55f9 Merge pull request #25792 from rallytime/bp-25688
  - 0aa1416b6b Don't acquire lock if there is no formatter
- **PR** #25796: (cachedout) Remove debug from docs @ *2015-07-28 17:35:59 UTC*

  - 737fb1410c Merge pull request #25796 from cachedout/debug_doc
  - 33bfdf3b0b Remove debug from docs
- **ISSUE** #24920: (voileux) module.zpool.create on character device is not possible by salt (refs: #25749)
- **PR** #25749: (jahamn) Allow zpool.create on character devices @ *2015-07-28 16:01:40 UTC*
  - a658753eff Merge pull request #25749 from jahamn/fix-zpool-special-char-device-support
  - 361f6cc23f Allow zpool.create on character devices
- **PR** #25685: (twangboy) Fixed regex issues with comment and uncomment @ *2015-07-28 15:29:49 UTC*
  - 1fae76d53c Merge pull request #25685 from twangboy/fix_25594
  - a904e8329b Fixed another test failure…
  - aa077d3a86 Fixed more tests… justin findlay helped me…
  - 87c8f8dfb5 Fixed some tests… maybe…
  - 3c1a73f16c Fixed some lint
  - b3e44e342c Fixed states to work with comment_line
  - b1cedd1153 Fixed regex issues with comment and uncomment
- **ISSUE** #25437: (lorengordon) Stacktrace on Windows when running pkg.list_pkgs (refs: #25598, #25763)
- **PR** #25763: (twangboy) Fix 25437 (refs: #25797) @ *2015-07-28 15:29:27 UTC*
  - 0bdb29402a Merge pull request #25763 from twangboy/fix_25437
  - 9e70c800b9 The real fix for 25437 that doesn't break other crap
  - d7347e01e5 Revert "Fixed problem trying to load file with name of boolean type"
  - cf57712eeb Merge branch '2015.5' of https://github.com/saltstack/salt into fix_25437
- **PR** #25752: (thatch45) State top saltenv @ *2015-07-28 01:02:10 UTC*
  - c1236595f9 Merge pull request #25752 from thatch45/state_top_saltenv
  - 65d6ec0659 don't override the minion config unless requested
  - 26c858361c Add state_top_saltenv to the config chain
  - 36a3b674a7 Add raet support for state_top_saltnev
  - f6fa025b13 Add saltenv top file support to salt master_opts
  - 4a1c53309b Add state_top_saltenv support
- **ISSUE** #25717: (twangboy) Problem with chocolatey module not loading (refs: #25755)
- **PR** #25755: (twangboy) Fixed problem with dunder functions not being passed @ *2015-07-27 19:31:22 UTC*
  - f367acb253 Merge pull request #25755 from twangboy/fix_25717
  - 10e410504d Fixed problem with dunder functions not being passed
- **ISSUE** #25352: (m03) reg.absent reporting incorrect results (refs: #25648)
- **PR** #25648: (twangboy) Clarified functionality of reg module, fixed state to work with new module @ *2015-07-27 19:30:33 UTC*
  - f05ae95f9c Merge pull request #25648 from twangboy/fix_25352
  - d6496ce814 Merge pull request #1 from jfindlay/reg

        * 3b0cc6592a fix reg unit tests
    - b473fb7827 Fixed some tests... maybe...
    - ff7296d983 Fixed some more lint
    - 7a71f5ea6a Merge branch '2015.5' of https://github.com/saltstack/salt into fix_25352
    - f57b2b8e7a Fixed some line, added documentation
    - d78fa97a71 Merge branch '2015.5' of https://github.com/saltstack/salt into fix_25352
    - 99d9518af8 Clarified functionality of reg module, fixed state to work with new module
- **ISSUE** #25154: (uvsmtid) All data mixed on STDOUT together should generate valid JSON output (refs: #25722)
- **ISSUE** #25153: (uvsmtid) Multiple results should generate valid JSON output (refs: #25722)
- **PR** #25740: (rallytime) Back-port #25722 to 2015.5 @ *2015-07-27 16:08:40 UTC*
    - **PR** #25722: (uvsmtid) Minor docs changes to emphasize JSON output problems without *--static* option (refs: #25740)
    - 29c66d85a4 Merge pull request #25740 from rallytime/bp-25722
    - c33eb813ea Change docs for --static option with JSON - text B
    - 89dd2ec8fb Change docs for --static option with JSON - text A
- **PR** #25739: (rallytime) Back-port #25709 to 2015.5 @ *2015-07-27 16:08:27 UTC*
    - **PR** #25709: (colekowalski) add direct-io-mode to mount_invisible_options (refs: #25739)
    - **PR** #25699: (rallytime) Back-port #25660 to 2015.5 (refs: #25709)
    - **PR** #25660: (colekowalski) add glusterfs' direct-io-mode to mount_invisible_keys (refs: #25699, #25709)
    - 135b03e53b Merge pull request #25739 from rallytime/bp-25709
    - fda2ffa44e add direct-io-mode to mount_invisible_options
- **PR** #25738: (rallytime) Back-port #25671 to 2015.5 @ *2015-07-27 16:08:23 UTC*
    - **PR** #25671: (niq000) added a parameter so verifying SSL is now optional instead of hard-coded (refs: #25738)
    - 095a923b6e Merge pull request #25738 from rallytime/bp-25671
    - 525cd70589 added a parameter so verifying SSL is now optional instead of hard-coded
- **ISSUE** #25229: (rmatulat) Module git.latest kills target directory when test=True (refs: #25608)
- **PR** #25737: (rallytime) Back-port #25608 to 2015.5 @ *2015-07-27 16:08:18 UTC*
    - **PR** #25608: (rmatulat) Fix: prevent git.latest from removing target (refs: #25737)
    - 05fbfe64e9 Merge pull request #25737 from rallytime/bp-25608
    - df85d734bc Fix: prevent git.latest from removing target Fixes #25229 While force=True and test=True git.latest should not remove the target directory.
- **PR** #25733: (davidjb) Avoid IndexError when listing mounts if mount output ends in newline @ *2015-07-27 16:08:05 UTC*
    - 9817fc5556 Merge pull request #25733 from davidjb/mount-fix
    - 6d0bce2418 Test length of comps when listing mounts
- **ISSUE** #22460: (onmeac) Command setm is not supported (yet) (refs: #25705)

- **PR** #25705: (blackduckx) Support for setm augeas command. *@ 2015-07-27 16:07:10 UTC*
  - 82ba390b7b Merge pull request #25705 from blackduckx/augeas-setm
  - cad0f2b46e Augeas: fix pylint and documentation
  - ee97896cba Support for setm augeas command.
- **PR** #25703: (cachedout) Return to *str* for master_type for 2015.5 *@ 2015-07-27 16:06:22 UTC*
  - f732be365d Merge pull request #25703 from cachedout/master_type_2015_5
  - 0dc28ad3e4 Return to *str* for master_type for 2015.5
- **ISSUE** #25144: (johnccfm) user.present on Windows fails to add user to groups if group name contains a space (refs: #25702)
- **PR** #25702: (twangboy) Fixed win_user module for groups with spaces in the name *@ 2015-07-27 15:06:33 UTC*
  - dea3d31578 Merge pull request #25702 from twangboy/fix_25144
  - d5be7a2fdf Fixed win_user moduele for groups with spaces in the name
- **ISSUE** #25351: (m03) win_servermanager.list_installed failing with "IndexError: list index out of range" (refs: #25711)
- **PR** #25711: (twangboy) Fixed problem with win_servermanager.list_installed *@ 2015-07-27 15:05:48 UTC*
  - 186af9b54d Merge pull request #25711 from twangboy/fix_25351
  - 82fa911931 Fixed problem with win_servermanager.list_installed
- **ISSUE** #25435: (yee379) progressbar dependency missing (refs: #25714)
- **PR** #25714: (cachedout) Display warning when progressbar can't be loaded *@ 2015-07-25 00:10:13 UTC*
  - ad8456eeed Merge pull request #25714 from cachedout/issue_25435
  - 44f34684ef Included note in help docs
  - 4e2fee17cc Display warning when progressbar can't be loaded
- **PR** #25699: (rallytime) Back-port #25660 to 2015.5 (refs: #25709) *@ 2015-07-24 22:11:40 UTC*
  - **PR** #25660: (colekowalski) add glusterfs' direct-io-mode to mount_invisible_keys (refs: #25699, #25709)
  - a0969ff74a Merge pull request #25699 from rallytime/bp-25660
  - 85c636d7a1 add glusterfs' direct-io-mode to mount_invisible_keys
- **ISSUE** #25689: (anlutro) Minion log in salt-ssh (refs: #25694)
- **PR** #25694: (s0undt3ch) Salt-SSH fix for #25689 *@ 2015-07-24 21:41:57 UTC*
  - fe829564f4 Merge pull request #25694 from s0undt3ch/2015.5
  - afba3bde90 Use a relative un-nested path to the salt-call logfile.
  - 6309f22a65 Fix wrong variable assignment
  - c312592c81 Have cookie JAR's respect the configured *cachedir*
- **ISSUE** #25250: (wipfs) 'force' option in copy state deletes target file (refs: #25461, #25710)
- **PR** #25710: (jahamn) Integration Testcase for Issue 25250 *@ 2015-07-24 20:57:33 UTC*
  - fb4744b2f8 Merge pull request #25710 from jahamn/integration-test-for-issue-25250
  - 24f653e963 Integration Test for Issue 25250

- **PR** #25680: (basepi) [2015.5] Move cmd.run jinja aliasing to a wrapper class to prevent side effects @ *2015-07-24 19:52:10 UTC*
  - **PR** #25049: (terminalmage) Fix cmd.run when cross-called in a state/execution module (refs: #25680)
  - 18c9d5454d Merge pull request #25680 from basepi/jinja.alias.25049
  - e83a0f9b2b Use new-style classes
  - 4a50bac1c2 Fix typo
  - 36410389dc Name the Nitrogen release
  - 77679596f9 Make ALIASES global
  - 01c209efd9 Fix some aliases references
  - 1644641c57 Move cmd.run aliasing to a wrapper class to prevent side effects
- **PR** #25682: (basepi) [2015.5] Fix parsing args with just a hash (#) @ *2015-07-24 19:52:01 UTC*
  - 6a5c6dcd04 Merge pull request #25682 from basepi/fix.hash.parsing
  - 8d75c1b882 Fix parsing args with just a hash (#)
- **PR** #25695: (stanislavb) Configurable AWS region & region from IAM metadata @ *2015-07-24 19:36:40 UTC*
  - d330ef0d81 Merge pull request #25695 from stanislavb/expose-aws-region-config-and-fetch-region-from-metadata
  - 595da6252e Configurable AWS region & region from IAM metadata
- **PR** #25645: (kev009) Fix pkgng provider to work with a sources list and the underlying pkg... @ *2015-07-24 16:33:18 UTC*
  - ea0d295d49 Merge pull request #25645 from kev009/freebsd-pkgng-add
  - ee2cbb574a Fix pkgng provider to work with a sources list and the underlying pkg-add(8)
- **PR** #25677: (aneeshusa) Fix pacman.list_upgrades when refresh=True. @ *2015-07-24 16:30:06 UTC*
  - 2cad79c2f0 Merge pull request #25677 from aneeshusa/fix-pacman-list-upgrades-when-refreshing
  - 7062ae4eae Fix pacman.list_upgrades when refresh=True.
- **ISSUE** #25674: (UtahDave) file.managed with contents parameter uses wrong line endings on Windows (refs: #25675)
- **PR** #25675: (UtahDave) Use OS line endings with contents on file.managed @ *2015-07-24 16:29:50 UTC*
  - 18e739b812 Merge pull request #25675 from UtahDave/2015.5local
  - d0f9d001db Use OS line endings with contents on file.managed
- **PR** #25676: (basepi) Update release candidate docs to 2015.8.0rc2 @ *2015-07-23 20:29:37 UTC*
  - 7914f51636 Merge pull request #25676 from basepi/2015.8.0rc2releasedocs
  - 882d11836b Update release candidate docs to 2015.8.0rc2
- **ISSUE** #25665: (nmadhok) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) (refs: #25666)
- **PR** #25666: (nmadhok) Check if the properties exist before looping over them causing KeyError @ *2015-07-23 17:55:40 UTC*
  - c36b714401 Merge pull request #25666 from nmadhok/vmware-cloud-fix_2015.5
  - 8e812296ef Check if the properties exist before looping over them causing KeyErrors Fixes #25665

- **PR** #25656: (anlutro) Fix locale detection in debian/gentoo @ *2015-07-23 16:46:40 UTC*
  - 36d04b2954 Merge pull request #25656 from alprs/fix-locale_detection
  - a260236942 change variable name
  - dd2a188c05 fix tests
  - aefd0fb374 code formatting
  - e58d222fb0 fix locale detection in debian/gentoo
- **PR** #25661: (rallytime) Back-port #25624 to 2015.5 @ *2015-07-23 16:26:48 UTC*
  - **PR** #25624: (bobrik) Fix typo in get_routes example for debian_ip (refs: #25661)
  - b1c1735aae Merge pull request #25661 from rallytime/bp-25624
  - 4e1fcfa15e Fix typo in get_routes example for debian_ip
- **ISSUE** #15209: (hubez) file.manage: source_hash not working with s3:// (2014.7.0rc1) (refs: #25638)

  - aeaeb53ed6 Merge pull request #25642 from cachedout/issue_25540
  - 74f6b6930c Warn on pillar schedule delete
- **ISSUE** #25437: (lorengordon) Stacktrace on Windows when running pkg.list_pkgs (refs: #25598, #25763)
- **PR** #25598: (twangboy) Fixed problem trying to load file with name of boolean type @ *2015-07-22 17:07:49 UTC*
  - 7b79e433f1 Merge pull request #25598 from twangboy/fix_25437
  - c53e11d42c Fixed problem trying to load file with name of boolean type
- **ISSUE** #25323: (terminalmage) unit.modules.tls_test fails with older mock (refs: #25604)
- **PR** #25604: (terminalmage) Move patching of mock_open to within test @ *2015-07-22 16:53:55 UTC*
  - f4a38a8aee Merge pull request #25604 from terminalmage/fix-mock_open
  - 123b8ee1cb Fix mock_open patch
  - af82835f42 Move patching of mock_open to within test
- **ISSUE** saltstack/salt-bootstrap#630: (jf) Ubuntu 12.04 (and maybe 12.x?): apt-get installing python-requests causes digital_ocean_v2 to fail with "[ERROR] Failed to get the output of 'digital_ocean.avail_sizes()': 'Response' object has no attribute 'text'" (refs: #25609)
  - **PR** saltstack/salt-bootstrap#627: (nyushi) Fix tornado installation on ubuntu (refs: #25609)

- **PR** #25609: (s0undt3ch) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ *2015-07-22 16:28:52 UTC*
  - 224484df7e Merge pull request #25609 from s0undt3ch/hotfix/bootstrap-script-2015.5
  - 96a8568336 Update the bootstrap script to latest release v2015.07.22
- **ISSUE** #21912: (rvora) pkg.latest not updating the package on CentOS though yum reports an update available (refs: #25603)
- **PR** #25603: (terminalmage) Add version_cmp function to yumpkg.py @ *2015-07-22 15:42:29 UTC*
  - 07eb78c79f Merge pull request #25603 from terminalmage/issue21912
  - 99e532ba74 Add versionadded directive
  - 8a1765fc6f Add version_cmp function to yumpkg.py
  - 457e72e273 Fix references to __salt__['version_cmp']
  - a19fa2296a Avoid using single-letter variable
- **ISSUE** #25560: (dennisjac) scheduled highstate runs don't return results to the job cache (refs: #25590)
- **PR** #25590: (garethgreenaway) 2015.5 scheduled jobs return data @ *2015-07-21 21:57:42 UTC*
  - 69ef81caba Merge pull request #25590 from garethgreenaway/25560_2015_5_schedule_return_data
  - 19ca0c0b40 Switching default in 2015.5 for whether job data in returned to the mater job_cache.
- **PR** #25584: (rallytime) Back-port #24054 and #25576 to 2015.5 @ *2015-07-21 21:16:38 UTC*
  - **PR** #25576: (pcn) s3fs breaks when fetching files from s3 (refs: #25584)
  - **PR** #24054: (mgwilliams) s3.head: return useful data (refs: #25584)
  - 9ffefc867e Merge pull request #25584 from rallytime/bp-24054-and-25576
  - aa9598e3a5 s3fs breaks when fetching files from s3
  - 1667d67c3e s3.head: return useful data
- **ISSUE** #23626: (mirko) salt state 'ssh_known_hosts' doesn't take 'port' into account (refs: #25589)
- **PR** #25589: (jahamn) Fixes ssh_known_host not taking port into account @ *2015-07-21 21:15:06 UTC*
  - a966e439d1 Merge pull request #25589 from jahamn/Fix-ssh_known_host-not-taking-port-into-account
  - 8db7ada82d Fixed pylint e8303 errors
  - 6abad29f66 Fixed pylint errors
  - 8ae6ba1290 Merge branch '2015.5' of https://github.com/saltstack/salt into Fix-ssh_known_host-not-taking-port-into-account
- **PR** #25573: (EvaSDK) Do not execute bootstrap script twice @ *2015-07-21 18:20:04 UTC*
  - **PR** #25465: (EvaSDK) 2015.5.3 LXC module fixes (refs: #25573)
  - df74f2c3ad Merge pull request #25573 from EvaSDK/2015.5.3-lxc-fixes
  - 49cec9f9a1 Use a more persistent tmp directory
  - 96a672f8e0 Do not execute bootstrap script twice
- **ISSUE** #25532: (attiasr) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) (refs: #25580, #25556)
- **PR** #25580: (attiasr) use explicit utf-8 decoding (#25532) @ *2015-07-21 15:40:49 UTC*
  - 79a809dd79 Merge pull request #25580 from attiasr/patch-1

    - 4b7dc96919 use explicit utf-8 decoding (#25532)
- **ISSUE** #25206: (jfindlay) fullname issues with user.add state on windows (refs: #25568)
- **PR** #25568: (twangboy) Fixed win_useradd module to add fullname @ *2015-07-21 14:30:25 UTC*
    - 6edf196533 Merge pull request #25568 from twangboy/fix_25206
    - fbee445c6d Commented out a pylint error
    - 4b56dc3893 Fixed win_useradd module to add fullname
- **ISSUE** #21041: (deuscapturus) state module gem.installed not working on Windows. (refs: #25430, #25561, #25428)
- **PR** #25561: (twangboy) Fixed the gem module to work on windows... without injection @ *2015-07-20 21:12:15 UTC*
    - **PR** #25428: (twangboy) Fixed the gem module to work on windows (refs: #25561)
    - 3c32b0b669 Merge pull request #25561 from twangboy/fix_21041_again
    - aaf3f3dcd0 Fixed some line and style issues
    - e6d0e5cda7 Merge branch '2015.5' of https://github.com/saltstack/salt into fix_21041_again
- **PR** #25521: (cachedout) Fix outputter for state.orch @ *2015-07-20 19:30:14 UTC*
    - 9e19142c35 Merge pull request #25521 from cachedout/orch_outputter
    - ea40816621 Try/except
    - dd609eb440 Fix outputter for state.orch
- **PR** #25563: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-07-20 19:27:36 UTC*
    - 2117ac8022 Merge pull request #25563 from basepi/merge-forward-2015.5
    - 3bf2f1a722 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
    - 09ebaceca8 Merge pull request #25416 from cachedout/str_2014_7
        * cc514938a8 Fix broken keyword
            · d67491bb80 Removed the logger as it's not used anymore
            · 5008bfee96 Merge branch '2015.5' of https://github.com/saltstack/salt into fix_21041_again
- **PR** #25559: (cachedout) Lint win_pkg @ *2015-07-20 17:46:29 UTC*

- **PR** #25369: (anlutro) Fix aptpkg.version_cmp @ *2015-07-13 20:18:45 UTC*
  - c9fe10e7aa Merge pull request #25369 from alprs/fix-apt_version_cmp
  - 6391b15b3e fix aptpkg.version_cmp
- **ISSUE** #25337: (eliasp) *salt-call* from non-existend cwd backtraces (refs: #25379)
- **PR** #25379: (jfindlay) check for cwd before getting it @ *2015-07-13 19:50:27 UTC*
  - beb0238392 Merge pull request #25379 from jfindlay/check_wd
  - 6e4547ff38 check for cwd before getting it
- **ISSUE** #25320: (podloucky-init) zypper module list_upgrades broken (2015.5.2) (refs: #25334)
- **PR** #25334: (jfindlay) return all cmd info back to zypper fcn @ *2015-07-13 17:03:29 UTC*
  - 274622ad9b Merge pull request #25334 from jfindlay/fix_zyp
  - c1e633903e return all cmd info back to zypper fcn
- **PR** #25339: (jfindlay) update orchestration docs @ *2015-07-13 16:04:26 UTC*
  - 71859c6593 Merge pull request #25339 from jfindlay/orch_doc
  - 0447808d95 clarify, motivate orchestration docs
- **ISSUE** #22241: (masterkorp) Salt master not properly generating the map (refs: #25358)
- **PR** #25358: (dkiser) Deep merge of pillar lists (refs: #26016) @ *2015-07-13 15:51:01 UTC*
  - 90a1ca02a3 Merge pull request #25358 from dkiser/22241_pillar_merge_lists
  - d030e289b3 Deep merge of pillar lists
- **ISSUE** #25281: (shinshenjs) Unless usage in Official Doc syntax error? (refs: #25346)
- **PR** #25346: (bechtoldt) set correct indention in states/requisites.rst (docs), fixes #25281 @ *2015-07-13 15:34:45 UTC*
  - 66c619fd71 Merge pull request #25346 from bechtoldt/issue25281
  - 8eb2ac1dbe set correct indention in states/requisites.rst (docs), fixes #25281
- **PR** #25336: (terminalmage) Don't try to read init binary if it wasn't found @ *2015-07-13 09:45:30 UTC*
  - b122ed931d Merge pull request #25336 from terminalmage/fix-init-grain
  - f473918a53 Don't try to read init binary if it wasn't found
- **PR** #25350: (davidjb) Fix documentation for file.blockreplace @ *2015-07-13 03:41:20 UTC*
  - 1805bafc89 Merge pull request #25350 from davidjb/patch-4
  - e13a9fd74e Fix documentation for file.blockreplace
- **ISSUE** #19288: (oba11) AssociatePublicIpAddress doesn't work with salt-cloud 2014.7.0 (refs: #25326, #20972)
- **PR** #25326: (rallytime) Back-port #20972 to 2015.5 @ *2015-07-10 18:49:44 UTC*
  - **PR** #20972: (JohannesEbke) Fix interface cleanup when using AssociatePublicIpAddress in #19288 (refs: #25326)
  - b0196fccb7 Merge pull request #25326 from rallytime/bp-20972
  - 51c941f59d Also fix cleanup of interfaces when using AssociatePublicIpAddress in #19288

- **ISSUE** #24433: (chrimi) Salt locale state fails, if locale has not been generated (refs: #25290)
- **PR** #25327: (rallytime) Back-port #25290 to 2015.5 @ *2015-07-10 18:49:37 UTC*
  - **PR** #25290: (pcdummy) Simple fix for locale.present on Ubuntu. (refs: #25327)
  - 28450d124e Merge pull request #25327 from rallytime/bp-25290
  - 20032c55f3 Simple fix for locale.present on Ubuntu.
- **ISSUE** #24827: (yermulnik) locale.present doesn't generate locales (refs: #25309)
- **PR** #25328: (rallytime) Back-port #25309 to 2015.5 @ *2015-07-10 17:22:59 UTC*
  - **PR** #25309: (davidjb) Format /etc/locale.gen correctly in salt.modules.localemod.gen_locale (refs: #25328)
  - 8f666a24f3 Merge pull request #25328 from rallytime/bp-25309
  - 44d44ec574 Format /etc/locale.gen correctly on gen_locale
- **PR** #25322: (jacobhammons) version change to 2015.5.3 @ *2015-07-10 16:11:24 UTC*
  - 0a33a1d8bb Merge pull request #25322 from jacobhammons/release-2015.5.3
  - 19f88920fa version change to 2015.5.3
- **PR** #25308: (jacksontj) Make clear commands trace level logging @ *2015-07-10 14:20:06 UTC*
  - **PR** #24737: (jacksontj) Move AES command logging to trace (refs: #25308)
  - 2f0f59b6cb Merge pull request #25308 from jacksontj/2015.5
  - 60fc770ba2 Make clear commands trace level logging
- **ISSUE** #24520: (nvx) Tomcat module fails to extract version number from snapshot builds (2015.5 regression) (refs: #24927)
- **PR** #25269: (jfindlay) Extract tomcat war version @ *2015-07-10 01:28:21 UTC*
  - **PR** #24927: (egarbi) Tomcat module fails to extract version number from snapshot builds #2... (refs: #25269)
  - 9b6646d578 Merge pull request #25269 from jfindlay/tomcat
  - fd4fca172d consolidate tomcat exec and state version extract
  - 59dc833567 update tomcat war_deployed state tests
  - edca458b6c Fixed 2 blank lines around import re
  - 7e528d1050 Tomcat module fails to extract version number from snapshot builds #24520
- **ISSUE** #18808: (amendlik) Add command line argument to select pillar environment (refs: #25238)
- **PR** #25238: (DmitryKuzmenko) Pillarenv backport 2015.5 @ *2015-07-10 01:25:07 UTC*
  - 0f82ac3e30 Merge pull request #25238 from DSRCompany/pillarenv_backport_2015.5
  - 98792eb179 Pillarenv support in minion config, cp and cmdmod modules.
  - 88ff576f39 Support pillarenv cmdline in state.sls. Backport of PR #23719
- **ISSUE** #13943: (Supermathie) Powershell commands that expect input hang forever (refs: #25299)
- **PR** #25299: (twangboy) Added -NonInteractive so powershell doesn't hang waiting for input @ *2015-07-09 21:00:16 UTC*
  - 219d4cad9c Merge pull request #25299 from twangboy/fix_13943

  - c05889031f Added -NonInteractive so powershell doesn't hang waiting for input

- **PR** #25301: (jacobhammons) bug fix for module function display in help @ *2015-07-09 20:46:34 UTC*
  - 1c43892a80 Merge pull request #25301 from jacobhammons/doc-bugs
  - f6561289af bug fix for module function display in help
- **ISSUE** #25277: (jacobhammons) CherryPy recommended versions (refs: #25279)
- **PR** #25279: (jacobhammons) Additional docs on external and master job cache, assorted doc fixes @ *2015-07-09 16:46:26 UTC*
  - 68149bc686 Merge pull request #25279 from jacobhammons/job-cache-docs
  - 57dfa92d5a Fixed typos
  - 2f9e5b9125 Additional docs on external and master job cache, assorted doc fixes Refs #25277
- **ISSUE** #25268: (lichtamberg) Salt not working anymore in 2015.8/develop: ValueError: 'scope' is not in list (refs: #25274)
- **PR** #25274: (jleroy) Fix for issue #25268 @ *2015-07-09 13:36:26 UTC*
  - **PR** #25151: (jleroy) Support for IPv6 addresses scopes in network.interfaces (refs: #25274, #25433)
  - 972fa2fb54 Merge pull request #25274 from jleroy/25268-fix
  - 2c698d204b Fix for issue #25268
- **PR** #25272: (twangboy) Fixed problem with service not starting @ *2015-07-08 23:29:48 UTC*
  - 8ebb73df2d Merge pull request #25272 from twangboy/service
  - e61eeba48b Fixed problem with service not starting
- **ISSUE** #25223: (nmadhok) Runner occasionally fails with a RuntimeError when fired by a reactor (refs: #25225)
- **PR** #25225: (nmadhok) Backporting fix for issue #25223 on 2015.5 branch @ *2015-07-08 15:16:18 UTC*
  - c6efd2356c Merge pull request #25225 from nmadhok/client-runtime-fix-backport-2015-2
  - 391b7d6730 Backporting fix for issue #25223 on 2015.2 branch
- **PR** #25214: (rallytime) A couple of doc fixes for the http tutorial @ *2015-07-07 22:23:07 UTC*
  - 207fbaeac4 Merge pull request #25214 from rallytime/http_doc
  - d0b61f3fc1 A couple of doc fixes for the http tutorial
- **ISSUE** #24272: (rallytime) Fix boto_vpc_test moto version check (refs: #25194)
- **PR** #25194: (rallytime) Update moto version check in boto_vpc_test and update min version @ *2015-07-07 18:27:32 UTC*
  - 9dd5cd8a8e Merge pull request #25194 from rallytime/fix-24272
  - f959e165a1 Clean up imports
  - fbc9c0d6bf Fix Pylint
  - fe2561f415 Update moto version check in boto_vpc_test and update min version
- **PR** #25205: (basepi) Update releasecandidate docs @ *2015-07-07 15:25:24 UTC*
  - a3e9486c28 Merge pull request #25205 from basepi/releasecandidatedocs
  - 452880d4aa Update releasecandidate docs

- **PR** #25187: (UtahDave) Doc fixes: Fix misspelling and remove extraneous double spaces @ *2015-07-07 01:07:04 UTC*
  - fbafd39a46 Merge pull request #25187 from UtahDave/fix_misspelling
  - 65abb63003 remove some extraneous double spaces
  - c423b62aa5 fix misspelling
- **PR** #25182: (cachedout) Try to re-pack long floats as strs @ *2015-07-07 01:06:43 UTC*
  - ddee90ce23 Merge pull request #25182 from cachedout/pack_long_floats
  - a192ecfd74 Try to re-pack long ints as strs
- **ISSUE** #23822: (sidcarter) Zip file extracted permissions are incorrect (refs: #25128)
- **PR** #25185: (rallytime) Back-port #25128 to 2015.5 @ *2015-07-07 00:58:00 UTC*
  - **PR** #25128: (stanislavb) Use cmd_unzip to preserve permissions (refs: #25185)
  - df9982b836 Merge pull request #25185 from rallytime/bp-25128
  - 1726057c8a Use cmd_unzip to preserve permissions
- **PR** #25181: (rallytime) Back-port #25102 to 2015.5 @ *2015-07-07 00:57:13 UTC*
  - **PR** #25102: (derBroBro) Update win_network.py (refs: #25181)
  - df0bb8c831 Merge pull request #25181 from rallytime/bp-25102
  - 64d8f14417 Update win_network.py
  - 6789c5b8e8 Update win_network.py
- **ISSUE** #24301: (iggy) influxdb_user and influxdb_database states need virtual functions (refs: #25059)
- **PR** #25179: (rallytime) Back-port #25059 to 2015.5 @ *2015-07-07 00:56:44 UTC*
  - **PR** #25059: (babilen) Add virtual functions to influxdb state modules (refs: #25179)
  - 04fdd7b0ee Merge pull request #25179 from rallytime/bp-25059
  - 1eeefbd2ab Add virtual functions to influxdb state modules
- **ISSUE** #18919: (giner) Windows: pkg.refresh_db returns false-positive success (refs: #25196)
- **PR** #25196: (twangboy) Fixed #18919 false-positive on pkg.refresh @ *2015-07-07 00:24:13 UTC*
  - 58b7d0e653 Merge pull request #25196 from twangboy/pkg_refresh
  - 12ffcd1062 Fixed #18919 false-positive on pkg.refresh
- **PR** #25180: (rallytime) Back-port #25088 to 2015.5 @ *2015-07-06 20:33:45 UTC*
  - **PR** #25088: (supertom) Update (refs: #25180)
  - 4a406aca45 Merge pull request #25180 from rallytime/bp-25088
  - 4078c8db25 added message recommending JSON file be used if the libcloud version is >= 0.17.0
- **PR** #25191: (basepi) Add extrndest back to fileclient.is_cached in 2015.5 @ *2015-07-06 19:35:24 UTC*
  - **PR** #25117: (basepi) Fix fileclient.is_cached (refs: #25191)
  - 01ed062ca7 Merge pull request #25191 from basepi/fix.fileclient.is_cached
  - 5fa74f4408 Add back in the extrndest stuff (which is now in develop)
- **ISSUE** #25016: (martinhoefling) salt-run doc.execution fails with AttributeError (refs: #25020)

- **PR** #25175: (rallytime) Back-port #25020 to 2015.5 @ *2015-07-06 18:53:19 UTC*
  - **PR** #25020: (martinhoefling) Fix for issue #25016 (refs: #25175)
  - a9404aea5c Merge pull request #25175 from rallytime/bp-25020
  - da2e1704ea Fix for issue #25016
- **ISSUE** #21879: (bechtoldt) Reference pages in documentation are outdated again (refs: #25019, #21880)
- **ISSUE** #19262: (bechtoldt) salt.pillar.file_tree doesn't appear in the documentation (refs: #25019)
- **PR** #25173: (rallytime) Partial back-port of #25019 @ *2015-07-06 18:52:59 UTC*
  - **PR** #25019: (bechtoldt) add missing module documentation to references (refs: #25173)
  - **PR** #24421: (bechtoldt) add missing module documentation (refs: #25019)
  - **PR** #21880: (bechtoldt) update references, fixes #21879 (refs: #25019)
  - **PR** #20039: (bechtoldt) completing some doc references (refs: #25019)
  - c70fec65b8 Merge pull request #25173 from rallytime/partial-bp-25019
  - c0c2463b64 Partial backport of #25019
- **PR** #25171: (rallytime) Back-port #25001 to 2015.5 @ *2015-07-06 18:51:53 UTC*
  - **PR** #25001: (jasonkeene) Add docs for key arg in ssh_known_hosts.present (refs: #25171)
  - c5ba9a90ba Merge pull request #25171 from rallytime/bp-25001
  - a891108793 Add docs for key arg in ssh_known_hosts.present
- **PR** #25170: (rallytime) Back-port #24982 to 2015.5 @ *2015-07-06 16:34:43 UTC*
  - **PR** #24982: (asyncsrc) ec2 network_interfaces fix (refs: #25170)
  - 3e06602545 Merge pull request #25170 from rallytime/bp-24982
  - 3e6eab3ae9 ec2 network_interfaces fix
- **PR** #25161: (aneeshusa) Allow checking for non-normalized systemd units. @ *2015-07-06 15:15:31 UTC*
  - 09602808a0 Merge pull request #25161 from aneeshusa/allow-checking-non-normalized-systemd-service-availability
  - b4d544fe70 Allow checking for non-normalized systemd units.
- **PR** #25151: (jleroy) Support for IPv6 addresses scopes in network.interfaces (refs: #25274, #25433) @ *2015-07-06 14:43:03 UTC*
  - 3599b8abab Merge pull request #25151 from jleroy/ipv6-scope-support
  - edce034e6c Support for IPv6 addresses scopes in network.interfaces
- **ISSUE** #24979: (mavenAtHouzz) [Discussion] Support for more than 1 netapi.rest_tornado server process (refs: #25149)
- **PR** #25166: (cachedout) Lint #25149 @ *2015-07-06 14:40:29 UTC*
  - **PR** #25149: (jacksontj) Saltnado multiprocess support (refs: #25166)
  - 66d6365a9f Merge pull request #25166 from cachedout/lint_saltnado
  - 2fe167edf8 Lint #25149
- **ISSUE** #24979: (mavenAtHouzz) [Discussion] Support for more than 1 netapi.rest_tornado server process (refs: #25149)

- **PR** #25149: (jacksontj) Saltnado multiprocess support (refs: #25166) @ *2015-07-06 14:38:43 UTC*
  - 2f1bad1c01 Merge pull request #25149 from jacksontj/saltnado
  - 6aa5548e2d Enable multiprocess support in saltnado
  - 9a1351eada Change print to logger, so we can set a level and log exc_info
- **PR** #25120: (d--j) add missing continue for exception case @ *2015-07-02 19:38:45 UTC*
  - a723af0f10 Merge pull request #25120 from d--j/patch-2
  - 81d5d15dce add missing continue for error case
- **PR** #25117: (basepi) Fix fileclient.is_cached (refs: #25191) @ *2015-07-02 19:38:26 UTC*
  - 6e2222241a Merge pull request #25117 from basepi/fix.fileclient.is_cached
  - 38e243fdfb Add fix from merge forward
  - 52f35f761a Add import
  - 23c32a7518 Backport develop version of salt.fileclient.is_cached
- **PR** #25087: (0xf10e) Fix execution module for glance - now based on 2015.5! @ *2015-07-02 19:36:27 UTC*
  - c80990ba4f Merge pull request #25087 from 0xf10e/fix_glance_2015.5
  - 7749cc081c PEP8 W601...
  - bbda079fa5 fix pylint E302, E502, E713, E1305
  - 3baacc72b4 use Glance API v1 for image_create
  - c3d6134da1 making pylint marginally happier
  - 19a20bf228 get valid properties for image_show() from the schema for "image"
  - 0c6a61173a add some debugging, fix a few AttributeErrors
  - aceca0e20d fix return of glance.image_show()
  - a47509e7dd fix return of image_list
  - 9f923edfab Change confusing "nt_ks" to "g_client"
  - fa2bd1a79c bit of docs/comments in image_create()
  - 5c34d0c494 merge 439b1e42053239b into 2015.5
  - 7a3cf27948 update attributes for image_show output
  - b1bec0f1a1 fix retry w/ user/pass if token fails
  - 2f4ef6683c update attributes for image_list output
  - eef3bc7048 use _auth() from neutron plus keystoneclient,
- **PR** #25129: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-07-02 17:37:40 UTC*
  - 549ee47420 Merge pull request #25129 from basepi/merge-forward-2015.5
  - 187268d879 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 36d53ef59e Merge pull request #25093 from jaybocc2/2014.7
    - c6a501ebda quick fix for issue #18447
  - 38903a94a1 Merge pull request #25069 from puneetk/patch-1
  - f0b4e600e6 Update Documentation to clarify version added

  - f8dc6030e7 Pylint updates , removing whitespace
  - 532d315dd1 [Code Review update] renamed function to is_enaled from list_enabled
  - 20b0462289 Update schedule.py
  - 4f1471d7fb Add a helper module function called list_enabled
  - **PR** saltstack/salt#24798: (justinta) Revert "adding states/postgres_database unit test case." (refs: #25114)
  - **PR** saltstack/salt#24329: (jayeshka) adding states/postgres_database unit test case. (refs: #`saltstack/salt#24798`_)
- **PR** #25114: (jfindlay) Revert "Revert "adding states/postgres_database unit test case."" @ *2015-07-02 01:01:29 UTC*
  - 86f2791fdb Merge pull request #25114 from saltstack/revert-24798-revert-24329-postgres_database-states-unit-test
  - 071ee44d41 Revert "Revert "adding states/postgres_database unit test case.""
- **PR** #24362: (jayeshka) adding states/postgres_user unit test case. @ *2015-07-01 21:45:31 UTC*
  - bf8c7e7a9d Merge pull request #24362 from jayeshka/postgres_user-states-unit-test
  - fd1d834688 adding states/postgres_user unit test case.
- **PR** #24361: (jayeshka) adding states/postgres_schema unit test case. @ *2015-07-01 21:44:56 UTC*
  - 4195cea512 Merge pull request #24361 from jayeshka/postgres_schema-states-unit-test
  - 0558b0d744 adding states/postgres_schema unit test case.
- **PR** #24331: (jayeshka) adding states/postgres_extension unit test case. @ *2015-07-01 21:43:58 UTC*
  - ada8fe57d4 Merge pull request #24331 from jayeshka/postgres_extension-states-unit-test
  - 3d465a574a adding states/postgres_extension unit test case.

33.2.116 Salt 2015.5.5 Release Notes

release
2015-08-20

Version 2015.5.5 is a bugfix release for *2015.5.0*.

Statistics

- Total Merges: **33**
- Total Issue References: **28**
- Total PR References: **39**
- Contributors: **20** (TheBigBear, arthurlogilab, basepi, bastiaanb, cachedout, driskell, garethgreenaway, jacobhammons, jahamn, jfindlay, rallytime, s0undt3ch, scottjpack, silenius, sixninetynine, stanislavb, terminalmage, thusoy, twangboy, vr-jack)

Changelog for v2015.5.4..v2015.5.5

Generated at: 2018-05-27 22:04:18 UTC

- **ISSUE** #26484: (thusoy) Git state leaks HTTPS user/pw to log (refs: #26486)
- **ISSUE** #26482: (thusoy) Git states doesn't allow user-only auth (refs: #26483)
- **PR** #26486: (thusoy) Git: Don't leak https user/pw to log @ *2015-08-20 16:04:52 UTC*
  - **PR** #26483: (thusoy) Handle user-only http auth in git module (refs: #26486)
  - 28aa9b1058 Merge pull request #26486 from thusoy/git-confidential-auth
  - 5289165487 Git: Don't leak https user/pw to log
- **ISSUE** #26432: (centromere) Documentation incorrectly references salt-key on the minion (refs: #26476)
- **ISSUE** #26403: (adelcast) Grains documentation incorrectly states they are static (refs: #26476)
- **ISSUE** #26329: (cro) Add note to eauth docs indicating default PAM service. (refs: #26476)
- **ISSUE** #26264: (grep4linux) state trees cannot have 'dots' in the name (refs: #26476)
- **ISSUE** #26233: (dove-young) pip install salt, then start master failed on Fedora 22 (refs: #26476)
- **PR** #26476: (jacobhammons) Minor doc bug fixes @ *2015-08-19 22:52:35 UTC*
  - 679ba5ee0a Merge pull request #26476 from jacobhammons/doc-bugs
  - 499bd66378 Minor doc bug fixes Refs #26403 Refs #26432 Refs #26233 Refs #26264 Refs #26329
- **ISSUE** #26366: (GreatSnoopy) The development tree produces hanging, 100%cpu salt-master processes (refs: #26443)
- **ISSUE** #26301: (waynew) CPU pegged out running salt-master (after running command) (refs: #26443)
- **ISSUE** #25998: (driskell) Event subsystem discarding required events during --batch breaking it for slow running commands (refs: #26000)
- **PR** #26443: (cachedout) Fix connect issue in event init @ *2015-08-19 22:50:22 UTC*
  - **PR** #26000: (driskell) Implement full event caching for subscribed tags (refs: #26443)
  - 42b8c1b3f4 Merge pull request #26443 from cachedout/fix_event_sub
  - 560977bc7e Fix connect issue in event init
- **ISSUE** #26343: (jfindlay) batch error when no minions match target (refs: #26445)
- **PR** #26445: (cachedout) Raise clean error when no minions targeted in batch mode @ *2015-08-19 22:50:07 UTC*
  - d2df1a86ad Merge pull request #26445 from cachedout/issue_26343
  - 1600f3eccd Raise clean error when no minions targeted in batch mode
- **ISSUE** #26482: (thusoy) Git states doesn't allow user-only auth (refs: #26483)
- **PR** #26483: (thusoy) Handle user-only http auth in git module (refs: #26486) @ *2015-08-19 22:47:41 UTC*
  - a9b28e9577 Merge pull request #26483 from thusoy/git-user-only-auth
  - 09fc934acc Handle user-only http auth in git module
- **PR** #26496: (jfindlay) add dateutil dependency reporting @ *2015-08-19 22:46:31 UTC*
  - edc04930ae Merge pull request #26496 from jfindlay/dateutil
  - cbe330e78b add dateutil dependency reporting

- **PR** #26494: (cachedout) Remove unnecessary debug statements @ *2015-08-19 20:46:00 UTC*
  - 4fff53b842 Merge pull request #26494 from cachedout/remove_debug_statements
  - d717a43dcc Remove unnecessary debug statements
- **PR** #26465: (rallytime) Back-port #26457 to 2015.5 @ *2015-08-19 16:08:16 UTC*
  - **PR** #26457: (arthurlogilab) docstring improvement for network.ping module execution (refs: #26465)
  - f46a0dab5d Merge pull request #26465 from rallytime/bp-26457
  - b3f638ff0f docstring improvement for network.ping module execution
- **PR** #26434: (s0undt3ch) Fix missed typo @ *2015-08-18 18:14:29 UTC*
  - c1458980f3 Merge pull request #26434 from s0undt3ch/2015.5
  - 06dcaefcaa Fix missed typo
- **ISSUE** #26426: (alxbse) Private/public IPs are interchanged when listing nova driver cloud nodes (refs: #26430)
- **PR** #26430: (rallytime) List public and private ips under the correct label @ *2015-08-18 16:20:32 UTC*
  - 0f64be710f Merge pull request #26430 from rallytime/fix-26426
  - 2ba97316c9 List public and private ips under the correct label
- **PR** #26431: (rallytime) Back-port #26417 to 2015.5 @ *2015-08-18 15:41:58 UTC*
  - **PR** #26417: (scottjpack) Changed t1 -> t2 micro (refs: #26431)
  - 913451a414 Merge pull request #26431 from rallytime/bp-26417
  - 0254a2e90e Changed t1 -> t2 micro
- **PR** #26378: (stanislavb) Fix EC2 credentials from IAM roles for s3fs and s3 ext_pillar in 2015.5 @ *2015-08-18 14:01:53 UTC*
  - 952da7abaf Merge pull request #26378 from stanislavb/2015.5
  - 39ce3127cd Let utils.aws query instance metadata
- **ISSUE** #26245: (bradthurber) salt v2015.5.3 gitfs.py using newer pygit2 feature than required minimum (refs: #26420)
- **PR** #26420: (terminalmage) Only use pygit2.errors if it exists (2015.5 branch) @ *2015-08-18 14:00:01 UTC*
  - 09e96dce39 Merge pull request #26420 from terminalmage/issue26245-2015.5
  - 19a1149067 Only use pygit2.errors if it exists (2015.5 branch)
- **PR** #26409: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-17 23:19:56 UTC*
  - c5eb6bbd3e Merge pull request #26409 from basepi/merge-forward-2015.5
  - dafed10a9e Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - da8bca09aa Merge pull request #26242 from cro/anonldap4
    - a0d2ab1eed Remove dead code
  - 1ecf23773e Merge pull request #26216 from cro/anonldap3
  - af132d7b89 Documentation update for anonymous bind issue.
  - 2ef54b6b13 Documentation update for anonymous bind issue.
  - 5b1836bb00 Fix issue with LDAP anonymous binds.
- **ISSUE** #26404: (ssgward) Syntax error in lvm.vg_absent state causing failure (refs: #26406)

- **PR** #26406: (jfindlay) fix syntax error in lvm exec module @ *2015-08-17 21:18:25 UTC*
  - 741ca6b4db Merge pull request #26406 from jfindlay/lvm
  - 81d351ff8f fix syntax error in lvm exec module
- **PR** #26405: (TheBigBear) dependency zip files moved to new site @ *2015-08-17 21:17:24 UTC*
  - a7e2d30e2a Merge pull request #26405 from TheBigBear/patch-8
  - 8898d64918 dependency zip files moved to new site
- **PR** #26298: (vr-jack) Keep $HOME from being interpretted by Master shell @ *2015-08-17 21:15:11 UTC*
  - cf0523a12e Merge pull request #26298 from vr-jack/2015.5
  - 1fd6fc6ce3 Keep $HOME from being interpretted by Master shell
- **PR** #26324: (s0undt3ch) Salt is now pip install'able in windows @ *2015-08-17 20:41:34 UTC*
  - c0811d3302 Merge pull request #26324 from s0undt3ch/2015.5
  - e7cb3be2a0 Document the added options
  - 92af1c9572 Fix argument name
  - 72d2fdb512 Add *pypiwin32 >= 219* as a windows install requires.
  - b1105fc706 Allow mimicking the install setup command for develop/editable installations.
  - 26246a72ee Allow writing Salt's _version.py when installing in develop mode.
  - 71928f2194 Prefer HTTPS, fix url argument
  - 7b25430cc7 Download the necessary DLLs for windows
  - 86692a92cd Install PyCrypto from a wheel in repo.saltstack.com under Windows
  - 915da594c2 Skip M2Crypto in Windows.
  - 1ea426e299 Move code to properly handle default requirements.
  - 8fda8c0db3 M2CryptoWin{32,64} should only be installed on Salt < 2015.8.0
  - 0ff2f19aee Override the develop command in cmdclass
  - a5aa752a85 Override the develop command when WITH_SETUPTOOLS is set
  - 4d6841c761 Install M2CryptoWin{32,64} while installing Salt
- **ISSUE** #26161: (bastiaanb) salt initscripts do not set lock file in /var/lock/subsys as required on RedHat family OSes (refs: #26371)
- **PR** #26371: (bastiaanb) fix issue #26161: on RedHat family systems touch /var/lock/subsys/$SE... @ *2015-08-17 20:39:28 UTC*
  - 87151736c5 Merge pull request #26371 from bastiaanb/fix/issue-26161-salt-initscripts-dont-set-lockfile
  - ec8d4b0470 test whether RETVAL is 0 with -eq rather than =.
  - a83a5de41e fix issue #26161: on RedHat family systems touch /var/lock/subsys/$SERVICE to ensure the daemon will be stopped on shutdown.
- **ISSUE** #25801: (themalkolm) Update docs that salt.states.winrepo requires *roles:salt-master* in grains. (refs: #26328)
- **ISSUE** #25562: (jefftucker) winrepo state does not run on masterless minion (refs: #26328)
- **PR** #26402: (twangboy) Removed documentation no longer required @ *2015-08-17 20:35:37 UTC*

  - **PR** #26328: (twangboy) Removed salt-master role requirement (refs: #26402)
  - 89602f56ad Merge pull request #26402 from twangboy/fix_26328
  - ad5fa03b76 Removed documentation no longer required
- **PR** #26392: (rallytime) Back-port #26376 to 2015.5 @ *2015-08-17 19:39:51 UTC*
  - **PR** #26376: (TheBigBear) minor edit spelling (refs: #26392)
  - eb373e5904 Merge pull request #26392 from rallytime/bp-26376
  - a013bb5b3d minor edit
- **ISSUE** #16049: (ryan-lane) boto_elb.present state requires attributes argument (refs: #26342)
- **PR** #26342: (rallytime) Don't call boto_elb._attributes_present if no attributes were provided @ *2015-08-17 19:19:08 UTC*
  - 8bb57d1631 Merge pull request #26342 from rallytime/fix-16049
  - 211f6feaf5 Fix test failures - get_attributes shouldn't be called if none are provided
  - d8ad023e88 Don't call boto_elb._attributes_present if no attributes were provided
- **ISSUE** #26155: (silenius) pip availability in states/pip_state (refs: #26160)
- **PR** #26389: (rallytime) Back-port #26160 to 2015.5 @ *2015-08-17 19:09:16 UTC*
  - **PR** #26160: (silenius) proposed fix for #26155 (refs: #26389)
  - 2fd1e06343 Merge pull request #26389 from rallytime/bp-26160
  - f0bc3765d9 No logging should happen on __virtual__
  - ca406eaf3c proposed fix for #26155
- **ISSUE** #26266: (o-sleep) limit pw_user.getent() from returning entire corporate list (refs: #26300)
- **PR** #26300: (jfindlay) mock pwd function calls in pw_user exec module @ *2015-08-17 18:56:41 UTC*
  - 0046c6cfed Merge pull request #26300 from jfindlay/pw_test
  - 7e94989403 mock pwd calls in pw_user exec mod test
  - 26f5b466f5 check for pwd on linux and BSD user exec mods
- **ISSUE** #24334: (afletch) autosign_timeout not honoured (refs: #26386)
- **PR** #26386: (jahamn) Fixes autosign_timeout usage in check_autosign_dir @ *2015-08-17 18:34:40 UTC*
  - 709499438b Merge pull request #26386 from jahamn/fix-autosign_timeout
  - b2fa2ac9d3 Fixes autosign_timeout usage in check_autosign_dir
- **ISSUE** #25801: (themalkolm) Update docs that salt.states.winrepo requires *roles:salt-master* in grains. (refs: #26328)
- **ISSUE** #25562: (jefftucker) winrepo state does not run on masterless minion (refs: #26328)
- **PR** #26328: (twangboy) Removed salt-master role requirement (refs: #26402) @ *2015-08-17 18:30:17 UTC*
  - 8d901d7b15 Merge pull request #26328 from twangboy/fix_25562
  - d4ca1dccbf Removed salt-master role requirement
- **ISSUE** #26327: (bradthurber) mount.mounted opts incorrect "forced unmount and mount because options (tcp) changed" (refs: #26362)
- **PR** #26362: (garethgreenaway) Fixes to mount state. @ *2015-08-17 17:44:55 UTC*

  - 74558f5743 Merge pull request #26362 from garethgreenaway/2015_5_26327_more_invisible_mount_options
  - cf532d46dd Some mount options are translated to different options once a share has been mounted, eg. when specifying a protocol for NFS as either tcp or udp this option is translated into either proto=tcp or proto=udp. Change adds a lookup dictionary for these options so that a re-mount isn't forced each time.

- **PR** #26379: (s0undt3ch) [2015.5] Backport #26353 @ *2015-08-17 17:19:29 UTC*
  - **PR** #26353: (sixninetynine) fixed a typo in setup.py (refs: #26379)
  - 7dbbd90c98 Merge pull request #26379 from s0undt3ch/issues/backport-26353
  - 33ed315c85 fixed Packaing -> Packaging typo and added a couple comments on the setuptools/distutils abstract methods
- **ISSUE** #26240: (0xf10e) keystone.user_get raises exception when user is not found (refs: #26277)
- **PR** #26277: (rallytime) Handle exception when user is not found in keystone.user_get @ *2015-08-14 19:41:59 UTC*
  - bcca1b4c5a Merge pull request #26277 from rallytime/fix-26240
  - 0b6977335e Clean it up
  - 5edabfd271 It's a dict - git problems...
  - 39d3eb66f0 Log error and return error - make returns consistent.
  - 496474d862 Handle exception when user is not found in keystone.get_user
- **ISSUE** #24484: (bailsman) clouds/ec2.py: create_snapshot throws exception (refs: #26326)
- **PR** #26326: (rallytime) Make ec2.create_snapshot return less unweildly and more relevant @ *2015-08-14 19:40:47 UTC*
  - 78be3a826f Merge pull request #26326 from rallytime/create_snapshot_return
  - c5395db851 Make ec2.create_snapshot return less unweildly and more relevant
- **ISSUE** #16179: (UtahDave) Salt Cloud -l debug includes the entire bootstrap script twice in its output (refs: #26306)
- **PR** #26306: (rallytime) Move VM creation details dict to log.trace @ *2015-08-14 17:39:52 UTC*
  - 44c9d3063b Merge pull request #26306 from rallytime/fix-16179
  - 670464258f Move VM creation details dict to log.trace

33.2.117 Salt 2015.5.6 Release Notes

release
2015-10-13

Version 2015.5.6 is a bugfix release for *2015.5.0*.

Statistics

- Total Merges: **145**
- Total Issue References: **71**
- Total PR References: **178**
- Contributors: **53** (Arabus, JensRantil, PierreR, SaltyCharles, TheBigBear, abh, aboe76, anlutro, arthurlogilab, aspyatkin, basepi, benhosmer, bersace, cachedout, carlpett, damonzheng, derphilipp, dmyerscough, dsumsky, efficks, eguven, garethgreenaway, hexedpackets, jacksontj, jacobhammons, jfindlay, joejulian, johanek, julianbrost, kev009, lorengordon, madprog, marccardinal, netroby, nmadhok, plastikos, rallytime, serge-p, spudfkc, stanislavb, styro, systembell, tankywoo, techhat, terminalmage, thatch45, tjstansell, twangboy, vakulich, vtek21, whiteinge, zmalone, zyio)

Security Fixes

CVE-2015-6941 The Windows *user* module and `salt-cloud` display passwords in log when log level is set to `debug` or more verbose.

For the Windows *user* module, the password is now replaced with the string `XXX-REDACTED-XXX`.

For salt-cloud, debug logging no longer displays `win_password` and `sudo_password` authentication credentials.

CVE-2015-6918 Git state/execution modules log HTTPS auth credentials when log level is set to `debug` or more verbose.

These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Changelog for v2015.5.5..v2015.5.6

Generated at: 2018-05-27 22:13:00 UTC

- **PR** #27582: (jfindlay) add 2015.5.6 release notes @ *2015-09-30 22:33:48 UTC*
  - 304dc68f7f Merge pull request #27582 from jfindlay/2015.5
  - 4f0d55cda6 add 2015.5.6 release notes
- **ISSUE** #27518: (srkunze) [Docs] Relationship between Mine and Grains (refs: #27557)
- **PR** #27557: (jfindlay) add doc motivating mine vs grains @ *2015-09-30 17:49:46 UTC*
  - 7201ce71e4 Merge pull request #27557 from jfindlay/mine_doc
  - 3727d79bad edit mine doc for style and markup
  - 7e037a4666 add doc motivating mine vs grains
- **ISSUE** #27478: (rominf) iptables state fails to save rules (refs: #27515)
- **PR** #27515: (jfindlay) save iptables rules on SuSE @ *2015-09-30 16:09:42 UTC*
  - 59c3d5f93e Merge pull request #27515 from jfindlay/suse_fire
  - 4460ad2785 save iptables rules on SuSE
- **ISSUE** #27460: (llevar) Orchestrate runner not resolving reference to a built in state (refs: #27509)
- **PR** #27509: (jfindlay) tell the user why the gluster module does not work @ *2015-09-30 15:49:16 UTC*

  - 9b26357b19 Merge pull request #27509 from jfindlay/gluster_reason
  - 1ccda538d2 tell the user why the gluster module does not work
- **ISSUE** #27372: (GregMeno) pip.installed state fails when env_vars is not a dict (refs: #27379)
- **PR** #27379: (jfindlay) document and check dict type for pip env_vars @ *2015-09-30 02:56:52 UTC*
  - 989733ea86 Merge pull request #27379 from jfindlay/pip_vars
  - aee51ffdef document and check dict type for pip env_vars
- **PR** #27516: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-09-29 17:53:33 UTC*
  - 6d773f66c3 Merge pull request #27516 from basepi/merge-forward-2015.5
  - a08951f0fa Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 5262f01325 Merge pull request #27335 from rallytime/cloud-logging-7
    * adeb1dcad4 Pylint Fix
    * 588c13783c Salt-cloud logging clean up for windows functions
    * 9b6000135c [2014.7] Fixup salt-cloud logging
- **ISSUE** #27447: (junster1) Fix mysql table size for salt_events (refs: #27472)
- **PR** #27472: (cachedout) Change recommended schema for data field in mysql event table @ *2015-09-29 15:49:37 UTC*
  - 68d784c3dd Merge pull request #27472 from cachedout/fix_27447
  - 5e745ad6da Change recommended schema for data field in mysql event table
- **PR** #27468: (cachedout) Fix 27351 @ *2015-09-29 15:35:29 UTC*
  - **PR** #27351: (SaltyCharles) fix sysctl truncating newline on os x (refs: #27468)
  - ee6e0ed057 Merge pull request #27468 from cachedout/fix_27351
  - 0bc37c0d41 Fix test
  - f9a19720de fix sysctl truncating newline on os x
- **ISSUE** #27438: (aboe76) can't set system locale on OpenSuse SUse (refs: #27479)
- **PR** #27479: (aboe76) fix locale on opensuse and suse #27438 @ *2015-09-29 15:34:48 UTC*
  - a214c7f84e Merge pull request #27479 from aboe76/fix_locale_suse
  - a8f2dad1be fix locale on opensuse and suse #27438
- **ISSUE** #17103: (arthurlogilab) salt is looking for outputters in /var/cache/salt/minion/extmods/output not /var/cache/salt/minion/extmods/outputputters (refs: #27483)
- **PR** #27483: (rallytime) Outputters should sync to output, not outputters, on the minion. @ *2015-09-29 15:33:08 UTC*
  - 931f593b51 Merge pull request #27483 from rallytime/fix-17103
  - 441241eb90 Change sync_outputters to sync_output for consistency, but alias sync_outputters
  - 105528720b Outputters should sync to output, not outputters, on the minion.
- **PR** #27484: (rallytime) Back-port #27434 and #27470 to 2015.5 @ *2015-09-29 15:32:03 UTC*
  - **PR** #27470: (cachedout) Minor doc fixup. (refs: #27484)
  - **PR** #27434: (netroby) Doc: copy key to server via ssh-copy-id (refs: #27484, #27470)

  - 9c2c028953 Merge pull request #27484 from rallytime/bp-27434-and-27470
  - 5de2ee35ab Minor doc fixup.
  - af656c7e87 Doc: copy key to server via ssh-copy-id
- **ISSUE** #27433: (TheBigBear) winrepo - drops "trailing zeroes" from version numbers on un-install? (refs: #27469)
- **PR** #27469: (twangboy) Added quotes to version numbers example @ *2015-09-28 21:54:43 UTC*
  - 927874d316 Merge pull request #27469 from twangboy/fix_27433
  - a996ea46e2 Added quotes to version numbers example
- **ISSUE** #27342: (ariscn) File.managed silent fail for contents_pillar (refs: #27375, #27467)

  - b5fe944875 Merge pull request #27311 from jfindlay/maxoc
  - 8ec2e921bd discuss replacement occurrences in file doc
- **PR** #27310: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-09-22 21:08:41 UTC*

  - ca4597b93a Merge pull request #27310 from basepi/merge-forward-2015.5
  - 7b75e4aed1 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - e90412d3b8 Merge pull request #27252 from jfindlay/version.2014.7
    * 3d28307a00 2014.7 -> 2014.7.0
- **ISSUE** #27307: (terminalmage) Regression in yumpkg's refresh_db function (refs: #27308)
- **PR** #27308: (terminalmage) Fix refresh_db regression in yumpkg.py @ *2015-09-22 21:07:28 UTC*
  - 982c21c79f Merge pull request #27308 from terminalmage/fix-refresh_db-regression
  - 77686fb7ce Fix refresh_db regression in yumpkg.py
- **PR** #27286: (terminalmage) Add a configurable timer for minion return retries @ *2015-09-22 16:35:07 UTC*
  - 775a4f9ad0 Merge pull request #27286 from terminalmage/return_retry_timer
  - 540a7dfcf1 Add default values for new minion config options
  - 453b883820 Add a configurable timer for minion return retries
- **PR** #27278: (rallytime) Back-port #27256 to 2015.5 @ *2015-09-21 19:27:51 UTC*
  - **PR** #27256: (julianbrost) Fix error handling in salt.modules.file.statvfs (refs: #27278)
  - 02482c0572 Merge pull request #27278 from rallytime/bp-27256
  - 1beddf6311 Fix error handling in salt.modules.file.statvfs
- **PR** #27277: (rallytime) Back-port #27230 to 2015.5 @ *2015-09-21 19:06:14 UTC*
  - **PR** #27230: (benhosmer) Fix typo in AWS doc config (refs: #27277)
  - e36c019c37 Merge pull request #27277 from rallytime/bp-27230
  - 3ce77db1bc Fix typo in AWS doc config
- **PR** #27253: (jfindlay) 2015.5 -> 2015.5.0 @ *2015-09-18 23:44:43 UTC*
  - b22286476e Merge pull request #27253 from jfindlay/version.2015.5
  - 967e3bb72a 2015.5 -> 2015.5.0
- **PR** #27244: (garethgreenaway) Exception in cloud.ec2.create_snapshot @ *2015-09-18 21:41:11 UTC*
  - 51a0193b54 Merge pull request #27244 from garethgreenaway/ec2_create_snapshot_no_return_data_exception
  - 820fd576b9 Fixing the cause when the r_data from aws.query is empty and an exception happens when looking for the snapshotID
- **ISSUE** #27215: (wfhu) cron.file override the crontab file even if there's no change (refs: #27231)
- **PR** #27231: (jfindlay) only write cron file if it is changed @ *2015-09-18 18:23:10 UTC*
  - 26540f15bc Merge pull request #27231 from jfindlay/cronchange
  - 1e335297e2 only write cron file if it is changed
- **PR** #27233: (basepi) [2015.5] Add stub release notes for 2015.5.6 @ *2015-09-18 16:55:40 UTC*
  - 579f375f74 Merge pull request #27233 from basepi/release.notes.stubs
  - f4563ea9b7 Add stub release notes for 2015.5.6
- **ISSUE** #25423: (tweenk) Impossible to define a file.managed for use only as a template in "use" requisites (refs: #27208)
- **PR** #27208: (basepi) [2015.5] Add test.nop state @ *2015-09-18 16:50:17 UTC*

  - f5a322e3f2 Merge pull request #27208 from basepi/nop.state.25423
  - 9414b05b2c Add test.nop example
  - a84ce67b8f Add test.nop state
- **ISSUE** #27187: (SeverinLeonhardt) ssh_known_hosts.present hashes other entries even with hash_hostname: false (refs: #27201)
- **PR** #27201: (jfindlay) rename hash_hostname to hash_known_hosts @ *2015-09-18 15:45:03 UTC*
  - 59a07cae68 Merge pull request #27201 from jfindlay/sshhash
  - 1b620b77cd rename hash_host arg to hash_known_hosts
  - 12f14ae37c update hash_known_hosts docs in ssh module
- **PR** #27214: (jacksontj) Correctly support https, port 443 is not a requirement @ *2015-09-18 15:43:05 UTC*
  - 560545c4c5 Merge pull request #27214 from jacksontj/2015.5
  - e7526bdb44 Correctly support https, port 443 is not a requirement
- **ISSUE** #18582: (mainframe) Allow merging file_roots and pillar_roots from different config files included from master.d (refs: #27150)
- **PR** #27172: (rallytime) Back-port #27150 to 2015.5 @ *2015-09-17 17:25:51 UTC*
  - **PR** #27150: (cachedout) Merge config values from master.d/minion.d conf files (refs: #27172)
  - 7a34c7742d Merge pull request #27172 from rallytime/bp-27150
  - 0d7ee4b209 Merge config values from master.d/minion.d conf files
- **PR** #27194: (rallytime) Back-port #27180 to 2015.5 @ *2015-09-17 16:17:24 UTC*
  - **PR** #27180: (tankywoo) file copy ret result True if no change in test mode (refs: #27194)
  - e956d88f5f Merge pull request #27194 from rallytime/bp-27180
  - 327d343fef file copy ret result True if no change in test mode
- **PR** #27176: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-09-17 15:00:40 UTC*
  - a02d043309 Merge pull request #27176 from basepi/merge-forward-2015.5
  - 66f4641be3 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - c186e51764 Merge pull request #27117 from jacobhammons/release-docs-2014.7
    - b69e11e0a4 made 2014.7 an archived release minor doc site updates
  - 69d758ee2b Merge pull request #27114 from cachedout/warn_on_insecure_log
    - 507fb04683 Issue warning that some log levels may contain sensitive data
  - aa71bae8aa Merge pull request #27075 from twangboy/fix_password_2014.7
    - c0689e3215 Replaced password with redacted when displayed
- **PR** #27170: (rallytime) Update Getting Started with GCE docs to use cloud.profiles or cloud.profiles.d examples @ *2015-09-16 22:23:51 UTC*
  - de2027426e Merge pull request #27170 from rallytime/gce-docs
  - a07db909bd Update Getting Started with GCE docs to use cloud.profiles or cloud.profiles.d examples
- **PR** #27167: (rallytime) Back-port #27148 to 2015.5 @ *2015-09-16 19:56:01 UTC*
  - **PR** #27148: (hexedpackets) Pass file pointers to the serialize load functions. (refs: #27167)

  - 28cfdfd067 Merge pull request #27167 from rallytime/bp-27148
  - d12be52355 Pass filepointers to the serialize load functions.
- **ISSUE** #27157: (alxbse) salt.util.smb loads even when impacket library is missing (refs: #27168)
- **PR** #27168: (techhat) Add further gating of impacket library @ *2015-09-16 18:55:56 UTC*
  - 4495f4f4d0 Merge pull request #27168 from techhat/gateimpacket
  - cc448bfdc1 Add further gating of impacket library
- **ISSUE** #27100: (hexedpackets) salt-cloud --full-query does nothing when no VM profiles are configured (refs: #27166)
- **PR** #27166: (rallytime) Allow a full-query for EC2, even if there are no profiles defined @ *2015-09-16 17:41:40 UTC*
  - 3e5ef0dc30 Merge pull request #27166 from rallytime/fix-27100
  - 50fb3a489a Allow a full-query for EC2, even if there are no profiles defined
- **PR** #27162: (rallytime) Be explicit in using "SoftLayer" for service queries in SoftLayer drivers @ *2015-09-16 16:43:26 UTC*
  - f1c9de7ed9 Merge pull request #27162 from rallytime/softlayer-service
  - d281068c70 Be explicit in using "SoftLayer" for service queries in SoftLayer drivers
- **ISSUE** #27133: (deniswal) win_path.add causes the value data to be set as the value and vice versa (refs: #27149)
- **PR** #27149: (twangboy) Fixed problem with add/remove path @ *2015-09-16 15:01:48 UTC*
  - 59e9dfd8de Merge pull request #27149 from twangboy/fix_27133
  - 7992b7e20a Fixed some tests... hopefully...
  - d4c8e30f5d Fixed problem with add/remove path
- **ISSUE** #11669: (jcockhren) salt.cloud is out of date for new google compute engine dashboard and API (refs: #27147)
- **PR** #27147: (rallytime) Enforce bounds in the GCE Regex @ *2015-09-15 21:51:55 UTC*
  - 097fcd1017 Merge pull request #27147 from rallytime/fix-11669
  - 55312ea03f Provide a more friendly error message.
  - 36555856c7 Enforce bounds in the GCE Regex
- **PR** #27128: (eguven) don't show diff for test run if show_diff=False @ *2015-09-15 14:11:55 UTC*
  - f5c3f157dd Merge pull request #27128 from eguven/2015.5-fix-test-diff
  - ec2d68a84a don't show diff for test run if show_diff=False
- **PR** #27116: (jacobhammons) Update latest to 2015.8, 2015.5 is now previous @ *2015-09-15 07:34:28 UTC*
  - 088b1dbb3e Merge pull request #27116 from jacobhammons/release-docs-2015.5
  - 6e323b6dd3 Update latest to 2015.8, 2015.5 is now previous Assorted style and minor updates
- **ISSUE** #25352: (m03) reg.absent reporting incorrect results (refs: #27019)
- **PR** #27033: (jfindlay) Merge #27019 @ *2015-09-15 07:32:17 UTC*
  - **PR** #27019: (twangboy) Fixed reg state module for None, 0, and '' values (refs: #27033)
  - 440855b182 Merge pull request #27033 from jfindlay/n0ne

  - 3334b9d548 fix comment and unit test for reg state
  - 391a09d5ac update reg state unit tests
  - ebbf2b05ca Fixed reg state module for None, 0, and '' values
- **ISSUE** #17088: (umireon) state.dockerio.run: docked_onlyif and docked_unless do not work (refs: #26942)
- **PR** #26942: (Arabus) Fix docker.run @ *2015-09-14 18:10:54 UTC*
  - 35fc74132a Merge pull request #26942 from Arabus/fix-docker.run
  - e61e1de1f5 Fixes value typo for dockerio.loaded state
  - 39fa11b696 further linting
  - 4aec37397c Further Linting to quiet the linter
  - 7eff8ad070 Code Linting and cmd call fix
  - a51676e0eb Fixes #17088 olyif and unless should run on the host
  - d0c6128b8f Fixes #17088 retcode now returns True or False based on return status
  - 8b2e7cc4f5 Syntax clarification
- **PR** #26977: (abh) Add support for PEERNTP network interface configuration @ *2015-09-14 17:59:00 UTC*
  - 59f2a0c7ae Merge pull request #26977 from abh/2015.5-ntppeer
  - df3d6e817f Add support for PEERNTP network interface configuration on RH derived systems
- **ISSUE** #27021: (SEJeff) webutil.user_exists state does not respect test=true (refs: #27023)
- **ISSUE** #21533: (aspyatkin) Add option specifying user to run htpasswd module functions (refs: #21649)
- **PR** #27023: (jfindlay) add test support for htpasswd state mod @ *2015-09-14 17:48:00 UTC*
  - **PR** #21649: (aspyatkin) Make enhancements to htpasswd modules (refs: #27023)
  - e05b1f3951 Merge pull request #27023 from jfindlay/htwebutilpass
  - 9f3d7890a6 add test support for htpasswd state mod
- **PR** #27074: (twangboy) Replaced password with redacted when displayed @ *2015-09-14 16:27:26 UTC*
  - 9f999c0027 Merge pull request #27074 from twangboy/fix_password_2015.5
  - fdd3537456 Replaced password with redacted when displayed
- **PR** #27073: (rallytime) Remove "use develop branch" warning from LXC tutorial @ *2015-09-11 23:51:06 UTC*
  - 46b44f85ed Merge pull request #27073 from rallytime/remove-lxc-warning
  - 76c056d02b Remove "use develop branch" warning from LXC tutorial now that 2015.5.0 has been released
- **PR** #27054: (rallytime) Back-port #27029 to 2015.5 @ *2015-09-11 22:29:45 UTC*
  - **PR** #27029: (spudfkc) Removed check for no package name (refs: #27054)
  - caab21d99c Merge pull request #27054 from rallytime/bp-27029
  - 0be393be22 Removed check for no package name
- **PR** #27053: (rallytime) Back-port #26992 to 2015.5 @ *2015-09-11 22:29:30 UTC*
  - **PR** #26992: (plastikos) Summary requires full return information. (refs: #27053)
  - 0227e1cb57 Merge pull request #27053 from rallytime/bp-26992
  - 83798aff3c Do not use full return for documentation.

  - d9d5bbaa68 Summary requires full return information.

- **PR** #27052: (rallytime) Back-port #26930 to 2015.5 @ *2015-09-11 22:28:11 UTC*
  - **PR** #26930: (madprog) aptpkg.mod_repo: Raise when key_url doesn't exist (refs: #27052)
  - b72a0ef86d Merge pull request #27052 from rallytime/bp-26930
  - d9787aa318 aptpkg.mod_repo: Raise when key_url doesn't exist
- **PR** #27049: (johanek) Run repoquery less @ *2015-09-11 22:26:12 UTC*
  - 8b554dd16f Merge pull request #27049 from johanek/repoquery-dedupe
  - c113916a23 When running repoquery to check for available versions of packages, run once for all packages rather than once per package
- **PR** #27070: (stanislavb) Deprecate salt.utils.iam in Carbon @ *2015-09-11 22:01:57 UTC*
  - **PR** #26561: (stanislavb) Leave salt.utils.s3 location fallback to salt.utils.aws (refs: #27070)
  - **PR** #26446: (stanislavb) Fetch AWS region from EC2 instance metadata (refs: #26561)
  - **PR** #26378: (stanislavb) Fix EC2 credentials from IAM roles for s3fs and s3 ext_pillar in 2015.5 (refs: #26446)
  - cc2cbf9869 Merge pull request #27070 from stanislavb/2015.5
  - 1e6e5ddc9c Deprecate salt.utils.iam in Carbon
- **PR** #27030: (jfindlay) Backport #26938 @ *2015-09-11 15:10:46 UTC*
  - **PR** #27004: (vtek21) Fix 'dict' object has no attribute split (refs: #27024, #27030)
  - **PR** #26938: (derphilipp) Fixes win_path module, migrates from reg.(set|get)_key to reg.(set|get)_value (refs: #27030)
  - e23caa8ccf Merge pull request #27030 from jfindlay/winreg
  - 120fbe78e0 remove trailing line in win_path exec module
  - b36a7107b2 update win_path exec module unit tests
  - a2dc6f2dd7 Fixes win_path module, migrates from reg.(set|get)_key to reg.(set|get)_value
- **ISSUE** #25581: (b18) Salt 2015.5.2 - Could not deserialize msgpack message error. (refs: #27025)
- **PR** #27025: (cachedout) Better try and error handling for prep_jid @ *2015-09-11 07:40:10 UTC*
  - 843c28b435 Merge pull request #27025 from cachedout/issue_25581
  - ecc09d9b93 Lint
  - bfcaab9ef4 Better try and error handling for prep_jid
- **PR** #27035: (terminalmage) useradd.py: Use contextmanager to prevent leaked filehandles @ *2015-09-11 07:39:41 UTC*
  - b9baa0b39a Merge pull request #27035 from terminalmage/useradd-contextmanager
  - e430e97f6c Update user states to reflect changes to login class handling
  - f24b979c7c useradd.py: Use contextmanager to prevent leaked filehandles
- **PR** #27034: (rallytime) Update softlayer docs for where to find apikey @ *2015-09-10 22:29:56 UTC*
  - 1cdfdf7a92 Merge pull request #27034 from rallytime/softlayer-doc-fix
  - cb641f8145 Update softlayer docs for where to find apikey

- **PR** #27024: (rallytime) Back-port #27004 to 2015.5 @ *2015-09-10 21:14:21 UTC*
  - **PR** #27004: (vtek21) Fix 'dict' object has no attribute split (refs: #27024, #27030)
  - 9e06d3f01a Merge pull request #27024 from rallytime/bp-27004
  - 54d6fcf4c7 Fix 'dict' object has no attribute split
  - bb29d73c71 Fix 'dict' object has no attribute split
  - 5f1a9c46aa Fix 'dict' object has no attribute split
  - 2bfdd9724e Fix 'dict' object has no attribute split
- **PR** #27027: (rallytime) Back-port #27013 to 2015.5 @ *2015-09-10 21:13:52 UTC*
  - **PR** #27013: (nmadhok) Remove unwanted debug statement (refs: #27027)
  - 9ab2cae1e4 Merge pull request #27027 from rallytime/bp-27013
  - 19a6e9cb1c Remove unwanted debug statement.
- **PR** #27026: (rallytime) Back-port #27011 to 2015.5 @ *2015-09-10 21:13:45 UTC*
  - **PR** #27011: (whiteinge) Move giant eventlisten.sh example out of the state.event docstring (refs: #27026)
  - 2c8beb238f Merge pull request #27026 from rallytime/bp-27011
  - f8518d545f Move giant eventlisten.sh example out of the state.event docstring
- **ISSUE** #20522: (eliasp) *modules.win_pkg.install()* blindly trusts *fileclient.get_url()*/unhandled exceptions (refs: #26972)
- **PR** #26972: (twangboy) Catch the 404 error from fileclient @ *2015-09-10 20:53:12 UTC*
  - e8cdcc62f7 Merge pull request #26972 from twangboy/fix_20522
  - 0110786fa9 Catch the 404 error from fileclient
- **PR** #26951: (terminalmage) Fix timezone module for CentOS @ *2015-09-10 20:46:07 UTC*
  - fbc95f4685 Merge pull request #26951 from terminalmage/fix-timezone
  - 30a4915762 Update tests to reflect changes to timezone module
  - b6f926919f Fix timezone module for CentOS
- **PR** #26875: (marccardinal) LXC gateway provisioned only when IP is provided @ *2015-09-10 19:31:32 UTC*
  - f2ad3c333c Merge pull request #26875 from marccardinal/patch-2
  - 36d5a62262 LXC gateway provisioned only when IP is provided
- **ISSUE** #26730: (styro) __opts__['user'] on Windows minion incorrect (eg for file.symlink) (refs: #26997, #`saltstack/salt`#26899`_`_, #26899)
- **PR** #26997: (twangboy) Fixed symlinks for windows (don't use user root) @ *2015-09-10 18:54:50 UTC*
  - **PR** #26899: (twangboy) file.symlink gets windows account instead of root (refs: #26997)
  - 7b2e7b1b37 Merge pull request #26997 from twangboy/fix_symlink_windows
  - 89cc02d4e0 Added *versionadded*
  - 835177b0c8 Fixed symlinks for windows (don't use user root)
- **PR** #27001: (twangboy) Added CLI Example for reg.delete_key_recursive @ *2015-09-10 17:19:43 UTC*
  - 5389a85894 Merge pull request #27001 from twangboy/fix_reg_docs
  - 2980bbda17 Minor clarification

  - 4684b2ddd1 Added CLI example for reg.delete_key_recursive

- **PR** #26996: (jacobhammons) Beacon doc updates @ *2015-09-10 16:47:49 UTC*
  - 37814f5dff Merge pull request #26996 from jacobhammons/beacon-doc
  - e475ea688e Fixed typo
  - 2401533d9e New content added to beacon docs.
- **ISSUE** #26867: (joejulian) lvm pv's can show as not belonging to their vg if symlink is used (refs: #26868)
- **PR** #26868: (joejulian) Use the actual device name when checking vgdisplay @ *2015-09-10 16:08:16 UTC*
  - 4ba7eed711 Merge pull request #26868 from joejulian/2015.5_lvm_vg_symlink_fix
  - 3dfb33849a Use the actual device name when checking vgdisplay
- **PR** #26955: (dsumsky) S3 ext_pillar module has broken caching mechanism (backport to 2015.5) @ *2015-09-10 14:54:01 UTC*
  - 1537e945be Merge pull request #26955 from dsumsky/s3-pillar-module-cache-fix-2015.5
  - 8219acffe7 - fixed pylint warnings
  - a3b10e8ab1 - fixed broken caching in S3 ext_pillar module (file_md5 was a list) - added debugging messages - static parameters are available as module parameters now
- **PR** #26987: (rallytime) Back-port #26966 to 2015.5 @ *2015-09-09 18:42:51 UTC*
  - **PR** #26966: (TheBigBear) URL has changed (refs: #26987)
  - 3e902e86b1 Merge pull request #26987 from rallytime/bp-26966
  - 6a29eac003 URL has changed
- **PR** #26915: (rallytime) Update Joyent Cloud Tests @ *2015-09-09 15:04:50 UTC*
  - eddb532713 Merge pull request #26915 from rallytime/joyent-tests
  - d4ad42d697 Update Joyent Cloud Tests
- **PR** #26971: (rallytime) Fix a couple of typos in reactor docs @ *2015-09-09 15:03:54 UTC*
  - f86814b2a4 Merge pull request #26971 from rallytime/reactor-doc-fix
  - 0214daad19 Fix a couple of typos in reactor docs
- **ISSUE** #26730: (styro) __opts__['user'] on Windows minion incorrect (eg for file.symlink) (refs: #26997, #`saltstack/salt`#26899`_`_, #26899)
  - **PR** saltstack/salt#26899: (twangboy) file.symlink gets windows account instead of root (refs: #26976)
- **PR** #26976: (thatch45) Revert "file.symlink gets windows account instead of root" @ *2015-09-08 22:44:19 UTC*
  - 57b1080f94 Merge pull request #26976 from saltstack/revert-26899-fix_26730
  - 6dd54e6bec Revert "file.symlink gets windows account instead of root"
- **PR** #26975: (whiteinge) Remove mocks from rest_cherrypy integration tests; fix groups check bug @ *2015-09-08 22:34:08 UTC*
  - 67be01f5fe Merge pull request #26975 from whiteinge/rest_cherrypy-integration
  - 9a0989585b Add additional 'groups' check to rest_cherrypy if groups are not used
  - d68aefcfde Remove mocks from rest_cherrypy integration tests
  - 2aa3da8911 Rename the rest_cherrypy tests to conform to our convention

- **ISSUE** #26730: (styro) __opts__['user'] on Windows minion incorrect (eg for file.symlink) (refs: #26997, #`salt-stack/salt`#26899`_`_, #26899)
- **PR** #26899: (twangboy) file.symlink gets windows account instead of root (refs: #26997) @ *2015-09-08 21:14:30 UTC*
  - 20a48f7f2e Merge pull request #26899 from twangboy/fix_26730
  - 9d9b3bb47a file.symlink gets windows account instead of root
- **PR** #26960: (rallytime) Fix bash code block formatting in CherryPy netapi docs @ *2015-09-08 18:14:11 UTC*
  - dbc6b862f4 Merge pull request #26960 from rallytime/cherrypy-docs
  - c1420711db Fix bash code block formatting
- **PR** #26940: (rallytime) Fix minor doc typo in client api @ *2015-09-08 04:15:00 UTC*
  - f733e048c9 Merge pull request #26940 from rallytime/api-doc-fix
  - 00fe6a225c Fix minor doc typo in client api
- **ISSUE** #26850: (jfindlay) salt-ssh error on 2015.8 (refs: #26852)
- **PR** #26871: (rallytime) Back-port #26852 to 2015.5 @ *2015-09-08 03:43:08 UTC*
  - **PR** #26852: (basepi) [2015.8] Only reference msgpack if it imported successfully (refs: #26871)
  - de9350466e Merge pull request #26871 from rallytime/bp-26852
  - 5a4c8dd2f5 Only reference msgpack if it imported successfully
- **ISSUE** #26644: (gravyboat) pkgrepo should note that for ubuntu/debian all options should not be used (refs: #26800, #26851)
- **ISSUE** #26638: (WackyOne) Suse install documentation (refs: #26800, #26851)
- **PR** #26851: (jacobhammons) states/pkgrepo examples, suse installation updates @ *2015-09-02 18:29:09 UTC*
  - a563af29d3 Merge pull request #26851 from jacobhammons/doc-bugs
  - ac3bd47440 states/pkgrepo examples, suse installation updates Refs #26644 Refs #26638
- **ISSUE** #26804: (lrhazi) gpasswd error on RHEL 5 (refs: #26817)
- **PR** #26817: (jfindlay) modify groupadd for rhel 5 @ *2015-09-02 14:52:53 UTC*
  - 5b1b934192 Merge pull request #26817 from jfindlay/grouparg
  - 82d33939f3 modify groupadd for rhel 5
- **ISSUE** #22724: (ty2u) digital_ocean_v2.py doesn't restore snapshot (refs: #26824)
- **PR** #26824: (systembell) [salt-cloud] Fix creating droplet from snapshot in digital_ocean provider @ *2015-09-02 05:18:37 UTC*
  - cdc0ea2fe3 Merge pull request #26824 from pravka/fix-droplet-creation-from-snapshot-in-dov2
  - 00e3192536 removing log
  - e4a82d78d9 removing stringification of every value in the image dict
  - cdc2b4584a fixing condition for slug check
- **ISSUE** #26805: (joejulian) cur_param referenced before assignment (refs: #26823, #26820)
- **PR** #26823: (joejulian) use dbus instead of localectl @ *2015-09-02 00:25:25 UTC*
  - 4af6951a4c Merge pull request #26823 from joejulian/ctlfix

  - a9928cb143 pep8 fixes
  - 6108ec4280 Gated dbus for os families that use it
  - e154c7b16f remove trailing spaces
  - c1c1266cc3 fix indent change
  - 0a35320aa7 Use dbus directly
- **ISSUE** #26805: (joejulian) cur_param referenced before assignment (refs: #26823, #26820)
- **PR** #26820: (jfindlay) add default param in _parse_localectl in locale mod @ *2015-09-01 22:02:17 UTC*
  - a1749b76b8 Merge pull request #26820 from jfindlay/ctlfix
  - 3a2c0d5fbb add default param in _parse_localectl in locale mod
- **ISSUE** #26788: (ssgward) Windows minion user.rename gives exception (refs: #26821)
- **PR** #26821: (twangboy) Fixed user.rename function in windows @ *2015-09-01 22:01:50 UTC*
  - ff733547c4 Merge pull request #26821 from twangboy/fix_26788
  - cf979e4877 Fixed user.rename function in windows
- **ISSUE** #26754: (jefftucker) MySQLdb-python package should be included with windows minion installer (refs: #26803)
- **PR** #26803: (twangboy) Added check for PyMySQL if MySQLdb import fails @ *2015-09-01 21:44:41 UTC*
  - c892be3255 Merge pull request #26803 from twangboy/fix_26754
  - 23576c65eb Added check for PyMySQL if MySQLdb import fails
- **ISSUE** #26798: (jfindlay) stack trace from linode driver (refs: #26815)
- **PR** #26815: (jfindlay) stringify linode id before performing str actions @ *2015-09-01 17:56:29 UTC*
  - 6edfa36083 Merge pull request #26815 from jfindlay/linstr
  - 2ff5823944 stringify linode id before performing str actions
- **ISSUE** #26644: (gravyboat) pkgrepo should note that for ubuntu/debian all options should not be used (refs: #26800, #26851)
- **ISSUE** #26638: (WackyOne) Suse install documentation (refs: #26800, #26851)
- **ISSUE** #26192: (jefftucker) Logging documentation does not exist (refs: #26800)

- **ISSUE** #24510: (ahammond) lack of documentation around Denied Keys (refs: #26800)
- **PR** #26800: (jacobhammons) Doc bug fixes @ *2015-09-01 05:40:09 UTC*
  - 135a8a64af Merge pull request #26800 from jacobhammons/doc-fixes
  - 5cca52a3c1 Fixed windows installer paths Refs #25567
  - 0ec036350d Updates to salt-ssh and salt-key #24510
  - 992edc3bb8 Doc bug fixes Refs #26192 Refs #26638 Refs #26644 Refs #26108
- **ISSUE** #24021: (arthurlogilab) [salt-cloud saltify] AttributeError: 'str' object has no attribute 'setdefault' (refs: #26793)
- **PR** #26793: (rallytime) Don't stacktrace if "name" is specified as a minion id in a map file @ *2015-08-31 19:24:25 UTC*

  - da161b9516 Merge pull request #26793 from rallytime/fix-name-stacktrace
  - 8601e4b341 Don't stacktrace if "name" is specified as a minion id in a map file
- **ISSUE** #24020: (arthurlogilab) [salt-cloud saltify] cannot use --profile saltify machine{1..3} without a map (refs: #26790)
- **PR** #26790: (rallytime) Update Saltify docs to be more accurate and helpful @ *2015-08-31 18:17:31 UTC*
  - 7c8d0a09f6 Merge pull request #26790 from rallytime/saltify_docs
  - d53754f2b7 Update Saltify docs to be more accurate and helpful
- **ISSUE** #26773: (styro) salt-call minor breakage on Windows (refs: #26775)
- **PR** #26787: (jfindlay) merge #26775 @ *2015-08-31 17:52:45 UTC*
  - **PR** #26775: (styro) Fix some leftover non portable exitcodes. (refs: #26787)
  - 70d0268c83 Merge pull request #26787 from jfindlay/imp
  - e5bbf59ec7 disable import lint in run.py
  - 8aef725243 Restore blank lines again.
  - 1710070f61 Restore blank line.
  - 59d61a8dea os module no longer required.
  - f1b8d0d509 Add missing imports.
  - 7bd8809e23 Fix some non portable exitcodes. Fixes #26773
- **PR** #26759: (terminalmage) Backport PR #26726 to 2015.5 branch @ *2015-08-31 14:39:20 UTC*
  - **PR** #26726: (terminalmage) Redact HTTPS Basic Auth in states/funcs which deal with git remotes (refs: #26759)
  - 645998dbd3 Merge pull request #26759 from terminalmage/bp-26726
  - d7f7fca7e5 More cleanup from moving auth redaction to salt.utils.url
  - 07db5a7038 fix redaction
  - 399871e6dd Add auth redaction flags to git exec module and use them in git state
  - 776dc38d73 check for ValueError when adding http basic auth
  - d2eb1f4340 Rename arguments in salt.utils.url.add_http_basic_auth
  - b45f37a467 Add http basic auth tests
  - 1ed42ea4fd Remove git unit tests, moving them to salt.utils.url tests
  - 96a55cdb59 Remove unused imports
  - 1f25a859bd Redact HTTPS Basic Auth data from remote URLs in comments and changes dict
  - eafeb6c7bf Automatically redact HTTPS basic auth
  - 6be3f8f9e1 Add support for callbacks to influence what information about commands is logged
  - c36f240a87 Add HTTPS Basic Auth funcs to salt.utils.url
- **ISSUE** #26628: (MadsRC) state.ipset tries to parse wrong data (refs: #26768)
- **PR** #26768: (garethgreenaway) Fixes to ipset in 2015.5 for #26628 @ *2015-08-29 03:24:07 UTC*
  - 46a4bbd0e7 Merge pull request #26768 from garethgreenaway/26628_2015_5_ipset_fixes

  - f0c6090c7e Fixing issue when information returned from ipset isn't in the format we expect and it causes an exception.

- **ISSUE** #26732: (saltstack-bot) SmartOS pkgsrc dependency (refs: #26753)
- **PR** #26753: (jfindlay) import elementree from _compat in ilo exec mod @ *2015-08-28 20:56:45 UTC*
  - 7a58878ea8 Merge pull request #26753 from jfindlay/iloet
  - 211a02754f import elementree from _compat in ilo exec mod
- **ISSUE** #21256: (dhs-rec) win.exe package for RH 6 (refs: #26736)
- **PR** #26736: (twangboy) Changed import from smbconnection to smb3 @ *2015-08-28 17:23:42 UTC*
  - 22dbce8d61 Merge pull request #26736 from twangboy/fix_21256
  - 86f425c669 Changed import from smbconnection to smb3
- **ISSUE** #26705: (Galser) Salt-Master 2015.5.5-1 on Scientific Linux 6 fails loading some primitive pillars from YAML (refs: #26714)
- **PR** #26714: (jfindlay) add exception placeholder for older msgpacks @ *2015-08-28 16:02:35 UTC*
  - 16d4e0350d Merge pull request #26714 from jfindlay/pack_except
  - ebcfaf9050 add exception placeholder for older msgpacks
- **PR** #26710: (rallytime) Update GCE driver to return True, False or a new name in __virtual__() @ *2015-08-27 20:08:17 UTC*
  - 47faa8cc16 Merge pull request #26710 from rallytime/gce_virtual_return
  - e6b74879d7 Remove unused import
  - 78e31585cf Update GCE driver to return True, False or a new name in __virtual__()
- **ISSUE** #14612: (cachedout) Catch provider errors in salt cloud (refs: #26709)
- **PR** #26709: (rallytime) Ensure VM name is valid before trying to create Linode VM @ *2015-08-27 20:07:49 UTC*
  - cf487cf0f5 Merge pull request #26709 from rallytime/fix-14612
  - bc21094ea0 versionadded and more efficient checks
  - a3ac8e7008 Whitespace fix
  - 9a4228d906 Added unit tests for new _validate_name function and adjusted regex
  - 388815112c Ensure VM name is valid before trying to create Linode VM
- **ISSUE** #9592: (otrempe) pip module fails on Windows because of quoting (refs: #26617)
- **PR** #26617: (terminalmage) Fix Windows failures in pip module due to raw string formatting @ *2015-08-27 19:24:53 UTC*
  - c3a6280f8c Merge pull request #26617 from terminalmage/issue9592
  - 96c3df1ed5 Don't accept non-list input for pkgs arg
  - 419221535b Lint fix
  - ede057eebc Fix tests to reflect args being passed as lists instead of strings
  - 03250dbd9f Pass command to cmd.run_all as list instead of joining
  - 1c90cdb07e salt/modules/pip.py: Remove raw string format flags
  - cd35df5ff8 Catch TypeErrors in timed_subprocess

- **PR** #26700: (kev009) Ignore the first element of kern.disks split, which is the sysctl name @ *2015-08-27 17:48:02 UTC*
  - 24a4f54f39 Merge pull request #26700 from kev009/fbsd-disks-fix-2015.5
  - 3ac97f9de4 Ignore the first element of kern.disks split, which is the sysctl name
- **PR** #26695: (terminalmage) Better HTTPS basic auth redaction for 2015.5 branch @ *2015-08-27 15:10:38 UTC*
  - 58945131b5 Merge pull request #26695 from terminalmage/better-https-auth-redaction-2015.5
  - 752d260209 Use versioninfo tuple for comparison
  - b1d253483e Better HTTPS basic auth redaction for 2015.5 branch
- **PR** #26694: (terminalmage) Backport #26693 to 2015.5 @ *2015-08-27 08:16:30 UTC*
  - **PR** #26693: (serge-p) Update openbsdpkg.py (refs: #26694)
  - 4040a312f9 Merge pull request #26694 from terminalmage/bp-26693
  - 4aec926476 Update openbsdpkg.py
- **PR** #26681: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-26 22:03:07 UTC*
  - 0b17f80fe9 Merge pull request #26681 from basepi/merge-forward-2015.5
  - 64cad371f0 Remove overmocked test
  - 40718af1d5 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - c2c7fe06c8 Merge pull request #26667 from nmadhok/doc-fix-2014.7
    - 26be189689 Doc fix. Fixes #26656
  - 6bd3dccae8 Merge pull request #26663 from jacobhammons/2014.7-version
    - b6af538070 version change for latest branch
  - 071a6112e5 Merge pull request #26636 from rallytime/cloud-test-fixes
    - c0d83d558d Don't use id as variable
    - 2b4bc1679d Keep ec2 instance creation test the same - it works better for the ec2 output
    - b5b58eb31f Skip digital ocean tests since we can't use API v1 with v2 tests
    - 9ae1539c62 Update cloud tests to be more efficient and accurate
  - 304542b4c6 Merge pull request #26640 from efficks/fixws2014
    - ebe5d9d85c Fix function spacing
- **PR** #26676: (rallytime) Back-port #26648 to 2015.5 @ *2015-08-26 19:46:01 UTC*
  - **PR** #26648: (whiteinge) Free 'fun' from the function signature namespace (refs: #26676)
  - 75675a6ba9 Merge pull request #26676 from rallytime/bp-26648
  - 1af42eed36 Free 'fun' from the function signature namespace
- **PR** #26677: (rallytime) Back-port #26653 to 2015.5 @ *2015-08-26 19:45:54 UTC*
  - **PR** #26653: (dmyerscough) You can provide a X-Auth-Token when requesting jobs (refs: #26677)
  - d7f682cb5b Merge pull request #26677 from rallytime/bp-26653
  - 497ca96039 You can provide a X-Auth-Token when requesting jobs
- **PR** #26675: (rallytime) Back-port #26631 to 2015.5 @ *2015-08-26 19:44:59 UTC*

  - **PR** #26631: (PierreR) Fix get_load in postgres returner (refs: #26675)
  - 960dbba7ed Merge pull request #26675 from rallytime/bp-26631
  - 20eecdc7be Fix get_load
- **PR** #26655: (damonzheng) Update win_dns_client.py @ *2015-08-26 16:05:26 UTC*
  - db30926ac9 Merge pull request #26655 from cheng0919/2015.5
  - fdebc01def Update win_dns_client.py
  - 1d23d5e797 Update win_dns_client.py
  - 1a45db0fb7 Update win_dns_client.py
- **PR** #26662: (jacobhammons) update version to 2015.5 @ *2015-08-26 13:45:44 UTC*
  - a04d243471 Merge pull request #26662 from jacobhammons/version
  - 4e5766fdde update version to 2015.5
- **PR** #26651: (jfindlay) add 2015.5.4 notes to 2015.5.5 notes @ *2015-08-26 00:25:28 UTC*
  - 8a9a076ad4 Merge pull request #26651 from jfindlay/2015.5
  - dc5cee5f8f add 2015.5.4 notes to 2015.5.5 notes
- **ISSUE** #26497: (JensRantil) Feature request: Make salt.states.managed support local file *source* (refs: #26525)
- **PR** #26525: (jfindlay) document check_file_meta args, remove unused arg @ *2015-08-25 21:43:46 UTC*
  - 5bdefdc234 Merge pull request #26525 from jfindlay/sum
  - 0297d49aa0 remove unused check_file_meta arg
  - 6a3cb1c0aa document args to file.check_file_meta exec fcn
- **PR** #26561: (stanislavb) Leave salt.utils.s3 location fallback to salt.utils.aws (refs: #27070) @ *2015-08-25 21:40:30 UTC*
  - **PR** #26446: (stanislavb) Fetch AWS region from EC2 instance metadata (refs: #26561)
  - **PR** #26378: (stanislavb) Fix EC2 credentials from IAM roles for s3fs and s3 ext_pillar in 2015.5 (refs: #26446)
  - 84e96458b3 Merge pull request #26561 from stanislavb/2015.5
  - 50332895a1 Leave salt.utils.s3 location fallback to salt.utils.aws
- **ISSUE** #22550: (amendlik) Error deleting SSH keys using salt-cloud --destroy (refs: #26573)
- **PR** #26573: (rallytime) Don't stacktrace if using private_ips and delete_sshkeys together @ *2015-08-25 20:00:23 UTC*
  - 1d729734cc Merge pull request #26573 from rallytime/destroy_ssh_keys_private_ips
  - 4267509c25 Don't stacktrace if using private_ips and delete_sshkeys
- **ISSUE** #20169: (flavianh) [salt-cloud] Add a meaningful error when /etc/salt/cloud is missing the master's address (refs: #26563)
- **PR** #26563: (rallytime) Fix error detection when salt-cloud config is missing a master's address @ *2015-08-25 20:00:11 UTC*
  - 000e5a2acf Merge pull request #26563 from rallytime/fix-20169
  - 65b285d02d Only warn if master IP is unset - must be compatible with masterless minions
  - a4c87fcf57 Simplify logic

  - 593ead08cf Fix error detection when salt-cloud config is missing a master's address

- **PR** #26641: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-25 18:17:46 UTC*
  - 19c7a6d575 Merge pull request #26641 from basepi/merge-forward-2015.5
  - a5dafa436c Already fixed on 2015.5
  - 71c0898fb5 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 4532f98a76 Merge pull request #26515 from bersace/salt-env-local-sls
  - 0727af9e3d Defaults to current saltenv in state.sls
- **PR** #26620: (rallytime) Also add -Z to script args for cloud tests @ *2015-08-24 22:03:24 UTC*
  - 2927859c8a Merge pull request #26620 from rallytime/more_script_args
  - 9ae27193d8 Also add -Z to script args for cloud tests
- **PR** #26618: (rallytime) Add script_args: '-P' to Ubuntu 14 profiles for nightly cloud tests @ *2015-08-24 21:15:24 UTC*
  - ed166ebd4f Merge pull request #26618 from rallytime/pip-undate-cloud-tests
  - 5a2c8825ba Extra lines
  - d28672b69e Add script_args: '-P' to Ubuntu 14 profiles for nightly cloud tests
- **PR** #26612: (rallytime) Use an available image to test against @ *2015-08-24 19:09:18 UTC*
  - 6d3927bed5 Merge pull request #26612 from rallytime/fix-do-list-images-test
  - 1401255287 Use an available image to test against
- **ISSUE** #15590: (jtratner) salt-cloud gce configuration check incorrect (refs: #26576)
- **PR** #26576: (rallytime) Ensure GCE and EC2 configuration checks are correct @ *2015-08-23 18:59:46 UTC*
  - 991bbf63fe Merge pull request #26576 from rallytime/fix-14604
  - ac67a1d238 Ensure GCE configuration check is correct
  - 421f1fde1e Ensure EC2 configuration check is correct
- **ISSUE** #12225: (arthurlogilab) [salt-cloud] Attribution of floating IPs works partially in parallel mode (refs: #26580)
- **PR** #26580: (rallytime) Avoid race condition when assigning floating IPs to new VMs @ *2015-08-23 18:58:48 UTC*
  - 746c0008a9 Merge pull request #26580 from rallytime/fix-12225
  - e3f7db17cc Avoid race condition when assigning floating IPs to new VMs
  - afda31be74 Create _assign_floating_ips function for DRY
- **PR** #26581: (terminalmage) Skip tests that don't work with older mock @ *2015-08-22 23:06:27 UTC*
  - 965a4ba7cf Merge pull request #26581 from terminalmage/fix-tests
  - 49d8bd1dbe Remove unused import
  - 81a0d4c915 Skip tests that don't work with older mock
- **ISSUE** #25478: (zyio) salt-ssh - Unable to locate current thin version (refs: #25862)
- **ISSUE** #25026: (sylvia-wang) salt-ssh "Failure deploying thin" when using salt module functions (refs: #25862)
- **PR** #26591: (rallytime) Back-port #26554 to 2015.5 @ *2015-08-22 21:19:02 UTC*

  - **PR** #26554: (tjstansell) /bin/sh is more portable than /bin/bash (refs: #26591)
  - **PR** #25862: (zyio) Adding SCP_NOT_FOUND exit code (refs: #26554)
  - 19992c1450 Merge pull request #26591 from rallytime/bp-26554
  - 6f8bed88cb /bin/sh is more portable than /bin/bash
- **PR** #26565: (cachedout) Fix many errors with __virtual__ in tests @ *2015-08-21 21:37:54 UTC*
  - 2cd36c7ed4 Merge pull request #26565 from cachedout/fix_virtual_warnings
  - 41541e4e2b Fix many errors with __virtual__ in tests
- **ISSUE** #19249: (ahetmanski) Cannot create cache_dir salt master exception. (refs: #26548)
- **PR** #26553: (rallytime) Back-port #26548 to 2015.5 @ *2015-08-21 17:40:21 UTC*
  - **PR** #26548: (vakulich) Catch OSError during cache directories creation, fixes #19249 (refs: #26553)
  - 5a32664efd Merge pull request #26553 from rallytime/bp-26548
  - ec2b2c3e40 Catch OSError during cache directories creation, fixes #19249
- **PR** #26552: (rallytime) Back-port #26542 to 2015.5 @ *2015-08-21 17:40:11 UTC*
  - **PR** #26542: (arthurlogilab) [doc] reactor documentation fix : returners (refs: #26552)
  - 7e67e48656 Merge pull request #26552 from rallytime/bp-26542
  - 0976b1e23b [doc] reactor documentation fix : returners
- **PR** #26551: (rallytime) Back-port #26539 to 2015.5 @ *2015-08-21 17:39:22 UTC*
  - **PR** #26539: (carlpett) Doc-fix: Escape backslash in domain\\username (refs: #26551)
  - bcd462545d Merge pull request #26551 from rallytime/bp-26539
  - 94ff4cff40 Doc-fix: Escape backslash in domainusername
- **PR** #26549: (rallytime) Back-port #26524 to 2015.5 @ *2015-08-21 17:38:50 UTC*
  - **PR** #26524: (JensRantil) Gracefully handle package comparison not in (-1, 0, 1) (refs: #26549)
  - **PR** #25369: (anlutro) Fix aptpkg.version_cmp (refs: #26524)
  - 4dbf61c5af Merge pull request #26549 from rallytime/bp-26524
  - 4763f28725 logging(cmp_version): output assertion
  - 673b6c683d utils(version_cmp): handle comparison not in (0,1,-1)
- **ISSUE** #26502: (ryan-lane) Adding a listener with None as ports doesn't result in an invocation error in boto_elb (refs: #26527)
- **PR** #26527: (jfindlay) check exists and values in boto_elb listeners @ *2015-08-21 15:27:52 UTC*
  - 1ac8287588 Merge pull request #26527 from jfindlay/elb
  - 343e47f00c check exists and values in boto_elb listeners
- **PR** #26446: (stanislavb) Fetch AWS region from EC2 instance metadata (refs: #26561) @ *2015-08-21 15:11:08 UTC*
  - **PR** #26378: (stanislavb) Fix EC2 credentials from IAM roles for s3fs and s3 ext_pillar in 2015.5 (refs: #26446)
  - e4b2534aa8 Merge pull request #26446 from stanislavb/2015.5-ec2-metadata-region
  - 57943ff4f7 Fetch AWS region from EC2 instance metadata

- **PR** #26546: (nmadhok) Do not raise KeyError when calling avail_images if VM/template is in disconnected state @ *2015-08-21 14:17:49 UTC*
  - d721b7b2be Merge pull request #26546 from nmadhok/vmware-key-error-patch-2015.5
  - 1dcf157256 Do not raise KeyError when calling avail_images if VM/template is in disconnected state
- **ISSUE** #25360: (BretFisher) file.replace removes line feed if using YAML's multiline string syntax (refs: #26481)
- **PR** #26537: (jfindlay) Merge #26481 @ *2015-08-21 05:37:24 UTC*
  - **PR** #26481: (TheBigBear) minor note: added (refs: #26537)
  - 7da87fabf1 Merge pull request #26537 from jfindlay/note
  - 662e723ae0 fixup note lint in file.replace state mod
  - 332535f2e6 Update file.py
  - 598500034f Update file.py
  - ec7c7d738d minor note: added
- **PR** #26528: (zmalone) Fixing encrypt to instructions in the 2015.5 branch @ *2015-08-20 21:49:06 UTC*
  - c6d8e34730 Merge pull request #26528 from zmalone/2015.5
  - 39b111c465 Fixing encrypt to instructions in the 2015.5 branch, --homedir is not necessary here.

33.2.118 Salt 2015.5.7 Release Notes

release
2015-10-13

Version 2015.5.7 is a bugfix release for *2015.5.0*.

Statistics

- Total Merges: **103**
- Total Issue References: **66**
- Total PR References: **135**
- Contributors: **46** (0xf10e, JaseFace, MasterNayru, MrCitron, Sacro, ajacoutot, arthurlogilab, basepi, belvedere-trading, beverlcl, blast-hardcheese, blueyed, bogdanr, cachedout, cbuechler, chrigl, dmyerscough, eguven, eliasp, erchn, eyj, garethgreenaway, gashev, gnubyexample, gracinet, gravyboat, gwaters, hedinfaok, iggy, jacksontj, jacobhammons, jfindlay, lorengordon, mbologna, msciciel, nmadhok, pass-by-value, plastikos, rallytime, rominf, s0undt3ch, silenius, sjmh, stephen144, terminalmage, twangboy)

Important: A significant orchestrate issue (issue #29110) was discovered during the release process of 2015.5.7, so it has not been officially released. Please use *2015.5.8* instead.

Changelog for v2015.5.6..v2015.5.7

Generated at: 2018-05-27 22:16:54 UTC

- **PR** #28864: (jfindlay) add 2015.5.7 release notes @ *2015-11-13 17:15:00 UTC*
  - ec7fdc539b Merge pull request #28864 from jfindlay/2015.5
  - 648b697951 add 2015.5.7 release notes
- **ISSUE** #27392: (ahammond) schedule running state.orchestrate fails (refs: #28731)
- **PR** #28731: (garethgreenaway) Fixes to salt scheduler in 2015.5, ensuring that return_job is only used on minion scheduler @ *2015-11-13 16:58:06 UTC*
  - bed45f4208 Merge pull request #28731 from garethgreenaway/27392_2015_5_scheduler_return_job_master
  - 771e9f7b6f Fixing the salt scheduler so that it only attempts to return the job data to the master if the scheduled job is running from a minion's scheduler.
- **PR** #28857: (rallytime) Back-port #28851 to 2015.5 @ *2015-11-13 13:56:53 UTC*
  - **PR** #28851: (rominf) [states/schedule] docstring: args, kwargs -> job_args, job_kwargs (refs: #28857)
  - 06f4932876 Merge pull request #28857 from rallytime/bp-28851
  - aa4b193f87 [states/schedule] docstring: args, kwargs -> job_args, job_kwargs
- **PR** #28856: (rallytime) Back-port #28853 to 2015.5 @ *2015-11-13 13:46:10 UTC*
  - **PR** #28853: (eliasp) Typo (with → which) (refs: #28856)
  - 0934a52b34 Merge pull request #28856 from rallytime/bp-28853
  - 37eeab2683 Typo (with → which)
- **ISSUE** #28828: (basepi) salt-ssh doesn't package tornado's new deps in the thin (refs: #28826)
- **PR** #28832: (basepi) [2015.5] Backport #28826 @ *2015-11-12 19:32:03 UTC*
  - **PR** #28826: (basepi) [2015.8] Add new tornado deps to salt-ssh thin (refs: #28832)
  - eb904665dc Merge pull request #28832 from basepi/backport.28826
  - 57be72eb91 Add backports_abc and singledispatch_helpers to thin as well
  - 897cad627b Add singledispatch to the thin
- **ISSUE** #8647: (Mrten) salt '*' highstate returns 'minion did not return', salt [minion] highstate works (refs: #28833)
- **PR** #28833: (basepi) [2015.5] Increase the default gather_job_timeout @ *2015-11-12 19:31:58 UTC*
  - eff811a0ad Merge pull request #28833 from basepi/increase.gather_job_timeout.8647
  - c09243dd01 Increase the default gather_job_timeout
- **PR** #28829: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-11-12 18:50:51 UTC*
  - e4a036365d Merge pull request #28829 from basepi/merge-forward-2015.5
  - f8b8441485 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 76e69b4bff Merge pull request #28777 from rallytime/bp-28740-2014.7
    - da5fac2b36 Back-port #28740 to 2014.7
  - 45c73ebf2f Merge pull request #28716 from rallytime/bp-28705
    - 32e7bd3ea0 Account for new headers class in tornado 4.3

    - f4fe921965 Merge pull request #28717 from cachedout/umask_note
        * 1874300e08 Add note about recommended umask
- **ISSUE** #25775: (trimbleagvendoraccounta) blockdev.formatted formats but fails. Second highstate shows success. (refs: #28756)
- **ISSUE** #20235: (joejulian) blockdev.format state can fail even if it succeeds (refs: #28756)
- **PR** #28756: (MrCitron) Fix #25775 @ *2015-11-12 17:47:51 UTC*
    - 93562631aa Merge pull request #28756 from MrCitron/fix-25775
    - 82075c809c Add logs and correct pylint error
    - e31e22d96a Fix 25775
- **ISSUE** #28783: (chrigl) iptables.get_saved_rules does not handle family=ipv6 (refs: #28786)
- **PR** #28786: (chrigl) closes #28783 @ *2015-11-11 21:01:19 UTC*
    - 30cc48e37f Merge pull request #28786 from chrigl/fix-28783
    - ba6d814553 closes #28783
- **PR** #28776: (rallytime) Back-port #28740 to 2015.5 @ *2015-11-11 18:02:03 UTC*
    - **PR** #28740: (MasterNayru) Add missing S3 module import (refs: #28776, #28777)
    - 8f1d0b636e Merge pull request #28776 from rallytime/bp-28740-2015.5
    - 49256b7d90 Back-port #28740 to 2015.5
- **ISSUE** #28732: (dmyerscough) cherrypy API endpoint (refs: #28760)
- **ISSUE** #22452: (whiteinge) rest_cherrypy /keys URL returns empty keys for minion IDs that already exist (refs: #28760)
- **ISSUE** #22451: (whiteinge) rest_cherrypy /keys URL throws a 500 on the first request (refs: #28760)
- **ISSUE** #22442: (allanliu) rest_cherrypy /keys URL does not handle JSON requests (refs: #28760)
- **PR** #28760: (dmyerscough) Fixing CherryPy key bug @ *2015-11-11 15:11:18 UTC*
    - 77d4b980f1 Merge pull request #28760 from dmyerscough/28732-Fix-cherrypi-api-keys-endpoint
    - 206d1684b2 Fixing CherryPy key bug
- **ISSUE** #28714: (gravyboat) Salt-api doesn't work with post unless data is included. (refs: #28718)
- **PR** #28746: (rallytime) Back-port #28718 to 2015.5 @ *2015-11-10 18:16:40 UTC*
    - **PR** #28718: (sjmh) Account for no POST data (refs: #28746)
    - 6f8f04975f Merge pull request #28746 from rallytime/bp-28718
    - 092f441cad Account for no POST data
- **PR** #28705: (cachedout) Account for new headers class in tornado 4.3 (refs: #28716) @ *2015-11-09 19:24:34 UTC*
    - f40c617bad Merge pull request #28705 from cachedout/tornado_http_headers
    - 7ac6cde1ee Account for new headers class in tornado 4.3
- **PR** #28699: (rallytime) Back-port #28670 to 2015.5 @ *2015-11-09 18:10:58 UTC*
    - **PR** #28670: (plastikos) psutil can fail to look-up a uid and raise a KeyError (refs: #28699)
    - 604a7b4199 Merge pull request #28699 from rallytime/bp-28670
    - e436b23296 psutil can fail to look-up a uid and raise a KeyError

- **PR** #28703: (rallytime) Back-port #28690 to 2015.5 @ *2015-11-09 18:01:57 UTC*
  - **PR** #28690: (MrCitron) Fix 28689 : Check s3 ext pillar cache file before calculating expiration (refs: #28703)
  - 7bd3eb8370 Merge pull request #28703 from rallytime/bp-28690
  - a0988dab58 Fix 28689 : Check s3 ext pillar cache file before calculating expiration
  - **PR** saltstack/salt-bootstrap#868: (cachedout) Always refresh the Arch Linux keyring if needed (refs: #28694)
- **PR** #28694: (s0undt3ch) [2015.5] Update to latest bootstrap script v2015.11.09 @ *2015-11-09 17:49:53 UTC*
  - 2a40f57b93 Merge pull request #28694 from s0undt3ch/2015.5
  - 0910c6ffe4 Update to latest bootstrap script v2015.11.09
- **ISSUE** #26592: (centromere) rabbitmq.list_vhosts removes final line from rabbitmqctl output (refs: #28669)
- **PR** #28669: (rallytime) Use the -q argument to strip extraneous messages from rabbitmq @ *2015-11-08 01:07:25 UTC*
  - 3249b322e8 Merge pull request #28669 from rallytime/fix-26592
  - 098fb815af Use the -q argument to strip extraneous messages from rabbitmq
- **ISSUE** #28577: (jacksontj) Increase in master CPU usage after upgrading to 2015.8 (refs: #28645)
- **PR** #28645: (jacksontj) Rework minion return_retry_timer @ *2015-11-07 03:40:28 UTC*
  - **PR** #27286: (terminalmage) Add a configurable timer for minion return retries (refs: #28645)
  - 29e8250d0c Merge pull request #28645 from jacksontj/2015.5
  - f63c2d70a7 Rework minion return_retry_timer
- **ISSUE** #15177: (baskinomics) system.join_domain() does not join domain on Windows Server 2012 R2 (refs: #28668)
- **PR** #28668: (twangboy) Fixed join_domain and unjoin_domain for Windows @ *2015-11-07 03:40:04 UTC*
  - 1bbaea8aad Merge pull request #28668 from twangboy/fix_15177
  - 745b8f75f6 Fixed some lint
  - a43eb53f28 Added version added notes in docs
  - 6b537c8640 Fixed join_domain and unjoin_domain for Windows
- **ISSUE** #8051: (regilero) Problems with fileinput.input inplace editing in salt.states.file.replace (refs: #28174)
- **ISSUE** #7999: (regilero) MULTILINE pattern cannot work in file.replace, fileinput always reads line by line. (refs: #28174)
- **PR** #28666: (jfindlay) define r_data before using it in file module @ *2015-11-07 00:46:27 UTC*
  - **PR** #28174: (lorengordon) Add support for multiline regex in file.replace (refs: #28666)
  - 4ad5056066 Merge pull request #28666 from jfindlay/r_data
  - 29228f445f define r_data before using it in file module
- **ISSUE** #24758: (zerthimon) salt-minion uses 100% CPU for periodic status.master task on a server with a lot of TCP connections (a LB). (refs: #28662)
- **PR** #28662: (cachedout) Add note about disabling master_alive_interval @ *2015-11-07 00:38:12 UTC*
  - e129e889ad Merge pull request #28662 from cachedout/issue_24758

  - 78f4894333 Add note about disabling master_alive_interval
- **PR** #28627: (twangboy) Backport win_useradd @ *2015-11-06 16:57:49 UTC*
  - df121d0cec Merge pull request #28627 from twangboy/backport_win_useradd
  - 87282b6354 Backport win_useradd
- **ISSUE** #28398: (L4rS6) Permissions /var/cache/salt/minion/extmods (refs: #28617)
- **PR** #28617: (cachedout) Set restrictive umask on module sync @ *2015-11-05 23:43:28 UTC*
  - 64a20228c6 Merge pull request #28617 from cachedout/umask_module_sync
  - 227792e158 Set restrictive umask on module sync
- **ISSUE** #28621: (gravyboat) Puppet module documentation should be less insulting (refs: #28622)
- **PR** #28622: (gravyboat) Update puppet module wording @ *2015-11-05 20:34:07 UTC*
  - 065f8c7fb3 Merge pull request #28622 from gravyboat/update_puppet_module_docs
  - 4ea28bed30 Update puppet module wording
- **ISSUE** #655: (thatch45) Add general command management to service (refs: #`saltstack/salt-bootstrap#656`_)
  - **PR** saltstack/salt-bootstrap#674: (jfindlay) add support for repo.saltstack.com (refs: #28563)
  - **PR** saltstack/salt-bootstrap#665: (mbologna) Change to 'dnf' as package manager for Fedora 22-> (refs: #28563)
  - **PR** saltstack/salt-bootstrap#656: (eyj) Add bootstrap -b flag (don't install dependencies) (refs: #28563)
  - **PR** saltstack/salt-bootstrap#654: (hedinfaok) Fixes error finding python-jinja2 in RHEL 7 (refs: #28563)
  - **PR** saltstack/salt-bootstrap#653: (cbuechler) Make bootstrap work with FreeBSD 11-CURRENT. (refs: #28563)
- **PR** #28563: (s0undt3ch) [2015.5] Update to latest bootstrap script v2015.11.04 @ *2015-11-04 15:16:31 UTC*
  - 08295de5a5 Merge pull request #28563 from s0undt3ch/2015.5
  - 16f4db79a0 Update to latest bootstrap script v2015.11.04
- **ISSUE** #28173: (twangboy) system.computer_name does not work in windows (refs: #28541)
- **PR** #28541: (twangboy) Fixed problem with system.set_computer_name @ *2015-11-04 14:48:54 UTC*
  - 1e09f186ce Merge pull request #28541 from twangboy/fix_28173
  - 7edf5ce370 Fixed problem with system.set_computer_name
- **ISSUE** #28524: (bmcorser) UnicodeDecodeError in states.file (refs: #28538, #28537)
  - **PR** #28538: (jfindlay) decode path and url to utf-8 in url.create (refs: #28537)
- **PR** #28537: (jfindlay) decode filename to utf-8 in file.recurse state @ *2015-11-04 14:48:18 UTC*
  - f44ed780b5 Merge pull request #28537 from jfindlay/decode_state_2015.5
  - 06e514940c decode filename to utf-8 in file.recurse state
- **ISSUE** #28272: (gravyboat) Update documentation contributing docs to explain how to PR against different releases (refs: #28529)
- **PR** #28529: (rallytime) Update contributing and documentation pages to recommend submitting against branches @ *2015-11-04 14:47:21 UTC*
  - 6acf87593f Merge pull request #28529 from rallytime/fix-28272

  - a959681858 Add link to Sending a GH PR to documentation docs
  - 1c612e2772 Update contributing and documentation pages to recommend submitting against branches
- **ISSUE** #28511: (nghgd) vmware clone task fails instead of waiting to completion (refs: #28546)
- **PR** #28548: (nmadhok) [Backport] [2015.5] Tasks can be in queued state instead of running @ *2015-11-04 04:14:25 UTC*
  - **PR** #28546: (nmadhok) Tasks can be in queued state instead of running. (refs: #28548)
  - 025bff2bf0 Merge pull request #28548 from nmadhok/2015.5-task-error
  - 804a0a6537 Tasks can be in queued state instead of running. Fixes #28511
- **ISSUE** #24585: (utahcon) No version data for SALT.STATES.VIRTUALENV in wiki (refs: #28531)
- **PR** #28531: (rallytime) Add versionadded directives to virtualenv_mod state/module @ *2015-11-03 21:34:49 UTC*
  - 63bd3e52b3 Merge pull request #28531 from rallytime/fix-24585
  - bc577b2531 Add versionadded directives to virtualenv_mod state/module
- **PR** #28508: (twangboy) Fixed windows tests @ *2015-11-03 19:31:12 UTC*
  - ea3bf972c4 Merge pull request #28508 from twangboy/fix_unit_tests_windows
  - 0da6ff7c50 Fixed some logic
  - cf1e059be5 Fixed windows tests
- **PR** #28525: (rallytime) Fix spacing in doc examples for boto_route53 state and module @ *2015-11-03 19:30:24 UTC*
  - 73c5735fc1 Merge pull request #28525 from rallytime/route53_spacing
  - 6ab2ce615c Fix spacing in doc examples for boto_route53 state and module
- **ISSUE** #28243: (guettli) Docs: default value of state_auto_order ? (refs: #28517)
- **PR** #28517: (rallytime) Add state_auto_order defaults to True note to ordering docs @ *2015-11-03 14:04:40 UTC*
  - 2d7f934f67 Merge pull request #28517 from rallytime/fix-28243
  - be8f650901 Punctuation.
  - fd846822c1 Add state_auto_order defaults to True note to ordering docs
- **PR** #28512: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-11-03 00:38:08 UTC*
  - 63ce8f78d5 Merge pull request #28512 from basepi/merge-forward-2015.5
  - 61c382133a Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 4bf56cad3f Merge pull request #28461 from cachedout/issue_28455
    - 097838ec0c Wrap all cache calls in state.sls in correct umask
  - f3e61db045 Merge pull request #28407 from DSRCompany/issues/24910_token_auth_fix_2014
    - b7b5bec309 Don't request creds if auth with key.
- **PR** #28448: (gwaters) added a note to the tutorial for redhat derivatives @ *2015-10-30 18:49:53 UTC*
  - 37ceae1e88 Merge pull request #28448 from gwaters/add-redhat-notes
  - e70990704a added a note to the tutorial for those that redhat so they can use the state file too.
- **PR** #28406: (rallytime) Back-port #28381 to 2015.5 @ *2015-10-29 19:10:37 UTC*

  - **PR** #28381: (JaseFace) Add FreeBSD detection for VirtualBox (refs: #28406)
  - 5ef50d60cd Merge pull request #28406 from rallytime/bp-28381
  - e5322d2c44 Add FreeBSD detection for VirtualBox
- **PR** #28413: (rallytime) Back-port #28400 to 2015.5 @ *2015-10-29 18:06:46 UTC*
  - **PR** #28400: (msciciel) State pkg.installed: do not execute _preflight_check if not_installed list is empty in _find_install_targets (refs: #28413)
  - 30d5f7bbae Merge pull request #28413 from rallytime/bp-28400
  - ae1921b922 Do not execute _preflight_check if not_installed list is empty in _find_install_targets. Calling with empty list on rhel/centos cause execution of repoquery --whatprovides without pkg list which is memory consumptive task for host and also for red hat satellite server.
- **PR** #28366: (erchn) mark repo not enabled when pkgrepo state passes in disable: True @ *2015-10-29 15:55:54 UTC*
  - 045d540aff Merge pull request #28366 from erchn/fix_yumpkg_mod_repo_disabled
  - 8187a4ce20 re-arrange things a bit to have less overall changes
  - f1d570ff18 move todelete above disabled check, add comment
  - 64feec413f also remove disabled key from repo_opts
  - 2f2ebb7bb6 mark repo not enabled when pkgrepo state passes in disable: True
- **ISSUE** #28372: (beverlcl) use_carrier option for bonding network interfaces are setting invalid values (refs: #28373)
- **PR** #28373: (beverlcl) Fixing bug #28372 for use_carrier option on bonding network interfaces. @ *2015-10-29 14:45:57 UTC*
  - 3923f4a569 Merge pull request #28373 from beverlcl/fix-use_carrier-28372
  - 32cffeceb6 Fixing bug #28372 for use_carrier option on bonding network interfaces.
- **PR** #28359: (rallytime) Back-port #28358 to 2015.5 @ *2015-10-28 20:43:05 UTC*
  - **PR** #28358: (arthurlogilab) docstring typo fix - list returners not runners (refs: #28359)
  - e07e3f257b Merge pull request #28359 from rallytime/bp-28358
  - 9cacbf582b docstring typo fix - list returners not runners
- **ISSUE** #28000: (hrumph) No option to stop windows minion installer from starting service in silent mode. (refs: #28346)
- **ISSUE** #27923: (twangboy) Salt Windows Installer fails to grab existing config (refs: #28346)
- **PR** #28346: (twangboy) Fix installer @ *2015-10-28 14:21:34 UTC*
  - 282be7ba5a Merge pull request #28346 from twangboy/fix_installer
  - f65e3e5275 Updated documentation to reflect the new parameter
  - a0c5223554 Fixes #27923 and #28000
- **PR** #28315: (gwaters) Adding a working example of setting pillar data on the cli @ *2015-10-27 15:27:49 UTC*
  - 7858f04ebc Merge pull request #28315 from gwaters/update-pillar-doc
  - b15285c0b4 adding a working example of setting pillar data on the cli
- **ISSUE** #28209: (basepi) Legacy git_pillar configs cause duplicate ext_pillar calls (refs: #28210)

- **PR** #28211: (terminalmage) Fix for ext_pillar being compiled twice in legacy git_pillar code (2015.5 branch) @ *2015-10-26 14:14:02 UTC*
  - **PR** #28210: (terminalmage) Fix for ext_pillar being compiled twice in legacy git_pillar code (refs: #28211)
  - 45305ccf29 Merge pull request #28211 from terminalmage/legacy_git_pillar-2015.5
  - 0d6a4ac115 Remove non-functional test
  - ab991d61d9 Fix for ext_pillar being compiled twice in legacy git_pillar code (2015.5 branch)
- **ISSUE** #26411: (whiteinge) salt-call cannot send custom events without Minion daemon running (refs: #28263)
- **PR** #28263: (cachedout) New channel for event.send @ *2015-10-26 14:07:06 UTC*
  - a6cc84c407 Merge pull request #28263 from cachedout/issue_26411-1
  - 3b880a5f07 New channel for event.fire_master
  - 29e9533aab Stand up a new channel if using salt-call
- **PR** #28293: (cachedout) Minor grammar changes @ *2015-10-26 12:15:42 UTC*
  - **PR** #28271: (gwaters) Update tutorial documentation (refs: #28293)
  - 788e1463d8 Merge pull request #28293 from cachedout/fix_28271
  - 499ed8519b Minor grammar changes to #28271
- **PR** #28271: (gwaters) Update tutorial documentation (refs: #28293) @ *2015-10-26 12:12:37 UTC*
  - e178af0b90 Merge pull request #28271 from gwaters/update-tutorial-documentation
  - f96d39483d updated the tutorial with gravyboat's suggestions
  - b1f4a2bdf4 i think i changed the wrong header, updated to fix
  - 846b3aece1 I found you can not run the cp.push commands until after enabling the feature in the conf, so I wanted to update the docs so others who try these commands won't bump into the same issue I had.
- **ISSUE** #28248: (0xf10e) conventions/formula.rst: "Gather external data" suggests unavailable jinja functionality (refs: #28280)
- **PR** #28280: (0xf10e) Correct Jinja function load_* to import_* @ *2015-10-25 04:11:10 UTC*
  - e3eff9b909 Merge pull request #28280 from 0xf10e/patch-1
  - 6d4316b0ac Correct Jinja function load_* to import_*
- **PR** #28255: (cachedout) Add __cli opt @ *2015-10-23 18:44:30 UTC*
  - 909fa3dc97 Merge pull request #28255 from cachedout/cli_opt
  - a2408157de Add __cli opt
- **ISSUE** #27374: (mool) boto_route53 state doesn't create a record (refs: #28213)
- **PR** #28213: (rallytime) If record returned None, don't continue with the state. Something went wrong @ *2015-10-23 13:54:50 UTC*
  - 0fa094ae11 Merge pull request #28213 from rallytime/boto_route53_state
  - 237d64ff11 If record returned None, don't continue with the state. Something went wrong.
- **ISSUE** #28217: (Ch3LL) Scheduler.present tries to add the scheudler each time (refs: #28238)
- **PR** #28238: (basepi) [2015.5] Fix schedule.present always diffing @ *2015-10-23 13:31:32 UTC*
  - 1768014705 Merge pull request #28238 from basepi/fix.schedule.present.28217

  - 087a8dc3c2 Only insert enabled if it's a dict
  - 5b49f41fab Fix schedule comparison to adjust for 'enabled' being added in schedule.list
  - 2dc1226ab8 Build new item with 'enabled' if available
- **ISSUE** #8051: (regilero) Problems with fileinput.input inplace editing in salt.states.file.replace (refs: #28174)
- **ISSUE** #7999: (regilero) MULTILINE pattern cannot work in file.replace, fileinput always reads line by line. (refs: #28174)
- **PR** #28174: (lorengordon) Add support for multiline regex in file.replace (refs: #28666) @ *2015-10-22 14:02:43 UTC*
  - bdd48c92de Merge pull request #28174 from lorengordon/file-replace-multiline
  - acdef2da60 Update docstrings with new guidance
  - 0835b005b7 Use a test that makes the extra file read unnecessary
  - 6d6121a6e5 Use *flags* when checking whether content was added previously
  - b25e609e9e Set *flags=8* since now the file is read as a MULTILINE string by default
  - 89e8dcdffd Use *finally* block to ensure mmap object is closed
  - 5aea6647c9 Add support for multiline regex in file.replace
- **ISSUE** #19673: (holyzhou) partition.mkpart in parted modules doesn't work (refs: #28175)
- **PR** #28175: (twangboy) Fixes #19673 @ *2015-10-21 20:48:24 UTC*
  - 2225925fb5 Merge pull request #28175 from twangboy/fix_19673
  - ae8fbb208f Fixes #19673
- **PR** #28140: (rallytime) Add OpenBSD installation documentation to 2015.5 branch @ *2015-10-20 16:31:34 UTC*
  - **PR** #28103: (ajacoutot) OpenBSD salt package: update list of dependencies. (refs: #28140)
  - ab18dcf637 Merge pull request #28140 from rallytime/bsd-installation-doc
  - 458a544d83 Add OpenBSD installation documentation to 2015.5 branch
- **ISSUE** #28101: (bogdanr) salt-cloud ec2 list-sizes doesn't show all available sizes (refs: #28138)
- **PR** #28138: (rallytime) Back-port #28130 EC2 Sizes Only portion to 2015.5 @ *2015-10-20 16:29:09 UTC*
  - **PR** #28130: (bogdanr) Ec2 upload public key and updated instances size list (refs: #28138)
  - fad38eb3c3 Merge pull request #28138 from rallytime/bp-28130-sizes-only
  - 6ab31e1886 Pylint
  - 37e4ed58a9 Added missing comma
  - 667f5e669f Added a bunch of instance sizes and updated some outdated ones
- **ISSUE** #26844: (double-yaya) The function "state.sls" is running as PID XXXX and was started at .... with jid XXXX always shows the current jid (refs: #28097)
- **PR** #28097: (jacksontj) For all multi-part messages, check the headers. If the header is not ... @ *2015-10-20 15:00:18 UTC*
  - ce8f858536 Merge pull request #28097 from jacksontj/2015.5
  - 75e04bcbbc For all multi-part messages, check the headers. If the header is not your minion_id, skip the message

- **ISSUE** #23655: (arthurlogilab) salt-cloud with lxc should not traceback when minion is unreacheable (refs: #28117)
- **PR** #28117: (rallytime) Clean up stacktrace when master can't be reached in lxc cloud driver @ *2015-10-20 12:41:12 UTC*
  - 9cdb970289 Merge pull request #28117 from rallytime/fix-23655
  - dfb908e405 Clean up stacktrace when master can't be reached in lxc cloud driver
- **PR** #28110: (terminalmage) Add explanation of file_client: local setting masterless mode @ *2015-10-20 12:28:05 UTC*
  - bf7ed0a397 Merge pull request #28110 from terminalmage/masterless-mode
  - ed90103124 Add explanation of file_client: local setting masterless mode
- **ISSUE** #27940: (multani) salt-cloud creating lxc containers doesn't fire "salt/cloud/*/created" event (refs: #28109)
- **PR** #28109: (rallytime) Add created reactor event to lxc cloud driver @ *2015-10-19 20:32:41 UTC*
  - a569ef4980 Merge pull request #28109 from rallytime/fix-27940
  - 18b2245611 Add created reactor event to lxc cloud driver
- **ISSUE** #21845: (kitsemets) pip.install: fails in v2015.2.0rc1 when the package is already installed (pip v1.0) (refs: #27996)
- **PR** #27996: (rallytime) Don't fail if pip package is already present and pip1 is installed @ *2015-10-19 12:59:17 UTC*
  - d4604fdb26 Merge pull request #27996 from rallytime/fix-21845
  - f8380d751e Provide empty string as default stdout instead of None
  - f9406b5828 Don't fail if pip package is already present and pip1 is installed
- **PR** #28056: (rallytime) Back-port #28033 to 2015.5 @ *2015-10-19 12:55:10 UTC*
  - **PR** #28033: (twangboy) Fixed win_useradd.py (refs: #28056)
  - 28b97c514f Merge pull request #28056 from rallytime/bp-28033
  - af2c5ab759 Fixed win_useradd.py
- **PR** #28059: (rallytime) Back-port #28040 to 2015.5 @ *2015-10-18 16:17:29 UTC*
  - **PR** #28040: (erchn) Swift rackspace fixes (refs: #28059)
  - dfc3aaec74 Merge pull request #28059 from rallytime/bp-28040
  - 76a0d4937b Revert "Allow passing in auth_version, defaulting to 2."
  - 63d5675d34 default auth_version = 2
  - 8072716888 remove extra spaces
  - 9770f56f04 cleanup whitespace, default to None to be consistent with profile
  - f4adfe98c0 Allow passing in auth_version, defaulting to 2.
  - fab1ad39af Rackspace support for switft module.
- **ISSUE** #27534: (llevar) file.managed can't retrieve file via ftp (refs: #28047)
- **PR** #28047: (cachedout) Restore FTP functionality to file client @ *2015-10-18 16:16:46 UTC*
  - d1fa036b55 Merge pull request #28047 from cachedout/issue_27534

  - 6ea37ddbca Context manager
  - 4d6f6bb371 Lint
  - 59018289dc Restore FTP functionality to file client
- **PR** #28032: (twangboy) Fixed win_path.py @ *2015-10-17 15:16:15 UTC*
  - fd2ca2df1b Merge pull request #28032 from twangboy/fix_win_path
  - 2bcac93314 Fixed win_path.py
- **ISSUE** #26336: (jfindlay) windows user.present broken (refs: #28003)
- **PR** #28037: (rallytime) Back-port #28003 to 2015.5 @ *2015-10-16 20:59:52 UTC*
  - **PR** #28003: (twangboy) Fix #26336 (refs: #28037)
  - 88c1770be4 Merge pull request #28037 from rallytime/bp-28003
  - 4fcf51fb1e Fix PR #26336
- **PR** #28031: (jacobhammons) Updated release notes with additional CVE information @ *2015-10-16 16:19:37 UTC*
  - de727d8bd2 Merge pull request #28031 from jacobhammons/relnotes6
  - 05927bb6f0 Updated release notes with additional CVE information
- **ISSUE** #27897: (Inveracity) request to add \\r escape character for salt.states.host for windows (refs: #28008)
- **PR** #28008: (jfindlay) platform independent line endings in hosts mod @ *2015-10-16 13:20:28 UTC*
  - 16c0272849 Merge pull request #28008 from jfindlay/host_path
  - 9f7047dd3c platform independent line endings in hosts mod
- **ISSUE** #28010: (vakulich) Error "KeyError: 'ret'" appeared during salt.state run in orchestrate module if minion had an exception (refs: #28012)
- **PR** #28012: (rallytime) Clean up stack trace when something goes wrong with minion output @ *2015-10-16 12:40:59 UTC*
  - d41018fa8e Merge pull request #28012 from rallytime/fix-28010
  - 0d7059e0c2 Clean up stack trace when something goes wrong with minion output
- **PR** #27995: (jacobhammons) added link to grains security FAQ to targeting and pillar topics. @ *2015-10-15 21:15:31 UTC*
  - f728307001 Merge pull request #27995 from jacobhammons/pillar-doc
  - 2870af2ba3 added link to grains security FAQ to targeting and pillar topics.
- **PR** #27986: (jacobhammons) Changed current release to 5.6 and added CVE to release notes @ *2015-10-15 17:25:41 UTC*
  - efede904a7 Merge pull request #27986 from jacobhammons/dot6
  - bb61c68c11 Changed current release to 5.6 and added CVE to release notes
- **PR** #27913: (pass-by-value) Set default @ *2015-10-14 14:03:36 UTC*
  - 831ec680d9 Merge pull request #27913 from pass-by-value/proxmox_verify_ssl
  - 0b721efe37 Set default
- **PR** #27876: (terminalmage) 2015.5 branch: Fix traceback when 2015.8 git ext_pillar config schema used @ *2015-10-13 14:58:45 UTC*

  - 41cccb3a30 Merge pull request #27876 from terminalmage/git_pillar-AttributeError-2015.5
  - 07794c837a 2015.5 branch: Fix traceback when 2015.8 git ext_pillar config schema used
- **ISSUE** #27610: (benburkert) PR #27201 broke ssh_known_hosts with :port (refs: #27726)
- **ISSUE** #27187: (SeverinLeonhardt) ssh_known_hosts.present hashes other entries even with hash_hostname: false (refs: #27201)
- **PR** #27726: (jfindlay) deprecate hash_hostname in favor of hash_known_hosts @ *2015-10-12 16:19:09 UTC*
  - **PR** #27201: (jfindlay) rename hash_hostname to hash_known_hosts (refs: #27726)
  - c9c3b7760e Merge pull request #27726 from jfindlay/hashhosts
  - ebce47de7c add docs to ssh.recv_known_host exec module fcn
  - b6ee16b1e5 deprecate hash_hostname in favor of hash_known_hosts
- **ISSUE** #27735: (go8ose) saltutils.find_cached_job doesn't work (refs: #27776)
- **PR** #27776: (jfindlay) return message when local jobs_cache not found @ *2015-10-12 16:11:41 UTC*
  - 18e31584b0 Merge pull request #27776 from jfindlay/local_msg
  - 03afa3cffa return message when local jobs_cache not found
- **ISSUE** #27665: (ahammond) user.absent should not "fail" if /var/spool/mail/<user> already does not exist. (refs: #27766)
- **PR** #27766: (jfindlay) better check for debian userdel error @ *2015-10-12 15:14:33 UTC*
  - 86cc7b5537 Merge pull request #27766 from jfindlay/debmail
  - ee78da2c27 better check for debian userdel error
- **ISSUE** #27756: (iggy) syslog returner formats line incorrectly (refs: #27758)
- **PR** #27758: (iggy) Remove redundant text from syslog returner @ *2015-10-12 15:09:49 UTC*
  - c224386c9a Merge pull request #27758 from iggy/patch-1
  - 0994fb6a8c Remove redundant text from syslog returner
- **ISSUE** #27832: (viking60) Salt fails to recognize Manjaro (as an Arch derivate) (refs: #27841)
- **PR** #27841: (terminalmage) Detect Manjaro Linux as Arch derivative @ *2015-10-12 14:53:46 UTC*
  - 34a005041f Merge pull request #27841 from terminalmage/issue27832
  - 8e09fbd6a3 Detect Manjaro Linux as Arch derivative
- **ISSUE** #26538: (seanjnkns) salt.states.file.managed generates warning when used in place of salt.states.file.touch (refs: #27806)
- **PR** #27852: (rallytime) Back-port #27806 to 2015.5 @ *2015-10-12 14:53:17 UTC*
  - **PR** #27806: (blast-hardcheese) Empty string is falsy (refs: #27852)

  - b59c03d20d regenerated man pages

33.2.119 Salt 2015.5.8 Release Notes

release
2015-12-01

Version 2015.5.8 is a bugfix release for *2015.5.0*.

Statistics

- Total Merges: **17**
- Total Issue References: **12**
- Total PR References: **27**
- Contributors: **12** (MasterNayru, TronPaul, basepi, cachedout, cxmcc, jfindlay, kevinlondon, messa, rallytime, tehmaspc, twangboy, whiteinge)

Security Fix

CVE-2015-8034 Saving `state.sls` cache data to disk with insecure permissions

This affects users of the `state.sls` function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to zmalone for bringing this issue to our attention.

Changelog for v2015.5.7..v2015.5.8

Generated at: 2018-05-27 22:25:07 UTC

- **ISSUE** #28883: (ldelossa) Issues running select states - local variable 'salt' referenced before assignment (refs: #29113)
- **PR** #29164: (jfindlay) Backport #29113 @ *2015-11-24 21:26:17 UTC*
  - **PR** #29113: (TronPaul) Kill unneeded import (refs: #29164)
  - **PR** #28740: (MasterNayru) Add missing S3 module import (refs: #28839, #29113)
  - a26c10a811 Merge pull request #29164 from jfindlay/bp-29113
  - 50fab35188 kill unneeded import
- **PR** #29138: (jfindlay) add 2015.5.8 release notes @ *2015-11-23 23:22:48 UTC*
  - 4f03196e7d Merge pull request #29138 from jfindlay/2015.5
  - be045f5cb1 add 2015.5.8 release notes
- **ISSUE** #29110: (mohshami) 2015.8.2 broke orchestration (refs: #29122)
- **ISSUE** #28010: (vakulich) Error "KeyError: 'ret'" appeared during salt.state run in orchestrate module if minion had an exception (refs: #28012)
- **PR** #29128: (cachedout) Set a safer default value for ret in saltmod @ *2015-11-23 17:07:40 UTC*
  - **PR** #29122: (cachedout) Fix broken state orchestration (refs: #29128)
  - **PR** #28012: (rallytime) Clean up stack trace when something goes wrong with minion output (refs: #29122)
  - 219367a23d Merge pull request #29128 from cachedout/tweak_29122

  - b08858b040 Missed check
  - 584efe81ee Set a safer default value for ret in saltmod

  - f1884de0e7 Update rabbitmq_user.py
- **ISSUE** #28928: (twangboy) Fix user.present 2015.5 (refs: #28932)
- **PR** #28932: (twangboy) Fixed user.present / user.absent in windows @ *2015-11-18 21:45:53 UTC*
  - **PR** #28627: (twangboy) Backport win_useradd (refs: #28932)
  - b3e3bebef0 Merge pull request #28932 from twangboy/fix_28928
  - 0653a04887 Fixed user.present / user.absent in windows
- **ISSUE** #26911: (dsumsky) file.manage state does not work with Amazon S3 URLs on Windows (refs: #28630)
- **ISSUE** #13850: (ryan-lane) s3:// urls in file.managed (and likely elsewhere) require s3.key and s3.keyid to be in minion config (refs: #28630)
- **PR** #29011: (rallytime) Back-port #28630 to 2015.5 @ *2015-11-18 17:50:05 UTC*
  - **PR** #28630: (messa) Use S3 credentials from Pillar (refs: #29011)
  - a2e4a227e0 Merge pull request #29011 from rallytime/bp-28630
  - 7baccc1b05 Lint - newline before def
  - 9e5c16d4da Reading S3 credentials from Pillar
  - a3216f813d Fixed requests HTTPError handler, it was still in urllib2 style
- **PR** #28982: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-11-18 00:49:32 UTC*

  - 1a4cd6002f Merge pull request #28982 from basepi/merge-forward-2015.5
  - bfbb109fbd Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 4b8bdd0afb Merge pull request #28839 from cachedout/revert_28740
  - 215b26c06f Revert #28740
- **ISSUE** #28947: (dmyerscough) sdb modules are not synced out (refs: #28949)
- **PR** #28949: (whiteinge) Add sync_sdb execution function @ *2015-11-17 15:35:38 UTC*
  - edd26d763a Merge pull request #28949 from whiteinge/sync-sdb
  - b0ec9ab25b Add sync_sdb execution function
- **ISSUE** #28888: (twangboy) Fix file.comment (refs: #28930)
- **PR** #28930: (twangboy) Added missing import mmap required by file.py @ *2015-11-16 23:17:23 UTC*
  - 43da1bc4ce Merge pull request #28930 from twangboy/fix_28888
  - f5c489eaad Added missing import mmap required by file.py
- **PR** #28908: (rallytime) A couple of spelling fixes for doc conventions page. @ *2015-11-16 02:29:35 UTC*
  - 2488b873b8 Merge pull request #28908 from rallytime/doc-convention-spelling
  - 60e6eddb77 A couple of spelling fixes for doc conventions page.
- **ISSUE** #22442: (allanliu) rest_cherrypy /keys URL does not handle JSON requests (refs: #28902)
- **PR** #28902: (whiteinge) Fix missing JSON support for /keys endpoint @ *2015-11-15 15:36:05 UTC*
  - 827a1ae020 Merge pull request #28902 from whiteinge/json-keys
  - 9745903301 Fix missing JSON support for /keys endpoint
- **PR** #28897: (rallytime) Back-port #28873 to 2015.5 @ *2015-11-15 00:43:35 UTC*
  - **PR** #28873: (tehmaspc) Fix salt-cloud help output typo (refs: #28897)
  - d23bd49130 Merge pull request #28897 from rallytime/bp-28873
  - 077e671ead Fix salt-cloud help output typo
- **ISSUE** #28870: (basepi) mdadm commands failing (refs: #28871)
- **PR** #28871: (basepi) [2015.5] Fix command generation for mdadm.assemble @ *2015-11-13 21:54:33 UTC*
  - a9dc8b6ca6 Merge pull request #28871 from basepi/mdadm.fix.28870
  - 323bc2d2ac Fix command generation for mdadm.assemble

33.2.120 Salt 2015.5.9 Release Notes

release
2016-01-11

Version 2015.5.9 is a bugfix release for *2015.5.0*.

Statistics

- Total Merges: **45**
- Total Issue References: **21**
- Total PR References: **48**
- Contributors: **21** (abednarik, aletourneau, attiasr, basepi, cachedout, clan, clarkperkins, cro, dmyerscough, jacobhammons, jfindlay, jsutton, justinta, lorengordon, markckimball, mpreziuso, rallytime, terminalmage, titilambert, twangboy, zmalone)

Changelog for v2015.5.8..v2015.5.9

Generated at: 2018-05-27 22:31:06 UTC

- **PR** #30248: (jfindlay) add 2015.5.9 release notes @ *2016-01-08 23:13:10 UTC*
  - 92889db638 Merge pull request #30248 from jfindlay/2015.5
  - 741f7aba31 add 2015.5.9 release notes
- **PR** #30237: (jacobhammons) Updated man pages and doc version for 2015.5.9 @ *2016-01-08 18:10:05 UTC*
  - 7a329d89d7 Merge pull request #30237 from jacobhammons/man-pages-prev
  - 2431c4c5c3 Updated man page and doc conf.py copyright year to 2016
  - fe3da1c174 Updated man pages and doc version for 2015.5.9
- **PR** #30207: (rallytime) Use correct spacing in rabbitmq state examples @ *2016-01-07 18:37:35 UTC*
  - 2c0b725924 Merge pull request #30207 from rallytime/rabbitmq_states_doc_fix
  - 8d48c24182 Use correct spacing in rabbitmq state examples
- **PR** #30191: (jacobhammons) Updated doc site banners @ *2016-01-06 22:37:40 UTC*
  - b49cf910f4 Merge pull request #30191 from jacobhammons/banner-prev
  - c3390955b0 Updated doc site banners
- **ISSUE** #29633: (twellspring) user.present does not modify home directory (refs: #30125)
- **PR** #30125: (abednarik) Update user home event when createhome is set to False @ *2016-01-05 18:15:38 UTC*
  - 9363d6f5b6 Merge pull request #30125 from abednarik/update_user_home
  - 56544a77f6 Update user home event when createhome is set to False
- **ISSUE** #10155: (jhenry82) Option to select a random master in multi-master mode (refs: #30127)
- **PR** #30127: (jsutton) Updating documentation and example minion config for random_master/master_shuffle. @ *2016-01-04 19:30:50 UTC*
  - 1a5d585d91 Merge pull request #30127 from jsutton/clarify-documentation-for-random_master
  - 01dbf385ef Adding random_master to reference and updating master_shuffle. Adding master_shuffle to the minion example config file as it is needed for multi-master PKI.
- **PR** #30110: (markckimball) Fixed flag sent to salt.utils.http in order for verify_ssl to work correctly @ *2015-12-31 21:17:53 UTC*
  - 28b1bbbe77 Merge pull request #30110 from markckimball/fix-verify_ssl-in-joyent-cloud
  - e1c08cb269 Fixed flag sent to salt.utils.http in order for verify_ssl to work appropriately.

- **PR** #30093: (zmalone) Noting that file_roots and "state tree" should both be avoided @ *2015-12-30 22:40:05 UTC*
  - 040412b0b1 Merge pull request #30093 from zmalone/pillar-notes
  - cfbfd58afe Noting that file_roots and "state tree" should both be avoided, because in some environments, the actual states show up another level down. Adding notes about why this is undesirable.
- **ISSUE** #28120: (jtylers) Clear text passwords (refs: #30097)
- **PR** #30097: (cachedout) Note concern about cleartext password in docs for shadow.gen_password @ *2015-12-30 22:37:33 UTC*
  - 25edefc93a Merge pull request #30097 from cachedout/note_on_password_process_list
  - 58aec884ef Note concern about cleartext password in docs for shadow.gen_password
- **PR** #30089: (mpreziuso) Fixes terminology and adds more accurate details about the algorithms @ *2015-12-30 20:02:18 UTC*
  - 6b1c3a6bf2 Merge pull request #30089 from mpreziuso/patch-1
  - 50533add40 Fixes terminology and adds more accurate details about the algorithms
- **ISSUE** #29921: (anlutro) pygit 0.21 not fully supported? (refs: #30086)
- **PR** #30086: (cachedout) Document that gitfs needs recent libs @ *2015-12-30 19:26:05 UTC*
  - 200d09385d Merge pull request #30086 from cachedout/issue_29921
  - 8c29e2dd6a Document that gitfs needs recent libs
- **ISSUE** #27835: (bertjwregeer) [FreeBSD] salt-ssh hangs forever (refs: #30070)
- **PR** #30070: (cachedout) Add documentation on debugging salt-ssh @ *2015-12-29 23:00:06 UTC*
  - 404414bf57 Merge pull request #30070 from cachedout/issue_27835
  - 60431e342a Add documentation on debugging salt-ssh
- **PR** #30059: (mpreziuso) Fixes wrong function scope @ *2015-12-29 16:12:06 UTC*
  - 84db12212d Merge pull request #30059 from mpreziuso/patch-1
  - 1cb1c2da07 Fixes wrong function scope
- **PR** #30025: (justinta) Skipping some Boto tests until resolved moto issue @ *2015-12-28 15:21:45 UTC*
  - **PR** #29725: (cachedout) Disable some boto tests per resolution of moto issue (refs: #30025)
  - 1c6c9b1a06 Merge pull request #30025 from jtand/boto_tests
  - e706642152 Skipping some Boto tests until resolved moto issue
- **ISSUE** #28956: (racooper) Netscaler module doc enhancements (refs: #29949)
- **PR** #29949: (aletourneau) Enhanced netscaler docstring @ *2015-12-22 20:26:52 UTC*
  - 0f91021c59 Merge pull request #29949 from aletourneau/2015.5
  - cf855fe262 Fixed trailing white spaces
  - 864801e002 fixed version
  - 041d9346c4 Enhanced netscaler docstring
- **PR** #29941: (cachedout) Fix spelling error in boto_vpc @ *2015-12-22 15:49:54 UTC*
  - 229d3eb60b Merge pull request #29941 from cachedout/boto_spelling
  - b11bfd07b8 Fix spelling error in boto_vpc

- **ISSUE** #29880: (githubcdr) Salt pkg.uptodate fails on Arch linux (refs: #29908)
- **PR** #29908: (cachedout) Allow kwargs to be passed to pacman provide for update func @ *2015-12-22 15:04:18 UTC*
  - 69c5ada636 Merge pull request #29908 from cachedout/issue_29880
  - 4cd77b4118 Allow kwargs to be passed to pacman provide for update func
- **ISSUE** #27056: (oogali) pkgng provider on FreeBSD does not do BATCH=yes (refs: #29909)
- **PR** #29909: (abednarik) FreeBSD pkgng fix for non-interactive install. @ *2015-12-22 15:03:50 UTC*
  - ad0de4d563 Merge pull request #29909 from abednarik/freebsd_pkgng_non_interactive_fix
  - 8ac213001a FreeBSD pkgng fix for non-interactive install.
- **ISSUE** #24698: (cmhe) docker.installed not working (salt 2015.5.0, docker 1.6.2, dockerpy 0.5.3) (refs: #29730)
- **PR** #29730: (rallytime) Update docker-py version requirement to 0.6.0 for dockerio.py files @ *2015-12-16 14:44:40 UTC*
  - f43f3d166c Merge pull request #29730 from rallytime/fix-24698
  - 120fd5fdf0 Update docker-py version requirement to 0.6.0 for dockerio.py files
- **ISSUE** #23343: (micaelbergeron) npm state ignore the requested version (refs: #29715)
- **ISSUE** #18647: (hundt) Version number in npm state name does not result in correct version being installed (refs: #29715)
- **PR** #29715: (rallytime) Install correct package version, if provided, for npm state. @ *2015-12-15 23:19:45 UTC*
  - c393a4175a Merge pull request #29715 from rallytime/fix-23343
  - a0ed857c37 Install correct package version, if provided, for npm state.
- **PR** #29721: (terminalmage) Fix display of multiline strings when iterating over a list @ *2015-12-15 22:16:10 UTC*
  - 1310afbbc2 Merge pull request #29721 from terminalmage/nested-output-multiline-fix
  - 761be9cb93 Fix display of multiline strings when iterating over a list
- **ISSUE** #29488: (Shad0w1nk) salt.cloud.clouds.vmware.revert_to_snapshot crash when using the default value (refs: #29646)
- **PR** #29646: (rallytime) Don't stacktrace on kwargs.get if kwargs=None @ *2015-12-15 19:02:58 UTC*
  - 52cc07cec9 Merge pull request #29646 from rallytime/fix-29488
  - c5fa9e9351 Don't stacktrace on kwargs.get if kwargs=None
- **ISSUE** #29661: (mosuowhq) bug report when creating VM in /salt/cloud/clouds/nova.py (refs: #29673)
- **PR** #29673: (rallytime) Default value should be False and not 'False' @ *2015-12-14 18:08:44 UTC*
  - f606c23ea8 Merge pull request #29673 from rallytime/fix-29661
  - e4af7a1157 Default value should be False and not 'False'
- **PR** #29527: (jfindlay) 2015.5.7 notes: add note about not being released @ *2015-12-08 21:08:26 UTC*
  - f77c8e7baf Merge pull request #29527 from jfindlay/2015.5
  - 1a8044f0c9 2015.5.7 notes: add note about not being released
- **PR** #29539: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-12-08 19:14:51 UTC*
  - 867d550271 Merge pull request #29539 from basepi/merge-forward-2015.5

  - 2c9c4ba430 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 85aa70a6cb Merge pull request #29392 from jacobhammons/2014.7
    * d7f0db1dd8 updated version number to not reference a specific build from the latest branch
- **ISSUE** #12072: (vk00226) Passing user-data when provisioning ec2 instances (refs: #29504)
- **PR** #29504: (rallytime) Document userdata_file option for EC2 driver @ *2015-12-08 16:54:33 UTC*
  - de7f3d5a59 Merge pull request #29504 from rallytime/fix-12072
  - 8357c95dc2 Document userdata_file option for EC2 driver
- **ISSUE** #29101: (jessbreckenridge) Salt-cloud 2015.8.0 - del_*_vols_on_destroy does not work according to docs (refs: #29507)
- **PR** #29507: (rallytime) Switch volumes and del_*_on_destroy example ordering @ *2015-12-08 16:50:11 UTC*
  - 65deba8bb5 Merge pull request #29507 from rallytime/ec2-doc-fix
  - 90b4823bc2 Switch volumes and del_*_on_destroy example ordering
- **ISSUE** #28862: (trevor-h) salt-cloud uppercase timeout options no longer recognized (refs: #29469)
- **PR** #29469: (abednarik) Added Documentation note in salt cloud. @ *2015-12-07 18:27:46 UTC*
  - 0918c9294f Merge pull request #29469 from abednarik/doc_note_for_saltcloud_connection_timeout
  - 8e5c3e366a Added Documentation note in salt cloud.
- **PR** #29461: (dmyerscough) Fix resource limits, systemd sets the default too small @ *2015-12-05 16:26:34 UTC*
  - e43c7c05a6 Merge pull request #29461 from dmyerscough/fix-resource-limits
  - 85a8a3b033 Fix resource limits, systemd sets the default number of open files to 4096 causing te master to complain about limits when you have a large number of keys
- **ISSUE** #28526: (clarkperkins) yumpkg.installed broken in salt v2015.8.1 on CentOS 6 minions (refs: #28656)
- **PR** #29439: (rallytime) Back-port #28656 to 2015.5 @ *2015-12-04 22:56:17 UTC*
  - **PR** #28656: (clarkperkins) #28526 fixed yumpkg module issue with pkg.installed (refs: #29439)
  - 730f02fbdf Merge pull request #29439 from rallytime/bp-28656
  - 2f11bb021f #28526 fixed yumpkg module
- **PR** #29418: (jacobhammons) Added CVE 2015-8034 to 2015.5.8 release notes @ *2015-12-04 03:02:53 UTC*
  - 197210d52e Merge pull request #29418 from jacobhammons/dot8
  - 4f51a737f9 Added CVE 2015-8034 to 2015.5.8 release notes
- **PR** #29389: (jacobhammons) updated version numbers in documentation @ *2015-12-03 16:27:23 UTC*
  - b3452f2a1a Merge pull request #29389 from jacobhammons/2015.5
  - 824721ff36 updated version numbers
- **ISSUE** #26898: (twangboy) Symlinks in Windows (2015.8) (refs: #28191)
- **PR** #28501: (twangboy) Requested fixes for 26898 @ *2015-12-03 01:12:12 UTC*
  - **PR** #28420: (jfindlay) fix removal of symbolic links on windows in the file state (refs: #28501)
  - **PR** #28191: (twangboy) Fix 26898 (refs: #28420, #28501)
  - 6a7a95f28a Merge pull request #28501 from twangboy/jmoney_26898
  - c0cf33332c Fixed some Lint...

    - df17fc59d3 Merge pull request #6 from jfindlay/twang_test
        - bc7e0cfe64 add file.symlink unit tests
        - 9381dc7215 orthogonalize file.symlink unit tests
    - 8f462ba044 Merge pull request #5 from cachedout/fix_twangboy_test
        - 5293150d25 Fix tests
    - 7d39091c91 Fixed some more lint
    - 3dbd62af2c Fixed some tests... hopefully
    - f187db3288 Removed unnecessary logic
    - 89ebd268e6 Added file attributes restore on fail
    - 9ec72ca724 fix file state unit tests for win symlink feature
    - 69c32a663e Fixed some lint
    - 638dec5027 Fixed some tests... let's see if they're really are
    - 5ed7a99792 Replaced instances of shutil.rmtree in file state
    - 2651ce509f Fix file.remove for windows
- **ISSUE** #29344: (justinta) file.search broken on python 2.6 with empty files (refs: #29348)
- **PR** #29348: (justinta) Fixes an file.search on python2.6 @ *2015-12-02 23:26:36 UTC*
    - 760a521603 Merge pull request #29348 from jtand/file_search_fix
    - 04f82bd4fd Fixes an file.search on python2.6
- **ISSUE** #29206: (mschiff) ssh_known_hosts.present creates wrong known_hosts lines (refs: #29276)
- **PR** #29336: (rallytime) Back-port #29276 to 2015.5 @ *2015-12-02 19:37:42 UTC*
    - **PR** #29276: (abednarik) Prevent adding port twice when adding entry in known hosts (refs: #29336)
    - 51ea88d489 Merge pull request #29336 from rallytime/bp-29276
    - 3a0e19debb Prevent adding port twice when adding entry in known hosts
- **PR** #29333: (rallytime) Back-port #29280 to 2015.5 @ *2015-12-02 19:37:05 UTC*
    - **PR** #29280: (cachedout) [Doc] Add note for SVN state (refs: #29333)
    - **PR** #29165: (titilambert) [Doc] Add note for SVN state (refs: #29280, #29333)
    - 28255af52a Merge pull request #29333 from rallytime/bp-29280
    - 722d02ff4a Lint
    - 4a0040c1b4 [Doc] Add note for SVN state
- **PR** #29316: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-12-01 20:20:23 UTC*
    - 14e94b3593 Merge pull request #29316 from basepi/merge-forward-2015.5
    - 33f40b3c47 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
    - d2fb2109a3 Merge pull request #29296 from douardda/patch-3
    - d2885390f4 Use process KillMode on Debian systems also
- **PR** #29216: (clan) size is 0 doesn't mean no data, e.g, /proc/version @ *2015-11-30 20:01:43 UTC*
    - 6a2ffbfb7c Merge pull request #29216 from clan/file_search_on_proc_file

  - 91a20c07a1 try mmap first
  - 8aa4f2053e remove extra space to fix lint failure
  - d34e6b1a9a use read only if has read() method
  - 3209c1cdb5 size is 0 doesn't mean no data, e.g, /proc/version
- **PR** #29261: (attiasr) fix incorrect reinstallation of windows pkg @ *2015-11-30 18:28:42 UTC*
  - d6aaae8d7b Merge pull request #29261 from attiasr/patch-1
  - 7a99b90596 add log and return if pkg already installed
  - 1843c7ab8e fix incorrect reinstallation of windows pkg
- **PR** #29214: (cro) Doc for salt.utils.http should say verify_ssl not ssl_verify. @ *2015-11-25 23:55:38 UTC*
  - 9236188867 Merge pull request #29214 from cro/ssl_verify_ssl
  - e9c13c561b Doc bug--salt.utils.http takes verify_ssl not ssl_verify.
- **ISSUE** #29202: (lorengordon) Broken ca bundle lookup in *salt.utils.http.get_ca_bundle* (refs: #29204)
- **PR** #29204: (lorengordon) Use os.path.join to return full path to ca bundle @ *2015-11-25 20:00:42 UTC*
  - df7b35a86b Merge pull request #29204 from lorengordon/fix-29202
  - b1dae5e6fe Use os.path.join to return full path to ca bundle

33.2.121 Salt 2014.7.0 Release Notes - Codename Helium

This release is the largest Salt release ever, with more features and commits then any previous release of Salt. Everything from the new RAET transport to major updates in Salt Cloud and the merging of Salt API into the main project.

Important: The Fedora/RHEL/CentOS **salt-master** package has been modified for this release. The following components of Salt have been broken out and placed into their own packages:

- salt-syndic
- salt-cloud
- salt-ssh

When the **salt-master** package is upgraded, these components will be removed, and they will need to be manually installed.

Important: Compound/pillar matching have been temporarily disabled for the `mine` and `publish` modules for this release due to the possibility of inferring pillar data using pillar glob matching. A proper fix is now in the 2014.7 branch and scheduled for the 2014.7.1 release, and compound matching and non-globbing pillar matching will be re-enabled at that point.

Compound and pillar matching for normal salt commands are unaffected.

New Transport!

RAET Transport Option

This has been a HUGE amount of work, but the beta release of Salt with RAET is ready to go. RAET is a reliable queuing transport system that has been developed in partnership with a number of large enterprises to give Salt an alternative to ZeroMQ and a way to get Salt to scale well beyond tens of thousands of servers. Unlike ZeroMQ, RAET is completely asynchronous in every aspect of its operation and has been developed using the flow programming paradigm. This allows for many new capabilities to be added to Salt in the upcoming releases.

Please keep in mind that this is a beta release of RAET and we hope for bugs to be worked out, performance to be better realized and more in the 2015.5.0 release.

Simply stated, users running Salt with RAET should expect some hiccups as we hammer out the update. This is a BETA release of Salt RAET.

Salt SSH Enhancements

Salt SSH has just entered a new league, with substantial updates and improvements to make salt-ssh more reliable and easier then ever! From new features like the ansible roster and fileserver backends to the new pypi salt-ssh installer to lowered deps and a swath of bugfixes, salt-ssh is basically reborn!

Install salt-ssh Using pip

Salt-ssh is now pip-installable!

https://pypi.org/project/salt-ssh/

Pip will bring in all of the required deps, and while some deps are compiled, they all include pure python implementations, meaning that any compile errors which may be seen can be safely ignored.

```
pip install salt-ssh
```

Fileserver Backends

Salt-ssh can now use the salt fileserver backend system. This allows for the gitfs, hgfs, s3, and many more ways to centrally store states to be easily used with salt-ssh. This also allows for a distributed team to easily use a centralized source.

Saltfile Support

The new saltfile system makes it easy to have a user specific custom extended configuration.

Ext Pillar

Salt-ssh can now use the external pillar system. Making it easier then ever to use salt-ssh with teams.

No More sshpass

Thanks to the enhancements in the salt vt system, salt-ssh no longer requires sshpass to send passwords to ssh. This also makes the manipulation of ssh calls substantially more flexible, allowing for intercepting ssh calls in a much more fluid way.

Pure Python Shim

The salt-ssh call originally used a shell script to discover what version of python to execute with and determine the state of the ssh code deployment. This shell script has been replaced with a pure python version making it easy to increase the capability of the code deployment without causing platform inconsistency issues with different shell interpreters.

Custom Module Delivery

Custom modules are now seamlessly delivered. This makes the deployment of custom grains, states, execution modules and returners a seamless process.

CP Module Support

Salt-ssh now makes simple file transfers easier then ever! The *cp* module allows for files to be conveniently sent from the salt fileserver system down to systems.

More Thin Directory Options

Salt ssh functions by copying a subset of the salt code, or *salt thin* down to the target system. In the past this was always transferred to /tmp/.salt and cached there for subsequent commands.

Now, salt thin can be sent to a random directory and removed when the call is complete with the *-W* option. The new *-W* option still uses a static location but will clean up that location when finished.

The default *salt thin* location is now user defined, allowing multiple users to cleanly access the same systems.

State System Enhancements

New Imperative State Keyword "Listen"

The new `listen` and `listen_in` keywords allow for completely imperative states by calling the `mod_watch()` routine after all states have run instead of re-ordering the states.

Mod Aggregate Runtime Manipulator

The new `mod_aggregate` system allows for the state system to rewrite the state data during execution. This allows for state definitions to be aggregated dynamically at runtime.

The best example is found in the *pkg* state. If `mod_aggregate` is turned on, then when the first pkg state is reached, the state system will scan all of the other running states for pkg states and take all other packages set for install and install them all at once in the first pkg state.

These runtime modifications make it easy to run groups of states together. In future versions, we hope to fill out the `mod_aggregate` system to build in more and more optimizations.

For more documentation on `mod_aggregate`, see *the documentation*.

New Requisites: onchanges and onfail

The new `onchanges` and `onchanges_in` requisites make a state apply only if there are changes in the required state. This is useful to execute post hooks after changes occur on a system.

The other new requisites, `onfail`, and `onfail_in`, allow for a state to run in reaction to the failure of another state.

For more information about these new requisites, see the *requisites documentation*.

Global onlyif and unless

The `onlyif` and `unless` options can now be used for any state declaration.

Use `names` to expand and override values

The *names declaration* in Salt's state system can now override or add values to the expanded data structure. For example:

```
my_users:
  user.present:
    - names:
      - larry
      - curly
      - moe:
        - shell: /bin/zsh
        - groups:
          - wheel
    - shell: /bin/bash
```

Major Features

Scheduler Additions

The Salt scheduler system has received MAJOR enhancements, allowing for cron-like scheduling and much more granular timing routines. See *here* for more info.

Red Hat 7 Family Support

All the needed additions have been made to run Salt on RHEL 7 and derived OSes like CentOS and Scientific.

Fileserver Backends in salt-call

Fileserver backends like gitfs can now be used without a salt master! Just add the fileserver backend configuration to the minion config and execute salt-call. This has been a much-requested feature and we are happy to finally bring it to our users.

Amazon Execution Modules

An entire family of execution modules further enhancing Salt's Amazon Cloud support. They include the following:

- *Autoscale Groups* (includes *state support*) -- related: *Launch Control* states
- *Cloud Watch* (includes *state support*)
- *Elastic Cache* (includes *state support*)
- *Elastic Load Balancer* (includes *state support*)
- *IAM Identity and Access Management* (includes *state support*)
- *Route53 DNS* (includes *state support*)
- *Security Groups* (includes *state support*)
- *Simple Queue Service* (includes *state support*)

LXC Runner Enhancements

BETA The Salt LXC management system has received a number of enhancements which make running an LXC cloud entirely from Salt an easy proposition.

Next Gen Docker Management

The Docker support in Salt has been increased at least ten fold. The Docker API is now completely exposed and Salt ships with Docker data tracking systems which make automating Docker deployments very easy.

Peer System Performance Improvements

The peer system communication routines have been refined to make the peer system substantially faster.

SDB

Encryption at rest for configs

GPG Renderer

Encrypted pillar at rest

OpenStack Expansion

Lots of new OpenStack stuff

Queues System

Ran change external queue systems into Salt events

Multi Master Failover Additions

Connecting to multiple masters is more dynamic then ever

Chef Execution Module

Managing Chef with Salt just got even easier!

salt-api Project Merge

The `salt-api` project has been merged into Salt core and is now available as part of the regular `salt-master` package install. No API changes were made, the **`salt-api`** script and init scripts remain intact.

`salt-api` has always provided Yet Another Pluggable Interface to Salt (TM) in the form of "netapi" modules. These are modules that bind to a port and start a service. Like many of Salt's other module types, netapi modules often have library and configuration dependencies. See the documentation for each module for instructions.

See also:

The full list of netapi modules.

Synchronous and Asynchronous Execution of Runner and Wheel Modules

salt.runner.RunnerClient and *salt.wheel.WheelClient* have both gained complimentary `cmd_sync` and `cmd_async` methods allowing for synchronous and asynchronous execution of any Runner or Wheel module function, all protected using Salt's *external authentication* system. `salt-api` benefits from this addition as well.

`rest_cherrypy` Additions

The *rest_cherrypy* netapi module provides the main REST API for Salt.

Web Hooks

This release of course includes the Web Hook additions from the most recent `salt-api` release, which allows external services to signal actions within a Salt infrastructure. External services such as Amazon SNS, Travis-CI, or GitHub, as well as internal services that cannot or should not run a Salt minion daemon can be used as first-class components in Salt's rich orchestration capabilities.

The raw HTTP request body is now available in the event data. This is sometimes required information for checking an HMAC signature in order to verify a HTTP request. As an example, Amazon or GitHub requests are signed this way.

Generating and Accepting Minion Keys

The */key* convenience URL generates a public and private key for a minion, automatically pre-accepts the public key on the Salt Master, and returns both keys as a tarball for download.

This allows for easily bootstrapping the key on a new minion with a single HTTP call, such as with a Kickstart script, all using regular shell tools.

```
curl -sS http://salt-api.example.com:8000/keys \
        -d mid=jerry \
        -d username=kickstart \
        -d password=kickstart \
        -d eauth=pam \
        -o jerry-salt-keys.tar
```

Fileserver Backend Enhancements

All of the fileserver backends have been overhauled to be faster, lighter, and more reliable. The VCS backends (*gitfs*, *hgfs*, and *svnfs*) have also received a **lot** of new features.

Additionally, most config parameters for the VCS backends can now be configured on a per-remote basis, allowing for global config parameters to be overridden for a specific gitfs/hgfs/svnfs remote.

New `gitfs` Features

Pygit2 and Dulwich

In addition to supporting GitPython, support for pygit2 (0.20.3 and newer) and dulwich have been added. Provided a compatible version of pygit2 is installed, it will now be the default provider. The config parameter *`gitfs_provider`* has been added to allow one to choose a specific provider for gitfs.

Mountpoints

Prior to this release, to serve a file from gitfs at a salt fileserver URL of `salt://foo/bar/baz.txt`, it was necessary to ensure that the parent directories existed in the repository. A new config parameter *`gitfs_mountpoint`* allows gitfs remotes to be exposed starting at a user-defined `salt://` URL.

Environment Whitelisting/Blacklisting

By default, gitfs will expose all branches and tags as Salt fileserver environments. Two new config parameters, `gitfs_env_whitelist`, and `gitfs_env_blacklist`, allow more control over which branches and tags are exposed. More detailed information on how these two options work can be found in the *Gitfs Walkthrough*.

Expanded Authentication Support

As of pygit2 0.20.3, both http(s) and SSH key authentication are supported, and Salt now also supports both authentication methods when using pygit2. Keep in mind that pygit2 0.20.3 is not yet available on many platforms, so those who had been using authenticated git repositories with a passphraseless key should stick to GitPython if a new enough pygit2 is not yet available for the platform on which the master is running.

A full explanation of how to use authentication can be found in the *Gitfs Walkthrough*.

New `hgfs` Features

Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called *`hgfs_mountpoint`*.

Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `hgfs_env_whitelist` and `hgfs_env_blacklist`.

New `svnfs` Features

Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `svnfs_mountpoint`.

Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `svnfs_env_whitelist` and `svnfs_env_blacklist`.

Configurable Trunk/Branches/Tags Paths

Prior to this release, the paths where trunk, branches, and tags were located could only be in directories named "trunk", "branches", and "tags" directly under the root of the repository. Three new config parameters (`svnfs_trunk`, `svnfs_branches`, and `svnfs_tags`) allow SVN repositories which are laid out differently to be used with svnfs.

New `minionfs` Features

Mountpoint

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `minionfs_mountpoint`. The one major difference is that, as minionfs doesn't use multiple remotes (it just serves up files pushed to the master using `cp.push`) there is no such thing as a per-remote configuration for `minionfs_mountpoint`.

Changing the Saltenv from Which Files are Served

A new config parameter (`minionfs_env`) allows minionfs files to be served from a Salt fileserver environment other than `base`.

Minion Whitelisting/Blacklisting

By default, minionfs will expose the pushed files from all minions. Two new config parameters, `minionfs_whitelist`, and `minionfs_blacklist`, allow minionfs to be restricted to serve files from only the desired minions.

Pyobjects Renderer

Salt now ships with with the `Pyobjects Renderer` that allows for construction of States using pure Python with an idiomatic object interface.

New Modules

In addition to the Amazon modules mentioned above, there are also several other new execution modules:

- *Oracle*
- *Random*
- *Redis*
- *Amazon Simple Queue Service*
- Block Device Management
- *CoreOS etcd*
- *Genesis*
- InfluxDB
- *Server Density*
- *Twilio Notifications*
- *Varnish*
- *ZNC IRC Bouncer*
- *SMTP*

New Runners

- *Map/Reduce Style*
- *Queue*

New External Pillars

- *CoreOS etcd*

New Salt-Cloud Providers

- *Aliyun ECS Cloud*
- *LXC Containers*
- *Proxmox (OpenVZ containers & KVM)*

Salt Call Change

When used with a returner, salt-call now contacts a master if `--local` is not specicified.

Deprecations

salt.modules.virtualenv_mod

- Removed deprecated `memoize` function from `salt/utils/__init__.py` (deprecated)
- Removed deprecated `no_site_packages` argument from `create` function (deprecated)
- Removed deprecated `check_dns` argument from `minion_config` and `apply_minion_config` functions (deprecated)
- Removed deprecated `OutputOptionsWithTextMixIn` class from `salt/utils/parsers.py` (deprecated)
- Removed the following deprecated functions from `salt/modules/ps.py`: - `physical_memory_usage` (deprecated) - `virtual_memory_usage` (deprecated) - `cached_physical_memory` (deprecated) - `physical_memory_buffers` (deprecated)
- Removed deprecated cloud arguments from `cloud_config` function in `salt/config.py`: - `vm_config` (deprecated) - `vm_config_path` (deprecated)
- Removed deprecated `libcloud_version` function from `salt/cloud/libcloudfuncs.py` (deprecated)
- Removed deprecated `CloudConfigMixIn` class from `salt/utils/parsers.py` (deprecated)

33.2.122 Salt 2014.7.1 Release Notes

release
2015-01-12

Version 2014.7.1 is a bugfix release for *2014.7.0*.

The changes include:

- Fixed gitfs serving symlinks in *`file.recurse`* states (issue 17700)
- Fixed holding of multiple packages (YUM) when combined with version pinning (issue 18468)
- Fixed use of Jinja templates in masterless mode with non-roots fileserver backend (issue 17963)
- Re-enabled pillar and compound matching for mine and publish calls. Note that pillar globbing is still disabled for those modes, for security reasons. (issue 17194)
- Fix for `tty: True` in salt-ssh (issue 16847)
- Fix for supervisord states when supervisor not installed to system python (issue 18044)
- Fix for logging when `log_level='quiet'` for *`cmd.run`* (issue 19479)

33.2.123 Salt 2014.7.2 Release Notes

release
2015-02-09

Version 2014.7.2 is a bugfix release for *2014.7.0*.

The changes include:

- Fix erroneous warnings for systemd service enabled check (issue 19606)
- Fix FreeBSD kernel module loading, listing, and persistence *kmod* (issue 197151, issue 19682)
- Allow case-sensitive npm package names in the *npm state*. This may break behavior for people expecting the state to lowercase their npm package names for them. The *npm module* was never affected by mandatory lowercasing. (issue 20329)
- Deprecate the `activate` parameter for pip.install for both the *module* and the `state`. If `bin_env` is given and points to a virtualenv, there is no need to activate that virtualenv in a shell for pip to install to the virtualenv.
- Fix a file-locking bug in gitfs (issue 18839)
- Deprecated `archive_user` in favor of standardized `user` parameter in `state` and added `group` parameter.

33.2.124 Salt 2014.7.3 Release Notes

release
2015-03-25

Version 2014.7.3 is a bugfix release for *2014.7.0*.

Changes:

- Multi-master minions mode no longer route fileclient operations asymetrically. This fixes the source of many multi-master bugs where the minion would become unrepsonsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado
- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid /etc/network/interfaces file in salt networking modules
- Fix bug where a response status was not checked for in fileclient.get_url
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's 'tar' module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script

- Update Linode salt-cloud driver to use either linode-python or apache-libcloud
- Fix for s3.query function to return correct headers
- Fix for s3.head returning None for files that exist
- Fix the disable function in win_service module so that the service is disabled correctly
- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
- Add status.master capability for Windows.
- Various fixes to ssh_known_hosts
- Various fixes to states.network bonding for Debian
- The debian_ip.get_interfaces module no longer removes nameservers.
- Better integration between grains.virtual and systemd-detect-virt and virt-what
- Fix traceback in sysctl.present state output
- Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
- Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if *backup* is False, and if a pre-existing file exists with extension *.bak*, then that backup file will be overwritten. This backup behavior is a result of how *fileinput* works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting *file.replace* so it doesn't use *fileinput*
- VCS filreserver fixes/optimizations
- Catch fileserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- set_locale when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created mdadm array with spares
- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwhich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requsites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.

- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting 'auth_timeout' and 'auth_tries' down to shorter periods.

33.2.125 Salt 2014.7.4 Release Notes

release
2015-03-30

Version 2014.7.4 is a bugfix release for *2014.7.0*.

This is a security release. The security issues fixed have only been present since 2014.7.0, and only users of the two listed modules are vulnerable. The following CVEs have been resolved:

- CVE-2015-1838 SaltStack: insecure /tmp file handling in salt/modules/serverdensity_device.py
- CVE-2015-1839 SaltStack: insecure /tmp file handling in salt/modules/chef.py

Changes:

- Multi-master minions mode no longer route fileclient operations asymetrically. This fixes the source of many multi-master bugs where the minion would become unrepsonsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado
- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid /etc/network/interfaces file in salt networking modules
- Fix bug where a response status was not checked for in fileclient.get_url
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's 'tar' module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script
- Update Linode salt-cloud driver to use either linode-python or apache-libcloud
- Fix for s3.query function to return correct headers
- Fix for s3.head returning None for files that exist
- Fix the disable function in win_service module so that the service is disabled correctly

- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
- Add status.master capability for Windows.
- Various fixes to ssh_known_hosts
- Various fixes to states.network bonding for Debian
- The debian_ip.get_interfaces module no longer removes nameservers.
- Better integration between grains.virtual and systemd-detect-virt and virt-what
- Fix traceback in sysctl.present state output
- Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
- Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if *backup* is False, and if a pre-existing file exists with extension *.bak*, then that backup file will be overwritten. This backup behavior is a result of how *fileinput* works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting *file.replace* so it doesn't use *fileinput*
- VCS filreserver fixes/optimizations
- Catch fileserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- set_locale when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created mdadm array with spares
- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwhich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requsites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.
- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting 'auth_timeout' and 'auth_tries' down to shorter periods.
- There are known issues with batch mode operating on the incorrect number of minions. This bug can be patched with the change in Pull Request #22464.
- The *fun*, *state*, and *unless* keywords are missing from the state internals, which can cause problems running some states. This bug can be patched with the change in Pull Request #22365.

33.2.126 Salt 2014.7.5 Release Notes

release
2015-04-16

Version 2014.7.5 is a bugfix release for *2014.7.0*.

Changes:

- Fixed a key error bug in salt-cloud
- Updated man pages to better match documentation
- Fixed bug concerning high CPU usage with salt-ssh
- Fixed bugs with remounting cvfs and fuse filesystems
- Fixed bug with alowing requisite tracking of entire sls files
- Fixed bug with aptpkg.mod_repo returning OK even if apt-add-repository fails
- Increased frequency of ssh terminal output checking
- Fixed malformed locale string in localmod module
- Fixed checking of available version of package when accept_keywords were changed
- Fixed bug to make git.latest work with empty repositories
- Added **kwargs to service.mod_watch which removes warnings about *enable* and *__reqs__* not being supported by the function
- Improved state comments to not grow so quickly on failed requisites
- Added force argument to service to trigger force_reload
- Fixed bug to andle pkgrepo keyids that have been converted to int
- Fixed module.portage_config bug with appending accept_keywords
- Fixed bug to correctly report disk usage on windows minion
- Added the ability to specify key prefix for S3 ext_pillar
- Fixed issues with batch mode operating on the incorrect number of minions
- Fixed a bug with the proxmox cloud provider stacktracing on disk definition
- Fixed a bug with the changes dictionary in the file state
- Fixed the TCP keep alive settings to work better with SREQ caching
- Fixed many bugs within the iptables state and module
- Fixed bug with states by adding *fun*, *state*, and *unless* to the state runtime internal keywords listing
- Added ability to eAuth against Active Directory

- Fixed some salt-ssh issues when running on Fedora 21
- Fixed grains.get_or_set_hash to work with multiple entries under same key
- Added better explanations and more examples of how the Reactor calls functions to docs
- Fixed bug to not pass *ex_config_drive* to libcloud unless it's explicitly enabled
- Fixed bug with pip.install on windows
- Fixed bug where puppet.run always returns a 0 retcode
- Fixed race condition bug with minion scheduling via pillar
- Made efficiency improvements and bug fixes to the windows installer
- Updated environment variables to fix bug with pygit2 when running salt as non-root user
- Fixed cas behavior on data module -- data.cas was not saving changes
- Fixed GPG rendering error
- Fixed strace error in virt.query
- Fixed stacktrace when running chef-solo command
- Fixed possible bug wherein uncaught exceptions seem to make zmq3 tip over when threading is involved
- Fixed argument passing to the reactor
- Fixed glibc caching to prevent bug where salt-minion getaddrinfo in dns_check() never got updated nameservers

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting 'auth_timeout' and 'auth_tries' down to shorter periods.

33.2.127 Salt 2014.7.6 Release Notes

release
2015-05-18

Version 2014.7.6 is a bugfix release for *2014.7.0*.

Statistics

- Total Merges: **122**
- Total Issue References: **66**
- Total PR References: **166**
- Contributors: **49** (0xf10e, Azidburn, F30, JaseFace, JohannesEbke, aletourneau, aneeshusa, basepi, bastichelaar, bersace, cachedout, cedwards, cellscape, chris-prince, clan, clinta, cr1st1p, cro, dr4Ke, ericfode, ether42, gareth-greenaway, gtmanfred, hvnsweeting, jfindlay, jleroy, joejulian, justinta, kaithar, lorengordon, martinhoefling, mguegan, multani, notpeter, panticz, rallytime, rominf, rubic, s0undt3ch, skizunov, slinu3d, t0rrant, techhat, teizz, terminalmage, thatch45, twangboy, vdesjardins, vr-jack)

Security Fix

CVE-2015-4017 Certificates are not verified when connecting to server in the Aliyun and Proxmox modules

Only users of the Aliyun or Proxmox cloud modules are at risk. The vulnerability does not exist in the latest 2015.5.0 release of Salt.

Changelog for v2014.7.5..v2014.7.6

Generated at: 2018-05-27 20:42:49 UTC

- **PR** #23810: (rallytime) Backport #23757 to 2014.7 @ *2015-05-18 15:30:21 UTC*
  - **PR** #23757: (clan) use abspath, do not eliminating symlinks (refs: #23810)
  - aee00c83df Merge pull request #23810 from rallytime/bp-23757
  - fb32c32065 use abspath, do not eliminating symlinks
- **ISSUE** #20198: (jcftang) virt.get_graphics, virt.get_nics are broken, in turn breaking other things (refs: #23809, #21469)
- **PR** #23809: (rallytime) Fix virtualport section of virt.get_nics loop @ *2015-05-18 15:30:09 UTC*
  - **PR** #21487: (rallytime) Backport #21469 to 2014.7 (refs: #23809)
  - **PR** #21469: (vdesjardins) fixes #20198: virt.get_graphics and virt.get_nics calls in module virt (refs: #21487)
  - 6b3352bb1a Merge pull request #23809 from rallytime/virt_get_nics_fix
  - 0616fb7884 Fix virtualport section of virt.get_nics loop
- **PR** #23823: (gtmanfred) add link local for ipv6 @ *2015-05-17 12:48:25 UTC*
  - 188f03f567 Merge pull request #23823 from gtmanfred/2014.7
  - 5ef006d59d add link local for ipv6
- **PR** #23802: (gtmanfred) if it is ipv6 ip_to_int will fail @ *2015-05-16 04:06:59 UTC*
  - **PR** #23573: (techhat) Scan all available networks for public and private IPs (refs: #23802)
  - f3ca682f92 Merge pull request #23802 from gtmanfred/2014.7
  - 2da98b58c8 if it is ipv6 ip_to_int will fail
- **PR** #23488: (cellscape) LXC cloud fixes @ *2015-05-15 18:09:35 UTC*
  - d9af0c3e82 Merge pull request #23488 from cellscape/lxc-cloud-fixes
  - 64250a67e5 Remove profile from opts after creating LXC container
  - c4047d2a71 Set destroy=True in opts when destroying cloud instance
  - 9e1311a7cd Store instance names in opts when performing cloud action
  - 934bc57c73 Correctly pass custom env to lxc-attach
  - 7fb85f7be1 Preserve test=True option in cloud states
  - 9771b5a313 Fix detection of absent LXC container in cloud state
  - fb24f0cf02 Report failure when failed to create/clone LXC container
  - 2d9aa2bb97 Avoid shadowing variables in lxc module
  - 792e1021f2 Allow overriding profile options in lxc.cloud_init_interface

  - 42bd64b9b3 Return changes on successful lxc.create from salt-cloud
  - 4409eabb83 Return correct result when creating cloud LXC container
  - 377015c881 Issue #16424: List all providers when creating salt-cloud instance without profile
- **ISSUE** #22332: (rallytime) [salt-ssh] Add a check for host in /etc/salt/roster (refs: #23748)
- **PR** #23748: (basepi) [2014.7] Log salt-ssh roster render errors more assertively and verbosely @ *2015-05-14 22:38:10 UTC*
  - 808bbe1cb2 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
  - bc53e049e0 Log entire exception for render errors in roster
  - 753de6a621 Log render errors in roster to error level
  - e01a7a90b3 Always let the real YAML error through
- **ISSUE** #22959: (highlyunavailable) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist (refs: #23731)
- **PR** #23731: (twangboy) Fixes #22959: Trying to add a directory to an unmapped drive in windows @ *2015-05-14 21:59:14 UTC*
  - 72cf360255 Merge pull request #23731 from twangboy/fix_22959
  - 88e5495b2d Fixes #22959: Trying to add a directory to an unmapped drive in windows
- **PR** #23730: (rallytime) Backport #23729 to 2014.7 @ *2015-05-14 21:58:34 UTC*
  - **PR** #23729: (rallytime) Partially merge #23437 (grains fix) (refs: #23730)
  - **PR** #23437: (cedwards) Grains item patch (refs: #23729)
  - 2610195262 Merge pull request #23730 from rallytime/bp-23729
  - 1877caecba adding support for nested grains to grains.item
- **PR** #23688: (twangboy) Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows @ *2015-05-14 16:15:56 UTC*
  - 3e9df883d6 Merge pull request #23688 from twangboy/fix_23415
  - 6a91169bae Fixed unused-import pylint error
  - 5e25b3f355 fixed pylint errors
  - 1a9676626f Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows
- **ISSUE** #23403: (iamfil) salt.runners.cloud.action fun parameter is replaced (refs: #23680)
- **PR** #23680: (cachedout) Rename kwarg in cloud runner @ *2015-05-13 19:44:02 UTC*
  - 1b86460d73 Merge pull request #23680 from cachedout/issue_23403
  - d5986c21b4 Rename kwarg in cloud runner
- **ISSUE** #23548: (kkaig) grains.list_present produces incorrect (?) output (refs: #23674)
- **PR** #23674: (cachedout) Handle lists correctly in grains.list_prsesent @ *2015-05-13 18:34:58 UTC*
  - cd64af0ce4 Merge pull request #23674 from cachedout/issue_23548
  - da8a2f5cb3 Handle lists correctly in grains.list_prsesent
- **PR** #23672: (twangboy) Fix user present @ *2015-05-13 18:30:09 UTC*
  - d322a19213 Merge pull request #23672 from twangboy/fix_user_present

  - 731e7af3dd Merge branch '2014.7' of https://github.com/saltstack/salt into fix_user_present
  - d6f70a4545 Fixed user.present to create password in windows
- **ISSUE** #23604: (Azidburn) service.dead on systemd Minion create an Error Message (refs: #23607)
- **PR** #23670: (rallytime) Backport #23607 to 2014.7 @ *2015-05-13 18:27:17 UTC*
  - **PR** #23607: (Azidburn) Fix for #23604. No error reporting. Exitcode !=0 are ok (refs: #23670)
  - 43f7025000 Merge pull request #23670 from rallytime/bp-23607
  - ed30dc4642 Fix for #23604. No error reporting. Exitcode !=0 are ok
- **ISSUE** #22141: (Deshke) grains.get_or_set_hash render error if hash begins with "%" (refs: #23640)
- **PR** #23661: (rallytime) Merge #23640 with whitespace fix @ *2015-05-13 15:47:30 UTC*
  - **PR** #23640: (cachedout) Add warning to get_or_set_hash about reserved chars (refs: #23661)
  - 0f006ac1d8 Merge pull request #23661 from rallytime/merge-23640
  - 4427f42bb6 Whitespace fix
  - dd9115466e Add warning to get_or_set_hash about reserved chars
- **ISSUE** #23452: (landergate) minion crashed with empty grain (refs: #23639)
- **PR** #23639: (cachedout) Handle exceptions raised by __virtual__ @ *2015-05-13 15:11:12 UTC*
  - 84e2ef88fc Merge pull request #23639 from cachedout/issue_23452
  - d418b49a77 Syntax error!
  - 45b4015d7d Handle exceptions raised by __virtual__
- **ISSUE** #23611: (hubez) master_type set to 'failover' but 'master' is not of type list but of type <type 'str'> (refs: #23637)
- **PR** #23637: (cachedout) Convert str master to list @ *2015-05-13 15:08:19 UTC*
  - bd9b94ba8c Merge pull request #23637 from cachedout/issue_23611
  - 56cb1f52e3 Fix typo
  - f6fcf19a7f Convert str master to list
- **PR** #23595: (rallytime) Backport #23549 to 2014.7 @ *2015-05-12 21:19:40 UTC*
  - **PR** #23549: (vr-jack) Update __init__.py (refs: #23595)
  - f20c0e42ce Merge pull request #23595 from rallytime/bp-23549
  - 6efcac09ad Update __init__.py
- **ISSUE** #23110: (martinhoefling) Copying files from gitfs in file.recurse state fails (refs: #23496)
- **PR** #23594: (rallytime) Backport #23496 to 2014.7 @ *2015-05-12 21:19:34 UTC*
  - **PR** #23496: (martinhoefling) Fix for issue #23110 (refs: #23594)
  - 1acaf86da7 Merge pull request #23594 from rallytime/bp-23496
  - d5ae1d268a Fix for issue #23110 This resolves issues when the freshly created directory is removed by fileserver.update.
- **PR** #23593: (rallytime) Backport #23442 to 2014.7 @ *2015-05-12 21:19:26 UTC*
  - **PR** #23442: (clan) add directory itself to keep list (refs: #23593)
  - 2c221c7332 Merge pull request #23593 from rallytime/bp-23442

  - 39869a15bd check w/ low['name'] only
  - 304cc499e9 another fix for file defined w/ id, but require name
  - 8814d4180e add directory itself to keep list
- **PR** #23606: (twangboy) Fixed checkbox for starting service and actually starting it @ *2015-05-12 21:18:50 UTC*
  - fadd1ef63c Merge pull request #23606 from twangboy/fix_installer
  - 038331edab Fixed checkbox for starting service and actually starting it
- **ISSUE** #22908: (karanjad) Add failhard option to salt orchestration (refs: #23389)
- **PR** #23592: (rallytime) Backport #23389 to 2014.7 @ *2015-05-12 16:44:42 UTC*
  - **PR** #23389: (cachedout) Correct fail_hard typo (refs: #23592)
  - 10b3f0f643 Merge pull request #23592 from rallytime/bp-23389
  - 734cc43801 Correct fail_hard typo
- **PR** #23573: (techhat) Scan all available networks for public and private IPs (refs: #23802) @ *2015-05-12 15:22:22 UTC*
  - cd34b9b6c4 Merge pull request #23573 from techhat/novaquery
  - f92db5e92f Linting
  - 26e00d3ccc Scan all available networks for public and private IPs
- **ISSUE** #23479: (danielmorlock) Typo in pkg.removed for Gentoo? (refs: #23558)
- **PR** #23558: (jfindlay) reorder emerge command line @ *2015-05-12 15:17:46 UTC*
  - 2a72cd71c2 Merge pull request #23558 from jfindlay/fix_ebuild
  - 45404fb2a6 reorder emerge command line
- **ISSUE** #23355: (dr4Ke) salt-ssh: 'sources: salt://' files from 'pkg' state are not included in salt_state.tgz (refs: #23530)
- **PR** #23530: (dr4Ke) salt-ssh state: fix including all salt:// references @ *2015-05-12 15:13:43 UTC*
  - a664a3c6fd Merge pull request #23530 from dr4Ke/fix_salt-ssh_to_include_pkg_sources
  - 5df6a8008c fix pylint warning
  - d0549e56ba salt-ssh state: fix including all salt:// references
- **ISSUE** #23004: (b18) 2014.7.5 - Windows - pkg.list_pkgs - ”nxlog” never shows up in output. (refs: #23433)
- **PR** #23433: (twangboy) Obtain all software from the registry @ *2015-05-11 22:47:52 UTC*
  - 55c3869861 Merge pull request #23433 from twangboy/list_pkgs_fix
  - 8ab5b1b86f Fix pylint error
  - 2d11d6545e Obtain all software from the registry
- **PR** #23554: (jleroy) Debian: Hostname always updated @ *2015-05-11 21:57:00 UTC*
  - 755bed0abd Merge pull request #23554 from jleroy/debian-hostname-fix
  - 5ff749e487 Debian: Hostname always updated
- **ISSUE** #23411: (dr4Ke) grains.append should work at any level of a grain (refs: #23440, #23474)
- **PR** #23551: (dr4Ke) grains.append unit tests, related to #23474 @ *2015-05-11 21:54:25 UTC*
  - **PR** #23474: (dr4Ke) Fix grains.append in nested dictionary grains #23411 (refs: #23551)

  - **PR** #23440: (dr4Ke) fix grains.append in nested dictionary grains #23411 (refs: #23474)
  - 6ec87ce9f5 Merge pull request #23551 from dr4Ke/grains.append_unit_tests
  - ebff9df5b2 fix pylint errors
  - c4954046ad unit tests for grains.append module function
  - 0c9a32326c use MagickMock
  - c838a22377 unit tests for grains.append module function
- **ISSUE** #23411: (dr4Ke) grains.append should work at any level of a grain (refs: #23440, #23474)
- **PR** #23474: (dr4Ke) Fix grains.append in nested dictionary grains #23411 (refs: #23551) @ *2015-05-11 18:00:21 UTC*
  - **PR** #23440: (dr4Ke) fix grains.append in nested dictionary grains #23411 (refs: #23474)
  - e96c5c5bf3 Merge pull request #23474 from dr4Ke/fix_grains.append_nested
  - a01a5bb51e grains.get, parameter delimiter, versionadded: 2014.7.6
  - b39f50475d remove debugging output
  - b6e15e295c fix grains.append in nested dictionary grains #23411
- **PR** #23537: (t0rrant) Update changelog @ *2015-05-11 17:02:16 UTC*
  - ab7e1aed8e Merge pull request #23537 from t0rrant/patch-1
  - 8e03cc99d3 Update changelog
- **PR** #23538: (cro) Update date in LICENSE file @ *2015-05-11 15:19:25 UTC*
  - b79fed3a92 Merge pull request #23538 from cro/licupdate
  - 345efe25c9 Update date in LICENSE file
- **ISSUE** #23159: (aneeshusa) Unused validator (refs: #23505)
- **PR** #23505: (aneeshusa) Remove unused ssh config validator. Fixes #23159. @ *2015-05-09 13:24:15 UTC*
  - a123a36f05 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
  - 90af1672ca Remove unused ssh config validator. Fixes #23159.
- **ISSUE** #20518: (ekle) module s3.get does not support eu-central-1 (refs: #23467)
- **PR** #23467: (slinu3d) Added AWS v4 signature support @ *2015-05-08 14:36:19 UTC*
  - ca2c21a63c Merge pull request #23467 from slinu3d/2014.7
  - 0b4081d8f4 Fixed pylint error at line 363
  - 5be5eb5b14 Fixed pylink errors
  - e64f374ffa Fixed lint errors
  - b9d1ac4f1f Added AWS v4 signature support
- **PR** #23444: (techhat) Add create_attach_volume to nova driver @ *2015-05-07 19:51:32 UTC*
  - e6f9eec02e Merge pull request #23444 from techhat/novacreateattach
  - ebdb7eae2d Add create_attach_volume to nova driver
- **ISSUE** #529: (rubic) run salt in user space (refs: #543)
  - **PR** saltstack/salt-bootstrap#563: (notpeter) Ubuntu alternate ppas (refs: #23460)

  - **PR** #543: (rubic) updated documentation for user, fixed configuration template links (refs: #`saltstack/salt-bootstrap#563`_)

- **PR** #23460: (s0undt3ch) [2014.7] Update to latest stable bootstrap script v2015.05.07 @ *2015-05-07 19:10:54 UTC*
  - e331463319 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - edcd0c41f2 Update to latest stable bootstrap script v2015.05.07
- **PR** #23439: (techhat) Add wait_for_passwd_maxtries variable @ *2015-05-07 07:28:56 UTC*
  - 7a8ce1a954 Merge pull request #23439 from techhat/maxtries
  - 0ad3ff2c88 Add wait_for_passwd_maxtries variable
- **PR** #23422: (cro) $HOME should not be used, some shells don't set it. @ *2015-05-06 21:02:36 UTC*
  - 644eb75fec Merge pull request #23422 from cro/gce_sh_home
  - 4ef9e6ba06 Don't use $HOME to find user's directory, some shells don't set it
- **PR** #23425: (basepi) [2014.7] Fix typo in FunctionWrapper @ *2015-05-06 20:38:03 UTC*
  - ef17ab4b2a Merge pull request #23425 from basepi/functionwrapper_typo
  - c390737f3e Fix typo in FunctionWrapper
- **PR** #23385: (rallytime) Backport #23346 to 2014.7 @ *2015-05-06 20:12:29 UTC*
  - **PR** #23346: (ericfode) Allow file_map in salt-cloud to handle folders. (refs: #23385)
  - 1b13ec04c2 Merge pull request #23385 from rallytime/bp-23346
  - 9efc13c810 more linting fixes
  - cf131c9a5a cleaned up some pylint errors
  - f981699c75 added logic to sftp_file and file_map to allow folder uploads using file_map
- **PR** #23414: (jfindlay) 2015.2 -> 2015.5 @ *2015-05-06 20:04:02 UTC*
  - f8c7a62089 Merge pull request #23414 from jfindlay/update_branch
  - 8074d16d52 2015.2 -> 2015.5
- **PR** #23404: (hvnsweeting) saltapi cherrypy: initialize var when POST body is empty @ *2015-05-06 17:35:56 UTC*
  - 54b3bd43e4 Merge pull request #23404 from hvnsweeting/cherrypy-post-emptybody-fix
  - f85f8f954c initialize var when POST body is empty
- **PR** #23409: (terminalmage) Update Lithium docstrings in 2014.7 branch @ *2015-05-06 16:20:46 UTC*
  - 160f703296 Merge pull request #23409 from terminalmage/update-lithium-docstrings-2014.7
  - bc97d011ba Fix sphinx typo
  - 20006b06f6 Update Lithium docstrings in 2014.7 branch
- **ISSUE** #17245: (tomashavlas) localemod does not generate locale for Arch (refs: #23397, #23307)
- **PR** #23397: (jfindlay) add more flexible whitespace to locale_gen search @ *2015-05-06 03:44:11 UTC*
  - aa5fb0aa46 Merge pull request #23397 from jfindlay/fix_locale_gen
  - 0941fefd2b add more flexible whitespace to locale_gen search
- **PR** #23368: (kaithar) Backport #23367 to 2014.7 @ *2015-05-05 21:42:26 UTC*
  - **PR** #23367: (kaithar) Put the sed insert statement back in to the output. (refs: #23368)

  - **PR** #18368: (basepi) Merge forward from 2014.7 to develop (refs: #23368, #23367)
  - 0c76dd4d8a Merge pull request #23368 from kaithar/bp-23367
  - 577f41972e Pylint fix
  - 8d9acd1f89 Put the sed insert statement back in to the output.
- **ISSUE** #23294: (variia) file.replace fails to append if repl string partially available (refs: #23350)
- **PR** #23350: (lorengordon) Append/prepend: search for full line @ *2015-05-05 21:42:11 UTC*
  - 3493cc1fca Merge pull request #23350 from lorengordon/file.replace_assume_line
  - b60e224beb Append/prepend: search for full line
- **ISSUE** #23026: (adelcast) Incorrect salt-syndic logfile and pidfile locations (refs: #23341)
- **PR** #23341: (cachedout) Fix syndic pid and logfile path @ *2015-05-05 21:29:10 UTC*
  - 7be5c48ad5 Merge pull request #23341 from cachedout/issue_23026
  - e98e65e787 Fix tests
  - 6011b437ca Fix syndic pid and logfile path
- **ISSUE** #19114: (pykler) salt-ssh and gpg pillar renderer (refs: #23347, #23272, #23188)
- **PR** #23272: (basepi) [2014.7] Allow salt-ssh minion config overrides via master config and roster (refs: #23347) @ *2015-05-05 21:28:47 UTC*
  - **PR** #23188: (basepi) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer (refs: #23272)
  - ea61abfa68 Merge pull request #23272 from basepi/salt-ssh.minion.config.19114
  - c223309bb7 Add versionadded
  - be7407feae Lint
  - c2c337567e Missing comma
  - 8e3e8e073a Pass the minion_opts through the FunctionWrapper
  - cb69cd07de Match the master config template in the master config reference
  - 87fc3161f9 Add Salt-SSH section to master config template
  - 91dd9dcbdc Add ssh_minion_opts to master config ref
  - c273ea14c6 Add minion config to salt-ssh doc
  - a0b6b760c3 Add minion_opts to roster docs
  - 5212c35260 Accept minion_opts from the target information
  - e2099b6e1b Process *ssh_minion_opts* from master config
  - 3b64214377 Revert "Work around bug in salt-ssh in config.get for gpg renderer"
  - 494953a208 Remove the strip (embracing multi-line YAML dump)
  - fe87f0fe39 Dump multi-line yaml into the SHIM
  - b751a7281c Inject local minion config into shim if available
- **ISSUE** #19114: (pykler) salt-ssh and gpg pillar renderer (refs: #23347, #23272, #23188)
- **PR** #23347: (basepi) [2014.7] Salt-SSH Backport FunctionWrapper.__contains__ @ *2015-05-05 14:13:21 UTC*
  - **PR** #23272: (basepi) [2014.7] Allow salt-ssh minion config overrides via master config and roster (refs: #23347)

  - **PR** #23188: (basepi) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer (refs: #23272)
  - 4f760dd9cb Merge pull request #23347 from basepi/salt-ssh.functionwrapper.contains.19114
  - 30595e3ff7 Backport FunctionWrapper.__contains__
- **ISSUE** #22742: (hvnsweeting) salt-master says: "This master address: 'salt' was previously resolvable but now fails to resolve!" (refs: #23344)
- **PR** #23344: (cachedout) Explicitly set file_client on master @ *2015-05-04 23:21:48 UTC*
  - 02658b1e60 Merge pull request #23344 from cachedout/issue_22742
  - 5adc96ce7f Explicitly set file_client on master
- **PR** #23318: (cellscape) Honor seed argument in LXC container initializaton @ *2015-05-04 20:58:12 UTC*
  - **PR** #23311: (cellscape) Fix new container initialization in LXC runner (refs: #23318)
  - ba7605d1cb Merge pull request #23318 from cellscape/honor-seed-argument
  - 228b1be299 Honor seed argument in LXC container initializaton
- **ISSUE** #17245: (tomashavlas) localemod does not generate locale for Arch (refs: #23397, #23307)
- **PR** #23307: (jfindlay) check for /etc/locale.gen @ *2015-05-04 20:56:32 UTC*
  - 4ac4509c57 Merge pull request #23307 from jfindlay/fix_locale_gen
  - 101199ac14 check for /etc/locale.gen
- **ISSUE** saltstack/salt-bootstrap#580: (bradthurber) git develop broken in centos6/rhel6/others? due to missing python tornado dep (refs: #23324)
- **ISSUE** saltstack/salt-bootstrap#560: (bradthurber) param to avoid git install on CentOS/RHEL? (refs: #23324)
- **ISSUE** #552: (jhutchins) Support require and watch under the same state dec (refs: #23324)
  - **PR** saltstack/salt-bootstrap#589: (panticz) Fix Debian Squeeze backports mirror (refs: #23324)
  - **PR** saltstack/salt-bootstrap#504: (rominf) opensuse 13.2: fix installation (refs: #23324)
  - **PR** #567: (bastichelaar) Added upstart module (refs: #23324)
- **PR** #23324: (s0undt3ch) [2014.7] Update to the latest stable release of the bootstrap script v2015.05.04 @ *2015-05-04 16:28:30 UTC*
  - f790f42ed6 Merge pull request #23324 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - 6643e47ce5 Update to the latest stable release of the bootstrap script v2015.05.04
- **PR** #23329: (cro) Require requests to verify cert when talking to aliyun and proxmox cloud providers @ *2015-05-04 16:18:17 UTC*
  - 5487367baa Merge pull request #23329 from cro/cloud_verify_cert
  - 860d4b7338 Turn on ssl verify for requests.
- **PR** #23311: (cellscape) Fix new container initialization in LXC runner (refs: #23318) @ *2015-05-04 09:55:29 UTC*
  - ea2017672d Merge pull request #23311 from cellscape/fix-salt-cloud-lxc-init
  - 76fbb34e7d Fix new container initialization in LXC runner
- **ISSUE** #18880: (johtso) npm installed breaks when a module is missing (refs: #23298)
- **PR** #23298: (chris-prince) Fixed issue #18880 in 2014.7 branch @ *2015-05-03 15:49:41 UTC*
  - c399b8f568 Merge pull request #23298 from chris-prince/2014.7

  - 0fa25dbb58 Fixed issue #18880 in 2014.7 branch
- **ISSUE** #23148: (cr1st1p) virt - error handling bogus if machine image location is wrong (refs: #23151)
- **PR** #23292: (rallytime) Merge #23151 with pylint fixes @ *2015-05-02 03:54:12 UTC*
  - **PR** #23151: (cr1st1p) Fixes #23148 (refs: #23292)
  - 16ecefd466 Merge pull request #23292 from rallytime/merge-23151
  - 8ff852a23a Merge #23151 with pylint fixes
  - 8ffa12e82d Fixes #23148
- **PR** #23274: (basepi) [2014.7] Reduce salt-ssh debug log verbosity @ *2015-05-01 20:19:23 UTC*
  - ce24315a4b Merge pull request #23274 from basepi/salt-ssh.debug.verbosity
  - ecee6c68f4 Log stdout and stderr to trace
  - 08f54d79c6 Log stdout and stderr to trace as well
  - 9b9c30f5ad Reduce salt-ssh debug log verbosity
- **ISSUE** #22605: (mavenAtHouzz) Tornado websockets event Handlers registration are incorrect (refs: #23261)
- **PR** #23261: (rallytime) Fix tornado websocket event handler registration @ *2015-05-01 18:20:31 UTC*
  - 7b55e4310f Merge pull request #23261 from rallytime/fix-22605
  - 4950fbf2b3 Fix tornado websocket event handler registration
- **PR** #23258: (teizz) TCP keepalives on the ret side, Revisited. @ *2015-05-01 16:13:49 UTC*
  - 83ef7cb114 Merge pull request #23258 from teizz/ret_keepalive_2014_7_5
  - 0b9fb6f9be The fixes by cachedout which were backported into 2015_2 were missing a single parameter thus not setting up the TCP keepalive for the ZeroMQ Channel by default.
- **ISSUE** #23224: (twellspring) iptables.append --log parameters must be after --jump LOG (refs: #23241)
- **PR** #23241: (techhat) Move iptables log options after the jump @ *2015-05-01 01:31:59 UTC*
  - 8de3c83956 Merge pull request #23241 from techhat/issue23224
  - 87f7948c99 Move iptables log options after the jump
- **PR** #23228: (rallytime) Backport #23171 to 2014.7 @ *2015-04-30 21:09:45 UTC*
  - **PR** #23171: (skizunov) Bugfix: 'clean_proc_dir' is broken (refs: #23228)
  - f20210e499 Merge pull request #23228 from rallytime/bp-23171
  - e670e99506 Bugfix: 'clean_proc_dir' is broken
- **ISSUE** #22703: (Xiol) salt-ssh does not work with list matcher (refs: #22808)
- **PR** #23227: (rallytime) Backport #22808 to 2014.7 @ *2015-04-30 21:09:14 UTC*
  - **PR** #22808: (basepi) [2015.2] Add list targeting to salt-ssh flat roster (refs: #23227)
  - 721cc285ee Merge pull request #23227 from rallytime/bp-22808
  - d208a00b2a Dict, not list
  - a3f529e003 It's already been converted to a list
  - dd57f2d1c1 Add list targeting to salt-ssh flat roster
- **PR** #22823: (hvnsweeting) 22822 file directory clean @ *2015-04-30 15:25:51 UTC*

  - 82c22afacc Merge pull request #22823 from hvnsweeting/22822-file-directory-clean
  - c749c276b4 fix lint - remove unnecessary parenthesis
  - cb3dfee969 refactor
  - 8924b5a911 refactor: use relpath instead of do it manually
  - d3060a51a3 refactor
  - 5759a0e8f0 bugfix: fix file.directory clean=True when it require parent dir
- **ISSUE** saltstack/salt#22941: (bersace) *_pillar* func breaks fileserver globals (refs: #22942)
- **ISSUE** #22941: (bersace) *_pillar* func breaks fileserver globals (refs: #22977)
- **PR** #22977: (bersace) Fix fileserver backends __opts__ overwritten by _pillar @ *2015-04-30 15:24:56 UTC*
  - **PR** #22942: (bersace) Fix fileserver backends global overwritten by _pillar (refs: #22977)
  - f6c0728bfb Merge pull request #22977 from bersace/fix-fileserver-backends-pillar-side-effect
  - 5f451f63cf Fix fileserver backends __opts__ overwritten by _pillar
- **ISSUE** #23166: (claudiupopescu) "Error in function _minion_event" resulting in modules not loaded (refs: #23180)
- **PR** #23180: (jfindlay) fix typos from 36841bdd in masterapi.py @ *2015-04-30 15:22:41 UTC*
  - 34206f7ae3 Merge pull request #23180 from jfindlay/remote_event
  - 72066e1073 fix typos from 36841bdd in masterapi.py
- **ISSUE** #23153: (cr1st1p) cmdmod : run_chroot - broken in 2014.7.5 - missing kwargs (refs: #23176)
- **PR** #23176: (jfindlay) copy standard cmd.run* kwargs into cmd.run_chroot @ *2015-04-30 15:22:12 UTC*
  - b6b82165c8 Merge pull request #23176 from jfindlay/run_chroot
  - 7dc3417b44 copy standard cmd.run* kwargs into cmd.run_chroot
- **ISSUE** #23192: (joejulian) supervisord mod_watch does not accept sfun (refs: #23193)
- **PR** #23193: (joejulian) supervisord.mod_watch should accept sfun @ *2015-04-30 04:34:21 UTC*
  - effacbe294 Merge pull request #23193 from joejulian/2014.7_supervisord_accept_sfun
  - efb59f9d9d supervisord.mod_watch should accept sfun
- **ISSUE** #19114: (pykler) salt-ssh and gpg pillar renderer (refs: #23347, #23272, #23188)
- **PR** #23188: (basepi) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer (refs: #23272) @ *2015-04-30 04:34:10 UTC*
  - 72fe88e5c6 Merge pull request #23188 from basepi/salt-ssh.function.wrapper.gpg.19114
  - d73979ee12 Work around bug in salt-ssh in config.get for gpg renderer
- **ISSUE** #21480: (msciciel) TypeError: string indices must be integers, not str (refs: #23154)
- **PR** #23154: (cachedout) Re-establish channel on interruption in fileclient @ *2015-04-29 16:18:59 UTC*
  - 168508ec2a Merge pull request #23154 from cachedout/refresh_channel
  - 9f8dd80c38 Re-establish channel on interruption in fileclient
- **ISSUE** #20647: (ryan-lane) file.serialize fails to serialize due to ordered dicts (refs: #20779)
- **PR** #23146: (rallytime) Backport #20779 to 2014.7 @ *2015-04-28 20:45:06 UTC*
  - **PR** #20779: (cachedout) Use declared yaml options (refs: #23146)

  - 3b53e04534 Merge pull request #23146 from rallytime/bp-20779
  - ffd18493e8 compare OrderedDicts in serializer unit test
  - a22170627c Just change serialize
  - a111798e8e Use declared yaml options
- **PR** #23145: (rallytime) Backport #23089 to 2014.7 @ *2015-04-28 20:44:56 UTC*
  - **PR** #23089: (cachedout) Stringify version number before lstrip (refs: #23145)
  - 8bb4664bf9 Merge pull request #23145 from rallytime/bp-23089
  - 93c41afd23 Stringify version number before lstrip
- **ISSUE** #16188: (drawks) salt.modules.parted has various functions with bogus input validation. (refs: #23124)
- **PR** #23144: (rallytime) Backport #23124 to 2014.7 @ *2015-04-28 20:44:46 UTC*
  - **PR** #23124: (ether42) fix parsing the output of parted in parted.list_() (refs: #23144)
  - c85d36fd29 Merge pull request #23144 from rallytime/bp-23124-2014-7
  - 6b64da706c fix parsing the output of parted
- **PR** #23120: (terminalmage) Don't run os.path.relpath() if repo doesn't have a "root" param set @ *2015-04-28 15:46:54 UTC*
  - a27b158153 Merge pull request #23120 from terminalmage/fix-gitfs-relpath
  - 1860fffd68 Don't run os.path.relpath() if repo doesn't have a "root" param set
- **PR** #23132: (clinta) Backport b27c176 @ *2015-04-28 15:00:30 UTC*
  - fcba607978 Merge pull request #23132 from clinta/patch-2
  - a824d727d1 Backport b27c176
- **ISSUE** #18476: (Auha) Upgrading salt on my master caused dependency issues (refs: #18610, #23114)
- **PR** #23114: (rallytime) Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages @ *2015-04-28 03:59:24 UTC*
  - **PR** #18610: (rallytime) Make ZMQ 4 installation docs for ubuntu more clear (refs: #23114)
  - b0f4b28487 Merge pull request #23114 from rallytime/remove_ubuntu_zmq4_docs
  - f6cc7c8f8a Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages
- **ISSUE** #23085: (xenophonf) Use "s3fs" (not "s3") in fileserver_roots (refs: #23097)
- **PR** #23108: (rallytime) Backport #23097 to 2014.7 @ *2015-04-28 03:58:05 UTC*
  - **PR** #23097: (rallytime) Change s3 to s3fs in fileserver_roots docs example (refs: #23108)
  - 399857f20b Merge pull request #23108 from rallytime/bp-23097
  - fa889845df Change s3 to s3fs in fileserver_roots docs example
- **ISSUE** #22171: (basepi) We should only call returner.save_load once per jid (refs: #22199)
- **PR** #23112: (basepi) [2014.7] Backport #22199 to fix mysql returner save_load errors @ *2015-04-28 03:55:44 UTC*
  - **PR** #22199: (basepi) [2015.2] Put a bandaid on the save_load duplicate issue (mysql returner) (refs: #23112)
  - 5541537c32 Merge pull request #23112 from basepi/mysql_returner_save_load
  - 0127012ed3 Put a bandaid on the save_load duplicate issue

  - **PR** saltstack/salt#22925: (rallytime) Backport #22895 to 2014.7 (refs: #23113)
- **PR** #23113: (rallytime) Revert "Backport #22895 to 2014.7" @ *2015-04-28 03:27:29 UTC*
  - **PR** #22895: (aletourneau) pam_tally counter was not reset to 0 after a successful login (refs: #23113, #22925, #saltstack/salt`#22925`_)
  - dfe2066b25 Merge pull request #23113 from saltstack/revert-22925-bp-22895
  - b957ea8977 Revert "Backport #22895 to 2014.7"
- **ISSUE** #23013: (ghost) gitfs regression with authenticated repos (refs: #23094)
- **PR** #23094: (terminalmage) pygit2: disable cleaning of stale refs for authenticated remotes @ *2015-04-27 20:51:28 UTC*
  - 21515f3c23 Merge pull request #23094 from terminalmage/issue23013
  - aaf7b04f79 pygit2: disable cleaning of stale refs for authenticated remotes
- **PR** #23048: (jfindlay) py-2.6 compat for utils/boto.py ElementTree exception @ *2015-04-25 16:56:45 UTC*
  - d45aa21dca Merge pull request #23048 from jfindlay/ET_error
  - 64c42ccb5f py-2.6 compat for utils/boto.py ElementTree exception
- **ISSUE** #22981: (syphernl) Locale state throwing traceback when generating not (yet) existing locale (refs: #23025)
- **PR** #23025: (jfindlay) catch exceptions on bad system locales/encodings @ *2015-04-25 16:56:30 UTC*
  - d25a5c102f Merge pull request #23025 from jfindlay/fix_sys_locale
  - 9c4d62bb00 catch exceptions on bad system locales/encodings
- **PR** #22932: (hvnsweeting) bugfix: also manipulate dir_mode when source not defined @ *2015-04-25 16:54:58 UTC*
  - 5e44b59a14 Merge pull request #22932 from hvnsweeting/file-append-bugfix
  - 3f368de14a do not use assert in execution module
  - 9d4fd4a8c8 bugfix: also manipulate dir_mode when source not defined
- **ISSUE** #23021: (ether42) ps.pgrep raises NoSuchProcess (refs: #23055)
- **PR** #23055: (jfindlay) prevent ps module errors on accessing dead procs @ *2015-04-24 22:39:49 UTC*
  - c2416a425f Merge pull request #23055 from jfindlay/fix_ps
  - c2dc7adeb1 prevent ps module errors on accessing dead procs
- **PR** #23031: (jfindlay) convert exception e.message to just e @ *2015-04-24 18:38:13 UTC*
  - bfd9158a83 Merge pull request #23031 from jfindlay/exception
  - 856bad1c31 convert exception e.message to just e
- **PR** #23015: (hvnsweeting) if status of service is stop, there is not an error with it @ *2015-04-24 14:35:10 UTC*
  - 7747f3342e Merge pull request #23015 from hvnsweeting/set-non-error-lvl-for-service-status-log
  - 92ea163513 if status of service is stop, there is not an error with it
- **ISSUE** #22993: (jetpak) salt-minion restart causes all spawned daemons to die on centos7 (systemd) (refs: #23000)
- **PR** #23000: (jfindlay) set systemd service killMode to process for minion @ *2015-04-24 03:42:39 UTC*
  - 2e09789156 Merge pull request #23000 from jfindlay/systemd_kill

  - 3d575e29c4 set systemd service killMode to process for minion

- **ISSUE** #22707: (arthurlogilab) retry_dns of master configuration is missing from the documentation (refs: #22999)
- **PR** #22999: (justinta) Added retry_dns to minion doc. @ *2015-04-24 03:30:24 UTC*
  - b5c059ab26 Merge pull request #22999 from jtand/fix_22707
  - 8486e17ab3 Added retry_dns to minion doc.
- **PR** #22990: (techhat) Use the proper cloud conf variable @ *2015-04-23 17:48:07 UTC*
  - 27dc877bfd Merge pull request #22990 from techhat/2014.7
  - d33bcbc2c1 Use the proper cloud conf variable
- **PR** #22976: (multani) Improve state_output documentation @ *2015-04-23 12:24:22 UTC*
  - 13dff652c6 Merge pull request #22976 from multani/fix/state-output-doc
  - 19efd419b5 Improve state_output documentation
- **PR** #22955: (terminalmage) Fix regression introduced yesterday in dockerio module @ *2015-04-22 18:56:39 UTC*
  - 89fa18500c Merge pull request #22955 from terminalmage/dockerio-run-fix
  - b4472ad1b2 Fix regression introduced yesterday in dockerio module
- **PR** #22954: (rallytime) Backport #22909 to 2014.7 @ *2015-04-22 18:56:20 UTC*
  - **PR** #22909: (mguegan) Fix compatibility with pkgin > 0.7 (refs: #22954)
  - 46ef227911 Merge pull request #22954 from rallytime/bp-22909
  - 70c1cd3969 Fix compatibility with pkgin > 0.7
- **ISSUE** #18720: (Reiner030) timeouts when setting Route53 records (refs: #22856)
- **PR** #22856: (jfindlay) increase timeout and decrease tries for route53 records @ *2015-04-22 16:47:01 UTC*
  - c9ae593461 Merge pull request #22856 from jfindlay/route53_timeout
  - ba4a786984 add route53 record sync wait, default=False
  - ea2fd50660 increase timeout and tries for route53 records
- **PR** #22946: (s0undt3ch) Test with a more recent pip version to avoid a traceback @ *2015-04-22 16:25:17 UTC*
  - a178d444b8 Merge pull request #22946 from s0undt3ch/2014.7
  - bc87749e2c Test with a more recent pip version to avoid a traceback
- **ISSUE** #22571: (BoomerB) same error message as on issue #18504 (refs: #22945)
- **PR** #22945: (garethgreenaway) Fixes to scheduler @ *2015-04-22 16:25:00 UTC*
  - de339bef0a Merge pull request #22945 from garethgreenaway/22571_2014_7_schedule_pillar_refresh_seconds_exceptions
  - bfa6d25ed8 Fixing a reported issue when using a scheduled job from pillar with splay. _seconds element that acted as a backup of the actual seconds was being removed when pillar was refreshed and causing exceptions. This fix moves some splay related code out of the if else condition so it's checked whether the job is in the job queue or not.
- **ISSUE** #18843: (calvinhp) State user.present will fail to create home if user exists and homedir doesn't (refs: #22933, #22887)
- **PR** #22887: (hvnsweeting) fix #18843 @ *2015-04-22 15:47:05 UTC*
  - 12d2b91d85 Merge pull request #22887 from hvnsweeting/18843-fix-user-present-home

  - 7fe7b089fd run user.chhome once to avoid any side-effect when run it twice
  - 19de9954ee clarify the usage of home arg
  - d6dc09af64 enhance doc, as usermod on ubuntu 12.04 will not CREATE home
  - 0ce4d7feb6 refactor: force to use boolean
  - 849d19edd7 log debug the creating dir process
  - c4e95b9f48 fix #18843: usermod won't create a dir if old home does not exist
- **ISSUE** #2417: (ffa) Module standards (refs: #22829)
- **ISSUE** #21140: (holms) locale.present state executed successfully, although originally fails (refs: #22930, #22829)
- **PR** #22930: (jfindlay) localemod.gen_locale now always returns a boolean @ *2015-04-22 15:37:39 UTC*
  - **PR** #22829: (F30) Always return a boolean in gen_locale() (refs: #22930)
  - b7de7bdf47 Merge pull request #22930 from jfindlay/localegen_bool
  - 399399f89e localemod.gen_locale now always returns a boolean
- **ISSUE** #18843: (calvinhp) State user.present will fail to create home if user exists and homedir doesn't (refs: #22933, #22887)
- **PR** #22933: (hvnsweeting) add test for #18843 @ *2015-04-22 15:27:18 UTC*
  - 11bcf14979 Merge pull request #22933 from hvnsweeting/18843-test
  - b13db32fde add test for #18843
- **PR** #22925: (rallytime) Backport #22895 to 2014.7 @ *2015-04-22 02:30:26 UTC*
  - **PR** #22895: (aletourneau) pam_tally counter was not reset to 0 after a successful login (refs: #23113, #22925, #saltstack/salt`#22925`_)
  - 6890752dd3 Merge pull request #22925 from rallytime/bp-22895
  - 3852d96213 Pylint fix
  - 90f7829ad3 Fixed pylint issues
  - 5ebf159554 Cleaned up pull request
  - a08ac478f6 pam_tally counter was not reset to 0 after a successful login
- **ISSUE** #22790: (whiteinge) jobs.list_jobs runner tracebacks on 'missing' argument (refs: #22914)
- **PR** #22914: (cachedout) Call proper returner function in jobs.list_jobs @ *2015-04-22 00:49:01 UTC*
  - eca37ebc11 Merge pull request #22914 from cachedout/issue_22790
  - d828d6fd58 Call proper returner function in jobs.list_jobs
- **PR** #22918: (JaseFace) Add a note to the git_pillar docs stating that GitPython is the only currently supported provider @ *2015-04-22 00:48:26 UTC*
  - 44f3409b01 Merge pull request #22918 from JaseFace/git-pillar-provider-doc-note
  - 0aee5c23d4 Add a note to the git_pillar docs stating that GitPython is the only currently supported provider
- **PR** #22907: (techhat) Properly merge cloud configs to create profiles @ *2015-04-21 22:02:44 UTC*
  - 31c461f573 Merge pull request #22907 from techhat/cloudconfig
  - 3bf4e66112 Properly merge cloud configs to create profiles

- **ISSUE** #22782: (0xf10e) Turning everything into OrderedDicts broke states.keystone.user_present() (refs: #22894)
- **PR** #22894: (0xf10e) Fix issue #22782 @ *2015-04-21 18:55:18 UTC*
  - f0939754a0 Merge pull request #22894 from 0xf10e/2014.7
  - 58fa24c7fa Clarify doc on kwarg 'roles' for user_present().
  - f0ae2eb84f Improve readability by renaming tenant_role
- **ISSUE** #12003: (MarkusMuellerAU) [state.dockerio] docker.run TypeError: run() argument after ** must be a mapping, not str (refs: #22902)
- **PR** #22902: (rallytime) Change state example to use proper kwarg @ *2015-04-21 18:50:47 UTC*
  - c802ba7514 Merge pull request #22902 from rallytime/docker_doc_fix
  - 8f703461b0 Change state example to use proper kwarg
- **PR** #22898: (terminalmage) dockerio: better error message for native exec driver @ *2015-04-21 18:02:58 UTC*
  - 81771a7769 Merge pull request #22898 from terminalmage/issue12003
  - c375309434 dockerio: better error message for native exec driver
- **ISSUE** #22825: (paolodina) Issue using file.replace in state file (refs: #22897)
- **PR** #22897: (rallytime) Add param documentation for file.replace state @ *2015-04-21 17:31:04 UTC*
  - e2ec4ecc55 Merge pull request #22897 from rallytime/fix-22825
  - 9c51630002 Add param documentation for file.replace state
- **ISSUE** saltstack/salt#22844: (bersace) LocalClient file cache confuse pillar and state files (refs: #22850)
- **PR** #22850: (bersace) Fix pillar and salt fileserver mixed @ *2015-04-21 17:04:33 UTC*
  - fd53889f0e Merge pull request #22850 from bersace/fix-pillar-salt-mixed
  - 31b98e72eb Initialize state file client after pillar loading
  - f6bebb7a31 Use saltenv
- **PR** #22818: (twangboy) Added documentation regarding pip in windows @ *2015-04-21 03:58:59 UTC*
  - 1380fec1b9 Merge pull request #22818 from twangboy/upd_pip_docs
  - cb999c7d70 Update pip.py
  - 3cc5c970ad Added documentation regarding pip in windows
- **PR** #22872: (rallytime) Prevent stacktrace on os.path.exists in hosts module @ *2015-04-21 02:54:40 UTC*
  - b2bf17f5d5 Merge pull request #22872 from rallytime/fix_hosts_stacktrace
  - c88a1ea243 Prevent stacktrace on os.path.exists in hosts module
- **PR** #22853: (s0undt3ch) Don't assume package installation order. @ *2015-04-21 02:42:41 UTC*
  - 03af523de9 Merge pull request #22853 from s0undt3ch/2014.7
  - b62df62151 Don't assume package installation order.
- **PR** #22877: (s0undt3ch) Don't fail on *make clean* just because the directory does not exist @ *2015-04-21 02:40:47 UTC*
  - 9211e36564 Merge pull request #22877 from s0undt3ch/hotfix/clean-docs-fix
  - 95d6887949 Don't fail on *make clean* just because the directory does not exist

- **PR** #22873: (thatch45) Type check the version since it will often be numeric @ *2015-04-21 02:38:11 UTC*
  - 5bdbd08bbd Merge pull request #22873 from thatch45/type_check
  - 53b8376626 Type check the version since it will often be numeric
- **PR** #22870: (twangboy) Added ability to send a version with a space in it @ *2015-04-20 23:18:28 UTC*
  - c965b0a035 Merge pull request #22870 from twangboy/fix_installer_again
  - 3f180cfaae Added ability to send a version with a space in it
- **PR** #22863: (rallytime) Backport #20974 to 2014.7 @ *2015-04-20 19:29:37 UTC*
  - **PR** #20974: (JohannesEbke) Fix expr_match usage in salt.utils.check_whitelist_blacklist (refs: #22863)
  - 2973eb18bc Merge pull request #22863 from rallytime/bp-20974
  - 14913a4cb4 Fix expr_match usage in salt.utils.check_whitelist_blacklist
- **PR** #22578: (hvnsweeting) gracefully handle when salt-minion cannot decrypt key @ *2015-04-20 15:24:45 UTC*
  - c45b92bb4b Merge pull request #22578 from hvnsweeting/2014-7-fix-compile-pillar
  - f75b24ad68 gracefully handle when salt-minion cannot decrypt key
- **ISSUE** #21979: (yrdevops) gitfs: error message not descriptive enough when libgit2 was compiled without libssh2 (refs: #22800)
- **PR** #22800: (terminalmage) Improve error logging for pygit2 SSH-based remotes @ *2015-04-18 17:18:55 UTC*
  - 900c7a510f Merge pull request #22800 from terminalmage/issue21979
  - 8f1c0084cd Clarify that for pygit2, receiving 0 objects means repo is up-to-date
  - 98885f71d6 Add information about libssh2 requirement for pygit2 ssh auth
  - 09468d2607 Fix incorrect log message
  - 2093bf8d96 Adjust loglevels for gitfs errors
  - 9d394dfe46 Improve error logging for pygit2 SSH-based remotes
- **PR** #22813: (twangboy) Updated instructions for building salt @ *2015-04-18 04:10:07 UTC*
  - e99f2fdb28 Merge pull request #22813 from twangboy/win_doc_fix
  - adc421acdd Fixed some formatting issues
  - 8901b3b5a6 Updated instructions for building salt
- **ISSUE** #22708: (Bilge) salt-ssh file.accumulated error: NameError: global name 'msgpack' is not defined (refs: #22810)
- **PR** #22810: (basepi) [2014.7] More msgpack gating for salt-ssh @ *2015-04-17 22:28:24 UTC*
  - fe1de89ad7 Merge pull request #22810 from basepi/salt-ssh.more.msgpack.gating
  - d4da8e66a4 Gate msgpack in salt/modules/saltutil.py
  - 02303b22ce Gate msgpack in salt/modules/data.py
  - d7e8741f02 Gate salt.states.file.py msgpack
- **ISSUE** #17144: (xpender) salt-cloud -m fails with softlayer (refs: #22803)
- **PR** #22803: (rallytime) Allow map file to work with softlayer @ *2015-04-17 20:34:42 UTC*
  - 11df71e16d Merge pull request #22803 from rallytime/fix-17144
  - ce88b6ad41 Allow map file to work with softlayer

- **PR** #22807: (rallytime) Add 2014.7.5 links to windows installation docs @ *2015-04-17 20:32:13 UTC*
  - cd43a95212 Merge pull request #22807 from rallytime/windows_docs_update
  - 5931a582d1 Replace all 4s with 5s
  - eadaead755 Add 2014.7.5 links to windows installation docs
- **PR** #22795: (rallytime) Added release note for 2014.7.5 release @ *2015-04-17 18:05:36 UTC*
  - 0b295e2c87 Merge pull request #22795 from rallytime/release_notes
  - fde1feed46 Remove extra line
  - b19b95d992 Added release note for 2014.7.5 release
- **ISSUE** #22740: (lorengordon) New Windows installer assumes salt is installed to the current directory (refs: #22759)
- **PR** #22759: (twangboy) Final edits to the batch files for running salt @ *2015-04-17 04:31:15 UTC*
  - **PR** #22754: (twangboy) Removed redundant \\ and " (refs: #22759)
  - 3c91459de2 Merge pull request #22759 from twangboy/fix_bat_one_last_time
  - 075f82e046 Final edits to the batch files for running salt
- **PR** #22760: (thatch45) Fix issues with the syndic @ *2015-04-17 04:30:48 UTC*
  - 20d3f2bb83 Merge pull request #22760 from thatch45/syndic_fix
  - e2db624b37 Fix issues with the syndic not resolving the master when the interface is set
- **PR** #22762: (twangboy) Fixed version not showing in Add/Remove Programs @ *2015-04-17 04:29:46 UTC*
  - 54c45845ab Merge pull request #22762 from twangboy/fix_installer
  - 4d25af8acf Fixed version not showing in Add/Remove Programs

33.2.128 Salt 2014.7.7 Release Notes

release
2015-10-13

Version 2014.7.7 is a bugfix release for *2014.7.0*.

Statistics

- Total Merges: **54**
- Total Issue References: **20**
- Total PR References: **60**
- Contributors: **28** (AkhterAli, BretFisher, MrCitron, alekti, basepi, bersace, cachedout, corux, cro, davidjb, dumol, efficks, garethgreenaway, hvnsweeting, jacksontj, jacobhammons, jaybocc2, jfindlay, jquast, justinta, msteed, nmadhok, notpeter, puneetk, rallytime, techhat, trevor-h, twangboy)

Changelog for v2014.7.6..v2014.7.7

Generated at: 2018-05-27 20:45:04 UTC

- **PR** #27335: (rallytime) [2014.7] Fixup salt-cloud logging @ *2015-09-24 20:33:53 UTC*
  - 5262f01325 Merge pull request #27335 from rallytime/cloud-logging-7
  - adeb1dcad4 Pylint Fix
  - 588c13783c Salt-cloud logging clean up for windows functions
  - 9b6000135c [2014.7] Fixup salt-cloud logging
- **PR** #27252: (jfindlay) 2014.7 -> 2014.7.0 @ *2015-09-18 23:44:39 UTC*
  - e90412d3b8 Merge pull request #27252 from jfindlay/version.2014.7
  - 3d28307a00 2014.7 -> 2014.7.0
- **PR** #27117: (jacobhammons) made 2014.7 an archived release @ *2015-09-15 07:35:12 UTC*
  - c186e51764 Merge pull request #27117 from jacobhammons/release-docs-2014.7
  - b69e11e0a4 made 2014.7 an archived release minor doc site updates
- **PR** #27114: (cachedout) Issue warning that some log levels may contain sensitive data @ *2015-09-15 07:30:43 UTC*
  - 69d758ee2b Merge pull request #27114 from cachedout/warn_on_insecure_log
  - 507fb04683 Issue warning that some log levels may contain sensitive data
- **PR** #27075: (twangboy) Replaced password with redacted when displayed @ *2015-09-14 18:36:10 UTC*
  - aa71bae8aa Merge pull request #27075 from twangboy/fix_password_2014.7
  - c0689e3215 Replaced password with redacted when displayed
- **ISSUE** #26656: (ari) [documentation] error in example for salt.runner.pillar (refs: #26667)
- **PR** #26667: (nmadhok) [doc-fix] Removing special character from salt.runners.pillar and other changes @ *2015-08-26 18:24:37 UTC*
  - c2c7fe06c8 Merge pull request #26667 from nmadhok/doc-fix-2014.7
  - 26be189689 Doc fix. Fixes #26656
- **PR** #26663: (jacobhammons) version change for latest branch @ *2015-08-26 14:03:35 UTC*
  - 6bd3dccae8 Merge pull request #26663 from jacobhammons/2014.7-version
  - b6af538070 version change for latest branch
- **PR** #26636: (rallytime) Refactor cloud provider tests to be more accurate @ *2015-08-25 21:28:34 UTC*
  - 071a6112e5 Merge pull request #26636 from rallytime/cloud-test-fixes
  - c0d83d558d Don't use id as variable
  - 2b4bc1679d Keep ec2 instance creation test the same - it works better for the ec2 output
  - b5b58eb31f Skip digital ocean tests since we can't use API v1 with v2 tests
  - 9ae1539c62 Update cloud tests to be more efficient and accurate
- **ISSUE** #26630: (efficks) win_service: Function has_powershell does not works on Windows XP (refs: #26640)
- **PR** #26640: (efficks) Fix function spacing @ *2015-08-25 20:01:39 UTC*

  - 304542b4c6 Merge pull request #26640 from efficks/fixws2014
  - ebe5d9d85c Fix function spacing
- **PR** #26515: (bersace) Defaults to current saltenv in state.sls @ *2015-08-25 16:35:50 UTC*
  - 4532f98a76 Merge pull request #26515 from bersace/salt-env-local-sls
  - 0727af9e3d Defaults to current saltenv in state.sls
- **PR** #26242: (cro) Remove dead code @ *2015-08-12 15:14:20 UTC*
  - da8bca09aa Merge pull request #26242 from cro/anonldap4
  - a0d2ab1eed Remove dead code
- **PR** #26216: (cro) Fix LDAP configuration issue. @ *2015-08-11 18:33:43 UTC*
  - 1ecf23773e Merge pull request #26216 from cro/anonldap3
  - af132d7b89 Documentation update for anonymous bind issue.
  - 2ef54b6b13 Documentation update for anonymous bind issue.
  - 5b1836bb00 Fix issue with LDAP anonymous binds.
- **PR** #26116: (corux) file.replace fails if repl string is an invalid regex and append/prepend is used @ *2015-08-10 16:44:12 UTC*
  - abdf2935c4 Merge pull request #26116 from corux/fix-escape-content
  - fd913ddc36 Append/prepend: search for full line with escaped content
- **ISSUE** #25751: (basepi) Document *master_finger* more prominently (refs: #26088)
- **PR** #26088: (jacobhammons) Master finger @ *2015-08-07 14:31:33 UTC*
  - 106356d98d Merge pull request #26088 from jacobhammons/master-finger
  - 133d5f7885 some small changes
  - d220c83f77 master_finger configuration docs switch a script to use https:// instead of http:// Refs #25751
- **ISSUE** #25961: (getabc) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate '*.wpengine.com' or 'wpengine.com' (refs: #26047)
- **PR** #26047: (jacobhammons) Updated windows download links in the docs to https://repo.saltstack.com @ *2015-08-05 22:59:44 UTC*
  - 4bd4bc41f2 Merge pull request #26047 from jacobhammons/win-downloads
  - 7c162d181c Updated windows download links in the docs to https://repo.saltstack.com Refs #25961
- **ISSUE** #25701: (alekti) Issue #23764 regression (refs: #25750)
- **ISSUE** #23764: (es1o) source_hash from local file is not supported. (refs: #25750)
- **PR** #25750: (alekti) Add file as supported protocol for file source_hash. Fixes #25701. @ *2015-07-29 02:31:27 UTC*
  - d93eb87c16 Merge pull request #25750 from alekti/2014.7
  - 9ec3ae96d4 Add file as supported protocol for file source_hash. Fixes #23764.
- **PR** #25704: (cachedout) Ensure prior alignment with master_type in 2014.7 @ *2015-07-27 16:06:35 UTC*
  - 3a15df22ac Merge pull request #25704 from cachedout/master_type_2014_7
  - c95886c9a7 Ensure prior alignment with master_type in 2014.7

- **PR** #25657: (MrCitron) Add the ability to specify a base pattern for carbon returner @ *2015-07-24 16:32:58 UTC*
  - d1b9362a73 Merge pull request #25657 from MrCitron/pattern-carbon-returner-2014.7
  - f8b2f8079f Add the ability to specify a base pattern for metrics path used by the carbon returner
- **PR** #25633: (AkhterAli) Update loader.py @ *2015-07-22 20:02:41 UTC*
  - 9634351fc2 Merge pull request #25633 from AkhterAli/2014.7
  - 29be4bbe11 Update loader.py
- **PR** #25416: (cachedout) Fix broken keyword @ *2015-07-14 19:47:10 UTC*
  - 09ebaceca8 Merge pull request #25416 from cachedout/str_2014_7
  - cc514938a8 Fix broken keyword
- **PR** #25375: (cachedout) Fix error in config.py for master_type @ *2015-07-13 16:49:27 UTC*
  - 2a1dd1113f Merge pull request #25375 from cachedout/config_fix_2014_7
  - c041f2905f Fix error in config.py for master_type
- **PR** #25324: (jacobhammons) Latest help theme updates @ *2015-07-10 16:11:31 UTC*
  - 2590e23d48 Merge pull request #25324 from jacobhammons/doc-theme-updates
  - 88f5fcf58d Latest help theme updates
- **ISSUE** #18447: (ryan-lane) Can't install salt with raet using pip -e git (refs: #25093)
- **PR** #25093: (jaybocc2) quick fix for issue #18447 @ *2015-07-01 15:56:53 UTC*
  - 36d53ef59e Merge pull request #25093 from jaybocc2/2014.7
  - c6a501ebda quick fix for issue #18447
- **PR** #25069: (puneetk) Add a helper module function called list_enabled @ *2015-06-30 20:53:51 UTC*
  - 38903a94a1 Merge pull request #25069 from puneetk/patch-1
  - f0b4e600e6 Update Documentation to clarify version added
  - f8dc6030e7 Pylint updates , removing whitespace
  - 532d315dd1 [Code Review update] renamed function to is_enaled from list_enabled
  - 20b0462289 Update schedule.py
  - 4f1471d7fb Add a helper module function called list_enabled
- **ISSUE** #15209: (hubez) file.manage: source_hash not working with s3:// (2014.7.0rc1) (refs: #25011)
- **PR** #25011: (notpeter) Add s3 to protocols for remote source_hash (2014.7 backport) @ *2015-06-27 22:35:44 UTC*
  - a7154e7471 Merge pull request #25011 from notpeter/s3_2014.7_backport
  - 8b8af640f6 Add s3 to protocols for remote source_hash
- **ISSUE** #24915: (justinta) Salt-cloud not working in 2014.7.6 (refs: #24944)
- **PR** #24944: (techhat) Double-check main_cloud_config @ *2015-06-25 12:29:55 UTC*
  - a11e4c6eea Merge pull request #24944 from techhat/issue24915
  - 59c3081e49 Double-check main_cloud_config
- **PR** #24936: (justinta) Fixed ps module to not use depreciated psutil commands @ *2015-06-24 22:38:19 UTC*
  - d26a5447ba Merge pull request #24936 from jtand/psutil

  - bdb7a19c36 Fixed ps module to not use depreciated psutil commands

- **ISSUE** saltstack/salt-bootstrap#473: (s1kbr0) salt-bootstrap.sh [...] git v2014.1.11 on SmartOS base64 is broken (refs: #24918)
- **PR** #24918: (BretFisher) SmartOS SMF minion startup fix @ *2015-06-24 15:44:26 UTC*
  - eeb05a1b10 Merge pull request #24918 from BretFisher/minion-start-smartos-smf-fix
  - d7bfb0c7fd Smartos smf minion fix
- **ISSUE** #24776: (nmadhok) --static option in salt raises ValueError and has been broken for a very long time (refs: #24777)
- **PR** #24780: (nmadhok) Backporting PR #24777 to 2014.7 branch @ *2015-06-18 14:52:56 UTC*
  - **PR** #24779: (nmadhok) Backporting Changes to 2014.7 branch (refs: #24777)
  - **PR** #24778: (nmadhok) Backporting PR #24777 to 2015.2 branch (refs: #24777)
  - **PR** #24777: (nmadhok) Fixing issue where --static option fails with ValueError Fixes #24776 (refs: #24778, #24780)
  - 4281dfff0b Merge pull request #24780 from nmadhok/backport-2014.7-24777
  - c53b0d9a22 Backporting PR #24777 to 2014.7 branch
- **ISSUE** #21318: (thanatos) get_full_returns raises KeyError (refs: #24769)
- **ISSUE** #18994: (njhartwell) salt.client.get_cli_returns errors when called immediately after run_job (refs: #24769)
- **PR** #24769: (msteed) Fix stacktrace in get_cli_returns() @ *2015-06-18 14:31:46 UTC*
  - f3c5cb2d41 Merge pull request #24769 from msteed/issue-21318
  - f40a9d5cc0 Fix stacktrace in get_cli_returns()
- **ISSUE** #17041: (xenophonf) Confusing Salt error messages due to limited/incomplete PowerShell command error handling (refs: #24690)
- **PR** #24690: (twangboy) Report powershell output instead of error @ *2015-06-17 16:33:49 UTC*
  - 59db24602f Merge pull request #24690 from twangboy/fix_17041
  - 7a015389af Added additional reporting
  - d84ad5d519 Fixed capitalization... Failed and Already
  - e9552455c4 Merge branch '2014.7' of https://github.com/saltstack/salt into fix_17041
- **ISSUE** #24196: (johnccfm) Exception when using user.present with Windows (refs: #24646)
- **PR** #24646: (twangboy) Fixed user.present on existing user @ *2015-06-15 15:04:43 UTC*
  - a18dadad71 Merge pull request #24646 from twangboy/fix_24196
  - a208e1d60f Fixed user.present on existing user
  - 144bff2f67 Report powershell output instead of error
- **PR** #24643: (cro) Add reference to salt-announce mailing list @ *2015-06-12 20:21:15 UTC*
  - b99484fde2 Merge pull request #24643 from cro/saltannounce
  - ecb0623d7f Add salt-announce mailing list.
- **PR** #24620: (twangboy) Fixed comment and uncomment functions in file.py @ *2015-06-12 19:36:26 UTC*
  - 635121e85d Merge pull request #24620 from twangboy/fix_24215

  - d7a9999be1 Fixed comment and uncomment functions in file.py
- **PR** #24589: (BretFisher) Fixed Mine example for jinja code block @ *2015-06-11 15:48:02 UTC*
  - d83928a7f9 Merge pull request #24589 from BretFisher/patch-1
  - 65a11336dc Fixed Mine example for jinja code block
- **ISSUE** #24427: (fayetted) 2015.5.1-3 Windows 64Bit Minion fails to start after install (refs: #24530)
- **PR** #24530: (twangboy) Start Minion Service on Silent Install @ *2015-06-09 21:30:08 UTC*
  - d376390f76 Merge pull request #24530 from twangboy/fix_24427
  - 673e1d809e Added missing panel.bmp for installer
  - cc50218b01 Start Minion Service on Silent Install
- **PR** #24513: (jquast) bugfix use of 'iteritem' in 2014.7 branch @ *2015-06-09 04:06:36 UTC*
  - **PR** #24511: (jquast) bugfix: trailing "...done" in rabbitmq output (refs: #24513)
  - 6ebc476bb3 Merge pull request #24513 from jquast/2014.7-bugfix-iteritem
  - 2be0180e5e bugfix use of 'iteritem' in 2014.7 branch
- **ISSUE** #24276: (markuskramerIgitt) Live salt-master Profiling with SIGUSR2 fails (refs: #24405)
- **PR** #24405: (jacksontj) Fix for #24276 @ *2015-06-04 20:50:42 UTC*
  - 83f853b6ea Merge pull request #24405 from jacksontj/2014.7
  - 2c7afaeebf Fix for #24276
- **PR** #24395: (hvnsweeting) handle exceptions when received data is not in good shape @ *2015-06-04 20:08:22 UTC*
  - cef919c602 Merge pull request #24395 from hvnsweeting/handle-exception-get-file
  - bb798a0224 handle exceptions when received data is not in good shape
- **PR** #24305: (twangboy) Added documentation, fixed formatting @ *2015-06-04 19:40:54 UTC*
  - efba1a94b4 Merge pull request #24305 from twangboy/win_path_docs
  - 36804253e6 Fixed pylint error caused by P... added r
  - bc42a4bb11 triple double quotes to triple single quotes
  - 77cd930bba Added documentation, fixed formatting
- **PR** #24178: (rallytime) Backport #24118 to 2014.7, too. @ *2015-05-27 17:49:45 UTC*
  - **PR** #24118: (trevor-h) removed deprecated pymongo usage (refs: #24178)
  - 9d7331c87d Merge pull request #24178 from rallytime/bp-24118
  - e2217a09e8 removed deprecated pymongo usage as no longer functional with pymongo > 3.x
- **PR** #24159: (rallytime) Fill out modules/keystone.py CLI Examples @ *2015-05-27 15:07:11 UTC*
  - 4e8c5031b0 Merge pull request #24159 from rallytime/keystone_doc_examples
  - dadac8d076 Fill out modules/keystone.py CLI Examples
- **PR** #24158: (rallytime) Fix test_valid_docs test for tls module @ *2015-05-27 15:06:05 UTC*
  - fc10ee8ed5 Merge pull request #24158 from rallytime/fix_doc_error
  - 49a517e2ca Fix test_valid_docs test for tls module

- **PR** #24125: (hvnsweeting) Fix rabbitmq test mode @ *2015-05-26 15:40:18 UTC*
  - c0d32e0b5e Merge pull request #24125 from hvnsweeting/fix-rabbitmq-test-mode
  - 71862c69b9 enhance log
  - 28e2594162 change according to new output of rabbitmq module functions
  - cd0212e8ed processes and returns better output for rabbitmq module
- **ISSUE** #23464: (tibold) cmd_iter_no_block() blocks (refs: #24093)
- **PR** #24093: (msteed) Make LocalClient.cmd_iter_no_block() not block @ *2015-05-25 15:56:42 UTC*
  - 39a8f30f06 Merge pull request #24093 from msteed/issue-23464
  - fd35903d75 Fix failing test
  - 41b344c7d3 Make LocalClient.cmd_iter_no_block() not block
- **PR** #24008: (davidjb) Correct reST formatting for states.cmd documentation @ *2015-05-21 04:19:01 UTC*
  - 5bffd3045e Merge pull request #24008 from davidjb/2014.7
  - 8b8d0293d4 Correct reST formatting for documentation
- **PR** #23933: (jacobhammons) sphinx saltstack2 doc theme @ *2015-05-20 18:19:19 UTC*
  - 1aa0420040 Merge pull request #23933 from jacobhammons/2014.7
  - a3613e68e4 removed numbering from doc TOC
  - 78b737c5e6 removed 2015.* release from release notes, updated index page to remove PDF/epub links
  - e867f7df77 Changed build settings to use saltstack2 theme and update release versions.
  - 81ed9c9f59 sphinx saltstack2 doc theme
- **PR** #23965: (hvnsweeting) handle all exceptions gitpython can raise @ *2015-05-20 15:08:03 UTC*
  - 314e4db512 Merge pull request #23965 from hvnsweeting/20147-fix-gitfs-gitpython-exception
  - 2576301631 handle all exception gitpython can raise
- **PR** #23939: (basepi) Add extended changelog to 2014.7.6 release notes @ *2015-05-19 21:21:00 UTC*
  - 913391207a Merge pull request #23939 from basepi/v2014.7.6release
  - 32b65dc2a9 Add extended changelog to 2014.7.6 release notes
- **ISSUE** #23820: (UtahDave) 2014.7.5 schedule error (refs: #23881)
- **PR** #23881: (garethgreenaway) Fixes to schedule module in 2014.7 @ *2015-05-19 15:46:30 UTC*
  - 0031ca2631 Merge pull request #23881 from garethgreenaway/23820_2014_7_schedule_list_issue
  - b207f2a433 Missing continue in the list function when deleting unused attributes.
- **ISSUE** #22131: (quixoten) "unexpected keyword argument 'merge'" on 2014.7.2 (salt-ssh) (refs: #23887)
- **PR** #23887: (basepi) [2014.7] Bring salt-ssh pillar.get in line with mainline pillar.get @ *2015-05-18 23:11:34 UTC*
  - 63bd21ecd2 Merge pull request #23887 from basepi/salt-ssh.pillar.get.22131
  - bc84502f46 Bring salt-ssh pillar.get in line with mainline pillar.get
- **PR** #23891: (basepi) Update the release notes index page @ *2015-05-18 23:06:52 UTC*
  - 17c5810c04 Merge pull request #23891 from basepi/releasenotes
  - dec153bcea Update the release notes index page

- **PR** #23888: (basepi) Update the 2014.7.6 release notes with CVE details @ *2015-05-18 22:35:51 UTC*
  - a93e58f80f Merge pull request #23888 from basepi/v2014.7.6release
  - 49921b6cb2 Update the 2014.7.6 release notes with CVE details
- **PR** #23871: (rallytime) Backport #23848 to 2014.7 @ *2015-05-18 20:34:04 UTC*
  - **PR** #23848: (dumol) Updated installation docs for SLES 12. (refs: #23871)
  - 50730287bb Merge pull request #23871 from rallytime/bp-23848
  - 379c09c3a5 Updated for SLES 12.

33.2.129 Salt 2014.7.8 Release Notes

release
2015-11-13

Version 2014.7.8 is a bugfix release for *2014.7.0*.

Statistics

- Total Merges: **7**

  - d2fb2109a3 Merge pull request #29296 from douardda/patch-3
  - d2885390f4 Use process KillMode on Debian systems also

33.2.131 Salt 2014.1.0 Release Notes - Codename Hydrogen

Note: Due to a change in master to minion communication, 2014.1.0 minions are not compatible with older-version masters. Please upgrade masters first. More info on backwards-compatibility policy *here*, under the "Upgrading Salt" subheading.

Note: A change in the grammar in the state compiler makes `module.run` in requisites illegal syntax. Its use is replaced simply with the word `module`. In other words you will need to change requisites like this:

```
require:
    module.run: some_module_name
```

to:

```
require:
    module: some_module_name
```

This is a breaking change. We apologize for the inconvenience, we needed to do this to remove some ambiguity in parsing requisites.

---

release
: 2014-02-24

The 2014.1.0 release of Salt is a major release which not only increases stability but also brings new capabilities in virtualization, cloud integration, and more. This release brings a great focus on the expansion of testing making roughly double the coverage in the Salt tests, and comes with many new features.

2014.1.0 is the first release to follow the new date-based release naming system. See the version numbers page for more details.

Major Features

Salt Cloud Merged into Salt

Salt Cloud is a tool for provisioning salted minions across various cloud providers. Prior to this release, Salt Cloud was a separate project but this marks its full integration with the Salt distribution. A Getting Started guide and additional documentation for Salt Cloud can be found *here*:

Google Compute Engine

Alongside Salt Cloud comes new support for the Google Compute Engine. Salt Stack can now deploy and control GCE virtual machines and the application stacks that they run.

For more information on Salt Stack and GCE, please see this blog post.

Documentation for Salt and GCE can be found *here*.

Salt Virt

Salt Virt is a cloud controller that supports virtual machine deployment, inspection, migration, and integration with many aspects of Salt.

Salt Virt has undergone a major overhaul with this release and now supports many more features and includes a number of critical improvements.

Docker Integration

Salt now ships with `states` and an `execution module` to manage Docker containers.

Substantial Testing Expansion

Salt continues to increase its unit/regression test coverage. This release includes over 300 new tests.

BSD Package Management

BSD package management has been entirely rewritten. FreeBSD 9 and older now default to using pkg_add, while FreeBSD 10 and newer will use pkgng. FreeBSD 9 can be forced to use pkgng, however, by specifying the following option in the minion config file:

```
providers:
  pkg: pkgng
```

In addition, support for installing software from the ports tree has been added. See the documentation for the ports *`state`* and *`execution module`* for more information.

Network Management for Debian/Ubuntu

Initial support for management of network interfaces on Debian-based distros has been added. See the documentation for the *network state* and the *debian_ip* for more information.

IPv6 Support for iptables State/Module

The iptables *state* and *module* now have IPv6 support. A new parameter `family` has been added to the states and execution functions, to distinguish between IPv4 and IPv6. The default value for this parameter is `ipv4`, specifying `ipv6` will use ip6tables to manage firewall rules.

GitFS Improvements

Several performance improvements have been made to the *Git fileserver backend*. Additionally, file states can now use any SHA1 commit hash as a fileserver environment:

```
/etc/httpd/httpd.conf:
  file.managed:
    - source: salt://webserver/files/httpd.conf
    - saltenv: 45af879
```

This applies to the functions in the *cp module* as well:

```
salt '*' cp.get_file salt://readme.txt /tmp/readme.txt saltenv=45af879
```

MinionFS

This new fileserver backend allows files which have been pushed from the minion to the master (using *cp.push*) to be served up from the salt fileserver. The path for these files takes the following format:

```
salt://minion-id/path/to/file
```

`minion-id` is the id of the "source" minion, the one from which the files were pushed to the master. `/path/to/file` is the full path of the file.

The *MinionFS Walkthrough* contains a more thorough example of how to use this backend.

saltenv

To distinguish between fileserver environments and execution functions which deal with environment variables, fileserver environments are now specified using the `saltenv` parameter. `env` will continue to work, but is deprecated and will be removed in a future release.

Grains Caching

A caching layer has been added to the Grains system, which can help speed up minion startup. Disabled by default, it can be enabled by setting the minion config option `grains_cache`:

```
grains_cache: True

# Seconds before grains cache is considered to be stale.
grains_cache_expiration: 300
```

If set to `True`, the grains loader will read from/write to a msgpack-serialized file containing the grains data.

Additional command-line parameters have been added to salt-call, mainly for testing purposes:

- `--skip-grains` will completely bypass the grains loader when salt-call is invoked.
- `--refresh-grains-cache` will force the grains loader to bypass the grains cache and refresh the grains, writing a new grains cache file.

Improved Command Logging Control

When using the *cmd module*, either on the CLI or when developing Salt execution modules, a new keyword argument `output_loglevel` allows for greater control over how (or even if) the command and its output are logged. For example:

```
salt '*' cmd.run 'tail /var/log/messages' output_loglevel=debug
```

The package management modules (`apt`, `yumpkg`, etc.) have been updated to log the copious output generated from these commands at loglevel `debug`.

Note: To keep a command from being logged, `output_loglevel=quiet` can be used.

Prior to this release, this could be done using `quiet=True`. This argument is still supported, but will be removed in a future Salt release.

PagerDuty Support

Initial support for firing events via PagerDuty has been added. See the documentation for the *pagerduty* module.

Virtual Terminal

Sometimes the subprocess module is not good enough, and, in fact, not even `askpass` is. This virtual terminal is still in its infant childhood, needs quite some love, and was originally created to replace `askpass`, but, while developing it, it immediately proved that it could do so much more. It's currently used by salt-cloud when bootstrapping salt on clouds which require the use of a password.

Proxy Minions

Initial basic support for Proxy Minions is in this release. Documentation can be found *here*.

Proxy minions are a developing feature in Salt that enables control of devices that cannot run a minion. Examples include network gear like switches and routers that run a proprietary OS but offer an API, or "dumb" devices that just don't have the horsepower or ability to handle a Python VM.

Proxy minions can be difficult to write, so a simple REST-based example proxy is included. A Python bottle-based webserver can be found at https://github.com/cro/salt-proxy-rest as an endpoint for this proxy.

This is an ALPHA-quality feature. There are a number of issues with it currently, mostly centering around process control, logging, and inability to work in a masterless configuration.

Additional Bugfixes (Release Candidate Period)

Below are many of the fixes that were implemented in salt during the release candidate phase.

- Fix mount.mounted leaving conflicting entries in fstab (issue 7079)
- Fix mysql returner serialization to use json (issue 9590)
- Fix `ZMQError: Operation cannot be accomplished in current state` errors (issue 6306)
- Rbenv and ruby improvements
- Fix quoting issues with mysql port (issue 9568)
- Update mount module/state to support multiple swap partitions (issue 9520)
- Fix `archive` state to work with `bsdtar`
- Clarify logs for minion ID caching
- Add numeric revision support to git state (issue 9718)
- Update `master_uri` with `master_ip` (issue 9694)
- Add comment to Debian `mod_repo` (issue 9923)
- Fix potential undefined loop variable in rabbitmq state (issue 8703)
- Fix for salt-virt runner to delete key on VM deletion
- Fix for `salt-run -d` to limit results to specific runner or function (issue 9975)
- Add tracebacks to jinja renderer when applicable (issue 10010)
- Fix parsing in monit module (issue 10041)
- Fix highstate output from syndic minions (issue 9732)
- Quiet logging when dealing with passwords/hashes (issue 10000)
- Fix for multiple remotes in git_pillar (issue 9932)
- Fix npm installed command (issue 10109)
- Add safeguards for utf8 errors in zcbuildout module
- Fix compound commands (issue 9746)
- Add systemd notification when master is started
- Many doc improvements

33.2.132 Salt 2014.1.1 Release Notes

release
2014-03-18

Version 2014.1.1 is a bugfix release for *2014.1.0*. The changes include:

- Various doc fixes, including up-to-date Salt Cloud installation documentation.
- Renamed state.sls runner to state.orchestrate, to reduce confusion with the *state.sls* execution function
- Fix various bugs in the `dig` module (issue 10367)
- Add retry for query on certain EC2 status codes (issue 10154)
- Fix various bugs in mongodb_user state module (issue 10430)
- Fix permissions on `~/.salt_token` (issue 10422)
- Add PyObjects support
- Fix launchctl module crash with missing files
- Fix *saltutil.find_job* for Windows (issue 10581)
- Fix OS detection for OpenSolaris (issue 10601)
- Fix broken salt-ssh key_deploy
- Add support for multiline cron comments (issue 10721)
- Fix timezone module for Arch (issue 10789)
- Fix symlink support for `file.recurse` (issue 10809)
- Fix multi-master bugs (issue 10732 and issue 10969)
- Fix file.patch to error when source file is unavailable (issue 10380)
- Fix pkg to handle packages set as `purge` in `pkg.installed` (issue 10719)
- Add `zmqversion` grain
- Fix highstate summary for masterless minions (issue 10945)
- Fix *saltutil.find_job* for 2014.1 masters talking to 0.17 minions (issue 11020)
- Fix *file.recurse* states with trailing slashes in source (issue 11002)
- Fix *pkg states* to allow `pkgname.x86_64` (issue 7306)
- Make *iptables states* set a default table for flush (issue 11037)
- Added iptables `--reject-with` after final iptables call in *iptables states* (issue:*10757*)
- Fix improper passing of "family" in *iptables states* (issue 10774)
- Fix traceback in *iptables.insert* states (issue 10988)
- Fix zombie processes (issue 10867 and others)
- Fix batch mode to obey `--return` settings (issue 9146)
- Fix localclient issue that was causing batch mode breakage (issue 11094, issue 10470, and others)
- Multiple salt-ssh fixes
- FreeBSD: look in /usr/local/etc/salt for configuration by default, if installed using `pip --editable`.

- Add a `skip_suggestions` parameter to pkg.installed states which allows pre-flight check to be skipped (issue 11106)
- Fixed tag-based gitfs fileserver environments regression (issue 10956)
- Yum: fix cache of available pkgs not cleared when repos are changed (issue 11001)
- Yum: fix for plugin-provided repositories (i.e. RHN/Spacewalk) (issue 11145)
- Fix regression in *chocolatey.bootstrap* (issue 10541)
- Fix fail on unknown target in *jobs runner* (issue 11151)
- Don't log errors for commands which are expected to sometimes exit with non-zero exit status (issue 11154, issue 11090)
- Fix `test=True` CLI override of config option (issue 10877)
- Log sysctl key listing at loglevel TRACE (issue 10931)

33.2.133 Salt 2014.1.10 Release Notes

release
2014-08-01

Note: Version 2014.1.9 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.9.

Version 2014.1.10 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

Salt 2014.1.10 fixes security issues documented by CVE-2014-3563: "Insecure tmp-file creation in seed.py, salt-ssh, and salt-cloud." Upgrading is recommended.

33.2.134 Salt 2014.1.11 Release Notes

release
2014-08-29

Version 2014.1.11 is another bugfix release for *2014.1.0*. Changes include:

- Fix for minion_id with byte-order mark (BOM) (issue 12296)
- Fix `runas` deprecation in `at` module
- Fix trailing slash befhavior for `file.makedirs_` (issue 14019)
- Fix chocolatey path (issue 13870)
- Fix git_pillar infinite loop issues (issue 14671)

- Fix json outputter `null` case
- Fix for minion error if one of multiple masters are down (issue 14099)

33.2.135 Salt 2014.1.12 Release Notes

release
2014-10-08

Version 2014.1.12 is another bugfix release for *2014.1.0*. Changes include:

- Fix `scp_file` always failing (which broke salt-cloud) (issue 16437)
- Fix regression in pillar in masterless (issue 16210, issue 16416, issue 16428)

33.2.136 Salt 2014.1.13 Release Notes

release
2014-10-14

Version 2014.1.13 is another bugfix release for *2014.1.0*. Changes include:

- Fix `sftp_file` by checking the exit status code of scp (which broke salt-cloud) (issue 16599)

33.2.137 Salt 2014.1.2 Release Notes

release
2014-04-15

Version 2014.1.2 is another bugfix release for *2014.1.0*. The changes include:

- Fix username detection when su'ed to root on FreeBSD (issue 11628)
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
- Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
- Don't reload `site` module on module refresh for MacOS
- Fix regression with running execution functions in Pillar SLS (issue 11453)
- Fix some modules missing from Windows installer
- Don't log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
- Fix bug in rabbitmq state (issue 8703)
- Fix missing ssh config options (issue 10604)
- Fix top.sls ordering (issue 10810 and issue 11691)
- Fix `salt-key --list all` (issue 10982)
- Fix win_servermanager install/remove function (issue 11038)
- Fix interaction with tokens when running commands as root (issue 11223)
- Fix overstate bug with `find_job` and `**kwargs` (issue 10503)
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state

- Fix environment issue causing file caching problems (issue 11189)
- Fix bug in `__parse_key` in registry state (issue 11408)
- Add minion auth retry on rejection (issue 10763)
- Fix publish_session updating the encryption key (issue 11493)
- Fix for bad `AssertionError` raised by GitPython (issue 11473)
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu (issue 11164)
- Fix potential memory leak caused by saved (and unused) events (issue 11582)
- Fix exception handling in the MySQL module (issue 11616)
- Fix environment-related error (issue 11534)
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows (issue 11471)
- Add additional `file` module helpers to Windows (issue 11235)
- Add `pid` to netstat output on Windows (issue 10782)
- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on `sys.doc` with invalid eauth (issue 11293)
- Fix `git.latest` with `test=True` (issue 11595)
- Fix `file.check_perms` hardcoded `follow_symlinks` (issue 11387)
- Fix certain `pkg` states for RHEL5/Cent5 machines (issue 11719)

33.2.138 Salt 2014.1.3 Release Notes

release
2014-04-15

Version 2014.1.3 is another bugfix release for *2014.1.0*. It was created as a hotfix for a regression found in 2014.1.2, which was not distributed. The only change made was as follows:

- Fix regression that caused `saltutil.find_job` to fail, causing premature terminations of salt CLI commands.

Changes in the not-distributed 2014.1.2, also included in 2014.1.3:

- Fix username detection when su'ed to root on FreeBSD (issue 11628)
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
- Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
- Don't reload `site` module on module refresh for MacOS
- Fix regression with running execution functions in Pillar SLS (issue 11453)
- Fix some modules missing from Windows installer

- Don't log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
- Fix bug in rabbitmq state (issue 8703)
- Fix missing ssh config options (issue 10604)
- Fix top.sls ordering (issue 10810 and issue 11691)
- Fix `salt-key --list all` (issue 10982)
- Fix win_servermanager install/remove function (issue 11038)
- Fix interaction with tokens when running commands as root (issue 11223)
- Fix overstate bug with `find_job` and `**kwargs` (issue 10503)
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state
- Fix environment issue causing file caching problems (issue 11189)
- Fix bug in `__parse_key` in registry state (issue 11408)
- Add minion auth retry on rejection (issue 10763)
- Fix publish_session updating the encryption key (issue 11493)
- Fix for bad `AssertionError` raised by GitPython (issue 11473)
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu (issue 11164)
- Fix potential memory leak caused by saved (and unused) events (issue 11582)
- Fix exception handling in the MySQL module (issue 11616)
- Fix environment-related error (issue 11534)
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows (issue 11471)
- Add additional `file` module helpers to Windows (issue 11235)
- Add `pid` to netstat output on Windows (issue 10782)
- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on `sys.doc` with invalid eauth (issue 11293)
- Fix `git.latest` with `test=True` (issue 11595)
- Fix `file.check_perms` hardcoded `follow_symlinks` (issue 11387)
- Fix certain `pkg` states for RHEL5/Cent5 machines (issue 11719)

33.2.139 Salt 2014.1.4 Release Notes

release
2014-05-05

Version 2014.1.4 is another bugfix release for *2014.1.0*. Changes include:

- Fix setup.py dependency issue (issue 12031)
- Fix handling for IOErrors under certain circumstances (issue 11783 and issue 11853)
- Fix fatal exception when `/proc/1/cgroup` is not readable (issue 11619)
- Fix os grains for OpenSolaris (issue 11907)
- Fix `lvs.zero` module argument pass-through (issue 9001)
- Fix bug in `debian_ip` interaction with *`network.system`* state (issue 11164)
- Remove bad binary package verification code (issue 12177)
- Fix traceback in solaris package installation (issue 12237)
- Fix *`file.directory`* state symlink handling (issue 12209)
- Remove `external_ip` grain
- Fix *`file.managed`* makedirs issues (issue 10446)
- Fix hang on non-existent Windows drive letter for *`file`* module (issue 9880)
- Fix salt minion caching all users on the server (issue 9743)
- Add strftime formatting for *`ps.boot_time`* (issue 12428)

33.2.140 Salt 2014.1.5 Release Notes

release
2014-06-11

Version 2014.1.5 is another bugfix release for *2014.1.0*. Changes include:

- Add function for finding cached job on the minion
- Fix iptables save file location for Debian (issue 11730)
- Fix for minion caching jobs when master is down
- Bump default `syndic_wait` to 5 to fix syndic-related problems (issue 12262)
- Add OpenBSD, FreeBSD, and NetBSD support for `network.netstat` (issue 12121)
- Fix false positive error in logs for `makeconf` state (issue 9762)
- Fix for yum `fromrepo` package installs when repo is disabled by default (issue 12466)
- Fix for extra blank lines in `file.blockreplace` (issue 12422)
- Fix grain detection for OpenVZ guests (issue 11877)
- Fix `get_dns_servers` function for Windows `win_dns_client`
- Use system locale for ports package installations
- Use correct stop/restart procedure for Debian networking in `debian_ip` (issue 12614)
- Fix for `cmd_iter`/`cmd_iter_no_block` blocking issues (issue 12617)

- Fix traceback when syncing custom types (issue 12883)
- Fix cleaning directory symlinks in `file.directory`
- Add performance optimizations for `saltutil.sync_all` and `state.highstate`
- Fix possible error in `saltutil.running`
- Fix for kmod modules with dashes (issue 13239)
- Fix possible race condition for Windows minions in state module reloading (issue 12370)
- Fix bug with roster for `passwd` option that is loaded as a non-string object (issue 13249)
- Keep duplicate version numbers from showing up in `pkg.list_pkgs` output
- Fixes for Jinja renderer, timezone *`module`*/*`state`* (issue 12724)
- Fix timedatectl parsing for systemd>=210 (issue 12728)
- Fix `saltenv` being written to YUM repo config files (issue 12887)
- Removed the deprecated external nodes classifier (originally accessible by setting a value for external_nodes in the master configuration file). Note that this functionality has been marked deprecated for some time and was replaced by the more general *master tops* system.
- More robust escaping of ldap filter strings.
- Fix trailing slash in *`gitfs_root`* causing files not to be available (issue 13185)

33.2.141 Salt 2014.1.6 Release Notes

release
2014-07-08

Version 2014.1.6 is another bugfix release for *2014.1.0*. Changes include:

- Fix extra `iptables --help` output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in debian_ip network module
- Add sqlite3 to esky builds
- Fix `jobs.active` output (issue 9526)
- Fix the `virtual` grain for Xen (issue 13534)
- Fix _ext_nodes unavailable on master (issue 13535)
- Fix eauth for batch mode (issue 9605)
- Fix force-related issues with `tomcat` support (issue 12889)
- Fix KeyError when cloud mapping
- Fix salt-minion restart loop in Windows (issue 12086)
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing ipv4 grain (issue 13838)
- Fix issue in roots backend with invalid data in mtime_map (issue 13836)
- Fix traceback in `jobs.active` (issue 11151)
- Fix `master_tops` and `_ext_nodes` issue (issue 13535, issue 13673)

33.2.142 Salt 2014.1.7 Release Notes

release
2014-07-09

Version 2014.1.7 is another bugfix release for *2014.1.0*. Changes include:

- Fix batch mode regression (issue 14046)

This release was a hotfix release for the regression listed above which was present in the 2014.1.6 release. The changes included in 2014.1.6 are listed below:

- Fix extra `iptables --help` output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in debian_ip network module
- Add sqlite3 to esky builds
- Fix `jobs.active` output (issue 9526)
- Fix the `virtual` grain for Xen (issue 13534)
- Fix eauth for batch mode (issue 9605)
- Fix force-related issues with `tomcat` support (issue 12889)
- Fix KeyError when cloud mapping
- Fix salt-minion restart loop in Windows (issue 12086)
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing ipv4 grain (issue 13838)
- Fix issue in roots backend with invalid data in mtime_map (issue 13836)
- Fix traceback in `jobs.active` (issue 11151)
- Fix `master_tops` and `_ext_nodes` issue (issue 13535, issue 13673)

33.2.143 Salt 2014.1.8 Release Notes

release
2014-07-30

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Version 2014.1.8 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

33.2.144 Salt 2014.1.9 Release Notes

release
2014-07-31

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Note: Version 2014.1.8 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.8.

Version 2014.1.9 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

33.2.145 Salt 0.10.0 Release Notes

release
2012-06-16

0.10.0 has arrived! This release comes with MANY bug fixes, and new capabilities which greatly enhance performance and reliability. This release is primarily a bug fix release with many new tests and many repaired bugs. This release also introduces a few new key features which were brought in primarily to repair bugs and some limitations found in some of the components of the original architecture.

Major Features

Event System

The Salt Master now comes equipped with a new event system. This event system has replaced some of the back end of the Salt client and offers the beginning of a system which will make plugging external applications into Salt. The event system relies on a local ZeroMQ publish socket and other processes can connect to this socket and listen for events. The new events can be easily managed via Salt's event library.

Unprivileged User Updates

Some enhancements have been added to Salt for running as a user other than root. These new additions should make switching the user that the Salt Master is running as very painless, simply change the `user` option in the master configuration and restart the master, Salt will take care of all of the particulars for you.

Peer Runner Execution

Salt has long had the peer communication system used to allow minions to send commands via the salt master. 0.10.0 adds a new capability here, now the master can be configured to allow for minions to execute Salt runners via the `peer_run` option in the salt master configuration.

YAML Parsing Updates

In the past the YAML parser for sls files would return the incorrect numbers when the file mode was set with a preceding 0. The YAML parser used in Salt has been modified to no longer convert these number into octal but to keep them as the correct value so that sls files can be a little cleaner to write.

State Call Data Files

It was requested that the minion keep a local cache of the most recent executed state run. This has been added and now with state runs the data is stored in a msgpack file in the minion's cachedir.

Turning Off the Job Cache

A new option has been added to the master configuration file. In previous releases the Salt client would look over the Salt job cache to read in the minion return data. With the addition of the event system the Salt client can now watch for events directly from the master worker processes.

This means that the job cache is no longer a hard requirement. Keep in mind though, that turning off the job cache means that historic job execution data cannot be retrieved.

Test Updates

Minion Swarms Are Faster

To continue our efforts with testing Salt's ability to scale the minionswarm script has been updated. The minionswarm can now start up minions much faster than it could before and comes with a new feature allowing modules to be disabled, thus lowering the minion's footprint when making a swarm. These new updates have allows us to test

```
# python minionswarm.py -m 20 --master salt-master
```

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.0, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=12&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.0 comes with a number of fixes for the minions and master greatly improving Salt stability.

33.2.146 Salt 0.10.1 Release Notes

release
2012-06-19

33.2.147 Salt 0.10.2 Release Notes

release
2012-07-30

0.10.2 is out! This release comes with enhancements to the pillar interface, cleaner ways to access the salt-call capabilities in the API, minion data caching and the event system has been added to salt minions.

There have also been updates to the ZeroMQ functions, many more tests (thanks to sponsors, the code sprint and many contributors) and a swath of bug fixes.

Major Features

Ext Pillar Modules

The ranks of available Salt modules directories sees a new member in 0.10.2. With the popularity of pillar a higher demand has arisen for `ext_pillar` interfaces to be more like regular Salt module additions. Now ext_pillar interfaces can be added in the same way as other modules, just drop it into the pillar directory in the salt source.

Minion Events

In 0.10.0 an event system was added to the Salt master. 0.10.2 adds the event system to the minions as well. Now event can be published on a local minion as well.

The minions can also send events back up to the master. This means that Salt is able to communicate individual events from the minions back up to the Master which are not associated with command.

Minion Data Caching

When pillar was introduced the landscape for available data was greatly enhanced. The minion's began sending grain data back to the master on a regular basis.

The new config option on the master called `minion_data_cache` instructs the Salt master to maintain a cache of the minion's grains and pillar data in the cachedir. This option is turned off by default to avoid hitting the disk more, but when enabled the cache is used to make grain matching from the salt command more powerful, since the minions that will match can be predetermined.

Backup Files

By default all files replaced by the file.managed and file.recurse states we simply deleted. 0.10.2 adds a new option. By setting the backup option to `minion` the files are backed up before they are replaced.

The backed up files are located in the cachedir under the file_backup directory. On a default system this will be at: `/var/cache/salt/file_backup`

Configuration files

`salt-master` and `salt-minion` automatically load additional configuration files from `master.d/*.conf` respective `minion.d/*.conf` where `master.d`/`minion.d` is a directory in the same directory as the main configuration file.

Salt Key Verification

A number of users complained that they had inadvertently deleted the wrong salt authentication keys. 0.10.2 now displays what keys are going to be deleted and verifies that they are the keys that are intended for deletion.

Key auto-signing

If `autosign_file` is specified in the configuration file incoming keys will be compared to the list of keynames in `autosign_file`. Regular expressions as well as globbing is supported.

The file must only be writable by the user otherwise the file will be ignored. To relax the permission and allow group write access set the `permissive_pki_access` option.

Module changes

Improved OpenBSD support

New modules for managing services and packages were provided by Joshua Elsasser to further improve the support for OpenBSD.

Existing modules like the *disk* module were also improved to support OpenBSD.

SQL Modules

The MySQL and PostgreSQL modules have both received a number of additions thanks to the work of Avi Marcus and Roman Imankulov.

ZFS Support on FreeBSD

A new ZFS module has been added by Kurtis Velarde for FreeBSD supporting various ZFS operations like creating, extending or removing zpools.

Augeas

A new Augeas module by Ulrich Dangel for editing and verifying config files.

Native Debian Service module

The support for the Debian was further improved with an new service module for Debian by Ahmad Khayyat supporting *disable* and *enable*.

Cassandra

Cassandra support has been added by Adam Garside. Currently only status and diagnostic information are supported.

Networking

The networking support for *RHEL* has been improved and supports bonding support as well as zeroconf configuration.

Monit

Basic monit support by Kurtis Velarde to control services via monit.

nzbget

Basic support for controlling nzbget by Joseph Hall

Bluetooth

Baisc `bluez` support for managing and controlling Bluetooth devices. Supports scanning as well as pairing/unpairing by Joseph Hall.

Test Updates

Consistency Testing

Another testing script has been added. A bug was found in pillar when many minions generated pillar data at the same time. The new `consist.py` script is the tests directory was created to reproduce bugs where data should always be consistent.

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.2, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=24&page=1&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.2 comes with a number of fixes for the minions and master greatly improving Salt stability.

33.2.148 Salt 0.10.3 Release Notes

release
2012-09-30

The latest taste of Salt has come, this release has many fixes and feature additions. Modifications have been made to make ZeroMQ connections more reliable, the beginning of the ACL system is in place, a new command line parsing system has been added, dynamic module distribution has become more environment aware, the new *master_finger* option and many more!

Major Features

ACL System

The new ACL system has been introduced. The ACL system allows for system users other than root to execute salt commands. Users can be allowed to execute specific commands in the same way that minions are opened up to the peer system.

The configuration value to open up the ACL system is called `client_acl` and is configured like so:

```
client_acl:
  fred:
    - test..*
    - pkg.list_pkgs
```

Where *fred* is allowed access to functions in the test module and to the `pkg.list_pkgs` function.

Master Finger Option

The *master_finger* option has been added to improve the security of minion provisioning. The *master_finger* option allows for the fingerprint of the master public key to be set in the configuration file to double verify that the master is valid. This option was added in response to a motivation to pre-authenticate the master when provisioning new minions to help prevent man in the middle attacks in some situations.

Salt Key Fingerprint Generation

The ability to generate fingerprints of keys used by Salt has been added to `salt-key`. The new option *finger* accepts the name of the key to generate and display a fingerprint for.

```
salt-key -F master
```

Will display the fingerprints for the master public and private keys.

Parsing System

Pedro Algavio, aka s0undt3ch, has added a substantial update to the command line parsing system that makes the help message output much cleaner and easier to search through. Salt parsers now have *--versions-report* besides usual *--version* info which you can provide when reporting any issues found.

Key Generation

We have reduced the requirements needed for *salt-key* to generate minion keys. You're no longer required to have salt configured and its common directories created just to generate keys. This might prove useful if you're batch creating keys to pre-load on minions.

Startup States

A few configuration options have been added which allow for states to be run when the minion daemon starts. This can be a great advantage when deploying with Salt because the minion can apply states right when it first runs. To use startup states set the `startup_states` configuration option on the minion to *highstate*.

New Exclude Declaration

Some users have asked about adding the ability to ensure that other sls files or ids are excluded from a state run. The exclude statement will delete all of the data loaded from the specified sls file or will delete the specified id:

```
exclude:
  - sls: http
  - id: /etc/vimrc
```

Max Open Files

While we're currently unable to properly handle ZeroMQ's abort signals when the max open files is reached, due to the way that's handled on ZeroMQ's, we have minimized the chances of this happening without at least warning the user.

More State Output Options

Some major changes have been made to the state output system. In the past state return data was printed in a very verbose fashion and only states that failed or made changes were printed by default. Now two options can be passed to the master and minion configuration files to change the behavior of the state output. State output can be set to verbose (default) or non-verbose with the `state_verbose` option:

```
state_verbose: False
```

It is noteworthy that the state_verbose option used to be set to *False* by default but has been changed to *True* by default in 0.10.3 due to many requests for the change.

Te next option to be aware of new and called `state_output`. This option allows for the state output to be set to *full* (default) or *terse*.

The *full* output is the standard state output, but the new *terse* output will print only one line per state making the output much easier to follow when executing a large state system.

```
state_output: terse
```

state.file.append Improvements

The salt state *file.append()* tries *not* to append existing text. Previously the matching check was being made line by line. While this kind of check might be enough for most cases, if the text being appended was multi-line, the check would not work properly. This issue is now properly handled, the match is done as a whole ignoring any white space addition or removal except inside commas. For those thinking that, in order to properly match over multiple lines, salt will load the whole file into memory, that's not true. For most cases this is not important but an erroneous order to read a 4GB file, if not properly handled, like salt does, could make salt chew that amount of memory. Salt has a buffered file reader which will keep in memory a maximum of 256KB and iterates over the file in chunks of 32KB to test for the match, more than enough, if not, explain your usage on a ticket. With this change, also *salt.modules.file.contains()*, *salt.modules.file.contains_regex()*, *salt.modules.file.contains_glob()* and *salt.utils.find* now do the searching and/or matching using the buffered chunks approach explained above.

Two new keyword arguments were also added, *makedirs*, and *source*. The first, *makedirs* will create the necessary directories in order to append to the specified file, of course, it only applies if we're trying to append to a non-existing file on a non-existing directory:

```
/tmp/salttest/file-append-makedirs:
    file.append:
        text: foo
        makedirs: True
```

The second, *source*, allows one to append the contents of a file instead of specifying the text.

```
/tmp/salttest/file-append-source:
```

(continues on next page)

(continued from previous page)

```
file.append:
    - source: salt://testfile
```

Security Fix

A timing vulnerability was uncovered in the code which decrypts the AES messages sent over the network. This has been fixed and upgrading is strongly recommended.

33.2.149 Salt 0.10.4 Release Notes

release
2012-10-23

Salt 0.10.4 is a monumental release for the Salt team, with two new module systems, many additions to allow granular access to Salt, improved platform support and much more.

This release is also exciting because we have been able to shorten the release cycle back to under a month. We are working hard to keep up the aggressive pace and look forward to having releases happen more frequently!

This release also includes a serious security fix and all users are very strongly recommended to upgrade. As usual, upgrade the master first, and then the minion to ensure that the process is smooth.

Major Features

External Authentication System

The new external authentication system allows for Salt to pass through authentication to any authentication system to determine if a user has permission to execute a Salt command. The Unix PAM system is the first supported system with more to come!

The external authentication system allows for specific users to be granted access to execute specific functions on specific minions. Access is configured in the master configuration file, and uses the new access control system:

```
external_auth:
  pam:
    thatch:
      - 'web*':
        - test.*
        - network.*
```

The configuration above allows the user *thatch* to execute functions in the test and network modules on minions that match the web* target.

Access Control System

All Salt systems can now be configured to grant access to non-administrative users in a granular way. The old configuration continues to work. Specific functions can be opened up to specific minions from specific users in the case of external auth and client ACLs, and for specific minions in the case of the peer system.

Access controls are configured like this:

```
client_acl:
  fred:
    - web\*:
      - pkg.list_pkgs
      - test.*
      - apache.*
```

Target by Network

A new matcher has been added to the system which allows for minions to be targeted by network. This new matcher can be called with the *-S* flag on the command line and is available in all places that the matcher system is available. Using it is simple:

```
$ salt -S '192.168.1.0/24' test.ping
$ salt -S '192.168.1.100' test.ping
```

Nodegroup Nesting

Previously a nodegroup was limited by not being able to include another nodegroup, this restraint has been lifted and now nodegroups will be expanded within other nodegroups with the *N@* classifier.

Salt Key Delete by Glob

The ability to delete minion keys by glob has been added to `salt-key`. To delete all minion keys whose minion name starts with 'web':

```
$ salt-key -d 'web*'
```

Master Tops System

The *external_nodes* system has been upgraded to allow for modular subsystems to be used to generate the top file data for a highstate run.

The *external_nodes* option still works but will be deprecated in the future in favor of the new *master_tops* option.

Example of using *master_tops*:

```
master_tops:
  ext_nodes: cobbler-external-nodes
```

Next Level Solaris Support

A lot of work has been put into improved Solaris support by Romeo Theriault. Packaging modules (pkgadd/pkgrm and pkgutil) and states, cron support and user and group management have all been added and improved upon. These additions along with SMF (Service Management Facility) service support and improved Solaris grain detection in 0.10.3 add up to Salt becoming a great tool to manage Solaris servers with.

Security

A vulnerability in the security handshake was found and has been repaired, old minions should be able to connect to a new master, so as usual, the master should be updated first and then the minions.

Pillar Updates

The pillar communication has been updated to add some extra levels of verification so that the intended minion is the only one allowed to gather the data. Once all minions and the master are updated to salt 0.10.4 please activate pillar *2* by changing the *pillar_version* in the master config to *2*. This will be set to *2* by default in a future release.

33.2.150 Salt 0.10.5 Release Notes

release
2012-11-15

Salt 0.10.5 is ready, and comes with some great new features. A few more interfaces have been modularized, like the outputter system. The job cache system has been made more powerful and can now store and retrieve jobs archived in external databases. The returner system has been extended to allow minions to easily retrieve data from a returner interface.

As usual, this is an exciting release, with many noteworthy additions!

Major Features

External Job Cache

The external job cache is a system which allows for a returner interface to also act as a job cache. This system is intended to allow users to store job information in a central location for longer periods of time and to make the act of looking up information from jobs executed on other minions easier.

Currently the external job cache is supported via the mongo and redis returners:

```
ext_job_cache: redis
redis.host: salt
```

Once the external job cache is turned on the new *ret* module can be used on the minions to retrieve return information from the job cache. This can be a great way for minions to respond and react to other minions.

OpenStack Additions

OpenStack integration with Salt has been moving forward at a blistering pace. The new *nova*, *glance*, and *keystone* modules represent the beginning of ongoing OpenStack integration.

The Salt team has had many conversations with core OpenStack developers and is working on linking to OpenStack in powerful new ways.

Wheel System

A new API was added to the Salt Master which allows the master to be managed via an external API. This new system allows Salt API to easily hook into the Salt Master and manage configs, modify the state tree, manage the pillar and more. The main motivation for the wheel system is to enable features needed in the upcoming web UI so users can manage the master just as easily as they manage minions.

The wheel system has also been hooked into the external auth system. This allows specific users to have granular access to manage components of the Salt Master.

Render Pipes

Jack Kuan has added a substantial new feature. The render pipes system allows Salt to treat the render system like unix pipes. This new system enables sls files to be passed through specific render engines. While the default renderer is still recommended, different engines can now be more easily merged. So to pipe the output of Mako used in YAML use this shebang line:

#!mako|yaml

Salt Key Overhaul

The Salt Key system was originally developed as only a CLI interface, but as time went on it was pressed into becoming a clumsy API. This release marks a complete overhaul of Salt Key. Salt Key has been rewritten to function purely from an API and to use the outputter system. The benefit here is that the outputter system works much more cleanly with Salt Key now, and the internals of Salt Key can be used much more cleanly.

Modular Outputters

The outputter system is now loaded in a modular way. This means that output systems can be more easily added by dropping a python file down on the master that contains the function *output*.

Gzip from Fileserver

Gzip compression has been added as an option to the cp.get_file and cp.get_dir commands. This will make file transfers more efficient and faster, especially over slower network links.

Unified Module Configuration

In past releases of Salt, the minions needed to be configured for certain modules to function. This was difficult because it required pre-configuring the minions. 0.10.5 changes this by making all module configs on minions search the master config file for values.

Now if a single database server is needed, then it can be defined in the master config and all minions will become aware of the configuration value.

Salt Call Enhancements

The `salt-call` command has been updated in a few ways. Now, `salt-call` can take the --return option to send the data to a returner. Also, `salt-call` now reports executions in the minion proc system, this allows the master to be aware of the operation salt-call is running.

Death to pub_refresh and sub_timeout

The old configuration values *pub_refresh* and *sub_timeout* have been removed. These options were in place to alleviate problems found in earlier versions of ZeroMQ which have since been fixed. The continued use of these options has proven to cause problems with message passing and have been completely removed.

Git Revision Versions

When running Salt directly from git (for testing or development, of course) it has been difficult to know exactly what code is being executed. The new versioning system will detect the git revision when building and how many commits have been made since the last release. A release from git will look like this:

0.10.4-736-gec74d69

Svn Module Addition

Anthony Cornehl (twinshadow) contributed a module that adds Subversion support to Salt. This great addition helps round out Salt's VCS support.

Noteworthy Changes

Arch Linux Defaults to Systemd

Arch Linux recently changed to use systemd by default and discontinued support for init scripts. Salt has followed suit and defaults to systemd now for managing services in Arch.

Salt, Salt Cloud and Openstack

With the releases of Salt 0.10.5 and Salt Cloud 0.8.2, OpenStack becomes the first (non-OS) piece of software to include support both on the user level (with Salt Cloud) and the admin level (with Salt). We are excited to continue to extend support of other platforms at this level.

33.2.151 Salt 0.11.0 Release Notes

release
2012-12-14

Salt 0.11.0 is here, with some highly sought after and exciting features. These features include the new overstate system, the reactor system, a new state run scope component called __context__, the beginning of the search system (still needs a great deal of work), multiple package states, the MySQL returner and a better system to arbitrarily reference outputters.

It is also noteworthy that we are changing how we mark release numbers. For the life of the project we have been pushing every release with features and fixes as point releases. We will now be releasing point releases for only bug fixes on a more regular basis and major feature releases on a slightly less regular basis. This means that the next release will be a bugfix only release with a version number of 0.11.1. The next feature release will be named 0.12.0 and will mark the end of life for the 0.11 series.

Major Features

OverState

The overstate system is a simple way to manage rolling state executions across many minions. The overstate allows for a state to depend on the successful completion of another state.

Reactor System

The new reactor system allows for a reactive logic engine to be created which can respond to events within a salted environment. The reactor system uses sls files to match events fired on the master with actions, enabling Salt to react to problems in an infrastructure.

Your load-balanced group of webservers is under extra load? Spin up a new VM and add it to the group. Your fileserver is filling up? Send a notification to your sysadmin on call. The possibilities are endless!

Module Context

A new component has been added to the module loader system. The module context is a data structure that can hold objects for a given scope within the module.

This allows for components that are initialized to be stored in a persistent context which can greatly speed up ongoing connections. Right now the best example can be found in the *cp* execution module.

Multiple Package Management

A long desired feature has been added to package management. By definition Salt States have always installed packages one at a time. On most platforms this is not the fastest way to install packages. Erik Johnson, aka terminalmage, has modified the package modules for many providers and added new capabilities to install groups of packages. These package groups can be defined as a list of packages available in repository servers:

```
python_pkgs:
  pkg.installed:
    - pkgs:
      - python-mako
      - whoosh
      - python-git
```

or specify based on the location of specific packages:

```
python_pkgs:
  pkg.installed:
    - sources:
      - python-mako: http://some-rpms.org/python-mako.rpm
      - whoosh: salt://whoosh/whoosh.rpm
      - python-git: ftp://companyserver.net/python-git.rpm
```

Search System

The bones to the search system have been added. This is a very basic interface that allows for search backends to be added as search modules. The first supported search module is the whoosh search backend. Right now only the basic paths for the search system are in place, making this very experimental. Further development will involve improving the search routines and index routines for whoosh and other search backends.

The search system has been made to allow for searching through all of the state and pillar files, configuration files and all return data from minion executions.

Notable Changes

All previous versions of Salt have shared many directories between the master and minion. The default locations for keys, cached data and sockets has been shared by master and minion. This has created serious problems with running a master and a minion on the same systems. 0.11.0 changes the defaults to be separate directories. Salt will also attempt to migrate all of the old key data into the correct new directories, but if it is not successful it may need to be done manually. If your keys exhibit issues after updating make sure that they have been moved from `/etc/salt/pki` to `/etc/salt/pki/{master,minion}`.

The old setup will look like this:

```
/etc/salt/pki
|-- master.pem
|-- master.pub
|-- minions
|   `-- ragnarok.saltstack.net
|-- minions_pre
|-- minion.pem
|-- minion.pub
```

(continues on next page)

(continued from previous page)

```
|-- minion_master.pub
|-- minions_pre
`-- minions_rejected
```

With the accepted minion keys in `/etc/salt/pki/minions`, the new setup places the accepted minion keys in `/etc/salt/pki/master/minions`.

```
/etc/salt/pki
|-- master
|   |-- master.pem
|   |-- master.pub
|   |-- minions
|   |   `-- ragnarok.saltstack.net
|   |-- minions_pre
|   `-- minions_rejected
|-- minion
|   |-- minion.pem
|   |-- minion.pub
|   `-- minion_master.pub
```

33.2.152 Salt 0.11.1 Release Notes

release
2012-12-19

33.2.153 Salt 0.12.0 Release Notes

release
2013-01-15

Another feature release of Salt is here! Some exciting additions are included with more ways to make salt modular and even easier management of the salt file server.

Major Features

Modular Fileserver Backend

The new modular fileserver backend allows for any external system to be used as a salt file server. The main benefit here is that it is now possible to tell the master to directly use a git remote location, or many git remote locations, automatically mapping git branches and tags to salt environments.

Windows is First Class!

A new Salt Windows installer is now available! Much work has been put in to improve Windows support. With this much easier method of getting Salt on your Windows machines, we hope even more development and progress will occur. Please file bug reports on the Salt GitHub repo issue tracker so we can continue improving.

One thing that is missing on Windows that Salt uses extensively is a software package manager and a software package repository. The Salt pkg state allows sys admins to install software across their infrastructure and across operating systems. Software on Windows can now be managed in the same way. The SaltStack team built a package manager that interfaces with the standard Salt pkg module to allow for installing and removing software on Windows. In addition, a software package repository has been built on top of the Salt fileserver. A small YAML file provides the information necessary for the package manager to install and remove software.

An interesting feature of the new Salt Windows software package repository is that one or more remote git repositories can supplement the master's local repository. The repository can point to software on the master's fileserver or on an HTTP, HTTPS, or ftp server.

New Default Outputter

Salt displays data to the terminal via the outputter system. For a long time the default outputter for Salt has been the python pretty print library. While this has been a generally reasonable outputter, it did have many failings. The new default outputter is called "nested", it recursively scans return data structures and prints them out cleanly.

If the result of the new nested outputter is not desired any other outputter can be used via the --out option, or the output option can be set in the master and minion configs to change the default outputter.

Internal Scheduler

The internal Salt scheduler is a new capability which allows for functions to be executed at given intervals on the minion, and for runners to be executed at given intervals on the master. The scheduler allows for sequences such as executing state runs (locally on the minion or remotely via an overstate) or continually gathering system data to be run at given intervals.

The configuration is simple, add the schedule option to the master or minion config and specify jobs to run, this in the master config will execute the state.over runner every 60 minutes:

```
schedule:
  overstate:
    function: state.over
    minutes: 60
```

This example for the minion configuration will execute a highstate every 30 minutes:

```
schedule:
  highstate:
    function: state.highstate
    minutes: 30
```

Optional DSL for SLS Formulas

Jack Kuan, our renderer expert, has created something that is astonishing. Salt, now comes with an optional Python based DSL, this is a very powerful interface that makes writing SLS files in pure python easier than it was with the raw py renderer. As usual this can be used with the renderer shebang line, so a single sls can be written with the DSL if pure python power is needed while keeping other sls files simple with YAML.

Set Grains Remotely

A new execution function and state module have been added that allows for grains to be set on the minion. Now grains can be set via a remote execution or via states. Use the *grains.present* state or the *grains.setval* execution functions.

Gentoo Additions

Major additions to Gentoo specific components have been made. The encompasses executions modules and states ranging from supporting the make.conf file to tools like layman.

33.2.154 Salt 0.12.1 Release Notes

release
2013-01-21

33.2.155 Salt 0.13.0 Release Notes

release
2013-02-12

The lucky number 13 has turned the corner! From CLI notifications when quitting a salt command, to substantial improvements on Windows, Salt 0.13.0 has arrived!

Major Features

Improved file.recurse Performance

The file.recurse system has been deployed and used in a vast array of situations. Fixes to the file state and module have led towards opening up new ways of running file.recurse to make it faster. Now the file.recurse state will download fewer files and will run substantially faster.

Windows Improvements

Minion stability on Windows has improved. Many file operations, including file.recurse, have been fixed and improved. The network module works better, to include network.interfaces. Both 32bit and 64bit installers are now available.

Nodegroup Targeting in Peer System

In the past, nodegroups were not available for targeting via the peer system. This has been fixed, allowing the new nodegroup expr_form argument for the publish.publish function:

```
salt-call publish.publish group1 test.ping expr_form=nodegroup
```

Blacklist Additions

Additions allowing more granular blacklisting are available in 0.13.0. The ability to blacklist users and functions in client_acl have been added, as well as the ability to exclude state formulas from the command line.

Command Line Pillar Embedding

Pillar data can now be embedded on the command line when calling `state.sls` and `state.highstate`. This allows for on the fly changes or settings to pillar and makes parameterizing state formulas even easier. This is done via the keyword argument:

```
salt '*' state.highstate pillar='{"cheese": "spam"}'
```

The above example will extend the existing pillar to hold the `cheese` key with a value of `spam`. If the `cheese` key is already specified in the minion's pillar then it will be overwritten.

CLI Notifications

In the past hitting ctrl-C and quitting from the `salt` command would just drop to a shell prompt, this caused confusion with users who expected the remote executions to also quit. Now a message is displayed showing what command can be used to track the execution and what the job id is for the execution.

Version Specification in Multiple-Package States

Versions can now be specified within multiple-package *`pkg.installed`* states. An example can be found below:

```
mypkgs:
  pkg.installed:
    - pkgs:
      - foo
      - bar: 1.2.3-4
      - baz
```

Noteworthy Changes

The configuration subsystem in Salt has been overhauled to make the `opts` dict used by Salt applications more portable, the problem is that this is an incompatible change with salt-cloud, and salt-cloud will need to be updated to the latest git to work with Salt 0.13.0. Salt Cloud 0.8.5 will also require Salt 0.13.0 or later to function.

The SaltStack team is sorry for the inconvenience here, we work hard to make sure these sorts of things do not happen, but sometimes hard changes get in.

33.2.156 Salt 0.13.1 Release Notes

release
2013-02-15

33.2.157 Salt 0.13.2 Release Notes

release
2013-03-13

33.2.158 Salt 0.13.3 Release Notes

release
2013-03-18

33.2.159 Salt 0.14.0 Release Notes

release
2013-03-23

Salt 0.14.0 is here! This release was held up primarily by PyCon, Scale, and illness, but has arrived! 0.14.0 comes with many new features and is breaking ground for Salt in the area of cloud management with the introduction of Salt providing basic cloud controller functionality.

Major Features

Salt - As a Cloud Controller

This is the first primitive inroad to using Salt as a cloud controller is available in 0.14.0. Be advised that this is alpha, only tested in a few very small environments.

The cloud controller is built using kvm and libvirt for the hypervisors. Hypervisors are autodetected as minions and only need to have libvirt running and kvm installed to function. The features of the Salt cloud controller are as follows:

- Basic vm discovery and reporting
- Creation of new virtual machines
- Seeding virtual machines with Salt via qemu-nbd or libguestfs
- Live migration (shared and non shared storage)
- Delete existing VMs

It is noteworthy that this feature is still Alpha, meaning that all rights are reserved to change the interface if needs be in future releases!

Libvirt State

One of the problems with libvirt is management of certificates needed for live migration and cross communication between hypervisors. The new `libvirt` state makes the Salt Master hold a CA and manage the signing and distribution of keys onto hypervisors, just add a call to the libvirt state in the sls formulas used to set up a hypervisor:

```
libvirt_keys:
  libvirt.keys
```

New get Functions

An easier way to manage data has been introduced. The pillar, grains, and config execution modules have been extended with the new `get` function. This function works much in the same way as the get method in a python dict, but with an enhancement, nested dict components can be extracted using a `:` delimiter.

If a structure like this is in pillar:

```
foo:
  bar:
    baz: quo
```

Extracting it from the raw pillar in an sls formula or file template is done this way:

```
{{ pillar['foo']['bar']['baz'] }}
```

Now with the new get function the data can be safely gathered and a default can be set allowing the template to fall back if the value is not available:

```
{{ salt['pillar.get']('foo:bar:baz', 'qux') }}
```

This makes handling nested structures much easier, and defaults can be cleanly set. This new function is being used extensively in the new formulae repository of salt sls formulas.

33.2.160 Salt 0.14.1 Release Notes

release
: 2013-04-13

33.2.161 Salt 0.15.0 Release Notes

release
: 2013-05-03

The many new features of Salt 0.15.0 have arrived! Salt 0.15.0 comes with many smaller features and a few larger ones.

These features range from better debugging tools to the new Salt Mine system.

Major Features

The Salt Mine

First there was the peer system, allowing for commands to be executed from a minion to other minions to gather data live. Then there was the external job cache for storing and accessing long term data. Now the middle ground is being filled in with the Salt Mine. The Salt Mine is a system used to execute functions on a regular basis on minions and then store only the most recent data from the functions on the master, then the data is looked up via targets.

The mine caches data that is public to all minions, so when a minion posts data to the mine all other minions can see it.

IPV6 Support

0.13.0 saw the addition of initial IPV6 support but errors were encountered and it needed to be stripped out. This time the code covers more cases and must be explicitly enabled. But the support is much more extensive than before.

Copy Files From Minions to the Master

Minions have long been able to copy files down from the master file server, but until now files could not be easily copied from the minion up to the master.

A new function called `cp.push` can push files from the minions up to the master server. The uploaded files are then cached on the master in the master cachedir for each minion.

Better Template Debugging

Template errors have long been a burden when writing states and pillar. 0.15.0 will now send the compiled template data to the debug log, this makes tracking down the intermittent stage templates much easier. So running state.sls or state.highstate with *-l debug* will now print out the rendered templates in the debug information.

State Event Firing

The state system is now more closely tied to the master's event bus. Now when a state fails the failure will be fired on the master event bus so that the reactor can respond to it.

Major Syndic Updates

The Syndic system has been basically re-written. Now it runs in a completely asynchronous way and functions primarily as an event broker. This means that the events fired on the syndic are now pushed up to the higher level master instead of the old method used which waited for the client libraries to return.

This makes the syndic much more accurate and powerful, it also means that all events fired on the syndic master make it up the pipe as well making a reactor on the higher level master able to react to minions further downstream.

Peer System Updates

The Peer System has been updated to run using the client libraries instead of firing directly over the publish bus. This makes the peer system much more consistent and reliable.

Minion Key Revocation

In the past when a minion was decommissioned the key needed to be manually deleted on the master, but now a function on the minion can be used to revoke the calling minion's key:

```
$ salt-call saltutil.revoke_auth
```

Function Return Codes

Functions can now be assigned numeric return codes to determine if the function executed successfully. While not all functions have been given return codes, many have and it is an ongoing effort to fill out all functions that might return a non-zero return code.

Functions in Overstate

The overstate system was originally created to just manage the execution of states, but with the addition of return codes to functions, requisite logic can now be used with respect to the overstate. This means that an overstate stage can now run single functions instead of just state executions.

Pillar Error Reporting

Previously if errors surfaced in pillar, then the pillar would consist of only an empty dict. Now all data that was successfully rendered stays in pillar and the render error is also made available. If errors are found in the pillar, states will refuse to run.

Using Cached State Data

Sometimes states are executed purely to maintain a specific state rather than to update states with new configs. This is grounds for the new cached state system. By adding *cache=True* to a state call the state will not be generated fresh from the master but the last state data to be generated will be used. If no previous state data is available then fresh data will be generated.

Monitoring States

The new monitoring states system has been started. This is very young but allows for states to be used to configure monitoring routines. So far only one monitoring state is available, the `disk.status` state. As more capabilities are added to Salt UI the monitoring capabilities of Salt will continue to be expanded.

33.2.162 Salt 0.15.1 Release Notes

release
2013-05-08

The 0.15.1 release has been posted, this release includes fixes to a number of bugs in 0.15.1 and a three security patches.

Security Updates

A number of security issues have been resolved via the 0.15.1 release.

Path Injection in Minion IDs

Salt masters did not properly validate the id of a connecting minion. This can lead to an attacker uploading files to the master in arbitrary locations. In particular this can be used to bypass the manual validation of new unknown minions. Exploiting this vulnerability does not require authentication.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/5427b9438e452a5a8910d9128c6aafb45d8fd5d3

https://github.com/saltstack/salt/commit/7560908ee62351769c3cd43b03d74c1ca772cc52

https://github.com/saltstack/salt/commit/e200b8a7ff53780124e08d2bdefde7587e52bfca

RSA Key Generation Fault

RSA key generation was done incorrectly, leading to very insecure keys. It is recommended to regenerate all RSA keys.

This issue can be used to impersonate Salt masters or minions, or decrypt any transferred data.

This issue can only be exploited by attackers who are able to observe or modify traffic between Salt minions and the legitimate Salt master.

A tool was included in 0.15.1 to assist in mass key regeneration, the manage.regen_keys runner.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/5dd304276ba5745ec21fc1e6686a0b28da29e6fc

Command Injection Via ext_pillar

Arbitrary shell commands could be executed on the master by an authenticated minion through options passed when requesting a pillar.

Ext pillar options have been restricted to only allow safe external pillars to be called when prompted by the minion.

This issue affects Salt versions from 0.14.0 to 0.15.0.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/43d8c16bd26159d827d1a945c83ac28159ec5865

33.2.163 Salt 0.15.2 Release Notes

33.2.164 Salt 0.15.3 Release Notes

release
2013-06-01

33.2.165 Salt 0.16.0 Release Notes

release
2013-07-01

The 0.16.0 release is an exciting one, with new features in master redundancy, and a new, powerful requisite.

Major Features

Multi-Master

This new capability allows for a minion to be actively connected to multiple salt masters at the same time. This allows for multiple masters to send out commands to minions and for minions to automatically reconnect to masters that have gone down. A tutorial is available to help get started here:

Multi Master Tutorial

Prereq, the New Requisite

The new *prereq* requisite is very powerful! It allows for states to execute based on a state that is expected to make changes in the future. This allows for a change on the system to be preempted by another execution. A good example is needing to shut down a service before modifying files associated with it, allowing, for instance, a webserver to be shut down allowing a load balancer to stop sending requests while server side code is updated. In this case, the prereq will only run if changes are expected to happen in the prerequired state, and the prerequired state will always run after the prereq state and only if the prereq state succeeds.

Peer System Improvements

The peer system has been revamped to make it more reliable, faster, and like the rest of Salt, async. The peer calls when an updated minion and master are used together will be much faster!

Relative Includes

The ability to include an sls relative to the defined sls has been added, the new syntax id documented here:

Includes

More State Output Options

The `state_output` option in the past only supported *full* and *terse*, 0.16.0 add the *mixed* and *changes* modes further refining how states are sent to users' eyes.

Improved Windows Support

Support for Salt on Windows continues to improve. Software management on Windows has become more seamless with Linux/UNIX/BSD software management. Installed software is now recognized by the short names defined in the *repository SLS*. This makes it possible to run `salt '*' pkg.version firefox` and get back results from Windows and non-Windows minions alike.

When templating files on Windows, Salt will now correctly use Windows appropriate line endings. This makes it much easier to edit and consume files on Windows.

When using the cmd state the `shell` option now allows for specifying Windows Powershell as an alternate shell to execute cmd.run and cmd.script. This opens up Salt to all the power of Windows Powershell and its advanced Windows management capabilities.

Several fixes and optimizations were added for the Windows networking modules, especially when working with IPv6.

A system module was added that makes it easy to restart and shutdown Windows minions.

The Salt Minion will now look for its config file in `c:\salt\conf` by default. This means that it's no longer necessary to specify the `-c` option to specify the location of the config file when starting the Salt Minion on Windows in a terminal.

Multiple Targets for pkg.removed, pkg.purged States

Both *pkg.removed* and *pkg.purged* now support the `pkgs` argument, which allow for multiple packages to be targeted in a single state. This, as in *pkg.installed*, helps speed up these states by reducing the number of times that the package management tools (apt, yum, etc.) need to be run.

Random Times in Cron States

The temporal parameters in *cron.present* states (minute, hour, etc.) can now be randomized by using `random` instead of a specific value. For example, by using the `random` keyword in the `minute` parameter of a cron state, the same cron job can be pushed to hundreds or thousands of hosts, and they would each use a randomly-generated minute. This can be helpful when the cron job accesses a network resource, and it is not desirable for all hosts to run the job concurrently.

```
/path/to/cron/script:
  cron.present:
    - user: root
    - minute: random
    - hour: 2
```

Since Salt assumes a value of `*` for unspecified temporal parameters, adding a parameter to the state and setting it to `random` will change that value from `*` to a randomized numeric value. However, if that field in the cron entry on the minion already contains a numeric value, then using the `random` keyword will not modify it.

Confirmation Prompt on Key Acceptance

When accepting new keys with `salt-key -a minion-id` or `salt-key -A`, there is now a prompt that will show the affected keys and ask for confirmation before proceeding. This prompt can be bypassed using the `-y` or `--yes` command line argument, as with other `salt-key` commands.

Support for Setting Password Hashes on BSD Minions

FreeBSD, NetBSD, and OpenBSD all now support setting passwords in *user.present* states.

33.2.166 Salt 0.16.1 Release Notes

release
2013-07-29

33.2.167 Salt 0.16.2 Release Notes

release
2013-08-01

Version 0.16.2 is a bugfix release for *0.16.0*, and contains a number of fixes.

Windows

- Only allow Administrator's group and SYSTEM user access to C:\salt. This eliminates a race condition where a non-admin user could modify a template or managed file before it is executed by the minion (which is running as an elevated user), thus avoiding a potential escalation of privileges. (issue 6361)

Grains

- Fixed detection of `virtual` grain on OpenVZ hardware nodes
- Gracefully handle lsb_release data when it is enclosed in quotes
- LSB grains are now prefixed with `lsb_distrib_` instead of simply `lsb_`. The old naming is not preserved, so SLS may be affected.
- Improved grains detection on MacOS

Pillar

- Don't try to load *`git_pillar`* if not enabled in master config (issue 6052)
- Functions *`pillar.item`* and *`pillar.items`* added for parity with *`grains.item`*/*`grains.items`*. The old function `pillar.data` is preserved for backwards compatibility.
- Fixed minion traceback when Pillar SLS is malformed (issue 5910)

Peer Publishing

- More gracefully handle improperly quoted publish commands (issue 5958)
- Fixed traceback when timeout specified via the CLI fo *`publish.publish`*, *`publish.full_data`* (issue 5959)
- Fixed unintended change in output of *`publish.publish`* (issue 5928)

Minion

- Fixed salt-key usage in minionswarm script
- Quieted warning about **SALT_MINION_CONFIG** environment variable on minion startup and for CLI commands run via `salt-call` (issue 5956)
- Added minion config parameter *`random_reauth_delay`* to stagger re-auth attempts when the minion is waiting for the master to approve its public key. This helps prevent SYN flooding in larger environments.

User/Group Management

- Implement previously-ignored `unique` option for *`user.present`* states in FreeBSD
- Report in state output when a *`group.present`* state attempts to use a gid in use by another group
- Fixed regression that prevents a *`user.present`* state to set the password hash to the system default (i.e. an unset password)
- Fixed multiple *`group.present`* states with the same group (issue 6439)

File Management

- Fixed file.mkdir setting incorrect permissions (issue 6033)
- Fixed cleanup of source files for templates when `/tmp` is in file_roots (issue 6118)
- Fixed caching of zero-byte files when a non-empty file was previously cached at the same path
- Added HTTP authentication support to the cp module (issue 5641)
- Diffs are now suppressed when binary files are changed

Package/Repository Management

- Fixed traceback when there is only one target for *`pkg.latest`* states
- Fixed regression in detection of virtual packages (apt)
- Limit number of pkg database refreshes to once per *`state.sls`*/*`state.highstate`*
- YUM: Allow 32-bit packages with arches other than i686 to be managed on 64-bit systems (issue 6299)
- Fixed incorrect reporting in pkgrepo.managed states (issue 5517)
- Fixed 32-bit binary package installs on 64-bit RHEL-based distros, and added proper support for 32-bit packages on 64-bit Debian-based distros (issue 6303)
- Fixed issue where requisites were inadvertently being put into YUM repo files (issue 6471)

Service Management

- Fixed inaccurate reporting of results in *`service.running`* states when the service fails to start (issue 5894)
- Fixed handling of custom initscripts in RHEL-based distros so that they are immediately available, negating the need for a second state run to manage the service that the initscript controls

Networking

- Function network.hwaddr renamed to *`network.hw_addr`* to match *`network.ip_addrs`* and *`network.ip_addrs6`*. All three functions also now work without the underscore in the name, as well.
- Fixed traceback in *`bridge.show`* when interface is not present (issue 6326)

SSH

- Fixed incorrect result reporting for some *ssh_known_hosts.present* states
- Fixed inaccurate reporting when *ssh_auth.present* states are run with `test=True`, when rsa/dss is used for the `enc` param instead of ssh-rsa/ssh-dss (issue 5374)

pip

- Properly handle `-f` lines in pip freeze output
- Fixed regression in pip.installed states with specifying a requirements file (issue 6003)
- Fixed use of `editable` argument in `pip.installed` states (issue 6025)
- Deprecated `runas` parameter in execution function calls, in favor of `user`

MySQL

- Allow specification of *MySQL* connection arguments via the CLI, overriding/bypassing minion config params
- Allow *mysql_user.present* states to set a passwordless login (issue 5550)
- Fixed endless loop when *mysql.processlist* is run (issue 6297)

PostgreSQL

- Fixed traceback in *postgres.user_list* (issue 6352)

Miscellaneous

- Don't allow *npm states* to be used if *npm module* is not available
- Fixed *alternatives.install* states for which the target is a symlink (issue 6162)
- Fixed traceback in *sysbench module* (issue 6175)
- Fixed traceback in job cache
- Fixed tempfile cleanup for windows
- Fixed issue where SLS files using the *pydsl renderer* were not being run
- Fixed issue where returners were being passed incorrect information (issue 5518)
- Fixed traceback when numeric args are passed to *cmd.script* states
- Fixed bug causing *cp.get_dir* to return more directories than expected (issue 6048)
- Fixed traceback when *supervisord.running* states are run with `test=True` (issue 6053)
- Fixed tracebacks when Salt encounters problems running rbenv (issue 5888)
- Only make the *monit module* available if monit binary is present (issue 5871)
- Fixed incorrect behavior of `img.mount_image`
- Fixed traceback in *tomcat.deploy_war* in Windows
- Don't re-write /etc/fstab if mount fails
- Fixed tracebacks when Salt encounters problems running gem (issue 5886)

- Fixed incorrect behavior of *selinux.boolean* states (issue 5912)
- *RabbitMQ*: Quote passwords to avoid symbols being interpolated by the shell (issue 6338)
- Fixed tracebacks in *extfs.mkfs* and *extfs.tune* (issue 6462)
- Fixed a regression with the *module.run* state where the `m_name` and `m_fun` arguments were being ignored (issue 6464)

33.2.168 Salt 0.16.3 Release Notes

release
2013-08-09

Version 0.16.3 is another bugfix release for *0.16.0*. The changes include:

- Various documentation fixes
- Fix proc directory regression (issue 6502)
- Properly detect Linaro Linux (issue 6496)
- Fix regressions in *mount.mounted* (issue 6522, issue 6545)
- Skip malformed state requisites (issue 6521)
- Fix regression in gitfs from bad import
- Fix for watching prereq states (including recursive requisite error) (issue 6057)
- Fix mod_watch not overriding prereq (issue 6520)
- Don't allow functions which compile states to be called within states (issue 5623)
- Return error for malformed top.sls (issue 6544)
- Fix traceback in *mysql.query*
- Fix regression in binary package installation for 64-bit packages on Debian-based Linux distros (issue 6563)
- Fix traceback caused by running *cp.push* without having set *file_recv* in the master config file
- Fix scheduler configuration in pillar (issue 6201)

33.2.169 Salt 0.16.4 Release Notes

release
2013-09-07

Version 0.16.4 is another bugfix release for *0.16.0*, likely to be the last before 0.17.0 is released. The changes include:

- Multiple documentation improvements/additions
- Added the `osfinger` and `osarch` grains
- Properly handle 32-bit packages for debian32 on x86_64 (issue 6607)
- Fix regression in yum package installation in CentOS 5 (issue 6677)
- Fix bug in *hg.latest* state that would erroneously delete directories (issue 6661)
- Fix bug related to pid not existing for *ps.top* (issue 6679)
- Fix regression in *MySQL returner* (issue 6695)

- Fix IP addresses grains (`ipv4` and `ipv6`) to include all addresses (issue 6656)
- Fix regression preventing authenticated FTP (issue 6733)
- Fix setting password for windows users (issue 6824)
- Fix *`file.contains`* on values YAML parses as non-string (issue 6817)
- Fix *`file.get_gid`*, *`file.get_uid`*, and *`file.chown`* for broken symlinks (issue 6826)
- Fix comment for service reloads in service state (issue 6851)

33.2.170 Salt 0.17.0 Release Notes

release
2013-09-26

The 0.17.0 release is a very exciting release of Salt, this brings to Salt some very powerful new features and advances. The advances range from the state system to the test suite, covering new transport capabilities and making states easier and more powerful, to extending Salt Virt and much more!

The 0.17.0 release will also be the last release of Salt to follow the old 0.XX.X numbering system, the next release of Salt will change the numbering to be date based following this format:

<Year>.<Month>.<Minor>

So if the release happens in November of 2013 the number will be 13.11.0, the first bugfix release will be 13.11.1 and so forth.

Major Features

Halite

The new Halite web GUI is now available on PyPI. A great deal of work has been put into Halite to make it fully event driven and amazingly fast. The Halite UI can be started from within the Salt Master (after being installed from PyPI), or standalone, and does not require an external database to run. It is very lightweight!

This initial release of Halite is primarily the framework for the UI and the communication systems, making it easy to extend and build the UI up. It presently supports watching the event bus and firing commands over Salt.

At this time, Halite is not available as a package, but installation documentation is available at: https://docs.saltproject.io/topics/tutorials/halite.html

Halite is, like the rest of Salt, Open Source!

Much more will be coming in the future of Halite!

Salt SSH

The new `salt-ssh` command has been added to Salt. This system allows for remote execution and states to be run over ssh. The benefit here being, that salt can run relying only on the ssh agent, rather than requiring a minion to be deployed.

The `salt-ssh` system runs states in a compatible way as Salt and states created and run with salt-ssh can be moved over to a standard salt deployment without modification.

Since this is the initial release of salt-ssh, there is plenty of room for improvement, but it is fully operational, not just a bootstrap tool.

Rosters

Salt is designed to have the minions be aware of the master and the master does not need to be aware of the location of the minions. The new salt roster system was created and designed to facilitate listing the targets for salt-ssh.

The roster system, like most of Salt, is a plugin system, allowing for the list of systems to target to be derived from any pluggable backend. The rosters shipping with 0.17.0 are flat and scan. Flat is a file which is read in via the salt render system and the scan roster does simple network scanning to discover ssh servers.

State Auto Order

This is a major change in how states are evaluated in Salt. State Auto Order is a new feature that makes states get evaluated and executed in the order in which they are defined in the sls file. This feature makes it very easy to see the finite order in which things will be executed, making Salt now, fully imperative AND fully declarative.

The requisite system still takes precedence over the order in which states are defined, so no existing states should break with this change. But this new feature can be turned off by setting `state_auto_order: False` in the master config, thus reverting to the old lexicographical order.

state.sls Runner

The `state.sls` runner has been created to allow for a more powerful system for orchestrating state runs and function calls across the salt minions. This new system uses the state system for organizing executions.

This allows for states to be defined that are executed on the master to call states on minions via `salt-run state.sls`.

Salt Thin

Salt Thin is an exciting new component of Salt, this is the ability to execute Salt routines without any transport mechanisms installed, it is a pure python subset of Salt.

Salt Thin does not have any networking capability, but can be dropped into any system with Python installed and then `salt-call` can be called directly. The Salt Thin system, is used by the `salt-ssh` command, but can still be used to just drop salt somewhere for easy use.

Event Namespacing

Events have been updated to be much more flexible. The tags in events have all been namespaced allowing easier tracking of event names.

Mercurial Fileserver Backend

The popular git fileserver backend has been joined by the mercurial fileserver backend, allowing the state tree to be managed entirely via mercurial.

External Logging Handlers

The external logging handler system allows for Salt to directly hook into any external logging system. Currently supported are sentry and logstash.

Jenkins Testing

The testing systems in Salt have been greatly enhanced, tests for salt are now executed, via jenkins.saltstack.com, across many supported platforms. Jenkins calls out to salt-cloud to create virtual machines on Rackspace, then the minion on the virtual machine checks into the master running on Jenkins where a state run is executed that sets up the minion to run tests and executes the test suite.

This now automates the sequence of running platform tests and allows for continuous destructive tests to be run.

Salt Testing Project

The testing libraries for salt have been moved out of the main salt code base and into a standalone codebase. This has been done to ease the use of the testing systems being used in salt based projects other than Salt itself.

StormPath External Authentication

The external auth system now supports the fantastic Stormpath cloud based authentication system.

LXC Support

Extensive additions have been added to Salt for LXC support. This included the backend libs for managing LXC containers. Addition into the salt-virt system is still in the works.

macOS User/Group Support

Salt is now able to manage users and groups on Minions running macOS. However, at this time user passwords cannot be managed.

Django ORM External Pillar

Pillar data can now be derived from Django managed databases.

Fixes from RC to release

- Multiple documentation fixes
- Add multiple source files + templating for *`file.append`* (issue 6905)
- Support sysctl configuration files in systemd>=207 (issue 7351)
- Add *`file.search`* and *`file.replace`*
- Fix cross-calling execution functions in provider overrides
- Fix locale override for postgres (issue 4543)

- Fix Raspbian identification for service/pkg support (issue 7371)
- Fix `cp.push` file corruption (issue 6495)
- Fix ALT Linux password hash specification (issue 3474)
- Multiple salt-ssh-related fixes and improvements

33.2.171 Salt 0.17.1 Release Notes

release
2013-10-17

Note: THIS RELEASE IS NOT COMPATIBLE WITH PREVIOUS VERSIONS. If you update your master to 0.17.1, you must update your minions as well. Sorry for the inconvenience -- this is a result of one of the security fixes listed below.

The 0.17.1 release comes with a number of improvements to salt-ssh, many bugfixes, and a number of security updates.

Salt SSH has been improved to be faster, more featureful and more secure. Since the original release of Salt SSH was primarily a proof of concept, it has been very exciting to see its rapid adoption. We appreciate the willingness of security experts to review Salt SSH and help discover oversights and ensure that security issues only exist for such a tiny window of time.

SSH Enhancements

Shell Improvements

Improvements to Salt SSH's communication have been added that improve routine execution regardless of the target system's login shell.

Performance

Deployment of routines is now faster and takes fewer commands to execute.

Security Updates

Be advised that these security issues all apply to a small subset of Salt users and mostly apply to Salt SSH.

Insufficient Argument Validation

This issue allowed for a user with limited privileges to embed executions inside of routines to execute routines that should be restricted. This applies to users using external auth or client ACL and opening up specific routines.

Be advised that these patches address the direct issue. Additional commits have been applied to help mitigate this issue from resurfacing.

YAML Calling Unsafe Loading Routine

It has been argued that this is not a valid security issue, as the YAML loading that was happening was only being called after an initial gateway filter in Salt has already safely loaded the YAML and would fail if non-safe routines were embedded. Nonetheless, the CVE was filed and patches applied.

Fix Reference

Version 0.17.1 is the first bugfix release for *0.17.0*. The changes include:

- Fix symbolic links in thin.tgz (issue 7482)
- Pass env through to file.patch state (issue 7452)
- Service provider fixes and reporting improvements (issue 7361)
- Add `--priv` option for specifying salt-ssh private key
- Fix salt-thin's salt-call on setuptools installations (issue 7516)
- Fix salt-ssh to support passwords with spaces (issue 7480)
- Fix regression in wildcard includes (issue 7455)
- Fix salt-call outputter regression (issue 7456)
- Fix custom returner support for startup states (issue 7540)
- Fix value handling in augeas (issue 7605)
- Fix regression in apt (issue 7624)
- Fix minion ID guessing to use `socket.getfqdn()` first (issue 7558)
- Add minion ID caching (issue 7558)
- Fix salt-key race condition (issue 7304)
- Add `--include-all` flag to salt-key (issue 7399)
- Fix custom grains in pillar (part of issue 5716, issue 6083)
- Fix race condition in salt-key (issue 7304)
- Fix regression in minion ID guessing, prioritize `socket.getfqdn()` (issue 7558)
- Cache minion ID on first guess (issue 7558)
- Allow trailing slash in `file.directory` state
- Fix reporting of file_roots in pillar return (issue 5449 and issue 5951)
- Remove pillar matching for mine.get (issue 7197)
- Sanitize args for multiple execution modules

- Fix yumpkg mod_repo functions to filter hidden args (issue 7656)
- Fix conflicting IDs in state includes (issue 7526)
- Fix mysql_grants.absent string formatting issue (issue 7827)
- Fix postgres.version so it won't return None (issue 7695)
- Fix for trailing slashes in mount.mounted state
- Fix rogue AttributErrors in the outputter system (issue 7845)
- Fix for incorrect ssh key encodings resulting in incorrect key added (issue 7718)
- Fix for pillar/grains naming regression in python renderer (issue 7693)
- Fix args/kwargs handling in the scheduler (issue 7422)
- Fix logfile handling for *file://*, *tcp://*, and *udp://* (issue 7754)
- Fix error handling in config file parsing (issue 6714)
- Fix RVM using sudo when running as non-root user (issue 2193)
- Fix client ACL and underlying logging bugs (issue 7706)
- Fix scheduler bug with returner (issue 7367)
- Fix user management bug related to default groups (issue 7690)
- Fix various salt-ssh bugs (issue 7528)
- Many various documentation fixes

33.2.172 Salt 0.17.2 Release Notes

release
2013-11-14

Version 0.17.2 is another bugfix release for *0.17.0*. The changes include:

- Add ability to delete key with grains.delval (issue 7872)
- Fix possible state compiler stack trace (issue 5767)
- Fix architecture regression in yumpkg (issue 7813)
- Use correct `ps` on Debian to prevent truncating (issue 5646)
- Fix grains targeting for new grains (issue 5737)
- Fix bug with merging in git_pillar (issue 6992)
- Fix print_jobs duplicate results
- Fix apt version specification for pkg.install
- Fix possible KeyError from ext_job_cache missing option
- Fix auto_order for `- names` states (issue 7649)
- Fix regression in new gitfs installs (directory not found error)
- Fix escape pipe issue on Windows for file.recurse (issue 7967)
- Fix fileclient in case of master restart (issue 7987)
- Try to output warning if CLI command malformed (issue 6538)

- Fix `--out=quiet` to actually be quiet (issue 8000)
- Fix for state.sls in salt-ssh (issue 7991)
- Fix for MySQL grants ordering issue (issue 5817)
- Fix traceback for certain missing CLI args (issue 8016)
- Add ability to disable lspci queries on master (issue 4906)
- Fail if sls defined in topfile does not exist (issue 5998)
- Add ability to downgrade MySQL grants (issue 6606)
- Fix ssh_auth.absent traceback (issue 8043)
- Add upstart detection for Debian/Raspbian (issue 8039)
- Fix ID-related issues (issue 8052, issue 8050, and others)
- Fix for jinja rendering issues (issue 8066 and issue 8079)
- Fix argument parsing in salt-ssh (issue 7928)
- Fix some GPU detection instances (issue 6945)
- Fix bug preventing includes from other environments in SLS files
- Fix for kwargs with dashes (issue 8102)
- Fix salt.utils.which for windows '.exe' (issue 7904)
- Fix apache.adduser without apachectl (issue 8123)
- Fix issue with evaluating `test` kwarg in states (issue 7788)
- Fix regression in `salt.client.Caller()` (issue 8078)
- Fix apt-key silent failure
- Fix bug where cmd.script would try to run even if caching failed (issue 7601)
- Fix apt `pkg.latest` regression (issue 8067)
- Fix for mine data not being updated (issue 8144)
- Fix for noarch packages in yum
- Fix a Xen detection edge case (issue 7839)
- Fix windows `__opts__` dictionary persistence (issue 7714)
- Fix version generation for when it's part of another git repo (issue 8090)
- Fix _handle_iorder stacktrace so that the real syntax error is shown (issue 8114 and issue 7905)
- Fix `git.latest` state when a commit SHA is used (issue 8163)
- Fix various small bugs in yumpkg.py (issue 8201)
- Fix for specifying identify file in git.latest (issue 8094)
- Fix for `--output-file` CLI arg (issue 8205)
- Add ability to specify shutdown time for system.shutdown (issue 7833)
- Fix for salt version using non-salt git repo info (issue 8266)
- Add additional hints at impact of `pkgrepo` states when `test=True` (issue 8247)
- Fix for salt-ssh files not being owned by root (issue 8216)

- Fix retry logic and error handling in fileserver (related to issue 7755)
- Fix file.replace with `test=True` (issue 8279)
- Add flag for limiting file traversal in fileserver (issue 6928)
- Fix for extra mine processes (issue 5729)
- Fix for unloading custom modules (issue 7691)
- Fix for salt-ssh opts (issue 8005 and issue 8271)
- Fix compound matcher for grains (issue 7944)
- Improve error reporting in ebuild module (related to issue 5393)
- Add `dir_mode` to `file.managed` (issue 7860)
- Improve traceroute support for FreeBSD and macOS (issue 4927)
- Fix for matching minions under syndics (issue 7671)
- Improve exception handling for missing ID (issue 8259)
- Fix grain mismatch for ScientificLinux (issue 8338)
- Add configuration option for minion_id_caching
- Fix open mode auth errors (issue 8402)

33.2.173 Salt 0.17.3 Release Notes

release
2013-12-08

Note: 0.17.3 had some regressions which were promptly fixed in the 0.17.4 release. Please use 0.17.4 instead.

Version 0.17.3 is another bugfix release for *0.17.0*. The changes include:

- Fix some jinja render errors (issue 8418)
- Fix `file.replace` state changing file ownership (issue 8399)
- Fix state ordering with the PyDSL renderer (issue 8446)
- Fix for new npm version (issue 8517)
- Fix for pip state requiring `name` even with requirements file (issue 8519)
- Fix yum logging to open terminals (issue 3855)
- Add sane maxrunning defaults for scheduler (issue 8563)
- Fix states duplicate key detection (issue 8053)
- Fix SUSE patch level reporting (issue 8428)
- Fix managed file creation umask (issue 8590)
- Fix logstash exception (issue 8635)
- Improve argument exception handling for salt command (issue 8016)
- Fix pecl success reporting (issue 8750)
- Fix launchctl module exceptions (issue 8759)

- Fix argument order in pw_user module
- Add warnings for failing grains (issue 8690)
- Fix hgfs problems caused by connections left open (issue 8811 and issue 8810)
- Add Debian iptables default for iptables-persistent package (issue 8889)
- Fix installation of packages with dots in pkg name (issue 8614)
- Fix noarch package installation on CentOS 6 (issue 8945)
- Fix portage_config.enforce_nice_config (issue 8252)
- Fix salt.util.copyfile umask usage (issue 8590)
- Fix rescheduling of failed jobs (issue 8941)
- Fix pkg on Amazon Linux (uses yumpkg5 now) (issue 8226)
- Fix conflicting options in postgres module (issue 8717)
- Fix ps modules for psutil >= 0.3.0 (issue 7432)
- Fix postgres module to return False on failure (issue 8778)
- Fix argument passing for args with pound signs (issue 8585)
- Fix pid of salt CLi command showing in status.pid output (issue 8720)
- Fix rvm to run gem as the correct user (issue 8951)
- Fix namespace issue in win_file module (issue 9060)
- Fix masterless state paths on windows (issue 9021)
- Fix timeout option in master config (issue 9040)

33.2.174 Salt 0.17.4 Release Notes

release
2013-12-10

Version 0.17.4 is another bugfix release for *0.17.0*. The changes include:

- Fix file.replace bug when replacement str is numeric (issue 9101)
- Fix regression in file.managed (issue 9131)
- Prevent traceback when job is None. (issue 9145)

33.2.175 Salt 0.17.5 Release Notes

release
2014-01-27

Version 0.17.5 is another bugfix release for *0.17.0*. The changes include:

- Fix `user.present` states with non-string fullname (issue 9085)
- Fix `virt.init` return value on failure (issue 6870)
- Fix reporting of `file.blockreplace` state when `test=True`
- Fix `network.interfaces` when used in cron (issue 7990)

- Fix bug in pkgrepo when switching to/from mirrorlist-based repo def (issue 9121)
- Fix infinite recursion when cache file is corrupted
- Add checking for rev and mirror/bare args in `git.latest` (issue 9107)
- Add `cmd.watch` alias (points to `cmd.wait`) (issue 8612)
- Fix stacktrace when prereq is not formed as a list (issue 8235)
- Fix stdin issue with lvdisplay command (issue 9128)
- Add pre-check function for range matcher (issue 9236)
- Add exception handling for psutil for processes that go missing (issue 9274)
- Allow `_in` requisites to match both on ID and name (issue 9061)
- Fix multiple client timeout issues (issue 7157 and issue 9302, probably others)
- Fix `ZMQError: Operation cannot be accomplished in current state` errors (issue 6306)
- Multiple optimization in minion auth routines
- Clarify logs for minion ID caching

33.2.176 Salt 0.6.0 release notes

The Salt remote execution manager has reached initial functionality! Salt is a management application which can be used to execute commands on remote sets of servers.

The whole idea behind Salt is to create a system where a group of servers can be remotely controlled from a single master, not only can commands be executed on remote systems, but salt can also be used to gather information about your server environment.

Unlike similar systems, like Func and MCollective, Salt is extremely simple to setup and use, the entire application is contained in a single package, and the master and minion daemons require no running dependencies in the way that Func requires Certmaster and MCollective requires activeMQ.

Salt also manages authentication and encryption. Rather than using SSL for encryption, salt manages encryption on a payload level, so the data sent across the network is encrypted with fast AES encryption, and authentication uses RSA keys. This means that Salt is fast, secure, and very efficient.

Messaging in Salt is executed with ZeroMQ, so the message passing interface is built into salt and does not require an external ZeroMQ server. This also adds speed to Salt since there is no additional bloat on the networking layer, and ZeroMQ has already proven itself as a very fast networking system.

The remote execution in Salt is "Lazy Execution", in that once the command is sent the requesting network connection is closed. This makes it easier to detach the execution from the calling process on the master, it also means that replies are cached, so that information gathered from historic commands can be queried in the future.

Salt also allows users to make execution modules in Python. Writers of these modules should also be pleased to know that they have access to the impressive information gathered from PuppetLabs' Facter application, making Salt module more flexible. In the future I hope to also allow Salt to group servers based on Facter information as well.

All in all Salt is fast, efficient, and clean, can be used from a simple command line client or through an API, uses message queue technology to make network execution extremely fast, and encryption is handled in a very fast and efficient manner. Salt is also VERY easy to use and VERY easy to extend.

You can find the source code for Salt on my GitHub page, I have also set up a few wiki pages explaining how to use and set up Salt. If you are using Arch Linux there is a package available in the Arch Linux AUR.

GitHub page: https://github.com/saltstack/salt

Wiki: https://github.com/saltstack/salt/wiki

Arch Linux Package: https://aur.archlinux.org/packages/salt-git/

I am very open to contributions, for instance I need packages for more Linux distributions as well as BSD packages and testers.

Give Salt a try, this is the initial release and is not a 1.0 quality release, but it has been working well for me! I am eager to get your feedback!

33.2.177 Salt 0.7.0 release notes

I am pleased to announce the release of Salt 0.7.0!

This release marks what is the first stable release of salt, 0.7.0 should be suitable for general use.

0.7.0 Brings the following new features to Salt:

- Integration with Facter data from puppet labs
- Allow for matching minions from the salt client via Facter information
- Minion job threading, many jobs can be executed from the master at once
- Preview of master clustering support - Still experimental
- Introduce new minion modules for stats, virtualization, service management and more
- Add extensive logging to the master and minion daemons
- Add sys.reload_functions for dynamic function reloading
- Greatly improve authentication
- Introduce the saltkey command for managing public keys
- Begin backend development preparatory to introducing butter
- Addition of man pages for the core commands
- Extended and cleaned configuration

0.7.0 Fixes the following major bugs:

- Fix crash in minions when matching failed
- Fix configuration file lookups for the local client
- Repair communication bugs in encryption
- Numerous fixes in the minion modules

The next release of Salt should see the following features:

- Stabilize the cluster support
- Introduce a remote client for salt command tiers
- salt-ftp system for distributed file copies
- Initial support for ”butter”

Coming up next is a higher level management framework for salt called Butter. I want salt to stay as a simple and effective communication framework, and allow for more complicated executions to be managed via Butter.

Right now Butter is being developed to act as a cloud controller using salt as the communication layer, but features like system monitoring and advanced configuration control (a puppet manager) are also in the pipe.

Special thanks to Joseph Hall for the status and network modules, and thanks to Matthias Teege for tracking down some configuration bugs!

Salt can be downloaded from the following locations;

Arch Linux Package:

https://aur.archlinux.org/packages/salt-git/

Please enjoy the latest Salt release!

33.2.178 Salt 0.8.0 release notes

Salt 0.8.0 is ready for general consumption! The source tarball is available on GitHub for download:

A lot of work has gone into salt since the last release just 2 weeks ago, and salt has improved a great deal. A swath of new features are here along with performance and threading improvements!

The main new features of salt 0.8.0 are:

Salt-cp

Cython minion modules

Dynamic returners

Faster return handling

Lowered required Python version to 2.6

Advanced minion threading

Configurable minion modules

Salt-cp

The salt-cp command introduces the ability to copy simple files via salt to targeted servers. Using salt-cp is very simple, just call salt-cp with a target specification, the source file(s) and where to copy the files on the minions. For instance:

salt-cp '*' /etc/hosts /etc/hosts

Will copy the local /etc/hosts file to all of the minions.

Salt-cp is very young, in the future more advanced features will be added, and the functionality will much more closely resemble the cp command.

Cython minion modules

Cython is an amazing tool used to compile Python modules down to c. This is arguably the fastest way to run Python code, and since pyzmq requires cython, adding support to salt for cython adds no new dependencies.

Cython minion modules allow minion modules to be written in cython and therefore executed in compiled c. Simply write the salt module in cython and use the file extension ".pyx" and the minion module will be compiled when the minion is started. An example cython module is included in the main distribution called cytest.pyx:

salt/modules/cytest.pyx

Dynamic Returners

By default salt returns command data back to the salt master, but now salt can return command data to any system. This is enabled via the new returners modules feature for salt. The returners modules take the return data and sends it to a specific module. The returner modules work like minion modules, so any returner can be added to the minions.

This means that a custom data returner can be added to communicate the return data so anything from MySQL, Redis, MongoDB, and more!

There are 2 simple stock returners in the returners directory:

salt/returners

The documentation on writing returners will be added to the wiki shortly, and returners can be written in pure Python, or in cython.

Configurable Minion Modules

Minion modules may need to be configured, now the options passed to the minion configuration file can be accessed inside of the minion modules via the __opt__ dict.

Information on how to use this simple addition has been added to the wiki: *Writing modules*

The test module has an example of using the __opts__ dict, and how to set default options:

salt/modules/test.py

Advanced Minion Threading

In 0.7.0 the minion would block after receiving a command from the master, now the minion will spawn a thread or multiprocess. By default Python threads are used because for general use they have proved to be faster, but the minion can now be configured to use the Python multiprocessing module instead. Using multiprocessing will cause executions that are CPU bound or would otherwise exploit the negative aspects of the Python GIL to run faster and more reliably, but simple calls will still be faster with Python threading. The configuration option can be found in the minion configuration file:

conf/minion

Lowered Supported Python to 2.6

The requirement for Python 2.7 has been removed to support Python 2.6. I have received requests to take the minimum Python version back to 2.4, but unfortunately this will not be possible, since the ZeroMQ Python bindings do not support Python 2.4.

Salt 0.8.0 is a very major update, it also changes the network protocol slightly which makes communication with older salt daemons impossible, your master and minions need to be upgraded together!

I could use some help bringing salt to the people! Right now I only have packages for Arch Linux, Fedora 14 and Gentoo. We need packages for Debian and people willing to help test on more platforms. We also need help writing more minion modules and returner modules. If you want to contribute to salt please hop on the mailing list and send in patches, make a fork on GitHub and send in pull requests! If you want to help but are not sure where you can, please email me directly or post tot he mailing list!

I hope you enjoy salt, while it is not yet 1.0 salt is completely viable and usable!

-Thomas S. Hatch

33.2.179 Salt 0.8.7 release notes

It has been a month since salt 0.8.0, and it has been a long month! But Salt is still coming along strong. 0.8.7 has a lot of changes and a lot of updates. This update makes Salt's ZeroMQ back end better, strips Facter from the dependencies, and introduces interfaces to handle more capabilities.

Many of the major updates are in the background, but the changes should shine through to the surface. A number of the new features are still a little thin, but the back end to support expansion is in place.

I also recently gave a presentation to the Utah Python users group in Salt Lake City, the slides from this presentation are available here:

The video from this presentation will be available shortly.

The major new features and changes in Salt 0.8.7 are:

- Revamp ZeroMQ topology on the master for better scalability
- State enforcement
- Dynamic state enforcement managers
- Extract the module loader into salt.loader
- Make Job ids more granular
- Replace Facter functionality with the new salt grains interface
- Support for "virtual" salt modules
- Introduce the salt-call command
- Better debugging for minion modules

The new ZeroMQ topology allows for better scalability, this will be required by the need to execute massive file transfers to multiple machines in parallel and state management. The new ZeroMQ topology is available in the aforementioned presentation.

0.8.7 introduces the capability to declare states, this is similar to the capabilities of Puppet. States in salt are declared via state data structures. This system is very young, but the core feature set is available. Salt states work around rendering files which represent Salt high data. More on the Salt state system will be documented in the near future.

The system for loading salt modules has been pulled out of the minion class to be a standalone module, this has enabled more dynamic loading of Salt modules and enables many of the updates in 0.8.7 –

salt/loader.py

Salt Job ids are now microsecond precise, this was needed to repair a race condition unveiled by the speed improvements in the new ZeroMQ topology.

The new grains interface replaces the functionality of Facter, the idea behind grains differs from Facter in that the grains are only used for static system data, dynamic data needs to be derived from a call to a salt module. This makes grains much faster to use, since the grains data is generated when the minion starts.

Virtual salt modules allows for a salt module to be presented as something other than its module name. The idea here is that based on information from the minion decisions about which module should be presented can be made. The best example is the pacman module. The pacman module will only load on Arch Linux minions, and will be called pkg. Similarly the yum module will be presented as pkg when the minion starts on a Fedora/RedHat system.

The new salt-call command allows for minion modules to be executed from the minion. This means that on the minion a salt module can be executed, this is a great tool for testing Salt modules. The salt-call command can also be used to view the grains data.

In previous releases when a minion module threw an exception very little data was returned to the master. Now the stack trace from the failure is returned making debugging of minion modules MUCH easier.

Salt is nearing the goal of 1.0, where the core feature set and capability is complete!

-Thomas S Hatch

33.2.180 Salt 0.8.8 release notes

Salt 0.8.8 is here! This release adds a great deal of code and some serious new features.

Improved Documentation has been set up for salt using sphinx thanks to the efforts of Seth House. This new documentation system will act as the back end to the salt website which is still under heavy development. The new sphinx documentation system has also been used to greatly clean up the salt manpages. The salt 7 manpage in particular now contains extensive information which was previously only in the wiki. The new documentation can be found at: https://docs.saltproject.io/ We still have a lot to add, and when the domain is set up I will post another announcement.

More additions have been made to the ZeroMQ setup, particularly in the realm of file transfers. Salt 0.8.8 introduces a built in, stateless, encrypted file server which allows salt minions to download files from the salt master using the same encryption system used for all other salt communications. The main motivation for the salt file server has been to facilitate the new salt state system.

Much of the salt code has been cleaned up and a new cleaner logging system has been introduced thanks to the efforts of Pedro Algarvio. These additions will allow for much more flexible logging to be executed by salt, and fixed a great deal of my poor spelling in the salt docstrings! Pedro Algarvio has also cleaned up the API, making it easier to embed salt into another application.

The biggest addition to salt found in 0.8.8 is the new state system. The salt module system has received a new front end which allows salt to be used as a configuration management system. The configuration management system allows for system configuration to be defined in data structures. The configuration management system, or as it is called in salt, the "salt state system" supports many of the features found in other configuration managers, but allows for system states to be written in a far simpler format, executes at blazing speeds, and operates via the salt minion matching system. The state system also operates within the normal scope of salt, and requires no additional configuration to use.

The salt state system can enforce the following states with many more to come: Packages Files Services Executing commands Hosts

The system used to define the salt states is based on a data structure, the data structure used to define the salt states has been made to be as easy to use as possible. The data structure is defined by default using a YAML file rendered via a Jinja template. This means that the state definition language supports all of the data structures that YAML supports, and all of the programming constructs and logic that Jinja supports. If the user does not like YAML or Jinja the states can be defined in yaml-mako, json-jinja, or json-mako. The system used to render the states is completely dynamic, and any rendering system can be added to the capabilities of Salt, this means that a rendering system that renders XML data in a cheetah template, or whatever you can imagine, can be easily added to the capabilities of salt.

The salt state system also supports isolated environments, as well as matching code from several environments to a single salt minion.

The feature base for Salt has grown quite a bit since my last serious documentation push. As we approach 0.9.0 the goals are becoming very clear, and the documentation needs a lot of work. The main goals for 0.9.0 are to further refine the state system, fix any bugs we find, get Salt running on as many platforms as we can, and get the documentation filled out. There is a lot more to come as Salt moves forward to encapsulate a much larger scope, while maintaining supreme usability and simplicity.

If you would like a more complete overview of Salt please watch the Salt presentation: Slides:

-Thomas S Hatch

33.2.181 Salt 0.8.9 Release Notes

Salt 0.8.9 has finally arrived! Unfortunately this is much later than I had hoped to release 0.8.9, life has been very crazy over the last month. But despite challenges, Salt has moved forward!

This release, as expected, adds few new features and many refinements. One of the most exciting aspect of this release is that the development community for salt has grown a great deal and much of the code is from contributors.

Also, I have filled out the documentation a great deal. So information on States is properly documented, and much of the documentation that was out of date has been filled in.

Download!

The Salt source can be downloaded from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.8.9.tar.gz

Here s the md5sum:

7d5aca4633bc22f59045f59e82f43b56

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt Run

A big feature is the addition of Salt run, the `salt-run` command allows for master side execution modules to be made that gather specific information or execute custom routines from the master.

Documentation for salt-run can be found *here*

Refined Outputters

One problem often complained about in salt was the fact that the output was so messy. Thanks to help from Jeff Schroeder a cleaner interface for the command output for the Salt CLI has been made. This new interface makes adding new printout formats easy and additions to the capabilities of minion modules makes it possible to set the printout mode or `outputter` for functions in minion modules.

Cross Calling Salt Modules

Salt modules can now call each other, the `__salt__` dict has been added to the predefined references in minion modules. This new feature is documented in the *modules documentation*.

Watch Option Added to Salt State System

Now in Salt states you can set the watch option, this will allow watch enabled states to change based on a change in the other defined states. This is similar to subscribe and notify statements in puppet.

Root Dir Option

Travis Cline has added the ability to define the option `root_dir` which allows the salt minion to operate in a subdir. This is a strong move in supporting the minion running as an unprivileged user

Config Files Defined in Variables

Thanks again to Travis Cline, the master and minion configuration file locations can be defined in environment variables now.

New Modules

Quite a few new modules, states, returners, and runners have been made.

New Minion Modules

apt

Support for apt-get has been added, this adds greatly improved Debian and Ubuntu support to Salt!

useradd and groupadd

Support for manipulating users and groups on Unix-like systems.

moosefs

Initial support for reporting on aspects of the distributed file system, MooseFS. For more information on MooseFS please see: http://www.moosefs.org

Thanks to Joseph Hall for his work on MooseFS support.

mount

Manage mounts and the fstab.

puppet

Execute puppet on remote systems.

shadow

Manipulate and manage the user password file.

ssh

Interact with ssh keys.

New States

user and group

Support for managing users and groups in Salt States.

mount

Enforce mounts and the fstab.

New Returners

mongo_return

Send the return information to a MongoDB server.

New Runners

manage

Display minions that are up or down.

33.2.182 Salt 0.9.0 Release Notes

release
2011-08-27

Salt 0.9.0 is here. This is an exciting release, 0.9.0 includes the new network topology features allowing peer salt commands and masters of masters via the syndic interface.

0.9.0 also introduces many more modules, improvements to the API and improvements to the ZeroMQ systems.

Download!

The Salt source can be downloaded from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.0.tar.gz

Here is the md5sum:

9a925da04981e65a0f237f2e77ddab37

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt Syndic

The new *Syndic interface* allows a master to be commanded via another higher level salt master. This is a powerful solution allowing a master control structure to exist, allowing salt to scale to much larger levels then before.

Peer Communication

0.9.0 introduces the capability for a minion to call a publication on the master and receive the return from another set of minions. This allows salt to act as a communication channel between minions and as a general infrastructure message bus.

Peer communication is turned off by default but can be enabled via the `peer` option in the master configuration file. Documentation on the new *Peer interface*.

Easily Extensible API

The minion and master classes have been redesigned to allow for specialized minion and master servers to be easily created. An example on how this is done for the master can be found in the `master.py` salt module:

salt/master.py

The `Master` class extends the `SMaster` class and set up the main master server.

The minion functions can now also be easily added to another application via the `SMinion` class, this class can be found in the `minion.py` module:

salt/minion.py

Cleaner Key Management

This release changes some of the key naming to allow for multiple master keys to be held based on the type of minion gathering the master key.

The -d option has also been added to the salt-key command allowing for easy removal of accepted public keys.

The --gen-keys option is now available as well for salt-key, this allows for a salt specific RSA key pair to be easily generated from the command line.

Improved 0MQ Master Workers

The 0MQ worker system has been further refined to be faster and more robust. This new system has been able to handle a much larger load than the previous setup. The new system uses the IPC protocol in 0MQ instead of TCP.

New Modules

Quite a few new modules have been made.

New Minion Modules

apache

Work directly with apache servers, great for managing balanced web servers

cron

Read out the contents of a systems crontabs

mdadm

Module to manage raid devices in Linux, appears as the `raid` module

mysql

Gather simple data from MySQL databases

ps

Extensive utilities for managing processes

publish

Used by the peer interface to allow minions to make publications

33.2.183 Salt 0.9.1 Release Notes

release
2011-08-29

33.2.184 Salt 0.9.2 Release Notes

release
2011-09-17

Salt 0.9.2 has arrived! 0.9.2 is primarily a bugfix release, the exciting component in 0.9.2 is greatly improved support for salt states. All of the salt states interfaces have been more thoroughly tested and the new salt-states git repo is growing with example of how to use states.

This release introduces salt states for early developers and testers to start helping us clean up the states interface and make it ready for the world!

0.9.2 also fixes a number of bugs found on Python 2.6.

Download!

The Salt source can be downloaded from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.2.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt-Call Additions

The salt-call command has received an overhaul, it now hooks into the outputter system so command output looks clean, and the logging system has been hooked into salt-call, so the -l option allows the logging output from salt minion functions to be displayed.

The end result is that the salt-call command can execute the state system and return clean output:

```
# salt-call state.highstate
```

State System Fixes

The state system has been tested and better refined. As of this release the state system is ready for early testers to start playing with. If you are interested in working with the state system please check out the (still very small) salt-states GitHub repo:

https://github.com/SS-archive/salt-states

This git repo is the active development branch for determining how a clean salt-state database should look and act. Since the salt state system is still very young a lot of help is still needed here. Please fork the salt-states repo and help us develop a truly large and scalable system for configuration management!

Notable Bug Fixes

Python 2.6 String Formatting

Python 2.6 does not support format strings without an index identifier, all of them have been repaired.

Cython Loading Disabled by Default

Cython loading requires a development tool chain to be installed on the minion, requiring this by default can cause problems for most Salt deployments. If Cython auto loading is desired it will need to be turned on in the minion config.

33.2.185 Salt 0.9.3 Release Notes

release
2011-11-05

Salt 0.9.3 is finally arrived. This is another big step forward for Salt, new features range from proper FreeBSD support to fixing issues seen when attaching a minion to a master over the Internet.

The biggest improvements in 0.9.3 though can be found in the state system, it has progressed from something ready for early testers to a system ready to compete with platforms such as Puppet and Chef. The backbone of the state system has been greatly refined and many new features are available.

Download!

The Salt source can be downloaded from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.3.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

WAN Support

Recently more people have been testing Salt minions connecting to Salt Masters over the Internet. It was found that Minions would commonly loose their connection to the master when working over the internet. The minions can now detect if the connection has been lost and reconnect to the master, making WAN connections much more reliable.

State System Fixes

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

Extend Declaration

The Salt States have also gained the `extend` declaration. This declaration allows for states to be cleanly modified in a post environment. Simply said, if there is an apache.sls file that declares the apache service, then another sls can include apache and then extend it:

```
include:
  - apache

extend:
  apache:
    service:
      - require:
        - pkg: mod_python

mod_python:
  pkg:
    - installed
```

The notable behavior with the extend functionality is that it literally extends or overwrites a declaration set up in another sls module. This means that Salt will behave as though the modifications were made directly to the apache sls. This ensures that the apache service in this example is directly tied to all requirements.

Highstate Structure Specification

This release comes with a clear specification of the Highstate data structure that is used to declare Salt States. This specification explains everything that can be declared in the Salt SLS modules.

The specification is extremely simple, and illustrates how Salt has been able to fulfill the requirements of a central configuration manager within a simple and easy to understand format and specification.

SheBang Renderer Switch

It came to our attention that having many renderers means that there may be a situation where more than one State Renderer should be available within a single State Tree.

The method chosen to accomplish this was something already familiar to developers and systems administrators, a SheBang. The Python State Renderer displays this new capability.

Python State Renderer

Until now Salt States could only be declared in yaml or json using Jinja or Mako. A new, very powerful, renderer has been added, making it possible to write Salt States in pure Python:

```
#!py

def run():
    """
    Install the python-mako package
    """
    return {"include": ["python"], "python-mako": {"pkg": ["installed"]}}
```

This renderer is used by making a run function that returns the Highstate data structure. Any capabilities of Python can be used in pure Python sls modules.

This example of a pure Python sls module is the same as this example in yaml:

```
include:
  - python

python-mako:
  pkg:
    - installed
```

FreeBSD Support

Additional support has been added for FreeBSD, this is Salt's first branch out of the Linux world and proves the viability of Salt on non-Linux platforms.

Salt remote execution already worked on FreeBSD, and should work without issue on any Unix-like platform. But this support comes in the form of package management and user support, so Salt States also work on FreeBSD now.

The new freebsdpkg module provides package management support for FreeBSD and the new pw_user and pw_group provide user and group management.

Module and State Additions

Cron Support

Support for managing the system crontab has been added, declaring a cron state can be done easily:

```
date > /tmp/datestamp:
  cron:
    - present
    - user: fred
    - minute: 5
    - hour: 3
```

File State Additions

The file state has been given a number of new features, primarily the directory, recurse, symlink, and absent functions.

file.directory
: Make sure that a directory exists and has the right permissions.

```
/srv/foo:
  file:
    - directory
    - user: root
    - group: root
    - mode: 1755
```

file.symlink
: Make a symlink.

```
/var/lib/www:
  file:
    - symlink
    - target: /srv/www
    - force: True
```

file.recurse
The recurse state function will recursively download a directory on the master file server and place it on the minion. Any change in the files on the master will be pushed to the minion. The recurse function is very powerful and has been tested by pushing out the full Linux kernel source.

```
/opt/code:
  file:
    - recurse
    - source: salt://linux
```

file.absent
Make sure that the file is not on the system, recursively deletes directories, files, and symlinks.

```
/etc/httpd/conf.d/somebogusfile.conf:
  file:
    - absent
```

Sysctl Module and State

The sysctl module and state allows for sysctl components in the kernel to be managed easily. the sysctl module contains the following functions:

sysctl.show
Return a list of sysctl parameters for this minion

sysctl.get
Return a single sysctl parameter for this minion

sysctl.assign
Assign a single sysctl parameter for this minion

sysctl.persist
Assign and persist a simple sysctl parameter for this minion

The sysctl state allows for sysctl parameters to be assigned:

```
vm.swappiness:
  sysctl:
    - present
    - value: 20
```

Kernel Module Management

A module for managing Linux kernel modules has been added. The new functions are as follows:

kmod.available
: Return a list of all available kernel modules

kmod.check_available
: Check to see if the specified kernel module is available

kmod.lsmod
: Return a dict containing information about currently loaded modules

kmod.load
: Load the specified kernel module

kmod.remove
: Unload the specified kernel module

The kmod state can enforce modules be either present or absent:

```
kvm_intel:
  kmod:
    - present
```

Ssh Authorized Keys

The ssh_auth state can distribute ssh authorized keys out to minions. Ssh authorized keys can be present or absent.

```
AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyYvlRBsJdDOo49CNfhlWHWXQRqul6rwL4KIuPrhY7hBw0tV7UNC7J9IZRI
↪xw6NtnQZVMcmZIre5Elrw3OKgxcDNomjYFNHuOYaQLBBMosyO++tJe1KTAr3A2zGj2xbWO9JhEzu8xvSdF8jRu0N5
↪x75wolBDbVzeTlxWxgxhafj7P6Ncdv25Wz9wvc6ko/puww0b3rcLNqK+XCNJlsM/
↪7lB8Q26iK5mRZzNsGeGwGTyzNIMBekGYQ5MRdIcPv5dBIP/1M6fQDEsAXQ==:
  ssh_auth:
    - present
    - user: frank
    - enc: dsa
    - comment: 'Frank's key'
```

33.2.186 Salt 0.9.4 Release Notes

release
: 2011-11-27

Salt 0.9.4 has arrived. This is a critical update that repairs a number of key bugs found in 0.9.3. But this update is not without feature additions as well! 0.9.4 adds support for Gentoo portage to the pkg module and state system. Also there are 2 major new state additions, the failhard option and the ability to set up finite state ordering with the `order` option.

This release also sees our largest increase in community contributions. These contributors have and continue to be the life blood of the Salt project, and the team continues to grow. I want to put out a big thanks to our new and existing contributors.

Download!

The Salt source can be downloaded from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.4.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Failhard State Option

Normally, when a state fails Salt continues to execute the remainder of the defined states and will only refuse to execute states that require the failed state.

But the situation may exist, where you would want all state execution to stop if a single state execution fails. The capability to do this is called `failing hard`.

State Level Failhard

A single state can have a failhard set, this means that if this individual state fails that all state execution will immediately stop. This is a great thing to do if there is a state that sets up a critical config file and setting a require for each state that reads the config would be cumbersome. A good example of this would be setting up a package manager early on:

```
/etc/yum.repos.d/company.repo:
  file:
    - managed
    - source: salt://company/yumrepo.conf
    - user: root
    - group: root
    - mode: 644
    - order: 1
    - failhard: True
```

In this situation, the yum repo is going to be configured before other states, and if it fails to lay down the config file, than no other states will be executed.

Global Failhard

It may be desired to have failhard be applied to every state that is executed, if this is the case, then failhard can be set in the master configuration file. Setting failhard in the master configuration file will result in failing hard when any minion gathering states from the master have a state fail.

This is NOT the default behavior, normally Salt will only fail states that require a failed state.

Using the global failhard is generally not recommended, since it can result in states not being executed or even checked. It can also be confusing to see states failhard if an admin is not actively aware that the failhard has been set.

To use the global failhard set failhard: True in the master configuration

Finite Ordering of State Execution

When creating salt sls files, it is often important to ensure that they run in a specific order. While states will always execute in the same order, that order is not necessarily defined the way you want it.

A few tools exist in Salt to set up the correct state ordering, these tools consist of requisite declarations and order options.

The Order Option

Before using the order option, remember that the majority of state ordering should be done with requisite statements, and that a requisite statement will override an order option.

The order option is used by adding an order number to a state declaration with the option *order*:

```
vim:
  pkg:
    - installed
    - order: 1
```

By adding the order option to *1* this ensures that the vim package will be installed in tandem with any other state declaration set to the order *1*.

Any state declared without an order option will be executed after all states with order options are executed.

But this construct can only handle ordering states from the beginning. Sometimes you may want to send a state to the end of the line, to do this set the order to last:

```
vim:
  pkg:
    - installed
    - order: last
```

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

Gentoo Support

Additional experimental support has been added for Gentoo. This is found in the contribution from Doug Renn, aka nestegg.

33.2.187 Salt 0.9.5 Release Notes

release
2012-01-15

Salt 0.9.5 is one of the largest steps forward in the development of Salt.

0.9.5 comes with many milestones, this release has seen the community of developers grow out to an international team of 46 code contributors and has many feature additions, feature enhancements, bug fixes and speed improvements.

Warning: Be sure to *read the upgrade instructions* about the switch to msgpack before upgrading!

Community

Nothing has proven to have more value to the development of Salt that the outstanding community that has been growing at such a great pace around Salt. This has proven not only that Salt has great value, but also the expandability of Salt is as exponential as I originally intended.

0.9.5 has received over 600 additional commits since 0.9.4 with a swath of new committers. The following individuals have contributed to the development of 0.9.5:

- Aaron Bull Schaefer
- Antti Kaihola
- Bas Tichelaar
- Brad Barden
- Brian Wagner
- Byron Clark
- Chris Scheller
- Christer Edwards
- Clint Savage
- Corey Quinn
- David Boucha
- Eivind Uggedal
- Eric Poelke
- Evan Borgstrom
- Jed Glazner
- Jeff Schroeder
- Jeffrey C. Ollie
- Jonas Buckner
- Kent Tenney
- Martin Schnabel
- Maxim Burgerhout

- Mitch Anderson
- Nathaniel Whiteinge
- Seth House
- Thomas S Hatch
- Thomas Schreiber
- Tor Hveem
- lzyeval
- syphernl

This makes 21 new developers since 0.9.4 was released!

To keep up with the growing community follow Salt on Black Duck Open Hub (https://www.openhub.net/p/salt), to join the Salt development community, fork Salt on GitHub, and get coding (https://github.com/saltstack/salt)!

Major Features

SPEED! Pickle to msgpack

For a few months now we have been talking about moving away from Python pickles for network serialization, but a preferred serialization format had not yet been found. After an extensive performance testing period involving everything from JSON to protocol buffers, a clear winner emerged. Message Pack (https://msgpack.org/) proved to not only be the fastest and most compact, but also the most "salt like". Message Pack is simple, and the code involved is very small. The msgpack library for Python has been added directly to Salt.

This move introduces a few changes to Salt. First off, Salt is no longer a "noarch" package, since the msgpack lib is written in C. Salt 0.9.5 will also have compatibility issues with 0.9.4 with the default configuration.

We have gone through great lengths to avoid backwards compatibility issues with Salt, but changing the serialization medium was going to create issues regardless. Salt 0.9.5 is somewhat backwards compatible with earlier minions. A 0.9.5 master can command older minions, but only if the `serial` config value in the master is set to `pickle`. This will tell the master to publish messages in pickle format and will allow the master to receive messages in both msgpack and pickle formats.

Therefore **the suggested methods for upgrading** are either to just upgrade everything at once, or:

1. Upgrade the master to 0.9.5
2. Set `serial` to `pickle` in the master config
3. Upgrade the minions
4. Remove the `serial` option from the master config

Since pickles can be used as a security exploit the ability for a master to accept pickles from minions at all will be removed in a future release.

C Bindings for YAML

All of the YAML rendering is now done with the YAML C bindings. This speeds up all of the sls files when running states.

Experimental Windows Support

David Boucha has worked tirelessly to bring initial support to Salt for Microsoft Windows operating systems. Right now the Salt Minion can run as a native Windows service and accept commands.

In the weeks and months to come Windows will receive the full treatment and will have support for Salt States and more robust support for managing Windows systems. This is a big step forward for Salt to move entirely outside of the Unix world, and proves Salt is a viable cross platform solution. Big Thanks to Dave for his contribution here!

Dynamic Module Distribution

Many Salt users have expressed the desire to have Salt distribute in-house modules, states, renderers, returners, and grains. This support has been added in a number of ways:

Modules via States

Now when salt modules are deployed to a minion via the state system as a file, then the modules will be automatically loaded into the active running minion - no restart required - and into the active running state. So custom state modules can be deployed and used in the same state run.

Modules via Module Environment Directories

Under the file_roots each environment can now have directories that are used to deploy large groups of modules. These directories sync modules at the beginning of a state run on the minion, or can be manually synced via the Salt module *salt.modules.saltutil.sync_all*.

The directories are named:

- `_modules`
- `_states`
- `_grains`
- `_renderers`
- `_returners`

The modules are pushed to their respective scopes on the minions.

Module Reloading

Modules can now be reloaded without restarting the minion, this is done by calling the `salt.modules.sys.reload_modules` function.

But wait, there's more! Now when a salt module of any type is added via states the modules will be automatically reloaded, allowing for modules to be laid down with states and then immediately used.

Finally, all modules are reloaded when modules are dynamically distributed from the salt master.

Enable / Disable Added to Service

A great deal of demand has existed for adding the capability to set services to be started at boot in the service module. This feature also comes with an overhaul of the service modules and initial systemd support.

This means that the *service state* can now accept `- enable: True` to make sure a service is enabled at boot, and `- enable: False` to make sure it is disabled.

Compound Target

A new target type has been added to the lineup, the compound target. In previous versions the desired minions could only be targeted via a single specific target type, but now many target specifications can be declared.

These targets can also be separated by and/or operators, so certain properties can be used to omit a node:

```
salt -C 'webserv* and G@os:Debian or E@db.*' test.ping
```

will match all minions with ids starting with webserv via a glob and minions matching the `os:Debian` grain. Or minions that match the `db.*` regular expression.

Node Groups

Often the convenience of having a predefined group of minions to execute targets on is desired. This can be accomplished with the new nodegroups feature. Nodegroups allow for predefined compound targets to be declared in the master configuration file:

```
nodegroups:
  group1: 'L@foo.domain.com,bar.domain.com,baz.domain.com and bl*.domain.com'
  group2: 'G@os:Debian and foo.domain.com'
```

And then used via the `-N` option:

```
salt -N group1 test.ping
```

Minion Side Data Store

The data module introduces the initial approach into storing persistent data on the minions, specific to the minions. This allows for data to be stored on minions that can be accessed from the master or from the minion.

The Minion datastore is young, and will eventually provide an interface similar to a more mature key/value pair server.

Major Grains Improvement

The Salt grains have been overhauled to include a massive amount of extra data. this includes hardware data, os data and salt specific data.

Salt -Q is Useful Now

In the past the salt query system, which would display the data from recent executions would be displayed in pure Python, and it was unreadable.

0.9.5 has added the outputter system to the `-Q` option, thus enabling the salt query system to return readable output.

Packaging Updates

Huge strides have been made in packaging Salt for distributions. These additions are thanks to our wonderful community where the work to set up packages has proceeded tirelessly.

FreeBSD

Salt on FreeBSD? There a port for that:

https://svnweb.freebsd.org/ports/head/sysutils/py-salt/

This port was developed and added by Christer Edwards. This also marks the first time Salt has been included in an upstream packaging system!

Fedora and Red Hat Enterprise

Salt packages have been prepared for inclusion in the Fedora Project and in EPEL for Red Hat Enterprise 5 and 6. These packages are the result of the efforts made by Clint Savage (herlo).

Debian/Ubuntu

A team of many contributors have assisted in developing packages for Debian and Ubuntu. Salt is still actively seeking inclusion in upstream Debian and Ubuntu and the package data that has been prepared is being pushed through the needed channels for inclusion.

These packages have been prepared with the help of:

- Corey
- Aaron Toponce
- and`

More to Come

We are actively seeking inclusion in more distributions. Primarily getting Salt into Gentoo, SUSE, OpenBSD, and preparing Solaris support are all turning into higher priorities.

Refinement

Salt continues to be refined into a faster, more stable and more usable application. 0.9.5 comes with more debug logging, more bug fixes and more complete support.

More Testing, More BugFixes

0.9.5 comes with more bugfixes due to more testing than any previous release. The growing community and the introduction a dedicated QA environment have unearthed many issues that were hiding under the covers. This has further refined and cleaned the state interface, taking care of things from minor visual issues to repairing misleading data.

Custom Exceptions

A custom exception module has been added to throw salt specific exceptions. This allows Salt to give much more granular error information.

New Modules

`data`

The new data module manages a persistent datastore on the minion. Big thanks to bastichelaar for his help refining this module

`freebsdkmod`

FreeBSD kernel modules can now be managed in the same way Salt handles Linux kernel modules.

This module was contributed thanks to the efforts of Christer Edwards

`gentoo_service`

Support has been added for managing services in Gentoo. Now Gentoo services can be started, stopped, restarted, enabled, disabled, and viewed.

pip

The pip module introduces management for pip installed applications. Thanks goes to whitinge for the addition of the pip module

rh_service

The rh_service module enables Red Hat and Fedora specific service management. Now Red Hat like systems come with extensive management of the classic init system used by Red Hat

saltutil

The saltutil module has been added as a place to hold functions used in the maintenance and management of salt itself. Saltutil is used to salt the salt minion. The saltutil module is presently used only to sync extension modules from the master server.

systemd

Systemd support has been added to Salt, now systems using this next generation init system are supported on systems running systemd.

virtualenv

The virtualenv module has been added to allow salt to create virtual Python environments. Thanks goes to whitinge for the addition of the virtualenv module

win_disk

Support for gathering disk information on Microsoft Windows minions The windows modules come courtesy of Utah_Dave

win_service

The win_service module adds service support to Salt for Microsoft Windows services

win_useradd

Salt can now manage local users on Microsoft Windows Systems

yumpkg5

The yumpkg module introduces in 0.9.4 uses the yum API to interact with the yum package manager. Unfortunately, on Red Hat 5 systems salt does not have access to the yum API because the yum API is running under Python 2.4 and Salt needs to run under Python 2.6.

The yumpkg5 module bypasses this issue by shelling out to yum on systems where the yum API is not available.

New States

mysql_database

The new mysql_database state adds the ability to systems running a mysql server to manage the existence of mysql databases.

The mysql states are thanks to syphernl

mysql_user

The mysql_user state enables mysql user management.

virtualenv

The virtualenv state can manage the state of Python virtual environments. Thanks to Whitinge for the virtualenv state

New Returners

cassandra_returner

A returner allowing Salt to send data to a cassandra server. Thanks to Byron Clark for contributing this returner

33.2.188 Salt 0.9.6 Release Notes

release
2012-01-21

Salt 0.9.6 is a release targeting a few bugs and changes. This is primarily targeting an issue found in the names declaration in the state system. But a few other bugs were also repaired, like missing support for grains in extmods.

Due to a conflict in distribution packaging msgpack will no longer be bundled with Salt, and is required as a dependency.

New Features

HTTP and ftp support in files.managed

Now under the source option in the file.managed state a HTTP or ftp address can be used instead of a file located on the salt master.

Allow Multiple Returners

Now the returner interface can define multiple returners, and will also return data back to the master, making the process less ambiguous.

Minion Memory Improvements

A number of modules have been taken out of the minion if the underlying systems required by said modules are not present on the minion system. A number of other modules need to be stripped out in this same way which should continue to make the minion more efficient.

Minions Can Locally Cache Return Data

A new option, cache_jobs, has been added to the minion to allow for all of the historically run jobs to cache on the minion, allowing for looking up historic returns. By default cache_jobs is set to False.

Pure Python Template Support For file.managed

Templates in the file.managed state can now be defined in a Python script. This script needs to have a run function that returns the string that needs to be in the named file.

33.2.189 Salt 0.9.7 Release Notes

release
2012-02-15

Salt 0.9.7 is here! The latest iteration of Salt brings more features and many fixes. This release is a great refinement over 0.9.6, adding many conveniences under the hood, as well as some features that make working with Salt much better.

A few highlights include the new Job system, refinements to the requisite system in states, the `mod_init` interface for states, external node classification, search path to managed files in the file state, and refinements and additions to dynamic module loading.

0.9.7 also introduces the long developed (and oft changed) unit test framework and the initial unit tests.

Major Features

Salt Jobs Interface

The new jobs interface makes the management of running executions much cleaner and more transparent. Building on the existing execution framework the jobs system allows clear introspection into the active running state of the running Salt interface.

The Jobs interface is centered in the new minion side proc system. The minions now store msgpack serialized files under `/var/cache/salt/proc`. These files keep track of the active state of processes on the minion.

Functions in the saltutil Module

A number of functions have been added to the saltutil module to manage and view the jobs:

`running` - Returns the data of all running jobs that are found in the proc directory.

`find_job` - Returns specific data about a certain job based on job id.

`signal_job` - Allows for a given jid to be sent a signal.

`term_job` - Sends a termination signal (`SIGTERM, 15`) to the process controlling the specified job.

`kill_job` Sends a kill signal (`SIGKILL, 9`) to the process controlling the specified job.

The jobs Runner

A convenience runner front end and reporting system has been added as well. The jobs runner contains functions to make viewing data easier and cleaner.

The jobs runner contains a number of functions...

active

The active function runs `saltutil.running` on all minions and formats the return data about all running jobs in a much more usable and compact format. The active function will also compare jobs that have returned and jobs that are still running, making it easier to see what systems have completed a job and what systems are still being waited on.

lookup_jid

When jobs are executed the return data is sent back to the master and cached. By default is cached for 24 hours, but this can be configured via the `keep_jobs` option in the master configuration.

Using the `lookup_jid` runner will display the same return data that the initial job invocation with the salt command would display.

list_jobs

Before finding a historic job, it may be required to find the job id. `list_jobs` will parse the cached execution data and display all of the job data for jobs that have already, or partially returned.

External Node Classification

Salt can now use external node classifiers like Cobbler's `cobbler-ext-nodes`.

Salt uses specific data from the external node classifier. In particular the classes value denotes which sls modules to run, and the environment value sets to another environment.

An external node classification can be set in the master configuration file via the `external_nodes` option: https://salt.readthedocs.io/en/latest/ref/configuration/master.html#external-nodes

External nodes are loaded in addition to the top files. If it is intended to only use external nodes, do not deploy any top files.

State Mod Init System

An issue arose with the pkg state. Every time a package was run Salt would need to refresh the package database. This made systems with slower package metadata refresh speeds much slower to work with. To alleviate this issue the `mod_init` interface has been added to salt states.

The `mod_init` interface is a function that can be added to a state file. This function is called with the first state called. In the case of the pkg state, the `mod_init` function sets up a tag which makes the package database only refresh on the first attempt to install a package.

In a nutshell, the `mod_init` interface allows a state to run any command that only needs to be run once, or can be used to set up an environment for working with the state.

Source File Search Path

The file state continues to be refined, adding speed and capabilities. This release adds the ability to pass a list to the source option. This list is then iterated over until the source file is found, and the first found file is used.

The new syntax looks like this:

```
/etc/httpd/conf/httpd.conf:
  file:
    - managed
    - source:
      - salt://httpd/httpd.conf
      - http://myserver/httpd.conf: md5=8c1fe119e6f1fd96bc06614473509bf1
```

The source option can take sources in the list from the salt file server as well as an arbitrary web source. If using an arbitrary web source the checksum needs to be passed as well for file verification.

Refinements to the Requisite System

A few discrepancies were still lingering in the requisite system, in particular, it was not possible to have a `require` and a `watch` requisite declared in the same state declaration.

This issue has been alleviated, as well as making the requisite system run more quickly.

Initial Unit Testing Framework

Because of the module system, and the need to test real scenarios, the development of a viable unit testing system has been difficult, but unit testing has finally arrived. Only a small amount of unit testing coverage has been developed, much more coverage will be in place soon.

A huge thanks goes out to those who have helped with unit testing, and the contributions that have been made to get us where we are. Without these contributions unit tests would still be in the dark.

Compound Targets Expanded

Originally only support for `and` and `or` were available in the compound target. 0.9.7 adds the capability to negate compound targets with `not`.

Nodegroups in the Top File

Previously the nodegroups defined in the master configuration file could not be used to match nodes for states. The nodegroups support has been expanded and the nodegroups defined in the master configuration can now be used to match minions in the top file.

33.2.190 Salt 0.9.8 Release Notes

release
2012-03-21

Salt 0.9.8 is a big step forward, with many additions and enhancements, as well as a number of precursors to advanced future developments.

This version of Salt adds much more power to the command line, making the old hard timeout issues a thing of the past and adds keyword argument support. These additions are also available in the salt client API, making the available API tools much more powerful.

The new pillar system allows for data to be stored on the master and assigned to minions in a granular way similar to the state system. It also allows flexibility for users who want to keep data out of their state tree similar to 'external lookup' functionality in other tools.

A new way to extend requisites was added, the ”requisite in” statement. This makes adding requires or watch statements to external state decs much easier.

Additions to requisites making them much more powerful have been added as well as improved error checking for sls files in the state system. A new provider system has been added to allow for redirecting what modules run in the background for individual states.

Support for openSUSE has been added and support for Solaris has begun serious development. Windows support has been significantly enhanced as well.

The matcher and target systems have received a great deal of attention. The default behavior of grain matching has changed slightly to reflect the rest of salt and the compound matcher system has been refined.

A number of impressive features with keyword arguments have been added to both the CLI and to the state system. This makes states much more powerful and flexible while maintaining the simple configuration everyone loves.

The new batch size capability allows for executions to be rolled through a group of targeted minions a percentage or specific number at a time. This was added to prevent the "thundering herd" problem when targeting large numbers of minions for things like service restarts or file downloads.

Upgrade Considerations

Upgrade Issues

There was a previously missed oversight which could cause a newer minion to crash an older master. That oversight has been resolved so the version incompatibility issue will no longer occur. When upgrading to 0.9.8 make sure to upgrade the master first, followed by the minions.

Debian/Ubuntu Packages

The original Debian/Ubuntu packages were called salt and included all salt applications. New packages in the ppa are split by function. If an old salt package is installed then it should be manually removed and the new split packages need to be freshly installed.

On the master:

```
# apt-get purge salt
# apt-get install salt-{master,minion}
```

On the minions:

```
# apt-get purge salt
# apt-get install salt-minion
```

And on any Syndics:

```
# apt-get install salt-syndic
```

The official Salt PPA for Ubuntu is located at: https://launchpad.net/~saltstack/+archive/ubuntu/salt

Major Features

Pillar

Pillar offers an interface to declare variable data on the master that is then assigned to the minions. The pillar data is made available to all modules, states, sls files etc. It is compiled on the master and is declared using the existing renderer system. This means that learning pillar should be fairly trivial to those already familiar with salt states.

CLI Additions

The `salt` command has received a serious overhaul and is more powerful than ever. Data is returned to the terminal as it is received, and the salt command will now wait for all running minions to return data before stopping. This makes adding very large *--timeout* arguments completely unnecessary and gets rid of long running operations returning empty `{}` when the timeout is exceeded.

When calling salt via sudo, the user originally running salt is saved to the log for auditing purposes. This makes it easy to see who ran what by just looking through the minion logs.

The *salt-key* command gained the *-D* and *--delete-all* arguments for removing all keys. Be careful with this one!

Running States Without a Master

The addition of running states without a salt-master has been added to 0.9.8. This feature allows for the unmodified salt state tree to be read locally from a minion. The result is that the UNMODIFIED state tree has just become portable, allowing minions to have a local copy of states or to manage states without a master entirely.

This is accomplished via the new file client interface in Salt that allows for the `salt://` URI to be redirected to custom interfaces. This means that there are now two interfaces for the salt file server, calling the master or looking in a local, minion defined `file_roots`.

This new feature can be used by modifying the minion config to point to a local `file_roots` and setting the `file_client` option to `local`.

Keyword Arguments and States

State modules now accept the `**kwargs` argument. This results in all data in a sls file assigned to a state being made available to the state function.

This passes data in a transparent way back to the modules executing the logic. In particular, this allows adding arguments to the `pkg.install` module that enable more advanced and granular controls with respect to what the state is capable of.

An example of this along with the new debconf module for installing ldap client packages on Debian:

```
ldap-client-packages:
  pkg:
    - debconf: salt://debconf/ldap-client.ans
    - installed
    - names:
      - nslcd
      - libpam-ldapd
      - libnss-ldapd
```

Keyword Arguments and the CLI

In the past it was required that all arguments be passed in the proper order to the *salt* and *salt-call* commands. As of 0.9.8, keyword arguments can be passed in the form of `kwarg=argument`.

```
# salt -G 'type:dev' git.clone \
    repository=https://github.com/saltstack/salt.git cwd=/tmp/salt user=jeff
```

Matcher Refinements and Changes

A number of fixes and changes have been applied to the Matcher system. The most noteworthy is the change in the grain matcher. The grain matcher used to use a regular expression to match the passed data to a grain, but now defaults to a shell glob like the majority of match interfaces in Salt. A new option is available that still uses the old style regex matching to grain data called `grain-pcre`. To use regex matching in compound matches use the letter *P*.

For example, this would match any ArchLinux or Fedora minions:

```
# salt --grain-pcre 'os:(Arch:Fed).*' test.ping
```

And the associated compound matcher suitable for `top.sls` is *P*:

```
P@os:(Arch|Fed).*
```

NOTE: Changing the grains matcher from pcre to glob is backwards incompatible.

Support has been added for matching minions with Yahoo's range library. This is handled by passing range syntax with *-R* or *--range* arguments to salt.

More information at: https://github.com/ytoolshed/range/wiki/%22yamlfile%22-module-file-spec

Requisite "in"

A new means to updating requisite statements has been added to make adding watchers and requires to external states easier. Before 0.9.8 the only way to extend the states that were watched by a state outside of the sls was to use an extend statement:

```
include:
  - http
extend:
  apache:
    service:
      - watch:
        - pkg: tomcat

tomcat:
  pkg:
    - installed
```

But the new `Requisite in` statement allows for easier extends for requisites:

```
include:
  - http

tomcat:
  pkg:
    - installed
    - watch_in:
      - service: apache
```

Requisite in is part of the extend system, so still remember to always include the sls that is being extended!

Providers

Salt predetermines what modules should be mapped to what uses based on the properties of a system. These determinations are generally made for modules that provide things like package and service management. The apt module maps to pkg on Debian and the yum module maps to pkg on Fedora for instance.

Sometimes in states, it may be necessary for a non-default module to be used for the desired functionality. For instance, an Arch Linux system may have been set up with systemd support. Instead of using the default service module detected for Arch Linux, the systemd module can be used:

```
http:
  service:
    - running
    - enable: True
    - provider: systemd
```

Default providers can also be defined in the minion config file:

```
providers:
  service: systemd
```

When default providers are passed in the minion config, then those providers will be applied to all functionality in Salt, this means that the functions called by the minion will use these modules, as well as states.

Requisite Glob Matching

Requisites can now be defined with glob expansion. This means that if there are many requisites, they can be defined on a single line.

To watch all files in a directory:

```
http:
  service:
    - running
    - enable: True
    - watch:
      - file: /etc/http/conf.d/*
```

This example will watch all defined files that match the glob `/etc/http/conf.d/*`

Batch Size

The new batch size option allows commands to be executed while maintaining that only so many hosts are executing the command at one time. This option can take a percentage or a finite number:

```
salt '*' -b 10 test.ping

salt -G 'os:RedHat' --batch-size 25% apache.signal restart
```

This will only run test.ping on 10 of the targeted minions at a time and then restart apache on 25% of the minions matching `os:RedHat` at a time and work through them all until the task is complete. This makes jobs like rolling web server restarts behind a load balancer or doing maintenance on BSD firewalls using carp much easier with salt.

Module Updates

This is a list of notable, but non-exhaustive updates with new and existing modules.

Windows support has seen a flurry of support this release cycle. We've gained all new `file`, *network*, and *shadow* modules. Please note that these are still a work in progress.

For our ruby users, new *rvm* and *gem* modules have been added along with the *associated states*

The *virt* module gained basic Xen support.

The *yum* module gained Scientific Linux support.

The *pkg* module on Debian, Ubuntu, and derivatives force apt to run in a non-interactive mode. This prevents issues when package installation waits for confirmation.

A `pkg` module for OpenSUSE's zypper was added.

The `service` module on Ubuntu natively supports upstart.

A new *debconf* module was contributed by our community for more advanced control over deb package deployments on Debian based distributions.

The *mysql.user* state and *mysql* module gained a *password_hash* argument.

The *cmd* module and state gained a *shell* keyword argument for specifying a shell other than `/bin/sh` on Linux / Unix systems.

New *git* and *mercurial* modules have been added for fans of distributed version control.

In Progress Development

Master Side State Compiling

While we feel strongly that the advantages gained with minion side state compiling are very critical, it does prevent certain features that may be desired. 0.9.8 has support for initial master side state compiling, but many more components still need to be developed, it is hoped that these can be finished for 0.9.9.

The goal is that states can be compiled on both the master and the minion allowing for compilation to be split between master and minion. Why will this be great? It will allow storing sensitive data on the master and sending it to some minions without all minions having access to it. This will be good for handling ssl certificates on front-end web servers for instance.

Solaris Support

Salt 0.9.8 sees the introduction of basic Solaris support. The daemon runs well, but grains and more of the modules need updating and testing.

Windows Support

Salt states on windows are now much more viable thanks to contributions from our community! States for file, service, local user, and local group management are more fully fleshed out along with network and disk modules. Windows users can also now manage registry entries using the new "reg" module.

33.2.191 Salt 0.9.9 Release Notes

release
2012-04-27

0.9.9 is out and comes with some serious bug fixes and even more serious features. This release is the last major feature release before 1.0.0 and could be considered the 1.0.0 release candidate.

A few updates include more advanced kwargs support, the ability for salt states to more safely configure a running salt minion, better job directory management and the new state test interface.

Many new tests have been added as well, including the new minion swarm test that allows for easier testing of Salt working with large groups of minions. This means that if you have experienced stability issues with Salt before, particularly in larger deployments, that these bugs have been tested for, found, and killed.

Major Features

State Test Interface

Until 0.9.9 the only option when running states to see what was going to be changed was to print out the highstate with state.show_highstate and manually look it over. But now states can be run to discover what is going to be changed.

Passing the option `test=True` to many of the state functions will now cause the salt state system to only check for what is going to be changed and report on those changes.

```
salt '*' state.highstate test=True
```

Now states that would have made changes report them back in yellow.

State Syntax Update

A shorthand syntax has been added to sls files, and it will be the default syntax in documentation going forward. The old syntax is still fully supported and will not be deprecated, but it is recommended to move to the new syntax in the future. This change moves the state function up into the state name using a dot notation. This is in-line with how state functions are generally referred to as well:

The new way:

```
/etc/sudoers:
  file.present:
    - source: salt://sudo/sudoers
    - user: root
    - mode: 400
```

Use and Use_in Requisites

Two new requisite statements are available in 0.9.9. The use and use_in requisite and requisite-in allow for the transparent duplication of data between states. When a state "uses" another state it copies the other state's arguments as defaults. This was created in direct response to the new network state, and allows for many network interfaces to be configured in the same way easily. A simple example:

```
root_file:
  file.absent:
    - name: /tmp/nothing
    - user: root
    - mode: 644
    - group: root
    - use_in:
      - file: /etc/vimrc

fred_file:
  file.absent:
    - name: /tmp/nothing
    - user: fred
    - group: marketing
    - mode: 660

/files/marketing/district7.rst:
  file.present:
    - source: salt://marketing/district7.rst
    - template: jinja
    - use:
      - file: fred_file

/etc/vimrc:
  file.present:
    - source: salt://edit/vimrc
```

This makes the 2 lower state decs inherit the options from their respectively "used" state decs.

Network State

The new network state allows for the configuration of network devices via salt states and the ip salt module. This addition has been given to the project by Jeff Hutchins and Bret Palsson from Jive Communications.

Currently the only network configuration backend available is for Red Hat based systems, like Red Hat Enterprise, CentOS, and Fedora.

Exponential Jobs

Originally the jobs executed were stored on the master in the format: `<cachedir>/jobs/jid/{minion ids}` But this format restricted the number of jobs in the cache to the number of subdirectories allowed on the filesystem. Ext3 for instance limits subdirectories to 32000. To combat this the new format for 0.9.9 is: `<cachedir>/jobs/jid_hash[:2]/jid_hash[2:]/{minion ids}` So that now the number of maximum jobs that can be run before the cleanup cycle hits the job directory is substantially higher.

ssh_auth Additions

The original ssh_auth state was limited to accepting only arguments to apply to a public key, and the key itself. This was restrictive due to the way the we learned that many people were using the state, so the key section has been expanded to accept options and arguments to the key that over ride arguments passed in the state. This gives substantial power to using ssh_auth with names:

```
sshkeys:
  ssh_auth:
    - present
    - user: backup
    - enc: ssh-dss
    - options:
      - option1="value1"
      - option2="value2 flag2"
    - comment: backup
    - names:
      -

```

LocalClient Additions

To follow up the recent additions in 0.9.8 of additional kwargs support, 0.9.9 also adds the capability to send kwargs into commands via a dict. This addition to the LocalClient api can be used like so:

```
import salt.client

client = salt.client.LocalClient("/etc/salt/master")
ret = client.cmd("*", "cmd.run", ["ls -l"], kwarg={"cwd": "/etc"})
```

This update has been added to all cmd methods in the LocalClient class.

Better Self Salting

One problem faced with running Salt states, is that it has been difficult to manage the Salt minion via states, this is due to the fact that if the minion is called to restart while a state run is happening then the state run would be killed. 0.9.9 slightly changes the process scope of the state runs, so now when salt is executing states it can safely restart the salt-minion daemon.

In addition to daemonizing the state run, the apt module also daemonizes. This update makes it possible to cleanly update the salt-minion package on Debian/Ubuntu systems without leaving apt in an inconsistent state or killing the active minion process mid-execution.

Wildcards for SLS Modules

Now, when including sls modules in include statements or in the top file, shell globs can be used. This can greatly simplify listing matched sls modules in the top file and include statements:

```
base:
  '*':
    - files*
    - core*
```

```
include:
  - users.dev.*
  - apache.ser*
```

External Pillar

Since the pillar data is just, data, it does not need to come expressly from the pillar interface. The external pillar system allows for hooks to be added making it possible to extract pillar data from any arbitrary external interface. The external pillar interface is configured via the `ext_pillar` option. Currently interfaces exist to gather external pillar data via hiera or via a shell command that sends yaml data to the terminal:

```
ext_pillar:
  - cmd_yaml: cat /etc/salt/ext.yaml
  - hiera: /etc/hirea.yaml
```

The initial external pillar interfaces and extra interfaces can be added to the file salt/pillar.py, it is planned to add more external pillar interfaces. If the need arises a new module loader interface will be created in the future to manage external pillar interfaces.

Single State Executions

The new state.single function allows for single states to be cleanly executed. This is a great tool for setting up a small group of states on a system or for testing out the behavior of single states:

```
salt '*' state.single user.present name=wade uid=2000
```

The test interface functions here as well, so changes can also be tested against as:

```
salt '*' state.single user.present name=wade uid=2000 test=True
```

New Tests

A few exciting new test interfaces have been added, the minion swarm allows not only testing of larger loads, but also allows users to see how Salt behaves with large groups of minions without having to create a large deployment.

Minion Swarm

The minion swarm test system allows for large groups of minions to be tested against easily without requiring large numbers of servers or virtual machines. The minion swarm creates as many minions as a system can handle and roots them in the /tmp directory and connects them to a master.

The benefit here is that we were able to replicate issues that happen only when there are large numbers of minions. A number of elusive bugs which were causing stability issues in masters and minions have since been hunted down. Bugs that used to take careful watch by users over several days can now be reliably replicated in minutes, and fixed in minutes.

Using the swarm is easy, make sure a master is up for the swarm to connect to, and then use the minionswarm.py script in the tests directory to spin up as many minions as you want. Remember, this is a fork bomb, don't spin up more than your hardware can handle!

```
python minionswarm.py -m 20 --master salt-master
```

Shell Tests

The new Shell testing system allows us to test the behavior of commands executed from a high level. This allows for the high level testing of salt runners and commands like salt-key.

Client Tests

Tests have been added to test the aspects of the client APIs and ensure that the client calls work, and that they manage passed data, in a desirable way.

CHAPTER

THIRTYFOUR

VENAFI TOOLS FOR SALT

34.1 Introduction

First, you need to configure the `master` file. This is because all module functions require either a configured `api_key` (for Cloud) or a `ttp_user` with a `tpp_password` and a `base_url` (for Trust Platform).

For Venafi Cloud:

```
venafi:
  api_key: abcdef01-2345-6789-abcd-ef0123456789
  base_url: "https://cloud.venafi.example.com/"    (optional)
```

If you don't have a Venafi Cloud account, you can sign up for one on the enrollment page.

For Venafi Platform:

```
venafi:
  base_url: "https://tpp.example.com/"
  tpp_user: admin
  tpp_password: "Str0ngPa$$w0rd"
  trust_bundle: "/opt/venafi/bundle.pem"
```

It is not common for the Venafi Platform's REST API (WebSDK) to be secured using a certificate issued by a publicly trusted CA, therefore establishing trust for that server certificate is a critical part of your configuration. Ideally this is done by obtaining the root CA certificate in the issuing chain in PEM format and copying that file to your Salt Master (e.g. /opt/venafi/bundle.pem). You then reference that file using the 'trust_bundle' parameter as shown above.

For the Venafi module to create keys and certificates it is necessary to enable external pillars. This is done by adding the following to the `/etc/salt/master` file:

```
ext_pillar:
  - venafi: True
```

34.2 Runner Functions

34.2.1 request

This command is used to enroll a certificate from Venafi Cloud or Venafi Platform.

minion_id
ID of the minion for which the certificate is being issued. Required.

dns_name
DNS subject name for the certificate. Required if `csr_path` is not specified.

csr_path
Full path name of certificate signing request file to enroll. Required if `dns_name` is not specified.

zone
Venafi Cloud zone ID or Venafi Platform folder that specify key and certificate policy. Defaults to "Default". For Venafi Cloud, the Zone ID can be found in the Zone page for your Venafi Cloud project.

org_unit
Business Unit, Department, etc. Do not specify if it does not apply.

org
Exact legal name of your organization. Do not abbreviate.

loc
City/locality where your organization is legally located.

state
State or province where your organization is legally located. Must not be abbreviated.

country
Country where your organization is legally located; two-letter ISO code.

key_password
Password for encrypting the private key.

The syntax for requesting a new certificate with private key generation looks like this:

```
salt-run venafi.request minion.example.com dns_name=www.example.com \
country=US state=California loc=Sacramento org="Company Name" org_unit=DevOps
↪\
zone=Internet key_password=SecretSauce
```

And the syntax for requesting a new certificate using a previously generated CSR looks like this:

```
salt-run venafi.request minion.example.com csr_path=/tmp/minion.req
↪zone=Internet
```

34.2.2 show_cert

This command is used to show last issued certificate for domain.

dns_name
DNS subject name of the certificate to look up.

```
salt-run venafi.show_cert www.example.com
```

34.2.3 list_domain_cache

This command lists domains that have been cached on this Salt Master.

```
salt-run venafi.list_domain_cache
```

34.2.4 del_cached_domain

This command deletes a domain from the Salt Master's cache.

domains
A domain name, or a comma-separated list of domain names, to delete from this master's cache.

```
salt-run venafi.del_cached_domain www.example.com
```

34.3 Transfer certificate to a minion

To transfer a cached certificate to a minion, you can use Venafi pillar.

Example state (SLS) file:

```
/etc/ssl/cert/www.example.com.crt:
  file.managed:
      - contents_pillar: venafi:www.example.com:cert
      - replace: True

/etc/ssl/cert/www.example.com.key:
  file.managed:

CHAPTER

THIRTYFIVE

GLOSSARY

Auto-Order
The evaluation of states in the order that they are defined in a SLS file. *See also*: *ordering*.

Bootstrap
A stand-alone Salt project which can download and install a Salt master and/or a Salt minion onto a host. *See also*: salt-bootstrap.

Compound Matcher
A combination of many target definitions that can be combined with boolean operators. *See also*: *targeting*.

EAuth
Shorthand for 'external authentication'. A system for calling to a system outside of Salt in order to authenticate users and determine if they are allowed to issue particular commands to Salt. *See also*: *external auth*.

Environment
A directory tree containing state files which can be applied to minions. *See also*: *top file*.

Execution Function
A Python function inside an Execution Module that may take arguments and performs specific system-management tasks. *See also*: *the list of execution modules*.

External Job Cache
An external data-store that can archive information about jobs that have been run. A default returner. *See also*: `ext_job_cache`, *the list of returners*.

Execution Module
A Python module that contains execution functions which directly perform various system-management tasks on a server. Salt ships with a number of execution modules but users can also write their own execution modules to perform specialized tasks. *See also*: *the list of execution modules*.

External Pillar
A module that accepts arbitrary arguments and returns a dictionary. The dictionary is automatically added to a pillar for a minion.

Event
A notice emitted onto an event bus. Events are often driven by requests for actions to occur on a minion or master and the results of those actions. *See also*: *Salt Reactor*.

File Server
A local or remote location for storing both Salt-specific files such as top files or SLS files as well as files that can be distributed to minions, such as system configuration files. *See also*: *Salt's file server*.

Grain
A key-value pair which contains a fact about a system, such as its hostname, network addresses. *See also*: *targeting with grains*.

Highdata
The data structure in a SLS file the represents a set of state declarations. *See also*: *state layers*.

Highstate
The collection of states to be applied to a system. *See also*: *state layers*.

Idempotent
An action that ensures the system is in a well-known state regardless of the system's state before the action is applied. A corollary to this is that applying the action multiple times results in no changes to the system. State module functions should be idempotent. Some state module functions, such as `cmd.run` are not idempotent by default but can be made idempotent with the proper use of requisites such as *unless* and *onlyif*. For more information, *see* wikipedia.

Jinja
A templating language which allows variables and simple logic to be dynamically inserted into static text files when they are rendered. *See also*: `Salt's Jinja documentation`.

Job
The complete set of tasks to be performed by the execution of a Salt command are a single job. *See also*: `jobs runner`.

Job Cache
A storage location for job results, which may then be queried by a salt runner or an external system. May be local to a salt master or stored externally.

Job ID
A unique identifier to represent a given *job*. This is often shortened to JID.

Low State
The collection of processed states after requisites and order are evaluated. *See also*: *state layers*.

Master
A central Salt daemon from which commands can be issued to listening minions.

Masterless
A minion which does not require a Salt master to operate. All configuration is local. *See also*: `file_client`.

Master Tops
A system for the master that allows hooks into external systems to generate top file data.

Mine
A facility to collect arbitrary data from minions and store that data on the master. This data is then available to all other minions. (Sometimes referred to as Salt Mine.) *See also*: *Salt Mine*.

Minion
A server running a Salt minion daemon which can listen to commands from a master and perform the requested tasks. Generally, minions are servers which are to be controlled using Salt.

Minion ID
A globally unique identifier for a minion. *See also*: `id`.

Multi-Master
The ability for a minion to be actively connected to multiple Salt masters at the same time in high-availability environments.

Node Group
A pre-defined group of minions declared in the master configuration file. *See also*: *targeting*.

Outputter
A formatter for defining the characteristics of output data from a Salt command. *See also*: *list of outputters*.

Peer Communication
The ability for minions to communicate directly with other minions instead of brokering commands through the Salt master. *See also*: *peer communication*.

Pillar
A simple key-value store for user-defined data to be made available to a minion. Often used to store and distribute sensitive data to minions. *See also*: *Pillar*, *list of Pillar modules*.

Proxy Minion
A minion which can control devices that are unable to run a Salt minion locally, such as routers and switches.

PyDSL
A Pythonic domain-specific-language used as a Salt renderer. PyDSL can be used in cases where adding pure Python into SLS files is beneficial. *See also*: `PyDSL`.

Reactor
An interface for listening to events and defining actions that Salt should taken upon receipt of given events. *See also*: *Reactor*.

Render Pipe
Allows SLS files to be rendered by multiple renderers, with each renderer receiving the output of the previous. *See also*: *composing renderers*.

Renderer
Responsible for translating a given data serialization format such as YAML or JSON into a Python data structure that can be consumed by Salt. *See also*: *list of renderers*.

Returner
Allows for the results of a Salt command to be sent to a given data-store such as a database or log file for archival. *See also*: *list of returners*.

Roster
A flat-file list of target hosts. (Currently only used by salt-ssh.)

Runner Module
A module containing a set of runner functions. *See also*: *list of runner modules*.

Runner Function
A function which is called by the **`salt-run`** command and executes on the master instead of on a minion. *See also*: *Runner Module*.

Salt Cloud
A suite of tools used to create and deploy systems on many hosted cloud providers. *See also*: *salt-cloud*.

Salt SSH
A configuration management and remote orchestration system that does not require that any software besides SSH be installed on systems to be controlled.

Salt Thin
A subset of the normal Salt distribution that does not include any transport routines. A Salt Thin bundle can be dropped onto a host and used directly without any requirement that the host be connected to a network. Used by Salt SSH. *See also*: `thin runner`.

Salt Virt
Used to manage the creation and deployment of virtual machines onto a set of host machines. Often used to create and deploy private clouds. *See also*: `virt runner`.

SLS Module
Contains a set of *state declarations*.

State Compiler
Translates *highdata* into lowdata.

State Declaration
A data structure which contains a unique ID and describes one or more states of a system such as ensuring that a package is installed or a user is defined. *See also*: *highstate structure*.

State Function
A function contained inside a *state module* which can manages the application of a particular state to a system. State functions frequently call out to one or more *execution modules* to perform a given task.

State Module
A module which contains a set of state functions. *See also*: *list of state modules*.

State Run
The application of a set of states on a set of systems.

Syndic
A forwarder which can relay messages between tiered masters. **See also**: *Syndic*.

Target
Minion(s) to which a given salt command will apply. *See also*: *targeting*.

Top File
Determines which SLS files should be applied to various systems and organizes those groups of systems into environments. *See also*: *top file*, *list of master top modules*.

__virtual__
A function in a module that is called on module load to determine whether or not the module should be available to a minion. This function commonly contains logic to determine if all requirements for a module are available, such as external libraries.

Worker
A master process which can send notices and receive replies from minions. *See also*: `worker_threads`.
