`salt.states.rabbitmq_cluster.join(name, host, user='rabbit', ram_node=None, runas='root')`

This function is an alias of `joined`.

Ensure the current node joined to a cluster with node `user@host`

**name**

Irrelevant, not used (recommended: `user@host`)

**user**

The user of node to join to (default: `rabbit`)

**host**

The host of node to join to

**ram\_node**

Join node as a RAM node

**runas**

The user to run the `rabbitmq` command as

`salt.states.rabbitmq_cluster.joined(name, host, user='rabbit', ram_node=None, runas='root')`

Ensure the current node joined to a cluster with node `user@host`

**name**

Irrelevant, not used (recommended: `user@host`)

**user**

The user of node to join to (default: `rabbit`)

**host**

The host of node to join to

**ram\_node**

Join node as a RAM node

**runas**

The user to run the `rabbitmq` command as

## 26.19.255 salt.states.rabbitmq\_plugin

### Manage RabbitMQ Plugins

New in version 2014.1.0.

Example:

```
some_plugin:
rabbitmq_plugin.enabled: []
```

`salt.states.rabbitmq_plugin.disabled(name, runas=None)`

Ensure the RabbitMQ plugin is disabled.

**name**

The name of the plugin

**runas**  
The user to run the rabbitmq-plugin command as

`salt.states.rabbitmq_plugin.enabled(name, runas=None)`

Ensure the RabbitMQ plugin is enabled.

**name**  
The name of the plugin

**runas**  
The user to run the rabbitmq-plugin command as

## 26.19.256 salt.states.rabbitmq\_policy

### Manage RabbitMQ Policies

**maintainer**  
Benn Eichhorn <benn@getlocalmeasure.com>

**maturity**  
new

**platform**  
all

Example:

```

rabbit_policy:
  rabbitmq_policy.present:
    - name: HA
    - pattern: '.*'
    - definition: '{"ha-mode": "all"}'

```

`salt.states.rabbitmq_policy.absent(name, vhost='/', runas=None)`

Ensure the named policy is absent

Reference: <http://www.rabbitmq.com/ha.html>

**name**  
The name of the policy to remove

**runas**  
Name of the user to run the command as

`salt.states.rabbitmq_policy.present(name, pattern, definition, priority=0, vhost='/', runas=None, apply_to=None)`

Ensure the RabbitMQ policy exists.

Reference: <https://rabbitmq.com/parameters.html#policies>

**name**  
Policy name

**pattern**  
A regex of queues to apply the policy to

**definition**  
A json dict describing the policy

**priority**  
Priority (defaults to 0)

**vhost**  
Virtual host to apply to (defaults to '/')

**runas**  
Name of the user to run the command as

**apply\_to**  
Apply policy to 'queues', 'exchanges' or 'all' (default to 'all')

## 26.19.257 salt.states.rabbitmq\_upstream

### Manage RabbitMQ Upstreams

Example:

```
rabbit_upstream:
  rabbitmq_upstream.present:
  - name: upstream_1
  - uri: amqp://my_user:my_password@rabbitmq_host
  - trust_user_id: True
  - ack_mode: on-confirm
  - max_hops: 1
```

New in version 3000.

**salt.states.rabbitmq\_upstream.absent**(*name*, *runas=None*)

Ensure the named upstream is absent.

#### Parameters

- **name** (*str*) -- The name of the upstream to remove
- **runas** (*str*) -- User to run the command

New in version 3000.

**salt.states.rabbitmq\_upstream.present**(*name*, *uri*, *prefetch\_count=None*, *reconnect\_delay=None*, *ack\_mode=None*, *trust\_user\_id=None*, *exchange=None*, *max\_hops=None*, *expires=None*, *message\_ttl=None*, *ha\_policy=None*, *queue=None*, *runas=None*)

Ensure the RabbitMQ upstream exists.

#### Parameters

- **name** (*str*) -- The name of the upstream connection
- **uri** (*str*) -- The URI to connect to. If upstream is a cluster and can have several URIs, you can enter them here separated by spaces. Examples: - amqp://user:password@server\_name - amqp://user:password@server\_name/vhost  
When connecting with SSL, several URI-parameters need also be specified: - cacertfile = /path/to/cacert.pem - certfile = /path/to/cert.pem - keyfile = /part/to/key.pem - verify = verify\_peer - fail\_if\_no\_peer\_cert = true | false - auth\_mechanism = external  
Example: - amqp://user:password@server\_name?cacertfile=/path/to/cacert.pem&certfile=/path/to/cert.pem&keyfile=/path/to/key.pem&verify=verify\_peer - amqp://server-name?cacertfile=/path/to/cacert.pem&certfile=/path/to/cert.pem&keyfile=/path/to/key.pem&verify=verify\_peer&fail\_if\_no\_peer\_cert=true&auth\_mechanism=external
- **prefetch\_count** (*int*) -- Maximum number of unacknowledged messages that may be in flight over a federation link at one time. Default: 1000
- **reconnect\_delay** (*int*) -- Time in seconds to wait after a network link goes down before attempting reconnection. Default: 5
- **ack\_mode** (*str*) -- The following values are allowed: on-confirm: Messages are acknowledged to the upstream broker after they have been confirmed downstream. Handles network errors and broker failures without losing messages. The slowest option, and the default. on-publish: Messages are acknowledged to the upstream broker after they have been published downstream. Handles network errors without losing

messages, but may lose messages in the event of broker failures. `no-ack`: Message acknowledgements are not used. The fastest option, but you may lose messages in the event of network or broker failures.

- **trust\_user\_id** (*bool*) -- Set `True` to preserve the "user-id" field across a federation link, even if the user-id does not match that used to republish the message. Set to `False` to clear the "user-id" field when messages are federated. Only set this to `True` if you trust the upstream broker not to forge user-ids.
- **exchange** (*str*) -- The name of the upstream exchange. Default is to use the same name as the federated exchange.
- **max\_hops** (*int*) -- Maximum number of federation links that messages can traverse before being dropped. Defaults to 1 if not set.
- **expires** (*int*) -- Time in milliseconds that the upstream should remember about this node for. After this time all upstream state will be removed. Set to `None` (Default) to mean "forever".
- **message\_ttl** (*int*) -- Time in milliseconds that undelivered messages should be held upstream when there is a network outage or backlog. Set to `None` (default) to mean "forever".
- **ha\_policy** (*str*) -- Determines the "x-ha-policy"-argument for the upstream queue for a federated exchange. Default is "none" meaning the queue is not HA.
- **queue** (*str*) -- The name of the upstream queue. Default is to use the same name as the federated queue.

New in version 3000.

## 26.19.258 salt.states.rabbitmq\_user

### Manage RabbitMQ Users

Example:

```

rabbit_user:
  rabbitmq_user.present:
    - password: password
    - force: True
    - tags:
      - monitoring
      - user
    - perms:
      -  '/' :
        -  '.' * :
        -  '.' * :
        -  '.' * :
    - runas: rabbitmq
  
```

`salt.states.rabbitmq_user.absent` (*name*, *runas=None*)

Ensure the named user is absent

**name**

The name of the user to remove

**runas**

User to run the command

`salt.states.rabbitmq_user.present` (*name*, *password=None*, *force=False*, *tags=None*, *perms=()*, *runas=None*)

Ensure the RabbitMQ user exists.

**name**  
User name

**password**  
The user's password

**force**  
If force is True, the password will be automatically updated without extra password change check.

**tags**  
Optional list of tags for the user

**perms**  
A list of dicts with vhost keys and 3-tuple values

**runas**  
Name of the user to run the command

### 26.19.259 salt.states.rabbitmq\_vhost

#### Manage RabbitMQ Virtual Hosts

Example:

```
virtual_host:
  rabbitmq_vhost.present:
    - user: rabbit_user
    - conf: .*
    - write: .*
    - read: .*
```

`salt.states.rabbitmq_vhost.absent(name)`

Ensure the RabbitMQ Virtual Host is absent

**name**  
Name of the Virtual Host to remove

**runas**

User to run the command

Deprecated since version 2015.8.0.

`salt.states.rabbitmq_vhost.present(name)`

Ensure the RabbitMQ VHost exists.

**name**  
VHost name

**user**  
Initial user permission to set on the VHost, if present

Deprecated since version 2015.8.0.

**owner**  
Initial owner permission to set on the VHost, if present

Deprecated since version 2015.8.0.

**conf**  
Initial conf string to apply to the VHost and user. Defaults to \*

Deprecated since version 2015.8.0.

**write**  
Initial write permissions to apply to the VHost and user. Defaults to \*

Deprecated since version 2015.8.0.

**read**

Initial read permissions to apply to the VHost and user. Defaults to `*`

Deprecated since version 2015.8.0.

**runas**

Name of the user to run the command

Deprecated since version 2015.8.0.

**26.19.260 salt.states.rbac\_solaris**

Management of Solaris RBAC

**maintainer**

Jorge Schrauwen <[sjorge@blackdot.be](mailto:sjorge@blackdot.be)>

**maturity**

new

**depends**

rbac\_solaris,solaris\_user

**platform**

solaris,illumos

New in version 2016.11.0.

**sjorge:****rbac.managed:**

- **roles:**
  - netcfg
- **profiles:**
  - System Power
- **authorizations:**
  - solaris.audit.\*

**salt.states.rbac\_solaris.managed** (*name*, *roles=None*, *profiles=None*, *authorizations=None*)

Manage RBAC properties for user

**name**

[string] username

**roles**

[list] list of roles for user

**profiles**

[list] list of profiles for user

**authorizations**

[list] list of authorizations for user

**Warning:** All existing roles, profiles and authorizations will be replaced! An empty list will remove everything.

Set the property to *None* to not manage it.

## 26.19.261 salt.states.rbenv

### Managing Ruby installations with rbenv

This module is used to install and manage ruby installations with rbenv and the ruby-build plugin. Different versions of ruby can be installed, and uninstalled. Rbenv will be installed automatically the first time it is needed and can be updated later. This module will *not* automatically install packages which rbenv will need to compile the versions of ruby. If your version of ruby fails to install, refer to the ruby-build documentation to verify you are not missing any dependencies: <https://github.com/rbenv/ruby-build/wiki>

If rbenv is run as the root user then it will be installed to /usr/local/rbenv, otherwise it will be installed to the users ~/.rbenv directory. To make rbenv available in the shell you may need to add the rbenv/shims and rbenv/bin directories to the users PATH. If you are installing as root and want other users to be able to access rbenv then you will need to add RBENV\_ROOT to their environment.

The following state configuration demonstrates how to install Ruby 1.9.x and 2.x using rbenv on Ubuntu/Debian:

```

rbenv-deps:
  pkg.installed:
    - names:
      - bash
      - git
      - openssl
      - libssl-dev
      - make
      - curl
      - autoconf
      - bison
      - build-essential
      - libffi-dev
      - libyaml-dev
      - libreadline6-dev
      - zlib1g-dev
      - libncurses5-dev

ruby-1.9.3-p429:
  rbenv.absent:
    - require:
      - pkg: rbenv-deps

ruby-2.0.0-p598:
  rbenv.installed:
    - default: True
    - require:
      - pkg: rbenv-deps

```

`salt.states.rbenv.absent` (*name*, *user=None*)

Verify that the specified ruby is not installed with rbenv. Rbenv is installed if necessary.

**name**

The version of ruby to uninstall

**user:** None

The user to run rbenv as.

New in version 0.17.0.

New in version 0.16.0.

`salt.states.rbenv.install_rbenv` (*name*, *user=None*)

Install rbenv if not installed. Allows you to require rbenv be installed prior to installing the plugins. Useful if you want to install rbenv plugins via the git or file modules and need them installed before installing any rubies.

Use the `rbenv.root` configuration option to set the path for rbenv if you want a system wide install that is not in a user home dir.

**user:** None

The user to run rbenv as.

`salt.states.rbenv.installed` (*name*, *default=False*, *user=None*)

Verify that the specified ruby is installed with rbenv. Rbenv is installed if necessary.

**name**

The version of ruby to install

**default**

[False] Whether to make this ruby the default.

**user:** None

The user to run rbenv as.

New in version 0.17.0.

New in version 0.16.0.

### 26.19.262 salt.states.rdp

Manage RDP Service on Windows servers

`salt.states.rdp.disabled` (*name*)

Disable the RDP service

`salt.states.rdp.enabled` (*name*)

Enable the RDP service and make sure access to the RDP port is allowed in the firewall configuration

### 26.19.263 salt.states.redismod

Management of Redis server

New in version 2014.7.0.

**depends**

- redis Python module

**configuration**

See `salt.modules.redis` for setup instructions.

**key\_in\_redis:**

**redis.string:**

- **value:** string data

The redis server information specified in the minion config file can be overridden in states using the following arguments: `host`, `port`, `db`, `password`.

**key\_in\_redis:**

**redis.string:**

- **value:** string data

(continues on next page)

(continued from previous page)

- **host**: localhost
- **port**: 6379
- **db**: 0
- **password**: somuchkittycat

`salt.states.redismod.absent`(*name*, *keys=None*, *\*\*connection\_args*)

Ensure key absent from redis

**name**

Key to ensure absent from redis

**keys**

list of keys to ensure absent, name will be ignored if this is used

`salt.states.redismod.slaveof`(*name*, *sentinel\_host=None*, *sentinel\_port=None*, *sentinel\_password=None*, *\*\*connection\_args*)

Set this redis instance as a slave.

New in version 2016.3.0.

**name**

Master to make this a slave of

**sentinel\_host**

Ip of the sentinel to check for the master

**sentinel\_port**

Port of the sentinel to check for the master

`salt.states.redismod.string`(*name*, *value*, *expire=None*, *expireat=None*, *\*\*connection\_args*)

Ensure that the key exists in redis with the value specified

**name**

Redis key to manage

**value**

Data to persist in key

**expire**

Sets time to live for key in seconds

**expireat**

Sets expiration time for key via UNIX timestamp, overrides *expire*

## 26.19.264 salt.states.reg

### Manage the Windows registry

Many python developers think of registry keys as if they were python keys in a dictionary which is not the case. The windows registry is broken down into the following components:

## Hives

This is the top level of the registry. They all begin with HKEY.

- HKEY\_CLASSES\_ROOT (HKCR)
- HKEY\_CURRENT\_USER (HKCU)
- HKEY\_LOCAL\_MACHINE (HKLM)
- HKEY\_USER (HKU)
- HKEY\_CURRENT\_CONFIG

## Keys

Hives contain keys. These are basically the folders beneath the hives. They can contain any number of subkeys.

When passing the hivekey values they must be quoted correctly depending on the backslashes being used (\ vs \\\). The way backslashes are handled in the state file is different from the way they are handled when working on the CLI. The following are valid methods of passing the hivekey:

Using single backslashes:

```
HKLMSOFTWAREPython 'HKLMSOFTWAREPython'
```

Using double backslashes:

```
"HKLM\SOFTWARE\Python"
```

## Values or Entries

Values or Entries are the name/data pairs beneath the keys and subkeys. All keys have a default name/data pair. The name is (Default) with a displayed value of (value not set). The actual value is Null.

## Example

The following example is taken from the windows startup portion of the registry:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run]
"RTHDVCPL"="\"C:\\Program Files\\Realtek\\Audio\\HDA\\RtkNGUI64.exe\" -s"
"NvBackend"="\"C:\\Program Files (x86)\\NVIDIA Corporation\\Update Core\\
↳NvBackend.exe\""
"BTMTrayAgent"="rundll32.exe \"C:\\Program Files (x86)\\Intel\\Bluetooth\\
↳btshelllex.dll\",TrayApp"
```

In this example these are the values for each:

Hive:

```
HKEY_LOCAL_MACHINE
```

Key and subkeys:

```
SOFTWARE\\Microsoft\\Windows\\CurrentVersion\\Run
```

Value:

- There are 3 value names: RTHDVCPL, NvBackend, and BTMTrayAgent
- Each value name has a corresponding value

`salt.states.reg.absent` (*name*, *vname*=None, *use\_32bit\_registry*=False)

Ensure a registry value is removed. To remove a key use `key_absent`.

#### Parameters

- **name** (*str*) -- A string value representing the full path of the key to include the HIVE, Key, and all Subkeys. For example:

```
HKEY_LOCAL_MACHINE\SOFTWARE\Salt
```

Valid hive values include:

- HKEY\_CURRENT\_USER or HKCU
- HKEY\_LOCAL\_MACHINE or HKLM
- HKEY\_USERS or HKU
- **vname** (*str*) -- The name of the value you'd like to create beneath the Key. If this parameter is not passed it will assume you want to set the (Default) value
- **use\_32bit\_registry** (*bool*) -- Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.

#### Returns

A dictionary showing the results of the registry operation.

#### Return type

dict

CLI Example:

```
'HKEY_CURRENT_USER\SOFTWARE\Salt':
  reg.absent
  - vname: version
```

In the above example the value named `version` will be removed from the `SOFTWARE\Salt` key in the `HKEY_CURRENT_USER` hive. If `vname` was not passed, the (Default) value would be deleted.

`salt.states.reg.key_absent` (*name*, *use\_32bit\_registry*=False)

New in version 2015.5.4.

Ensure a registry key is removed. This will remove the key, subkeys, and all value entries.

#### Parameters

- **name** (*str*) -- A string representing the full path to the key to be removed to include the hive and the keypath. The hive can be any of the following:
  - HKEY\_LOCAL\_MACHINE or HKLM
  - HKEY\_CURRENT\_USER or HKCU
  - HKEY\_USER or HKU
- **use\_32bit\_registry** (*bool*) -- Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.

#### Returns

A dictionary showing the results of the registry operation.

#### Return type

dict

CLI Example:

The following example will delete the `SOFTWARE\DeleteMe` key in the `HKEY_LOCAL_MACHINE` hive including all its subkeys and value pairs.

```
remove_key_demo:
  reg.key_absent:
  - name: HKEY_CURRENT_USER\SOFTWARE\DeleteMe
```

In the above example the path is interpreted as follows:

- `HKEY_CURRENT_USER` is the hive

- SOFTWARE\DeleteMe is the key

```
salt.states.reg.present(name, vname=None, vdata=None, vtype='REG_SZ', use_32bit_registry=False,
                        win_owner=None, win_perms=None, win_deny_perms=None,
                        win_inheritance=True, win_perms_reset=False)
```

Ensure a registry key or value is present.

#### Parameters

- **name** (*str*) -- A string value representing the full path of the key to include the HIVE, Key, and all Subkeys. For example:

```
HKEY_LOCAL_MACHINE\SOFTWARE\Salt
```

Valid hive values include:

- HKEY\_CURRENT\_USER or HKCU
- HKEY\_LOCAL\_MACHINE or HKLM
- HKEY\_USERS or HKU
- **vname** (*str*) -- The name of the value you'd like to create beneath the Key. If this parameter is not passed it will assume you want to set the (Default) value
- **vdata** (*str, int, list, bytes*) -- The value you'd like to set. If a value name (vname) is passed, this will be the data for that value name. If not, this will be the (Default) value for the key.

The type of data this parameter expects is determined by the value type specified in `vtype`. The correspondence is as follows:

- REG\_BINARY: Binary data (str in Py2, bytes in Py3)
- REG\_DWORD: int
- REG\_EXPAND\_SZ: str
- REG\_MULTI\_SZ: list of str
- REG\_QWORD: int
- REG\_SZ: str

---

**Note:** When setting REG\_BINARY, string data will be converted to binary automatically. To pass binary data, use the built-in yaml tag `!!binary` to denote the actual binary characters. For example, the following lines will both set the same data in the registry:

- `vdata: Salty Test`
- `vdata: !!binary U2FsdHkgVGZzdA==\n`

For more information about the `!!binary` tag see [here](#)

---

---

**Note:** The type for the (Default) value is always REG\_SZ and cannot be changed. This parameter is optional. If not passed, the Key will be created with no associated item/value pairs.

---

- **vtype** (*str*) -- The value type for the data you wish to store in the registry. Valid values are:
  - REG\_BINARY
  - REG\_DWORD
  - REG\_EXPAND\_SZ
  - REG\_MULTI\_SZ
  - REG\_QWORD
  - REG\_SZ (Default)
- **use\_32bit\_registry** (*bool*) -- Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.
- **win\_owner** (*str*) -- The owner of the registry key. If this is not passed, the account

under which Salt is running will be used.

---

**Note:** Owner is set for the key that contains the value/data pair. You cannot set ownership on value/data pairs themselves.

---

New in version 2019.2.0.

- **win\_perms** (*dict*) -- A dictionary containing permissions to grant and their propagation. If not passed the 'Grant' permissions will not be modified.

---

**Note:** Permissions are set for the key that contains the value/data pair. You cannot set permissions on value/data pairs themselves.

---

For each user specify the account name, with a sub dict for the permissions to grant and the 'Applies to' setting. For example: {'Administrators': {'perms': 'full\_control', 'applies\_to': 'this\_key\_subkeys'}}. perms must be specified.

Registry permissions are specified using the perms key. You can specify a single basic permission or a list of advanced perms. The following are valid perms:

**Basic (passed as a string):**

- full\_control
- read
- write

**Advanced (passed as a list):**

- delete
- query\_value
- set\_value
- create\_subkey
- enum\_subkeys
- notify
- create\_link
- read\_control
- write\_dac
- write\_owner

The 'Applies to' setting is optional. It is specified using the `applies_to` key. If not specified `this_key_subkeys` is used. Valid options are:

**Applies to settings:**

- this\_key\_only
- this\_key\_subkeys
- subkeys\_only

New in version 2019.2.0.

- **win\_deny\_perms** (*dict*) -- A dictionary containing permissions to deny and their propagation. If not passed the *Deny* permissions will not be modified.

---

**Note:** Permissions are set for the key that contains the value/data pair. You cannot set permissions on value/data pairs themselves.

---

Valid options are the same as those specified in `win_perms`

---

**Note:**

'Deny' permissions always take precedence over 'grant' permissions.

New in version 2019.2.0.

- **win\_inheritance** (*bool*) -- True to inherit permissions from the parent key. False to disable inheritance. Default is True.

**Note:** Inheritance is set for the key that contains the value/data pair. You cannot set inheritance on value/data pairs themselves.

New in version 2019.2.0.

- **win\_perms\_reset** (*bool*) -- If True the existing DACL will be cleared and replaced with the settings defined in this function. If False, new entries will be appended to the existing DACL. Default is False

**Note:** Perms are reset for the key that contains the value/data pair. You cannot set permissions on value/data pairs themselves.

New in version 2019.2.0.

#### Returns

A dictionary showing the results of the registry operation.

#### Return type

dict

Example:

The following example will set the (Default) value for the SOFTWARE\Salt key in the HKEY\_CURRENT\_USER hive to 2016.3.1:

```
HKEY_CURRENT_USER\SOFTWARE\Salt:
reg.present:
- vdata: 2016.3.1
```

Example:

The following example will set the value for the version entry under the SOFTWARE\Salt key in the HKEY\_CURRENT\_USER hive to 2016.3.1. The value will be reflected in Wow6432Node:

```
HKEY_CURRENT_USER\SOFTWARE\Salt:
reg.present:
- vname: version
- vdata: 2016.3.1
```

In the above example the path is interpreted as follows:

- HKEY\_CURRENT\_USER is the hive
- SOFTWARE\Salt is the key
- vname is the value name ('version') that will be created under the key
- vdata is the data that will be assigned to 'version'

Example:

Binary data can be set in two ways. The following two examples will set a binary value of Salty Test

```
no_conversion:
reg.present:
```

(continues on next page)

(continued from previous page)

```

- name: HKLM\SOFTWARE\SaltTesting
- vname: test_reg_binary_state
- vdata: Salty Test
- vtype: REG_BINARY

conversion:
  reg.present:
    - name: HKLM\SOFTWARE\SaltTesting
    - vname: test_reg_binary_state_with_tag
    - vdata: !!binary U2FsdHkgVGVzdA==\n
    - vtype: REG_BINARY

```

Example:

To set a REG\_MULTI\_SZ value:

```

reg_multi_sz:
  reg.present:
    - name: HKLM\SOFTWARE\Salt
    - vname: reg_multi_sz
    - vdata:
      - list item 1
      - list item 2

```

Example:

To ensure a key is present and has permissions:

```

set_key_permissions:
  reg.present:
    - name: HKLM\SOFTWARE\Salt
    - vname: version
    - vdata: 2016.3.1
    - win_owner: Administrators
    - win_perms:
      jsnuffy:
        perms: full_control
      sjones:
        perms:
          - read_control
          - enum_subkeys
          - query_value
        applies_to:
          - this_key_only
    - win_deny_perms:
      bsimpson:
        perms: full_control
        applies_to: this_key_subkeys
    - win_inheritance: True
    - win_perms_reset: True

```

## 26.19.265 salt.states.restconf

RESTCONF State module for Proxy minions

**codeauthor**  
 Jamie (Bear) Murphy <jamiemurphyit@gmail.com>

**maturity**  
 new

**platform**  
 any

### About

This state module was designed to manage RESTCONF states. This module relies on the RESTCONF proxy module to interface with the devices.

`salt.states.restconf.config_manage` (*name, path, method, config, init\_path=None, init\_method='PATCH', init\_config=None*)

Ensure a specific value exists at a given path

**name:**

(str) The name for this rule

**path:**

(str) The RESTCONF path to set / get config

**method:**

(str) rest method to use eg GET, PUT, POST, PATCH, DELETE

**config:**

(dict) The new value at the given path

**init\_path: (optional)**

(str) Alternative path incase the path doesnt exist on first pass

**init\_method: (optional)**

(str) Method to use on alternative path when setting config, default: PATCH

**init\_config: (optional)**

(dict) The new value at the given init path. This is only needed if you need to supply a different style of data to an init path.

Examples:

```
do_configure_restconf_endpoint:
  restconf.config_manage:
    - name: random_name_here
    - path: restconf/data/Cisco-IOS-XE-native:native/interface/
      ↪GigabitEthernet=1%2F0%2F3
    - config:
      Cisco-IOS-XE-native:GigabitEthernet:
        description: interfaceDescription
        name: "1/0/3"
```

## 26.19.266 salt.states.rsync

State to synchronize files and directories with rsync.

New in version 2016.3.0.

```

/opt/user-backups:
  rsync.synchronized:
    - source: /home
    - force: True

```

```

salt.states.rsync.synchronized(name, source, delete=False, force=False, update=False,
                                passwordfile=None, exclude=None, excludefrom=None, prepare=False,
                                dryrun=False, additional_opts=None)

```

Guarantees that the source directory is always copied to the target.

**name**

Name of the target directory.

**source**

Source directory.

**prepare**

Create destination directory if it does not exist.

**delete**

Delete extraneous files from the destination dirs (True or False)

**force**

Force deletion of dirs even if not empty

**update**

Skip files that are newer on the receiver (True or False)

**passwordfile**

Read daemon-access password from the file (path)

**exclude**

Exclude files, that matches pattern.

**excludefrom**

Read exclude patterns from the file (path)

**dryrun**

Perform a trial run with no changes made. Is the same as doing test=True

New in version 2016.3.1.

**additional\_opts**

Pass additional options to rsync, should be included as a list.

New in version 2018.3.0.

## 26.19.267 salt.states.rvm

### Managing Ruby installations and gemsets with Ruby Version Manager (RVM)

This module is used to install and manage ruby installations and gemsets with RVM, the Ruby Version Manager. Different versions of ruby can be installed and gemsets created. RVM itself will be installed automatically if it's not present. This module will not automatically install packages that RVM depends on or ones that are needed to build ruby. If you want to run RVM as an unprivileged user (recommended) you will have to create this user yourself. This is how a state configuration could look like:

```

rvm:
  group.present: []

```

(continues on next page)

(continued from previous page)

```
user.present:  
- gid: rvm  
- home: /home/rvm  
- require:  
  - group: rvm
```

```
rvm-deps:  
pkg.installed:  
- pkgs:  
  - bash  
  - coreutils  
  - gzip  
  - bzip2  
  - gawk  
  - sed  
  - curl  
  - git-core  
  - subversion
```

```
mri-deps:  
pkg.installed:  
- pkgs:  
  - build-essential  
  - openssl  
  - libreadline6  
  - libreadline6-dev  
  - curl  
  - git-core  
  - zlib1g  
  - zlib1g-dev  
  - libssl-dev  
  - libyaml-dev  
  - libsqlite3-0  
  - libsqlite3-dev  
  - sqlite3  
  - libxml2-dev  
  - libxslt1-dev  
  - autoconf  
  - libc6-dev  
  - libncurses5-dev  
  - automake  
  - libtool  
  - bison  
  - subversion  
  - ruby
```

```
jruby-deps:  
pkg.installed:  
- pkgs:  
  - curl  
  - g++  
  - openjdk-6-jre-headless
```

(continues on next page)

(continued from previous page)

```

ruby-1.9.2:
  rvm.installed:
    - default: True
    - user: rvm
    - require:
      - pkg: rvm-deps
      - pkg: mri-deps
      - user: rvm

jruby:
  rvm.installed:
    - user: rvm
    - require:
      - pkg: rvm-deps
      - pkg: jruby-deps
      - user: rvm

jgemset:
  rvm.gemset_present:
    - ruby: jruby
    - user: rvm
    - require:
      - rvm: jruby

mygemset:
  rvm.gemset_present:
    - ruby: ruby-1.9.2
    - user: rvm
    - require:
      - rvm: ruby-1.9.2

```

`salt.states.rvm.gemset_present` (*name*, *ruby='default'*, *user=None*)

Verify that the gemset is present.

**name**

The name of the gemset.

**ruby:** `default`

The ruby version this gemset belongs to.

**user:** `None`

The user to run rvm as.

New in version 0.17.0.

`salt.states.rvm.installed` (*name*, *default=False*, *user=None*, *opts=None*, *env=None*)

Verify that the specified ruby is installed with RVM. RVM is installed when necessary.

**name**

The version of ruby to install

**default**

[False] Whether to make this ruby the default.

**user:** `None`

The user to run rvm as.

**env:** `None`

A list of environment variables to set (ie, RUBY\_CONFIGURE\_OPTS)

**opts: None**

A list of option flags to pass to RVM (ie -C, --patch)

New in version 0.17.0.

**26.19.268 salt.states.salt\_proxy**

Salt proxy state

New in version 2015.8.2.

State to deploy and run salt-proxy processes on a minion.

Set up pillar data for your proxies per the documentation.

Run the state as below

```
salt-proxy-configure:
  salt_proxy.configure_proxy:
    - proxyname: p8000
    - start: True
```

This state will configure the salt proxy settings within `/etc/salt/proxy` (if `/etc/salt/proxy` doesn't exist) and start the salt-proxy process (default true), if it isn't already running.

```
salt.states.salt_proxy.configure_proxy (name, proxyname='p8000', start=True)
```

Create the salt proxy file and start the proxy process if required

**Parameters**

- **name** -- The name of this state
- **proxyname** -- Name to be used for this proxy (should match entries in pillar)
- **start** -- Boolean indicating if the process should be started

Example:

```
salt-proxy-configure:
  salt_proxy.configure_proxy:
    - proxyname: p8000
    - start: True
```

**26.19.269 salt.states.saltmod****Control the Salt command interface**

This state is intended for use from the Salt Master. It provides access to sending commands down to minions as well as access to executing master-side modules. These state functions wrap Salt's *Python API*.

New in version 2016.11.0.

Support for masterless minions was added to the `salt.state` function, so they can run orchestration sls files. This is particularly useful when the rendering of a state is dependent on the execution of another state. Orchestration will render and execute each orchestration block independently, while honoring requisites to ensure the states are applied in the correct order.

See also:

More Orchestrate documentation

- [Full Orchestrate Tutorial](#)

- *The Orchestrate runner*

`salt.states.saltmod.function`(*name*, *tgt*, *ssh=False*, *tgt\_type='glob'*, *ret=""*, *ret\_config=None*, *ret\_kwargs=None*, *expect\_minions=False*, *fail\_minions=None*, *fail\_function=None*, *arg=None*, *kwarg=None*, *timeout=None*, *batch=None*, *subset=None*, *failhard=None*, *\*\*kwargs*)

Execute a single module function on a remote minion via salt or salt-ssh

**name**

The name of the function to run, aka `cmd.run` or `pkg.install`

**tgt**

The target specification, aka `*` for all minions

**tgt\_type**

The target type, defaults to `glob`

**arg**

The list of arguments to pass into the function

**kwarg**

The dict (not a list) of keyword arguments to pass into the function

**ret**

Optionally set a single or a list of returners to use

**ret\_config**

Use an alternative returner configuration

**ret\_kwargs**

Override individual returner configuration items

**expect\_minions**

An optional boolean for failing if some minions do not respond

**fail\_minions**

An optional list of targeted minions where failure is an option

**fail\_function**

An optional string that points to a salt module that returns True or False based on the returned data dict for individual minions

**ssh**

Set to `True` to use the ssh client instead of the standard salt client

**roster**

In the event of using salt-ssh, a roster system can be set

New in version 3005.

**batch**

Execute the command *in batches*. E.g.: 10%.

**subset**

Number of minions from the targeted set to randomly use

New in version 2017.7.0.

**failhard**

pass failhard down to the executing state

New in version 2019.2.2.

`salt.states.saltmod.parallel_runners`(*name*, *runners*, *\*\*kwargs*)

Executes multiple runner modules on the master in parallel.

New in version 2018.3.0.

A separate thread is spawned for each runner. This state is intended to be used with the orchestrate runner in place of the `saltmod.runner` state when different tasks should be run in parallel. In general, Salt states are not safe when used concurrently, so ensure that they are used in a safe way (e.g. by only targeting separate minions in parallel tasks).

**name:**

name identifying this state. The name is provided as part of the output, but not used for anything else.

**runners:**

list of runners that should be run in parallel. Each element of the list has to be a dictionary. This dictionary's name entry stores the name of the runner function that shall be invoked. The optional kwarg entry stores a dictionary of named arguments that are passed to the runner function.

```
parallel-state:
  salt.parallel_runners:
    - runners:
      my_runner_1:
        - name: state.orchestrate
        - kwarg:
            mods: orchestrate_state_1
      my_runner_2:
        - name: state.orchestrate
        - kwarg:
            mods: orchestrate_state_2
```

`salt.states.saltmod.runner` (*name*, *\*\*kwargs*)

Execute a runner module on the master

New in version 2014.7.0.

**name**

The name of the function to run

**kwargs**

Any keyword arguments to pass to the runner function

```
run-manage-up:
  salt.runner:
    - name: manage.up
```

`salt.states.saltmod.state` (*name*, *tgt*, *ssh=False*, *tgt\_type='glob'*, *ret=""*, *ret\_config=None*, *ret\_kwargs=None*, *highstate=None*, *sls=None*, *top=None*, *saltenv=None*, *test=None*, *pillar=None*, *pillarenv=None*, *expect\_minions=True*, *exclude=None*, *fail\_minions=None*, *allow\_fail=0*, *concurrent=False*, *timeout=None*, *batch=None*, *queue=False*, *subset=None*, *orchestration\_jid=None*, *failhard=None*, *\*\*kwargs*)

Invoke a state run on a given target

**name**

An arbitrary name used to track the state execution

**tgt**

The target specification for the state run.

New in version 2016.11.0.

Masterless support: When running on a masterless minion, the `tgt` is ignored and will always be the local minion.

**tgt\_type**

The target type to resolve, defaults to `glob`

**ret**

Optionally set a single or a list of returners to use

**ret\_config**

Use an alternative returner configuration

**ret\_kwargs**

Override individual returner configuration items

**highstate**

Defaults to `None`, if set to `True` the target systems will ignore any `sls` references specified in the `sls` option and call `state.highstate` on the targeted minions

**top**

Should be the name of a top file. If set `state.top` is called with this top file instead of `state.sls`.

**sls**

A group of `sls` files to execute. This can be defined as a single string containing a single `sls` file, or a list of `sls` files

**test**

Pass `test=true` or `test=false` through to the state function. This can be used to override a test mode set in the minion's config file. If left as the default of `None` and the 'test' mode is supplied on the command line, that value is passed instead.

**pillar**

Pass the `pillar` kwarg through to the state function

**pillarenv**

The pillar environment to grab pillars from

New in version 2017.7.0.

**saltenv**

The default salt environment to pull `sls` files from

**ssh**

Set to `True` to use the `ssh` client instead of the standard salt client

**roster**

In the event of using `salt-ssh`, a roster system can be set

**expect\_minions**

An optional boolean for failing if some minions do not respond

**fail\_minions**

An optional list of targeted minions where failure is an option

**allow\_fail**

Pass in the number of minions to allow for failure before setting the result of the execution to `False`

**exclude**

Pass `exclude` kwarg to `state`

**concurrent**

Allow multiple state runs to occur at once.

WARNING: This flag is potentially dangerous. It is designed for use when multiple state runs can safely be run at the same Do not use this flag for performance optimization.

**queue**

Pass `queue=true` through to the state function

**batch**

Execute the command *in batches*. E.g.: 10%.

New in version 2016.3.0.

**subset**

Number of minions from the targeted set to randomly use

New in version 2017.7.0.

**failhard**

pass `failhard` down to the executing state

New in version 2019.2.2.

Examples:

Run a list of `sls` files via `state.sls` on target minions:

**webservers:**

(continues on next page)

(continued from previous page)

```

salt.state:
- tgt: 'web*'
- sls:
  - apache
  - django
  - core
- saltenv: prod

```

Run sls file via `state.sls` on target minions with exclude:

```

docker:
  salt.state:
  - tgt: 'docker*'
  - sls: docker
  - exclude: docker.swarm
  - saltenv: prod

```

Run a full `state.highstate` on target mininons.

```

databases:
  salt.state:
  - tgt: role:database
  - tgt_type: grain
  - highstate: True

```

`salt.states.saltmod.wait_for_event` (*name*, *id\_list*, *event\_id='id'*, *timeout=300*, *node='master'*)

Watch Salt's event bus and block until a condition is met

New in version 2014.7.0.

**name**

An event tag to watch for; supports Reactor-style globbing.

**id\_list**

A list of event identifiers to watch for -- usually the minion ID. Each time an event tag is matched the event data is inspected for `event_id`, if found it is removed from `id_list`. When `id_list` is empty this function returns success.

**event\_id**

[id] The name of a key in the event data. Default is `id` for the minion ID, another common value is `name` for use with orchestrating salt-cloud events.

**timeout**

[300] The maximum time in seconds to wait before failing.

The following example blocks until all the listed minions complete a restart and reconnect to the Salt master:

```

reboot_all_minions:
  salt.function:
  - name: system.reboot
  - tgt: '*'

wait_for_reboots:
  salt.wait_for_event:
  - name: salt/minion/*/start
  - id_list:
    - jerry
    - stuart

```

(continues on next page)

(continued from previous page)

```

- dave
- phil
- kevin
- mike
- require:
- salt: reboot_all_minions

```

`salt.states.saltmod.wheel`(*name*, **\*\*kwargs**)

Execute a wheel module on the master

New in version 2014.7.0.

**name**

The name of the function to run

**kwargs**

Any keyword arguments to pass to the wheel function

```

accept_minion_key:
salt.wheel:
- name: key.accept
- match: frank

```

## 26.19.270 salt.states.saltutil

### Saltutil State

This state wraps the saltutil execution modules to make them easier to run from a states. Rather than needing to use `module.run` this state allows for improved change detection.

New in version 3000.

`salt.states.saltutil.sync_all`(*name*, **\*\*kwargs**)

Performs the same task as `saltutil.sync_all` module See *saltutil module for full list of options*

```

sync_everything:
saltutil.sync_all:
- refresh: True

```

`salt.states.saltutil.sync_beacons`(*name*, **\*\*kwargs**)

Performs the same task as `saltutil.sync_beacons` module See *saltutil module for full list of options*

```

sync_everything:
saltutil.sync_beacons:
- refresh: True

```

`salt.states.saltutil.sync_clouds`(*name*, **\*\*kwargs**)

Performs the same task as `saltutil.sync_clouds` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_clouds:
    - refresh: True

```

`salt.states.saltutil.sync_engines`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_engines` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_engines:
    - refresh: True

```

`salt.states.saltutil.sync_executors`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_executors` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_executors:
    - refresh: True

```

`salt.states.saltutil.sync_grains`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_grains` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_grains:
    - refresh: True

```

`salt.states.saltutil.sync_log_handlers`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_log_handlers` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_log_handlers:
    - refresh: True

```

`salt.states.saltutil.sync_matchers`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_matchers` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_matchers:
    - refresh: True

```

`salt.states.saltutil.sync_modules`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_modules` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_modules:
    - refresh: True

```

`salt.states.saltutil.sync_output(name, **kwargs)`

Performs the same task as `saltutil.sync_output` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_output:
    - refresh: True
```

`salt.states.saltutil.sync_outputters(name, **kwargs)`

Performs the same task as `saltutil.sync_outputters` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_outputters:
    - refresh: True
```

`salt.states.saltutil.sync_pillar(name, **kwargs)`

Performs the same task as `saltutil.sync_pillar` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_pillar:
    - refresh: True
```

`salt.states.saltutil.sync_proxymodules(name, **kwargs)`

Performs the same task as `saltutil.sync_proxymodules` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_proxymodules:
    - refresh: True
```

`salt.states.saltutil.sync_renderers(name, **kwargs)`

Performs the same task as `saltutil.sync_renderers` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_renderers:
    - refresh: True
```

`salt.states.saltutil.sync_returners(name, **kwargs)`

Performs the same task as `saltutil.sync_returners` module See *saltutil module for full list of options*

```
sync_everything:
  saltutil.sync_returners:
    - refresh: True
```

`salt.states.saltutil.sync_sdb(name, **kwargs)`

Performs the same task as `saltutil.sync_sdb` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_sdb:
    - refresh: True

```

`salt.states.saltutil.sync_serializers`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_serializers` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_serializers:
    - refresh: True

```

`salt.states.saltutil.sync_states`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_states` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_states:
    - refresh: True

```

`salt.states.saltutil.sync_thorium`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_thorium` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_thorium:
    - refresh: True

```

`salt.states.saltutil.sync_tops`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_tops` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_tops:
    - refresh: True

```

`salt.states.saltutil.sync_utils`(*name*, *\*\*kwargs*)

Performs the same task as `saltutil.sync_utils` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_utils:
    - refresh: True

```

`salt.states.saltutil.sync_wrapper`(*name*, *\*\*kwargs*)

New in version 3007.0.

Performs the same task as `saltutil.sync_wrapper` module See *saltutil module for full list of options*

```

sync_everything:
  saltutil.sync_wrapper:
    - refresh: True

```

## 26.19.271 salt.states.schedule

### Management of the Salt scheduler

```
job3:
  schedule.present:
    - function: test.ping
    - seconds: 3600
    - splay: 10
```

This will schedule the command: test.ping every 3600 seconds (every hour) splaying the time between 0 and 10 seconds

```
job2:
  schedule.present:
    - function: test.ping
    - seconds: 15
    - splay:
      start: 10
      end: 20
```

This will schedule the command: test.ping every 15 seconds splaying the time between 10 and 20 seconds

```
job1:
  schedule.present:
    - function: state.sls
    - job_args:
      - httpd
    - job_kwargs:
      test: True
    - when:
      - Monday 5:00pm
      - Tuesday 3:00pm
      - Wednesday 5:00pm
      - Thursday 3:00pm
      - Friday 5:00pm
```

This will schedule the command: state.sls httpd test=True at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Requires that python-dateutil is installed on the minion.

```
job1:
  schedule.present:
    - function: state.sls
    - job_args:
      - httpd
    - job_kwargs:
      test: True
    - cron: '* /5 * * * *'
```

Scheduled jobs can also be specified using the format used by cron. This will schedule the command: state.sls httpd test=True to run every 5 minutes. Requires that python-croniter is installed on the minion.

```
job1:
  schedule.present:
```

(continues on next page)

(continued from previous page)

```

- function: state.sls
- job_args:
  - httpd
- job_kwargs:
  test: True
- when:
  - Monday 5:00pm
  - Tuesday 3:00pm
  - Wednesday 5:00pm
  - Thursday 3:00pm
  - Friday 5:00pm
- returner: xmpp
- return_config: xmpp_state_run
- return_kwargs:
  recipient: user@domain.com

```

This will schedule the command: `state.sls httpd test=True` at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Using the `xmpp` returner to return the results of the scheduled job, with the alternative configuration options found in the `xmpp_state_run` section.

```

job1:
  schedule.present:
    - function: state.sls
    - job_args:
      - httpd
    - job_kwargs:
      test: True
    - hours: 1
    - skip_during_range:
      - start: 2pm
      - end: 3pm
    - run_after_skip_range: True

```

This will schedule the command: `state.sls httpd test=True` at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Requires that `python-dateutil` is installed on the minion.

`salt.states.schedule.absent` (*name*, *\*\*kwargs*)

Ensure a job is absent from the schedule

**name**

The unique name that is given to the scheduled job.

**persist**

Whether changes to the scheduled job should be saved, defaults to True.

When used with `absent` this will decide whether the scheduled job will be removed from the saved scheduled jobs and not be available when the Salt minion is restarted.

`salt.states.schedule.disabled` (*name*, *\*\*kwargs*)

Ensure a job is disabled in the schedule

**name**

The unique name that is given to the scheduled job.

**persist**

Whether changes to the scheduled job should be saved, defaults to True.

**offline**

Delete the scheduled job to the Salt minion when the Salt minion is not running.

`salt.states.schedule.enabled(name, **kwargs)`

Ensure a job is enabled in the schedule

**name**

The unique name that is given to the scheduled job.

**persist**

Whether changes to the scheduled job should be saved, defaults to True.

`salt.states.schedule.present(name, **kwargs)`

Ensure a job is present in the schedule

**name**

The unique name that is given to the scheduled job.

**seconds**

The scheduled job will be executed after the specified number of seconds have passed.

**minutes**

The scheduled job will be executed after the specified number of minutes have passed.

**hours**

The scheduled job will be executed after the specified number of hours have passed.

**days**

The scheduled job will be executed after the specified number of days have passed.

**when**

This will schedule the job at the specified time(s). The when parameter must be a single value or a dictionary with the date string(s) using the dateutil format. Requires python-dateutil.

**cron**

This will schedule the job at the specified time(s) using the crontab format. Requires python-croniter.

**run\_on\_start**

Whether the scheduled job will run when Salt minion starts, or the job will be skipped **once** and run at the next scheduled run. Value should be a boolean.

**function**

The function that should be executed by the scheduled job.

**job\_args**

The arguments that will be used by the scheduled job.

**job\_kwargs**

The keyword arguments that will be used by the scheduled job.

**maxrunning**

Ensure that there are no more than N copies of a particular job running.

**jid\_include**

Include the job into the job cache.

**splay**

The amount of time in seconds to splay a scheduled job. Can be specified as a single value in seconds or as a dictionary range with 'start' and 'end' values.

**range**

This will schedule the command within the range specified. The range parameter must be a dictionary with the date strings using the dateutil format. Requires python-dateutil.

**once**

This will schedule a job to run once on the specified date.

**once\_fmt**

The default date format is ISO 8601 but can be overridden by also specifying the `once_fmt` option.

**enabled**

Whether the scheduled job should be enabled or disabled. Value should be a boolean.

**return\_job**

Whether to return information to the Salt master upon job completion.

**metadata**

Using the metadata parameter special values can be associated with a scheduled job. These values are not used in the execution of the job, but can be used to search for specific jobs later if combined with

the `return_job` parameter. The metadata parameter must be specified as a dictionary, otherwise it will be ignored.

**returner**

The returner to use to return the results of the scheduled job.

**return\_config**

The alternative configuration to use for returner configuration options.

**return\_kwargs**

Any individual returner configuration items to override. Should be passed as a dictionary.

**persist**

Whether changes to the scheduled job should be saved, defaults to True.

**skip\_during\_range**

This will ensure that the scheduled command does not run within the range specified. The range parameter must be a dictionary with the date strings using the dateutil format. Requires python-dateutil.

**run\_after\_skip\_range**

Whether the scheduled job should run immediately after the `skip_during_range` time period ends.

**offline**

Add the scheduled job to the Salt minion when the Salt minion is not running.

New in version 3006.3.

## 26.19.272 salt.states.selinux

### Management of SELinux rules

If SELinux is available for the running system, the mode can be managed and booleans can be set.

**enforcing:**

`selinux.mode`

**samba\_create\_home\_dirs:****selinux.boolean:**

- **value:** True
- **persist:** True

**nginx:****selinux.module:**

- **enabled:** False

**Note:** Use of these states require that the `selinux` execution module is available.

`salt.states.selinux.boolean`(*name*, *value*, *persist=False*)

Set up an SELinux boolean

**name**

The name of the boolean to set

**value**

The value to set on the boolean

**persist**

Defaults to False, set persist to true to make the boolean apply on a reboot

`salt.states.selinux.fcontext_policy_absent`(*name*, *filetype='a'*, *sel\_type=None*, *sel\_user=None*, *sel\_level=None*)

New in version 2017.7.0.

Makes sure an SELinux file context policy for a given filespec (name), filetype and SELinux context type is absent.

**name**

filespec of the file or directory. Regex syntax is allowed.

**filetype**

The SELinux filetype specification. Use one of [a, f, d, c, b, s, l, p]. See also *man semanage-fcontext*. Defaults to 'a' (all files).

**sel\_type**

The SELinux context type. There are many.

**sel\_user**

The SELinux user.

**sel\_level**

The SELinux MLS range.

`salt.states.selinux.fcontext_policy_applied(name, recursive=False)`

New in version 2017.7.0.

Checks and makes sure the SELinux policies for a given filespec are applied.

`salt.states.selinux.fcontext_policy_present(name, sel_type, filetype='a', sel_user=None, sel_level=None)`

New in version 2017.7.0.

Makes sure a SELinux policy for a given filespec (name), filetype and SELinux context type is present.

**name**

filespec of the file or directory. Regex syntax is allowed.

**sel\_type**

SELinux context type. There are many.

**filetype**

The SELinux filetype specification. Use one of [a, f, d, c, b, s, l, p]. See also *man semanage-fcontext*. Defaults to 'a' (all files).

**sel\_user**

The SELinux user.

**sel\_level**

The SELinux MLS range.

`salt.states.selinux.mode(name)`

Verifies the mode SELinux is running in, can be set to enforcing, permissive, or disabled

---

**Note:** A change to or from disabled mode requires a system reboot. You will need to perform this yourself.

---

**name**

The mode to run SELinux in, permissive, enforcing, or disabled.

`salt.states.selinux.module(name, module_state='Enabled', version='any', **opts)`

Enable/Disable and optionally force a specific version for an SELinux module

**name**

The name of the module to control

**module\_state**

Should the module be enabled or disabled?

**version**

Defaults to no preference, set to a specified value if required. Currently can only alert if the version is incorrect.

**install**

Setting to True installs module

**source**  
Points to module source file, used only when install is True

**remove**  
Setting to True removes module  
New in version 2016.3.0.

`salt.states.selinux.module_install(name)`

Installs custom SELinux module from given file

**name**  
Path to file with module to install  
New in version 2016.11.6.

`salt.states.selinux.module_remove(name)`

Removes SELinux module

**name**  
The name of the module to remove  
New in version 2016.11.6.

`salt.states.selinux.port_policy_absent(name, sel_type=None, protocol=None, port=None)`

New in version 2019.2.0.

Makes sure an SELinux port policy for a given port, protocol and SELinux context type is absent.

**name**  
The protocol and port spec. Can be formatted as (tcp|udp)/(port|port-range).

**sel\_type**  
The SELinux Type. Optional; can be used in determining if policy is present, ignored by `semanage port --delete`.

**protocol**  
The protocol for the port, tcp or udp. Required if name is not formatted.

**port**  
The port or port range. Required if name is not formatted.

`salt.states.selinux.port_policy_present(name, sel_type, protocol=None, port=None, sel_range=None)`

New in version 2019.2.0.

Makes sure an SELinux port policy for a given port, protocol and SELinux context type is present.

**name**  
The protocol and port spec. Can be formatted as (tcp|udp)/(port|port-range).

**sel\_type**  
The SELinux Type.

**protocol**  
The protocol for the port, tcp or udp. Required if name is not formatted.

**port**  
The port or port range. Required if name is not formatted.

**sel\_range**  
The SELinux MLS/MCS Security Range.

## 26.19.273 salt.states.serverdensity\_device

### Monitor Server with Server Density

New in version 2014.7.0.

Server Density Is a hosted monitoring service.

**Warning:** This state module is beta. It might be changed later to include more or less automation.

---

**Note:** This state module requires a pillar for authentication with Server Density To install a v1 agent:

```
serverdensity:
  api_token: "b97da80a41c4f61bff05975ee51eb1aa"
  account_url: "https://your-account.serverdensity.io"
```

To install a v2 agent:

```
serverdensity:
  api_token: "b97da80a41c4f61bff05975ee51eb1aa"
  account_name: "your-account"
```

---

**Note:** Although Server Density allows duplicate device names in its database, this module will raise an exception if you try monitoring devices with the same name.

---

Example:

```
'server_name':
  serverdensity_device.monitored
```

```
salt.states.serverdensity_device.monitored(name, group=None, salt_name=True,
   salt_params=True, agent_version=1, **params)
```

Device is monitored with Server Density.

**name**

Device name in Server Density.

**salt\_name**

If True (default), takes the name from the `id` grain. If False, the provided name is used.

**group**

Group name under with device will appear in Server Density dashboard. Default - *None*.

**agent\_version**

The agent version you want to use. Valid values are 1 or 2. Default - 1.

**salt\_params**

If True (default), needed config parameters will be sourced from grains and from `status.all_status`.

**params**

Add parameters that you want to appear in the Server Density dashboard. Will overwrite the `salt_params` parameters. For more info, see the [API docs](#).

Usage example:

```
'server_name':
  serverdensity_device.monitored
```

```
'server_name':
  serverdensity_device.monitored:
    - group: web-servers
```

```
'my_special_server':
  serverdensity_device.monitored:
    - salt_name: False
    - group: web-servers
    - cpuCores: 2
    - os: '{"code": "linux", "name": "Linux"}'
```

### 26.19.274 salt.states.service

#### Starting or restarting of services and daemons

Services are defined as system daemons and are typically launched using system init or rc scripts. This service state uses whichever service module is loaded on the minion with the virtualname of `service`. Services can be defined as either running or dead.

If you need to know if your init system is supported, see the list of supported `service` modules for your desired init system (systemd, sysvinit, launchctl, etc.).

Note that Salt's service execution module, and therefore this service state, uses OS grains to ascertain which service module should be loaded and used to execute service functions. As existing distributions change init systems or new distributions are created, OS detection can sometimes be incomplete. If your service states are running into trouble with init system detection, please see the *Overriding Virtual Module Providers* section of Salt's module documentation to work around possible errors.

For services managed by systemd, the `systemd_service` module includes a built-in feature to reload the daemon when unit files are changed or extended. This feature is used automatically by the service state and the `systemd_service` module when running on a systemd minion, so there is no need to set up your own methods of reloading the daemon. If you need to manually reload the daemon for some reason, you can use the `systemd_service.systemctl_reload` function provided by Salt.

---

**Note:** The current status of a service is determined by the return code of the init/rc script status command. A status return code of 0 it is considered running. Any other return code is considered dead.

---

```
httpd:
  service.running: []
```

The service can also be set to start at runtime via the `enable` option:

```
openvpn:
  service.running:
    - enable: True
```

By default if a service is triggered to refresh due to a watch statement the service is restarted. If the desired behavior is to reload the service, then set the `reload` value to `True`:

```
redis:
  service.running:
    - enable: True
    - reload: True
    - watch:
      - pkg: redis
```

---

**Note:** More details regarding `watch` can be found in the [Requisites](#) documentation.

---

`salt.states.service.dead`(*name*, *enable=None*, *sig=None*, *init\_delay=None*, *\*\*kwargs*)

Ensure that the named service is dead by stopping the service if it is running

**name**

The name of the init or rc script used to manage the service

**enable**

Set the service to be enabled at boot time, `True` sets the service to be enabled, `False` sets the named service to be disabled. The default is `None`, which does not enable or disable anything.

**sig**

The string to search for when looking for the service process with `ps`

**init\_delay**

Add a sleep command (in seconds) before the check to make sure service is killed.

New in version 2017.7.0.

**no\_block**

[False] **For systemd minions only.** Stops the service using `--no-block`.

New in version 2017.7.0.

**timeout**

**For Windows minions only.**

The time in seconds to wait for the service to stop before returning. Default is the default for [win\\_service.stop](#).

New in version 2017.7.9,2018.3.4.

`salt.states.service.disabled`(*name*, *\*\*kwargs*)

Ensure that the service is disabled on boot, only use this state if you don't want to manage the running process, remember that if you want to disable a service to use the `enable: False` option for the running or dead function.

**name**

The name of the init or rc script used to manage the service

`salt.states.service.enabled`(*name*, *\*\*kwargs*)

Ensure that the service is enabled on boot, only use this state if you don't want to manage the running process, remember that if you want to enable a running service to use the `enable: True` option for the running or dead function.

**name**

The name of the init or rc script used to manage the service

`salt.states.service.masked`(*name*, *runtime=False*)

New in version 2017.7.0.

---

**Note:** This state is only available on minions which use `systemd`.

---

Ensures that the named service is masked (i.e. prevented from being started).

**name**

Name of the service to mask

**runtime**

[False] By default, this state will manage an indefinite mask for the named service. Set this argument to True to runtime mask the service.

**Note:** It is possible for a service to have both indefinite and runtime masks set for it. Therefore, this state will manage a runtime or indefinite mask independently of each other. This means that if the service is already indefinitely masked, running this state with `runtime` set to True will *not* remove the indefinite mask before setting a runtime mask. In these cases, if it is desirable to ensure that the service is runtime masked and not indefinitely masked, pair this state with a `service.unmasked` state, like so:

```
mask_runtime_foo:
  service.masked:
    - name: foo
    - runtime: True

unmask_indefinite_foo:
  service.unmasked:
    - name: foo
    - runtime: False
```

`salt.states.service.mod_beacon`(*name*, *\*\*kwargs*)

Create a beacon to monitor a service based on a beacon state argument.

**Note:** This state exists to support special handling of the `beacon` state argument for supported state functions. It should not be called directly.

`salt.states.service.mod_watch`(*name*, *sfun=None*, *sig=None*, *reload=False*, *full\_restart=False*, *init\_delay=None*, *force=False*, *\*\*kwargs*)

The service watcher, called to invoke the watch command. When called, it will restart or reload the named service.

**Note:** This state exists to support special handling of the `watch requisite`. It should not be called directly.

Parameters for this function should be set by the watching service (e.g. `service.running`).

**name**

The name of the service to control.

**sfun**

The original function which triggered the `mod_watch` call (*service.running*, for example).

**sig**

The string to search for when looking for the service process with `ps`.

**reload**

When set, reload the service instead of restarting it (e.g. `service nginx reload`).

**full\_restart**

Perform a full stop/start of a service by passing `--full-restart`. This option is ignored if `reload` is set and is supported by only a few *service modules*.

**force**

Use `service.force_reload` instead of `reload` (needs `reload` to be set to True).

**init\_delay**

Add a sleep command (in seconds) before the service is restarted/reloaded.

`salt.states.service.running(name, enable=None, sig=None, init_delay=None, **kwargs)`

Ensure that the service is running

**name**

The name of the init or rc script used to manage the service

**enable**

Set the service to be enabled at boot time, `True` sets the service to be enabled, `False` sets the named service to be disabled. The default is `None`, which does not enable or disable anything.

**sig**

The string to search for when looking for the service process with `ps`

**init\_delay**

Some services may not be truly available for a short period after their startup script indicates to the system that they are. Provide an 'init\_delay' to specify that this state should wait an additional given number of seconds after a service has started before returning. Useful for requisite states wherein a dependent state might assume a service has started but is not yet fully initialized.

**no\_block**

[False] **For systemd minions only.** Starts the service using `--no-block`.

New in version 2017.7.0.

**timeout**

**For Windows minions only.**

The time in seconds to wait for the service to start before returning. Default is the default for `win_service.start`.

New in version 2017.7.9,2018.3.4.

**unmask**

[False] **For systemd minions only.** Set to `True` to remove an indefinite mask before attempting to start the service.

New in version 2017.7.0: In previous releases, Salt would simply unmask a service before making any changes. This behavior is no longer the default.

**unmask\_runtime**

[False] **For systemd minions only.** Set to `True` to remove a runtime mask before attempting to start the service.

New in version 2017.7.0: In previous releases, Salt would simply unmask a service before making any changes. This behavior is no longer the default.

**wait**

[3] **For systemd minions only.** Passed through when using `service.status` to determine whether the service is running or not.

New in version 2019.2.3.

---

**Note:**

**watch** can be used with `service.running` to restart a service when

another state changes ( example: a `file.managed` state that creates the service's config file ). More details regarding `watch` can be found in the [Requisites](#) documentation.

---

`salt.states.service.unmasked(name, runtime=False)`

New in version 2017.7.0.

---

**Note:** This state is only available on minions which use `systemd`.

---

Ensures that the named service is unmasked

**name**

Name of the service to unmask

**runtime**

[False] By default, this state will manage an indefinite mask for the named service. Set this argument to True to ensure that the service is runtime masked.

---

**Note:** It is possible for a service to have both indefinite and runtime masks set for it. Therefore, this state will manage a runtime or indefinite mask independently of each other. This means that if the service is indefinitely masked, running this state with `runtime` set to True will *not* remove the indefinite mask.

---

## 26.19.275 salt.states.slack

### Send a message to Slack

This state is useful for sending messages to Slack during state runs.

New in version 2015.5.0.

```
slack-message:
  slack.post_message:
    - channel: '#general'
    - from_name: SuperAdmin
    - message: 'This state was executed successfully.'
    - api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

The api key can be specified in the master or minion configuration like below:

```
slack:
  api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

`salt.states.slack.post_message(name, **kwargs)`

Send a message to a Slack channel.

```
slack-message:
  slack.post_message:
    - channel: '#general'
    - from_name: SuperAdmin
    - message: 'This state was executed successfully.'
    - api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

The following parameters are required:

**api\_key** parameters:

**name**

The unique name for this event.

**channel**

The channel to send the message to. Can either be the ID or the name.

**from\_name**

The name of that is to be shown in the "from" field.

**message**

The message that is to be sent to the Slack channel.

The following parameters are optional:

- api\_key**  
The api key for Slack to use for authentication, if not specified in the configuration options of master or minion.
- icon**  
URL to an image to use as the icon for this message
- webhook parameters:**
  - name**  
The unique name for this event.
  - message**  
The message that is to be sent to the Slack channel.
  - color**  
The color of border of left side
  - short**  
An optional flag indicating whether the value is short enough to be displayed side-by-side with other values.
  - webhook**  
The identifier of WebHook (URL or token).
  - channel**  
The channel to use instead of the WebHook default.
  - username**  
Username to use instead of WebHook default.
  - icon\_emoji**  
Icon to use instead of WebHook default.

### 26.19.276 salt.states.smartos

Management of SmartOS Standalone Compute Nodes

```

```

cleanup_images:
  smartos.image_vacuum

```

---

**Note:** Keep in mind that when removing properties from `vmconfig` they will not get removed from the vm's current configuration, except for `nics`, `disk`, `tags`, ... they get removed via `add_*`, `set_*`, `update_*`, and `remove_*`. Properties must be manually reset to their default value. The same behavior as when using `'vmadm update'`.

---

**Warning:** For HVM (bhyve and KVM) brands the `image_uuid` field should go on the boot disks, this disk should NOT have a size specified. (See `man vmadm`)

`salt.states.smartos.config_absent`(*name*)

Ensure configuration property is absent in `/usbkey/config`

**name**

[string] name of property

`salt.states.smartos.config_present`(*name*, *value*)

Ensure configuration property is set to value in `/usbkey/config`

**name**

[string] name of property

**value**

[string] value of property

`salt.states.smartos.image_absent`(*name*)

Ensure image is absent on the computenode

**name**  
[string] uuid of image

---

**Note:** computenode.image\_absent will only remove the image if it is not used by a vm.

---

`salt.states.smartos.image_present(name)`

Ensure image is present on the computenode

**name**  
[string] uuid of image

`salt.states.smartos.image_vacuum(name)`

Delete images not in use or installed via image\_present

**Warning:** Only image\_present states that are included via the top file will be detected.

`salt.states.smartos.source_absent(name)`

Ensure an image source is absent on the computenode

**name**  
[string] source url

`salt.states.smartos.source_present(name, source_type='imgapi')`

Ensure an image source is present on the computenode

**name**  
[string] source url  
**source\_type**  
[string] source type (imgapi or docker)

`salt.states.smartos.vm_absent(name, archive=False)`

Ensure vm is absent on the computenode

**name**  
[string] hostname of vm  
**archive**  
[boolean] toggle archiving of vm on removal

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

`salt.states.smartos.vm_present(name, vmconfig, config=None)`

Ensure vm is present on the computenode

**name**  
[string] hostname of vm  
**vmconfig**  
[dict] options to set for the vm  
**config**  
[dict] fine grain control over vm\_present

---

**Note:**

The following configuration properties can be toggled in the config parameter.

- `kvm_reboot` (true) - reboots of kvm zones if needed for a config update
- `auto_import` (false) - automatic importing of missing images
- `auto_lx_vars` (true) - copy kernel\_version and docker:\* variables from image
- `reprovision` (false) - reprovision on image\_uuid changes
- `enforce_tags` (true) - false = add tags only, true = add, update, and remove tags

- `enforce_routes` (true) - false = add tags only, true = add, update, and remove routes
  - `enforce_internal_metadata` (true) - false = add metadata only, true = add, update, and remove metadata
  - `enforce_customer_metadata` (true) - false = add metadata only, true = add, update, and remove metadata
- 

**Note:** State ID is used as hostname. Hostnames must be unique.

---

**Note:** If hostname is provided in `vmconfig` this will take president over the State ID. This allows multiple states to be applied to the same vm.

---

**Note:**

The following instances should have a unique ID.

- `nic` : mac
- `filesystem`: target
- `disk` : path or diskN for zvols

e.g. `disk0` will be the first disk added, `disk1` the 2nd,...

---

Changed in version 2019.2.0: Added support for docker image uuids, added `auto_lx_vars` configuration, documented some missing configuration options.

`salt.states.smartos.vm_running(name)`

Ensure vm is in the running state on the computenode

**name**

[string] hostname of vm

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

`salt.states.smartos.vm_stopped(name)`

Ensure vm is in the stopped state on the computenode

**name**

[string] hostname of vm

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

## 26.19.277 salt.states.smtp

### Sending Messages via SMTP

New in version 2014.7.0.

This state is useful for firing messages during state runs, using the SMTP protocol

```
server-warning-message:
  smtp.send_msg:
    - name: 'This is a server warning message'
```

(continues on next page)

(continued from previous page)

- **profile:** my-smtp-account
- **recipient:** admins@example.com

```
salt.states.smtp.send_msg(name, recipient, subject, sender=None, profile=None, use_ssl='True',
                        attachments=None)
```

Send a message via SMTP

```
server-warning-message:
  smtp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-smtp-account
    - subject: 'Message from Salt'
    - recipient: admin@example.com
    - sender: admin@example.com
    - use_ssl: True
    - attachments:
      - /var/log/syslog
      - /var/log/messages
```

**name**

The message to send via SMTP

## 26.19.278 salt.states.snapper

### Managing implicit state and baselines using snapshots

New in version 2016.11.0.

Salt can manage state against explicitly defined state, for example if your minion state is defined by:

```
/etc/config_file:
  file.managed:
    - source: salt://configs/myconfig
```

If someone modifies this file, the next application of the highstate will allow the admin to correct this deviation and the file will be corrected.

Now, what happens if somebody creates a file `/etc/new_config_file` and deletes `/etc/important_config_file`? Unless you have a explicit rule, this change will go unnoticed.

The snapper state module allows you to manage state implicitly, in addition to explicit rules, in order to define a baseline and iterate with explicit rules as they show that they work in production.

The workflow is: once you have a working and audited system, you would create your baseline snapshot (eg. with `salt tgt snapper.create_snapshot`) and define in your state this baseline using the identifier of the snapshot (in this case: 20):

```
my_baseline:
  snapper.baseline_snapshot:
    - number: 20
    - include_diff: False
    - ignore:
      - /var/log
      - /var/cache
```

Baseline snapshots can be also referenced by tag. Most recent baseline snapshot is used in case of multiple snapshots with the same tag:

```
my_baseline_external_storage:
  snapper.baseline_snapshot:
    - tag: my_custom_baseline_tag
    - config: external
    - ignore: - /mnt/tmp_files/
```

If you have this state, and you haven't done changes to the system since the snapshot, and you add a user, the state will show you the changes (including full diffs) to `/etc/passwd`, `/etc/shadow`, etc if you call it with `test=True` and will undo all changes if you call it without.

This allows you to add more explicit state knowing that you are starting from a very well defined state, and that you can audit any change that is not part of your explicit configuration.

So after you made this your state, you decided to introduce a change in your configuration:

```
my_baseline:
  snapper.baseline_snapshot:
    - number: 20
    - ignore:
      - /var/log
      - /var/cache

hosts_entry:
  file.blockreplace:
    - name: /etc/hosts
    - content: 'First line of content'
    - append_if_not_found: True
```

The change in `/etc/hosts` will be done after any other change that deviates from the specified snapshot are reverted. This could be for example, modifications to the `/etc/passwd` file or changes in the `/etc/hosts` that could render your the `hosts_entry` rule void or dangerous.

Once you take a new snapshot and you update the baseline snapshot number to include the change in `/etc/hosts` the `hosts_entry` rule will basically do nothing. You are free to leave it there for documentation, to ensure that the change is made in case the snapshot is wrong, but if you remove anything that comes after the `snapper.baseline_snapshot` as it will have no effect; by the moment the state is evaluated, the baseline state was already applied and include this change.

**Warning:** Make sure you specify the baseline state before other rules, otherwise the baseline state will revert all changes if they are not present in the snapshot.

**Warning:** Do not specify more than one baseline rule as only the last one will affect the result.

**codeauthor**

Duncan Mac-Vicar P. <dmacvicar@suse.de>

**codeauthor**

Pablo Suárez Hernández <psuarezhernandez@suse.de>

**maturity**  
new

**platform**  
Linux

`salt.states.snapper.baseline_snapshot` (*name*, *number=None*, *tag=None*, *include\_diff=True*,  
*config='root'*, *ignore=None*)

Enforces that no file is modified comparing against a previously defined snapshot identified by number.

**number**  
Number of selected baseline snapshot.

**tag**  
Tag of the selected baseline snapshot. Most recent baseline snapshot is used in case of multiple snapshots with the same tag. (*tag* and *number* cannot be used at the same time)

**include\_diff**  
Include a diff in the response (Default: True)

**config**  
Snapper config name (Default: root)

**ignore**  
List of files to ignore. (Default: None)

### 26.19.279 salt.states.solrcloud

States for solrcloud alias and collection configuration

New in version 2017.7.0.

`salt.states.solrcloud.alias` (*name*, *collections*, *\*\*kwargs*)

Create alias and enforce collection list.

Use the solrcloud module to get alias members and set them.

You can pass additional arguments that will be forwarded to http.query

**name**  
The collection name

**collections**  
list of collections to include in the alias

`salt.states.solrcloud.collection` (*name*, *options=None*, *\*\*kwargs*)

Create collection and enforce options.

Use the solrcloud module to get collection parameters.

You can pass additional arguments that will be forwarded to http.query

**name**  
The collection name

**options**  
[{}] options to ensure

## 26.19.280 salt.states.splunk

Splunk User State Module

New in version 2016.3.0.

This state is used to ensure presence of users in splunk.

```
ensure example test user 1:
  splunk.present:
    - name: 'Example TestUser1'
    - email: example@domain.com
```

`salt.states.splunk.absent` (*email*, *profile='splunk'*, *\*\*kwargs*)

Ensure a splunk user is absent

```
ensure example test user 1:
  splunk.absent:
    - email: 'example@domain.com'
    - name: 'exampleuser'
```

The following parameters are required:

**email**

This is the email of the user in splunk

**name**

This is the splunk username used to identify the user.

`salt.states.splunk.present` (*email*, *profile='splunk'*, *\*\*kwargs*)

Ensure a user is present

```
ensure example test user 1:
  splunk.user_present:
    - realname: 'Example TestUser1'
    - name: 'exampleuser'
    - email: 'example@domain.com'
    - roles: ['user']
```

The following parameters are required:

**email**

This is the email of the user in splunk

## 26.19.281 salt.states.splunk\_search

Splunk Search State Module

New in version 2015.5.0.

This state is used to ensure presence of splunk searches.

```
server-warning-message:
  splunk_search.present:
    - name: This is the splunk search name
    - search: index=main sourcetype=
```

`salt.states.splunk_search.absent` (*name*, *profile='splunk'*)

Ensure a search is absent

**API Error Search:**  
`splunk_search.absent`

The following parameters are required:

**name**

This is the name of the search in splunk

`salt.states.splunk_search.present` (*name*, *profile='splunk'*, *\*\*kwargs*)

Ensure a search is present

**API Error Search:**  
**splunk\_search.present:**  
**search:** index=main sourcetype=blah  
**template:** alert\_5min

The following parameters are required:

**name**

This is the name of the search in splunk

### 26.19.282 salt.states.sqlite3

#### Management of SQLite3 databases

New in version 2016.3.0.

**depends**

- SQLite3 Python Module

**configuration**

See `salt.modules.sqlite3` for setup instructions

The `sqlite3` module is used to create and manage `sqlite3` databases and execute queries

Here is an example of creating a table using `sql` statements:

```
users:
  sqlite3.table_present:
    - db: /var/www/data/app.sqlite
    - schema: CREATE TABLE `users` (`username` TEXT COLLATE NOCASE UNIQUE NOT NULL,
      ↪ `password` BLOB NOT NULL, `salt` BLOB NOT NULL, `last_login` INT)
```

Here is an example of creating a table using `yaml/jinja` instead of `sql`:

```
users:
  sqlite3.table_present:
    - db: /var/www/app.sqlite
    - schema:
      - email TEXT COLLATE NOCASE UNIQUE NOT NULL
      - firstname TEXT NOT NULL
      - lastname TEXT NOT NULL
      - company TEXT NOT NULL
```

(continues on next page)

(continued from previous page)

- password BLOB NOT NULL
- salt BLOB NOT NULL

Here is an example of making sure a table is absent:

```

badservers:
  sqlite3.table_absent:
    - db: /var/www/data/users.sqlite
  
```

Sometimes you would to have specific data in tables to be used by other services Here is an example of making sure rows with specific data exist:

```

user_john_doe_xyz:
  sqlite3.row_present:
    - db: /var/www/app.sqlite
    - table: users
    - where_sql: email='john.doe@companyxyz.com'
    - data:
      email: john.doe@companyxyz.com
      lastname: doe
      firstname: john
      company: companyxyz.com
      password: abcdef012934125
      salt: abcdef012934125
    - require:
      - sqlite3: users
  
```

Here is an example of removing a row from a table:

```

user_john_doe_abc:
  sqlite3.row_absent:
    - db: /var/www/app.sqlite
    - table: users
    - where_sql: email="john.doe@companyabc.com"
    - require:
      - sqlite3: users
  
```

Note that there is no explicit state to perform random queries, however, this can be approximated with sqlite3's module functions and module.run:

```

zone-delete:
  module.run:
    - name: sqlite3.modify
    - db: {{ db }}
    - sql: "DELETE FROM records WHERE id > {{ count[0] }} AND domain_id = {{
↪domain_id }}"
    - watch:
      - sqlite3: zone-insert-12
  
```

`salt.states.sqlite3.row_absent` (*name*, *db*, *table*, *where\_sql*, *where\_args=None*)

Makes sure the specified row is absent in db. If multiple rows match *where\_sql*, then the state will fail.

**name**

Only used as the unique ID

**db**  
The database file name

**table**  
The table name to check

**where\_sql**  
The sql to select the row to check

**where\_args**  
The list parameters to substitute in where\_sql

`salt.states.sqlite3.row_present`(*name, db, table, data, where\_sql, where\_args=None, update=False*)

Checks to make sure the given row exists. If row exists and update is True then row will be updated with data. Otherwise it will leave existing row unmodified and check it against data. If the existing data doesn't match data\_check the state will fail. If the row doesn't exist then it will insert data into the table. If more than one row matches, then the state will fail.

**name**  
Only used as the unique ID

**db**  
The database file name

**table**  
The table name to check the data

**data**  
The dictionary of key/value pairs to check against if row exists, insert into the table if it doesn't

**where\_sql**  
The sql to select the row to check

**where\_args**  
The list parameters to substitute in where\_sql

**update**  
True will replace the existing row with data When False and the row exists and data does not equal the row data then the state will fail

`salt.states.sqlite3.table_absent`(*name, db*)

Make sure the specified table does not exist

**name**  
The name of the table

**db**  
The name of the database file

`salt.states.sqlite3.table_present`(*name, db, schema, force=False*)

Make sure the specified table exists with the specified schema

**name**  
The name of the table

**db**  
The name of the database file

**schema**  
The dictionary containing the schema information

**force**  
If the name of the table exists and force is set to False, the state will fail. If force is set to True, the existing table will be replaced with the new table

## 26.19.283 salt.states.ssh\_auth

## Control of entries in SSH authorized\_key files

The information stored in a user's SSH authorized key file can be easily controlled via the `ssh_auth` state. Defaults can be set by the `enc`, `options`, and `comment` keys. These defaults can be overridden by including them in the name.

Since the YAML specification limits the length of simple keys to 1024 characters, and since SSH keys are often longer than that, you may have to use a YAML 'explicit key', as demonstrated in the second example below.

```

AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY== :
  ssh_auth.present:
    - user: root
    - enc: ssh-dss

? AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==...
:
  ssh_auth.present:
    - user: root
    - enc: ssh-dss

thatch:
  ssh_auth.present:
    - user: root
    - source: salt://ssh_keys/thatch.id_rsa.pub
    - config: '%h/.ssh/authorized_keys'

sshkeys:
  ssh_auth.present:
    - user: root
    - enc: ssh-rsa
    - options:
      - option1="value1"
      - option2="value2 flag2"
    - comment: myuser
    - names:
      - AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==
      - ssh-dss AAAAB3NzaCL0sQ9fJ5bYTEyY== user@domain
      - option3="value3" ssh-dss AAAAB3NzaC1kcQ9J5bYTEyY== other@testdomain
      - AAAAB3NzaC1kcQ9fJFF435bYTEyY== newcomment

sshkeys:
  ssh_auth.manage:
    - user: root
    - enc: ssh-rsa
    - options:
      - option1="value1"
      - option2="value2 flag2"
    - comment: myuser
    - ssh_keys:
      - AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==
      - ssh-dss AAAAB3NzaCL0sQ9fJ5bYTEyY== user@domain
      - option3="value3" ssh-dss AAAAB3NzaC1kcQ9J5bYTEyY== other@testdomain
      - AAAAB3NzaC1kcQ9fJFF435bYTEyY== newcomment

```

`salt.states.ssh_auth.absent` (*name, user, enc='ssh-rsa', comment="", source="", options=None, config='.ssh/authorized\_keys', fingerprint\_hash\_type=None*)

Verifies that the specified SSH key is absent

**name**

The SSH key to manage

**user**

The user who owns the SSH authorized keys file to modify

**enc**

Defines what type of key is being used, can be ed25519, ecdsa, ssh-rsa, ssh-dss or any other type as of openssh server version 8.7.

**comment**

The comment to be placed with the SSH public key

**options**

The options passed to the key, pass a list object

**source**

The source file for the key(s). Can contain any number of public keys, in standard "authorized\_keys" format. If this is set, comment, enc and options will be ignored.

New in version 2015.8.0.

**config**

The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/authorized\_keys". Token expansion %u and %h for username and home path supported.

**fingerprint\_hash\_type**

The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to sha256 if not specified.

New in version 2016.11.7.

`salt.states.ssh_auth.manage` (*name, ssh\_keys, user, enc='ssh-rsa', comment="", source="", options=None, config='.ssh/authorized\_keys', fingerprint\_hash\_type=None, \*\*kwargs*)

New in version 3000.

Ensures that only the specified ssh\_keys are present for the specified user

**ssh\_keys**

The SSH key to manage

**user**

The user who owns the SSH authorized keys file to modify

**enc**

Defines what type of key is being used, can be ed25519, ecdsa, ssh-rsa, ssh-dss or any other type as of openssh server version 8.7.

**comment**

The comment to be placed with the SSH public key

**source**

The source file for the key(s). Can contain any number of public keys, in standard "authorized\_keys" format. If this is set, comment and enc will be ignored.

---

**Note:** The source file must contain keys in the format `<enc> <key> <comment>`. If you have generated a keypair using PuTTYgen, then you will need to do the following to retrieve an OpenSSH-compatible public key.

1. In PuTTYgen, click Load, and select the *private* key file (not the public key), and click Open.
  2. Copy the public key from the box labeled Public key for pasting into OpenSSH authorized\_keys file.
  3. Paste it into a new file.
- 

**options**

The options passed to the keys, pass a list object

**config**

The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/authorized\_keys". Token expansion %u and %h for username and home path supported.

**fingerprint\_hash\_type**

The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to sha256 if not specified.

```
salt.states.ssh_auth.present(name, user, enc='ssh-rsa', comment="", source="", options=None,
                             config='.ssh/authorized_keys', fingerprint_hash_type=None, **kwargs)
```

Verifies that the specified SSH key is present for the specified user

**name**

The SSH key to manage

**user**

The user who owns the SSH authorized keys file to modify

**enc**

Defines what type of key is being used, can be ed25519, ecdsa, ssh-rsa, ssh-dss or any other type as of openssh server version 8.7.

**comment**

The comment to be placed with the SSH public key

**source**

The source file for the key(s). Can contain any number of public keys, in standard "authorized\_keys" format. If this is set, comment and enc will be ignored.

---

**Note:** The source file must contain keys in the format <enc> <key> <comment>. If you have generated a keypair using PuTTYgen, then you will need to do the following to retrieve an OpenSSH-compatible public key.

1. In PuTTYgen, click **Load**, and select the *private* key file (not the public key), and click **Open**.
  2. Copy the public key from the box labeled **Public key for pasting into OpenSSH authorized\_keys file**.
  3. Paste it into a new file.
- 

**options**

The options passed to the key, pass a list object

**config**

The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/authorized\_keys". Token expansion %u and %h for username and home path supported.

**fingerprint\_hash\_type**

The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to sha256 if not specified.

## 26.19.284 salt.states.ssh\_known\_hosts

### Control of SSH known\_hosts entries

Manage the information stored in the known\_hosts files.

**github.com:****ssh\_known\_hosts:**

- present
- **user:** root
- **fingerprint:** 16:27:ac:a5:76:28:2d:36:63:1b:56:4d:eb:df:a6:48

(continues on next page)

(continued from previous page)

- **fingerprint\_hash\_type**: md5

**example.com:****ssh\_known\_hosts:**

- absent
- **user**: root

`salt.states.ssh_known_hosts.absent` (*name, user=None, config=None*)

Verifies that the specified host is not known by the given user

**name**

The host name Note that only single host names are supported. If foo.example.com and bar.example.com are the same machine and you need to exclude both, you will need one Salt state for each.

**user**

The user who owns the ssh authorized keys file to modify

**config**

The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/known\_hosts". If no user is specified, defaults to "/etc/ssh/ssh\_known\_hosts". If present, must be an absolute path when a user is not specified.

`salt.states.ssh_known_hosts.present` (*name, user=None, fingerprint=None, key=None, port=None, enc=None, config=None, hash\_known\_hosts=True, timeout=5, fingerprint\_hash\_type=None*)

Verifies that the specified host is known by the specified user

On many systems, specifically those running with openssh 4 or older, the enc option must be set, only openssh 5 and above can detect the key type.

**name**

The name of the remote host (e.g. "github.com") Note that only a single hostname is supported, if foo.example.com and bar.example.com have the same host you will need two separate Salt States to represent them.

**user**

The user who owns the ssh authorized keys file to modify

**fingerprint**

The fingerprint of the key which must be present in the known\_hosts file (optional if key specified)

**key**

The public key which must be present in the known\_hosts file (optional if fingerprint specified)

**port**

optional parameter, port which will be used to when requesting the public key from the remote host, defaults to port 22.

**enc**

Defines what type of key is being used, can be ed25519, ecdsa, ssh-rsa, ssh-dss or any other type as of openssh server version 8.7.

**config**

The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/known\_hosts". If no user is specified, defaults to "/etc/ssh/ssh\_known\_hosts". If present, must be an absolute path when a user is not specified.

**hash\_known\_hosts**

[True] Hash all hostnames and addresses in the known hosts file.

**timeout**

[int] Set the timeout for connection attempts. If `timeout` seconds have elapsed since a connection was initiated to a host or since the last time anything was read from that host, then the connection is closed and the host in question considered unavailable. Default is 5 seconds.

New in version 2016.3.0.

**fingerprint\_hash\_type**

The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to sha256 if not specified.

New in version 2016.11.4.

Changed in version 2017.7.0: default changed from md5 to sha256

## 26.19.285 salt.states.stateconf

### Stateconf System

The stateconf system is intended for use only with the stateconf renderer. This State module presents the set function. This function does not execute any functionality, but is used to interact with the stateconf renderer.

`salt.states.stateconf.context(name, **kwargs)`

No-op state to support state config via the stateconf renderer.

`salt.states.stateconf.set(name, **kwargs)`

No-op state to support state config via the stateconf renderer.

## 26.19.286 salt.states.status

Minion status monitoring

Maps to the *status* execution module.

`salt.states.status.loadavg(name, maximum=None, minimum=None)`

Return the current load average for the specified minion. Available values for name are *1-min*, *5-min* and *15-min*. *minimum* and *maximum* values should be passed in as strings.

`salt.states.status.process(name)`

Return whether the specified signature is found in the process tree. This differs slightly from the services states, in that it may refer to a process that is not managed via the init system.

## 26.19.287 salt.states.statuspage

### StatusPage

Manage the `StatusPage` configuration.

In the minion configuration file, the following block is required:

```
statuspage:
  api_key: <API_KEY>
  page_id: <PAGE_ID>
```

New in version 2017.7.0.

`salt.states.statuspage.create(name, endpoint='incidents', api_url=None, page_id=None, api_key=None, api_version=None, **kwargs)`

Insert a new entry under a specific endpoint.

**endpoint:** `incidents`

Insert under this specific endpoint.

**page\_id**

Page ID. Can also be specified in the config file.

**api\_key**

API key. Can also be specified in the config file.

**api\_version: 1**

API version. Can also be specified in the config file.

**api\_url**

Custom API URL in case the user has a StatusPage service running in a custom environment.

**kwargs**

Other params.

SLS Example:

```
create-my-component:
  statuspage.create:
    - endpoint: components
    - name: my component
    - group_id: 993vgplshj12
```

`salt.states.statuspage.delete` (*name, endpoint='incidents', id=None, api\_url=None, page\_id=None, api\_key=None, api\_version=None*)

Remove an entry from an endpoint.

**endpoint: incidents**

Request a specific endpoint.

**page\_id**

Page ID. Can also be specified in the config file.

**api\_key**

API key. Can also be specified in the config file.

**api\_version: 1**

API version. Can also be specified in the config file.

**api\_url**

Custom API URL in case the user has a StatusPage service running in a custom environment.

SLS Example:

```
delete-my-component:
  statuspage.delete:
    - endpoint: components
    - id: ftgks51sfs2d
```

`salt.states.statuspage.managed` (*name, config, api\_url=None, page\_id=None, api\_key=None, api\_version=None, pace=1, allow\_empty=False*)

Manage the StatusPage configuration.

**config**

Dictionary with the expected configuration of the StatusPage. The main level keys of this dictionary represent the endpoint name. If a certain endpoint does not exist in this structure, it will be ignored / not configured.

**page\_id**

Page ID. Can also be specified in the config file.

**api\_key**

API key. Can also be specified in the config file.

**api\_version: 1**

API version. Can also be specified in the config file.

**api\_url**

Custom API URL in case the user has a StatusPage service running in a custom environment.

**pace: 1**

Max requests per second allowed by the API.

**allow\_empty:** False

Allow empty config.

SLS example:

```

my-statuspage-config:
  statuspage.managed:
    - config:
      components:
        - name: component1
          group_id: uy4g37rf
        - name: component2
          group_id: 3n4uyu4gf
      incidents:
        - name: incident1
          status: resolved
          impact: major
          backfilled: false
        - name: incident2
          status: investigating
          impact: minor

```

`salt.states.statuspage.update` (*name*, *endpoint='incidents'*, *id=None*, *api\_url=None*, *page\_id=None*, *api\_key=None*, *api\_version=None*, *\*\*kwargs*)

Update attribute(s) of a specific endpoint.

**id**

The unique ID of the endpoint entry.

**endpoint:** incidents

Endpoint name.

**page\_id**

Page ID. Can also be specified in the config file.

**api\_key**

API key. Can also be specified in the config file.

**api\_version:** 1

API version. Can also be specified in the config file.

**api\_url**

Custom API URL in case the user has a StatusPage service running in a custom environment.

SLS Example:

```

update-my-incident:
  statuspage.update:
    - id: dz959yz2nd4l
    - status: resolved

```

## 26.19.288 salt.states.supervisord

### Interaction with the Supervisor daemon

```
wsgi_server:
  supervisord.running:
    - require:
      - pkg: supervisor
    - watch:
      - file: /etc/nginx/sites-enabled/wsgi_server.conf
```

`salt.states.supervisord.dead`(*name*, *user=None*, *conf\_file=None*, *bin\_env=None*, *\*\*kwargs*)

Ensure the named service is dead (not running).

**name**

Service name as defined in the supervisor configuration file

**user**

Name of the user to run the supervisorctl command

New in version 0.17.0.

**conf\_file**

path to supervisorctl config file

**bin\_env**

path to supervisorctl bin or path to virtualenv with supervisor installed

`salt.states.supervisord.mod_watch`(*name*, *restart=True*, *update=False*, *user=None*, *conf\_file=None*, *bin\_env=None*, *\*\*kwargs*)

The supervisord watcher, called to invoke the watch command. Always restart on watch

---

**Note:** This state exists to support special handling of the `watch` *requisite*. It should not be called directly.

Parameters for this function should be set by the state being triggered.

---

`salt.states.supervisord.running`(*name*, *restart=False*, *update=False*, *user=None*, *conf\_file=None*, *bin\_env=None*, *\*\*kwargs*)

Ensure the named service is running.

**name**

Service name as defined in the supervisor configuration file

**restart**

Whether to force a restart

**update**

Whether to update the supervisor configuration.

**user**

Name of the user to run the supervisorctl command

New in version 0.17.0.

**conf\_file**

path to supervisorctl config file

**bin\_env**

path to supervisorctl bin or path to virtualenv with supervisor installed

## 26.19.289 salt.states.svn

### Manage SVN repositories

Manage repository checkouts via the svn vcs system. Note that subversion must be installed for these states to be available, so svn states should include a requisite to a pkg.installed state for the package which provides subversion (subversion in most cases). Example:

```

subversion:
  pkg.installed

http://unladen-swallow.googlecode.com/svn/trunk/:
  svn.latest:
    - target: /tmp/swallow

```

**salt.states.svn.dirty** (*name, target, user=None, username=None, password=None, ignore\_unversioned=False*)

Determine if the working directory has been changed.

**salt.states.svn.export** (*name, target=None, rev=None, user=None, username=None, password=None, force=False, overwrite=False, externals=True, trust=False, trust\_failures=None*)

Export a file or directory from an SVN repository

**name**

Address and path to the file or directory to be exported.

**target**

Name of the target directory where the checkout will put the working directory

**rev**

[None] The name revision number to checkout. Enable "force" if the directory already exists.

**user**

[None] Name of the user performing repository management operations

**username**

[None] The user to access the name repository with. The svn default is the current user

**password**

Connect to the Subversion server with this password

New in version 0.17.0.

**force**

[False] Continue if conflicts are encountered

**overwrite**

[False] Overwrite existing target

**externals**

[True] Change to False to not checkout or update externals

**trust**

[False] Automatically trust the remote server. SVN's --trust-server-cert

**trust\_failures**

[None] Comma-separated list of certificate trust failures, that shall be ignored. This can be used if trust=True is not sufficient. The specified string is passed to SVN's --trust-server-cert-failures option as-is.

New in version 2019.2.0.

**salt.states.svn.latest** (*name, target=None, rev=None, user=None, username=None, password=None, force=False, externals=True, trust=False, trust\_failures=None*)

Checkout or update the working directory to the latest revision from the remote repository.

**name**  
Address of the name repository as passed to "svn checkout"

**target**  
Name of the target directory where the checkout will put the working directory

**rev**  
[None] The name revision number to checkout. Enable "force" if the directory already exists.

**user**  
[None] Name of the user performing repository management operations

**username**  
[None] The user to access the name repository with. The svn default is the current user

**password**  
Connect to the Subversion server with this password  
  
New in version 0.17.0.

**force**  
[False] Continue if conflicts are encountered

**externals**  
[True] Change to False to not checkout or update externals

**trust**  
[False] Automatically trust the remote server. SVN's --trust-server-cert

**trust\_failures**  
[None] Comma-separated list of certificate trust failures, that shall be ignored. This can be used if trust=True is not sufficient. The specified string is passed to SVN's --trust-server-cert-failures option as-is.  
  
New in version 2019.2.0.

## 26.19.290 salt.states.sysctl

### Configuration of the kernel using sysctl

Control the kernel sysctl system.

```
vm.swappiness:
  sysctl.present:
    - value: 20
```

**salt.states.sysctl.present**(*name, value, config=None*)

Ensure that the named sysctl value is set in memory and persisted to the named configuration file. The default sysctl configuration file is /etc/sysctl.conf

**name**

The name of the sysctl value to edit

**value**

The sysctl value to apply. Make sure to set the value to the correct expected output for systctl or reading the respective /proc/sys file. For example, instead of adding the value *1,2,3* you might need to write *1-3*. If you do not set the correct value, Salt will continue to return with changes.

**config**

The location of the sysctl configuration file. If not specified, the proper location will be detected based on platform.

## 26.19.291 salt.states.sysfs

### Configuration of the kernel using sysfs

Control the kernel object attributes exported by sysfs

```
kernel/mm/transparent_hugepage/enabled
sysfs.present:
  - value: never
```

New in version 3006.0.

`salt.states.sysfs.present` (*name*, *value*, *config=None*)

Ensure that the named sysfs attribute is set with the defined value

**name**

The name of the sysfs attribute to edit

**value**

The sysfs value to apply

## 26.19.292 salt.states.syslog\_ng

### State module for syslog\_ng

**maintainer**

Tibor Benke <btibi@sch.bme.hu>

**maturity**

new

**depends**

cmd, ps, syslog\_ng

**platform**

all

Users can generate syslog-ng configuration files from YAML format or use plain ones and reload, start, or stop their syslog-ng by using this module.

### Details

The service module is not available on all system, so this module includes `syslog_ng.reloaded`, `syslog_ng.stopped`, and `syslog_ng.started` functions. If the service module is available on the computers, users should use that.

Users can generate syslog-ng configuration with `syslog_ng.config` function. For more information see `syslog-ng state usage`.

## Syslog-ng configuration file format

The syntax of a configuration snippet in `syslog-ng.conf`:

```
object_type object_id {<options>;
```

These constructions are also called statements. There are options inside of them:

```
option(parameter1, parameter2); option2(parameter1, parameter2);
```

You can find more information about syslog-ng's configuration syntax in the Syslog-ng Admin guide: <http://www.balabit.com/sites/default/files/documents/syslog-ng-ose-3.5-guides/en/syslog-ng-ose-v3.5-guide-admin/html-single/index.html#syslog-ng.conf.5>

`salt.states.syslog_ng.config`(*name*, *config*, *write=True*)

Builds syslog-ng configuration.

*name* : the id of the Salt document *config* : the parsed YAML code *write* : if True, it writes the config into the configuration file, otherwise just returns it

`salt.states.syslog_ng.reloaded`(*name*)

Reloads syslog-ng.

`salt.states.syslog_ng.started`(*name=None*, *user=None*, *group=None*, *chroot=None*, *caps=None*, *no\_caps=False*, *pidfile=None*, *enable\_core=False*, *fd\_limit=None*, *verbose=False*, *debug=False*, *trace=False*, *yydebug=False*, *persist\_file=None*, *control=None*, *worker\_threads=None*, *\*args*, *\*\*kwargs*)

Ensures, that syslog-ng is started via the given parameters.

Users shouldn't use this function, if the service module is available on their system.

`salt.states.syslog_ng.stopped`(*name=None*)

Kills syslog-ng.

### 26.19.293 salt.states.sysrc

State to work with sysrc

`salt.states.sysrc.absent`(*name*, *\*\*kwargs*)

Ensure a sysrc variable is absent.

**name**

The variable name to set

**file**

(optional) The rc file to add the variable to.

**jail**

(option) the name or JID of the jail to set the value in.

`salt.states.sysrc.managed`(*name*, *value*, *\*\*kwargs*)

Ensure a sysrc variable is set to a specific value.

**name**

The variable name to set

**value**

Value to set the variable to

**file**

(optional) The rc file to add the variable to.

`jail`

(option) the name or JID of the jail to set the value in.

Example:

```
syslogd:
  sysrc.managed:
    - name: syslogd_flags
    - value: -ss
```

## 26.19.294 salt.states.telemetry\_alert

### Manage Telemetry alert configurations

New in version 2016.3.0.

Create, Update and destroy Mongo Telemetry alert configurations.

This module uses requests, which can be installed via package, or pip.

This module accepts explicit credential (telemetry api key) or can also read api key credentials from a pillar. Example:

```
ensure telemetry alert X is defined on deployment Y:
  telemetry_alert.present:
    - deployment_id: "rs-XXXXXX"
    - metric_name: "testMetric"
    - alert_config:
      max: 1
      filter: SERVER_ROLE_MONGOD_PRIMARY
      escalate_to: "example@pagerduty.com"
    - name: "**MANAGED BY ORCA DO NOT EDIT BY HAND** manages alarm on
↳testMetric"
```

`salt.states.telemetry_alert.absent` (*name, deployment\_id, metric\_name, api\_key=None, profile='telemetry'*)

Ensure the telemetry alert config is deleted

**name**

An optional description of the alarms (not currently supported by telemetry API)

**deployment\_id**

Specifies the ID of the root deployment resource (replica set cluster or sharded cluster) to which this alert definition is attached

**metric\_name**

Specifies the unique ID of the metric to whose values these thresholds will be applied

**api\_key**

Telemetry api key for the user

**profile**

A dict with telemetry config data. If present, will be used instead of `api_key`.

`salt.states.telemetry_alert.present` (*name, deployment\_id, metric\_name, alert\_config, api\_key=None, profile='telemetry'*)

Ensure the telemetry alert exists.

**name**

An optional description of the alarm (not currently supported by telemetry API)

**deployment\_id**

Specifies the ID of the root deployment resource (replica set cluster or sharded cluster) to which this alert definition is attached

**metric\_name**

Specifies the unique ID of the metric to whose values these thresholds will be applied

**alert\_config:** Is a list of dictionaries where each dict contains the following fields:

**filter**

By default the alert will apply to the deployment and all its constituent resources. If the alert only applies to a subset of those resources, a filter may be specified to narrow this scope.

**min**

the smallest "ok" value the metric may take on; if missing or null, no minimum is enforced.

**max**

the largest "ok" value the metric may take on; if missing or null, no maximum is enforced.

**notify\_all**

Used to indicate if you want to alert both onCallEngineer and apiNotifications

**api\_key**

Telemetry api key for the user

**profile**

A dict of telemetry config information. If present, will be used instead of api\_key.

## 26.19.295 salt.states.test

### Test States

Provide test case states that enable easy testing of things to do with state calls, e.g. running, calling, logging, output filtering etc.

```

always-passes-with-any-kwarg:
  test.nop:
    - name: foo
    - something: else
    - foo: bar

always-passes:
  test.succeed_without_changes:
    - name: foo

always-fails:
  test.fail_without_changes:
    - name: foo

always-changes-and-succeeds:
  test.succeed_with_changes:
    - name: foo

always-changes-and-fails:
  test.fail_with_changes:
    - name: foo

my-custom-combo:
  test.configurable_test_state:
    - name: foo

```

(continues on next page)

(continued from previous page)

- **changes:** True
- **result:** False
- **comment:** bar.baz
- **warnings:** A warning

```
is-pillar-foo-present-and-bar-is-int:
  test.check_pillar:
    - present:
      - foo
    - integer:
      - bar
```

You may also use these states for controlled failure in state definitions, for example if certain conditions in pillar or grains do not apply. The following state definition will fail with a message "OS not supported!" when `grains['os']` is neither Ubuntu nor CentOS:

```
{% if grains['os'] in ['Ubuntu', 'CentOS'] %}

# Your state definitions go here

{% else %}
failure:
  test.fail_without_changes:
    - name: "OS not supported!"
    - failhard: True
{% endif %}
```

`salt.states.test.check_pillar` (*name*, *present=None*, *boolean=None*, *integer=None*, *string=None*, *listing=None*, *dictionary=None*, *verbose=False*)

Checks the presence and, optionally, the type of given keys in Pillar

Supported kwargs for types are: - boolean (bool) - integer (int) - string (str) - listing (list) - dictionary (dict)

Checking for None type pillars is not implemented yet.

```
is-pillar-foo-present-and-bar-is-int:
  test.check_pillar:
    - present:
      - foo
    - integer:
      - bar
```

`salt.states.test.configurable_test_state` (*name*, *changes=True*, *result=True*, *comment=""*, *warnings=None*, *allow\_test\_mode\_failure=False*)

New in version 2014.7.0.

A configurable test state which allows for more control over the return data

**name**

A unique string to serve as the state's ID

**changes**

[True] Controls whether or not the state reports that there were changes. There are three supported values for this argument:

- If `True`, the state will report changes
- If `False`, the state will report no changes

- If "Random", the state will randomly report either changes or no changes.

**result**

[True] Controls the result for for the state. Like `changes`, there are three supported values for this argument:

- If `True`, the state will report a `True` result
- If `False`, the state will report a `False` result
- If "Random", the state will randomly report either `True`

---

**Note:** The result will be reported as `None` if *all* of the following are true:

1. The state is being run in test mode (i.e. `test=True` on the CLI)
  2. `result` is `True` (either explicitly, or via being set to "Random")
  3. `changes` is `True` (either explicitly, or via being set to "Random")
- 

**comment**

[`""`] Comment field field for the state. By default, this is an empty string.

**warnings**

A string (or a list of strings) to fill the warnings field with. Default is `None`

New in version 3000.

**allow\_test\_mode\_failure**

When `False`, running this state in test mode can only return a `True` or `None` result. When set to `True` and result is set to `False`, the test mode result will be `False`. Default is `False`

New in version 3007.0.

`salt.states.test.fail_with_changes(name, **kwargs)`

New in version 2014.7.0.

Returns `False` with an non-empty changes dictionary. Useful for testing requisites.

**name**

A unique string to serve as the state's ID

`salt.states.test.fail_without_changes(name, **kwargs)`

New in version 2014.7.0.

Returns failure

**name**

A unique string to serve as the state's ID

`salt.states.test.mod_watch(name, sfun=None, **kwargs)`

Call this function via a watch statement

New in version 2014.7.0.

Any parameters in the state return dictionary can be customized by adding the keywords `result`, `comment`, and `changes`.

```

this_state_will_return_changes:
  test.succeed_with_changes

this_state_will_NOT_return_changes:
  test.succeed_without_changes

this_state_is_watching_another_state:
  test.succeed_without_changes:
  - comment: 'This is a custom comment'
  - watch:

```

(continues on next page)

(continued from previous page)

```

- test: this_state_will_return_changes
- test: this_state_will_NOT_return_changes

this_state_is_also_watching_another_state:
  test.succeed_without_changes:
    - watch:
      - test: this_state_will_NOT_return_changes

```

`salt.states.test.nop`(*name*, *\*\*kwargs*)

New in version 2015.8.1.

A no-op state that does nothing. Useful in conjunction with the use requisite, or in templates which could otherwise be empty due to jinja rendering.

**name**

A unique string to serve as the state's ID

`salt.states.test.show_notification`(*name*, *text=None*, *\*\*kwargs*)

New in version 2015.8.0.

Simple notification using text argument.

**name**

A unique string to serve as the state's ID

**text**

Text to return in the comment field

`salt.states.test.succeed_with_changes`(*name*, *\*\*kwargs*)

New in version 2014.7.0.

Returns True with a non-empty changes dictionary. Useful for testing requisites.

**name**

A unique string to serve as the state's ID

`salt.states.test.succeed_without_changes`(*name*, *\*\*kwargs*)

New in version 2014.7.0.

Returns successful

**name**

A unique string to serve as the state's ID

## 26.19.296 salt.states.testinframod

`salt.states.testinframod.camel_to_snake_case`(*camel\_input*)

Converts camelCase (or CamelCase) to snake\_case. From <https://codereview.stackexchange.com/questions/185966/functions-to-convert-camelcase-strings-to-snake-case>

**Parameters**

**camel\_input** (*str*) -- The camelcase or CamelCase string to convert to snake\_case

:return str

## 26.19.297 salt.states.timezone

### Management of timezones

The timezone can be managed for the system:

```
America/Denver:
  timezone.system
```

The system and the hardware clock are not necessarily set to the same time. By default, the hardware clock is set to localtime, meaning it is set to the same time as the system clock. If *utc* is set to True, then the hardware clock will be set to UTC, and the system clock will be an offset of that.

```
America/Denver:
timezone.system:
  - utc: True
```

The Ubuntu community documentation contains an explanation of this setting, as it applies to systems that dual-boot with Windows. This is explained in greater detail [here](#).

`salt.states.timezone.system`(*name*, *utc=True*)

Set the timezone for the system.

**name**

The name of the timezone to use (e.g.: America/Denver)

**utc**

Whether or not to set the hardware clock to UTC (default is True)

## 26.19.298 salt.states.tls

### Enforce state for SSL/TLS

`salt.states.tls.valid_certificate`(*name*, *weeks=0*, *days=0*, *hours=0*, *minutes=0*, *seconds=0*)

Verify that a TLS certificate is valid now and (optionally) will be valid for the time specified through weeks, days, hours, minutes, and seconds.

## 26.19.299 salt.states.tomcat

### Manage Apache Tomcat web applications

---

**Note:** This state requires the Tomcat Manager webapp to be installed and running.

---

The following grains/pillars must be set for communication with Tomcat Manager to work:

```
tomcat-manager:
  user: 'tomcat-manager'
  passwd: 'Passw0rd'
```

## Configuring Tomcat Manager

To manage webapps via the Tomcat Manager, you'll need to configure a valid user in the file `conf/tomcat-users.xml`.

Listing 1: `conf/tomcat-users.xml`

```
<?xml version='1.0' encoding='utf-8'?>
<tomcat-users>
  <role rolename="manager-script"/>
  <user username="tomcat-manager" password="Passw0rd" roles="manager-script
↪"/>
</tomcat-users>
```

### Notes

- Using multiple versions (aka. parallel deployments) on the same context path is not supported.
- More information about the Tomcat Manager: <http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html>
- If you use only this module for deployments you might want to restrict access to the manager so it's only accessible via localhost. For more info: [http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html#Configuring\\_Manager\\_Application\\_Access](http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html#Configuring_Manager_Application_Access)
- Last tested on:

**Tomcat Version:**

Apache Tomcat/7.0.54

**JVM Vendor:**

Oracle Corporation

**JVM Version:**

1.8.0\_101-b13

**OS Architecture:**

amd64

**OS Name:**

Linux

**OS Version:**

3.10.0-327.22.2.el7.x86\_64

`salt.states.tomcat.mod_watch` (*name*, *url*='http://localhost:8080/manager', *timeout*=180)

The tomcat watcher, called to invoke the watch command. When called, it will reload the webapp in question

---

**Note:** This state exists to support special handling of the `watch` *requisite*. It should not be called directly.

Parameters for this function should be set by the state being triggered.

---

`salt.states.tomcat.undeployed` (*name*, *url*='http://localhost:8080/manager', *timeout*=180)

Enforce that the WAR will be undeployed from the server

**name**

The context path to undeploy.

**url**

[http://localhost:8080/manager] The URL of the server with the Tomcat Manager webapp.

**timeout**

[180] Timeout for HTTP request to the Tomcat Manager.

Example:

```
jenkins:
  tomcat.undeployed:
    - name: /ran
    - require:
      - service: application-service
```

`salt.states.tomcat.wait`(*name*, *url*='http://localhost:8080/manager', *timeout*=180)

Wait for the Tomcat Manager to load.

Notice that if tomcat is not running we won't wait for it start and the state will fail. This state can be required in the tomcat.war\_deployed state to make sure tomcat is running and that the manager is running as well and ready for deployment.

**url**

[http://localhost:8080/manager] The URL of the server with the Tomcat Manager webapp.

**timeout**

[180] Timeout for HTTP request to the Tomcat Manager.

Example:

```
tomcat-service:
  service.running:
    - name: tomcat
    - enable: True

wait-for-tomcatmanager:
  tomcat.wait:
    - timeout: 300
    - require:
      - service: tomcat-service

jenkins:
  tomcat.war_deployed:
    - name: /ran
    - war: salt://jenkins-1.2.4.war
    - require:
      - tomcat: wait-for-tomcatmanager
```

`salt.states.tomcat.war_deployed`(*name*, *war*, *force*=False, *url*='http://localhost:8080/manager', *timeout*=180, *temp\_war\_location*=None, *version*=True)

Enforce that the WAR will be deployed and started in the context path, while making use of WAR versions in the filename.

---

**Note:** For more info about Tomcats file paths and context naming, please see <http://tomcat.apache.org/tomcat-7.0-doc/config/context.html#Naming>

---

**name**

The context path to deploy (incl. forward slash) the WAR to.

**war**

Absolute path to WAR file (should be accessible by the user running Tomcat) or a path supported by the `salt.modules.cp.get_url` function.

**force**

[False] Force deployment even if the version strings are the same. Disabled by default.

**url**

[<http://localhost:8080/manager>] The URL of the Tomcat Web Application Manager.

**timeout**

[180] Timeout for HTTP requests to the Tomcat Manager.

**temp\_war\_location**

[None] Use another location to temporarily copy the WAR file to. By default the system's temp directory is used.

**version**

['] Specify the WAR version. If this argument is provided, it overrides the version encoded in the WAR file name, if one is present.

New in version 2015.8.6.

Use `False` or blank value to prevent guessing the version and keeping it blank.

New in version 2016.11.0.

Example:

```
jenkins:
  tomcat.war_deployed:
    - name: /salt-powered-jenkins
    - war: salt://jenkins-1.2.4.war
    - require:
      - service: application-service
```

---

**Note:** Be aware that in the above example the WAR `jenkins-1.2.4.war` will be deployed to the context path `salt-powered-jenkins##1.2.4`. To avoid this either specify a version yourself, or set `version` to `False`.

---

### 26.19.300 salt.states.trafficserver

#### Control Apache Traffic Server

New in version 2015.8.0.

`salt.states.trafficserver.bounce_cluster` (*name*)

Bounce all Traffic Server nodes in the cluster. Bouncing Traffic Server shuts down and immediately restarts Traffic Server, node-by-node.

```
bounce_ats_cluster:
  trafficserver.bounce_cluster
```

`salt.states.trafficserver.bounce_local` (*name*, *drain=False*)

Bounce Traffic Server on the local node. Bouncing Traffic Server shuts down and immediately restarts the Traffic Server node.

This option modifies the behavior of `traffic_line -b` and `traffic_line -L` such that `traffic_server` is not shut down until the number of active client connections drops to the number given by the `proxy.config.restart.active_client_threshold` configuration variable.

```
bounce_ats_local:
  trafficserver.bounce_local
```

```
bounce_ats_local:
  trafficserver.bounce_local
  - drain: True
```

`salt.states.trafficserver.clear_cluster(name)`

Clears accumulated statistics on all nodes in the cluster.

```
clear_ats_cluster:
  trafficserver.clear_cluster
```

`salt.states.trafficserver.clear_node(name)`

Clears accumulated statistics on the local node.

```
clear_ats_node:
  trafficserver.clear_node
```

`salt.states.trafficserver.config(name, value)`

Set Traffic Server configuration variable values.

```
proxy.config.proxy_name:
  trafficserver.config:
    - value: cdn.site.domain.tld
```

OR

```
traffic_server_setting:
  trafficserver.config:
    - name: proxy.config.proxy_name
    - value: cdn.site.domain.tld
```

`salt.states.trafficserver.offline(name, path)`

Mark a cache storage device as offline. The storage is identified by a path which must match exactly a path specified in `storage.config`. This removes the storage from the cache and redirects requests that would have used this storage to other storage. This has exactly the same effect as a disk failure for that storage. This does not persist across restarts of the `traffic_server` process.

```
offline_ats_path:
  trafficserver.offline:
    - path: /path/to/cache
```

`salt.states.trafficserver.refresh(name)`

Initiate a Traffic Server configuration file reread. Use this command to update the running configuration after any configuration file modification.

The timestamp of the last reconfiguration event (in seconds since epoch) is published in the `proxy.node.config.reconfigure_time` metric.

```
refresh_ats:
  trafficserver.refresh
```

`salt.states.trafficserver.restart_cluster(name)`

Restart the `traffic_manager` process and the `traffic_server` process on all the nodes in a cluster.

```
restart_ats_cluster:
  trafficserver.restart_cluster
```

`salt.states.trafficserver.restart_local(name, drain=False)`

Restart the `traffic_manager` and `traffic_server` processes on the local node.

This option modifies the behavior of `traffic_line -b` and `traffic_line -L` such that `traffic_server` is not shut down until the number of active client connections drops to the number given by the `proxy.config.restart.active_client_threshold` configuration variable.

```
restart_ats_local:
  trafficserver.restart_local

restart_ats_local_drain:
  trafficserver.restart_local
  - drain: True
```

`salt.states.trafficserver.shutdown(name)`

Shut down Traffic Server on the local node.

```
shutdown_ats:
  trafficserver.shutdown
```

`salt.states.trafficserver.startup(name)`

Start Traffic Server on the local node.

```
startup_ats:
  trafficserver.startup
```

`salt.states.trafficserver.zero_cluster(name)`

Reset performance statistics to zero across the cluster.

```
zero_ats_cluster:
  trafficserver.zero_cluster
```

`salt.states.trafficserver.zero_node(name)`

Reset performance statistics to zero on the local node.

```
zero_ats_node:
  trafficserver.zero_node
```

### 26.19.301 salt.states.tuned

Interface to Red Hat `tuned-adm` module

**maintainer**  
Syed Ali <[alicsyed@gmail.com](mailto:alicsyed@gmail.com)>

**maturity**  
new

**depends**  
cmd.run

**platform**  
Linux

`salt.states.tuned.off`(*name=None*)

Turns 'tuned' off. Example tuned.sls file for turning tuned off:

```
tuned:
  tuned.off: []
```

To see a valid list of states call execution module:

*tuned.list*

`salt.states.tuned.profile`(*name*)

This state module allows you to modify system tuned parameters

Example tuned.sls file to set profile to virtual-guest

```
tuned:
  tuned.profile
    • name: virtual-guest
```

**name**  
tuned profile name to set the system to

To see a valid list of states call execution module:

*tuned.list*

### 26.19.302 salt.states.uptime

#### Monitor Web Server with Uptime

Uptime is an open source remote monitoring application using Node.js, MongoDB, and Twitter Bootstrap.

**Warning:** This state module is beta. It might be changed later to include more or less automation.

**Note:** This state module requires a pillar to specify the location of your uptime install

```
uptime:
  application_url: "http://uptime-url.example.org"
```

Example:

```
url:
  uptime.monitored
url/sitemap.xml:
  uptime.monitored:
    - polling: 600 # every hour
```

`salt.states.uptime.monitored`(*name, \*\*params*)

Makes sure an URL is monitored by uptime. Checks if URL is already monitored, and if not, adds it.

## 26.19.303 salt.states.user

## Management of user accounts.

The user module is used to create and manage user settings, users can be set as either absent or present

```
fred:
  user.present:
    - fullname: Fred Jones
    - shell: /bin/zsh
    - home: /home/fred
    - uid: 4000
    - gid: 4000
    - groups:
      - wheel
      - storage
      - games

testuser:
  user.absent
```

**salt.states.user.absent** (*name, purge=False, force=False, local=False*)

Ensure that the named user is absent

**name**

The name of the user to remove

**purge**

Set purge to True to delete all of the user's files as well as the user, Default is False.

**force**

If the user is logged in, the absent state will fail. Set the force option to True to remove the user even if they are logged in. Not supported in FreeBSD and Solaris, Default is False.

**local (Only on systems with luserdel available):**

Ensure the user account is removed locally ignoring global account management (default is False).

New in version 3007.0.

**salt.states.user.present** (*name, uid=None, gid=None, usergroup=None, groups=None, optional\_groups=None, remove\_groups=True, home=None, createhome=True, password=None, hash\_password=False, enforce\_password=True, empty\_password=False, shell=None, unique=True, system=False, fullname=None, roomnumber=None, workphone=None, homephone=None, other=None, loginclass=None, date=None, mindays=None, maxdays=None, inactdays=None, warndays=None, expire=None, win\_homedrive=None, win\_profile=None, win\_logonscript=None, win\_description=None, nologinit=False, allow\_uid\_change=False, allow\_gid\_change=False, password\_lock=None, local=False*)

Ensure that the named user is present with the specified properties

**name**

The name of the user to manage

**uid**

The user id to assign. If not specified, and the user does not exist, then the next available uid will be assigned.

**gid**

The id of the default group to assign to the user. Either a group name or gid can be used. If not specified, and the user does not exist, then the next available gid will be assigned.

**allow\_uid\_change**

[False] Set to `True` to allow the state to update the uid.

New in version 2018.3.1.

**allow\_gid\_change**

[False] Set to `True` to allow the state to update the gid.

New in version 2018.3.1.

**usergroup**

If `True`, a group with the same name as the user will be created. If `False`, a group with the same name as the user will not be created. The default is distribution-specific. See the `USERGROUPS_ENAB` section of the `login.defs(5)` man page.

---

**Note:** Only supported on GNU/Linux distributions

---

New in version 3001.

**groups**

A list of groups to assign the user to, pass a list object. If a group specified here does not exist on the minion, the state will fail. If set to the empty list, the user will be removed from all groups except the default group. If unset, salt will assume current groups are still wanted, and will make no changes to them.

**optional\_groups**

A list of groups to assign the user to, pass a list object. If a group specified here does not exist on the minion, the state will silently ignore it.

**NOTE:** If the same group is specified in both "groups" and "optional\_groups", then it will be assumed to be required and not optional.

**remove\_groups**

Remove groups that the user is a member of that weren't specified in the state, Default is `True`.

**home**

The custom login directory of user. Uses default value of underlying system if not set. Notice that this directory does not have to exist. This also the location of the home directory to create if `createhome` is set to `True`.

**createhome**

[True] If set to `False`, the home directory will not be created if it doesn't already exist.

**Warning:** Not supported on Windows or Mac OS.

Additionally, parent directories will *not* be created. The parent directory for `home` must already exist.

**nologinit**

[False] If set to `True`, it will not add the user to lastlog and faillog databases.

---

**Note:** Not supported on Windows.

---

**password**

A password hash to set for the user. This field is only supported on Linux, FreeBSD, NetBSD, OpenBSD, and Solaris. If the `empty_password` argument is set to `True` then `password` is ignored. For Windows this is the plain text password. For Linux, the hash can be generated with `mkpasswd -m sha-256`.

Changed in version 0.16.0: BSD support added.

**hash\_password**

Set to `True` to hash the clear text password. Default is `False`.

**enforce\_password**

Set to `False` to keep the password from being changed if it has already been set and the password hash differs from what is specified in the "password" field. This option will be ignored if "password" is not specified, Default is `True`.

**empty\_password**

Set to `True` to enable password-less login for user, Default is `False`.

**password\_lock**

Set to `False` to unlock a user's password (or Windows account). On non-Windows systems ONLY, this parameter can be set to `True` to lock a user's password. Default is `None`, which does not take action on the password (or Windows account).

New in version 3006.0.

**shell**

The login shell, defaults to the system default shell

**unique**

Require a unique UID, Default is `True`.

**system**

Choose UID in the range of `FIRST_SYSTEM_UID` and `LAST_SYSTEM_UID`, Default is `False`.

**loginclass**

The login class, defaults to `empty` (BSD only)

User comment field (GECOS) support (currently Linux, BSD, and MacOS only):

The below values should be specified as strings to avoid ambiguities when the values are loaded. (Especially the phone and room number fields which are likely to contain numeric data)

**fullname**

The user's full name

**roomnumber**

The user's room number (not supported in MacOS)

**workphone**

The user's work phone number (not supported in MacOS)

**homephone**

The user's home phone number (not supported in MacOS)

**other**

The user's other attribute (not supported in MacOS) If GECOS field contains more than 4 commas, this field will have the rest of 'em

Changed in version 2014.7.0: Shadow attribute support added.

Shadow attributes support (currently Linux only):

The below values should be specified as integers.

**date**

Date of last change of password, represented in days since epoch (January 1, 1970).

**mindays**

The minimum number of days between password changes.

**maxdays**

The maximum number of days between password changes.

**inactdays**

The number of days after a password expires before an account is locked.

**warndays**

Number of days prior to `maxdays` to warn users.

**expire**

Date that account expires, represented in days since epoch (January 1, 1970).

**local (Only on systems with `luseradd` available):**

Create the user account locally ignoring global account management (default is `False`).

New in version 3007.0.

The below parameters apply to windows only:

**win\_homedrive (Windows Only)**

The drive letter to use for the home directory. If not specified the home directory will be a unc path. Otherwise the home directory will be mapped to the specified drive. Must be a letter followed by a colon. Because of the colon, the value must be surrounded by single quotes. ie: - win\_homedrive: 'U:'

Changed in version 2015.8.0.

**win\_profile (Windows Only)**

The custom profile directory of the user. Uses default value of underlying system if not set.

Changed in version 2015.8.0.

**win\_logonscript (Windows Only)**

The full path to the logon script to run when the user logs in.

Changed in version 2015.8.0.

**win\_description (Windows Only)**

A brief description of the purpose of the users account.

Changed in version 2015.8.0.

## 26.19.304 salt.states.vagrant

### Manage Vagrant VMs

Manange execution of Vagrant virtual machines on Salt minions.

*Vagrant* is a tool for building and managing virtual machine environments. It can use various providers, such as *VirtualBox*, *Docker*, or *VMware*, to run its VMs. Vagrant provides some of the functionality of a light-weight hypervisor. The combination of Salt modules, Vagrant running on the host, and a virtual machine provider, gives hypervisor-like functionality for developers who use Vagrant to quickly define their virtual environments.

New in version 2018.3.0.

The configuration of each virtual machine is defined in a file named `Vagrantfile` which must exist on the VM host machine. The essential parameters which must be defined to start a Vagrant VM are the directory where the `Vagrantfile` is located (argument `cwd:`), and the username which will own the Vagrant `box` created for the VM (argument `vagrant_runas:`).

A single `Vagrantfile` may define one or more virtual machines. Use the `machine` argument to chose among them. The default (blank) value will select the `primary` (or `only`) machine in the `Vagrantfile`.

[NOTE:] Each virtual machine host must have the following:

- a working salt-minion
- a Salt sdb database configured for `vagrant_sdb_data`.
- Vagrant installed and the `vagrant` command working
- a suitable VM provider

```
# EXAMPLE:
# file /etc/salt/minion.d/vagrant_sdb.conf on the host computer
# -- this sdb database is required by the Vagrant module --
vagrant_sdb_data: # The sdb database must have this name.
  driver: sqlite3 # Let's use SQLite to store the data ...
  database: /var/cache/salt/vagrant.sqlite # ... in this file ...
  table: sdb # ... using this table name.
  create_table: True # if not present
```

`salt.states.vagrant.destroyed(name)`

Stops a VM (or VMs) and removes all references to it (them). (Runs `vagrant destroy`.)

Subsequent re-use of the same machine will require another operation of `vagrant.running` or a call to the `vagrant.init` execution module.

**Parameters**

**name** -- May be a Salt\_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.destroyed
```

`salt.states.vagrant.initialized(name, **kwargs)`

Defines a new VM with specified arguments, but does not start it.

**Parameters**

**name** -- the Salt\_id node name you wish your VM to have.

Each machine must be initialized individually using this function or the "vagrant.running" function, or the `vagrant.init` execution module call.

This command will not change the state of a running or paused machine.

Possible keyword arguments:

- `cwd`: The directory (path) containing the Vagrantfile
- `machine`: ("") the name of the machine (in the Vagrantfile) if not default
- `vagrant_runas`: ('root') the username who owns the vagrantbox file
- `vagrant_provider`: the provider to run the VM (usually 'virtualbox')
- `vm`: ({} ) a dictionary containing these or other keyword arguments

```
node_name1:
  vagrant.initialized
  - cwd: /projects/my_project
  - vagrant_runas: my_username
  - machine: machine1

node_name2:
  vagrant.initialized
  - cwd: /projects/my_project
  - vagrant_runas: my_username
  - machine: machine2

start_nodes:
  vagrant.start:
    - name: node_name?
```

`salt.states.vagrant.paused(name)`

Stores the state of a VM (or VMs) for fast restart. (Runs `vagrant suspend`.)

**Parameters**

**name** -- May be a Salt\_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.paused
```

`salt.states.vagrant.powered_off(name)`

Stops a VM (or VMs) by power off. (Runs `vagrant halt`.)

This method is provided for compatibility with other VM-control state modules. For Vagrant, the action is identical with `stopped`.

**Parameters**

**name** -- May be a Salt\_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.unpowered
```

`salt.states.vagrant.rebooted(name)`

Reboots a running, paused, or stopped VM (or VMs). (Runs `vagrant reload`.)

The will re-run the provisioning

**Parameters**

**name** -- May be a Salt\_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.reloaded
```

`salt.states.vagrant.running(name, **kwargs)`

Defines and starts a new VM with specified arguments, or restart a VM (or group of VMs). (Runs `vagrant up`.)

**Parameters**

**name** -- the Salt\_id node name you wish your VM to have.

If name contains a "?" or "\*" then it will re-start a group of VMs which have been paused or stopped.

Each machine must be initially started individually using this function or the `vagrant.init` execution module call.

[NOTE:] Keyword arguments are silently ignored when re-starting an existing VM.

Possible keyword arguments:

- `cwd`: The directory (path) containing the Vagrantfile
- `machine`: (") the name of the machine (in the Vagrantfile) if not default
- `vagrant_runas`: ('root') the username who owns the vagrantbox file
- `vagrant_provider`: the provider to run the VM (usually 'virtualbox')
- `vm`: ({} ) a dictionary containing these or other keyword arguments

```
node_name:
  vagrant.running
```

```
node_name:
  vagrant.running:
    - cwd: /projects/my_project
    - vagrant_runas: my_username
    - machine: machine1
```

`salt.states.vagrant.stopped(name)`

Stops a VM (or VMs) by shutting it (them) down nicely. (Runs `vagrant halt`)

**Parameters**

**name** -- May be a Salt\_id node, or a POSIX-style wildcard string.

```
node_name:
  vagrant.stopped
```

### 26.19.305 salt.states.vault

**Warning:** This module will be removed from Salt in version 3009 in favor of the [vault Salt Extension](#).

States for managing Hashicorp Vault. Currently handles policies. Configuration instructions are documented in the *execution module docs*.

**maintainer**  
SaltStack

**maturity**  
new

**platform**  
all

New in version 2017.7.0.

**salt.states.vault.policy\_absent**(*name*)

Ensure a Vault policy with the given name and rules is absent.

**name**  
The name of the policy

**salt.states.vault.policy\_present**(*name, rules*)

Ensure a Vault policy with the given name and rules is present.

**name**  
The name of the policy

**rules**  
Rules formatted as in-line HCL

```
demo-policy:
  vault.policy_present:
    - name: foo/bar
    - rules: |
        path "secret/top-secret/*" {
          policy = "deny"
        }
        path "secret/not-very-secret/*" {
          policy = "write"
        }
```

### 26.19.306 salt.states.vbox\_guest

VirtualBox Guest Additions installer state

**salt.states.vbox\_guest.additions\_installed**(*name, reboot=False, upgrade\_os=False*)

Ensure that the VirtualBox Guest Additions are installed. Uses the CD, connected by VirtualBox.

**name**  
The name has no functional value and is only used as a tracking reference.

**reboot**  
[False] Restart OS to complete installation.

**upgrade\_os**  
[False] Upgrade OS (to ensure the latests version of kernel and developer tools installed).

`salt.states.vbox_guest.additions_removed(name, force=False)`

Ensure that the VirtualBox Guest Additions are removed. Uses the CD, connected by VirtualBox.

To connect VirtualBox Guest Additions via VirtualBox graphical interface press 'Host+D' ('Host' is usually 'Right Ctrl').

**name**

The name has no functional value and is only used as a tracking reference.

**force**

Force VirtualBox Guest Additions removing.

`salt.states.vbox_guest.grant_access_to_shared_folders_to(name, users=None)`

Grant access to auto-mounted shared folders to the users.

User is specified by its name. To grant access for several users use argument *users*.

**name**

Name of the user to grant access to auto-mounted shared folders to.

**users**

List of names of users to grant access to auto-mounted shared folders to. If specified, *name* will not be taken into account.

### 26.19.307 salt.states.victorops

#### Create an Event in VictorOps

New in version 2015.8.0.

This state is useful for creating events on the VictorOps service during state runs.

```

webserver-warning-message:
victorops.create_event:
- message_type: 'CRITICAL'
- entity_id: 'webserver/diskspace'
- state_message: 'Webserver diskspace is low.'

```

`salt.states.victorops.create_event(name, message_type, routing_key='everyone', **kwargs)`

Create an event on the VictorOps service

```

webserver-warning-message:
victorops.create_event:
- message_type: 'CRITICAL'
- entity_id: 'webserver/diskspace'
- state_message: 'Webserver diskspace is low.'

database-server-warning-message:
victorops.create_event:
- message_type: 'WARNING'
- entity_id: 'db_server/load'
- state_message: 'Database Server load is high.'
- entity_is_host: True
- entity_display_name: 'dbdserver.example.com'

```

The following parameters are required:

**name**

This is a short description of the event.

**message\_type**

One of the following values: INFO, WARNING, ACKNOWLEDGEMENT, CRITICAL, RECOVERY.

The following parameters are optional:

**routing\_key**

The key for where messages should be routed. By default, sent to 'everyone' route.

**entity\_id**

The name of alerting entity. If not provided, a random name will be assigned.

**timestamp**

Timestamp of the alert in seconds since epoch. Defaults to the time the alert is received at VictorOps.

**timestamp\_fmt**

The date format for the timestamp parameter. Defaults to '%Y-%m-%dT%H:%M:%S'.

**state\_start\_time**

The time this entity entered its current state (seconds since epoch). Defaults to the time alert is received.

**state\_start\_time\_fmt**

The date format for the timestamp parameter. Defaults to '%Y-%m-%dT%H:%M:%S'.

**state\_message**

Any additional status information from the alert item.

**entity\_is\_host**

Used within VictorOps to select the appropriate display format for the incident.

**entity\_display\_name**

Used within VictorOps to display a human-readable name for the entity.

**ack\_message**

A user entered comment for the acknowledgment.

**ack\_author**

The user that acknowledged the incident.

## 26.19.308 salt.states.virt

### Manage virt

For the key certificate this state uses the external pillar in the master to call for the generation and signing of certificates for systems running libvirt:

**libvirt\_keys:**

```
virt.keys
```

```
salt.states.virt.defined(name, cpu=None, mem=None, vm_type=None, disk_profile=None, disks=None,
                        nic_profile=None, interfaces=None, graphics=None, seed=True, install=True,
                        pub_key=None, priv_key=None, connection=None, username=None,
                        password=None, os_type=None, arch=None, boot=None, numatune=None,
                        boot_dev=None, hypervisor_features=None, clock=None, serials=None,
                        consoles=None, stop_on_reboot=False, live=True, host_devices=None,
                        autostart=False)
```

Starts an existing guest, or defines and starts a new VM with specified arguments.

New in version 3001.

**Parameters**

- **name** -- name of the virtual machine to run
- **cpu** -- Number of virtual CPUs to assign to the virtual machine or a dictionary with detailed information to configure cpu model and topology, numa node tuning, cpu

tuning and iotreads allocation. The structure of the dictionary is documented in *cpu parameters definition*.

```

cpu:
  placement: static
  cpuset: 0-11
  current: 5
  maximum: 12
  vcpus:
    0:
      enabled: 'yes'
      hotpluggable: 'no'
      order: 1
    1:
      enabled: 'no'
      hotpluggable: 'yes'
  match: minimum
  mode: custom
  check: full
  vendor: Intel
  model:
    name: core2duo
    fallback: allow
    vendor_id: GenuineIntel
  topology:
    sockets: 1
    cores: 12
    threads: 1
  cache:
    level: 3
    mode: emulate
  feature:
    policy: optional
    name: lahf_lm

New in version 3003.

- **mem** -- Amount of memory to allocate to the virtual machine in MiB. Since 3002, a dictionary can be used to contain detailed configuration which support memory allocation or tuning. Supported parameters are `boot`, `current`, `max`, `slots`, `hard_limit`, `soft_limit`, `swap_hard_limit`, `min_guarantee`, `hugepages`, `nosharepages`, `locked`, `source`, `access`, `allocation` and `discard`. The structure of the dictionary is documented in [Memory parameter definition](#). Both decimal and binary base are supported. Detail unit specification is documented in [Units specification](#). Please note that the value for `slots` must be an integer.

```

boot: 1g
current: 1g
max: 1g
slots: 10
hard_limit: 1024
soft_limit: 512m
swap_hard_limit: 1g
min_guarantee: 512mib
hugepages:
- size: 2m
- nodeset: 0-2
  size: 1g
- nodeset: 3
  size: 2g
nosharepages: True
locked: True
source: file
access: shared
allocation: immediate
discard: True

```

Changed in version 3002.

- **vm\_type** -- force virtual machine type for the new VM. The default value is taken from the host capabilities. This could be useful for example to use 'qemu' type instead of the 'kvm' one.
- **disk\_profile** -- Name of the disk profile to use for the new virtual machine
- **disks** -- List of disk to create for the new virtual machine. See [Disks Definitions](#) for more details on the items on this list.
- **nic\_profile** -- Name of the network interfaces profile to use for the new virtual machine
- **interfaces** -- List of network interfaces to create for the new virtual machine. See [Network Interfaces Definitions](#) for more details on the items on this list.
- **graphics** -- Graphics device to create for the new virtual machine. See [Graphics Definition](#) for more details on this dictionary
- **saltenv** -- Fileserver environment (Default: 'base'). See [cp module for more details](#)
- **seed** -- True to seed the disk image. Only used when the `image` parameter is provided. (Default: True)

- **install** -- install salt minion if absent (Default: True)
- **pub\_key** -- public key to seed with (Default: None)
- **priv\_key** -- public key to seed with (Default: None)
- **seed\_cmd** -- Salt command to execute to seed the image. (Default: 'seed.apply')
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults
- **os\_type** -- type of virtualization as found in the `//os/type` element of the libvirt definition. The default value is taken from the host capabilities, with a preference for hvm. Only used when creating a new virtual machine.
- **arch** -- architecture of the virtual machine. The default value is taken from the host capabilities, but x86\_64 is preferred over i686. Only used when creating a new virtual machine.
- **boot** -- Specifies kernel, initial ramdisk and kernel command line parameters for the virtual machine. This is an optional parameter, all of the keys are optional within the dictionary.

Refer to [Boot parameters definition](#) for the complete boot parameters description.

To update any boot parameters, specify the new path for each. To remove any boot parameters, pass a None object, for instance: 'kernel': None.

New in version 3000.

- **boot\_dev** -- Space separated list of devices to boot from sorted by decreasing priority. Values can be hd, fd, cdrom or network.

By default, the value will "hd".

New in version 3002.

- **numatune** -- The optional numatune element provides details of how to tune the performance of a NUMA host via controlling NUMA policy for domain process. The optional memory element specifies how to allocate memory for the domain process on a NUMA host. memnode elements can specify memory allocation policies per each guest NUMA node. The definition used in the dictionary can be found at [cpu parameters definition](#).

New in version 3003.

```
{
  'memory': {'mode': 'strict', 'nodeset': '0-11'},
  'memnodes': {0: {'mode': 'strict', 'nodeset': 1}, 1:
    ↪ {'mode': 'preferred', 'nodeset': 2}}
}
```

- **hypervisor\_features** -- Enable or disable hypervisor-specific features on the virtual machine.

New in version 3003.

```
hypervisor_features:
  kvm-hint-dedicated: True
```

- **clock** -- Configure the guest clock. The value is a dictionary with the following keys:
  - adjustment**
    - time adjustment in seconds or `reset`
  - utc**
    - set to `False` to use the host local time as the guest clock. Defaults to `True`.

**timezone**

synchronize the guest to the corresponding timezone

**timers**

a dictionary associating the timer name with its configuration. This configuration is a dictionary with the properties `track`, `tickpolicy`, `catchup`, `frequency`, `mode`, `present`, `slew`, `threshold` and `limit`. See [libvirt time keeping documentation](#) for the possible values.

New in version 3003.

Set the clock to local time using an offset in seconds .. code-block:: yaml

**clock:**

```
adjustment: 3600 utc: False
```

Set the clock to a specific time zone:

```
clock:
  timezone: CEST
```

- **serials** -- Dictionary providing details on the serials connection to create. (Default: None) See *Serials and Consoles Definitions* for more details on the possible values.

New in version 3003.

- **consoles** -- Dictionary providing details on the consoles device to create. (Default: None) See *Serials and Consoles Definitions* for more details on the possible values.

New in version 3003.

- **stop\_on\_reboot** -- If set to `True` the guest will stop instead of rebooting. This is specially useful when creating a virtual machine with an installation cdrom or an autoinstallation needing a special first boot configuration. Defaults to `False`

New in version 3003.

- **live** -- If set to `False` the changes will not be applied live to the running instance, but will only apply at the next start. Note that reboot will not take those changes.

New in version 3003.

- **host\_devices** -- List of host devices to passthrough to the guest. The value is a list of device names as provided by the `node_devices()` function. (Default: None)

New in version 3003.

- **autostart** -- If set to `True` the host will start the guest after boot. (Default: `False`)

### Example States

Make sure a virtual machine called `domain_name` is defined:

```
domain_name:
  virt.defined:
    - cpu: 2
    - mem: 2048
    - boot_dev: network hd
    - disk_profile: prod
    - disks:
      - name: system
        size: 8192
        overlay_image: True
        pool: default
```

(continues on next page)

(continued from previous page)

```

    image: /path/to/image.qcow2
  - name: data
    size: 16834
  - nic_profile: prod
  - interfaces:
    - name: eth0
      mac: 01:23:45:67:89:AB
    - name: eth1
      type: network
      source: admin
  - graphics:
    type: spice
    listen:
      type: address
      address: 192.168.0.125

```

`salt.states.virt.keys` (*name*, *basepath*='/etc/pki', *\*\*kwargs*)

Manage libvirt keys.

**name**

The name variable used to track the execution

**basepath**

Defaults to `/etc/pki`, this is the root location used for libvirt keys on the hypervisor

The following parameters are optional:

**country**

The country that the certificate should use. Defaults to US.

New in version 2018.3.0.

**state**

The state that the certificate should use. Defaults to Utah.

New in version 2018.3.0.

**locality**

The locality that the certificate should use. Defaults to Salt Lake City.

New in version 2018.3.0.

**organization**

The organization that the certificate should use. Defaults to Salted.

New in version 2018.3.0.

**expiration\_days**

The number of days that the certificate should be valid for. Defaults to 365 days (1 year)

New in version 2018.3.0.

`salt.states.virt.network_defined` (*name*, *bridge*, *forward*, *vport*=None, *tag*=None, *ipv4\_config*=None, *ipv6\_config*=None, *autostart*=True, *connection*=None, *username*=None, *password*=None, *mtu*=None, *domain*=None, *nat*=None, *interfaces*=None, *addresses*=None, *physical\_function*=None, *dns*=None)

Defines a new network with specified arguments.

Parameters

- **name** -- Network name
- **bridge** -- Bridge name
- **forward** -- Forward mode(bridge, router, nat)

Changed in version 3003: a None value creates an isolated network with no forwarding at all

- **vport** -- Virtualport type (Default: 'None') The value can also be a dictionary with `type` and `parameters` keys. The `parameters` value is a dictionary of virtual port parameters.

```
- vport:
  type: openvswitch
  parameters:
    interfaceid: 09b11c53-8b5c-4eeb-8f00-d84eaa0aaa4f
```

Changed in version 3003: possible dictionary value

- **tag** -- Vlan tag (Default: 'None') The value can also be a dictionary with the `tags` and optional `trunk` keys. `trunk` is a boolean value indicating whether to use VLAN trunking. `tags` is a list of dictionaries with keys `id` and `nativeMode`. The `nativeMode` value can be one of `tagged` or `untagged`.

```
- tag:
  trunk: True
  tags:
    - id: 42
      nativeMode: untagged
    - id: 47
```

Changed in version 3003: possible dictionary value

- **ipv4\_config** -- IPv4 network configuration. See the [virt.network\\_define](#) function corresponding parameter documentation for more details on this dictionary. (Default: None).
- **ipv6\_config** -- IPv6 network configuration. See the [virt.network\\_define](#) function corresponding parameter documentation for more details on this dictionary. (Default: None).
- **autostart** -- Network autostart (default 'True')
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults
- **mtu** -- size of the Maximum Transmission Unit (MTU) of the network. (default None)

New in version 3003.

- **domain** -- DNS domain name of the DHCP server. The value is a dictionary with a mandatory `name` property and an optional `localOnly` boolean one. (default None)

```
- domain:
  name: lab.acme.org
  localOnly: True
```

New in version 3003.

- **nat** -- addresses and ports to route in NAT forward mode. The value is a dictionary with optional keys `address` and `port`. Both values are a dictionary with `start` and `end` values. (default None)

```
- forward: nat
- nat:
  address:
    start: 1.2.3.4
    end: 1.2.3.10
  port:
```

(continues on next page)

(continued from previous page)

```

start: 500
end: 1000

```

New in version 3003.

- **interfaces** -- whitespace separated list of network interfaces devices that can be used for this network. (default None)

```

- forward: passthrough
- interfaces: "eth10 eth11 eth12"

```

New in version 3003.

- **addresses** -- whitespace separated list of addresses of PCI devices that can be used for this network in *hostdev* forward mode. (default None)

```

- forward: hostdev
- interfaces: "0000:04:00.1 0000:e3:01.2"

```

New in version 3003.

- **physical\_function** -- device name of the physical interface to use in *hostdev* forward mode. (default None)

```

- forward: hostdev
- physical_function: "eth0"

```

New in version 3003.

- **dns** -- virtual network DNS configuration The value is a dictionary described in *DNS configuration definition*. (default None)

```

- dns:
  forwarders:
    - domain: example.com
      addr: 192.168.1.1
    - addr: 8.8.8.8
      - domain: www.example.com
  txt:
    example.com: "v=spf1 a -all"
    _http.tcp.example.com: "name=value,paper=A4"
  hosts:
    192.168.1.2:
      - mirror.acme.lab
      - test.acme.lab
  srvs:
    - name: ldap
      protocol: tcp
      domain: ldapserver.example.com
      target: .
      port: 389
      priority: 1
      weight: 10

```

New in version 3003.

New in version 3001.

```
network_name:
  virt.network_defined
```

```
network_name:
  virt.network_defined:
    - bridge: main
    - forward: bridge
    - vport: openvswitch
    - tag: 180
    - autostart: True
```

```
network_name:
  virt.network_defined:
    - bridge: natted
    - forward: nat
    - ipv4_config:
        cidr: 192.168.42.0/24
        dhcp_ranges:
          - start: 192.168.42.10
            end: 192.168.42.25
          - start: 192.168.42.100
            end: 192.168.42.150
    - autostart: True
```

`salt.states.virt.network_running`(*name*, *bridge*, *forward*, *vport*=None, *tag*=None, *ipv4\_config*=None, *ipv6\_config*=None, *autostart*=True, *connection*=None, *username*=None, *password*=None, *mtu*=None, *domain*=None, *nat*=None, *interfaces*=None, *addresses*=None, *physical\_function*=None, *dns*=None)

Defines and starts a new network with specified arguments.

#### Parameters

- **name** -- Network name
- **bridge** -- Bridge name
- **forward** -- Forward mode(bridge, router, nat)

Changed in version 3003: a None value creates an isolated network with no forwarding at all

- **vport** -- Virtualport type (Default: 'None') The value can also be a dictionary with `type` and `parameters` keys. The `parameters` value is a dictionary of virtual port parameters.

```
- vport:
  type: openvswitch
  parameters:
    interfaceid: 09b11c53-8b5c-4eeb-8f00-d84eaa0aaa4f
```

Changed in version 3003: possible dictionary value

- **tag** -- Vlan tag (Default: 'None') The value can also be a dictionary with the `tags` and optional `trunk` keys. `trunk` is a boolean value indicating whether to use VLAN trunking. `tags` is a list of dictionaries with keys `id` and `nativeMode`. The `nativeMode` value can be one of `tagged` or `untagged`.

```

- tag:
  trunk: True
  tags:
    - id: 42
      nativeMode: untagged
    - id: 47

```

Changed in version 3003: possible dictionary value

- **ipv4\_config** -- IPv4 network configuration. See the `:py:func`virt.network_define`` <salt.modules.virt.network\_define>` function corresponding parameter documentation for more details on this dictionary. (Default: None).

New in version 3000.

- **ipv6\_config** -- IPv6 network configuration. See the `:py:func`virt.network_define`` <salt.modules.virt.network\_define>` function corresponding parameter documentation for more details on this dictionary. (Default: None).

New in version 3000.

- **autostart** -- Network autostart (default 'True')
- **connection** -- libvirt connection URI, overriding defaults

New in version 2019.2.0.

- **username** -- username to connect with, overriding defaults

New in version 2019.2.0.

- **password** -- password to connect with, overriding defaults

New in version 2019.2.0.

- **mtu** -- size of the Maximum Transmission Unit (MTU) of the network. (default None)

New in version 3003.

- **domain** -- DNS domain name of the DHCP server. The value is a dictionary with a mandatory `name` property and an optional `localOnly` boolean one. (default None)

```

- domain:
  name: lab.acme.org
  localOnly: True

```

New in version 3003.

- **nat** -- addresses and ports to route in NAT forward mode. The value is a dictionary with optional keys `address` and `port`. Both values are a dictionary with `start` and `end` values. (default None)

```

- forward: nat
- nat:
  address:
    start: 1.2.3.4
    end: 1.2.3.10
  port:
    start: 500
    end: 1000

```

New in version 3003.

- **interfaces** -- whitespace separated list of network interfaces devices that can be used for this network. (default None)

```
- forward: passthrough
- interfaces: "eth10 eth11 eth12"
```

New in version 3003.

- **addresses** -- whitespace separated list of addresses of PCI devices that can be used for this network in *hostdev* forward mode. (default None)

```
- forward: hostdev
- interfaces: "0000:04:00.1 0000:e3:01.2"
```

New in version 3003.

- **physical\_function** -- device name of the physical interface to use in *hostdev* forward mode. (default None)

```
- forward: hostdev
- physical_function: "eth0"
```

New in version 3003.

- **dns** -- virtual network DNS configuration The value is a dictionary described in *DNS configuration definition*. (default None)

```
- dns:
  forwarders:
    - domain: example.com
      addr: 192.168.1.1
    - addr: 8.8.8.8
      domain: www.example.com
  txt:
    host.widgets.com.: "printer=lpr5"
    example.com.: "This domain name is reserved for
↪use in documentation"
  hosts:
    192.168.1.2:
      - mirror.acme.lab
      - test.acme.lab
  srvs:
    - name: ldap
      protocol: tcp
      domain: ldapserver.example.com
      target: .
      port: 389
      priority: 1
      weight: 10
```

New in version 3003.

```
network_name:
  virt.network_running
```

```
network_name:
  virt.network_running:
    - bridge: main
    - forward: bridge
```

(continues on next page)

(continued from previous page)

- **vport**: openvswitch
- **tag**: 180
- **autostart**: True

```

network_name:
  virt.network_running:
    - bridge: natted
    - forward: nat
    - ipv4_config:
        cidr: 192.168.42.0/24
        dhcp_ranges:
          - start: 192.168.42.10
            end: 192.168.42.25
          - start: 192.168.42.100
            end: 192.168.42.150
    - autostart: True

```

`salt.states.virt.pool_defined` (*name*, *ptype=None*, *target=None*, *permissions=None*, *source=None*, *transient=False*, *autostart=True*, *connection=None*, *username=None*, *password=None*)

Defines a new pool with specified arguments.

New in version 3001.

#### Parameters

- **ptype** -- libvirt pool type
- **target** -- full path to the target device or folder. (Default: None)
- **permissions** -- target permissions. See *Permissions definition* for more details on this structure.
- **source** -- dictionary containing keys matching the `source_*` parameters in function `salt.modules.virt.pool_define()`.
- **transient** -- when set to True, the pool will be automatically undefined after being stopped. (Default: False)
- **autostart** -- Whether to start the pool when booting the host. (Default: True)
- **start** -- When True, define and start the pool, otherwise the pool will be left stopped.
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults

```

pool_name:
  virt.pool_defined:
    - ptype: netfs
    - target: /mnt/cifs
    - permissions:
        - mode: 0770
        - owner: 1000
        - group: 100
    - source:
        dir: samba_share
        hosts:
          - one.example.com
          - two.example.com

```

(continues on next page)

(continued from previous page)

```

format: cifs
- autostart: True

```

`salt.states.virt.pool_deleted`(*name*, *purge=False*, *connection=None*, *username=None*, *password=None*)

Deletes a virtual storage pool.

#### Parameters

- **name** -- the name of the pool to delete.
- **purge** -- if `True`, the volumes contained in the pool will be deleted as well as the pool itself. Note that these will be lost for ever. If `False` the pool will simply be undefined. (Default: `False`)
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults

In order to be purged a storage pool needs to be running to get the list of volumes to delete.

Some libvirt storage drivers may not implement deleting, those actions are implemented on a best effort idea. In any case check the result's comment property to see if any of the action was unsupported.

```

pool_name:
uyuni_virt.pool_deleted:
- purge: True

```

New in version 3000.

`salt.states.virt.pool_running`(*name*, *ptype=None*, *target=None*, *permissions=None*, *source=None*, *transient=False*, *autostart=True*, *connection=None*, *username=None*, *password=None*)

Defines and starts a new pool with specified arguments.

New in version 2019.2.0.

#### Parameters

- **ptype** -- libvirt pool type
- **target** -- full path to the target device or folder. (Default: `None`)
- **permissions** -- target permissions. See [Permissions definition](#) for more details on this structure.
- **source** -- dictionary containing keys matching the `source_*` parameters in function `salt.modules.virt.pool_define()`.
- **transient** -- when set to `True`, the pool will be automatically undefined after being stopped. (Default: `False`)
- **autostart** -- Whether to start the pool when booting the host. (Default: `True`)
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults

```

pool_name:
  virt.pool_running

```

```

pool_name:
virt.pool_running:
- ptype: netfs
- target: /mnt/cifs
- permissions:
  - mode: 0770

```

(continues on next page)

(continued from previous page)

```

- owner: 1000
- group: 100
- source:
  dir: samba_share
  hosts:
    - one.example.com
    - two.example.com
  format: cifs
- autostart: True

```

`salt.states.virt.powered_off`(*name*, *connection=None*, *username=None*, *password=None*)

Stops a VM by power off.

New in version 2016.3.0.

#### Parameters

- **connection** -- libvirt connection URI, overriding defaults  
New in version 2019.2.0.
- **username** -- username to connect with, overriding defaults  
New in version 2019.2.0.
- **password** -- password to connect with, overriding defaults  
New in version 2019.2.0.

```

domain_name:
  virt.stopped

```

`salt.states.virt.rebooted`(*name*, *connection=None*, *username=None*, *password=None*)

Reboots VMs

New in version 2016.3.0.

#### Parameters

- **name** --
- **connection** -- libvirt connection URI, overriding defaults  
New in version 2019.2.0.
- **username** -- username to connect with, overriding defaults  
New in version 2019.2.0.
- **password** -- password to connect with, overriding defaults  
New in version 2019.2.0.

`salt.states.virt.reverted`(*name*, *snapshot=None*, *cleanup=False*)

Deprecated since version 2016.3.0.

Reverts to the particular snapshot.

New in version 2016.3.0.

```

domain_name:
  virt.reverted:
    - cleanup: True

domain_name_1:
  virt.reverted:

```

(continues on next page)

(continued from previous page)

- **snapshot**: snapshot\_name
- **cleanup**: False

```
salt.states.virt.running(name, cpu=None, mem=None, vm_type=None, disk_profile=None, disks=None,
    nic_profile=None, interfaces=None, graphics=None, seed=True, install=True,
    pub_key=None, priv_key=None, connection=None, username=None,
    password=None, os_type=None, arch=None, boot=None, boot_dev=None,
    numatune=None, hypervisor_features=None, clock=None, serials=None,
    consoles=None, stop_on_reboot=False, host_devices=None, autostart=False)
```

Starts an existing guest, or defines and starts a new VM with specified arguments.

New in version 2016.3.0.

#### Parameters

- **name** -- name of the virtual machine to run
- **cpu** -- Number of virtual CPUs to assign to the virtual machine or a dictionary with detailed information to configure cpu model and topology, numa node tuning, cpu tuning and iotreads allocation. The structure of the dictionary is documented in [cpu parameters definition](#).

To update any cpu parameters specify the new values to the corresponding tag. To remove any element or attribute, specify `None` object. Please note that `None` object is mapped to `null` in yaml, use `null` in sls file instead.

- **mem** -- Amount of memory to allocate to the virtual machine in MiB. Since 3002, a dictionary can be used to contain detailed configuration which support memory allocation or tuning. Supported parameters are `boot`, `current`, `max`, `slots`, `hard_limit`, `soft_limit`, `swap_hard_limit`, `min_guarantee`, `hugepages`, `nosharepages`, `locked`, `source`, `access`, `allocation` and `discard`. The structure of the dictionary is documented in [Memory parameter definition](#). Both decimal and binary base are supported. Detail unit specification is documented in [Units specification](#). Please note that the value for `slots` must be an integer.

To remove any parameters, pass a `None` object, for instance: `'soft_limit': None`. Please note that `None` is mapped to `null` in sls file, pass `null` in sls file instead.

```
- mem:
  hard_limit: null
  soft_limit: null
```

Changed in version 3002.

- **vm\_type** -- force virtual machine type for the new VM. The default value is taken from the host capabilities. This could be useful for example to use `'qemu'` type instead of the `'kvm'` one.

New in version 2019.2.0.

- **disk\_profile** -- Name of the disk profile to use for the new virtual machine

New in version 2019.2.0.

- **disks** -- List of disk to create for the new virtual machine. See [Disks Definitions](#) for more details on the items on this list.

New in version 2019.2.0.

- **nic\_profile** -- Name of the network interfaces profile to use for the new virtual machine

New in version 2019.2.0.

- **interfaces** -- List of network interfaces to create for the new virtual machine. See [Network Interfaces Definitions](#) for more details on the items on this list.

New in version 2019.2.0.

- **graphics** -- Graphics device to create for the new virtual machine. See [Graphics Definition](#) for more details on this dictionary

New in version 2019.2.0.

- **saltenv** -- Fileserver environment (Default: 'base'). See [cp module for more details](#)

New in version 2019.2.0.

- **seed** --  
**True to seed the disk image. Only used when the **image** parameter is provided.**  
(Default: True)

New in version 2019.2.0.

- **install** -- install salt minion if absent (Default: True)

New in version 2019.2.0.

- **pub\_key** -- public key to seed with (Default: None)

New in version 2019.2.0.

- **priv\_key** -- public key to seed with (Default: None)

New in version 2019.2.0.

- **seed\_cmd** -- Salt command to execute to seed the image. (Default: 'seed.apply')

New in version 2019.2.0.

- **connection** -- libvirt connection URI, overriding defaults

New in version 2019.2.0.

- **username** -- username to connect with, overriding defaults

New in version 2019.2.0.

- **password** -- password to connect with, overriding defaults

New in version 2019.2.0.

- **os\_type** -- type of virtualization as found in the `//os/type` element of the libvirt definition. The default value is taken from the host capabilities, with a preference for hvm. Only used when creating a new virtual machine.

New in version 3000.

- **arch** -- architecture of the virtual machine. The default value is taken from the host capabilities, but x86\_64 is preferred over i686. Only used when creating a new virtual machine.

New in version 3000.

- **boot** -- Specifies kernel, initial ramdisk and kernel command line parameters for the virtual machine. This is an optional parameter, all of the keys are optional within the dictionary.

Refer to [Boot parameters definition](#) for the complete boot parameters description.

To update any boot parameters, specify the new path for each. To remove any boot parameters, pass a None object, for instance: 'kernel': None.

New in version 3000.

- **serials** -- Dictionary providing details on the serials connection to create. (Default: None) See [Serials and Consoles Definitions](#) for more details on the possible values.

New in version 3003.

- **consoles** -- Dictionary providing details on the consoles device to create. (Default: None) See *Serials and Consoles Definitions* for more details on the possible values.

New in version 3003.

- **boot\_dev** -- Space separated list of devices to boot from sorted by decreasing priority. Values can be hd, fd, cdrom or network.

By default, the value will "hd".

New in version 3002.

- **numatune** -- The optional numatune element provides details of how to tune the performance of a NUMA host via controlling NUMA policy for domain process. The optional memory element specifies how to allocate memory for the domain process on a NUMA host. memnode elements can specify memory allocation policies per each guest NUMA node. The definition used in the dictionary can be found at *cpu parameters definition*.

To update any numatune parameters, specify the new value. To remove any numatune parameters, pass a None object, for instance: 'numatune': None. Please note that None is mapped to null in sls file, pass null in sls file instead.

New in version 3003.

- **stop\_on\_reboot** -- If set to True the guest will stop instead of rebooting. This is specially useful when creating a virtual machine with an installation cdrom or an autoinstallation needing a special first boot configuration. Defaults to False

New in version 3003.

- **hypervisor\_features** -- Enable or disable hypervisor-specific features on the virtual machine.

New in version 3003.

```
hypervisor_features:
  kvm-hint-dedicated: True
```

- **clock** -- Configure the guest clock. The value is a dictionary with the following keys:

**adjustment**

time adjustment in seconds or reset

**utc**

set to False to use the host local time as the guest clock. Defaults to True.

**timezone**

synchronize the guest to the corresponding timezone

**timers**

a dictionary associating the timer name with its configuration. This configuration is a dictionary with the properties track, tickpolicy, catchup, frequency, mode, present, slew, threshold and limit. See *libvirt time keeping documentation* for the possible values.

New in version 3003.

Set the clock to local time using an offset in seconds .. code-block:: yaml

```
clock:
```

```
  adjustment: 3600 utc: False
```

Set the clock to a specific time zone:

```
clock:
  timezone: CEST
```

- **host\_devices** -- List of host devices to passthrough to the guest. The value is a list of device names as provided by the `node_devices()` function. (Default: None)

New in version 3003.

- **autostart** -- If set to True the host will start the guest after boot. (Default: False)

### Example States

Make sure an already-defined virtual machine called `domain_name` is running:

```
domain_name:
  virt.running
```

Do the same, but define the virtual machine if needed:

```
domain_name:
  virt.running:
    - cpu: 2
    - mem: 2048
    - disk_profile: prod
    - boot_dev: network hd
    - disks:
      - name: system
        size: 8192
        overlay_image: True
        pool: default
        image: /path/to/image.qcow2
      - name: data
        size: 16834
    - nic_profile: prod
    - interfaces:
      - name: eth0
        mac: 01:23:45:67:89:AB
      - name: eth1
        type: network
        source: admin
    - graphics:
      type: spice
      listen:
        type: address
        address: 192.168.0.125
```

`salt.states.virt.saved(name, suffix=None)`

Deprecated since version 2016.3.0: Use `snapshot()` instead.

Takes a snapshot of a particular VM or by a UNIX-style wildcard.

New in version 2016.3.0.

```
domain_name:
  virt.saved:
    - suffix: periodic
```

(continues on next page)

(continued from previous page)

```
domain*:
  virt.saved:
    - suffix: periodic
```

`salt.states.virt.snapshot` (*name*, *suffix=None*, *connection=None*, *username=None*, *password=None*)

Takes a snapshot of a particular VM or by a UNIX-style wildcard.

New in version 2016.3.0.

**Parameters**

- **connection** -- libvirt connection URI, overriding defaults

New in version 2019.2.0.

- **username** -- username to connect with, overriding defaults

New in version 2019.2.0.

- **password** -- password to connect with, overriding defaults

New in version 2019.2.0.

```
domain_name:
  virt.snapshot:
    - suffix: periodic

domain*:
  virt.snapshot:
    - suffix: periodic
```

`salt.states.virt.stopped` (*name*, *connection=None*, *username=None*, *password=None*)

Stops a VM by shutting it down nicely.

New in version 2016.3.0.

**Parameters**

- **connection** -- libvirt connection URI, overriding defaults

New in version 2019.2.0.

- **username** -- username to connect with, overriding defaults

New in version 2019.2.0.

- **password** -- password to connect with, overriding defaults

New in version 2019.2.0.

```
domain_name:
  virt.stopped
```

`salt.states.virt.unpowered` (*name*)

Deprecated since version 2016.3.0: Use `powered_off()` instead.

Stops a VM by power off.

New in version 2016.3.0.

```
domain_name:
  virt.stopped
```

`salt.states.virt.volume_defined` (*pool*, *name*, *size*, *allocation=0*, *format=None*, *type=None*, *permissions=None*, *backing\_store=None*, *nocow=False*, *connection=None*, *username=None*, *password=None*)

Ensure a disk volume is existing.

#### Parameters

- **pool** -- name of the pool containing the volume
- **name** -- name of the volume
- **size** -- capacity of the volume to define in MiB
- **allocation** -- allocated size of the volume in MiB. Defaults to 0.
- **format** -- volume format. The allowed values are depending on the pool type. Check the `virt.pool_capabilities` output for the possible values and the default.
- **type** -- type of the volume. One of `file`, `block`, `dir`, `network`, `netdir`, `ploop` or `None`. By default, the type is guessed by libvirt from the pool type.
- **permissions** -- Permissions to set on the target folder. This is mostly used for filesystem-based pool types. See [Permissions definition](#) for more details on this structure.
- **backing\_store** -- dictionary describing a backing file for the volume. It must contain a `path` property pointing to the base volume and a `format` property defining the format of the base volume.

The base volume format will not be guessed for security reasons and is thus mandatory.

- **nocow** -- disable COW for the volume.
- **connection** -- libvirt connection URI, overriding defaults
- **username** -- username to connect with, overriding defaults
- **password** -- password to connect with, overriding defaults

#### CLI Example:

Volume on ESX:

```
esx_volume:
  virt.volume_defined:
    - pool: "[local-storage]"
    - name: myvm/myvm.vmdk
    - size: 8192
```

QCow2 volume with backing file:

```
myvolume:
  virt.volume_defined:
    - pool: default
    - name: myvm.qcow2
    - format: qcow2
    - size: 8192
    - permissions:
        mode: '0775'
        owner: '123'
        group: '345'
    - backing_store:
        path: /path/to/base.img
        format: raw
    - nocow: True
```

New in version 3001.

### 26.19.309 salt.states.virtualenv

Setup of Python virtualenv sandboxes.

New in version 0.17.0.

```

salt.states.virtualenv_mod.manage(name, venv_bin=None, requirements=None,
    system_site_packages=False, distribute=False, use_wheel=False,
    clear=False, python=None, extra_search_dir=None,
    never_download=None, prompt=None, user=None, cwd=None,
    index_url=None, extra_index_url=None, pre_releases=False,
    no_deps=False, pip_download=None, pip_download_cache=None,
    pip_exists_action=None, pip_ignore_installed=False, proxy=None,
    use_vt=False, env_vars=None, no_use_wheel=False,
    pip_upgrade=False, pip_pkgs=None, pip_no_cache_dir=False,
    pip_cache_dir=None, process_dependency_links=False,
    no_binary=None, **kwargs)

```

This function is an alias of `managed`.

Create a virtualenv and optionally manage it with pip

**name**

Path to the virtualenv.

**venv\_bin: virtualenv**

The name (and optionally path) of the virtualenv command. This can also be set globally in the minion config file as `virtualenv.venv_bin`.

**requirements: None**

Path to a pip requirements file. If the path begins with `salt://` the file will be transferred from the master file server.

**use\_wheel: False**

Prefer wheel archives (requires pip >= 1.4).

**python: None**

Python executable used to build the virtualenv

**user: None**

The user under which to run virtualenv and pip.

**cwd: None**

Path to the working directory where `pip install` is executed.

**no\_deps: False**

Pass `--no-deps` to `pip install`.

**pip\_exists\_action: None**

Default action of pip when a path already exists: (s)witch, (i)gnore, (w)ipe, (b)ackup.

**proxy: None**

Proxy address which is passed to `pip install`.

**env\_vars: None**

Set environment variables that some builds will depend on. For example, a Python C-module may have a Makefile that needs `INCLUDE_PATH` set to pick up a header file while compiling.

**no\_use\_wheel: False**

Force to not use wheel archives (requires pip>=1.4)

**no\_binary**

Force to not use binary packages (requires pip >= 7.0.0) Accepts either `:all:` to disable all binary packages, `:none:` to empty the set, or a list of one or more packages

**pip\_upgrade: False**

Pass `--upgrade` to `pip install`.

**pip\_pkgs: None**

As an alternative to `requirements`, pass a list of pip packages that should be installed.

**process\_dependency\_links: False**

Run pip install with the `--process_dependency_links` flag.

New in version 2017.7.0.

Also accepts any kwargs that the `virtualenv` module will. However, some kwargs, such as the `pip` option, require `distributed: True`.

```
/var/www/myvirtualenv.com:
virtualenv.managed:
- system_site_packages: False
- requirements: salt://REQUIREMENTS.txt
- env_vars:
  PATH_VAR: '/usr/local/bin/'
```

```
salt.states.virtualenv_mod.managed(name, venv_bin=None, requirements=None,
                                   system_site_packages=False, distribute=False, use_wheel=False,
                                   clear=False, python=None, extra_search_dir=None,
                                   never_download=None, prompt=None, user=None, cwd=None,
                                   index_url=None, extra_index_url=None, pre_releases=False,
                                   no_deps=False, pip_download=None, pip_download_cache=None,
                                   pip_exists_action=None, pip_ignore_installed=False, proxy=None,
                                   use_vt=False, env_vars=None, no_use_wheel=False,
                                   pip_upgrade=False, pip_pkgs=None, pip_no_cache_dir=False,
                                   pip_cache_dir=None, process_dependency_links=False,
                                   no_binary=None, **kwargs)
```

Create a virtualenv and optionally manage it with pip

**name**

Path to the virtualenv.

**venv\_bin: virtualenv**

The name (and optionally path) of the virtualenv command. This can also be set globally in the minion config file as `virtualenv.venv_bin`.

**requirements: None**

Path to a pip requirements file. If the path begins with `salt://` the file will be transferred from the master file server.

**use\_wheel: False**

Prefer wheel archives (requires pip >= 1.4).

**python: None**

Python executable used to build the virtualenv

**user: None**

The user under which to run virtualenv and pip.

**cwd: None**

Path to the working directory where `pip install` is executed.

**no\_deps: False**

Pass `--no-deps` to `pip install`.

**pip\_exists\_action: None**

Default action of pip when a path already exists: (s)witch, (i)gnore, (w)ipe, (b)ackup.

**proxy: None**

Proxy address which is passed to `pip install`.

**env\_vars: None**

Set environment variables that some builds will depend on. For example, a Python C-module may have a Makefile that needs `INCLUDE_PATH` set to pick up a header file while compiling.

**no\_use\_wheel: False**

Force to not use wheel archives (requires pip >= 1.4)

**no\_binary**

Force to not use binary packages (requires pip >= 7.0.0) Accepts either `:all:` to disable all binary packages,

`:none:` to empty the set, or a list of one or more packages

**pip\_upgrade:** `False`  
Pass `--upgrade` to `pip install`.

**pip\_pkgs:** `None`  
As an alternative to `requirements`, pass a list of pip packages that should be installed.

**process\_dependency\_links:** `False`  
Run pip install with the `--process_dependency_links` flag.

New in version 2017.7.0.

Also accepts any kwargs that the `virtualenv` module will. However, some kwargs, such as the `pip` option, require `- distribute: True`.

```
/var/www/myvirtualenv.com:
virtualenv.managed:
- system_site_packages: False
- requirements: salt://REQUIREMENTS.txt
- env_vars:
  PATH_VAR: '/usr/local/bin/'
```

### 26.19.310 salt.states.webutil

Support for `htpasswd` module. Requires the `apache2-utils` package for Debian-based distros.

New in version 2014.7.0.

```
username:
webutil.user_exists:
- password: secr3t
- htpasswd_file: /etc/nginx/htpasswd
- options: d
- force: true
```

`salt.states.webutil.user_absent` (*name*, *htpasswd\_file=None*, *runas=None*)

Make sure the user is not in the specified `htpasswd` file

**name**

User name

**htpasswd\_file**

Path to the `htpasswd` file

**runas**

The system user to run `htpasswd` command with

`salt.states.webutil.user_exists` (*name*, *password=None*, *htpasswd\_file=None*, *options=""*, *force=False*, *runas=None*, *update=False*)

Make sure the user is inside the specified `htpasswd` file

**name**

User name

**password**

User password

**htpasswd\_file**

Path to the `htpasswd` file

**options**

See `salt.modules.htpasswd.useradd`

**force**

Touch the file even if user already created

**runas**

The system user to run htpasswd command with

**update**

Update an existing user's password if it's different from what's in the htpasswd file (unlike force, which updates regardless)

### 26.19.311 salt.states.win\_appx

Manage Microsoft Store apps on Windows. Removing an app with this modules will deprovision the app from the online Windows image.

New in version 3007.0.

`salt.states.win_appx.absent` (*name, query, include\_store=False, frameworks=False, deprovision\_only=False*)

Removes Microsoft Store packages from the system. If the package is part of a bundle, the entire bundle will be removed.

This function removes the package for all users on the system. It also deprovisions the package so that it isn't re-installed by later system updates. To only deprovision a package and not remove it for all users, set `deprovision_only=True`.

**Parameters**

- **query** (*str*) -- The query string to use to select the packages to be removed. If the string matches multiple packages, they will all be removed. Here are some example strings:

```
string | description |
----- | -
```

*teams*	Remove Microsoft Teams
*zune*	Remove Windows Media Player and Zune Video
*zuneMusic*	Only remove Windows Media Player
*xbox*	Remove all xBox packages, there are 5 by default
*	Remove everything but the Microsoft Store, unless include_store=True

---

**Note:** Use the `appx.list` function to make sure your query is returning what you expect. Then use the same query to remove those packages

---

- **include\_store** (*bool*) -- Include the Microsoft Store in the results of the query to be removed. Use this with caution. It is difficult to reinstall the Microsoft Store once it has been removed with this function. Default is `False`
- **frameworks** (*bool*) -- Include frameworks in the results of the query to be removed. Default is `False`
- **deprovision\_only** (*bool*) -- Only deprovision the package. The package will be removed from the current user and added to the list of deprovisioned packages. The package will not be re-installed in future system updates. New users of the system will not have the package installed. However, the package will still be installed for existing users. Default is `False`

**Returns**

True if successful, None if no packages found

**Return type**

bool

**Raises****CommandExecutionError** -- On errors encountered removing the package

CLI Example:

```
remove_candy_crush:
  appx.absent:
    - query: "*candy*"
```

## 26.19.312 salt.states.win\_certutil

### Installing of certificates to the Windows Certificate Manager

Install certificates to the Windows Certificate Manager

```
salt://certs/cert.cer:
  certutil.add_store:
    - store: TrustedPublisher
```

**salt.states.win\_certutil.add\_store**(*name, store, saltenv='base'*)

Store a certificate to the given certificate store

**Parameters**

- **name** (*str*) -- The path to the certificate to add to the store. This is either the path to a local file or a file from the file server in the form of `salt://path/to/file`
- **store** (*str*) -- The certificate store to add the certificate to
- **saltenv** (*str*) -- The salt environment to use. This is ignored if the path is local

**Returns**

A dictionary containing the results

**Return type**

dict

CLI Example:

```
add_certificate:
  certutil.add_store:
    name: salt://web_cert.cer
    store: TrustedPublisher
```

**salt.states.win\_certutil.del\_store**(*name, store, saltenv='base'*)

Remove a certificate from the given certificate store

**Parameters**

- **name** (*str*) -- The path to the certificate to remove from the store. This is either the path to a local file or a file from the file server in the form of `salt://path/to/file`
- **store** (*str*) -- The certificate store to remove the certificate from
- **saltenv** (*str*) -- The salt environment to use. This is ignored if the path is local

**Returns**

A dictionary containing the results

**Return type**

dict

CLI Example:

```

remove_certificate:
  certutil.del_store:
    name: salt://web_cert.cer
    store: TrustedPublisher

```

### 26.19.313 salt.states.win\_dacl

Windows Object Access Control Lists

Ensure an ACL is present

parameters:

name - the path of the object objectType - Registry/File/Directory user - user account or SID for the ace  
 permission - permission for the ace (see module win\_acl for available permissions for each objectType)  
 acetype - Allow/Deny propagation - how the ACL should apply to child objects (see module win\_acl for available propagation types)

```

addAcl:
  win_dacl.present:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - user: FakeUser
    - permission: FullControl
    - acetype: ALLOW
    - propagation: KEY&SUBKEYS

```

Ensure an ACL does not exist

parameters:

name - the path of the object objectType - Registry/File/Directory user - user account or SID for the ace  
 permission - permission for the ace (see module win\_acl for available permissions for each objectType)  
 acetype - Allow/Deny propagation - how the ACL should apply to child objects (see module win\_acl for available propagation types)

```

removeAcl:
  win_dacl.absent:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - user: FakeUser
    - permission: FullControl
    - acetype: ALLOW
    - propagation: KEY&SUBKEYS

```

Ensure an object is inheriting permissions

parameters:

name - the path of the object objectType - Registry/File/Directory clear\_existing\_acl - True/False - when inheritance is enabled, should the existing ACL be kept or cleared out

```

eInherit:
  win_dacl.enableinheritance:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - clear_existing_acl: True

```

## Ensure an object is not inheriting permissions

### parameters:

**name** - the path of the object **objectType** - Registry/File/Directory **copy\_inherited\_acl** - True/False - if inheritance is enabled, should the inherited permissions be copied to the ACL when inheritance is disabled

### dInherit:

#### win\_dacl.disableinheritance:

- **name**: HKEY\_LOCAL\_MACHINE\SOFTWARE\mykey
- **objectType**: Registry
- **copy\_inherited\_acl**: False

`salt.states.win_dacl.absent`(*name, objectType, user, permission, acetype, propagation*)

Ensure an ACL does not exist

`salt.states.win_dacl.disinherit`(*name, objectType, copy\_inherited\_acl=True*)

Ensure an object is not inheriting ACLs from its parent

`salt.states.win_dacl.inherit`(*name, objectType, clear\_existing\_acl=False*)

Ensure an object is inheriting ACLs from its parent

`salt.states.win_dacl.present`(*name, objectType, user, permission, acetype, propagation*)

Ensure an ACE is present

## 26.19.314 salt.states.win\_dism

### Installing of Windows features using DISM

Install Windows features, capabilities, and packages with DISM

```
Language.Basic~~~en-US~0.0.1.0:
  dism.capability_installed
```

```
NetFx3:
  dism.feature_installed
```

`salt.states.win_dism.capability_installed`(*name, source=None, limit\_access=False, image=None, restart=False*)

Install a DISM capability

#### Parameters

- **name** (*str*) -- The capability to install
- **source** (*str*) -- The optional source of the capability
- **limit\_access** (*bool*) -- Prevent DISM from contacting Windows Update for on-line images
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the install

### Example

Run `dism.available_capabilities` to get a list of available capabilities. This will help you get the proper name to use

```
install_dotnet35:
  dism.capability_installed:
    - name: NetFX3~~~~
```

`salt.states.win_dism.capability_removed`(*name*, *image=None*, *restart=False*)

Uninstall a DISM capability

#### Parameters

- **name** (*str*) -- The capability to uninstall
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If `None` is passed, the running operating system is targeted. Default is `None`
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the uninstall

### Example

Run `dism.installed_capabilities` to get a list of installed capabilities. This will help you get the proper name to use

```
remove_dotnet35:
  dism.capability_removed:
    - name: NetFX3~~~~
```

`salt.states.win_dism.feature_installed`(*name*, *package=None*, *source=None*, *limit\_access=False*, *enable\_parent=False*, *image=None*, *restart=False*)

Install a DISM feature

#### Parameters

- **name** (*str*) -- The feature in which to install
- **package** (*Optional[str]*) -- The parent package for the feature. You do not have to specify the package if it is the Windows Foundation Package. Otherwise, use package to specify the parent package of the feature
- **source** (*str*) -- The optional source of the feature
- **limit\_access** (*bool*) -- Prevent DISM from contacting Windows Update for on-line images
- **enable\_parent** (*Optional[bool]*) -- True will enable all parent features of the specified feature
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If `None` is passed, the running operating system is targeted. Default is `None`
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the install

### Example

Run `dism.available_features` to get a list of available features. This will help you get the proper name to use

```
install_telnet_client:
  dism.feature_installed:
    - name: TelnetClient
```

`salt.states.win_dism.feature_removed(name, remove_payload=False, image=None, restart=False)`

Disables a feature.

#### Parameters

- **name** (*str*) -- The feature to disable
- **remove\_payload** (*Optional[bool]*) -- Remove the feature's payload. Must supply source when enabling in the future.
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the uninstall

### Example

Run `dism.installed_features` to get a list of installed features. This will help you get the proper name to use

```
remove_telnet_client:
  dism.feature_removed:
    - name: TelnetClient
    - remove_payload: True
```

`salt.states.win_dism.kb_removed(name, image=None, restart=False)`

Uninstall a KB package

New in version 3006.0.

#### Parameters

- **name** (*str*) -- The name of the KB. Can be with or without the KB at the beginning
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the uninstall

### Example

```
# Example using full KB name
remove_KB1231231:
  dism.package_installed:
    - name: KB1231231

# Example using just the KB number
remove_KB1231231:
  dism.package_installed:
    - name: 1231231
```

`salt.states.win_dism.package_installed`(*name*, *ignore\_check=False*, *prevent\_pending=False*, *image=None*, *restart=False*)

Install a package.

#### Parameters

- **name** (*str*) -- The package to install. Can be a .cab file, a .msu file, or a folder
- **ignore\_check** (*Optional[bool]*) -- Skip installation of the package if the applicability checks fail
- **prevent\_pending** (*Optional[bool]*) -- Skip the installation of the package if there are pending online actions
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the install

#### Example

```
install_KB123123123:
  dism.package_installed:
    - name: C:\Packages\KB123123123.cab
```

`salt.states.win_dism.package_removed`(*name*, *image=None*, *restart=False*)

Uninstall a package

#### Parameters

- **name** (*str*) -- The full path to the package. Can be either a .cab file or a folder. Should point to the original source of the package, not to where the file is installed. This can also be the name of a package as listed in `dism.installed_packages`
- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the uninstall

#### Example

```
# Example using source
remove_KB1231231:
  dism.package_installed:
    - name: C:\Packages\KB1231231.cab

# Example using name from ``dism.installed_packages``
remove_KB1231231:
  dism.package_installed:
    - name: Package_for_KB1231231~31bf3856ad364e35~amd64~~10.0.1.3
```

`salt.states.win_dism.provisioned_package_installed`(*name*, *image=None*, *restart=False*)

Provision a package on a Windows image.

New in version 3007.0.

#### Parameters

- **name** (*str*) -- The package to install. Can be one of the following:
  - .appx or .appxbundle
  - .msix or .msixbundle
  - .ppkg

The name of the file before the file extension must match the name of the package after it is installed. This name can be found by running `dism.provisioned_packages`

- **image** (*Optional[str]*) -- The path to the root directory of an offline Windows image. If None is passed, the running operating system is targeted. Default is None
- **restart** (*Optional[bool]*) -- Reboot the machine if required by the installation. Default is False

### Example

```
install_windows_media_player:
  dism.provisioned_package_installed:
    - name: C:\Packages\Microsoft.ZuneVideo_2019.22091.10036.0_neutral_~_
      ↪ 8wekyb3d8bbwe.Msixbundle
```

## 26.19.315 salt.states.win\_dns\_client

Module for configuring DNS Client on Windows systems

`salt.states.win_dns_client.dns_dhcp` (*name, interface='Local Area Connection'*)

Configure the DNS server list from DHCP Server

`salt.states.win_dns_client.dns_exists` (*name, servers=None, interface='Local Area Connection', replace=False*)

Configure the DNS server list in the specified interface

Example:

```
config_dns_servers:
  win_dns_client.dns_exists:
    - replace: True #remove any servers not in the "servers" list,
      ↪ default is False
    - servers:
      - 8.8.8.8
      - 8.8.8.9
```

`salt.states.win_dns_client.primary_suffix` (*name, suffix=None, updates=False*)

New in version 2014.7.0.

Configure the global primary DNS suffix of a DHCP client.

#### suffix

[None] The suffix which is advertised for this client when acquiring a DHCP lease When none is set, the explicitly configured DNS suffix will be removed.

#### updates

[False] Allow syncing the DNS suffix with the AD domain when the client's AD domain membership changes

```
primary_dns_suffix:
  win_dns_client.primary_suffix:
    - suffix: sub.domain.tld
    - updates: True
```

## 26.19.316 salt.states.win\_firewall

State for configuring Windows Firewall

`salt.states.win_firewall.add_rule` (*name*, *localport*, *protocol*='tcp', *action*='allow', *dir*='in', *remoteip*='any')

Add a new inbound or outbound rule to the firewall policy

### Parameters

- **name** (*str*) -- The name of the rule. Must be unique and cannot be "all". Required.
- **localport** (*int*) -- The port the rule applies to. Must be a number between 0 and 65535. Can be a range. Can specify multiple ports separated by commas. Required.
- **protocol** (*Optional[str]*) -- The protocol. Can be any of the following:
  - A number between 0 and 255
  - icmpv4
  - icmpv6
  - tcp
  - udp
  - any
- **action** (*Optional[str]*) -- The action the rule performs. Can be any of the following:
  - allow
  - block
  - bypass
- **dir** (*Optional[str]*) -- The direction. Can be `in` or `out`.
- **remoteip** (*Optional [str]*) -- The remote IP. Can be any of the following:
  - any
  - localsubnet
  - dns
  - dhcp
  - wins
  - defaultgateway
  - Any valid IPv4 address (192.168.0.12)
  - Any valid IPv6 address (2002:9b3b:1a31:4:208:74ff:fe39:6c43)
  - Any valid subnet (192.168.1.0/24)
  - Any valid range of IP addresses (192.168.0.1-192.168.0.12)
  - A list of valid IP addresses

Can be combinations of the above separated by commas.

New in version 2016.11.6.

Example:

```
open_smb_port:
  win_firewall.add_rule:
    - name: SMB (445)
    - localport: 445
    - protocol: tcp
    - action: allow
```

`salt.states.win_firewall.disabled` (*name*='allprofiles')

Disable all the firewall profiles (Windows only)

### Parameters

- **profile** (*Optional[str]*) -- The name of the profile to disable. Default is `allprofiles`. Valid options are:
  - allprofiles
  - domainprofile

- privateprofile
- publicprofile

Example:

```
# To disable the domain profile
disable_domain:
  win_firewall.disabled:
    - name: domainprofile

# To disable all profiles
disable_all:
  win_firewall.disabled:
    - name: allprofiles
```

`salt.states.win_firewall.enabled(name='allprofiles')`

Enable all the firewall profiles (Windows only)

Parameters

**profile** (*Optional[str]*) -- The name of the profile to enable. Default is allprofiles. Valid options are:

- allprofiles
- domainprofile
- privateprofile
- publicprofile

Example:

```
# To enable the domain profile
enable_domain:
  win_firewall.enabled:
    - name: domainprofile

# To enable all profiles
enable_all:
  win_firewall.enabled:
    - name: allprofiles
```

### 26.19.317 salt.states.win\_iis

Microsoft IIS site management

This module provides the ability to add/remove websites and application pools from Microsoft IIS.

New in version 2016.3.0.

`salt.states.win_iis.container_setting(name, container, settings=None)`

Set the value of the setting for an IIS container.

Parameters

- **name** (*str*) -- The name of the IIS container.
- **container** (*str*) -- The type of IIS container. The container types are: AppPools, Sites, SslBindings
- **settings** (*str*) -- A dictionary of the setting names and their values. Example of usage for the AppPools container:

```

site0-appool-setting:
  win_iis.container_setting:
    - name: site0
    - container: AppPools
    - settings:
      managedPipelineMode: Integrated
      processModel.maxProcesses: 1
      processModel.userName: TestUser
      processModel.password: TestPassword
      processModel.identityType: SpecificUser

```

Example of usage for the Sites container:

```

site0-site-setting:
  win_iis.container_setting:
    - name: site0
    - container: Sites
    - settings:
      logFile.logFormat: W3C
      logFile.period: Daily
      limits.maxUrlSegments: 32

```

`salt.states.win_iis.create_app(name, site, sourcepath, apppool=None)`

Create an IIS application.

#### Parameters

- **name** (*str*) -- The IIS application.
- **site** (*str*) -- The IIS site name.
- **sourcepath** (*str*) -- The physical path.
- **apppool** (*str*) -- The name of the IIS application pool.

Example of usage with only the required arguments:

```

site0-v1-app:
  win_iis.create_app:
    - name: v1
    - site: site0
    - sourcepath: C:\inetpub\site0\v1

```

Example of usage specifying all available arguments:

```

site0-v1-app:
  win_iis.create_app:
    - name: v1
    - site: site0
    - sourcepath: C:\inetpub\site0\v1
    - apppool: site0

```

`salt.states.win_iis.create_appool(name)`

Create an IIS application pool.

#### Parameters

- **name** (*str*) -- The name of the IIS application pool.

Usage:

```

site0-appool:
  win_iis.create_appool:
    - name: site0

```

`salt.states.win_iis.create_binding`(*name*, *site*, *hostheader*=", *ipaddress*="\*", *port*=80, *protocol*='http', *sslflags*=0)

Create an IIS binding.

#### Parameters

- **site** (*str*) -- The IIS site name.
- **hostheader** (*str*) -- The host header of the binding.
- **ipaddress** (*str*) -- The IP address of the binding.
- **port** (*str*) -- The TCP port of the binding.
- **protocol** (*str*) -- The application protocol of the binding.
- **sslflags** (*str*) -- The flags representing certificate type and storage of the binding.

Example of usage with only the required arguments:

```

site0-https-binding:
  win_iis.create_binding:
    - site: site0

```

Example of usage specifying all available arguments:

```

site0-https-binding:
  win_iis.create_binding:
    - site: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443
    - protocol: https
    - sslflags: 0

```

`salt.states.win_iis.create_cert_binding`(*name*, *site*, *hostheader*=", *ipaddress*="\*", *port*=443, *sslflags*=0)

Assign a certificate to an IIS binding.

#### Parameters

- **name** (*str*) -- The thumbprint of the certificate.
- **site** (*str*) -- The IIS site name.
- **hostheader** (*str*) -- The host header of the binding.
- **ipaddress** (*str*) -- The IP address of the binding.
- **port** (*str*) -- The TCP port of the binding.
- **sslflags** (*str*) -- Flags representing certificate type and certificate storage of the binding.

Example of usage with only the required arguments:

```

site0-cert-binding:
  win_iis.create_cert_binding:
    - name: 998877665544332211000AAABBBCCDDDEEEFFF
    - site: site0

```

Example of usage specifying all available arguments:

```

site0-cert-binding:
  win_iis.create_cert_binding:

```

(continues on next page)

(continued from previous page)

```

- name: 9988776655443322111000AAABBBCCDDDEEEFFF
- site: site0
- hostheader: site0.local
- ipaddress: 192.168.1.199
- port: 443
- sslflags: 1

```

New in version 2016.11.0.

`salt.states.win_iis.create_vdir` (*name*, *site*, *sourcepath*, *app*='')

Create an IIS virtual directory.

**Parameters**

- **name** (*str*) -- The virtual directory name.
- **site** (*str*) -- The IIS site name.
- **sourcepath** (*str*) -- The physical path.
- **app** (*str*) -- The IIS application.

Example of usage with only the required arguments:

```

site0-foo-vdir:
  win_iis.create_vdir:
    - name: foo
    - site: site0
    - sourcepath: C:\inetpub\vdms\foo

```

Example of usage specifying all available arguments:

```

site0-foo-vdir:
  win_iis.create_vdir:
    - name: foo
    - site: site0
    - sourcepath: C:\inetpub\vdms\foo
    - app: v1

```

`salt.states.win_iis.deployed` (*name*, *sourcepath*, *apppool*="", *hostheader*="", *ipaddress*="", *port*=80, *protocol*='http')

Ensure the website has been deployed.

**Parameters**

- **name** (*str*) -- The IIS site name.
- **sourcepath** (*str*) -- The physical path of the IIS site.
- **apppool** (*str*) -- The name of the IIS application pool.
- **hostheader** (*str*) -- The host header of the binding.
- **ipaddress** (*str*) -- The IP address of the binding.
- **port** (*str*) -- The TCP port of the binding.
- **protocol** (*str*) -- The application protocol of the binding.

Example of usage with only the required arguments. This will default to using the default application pool assigned by IIS:

```

site0-deployed:
  win_iis.deployed:
    - name: site0
    - sourcepath: C:\inetpub\site0

```

Example of usage specifying all available arguments:

```

site0-deployed:
  win_iis.deployed:
    - name: site0
    - sourcepath: C:\inetpub\site0
    - apppool: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443
    - protocol: https

```

`salt.states.win_iis.remove_app(name, site)`

Remove an IIS application.

Parameters

- **name** (*str*) -- The application name.
- **site** (*str*) -- The IIS site name.

Usage:

```

site0-v1-app-remove:
  win_iis.remove_app:
    - name: v1
    - site: site0

```

`salt.states.win_iis.remove_apppool(name)`

Remove an IIS application pool.

Parameters

- **name** (*str*) -- The name of the IIS application pool.

Usage:

```

defaultapppool-remove:
  win_iis.remove_apppool:
    - name: DefaultAppPool

```

`salt.states.win_iis.remove_binding(name, site, hostheader="", ipaddress="", port=80)`

Remove an IIS binding.

Parameters

- **site** (*str*) -- The IIS site name.
- **hostheader** (*str*) -- The host header of the binding.
- **ipaddress** (*str*) -- The IP address of the binding.
- **port** (*str*) -- The TCP port of the binding.

Example of usage with only the required arguments:

```

site0-https-binding-remove:
  win_iis.remove_binding:
    - site: site0

```

Example of usage specifying all available arguments:

```

site0-https-binding-remove:
  win_iis.remove_binding:
    - site: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443

```

`salt.states.win_iis.remove_cert_binding(name, site, hostheader="", ipaddress="*", port=443)`

Remove a certificate from an IIS binding.

**Parameters**

- **name** (*str*) -- The thumbprint of the certificate.
- **site** (*str*) -- The IIS site name.
- **hostheader** (*str*) -- The host header of the binding.
- **ipaddress** (*str*) -- The IP address of the binding.
- **port** (*str*) -- The TCP port of the binding.

Example of usage with only the required arguments:

```
site0-cert-binding-remove:
  win_iis.remove_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0
```

Example of usage specifying all available arguments:

```
site0-cert-binding-remove:
  win_iis.remove_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0
    - hostheader: site0.local
    - ipaddress: 192.168.1.199
    - port: 443
```

New in version 2016.11.0.

`salt.states.win_iis.remove_site(name)`

Delete a website from IIS.

**Parameters**

- **name** (*str*) -- The IIS site name.

Usage:

```
defaultwebsite-remove:
  win_iis.remove_site:
    - name: Default Web Site
```

`salt.states.win_iis.remove_vdir(name, site, app='/')`

Remove an IIS virtual directory.

**Parameters**

- **name** (*str*) -- The virtual directory name.
- **site** (*str*) -- The IIS site name.
- **app** (*str*) -- The IIS application.

Example of usage with only the required arguments:

```
site0-foo-vdir-remove:
  win_iis.remove_vdir:
    - name: foo
    - site: site0
```

Example of usage specifying all available arguments:

```
site0-foo-vdir-remove:
  win_iis.remove_vdir:
```

(continues on next page)

(continued from previous page)

```
- name: foo
- site: site0
- app: v1
```

`salt.states.win_iis.set_app(name, site, settings=None)`

New in version 2017.7.0.

Set the value of the setting for an IIS web application.

---

**Note:** This function only configures existing app. Params are case sensitive.

---

#### Parameters

- **name** (*str*) -- The IIS application.
- **site** (*str*) -- The IIS site name.
- **settings** (*str*) -- A dictionary of the setting names and their values.

Available settings:

- `physicalPath` - The physical path of the webapp
- `applicationPool` - The application pool for the webapp
- `userName` "connectAs" user
- `password` "connectAs" password for user

#### Return type

`bool`

Example of usage:

```
site0-webapp-setting:
  win_iis.set_app:
    - name: app0
    - site: Default Web Site
    - settings:
      userName: domain\\user
      password: pass
      physicalPath: c:\inetpub\wwwroot
      applicationPool: appPool0
```

`salt.states.win_iis.webconfiguration_settings(name, settings=None)`

Set the value of webconfiguration settings.

#### Parameters

- **name** (*str*) -- The name of the IIS PSPath containing the settings. Possible PSPaths are : MACHINE, MACHINE/WEBROOT, IIS:, IIS:Sitessitename, ...
- **settings** (*dict*) -- Dictionaries of dictionaries. You can match a specific item in a collection with this syntax inside a key: 'Collection[{name: site0}].logFile.directory'

Example of usage for the MACHINE/WEBROOT PSPath:

```
MACHINE-WEBROOT-level-security:
  win_iis.webconfiguration_settings:
    - name: 'MACHINE/WEBROOT'
    - settings:
      system.web/authentication/forms:
        requireSSL: True
        protection: "All"
```

(continues on next page)

(continued from previous page)

```

credentials.passwordFormat: "SHA1"
system.web/httpCookies:
  httpOnlyCookies: True

```

Example of usage for the IIS:\Sites\site0 PSPATH:

```

site0-IIS-Sites-level-security:
  win_iis.webconfiguration_settings:
    - name: 'IIS:\Sites\site0'
    - settings:
      system.webServer/httpErrors:
        errorMode: "DetailedLocalOnly"
      system.webServer/security/requestFiltering:
        allowDoubleEscaping: False
        verbs.Collection:
          - verb: TRACE
            allowed: False
        fileExtensions.allowUnlisted: False

```

Example of usage for the IIS:\ PSPATH with a collection matching:

```

site0-IIS-level-security:
  win_iis.webconfiguration_settings:
    - name: 'IIS:\'
    - settings:
      system.applicationHost/sites:
        'Collection[{name: site0}].logFile.directory': 'C:\logs\iis\
→site0'

```

### 26.19.318 salt.states.win\_lgpo

#### Manage Windows Local Group Policy

New in version 2016.11.0.

This state module allows you to configure local Group Policy on Windows. You can ensure the setting of a single policy or multiple policies in one pass.

Single policies must specify the policy name, the setting, and the policy class (Machine/User/Both). Here are some examples for setting a single policy setting.

Example single policy configuration:

```

Ensure Account Lockout Duration:
lgpo.set:
  - name: Account lockout duration
  - setting: 90
  - policy_class: Machine

```

Example using abbreviated form:

```

Account lockout duration:
lgpo.set:

```

(continues on next page)

(continued from previous page)

- **setting:** 120
- **policy\_class:** Machine

It is also possible to set multiple policies in a single state. This is done by setting the settings under either *computer\_policy* or *user\_policy*. Here are some examples for setting multiple policy settings in a single state.

Multiple policy configuration

#### Company Local Group Policy:

##### lgpo.set:

##### - computer\_policy:

##### Deny log on locally:

- Guest

**Account lockout duration:** 120

**Account lockout threshold:** 10

**Reset account lockout counter after:** 120

**Enforce password history:** 24

**Maximum password age:** 60

**Minimum password age:** 1

**Minimum password length:** 14

**Password must meet complexity requirements:** Enabled

**Store passwords using reversible encryption:** Disabled

##### Configure Automatic Updates:

**Configure automatic updating:** 4 - Auto download and schedule

→the intsalt

**Scheduled install day:** 7 - Every Saturday

**Scheduled install time:** 17:00

##### Specify intranet Microsoft update service location:

**Set the intranet update service for detecting updates:** http://

→mywsus

**Set the intranet statistics server:** http://mywsus

##### - user\_policy:

**Do not process the legacy run list:** Enabled

#### server\_policy:

##### lgpo.set:

##### - computer\_policy:

Maximum password age: 60

Minimum password age: 1

Minimum password length: 14

Account lockout duration: 120

Account lockout threshold: 10

Reset account lockout counter after: 120

Manage auditing and security log:

- "BUILTIN\Administrators"

Replace a process level token:

- "NT AUTHORITY\NETWORK SERVICE"

- "NT AUTHORITY\LOCAL SERVICE"

"Accounts: Guest account status": Disabled

"Accounts: Rename guest account": Not\_4\_U

"Audit: Audit the use of Backup and Restore privilege": Enabled

"Interactive logon: Do not display last user name": Enabled

    - cumulative_rights_assignments: True

```

Some policy settings can't be set on their own and require that other policy settings are set at the same time. It can be difficult to figure out what additional settings need to be applied. The easiest way to do this is to modify the setting manually using the Group Policy Editor (`gpedit.msc`) on the machine. Then `get` the policy settings configured on that machine. Use the following command:

```

.. code-block:: bash

    salt-call --local lgpo.get machine

```

(continues on next page)

(continued from previous page)

For example, if I want to set the Windows Update settings for a Windows Server 2016 machine I would go into the Group Policy Editor (``gpedit.msc``) and configure the group policy. That policy can be found at: Computer Configuration -> Administrative Templates -> Windows Components -> Windows Update -> Configure Automatic Updates. You have the option to "Enable" the policy and set some configuration options. In this example, just click "Enable" and accept the default configuration options. Click "OK" to apply the setting.

Now run the ``get`` command as shown above. You will find the following in the minion return:

```
.. code-block:: bash

  Windows Components\Windows Update\Configure Automatic Updates:
  -----
  Configure automatic updating:
    3 - Auto download and notify for install
  Install during automatic maintenance:
    False
  Install updates for other Microsoft products:
    False
  Scheduled install day:
    0 - Every day
  Scheduled install time:
    03:00
```

This shows you that to enable the "Configure Automatic Updates" policy you also have to configure the following settings:

- Configure automatic updating
- Install during automatic maintenance
- Install updates for other Microsoft products
- Scheduled install day
- Scheduled install time

So, if you were writing a state for the above policy, it would look like this:

```
.. code-block:: bash

  configure_windows_update_settings:
    lgpo.set:
      - computer_policy:
          Configure Automatic Updates:
            Configure automatic updating: 3 - Auto download and notify for
↪install
            Install during automatic maintenance: False
            Install updates for other Microsoft products: False
            Scheduled install day: 0 - Every day
            Scheduled install time: 03:00
```

(continues on next page)

.. note::

It is important that you put names of policies and settings exactly as they are displayed in the return. That includes capitalization and punctuation such as periods, dashes, etc. This rule applies to both the setting name and the setting value.

.. warning::

From time to time Microsoft updates the Administrative templates on the machine. This can cause the policy name to change or the list of settings that must be applied at the same time. These settings often change between versions of Windows as well. For example, Windows Server 2019 allows you to also specify a specific week of the month to apply the update.

Another thing note is the long policy name returned by the ``get`` function:

.. code-block:: bash

```
Windows Components\Windows Update\Configure Automatic Updates:
```

When we wrote the state for this policy we only used the final portion of the policy name, ``Configure Automatic Updates``. This usually works fine, but if you are having problems, you may try the long policy name.

When writing the long name in a state file either wrap the name in single quotes to make yaml see it as raw data, or escape the back slashes.

.. code-block:: bash

```
'Windows Components\Windows Update\Configure Automatic Updates:'
```

or

```
Windows Components\\Windows Update\\Configure Automatic Updates:
```

```
salt.states.win_lgpo.set_(name, setting=None, policy_class=None, computer_policy=None,
                        user_policy=None, cumulative_rights_assignments=True,
                        adml_language='en-US', refresh_cache=False)
```

Ensure the specified policy is set.

**Warning:** The `setting` argument cannot be used in conjunction with the `computer_policy` or `user_policy` arguments

#### Parameters

- **name** (*str*) -- The name of a single policy to configure
- **setting** (*str*, *dict*, *list*) -- The configuration setting for the single named policy. If this argument is used the `computer_policy` / `user_policy` arguments will be ignored

- **policy\_class** (*str*) -- The policy class of the single named policy to configure. This can be `machine`, `user`, or `both`
- **computer\_policy** (*dict*) -- A dictionary of containing the policy name and key/value pairs of a set of computer policies to configure. If this argument is used, the `name / policy_class` arguments will be ignored
- **user\_policy** (*dict*) -- A dictionary of containing the policy name and key/value pairs of a set of user policies to configure. If this argument is used, the `name / policy_class` arguments will be ignored
- **cumulative\_rights\_assignments** (*bool*) -- If user rights assignments are being configured, determines if any user right assignment policies specified will be cumulative or explicit
- **adml\_language** (*str*) -- The adml language to use for ADMX policy data/display conversions. Default is `en-US`
- **refresh\_cache** (*bool*) -- Clear the cached policy definitions before applying the state. This is useful when the underlying policy files (ADMX/ADML) have been added/modified in the same state. This will allow those new policies to be picked up. This adds time to the state run when applied to multiple states within the same run. Therefore, it is best to only apply this to the first policy that is applied. For individual runs this will have no effect. Default is `False`

New in version 3006.8.

New in version 3007.1.

### 26.19.319 salt.states.win\_lgpo\_reg

#### LGPO - Registry.pol

New in version 3006.0.

A state module for working with registry based policies in Windows Local Group Policy (LGPO). This module contains functions for working with the `Registry.pol` file. The `Registry.pol` file is the source of truth for registry settings and LGPO.

Group Policy is refreshed every 90 seconds by default. During that refresh the contents of the `Registry.pol` file are applied to the Registry. If the setting is changed outside of Group Policy to something other than what is contained in the `Registry.pol` file, it will be changed back during the next refresh.

In the Group Policy Editor (`gpedit.msc`) these policies can be set to three states:

- Not Configured
- Enabled
- Disabled

A policy that is "Not Configured" does not have an entry in the `Registry.pol` file. A Group Policy refresh will not make any changes to key/value pairs in the registry that are not specified in the `Registry.pol` file.

An "Enabled" policy will have an entry in the `Registry.pol` files that contains its key path, value name, value type, value size, and value data. When Group Policy is refreshed, existing values will be overwritten with those contained in the `Registry.pol` file.

A "Disabled" policy will have an entry in the `Registry.pol` file with the key path and the value name, but the value name will be prepended with `**del.`. When Group Policy is refreshed the key/value will be deleted from the registry. If the key contains no values, it will also be deleted.

## Working with LGPO Reg

The easiest way to figure out the values needed for this module is to set the policy using the Group Policy Editor (`gpedit.msc`) and then run the `lgpo_reg.read_reg_pol` function. This function will display a dictionary of all registry-based policies in the `Registry.pol` file. From its return you can get the `key`, `v_name`, `v_type`, and `v_data` required to configure that policy.

---

**Note:** Not all policies in the Group Policy Editor (`gpedit.msc`) that write to the registry make that change in the `Registry.pol` file. Those policies could still be enforced via the `Registry.pol` file... theoretically. But you will have to find the values needed to set them with this module using a different method.

---

`salt.states.win_lgpo_reg.value_absent` (*name*, *key*, *policy\_class*='Machine')

Ensure a registry setting is not present in the Registry.pol file.

### Parameters

- **key** (*str*) -- The registry key path
- **name** (*str*) -- The registry value name within the key
- **policy\_class** (*str*) -- The registry class to write to. Can be one of the following:
  - Computer
  - Machine
  - User

Default is Machine

CLI Example:

```
# Using the name parameter in the definition
set_reg_pol_value:
  lgpo_reg.value_absent:
    - key: SOFTWARE\MyKey
    - name: MyValue
    - policy_class: Machine

# Using the name as the parameter and modifying the User policy
MyValue:
  lgpo_reg.value_absent:
    - key: SOFTWARE\MyKey
    - policy_class: User
```

`salt.states.win_lgpo_reg.value_disabled` (*name*, *key*, *policy\_class*='Machine')

Ensure a registry setting is disabled in the Registry.pol file.

### Parameters

- **key** (*str*) -- The registry key path
- **name** (*str*) -- The registry value name within the key
- **policy\_class** (*str*) -- The registry class to write to. Can be one of the following:
  - Computer
  - Machine
  - User

Default is Machine

CLI Example:

```
# Using the name parameter in the definition
set_reg_pol_value:
  lgpo_reg.value_disabled:
```

(continues on next page)

(continued from previous page)

```

- key: SOFTWARE\MyKey
- name: MyValue
- policy_class: Machine

# Using the name as the parameter and modifying the User policy
MyValue:
  lgpo_reg.value_disabled:
    - key: SOFTWARE\MyKey
    - policy_class: User

```

```

salt.states.win_lgpo_reg.value_present(name, key, v_data, v_type='REG_DWORD',
                                       policy_class='Machine')

```

Ensure a registry setting is present in the Registry.pol file.

#### Parameters

- **name** (*str*) -- The registry value name within the key
- **key** (*str*) -- The registry key path
- **v\_data** (*str*) -- The registry value
- **v\_type** (*str*) -- The registry value type. Must be one of the following:
  - REG\_BINARY
  - REG\_DWORD
  - REG\_EXPAND\_SZ
  - REG\_MULTI\_SZ
  - REG\_QWORD
  - REG\_SZ
 Default is REG\_DWORD
- **policy\_class** (*str*) -- The registry class to write to. Can be one of the following:
  - Computer
  - Machine
  - User
 Default is Machine

CLI Example:

```

# Using the name parameter in the definition
set_reg_pol_value:
  lgpo_reg.value_present:
    - key: SOFTWARE\MyKey
    - name: MyValue
    - v_type: REG_SZ
    - v_data: "some string data"
    - policy_class: Machine

# Using the name as the parameter and modifying the User policy
MyValue:
  lgpo_reg.value_present:
    - key: SOFTWARE\MyKey
    - v_type: REG_SZ
    - v_data: "some string data"
    - policy_class: User

```

## 26.19.320 salt.states.win\_license

### Installation and activation of windows licenses

Install and activate windows licenses

```
XXXXX-XXXXX-XXXXX-XXXXX-XXXXX:  
license.activate
```

`salt.states.win_license.activate(name)`

Install and activate the given product key

**name**

The 5x5 product key given to you by Microsoft

## 26.19.321 salt.states.win\_network

### Configuration of network interfaces on Windows hosts

New in version 2014.1.0.

This module provides the `network` state(s) on Windows hosts. DNS servers, IP addresses and default gateways can currently be managed.

Below is an example of the configuration for an interface that uses DHCP for both DNS servers and IP addresses:

```
Local Area Connection #2:  
network.managed:  
- dns_proto: dhcp  
- ip_proto: dhcp
```

---

**Note:** Both the `dns_proto` and `ip_proto` arguments are required.

---

Static DNS and IP addresses can be configured like so:

```
Local Area Connection #2:  
network.managed:  
- dns_proto: static  
- dns_servers:  
  - 8.8.8.8  
  - 8.8.4.4  
- ip_proto: static  
- ip_addrs:  
  - 10.2.3.4/24
```

---

**Note:** IP addresses are specified using the format `<ip-address>/<subnet-length>`. Salt provides a convenience function called `ip.get_subnet_length` to calculate the subnet length from a netmask.

---

Optionally, if you are setting a static IP address, you can also specify the default gateway using the `gateway` parameter:

```
Local Area Connection #2:
```

```
network.managed:
- dns_proto: static
- dns_servers:
  - 8.8.8.8
  - 8.8.4.4
- ip_proto: static
- ip_addrs:
  - 10.2.3.4/24
- gateway: 10.2.3.1
```

```
salt.states.win_network.managed(name, dns_proto=None, dns_servers=None, ip_proto=None,
                                ip_addrs=None, gateway=None, enabled=True, **kwargs)
```

Ensure that the named interface is configured properly.

#### Parameters

- **name** (*str*) -- The name of the interface to manage
- **dns\_proto** (*str*) -- None Set to `static` and use the `dns_servers` parameter to provide a list of DNS nameservers. set to `dhcp` to use DHCP to get the DNS servers.
- **dns\_servers** (*list*) -- None A list of static DNS servers. To clear the list of DNS servers pass an empty list (`[]`). None will make no changes.
- **ip\_proto** (*str*) -- None Set to `static` and use the `ip_addrs` and (optionally) `gateway` parameters to provide a list of static IP addresses and the default gateway. Set to `dhcp` to use DHCP.
- **ip\_addrs** (*list*) -- None A list of static IP addresses with netmask flag, ie: `192.168.0.11/24`
- **gateway** (*str*) -- None The gateway to set for the interface
- **enabled** (*bool*) -- True Set to `False` to ensure that this interface is disabled.

#### Returns

A dictionary of old and new settings

#### Return type

`dict`

Example:

```
Ethernet1:
network.managed:
- dns_proto: static
- dns_servers:
  - 8.8.8.8
  - 8.8.8.4
- ip_proto: static
- ip_addrs:
  - 192.168.0.100/24
```

Clear DNS entries example:

```
Ethernet1:
network.managed:
- dns_proto: static
- dns_servers: []
- ip_proto: dhcp
```

### 26.19.322 salt.states.win\_path

Manage the Windows System PATH

`salt.states.win_path.absent` (*name*)

Remove the directory from the SYSTEM path

Example:

```
'C:\sysinternals':
  win_path.absent
```

`salt.states.win_path.exists` (*name*, *index=None*)

Add the directory to the system PATH at index location

**index**

Position where the directory should be placed in the PATH. This is 0-indexed, so 0 means to prepend at the very start of the PATH.

---

**Note:** If the index is not specified, and the directory needs to be added to the PATH, then the directory will be appended to the PATH, and this state will not enforce its location within the PATH.

---

Examples:

```
'C:\python27':
  win_path.exists

'C:\sysinternals':
  win_path.exists:
    - index: 0

'C:\mystuff':
  win_path.exists:
    - index: -1
```

### 26.19.323 salt.states.win\_pki

Microsoft certificate management via the Pki PowerShell module.

**platform**

Windows

New in version 2016.11.0.

`salt.states.win_pki.import_cert` (*name*, *cert\_format='cer'*, *context='LocalMachine'*, *store='My'*, *exportable=True*, *password=""*, *saltenv='base'*)

Import the certificate file into the given certificate store.

**Parameters**

- **name** (*str*) -- The path of the certificate file to import.
- **cert\_format** (*str*) -- The certificate format. Specify 'cer' for X.509, or 'pfx' for PKCS #12.
- **context** (*str*) -- The name of the certificate store location context.
- **store** (*str*) -- The name of the certificate store.
- **exportable** (*bool*) -- Mark the certificate as exportable. Only applicable to pfx format.

- **password** (*str*) -- The password of the certificate. Only applicable to pfx format.
- **saltenv** (*str*) -- The environment the file resides in.

Example of usage with only the required arguments:

```
site0-cert-imported:
  win_pki.import_cert:
    - name: salt://win/webserver/certs/site0.cer
```

Example of usage specifying all available arguments:

```
site0-cert-imported:
  win_pki.import_cert:
    - name: salt://win/webserver/certs/site0.pfx
    - cert_format: pfx
    - context: LocalMachine
    - store: My
    - exportable: True
    - password: TestPassword
    - saltenv: base
```

`salt.states.win_pki.remove_cert` (*name*, *thumbprint*, *context*='LocalMachine', *store*='My')

Remove the certificate from the given certificate store.

Parameters

- **thumbprint** (*str*) -- The thumbprint value of the target certificate.
- **context** (*str*) -- The name of the certificate store location context.
- **store** (*str*) -- The name of the certificate store.

Example of usage with only the required arguments:

```
site0-cert-removed:
  win_pki.remove_cert:
    - thumbprint: 9988776655443322111000AAABBBCCDDDEEEFFF
```

Example of usage specifying all available arguments:

```
site0-cert-removed:
  win_pki.remove_cert:
    - thumbprint: 9988776655443322111000AAABBBCCDDDEEEFFF
    - context: LocalMachine
    - store: My
```

### 26.19.324 salt.states.win\_powercfg

This module allows you to control the power settings of a windows minion via powercfg.

New in version 2015.8.0.

```
# Set timeout to 30 minutes on battery power
monitor:
  powercfg.set_timeout:
    - value: 30
    - power: dc
```

`salt.states.win_powercfg.set_timeout` (*name*, *value*, *power*='ac', *scheme*=None)

Set the sleep timeouts of specific items such as disk, monitor, etc.

**Parameters**

- **name** (*str*) -- The setting to change, can be one of the following:
  - monitor
  - disk
  - standby
  - hibernate
- **value** (*int*) -- The amount of time in minutes before the item will timeout
- **power** (*str*) -- Set the value for AC or DC power. Default is ac. Valid options are:
  - ac (AC Power)
  - dc (Battery)
- **scheme** (*str*) -- The scheme to use, leave as None to use the current. Default is None. This can be the GUID or the Alias for the Scheme. Known Aliases are:
  - SCHEME\_BALANCED - Balanced
  - SCHEME\_MAX - Power saver
  - SCHEME\_MIN - High performance

CLI Example:

```
# Set monitor timeout to 30 minutes on Battery
monitor:
  powercfg.set_timeout:
    - value: 30
    - power: dc

# Set disk timeout to 10 minutes on AC Power
disk:
  powercfg.set_timeout:
    - value: 10
    - power: ac
```

### 26.19.325 salt.states.win\_servermanager

Manage Windows features via the ServerManager powershell module. Can install and remove roles/features.

**maintainer**

Shane Lee &lt;slee@saltstack.com&gt;

**platform**

Windows Server 2008R2 or greater

**depends**

win\_servermanager.install

**depends**

win\_servermanager.remove

**salt.states.win\_servermanager.installed** (*name*, *features=None*, *recurse=False*, *restart=False*, *source=None*, *exclude=None*, *\*\*kwargs*)

Install the windows feature. To install a single feature, use the *name* parameter. To install multiple features, use the *features* parameter.

---

**Note:** Some features require reboot after un/installation. If so, until the server is restarted other features can not be installed!

---

**Parameters**

- **name** (*str*) -- Short name of the feature (the right column in `win_servermanager.list_available`). This can be a single feature or a string of features in a comma delimited list (no spaces)

---

**Note:** A list is not allowed in the name parameter of any state. Use the `features` parameter if you want to pass the features as a list

---

- **features** (*Optional[list]*) -- A list of features to install. If this is passed it will be used instead of the `name` parameter.

New in version 2018.3.0.

- **recurse** (*Optional[bool]*) -- Install all sub-features as well. If the feature is installed but one of its sub-features are not installed set this will install additional sub-features. This argument was previously renamed from `force`. To ensure backwards compatibility `force` will continue to work but please update your states to use the preferred `recurse` arg.
- **source** (*Optional[str]*) -- Path to the source files if missing from the target system. None means that the system will use windows update services to find the required files. Default is None
- **restart** (*Optional[bool]*) -- Restarts the computer when installation is complete, if required by the role/feature installed. Default is False
- **exclude** (*Optional[str]*) -- The name of the feature to exclude when installing the named feature. This can be a single feature, a string of features in a comma-delimited list (no spaces), or a list of features.

**Warning:** As there is no exclude option for the `Add-WindowsFeature` or `Install-WindowsFeature` PowerShell commands the features named in `exclude` will be installed with other sub-features and will then be removed. If the feature named in `exclude` is not a sub-feature of one of the installed items it will still be removed.

### Example

Do not use the role or feature names mentioned in the PKGMGR documentation. To get a list of available roles and features run the following command:

```
salt <minion_name> win_servermanager.list_available
```

Use the name in the right column of the results.

```
# Installs the IIS Web Server Role (Web-Server)
IIS-WebServerRole:
  win_servermanager.installed:
    - recurse: True
    - name: Web-Server

# Install multiple features, exclude the Web-Service
install_multiple_features:
  win_servermanager.installed:
    - recurse: True
    - features:
      - RemoteAccess
```

(continues on next page)

(continued from previous page)

- ```

- XPS-Viewer
- SNMP-Service
- exclude:
- Web-Server

```

`salt.states.win_servermanager.removed(name, features=None, remove_payload=False, restart=False)`

Remove the windows feature To remove a single feature, use the `name` parameter. To remove multiple features, use the `features` parameter.

#### Parameters

- **name** (*str*) -- Short name of the feature (the right column in `win_servermanager.list_available`). This can be a single feature or a string of features in a comma-delimited list (no spaces)

---

**Note:** A list is not allowed in the name parameter of any state. Use the `features` parameter if you want to pass the features as a list

---

- **features** (*Optional[list]*) -- A list of features to remove. If this is passed it will be used instead of the `name` parameter.

New in version 2018.3.0.

- **remove\_payload** (*Optional[bool]*) -- True will cause the feature to be removed from the side-by-side store. To install the feature in the future you will need to specify the `source`
- **restart** (*Optional[bool]*) -- Restarts the computer when uninstall is complete if required by the role/feature uninstall. Default is False

---

**Note:** Some features require a reboot after uninstall. If so the feature will not be completely uninstalled until the server is restarted.

---

#### Example

Do not use the role or feature names mentioned in the PKGMGR documentation. To get a list of available roles and features run the following command:

```
salt <minion_name> win_servermanager.list_available
```

Use the name in the right column of the results.

```

# Uninstall the IIS Web Server Rol (Web-Server)
IIS-WebserverRole:
  win_servermanager.removed:
    - name: Web-Server

# Uninstall multiple features, reboot if required
uninstall_multiple_features:
  win_servermanager.removed:
    - features:
      - RemoteAccess
      - XPX-Viewer
      - SNMP-Service
    - restart: True

```

## 26.19.326 salt.states.win\_shortcut

State module for creating shortcuts on Windows. Handles file shortcuts (*.lnk*) and url shortcuts (*.url*). Allows for the configuration of icons and hot keys on file shortcuts. Changing the icon and hot keys are unsupported for url shortcuts.

New in version 3005.

```
salt.states.win_shortcut.present(name, arguments="", description="", hot_key="", icon_location="",
                                icon_index=0, target="", window_style='Normal', working_dir="",
                                backup=False, force=False, make_dirs=False, user=None)
```

Create a new shortcut. This can be a file shortcut (*.lnk*) or a url shortcut (*.url*).

### Parameters

- **name** (*str*) -- The full path to the shortcut
- **target** (*str*) -- The full path to the target
- **arguments** (*str*, *optional*) -- Any arguments to be passed to the target
- **description** (*str*, *optional*) -- The description for the shortcut. This is shown in the Comment field of the dialog box. Default is an empty string
- **hot\_key** (*str*, *optional*) -- A combination of hot Keys to trigger this shortcut. This is something like Ctrl+Alt+D. This is shown in the Shortcut key field in the dialog box. Default is an empty string. Available options are:
  - Ctrl
  - Alt
  - Shift
  - Ext
- **icon\_index** (*int*, *optional*) -- The index for the icon to use in files that contain multiple icons. Default is 0
- **icon\_location** (*str*, *optional*) -- The full path to a file containing icons. This is shown in the Change Icon dialog box by clicking the Change Icon button. If no file is specified and a binary is passed as the target, Windows will attempt to get the icon from the binary file. Default is an empty string
- **window\_style** (*str*, *optional*) -- The window style the program should start in. This is shown in the Run field of the dialog box. Default is Normal. Valid options are:
  - Normal
  - Minimized
  - Maximized
- **working\_dir** (*str*, *optional*) -- The full path to the working directory for the program to run in. This is shown in the Start in field of the dialog box.
- **backup** (*bool*, *optional*) -- If there is already a shortcut with the same name, set this value to True to backup the existing shortcut and continue creating the new shortcut. Default is False
- **force** (*bool*, *optional*) -- If there is already a shortcut with the same name and you aren't backing up the shortcut, set this value to True to remove the existing shortcut and create a new with these settings. Default is False
- **make\_dirs** (*bool*, *optional*) -- If the parent directory structure does not exist for the new shortcut, create it. Default is False
- **user** (*str*, *optional*) -- The user to be the owner of any directories created by setting make\_dirs to True. If no value is passed Salt will use the user account that it is running under. Default is an empty string.

### Returns

A dictionary containing the changes, comments, and result of the state

### Return type

dict

Example:

```
KB123456:
wusa.installed:
  - source: salt://kb123456.msu

# Create a shortcut and set the ``Shortcut key`` (``hot_key``)
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - hot_key: Ctrl+Alt+N

# Create a shortcut and change the icon to the 3rd one in the icon file
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - icon_location: C:\path\to\icon.ico
    - icon_index: 2

# Create a shortcut and change the startup mode to full screen
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - window_style: Maximized

# Create a shortcut and change the icon
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - icon_location: C:\path\to\icon.ico

# Create a shortcut and force it to overwrite an existing shortcut
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - force: True

# Create a shortcut and create any parent directories if they are missing
new_shortcut:
  shortcut.present:
    - name: C:\path\to\shortcut.lnk
    - target: C:\Windows\notepad.exe
    - make_dirs: True
```

### 26.19.327 salt.states.win\_smtp\_server

Module for managing IIS SMTP server configuration on Windows servers.

`salt.states.win_smtp_server.active_log_format`(*name*, *log\_format*, *server*='SmtSvc/1')

Manage the active log format for the SMTP server.

**Parameters**

- **log\_format** (*str*) -- The log format name.
- **server** (*str*) -- The SMTP server name.

Example of usage:

```
smtp-log-format:
  win_smtp_server.active_log_format:
    - log_format: Microsoft IIS Log File Format
```

`salt.states.win_smtp_server.connection_ip_list`(*name*, *addresses*=None, *grant\_by\_default*=False, *server*='SmtSvc/1')

Manage IP list for SMTP connections.

**Parameters**

- **addresses** (*str*) -- A dictionary of IP + subnet pairs.
- **grant\_by\_default** (*bool*) -- Whether the addresses should be a blacklist or whitelist.
- **server** (*str*) -- The SMTP server name.

Example of usage for creating a whitelist:

```
smtp-connection-whitelist:
  win_smtp_server.connection_ip_list:
    - addresses:
        127.0.0.1: 255.255.255.255
        172.16.1.98: 255.255.255.255
        172.16.1.99: 255.255.255.255
    - grant_by_default: False
```

Example of usage for creating a blacklist:

```
smtp-connection-blacklist:
  win_smtp_server.connection_ip_list:
    - addresses:
        172.16.1.100: 255.255.255.255
        172.16.1.101: 255.255.255.255
    - grant_by_default: True
```

Example of usage for allowing any source to connect:

```
smtp-connection-blacklist:
  win_smtp_server.connection_ip_list:
    - addresses: {}
    - grant_by_default: True
```

`salt.states.win_smtp_server.relay_ip_list`(*name*, *addresses*=None, *server*='SmtSvc/1')

Manage IP list for SMTP relay connections.

Due to the unusual way that Windows stores the relay IPs, it is advisable to retrieve the existing list you wish to set from a pre-configured server.

For example, setting '127.0.0.1' as an allowed relay IP through the GUI would generate an actual relay IP list similar to the following:

```
['24.0.0.128', '32.0.0.128', '60.0.0.128', '68.0.0.128', '1.0.0.0', '76.0.
→0.0',
  '0.0.0.0', '0.0.0.0', '1.0.0.0', '1.0.0.0', '2.0.0.0', '2.0.0.0', '4.0.
→0.0',
  '0.0.0.0', '76.0.0.128', '0.0.0.0', '0.0.0.0', '0.0.0.0', '0.0.0.0',
  '255.255.255.255', '127.0.0.1']
```

**Note:** Setting the list to None corresponds to the restrictive 'Only the list below' GUI parameter with an empty access list configured, and setting an empty list/tuple corresponds to the more permissive 'All except the list below' GUI parameter.

#### Parameters

- **addresses** (*str*) -- A list of the relay IPs. The order of the list is important.
- **server** (*str*) -- The SMTP server name.

Example of usage:

```
smtp-relay-list:
win_smtp_server.relay_ip_list:
- addresses:
  - 24.0.0.128
  - 32.0.0.128
  - 60.0.0.128
  - 1.0.0.0
  - 76.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 1.0.0.0
  - 1.0.0.0
  - 2.0.0.0
  - 2.0.0.0
  - 4.0.0.0
  - 0.0.0.0
  - 76.0.0.128
  - 0.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 255.255.255.255
  - 127.0.0.1
```

Example of usage for disabling relaying:

```
smtp-relay-list:
win_smtp_server.relay_ip_list:
- addresses: None
```

Example of usage for allowing relaying from any source:

```
smtp-relay-list:
  win_smtp_server.relay_ip_list:
    - addresses: []
```

`salt.states.win_smtp_server.server_setting(name, settings=None, server='SmtpSvc/1')`

Ensure the value is set for the specified setting.

---

**Note:** The setting names are case-sensitive.

---

#### Parameters

- **settings** (*str*) -- A dictionary of the setting names and their values.
- **server** (*str*) -- The SMTP server name.

Example of usage:

```
smtp-settings:
  win_smtp_server.server_setting:
    - settings:
      LogType: 1
      LogFilePeriod: 1
      MaxMessageSize: 16777216
      MaxRecipients: 10000
      MaxSessionSize: 16777216
```

### 26.19.328 salt.states.win\_snmp

Module for managing SNMP service settings on Windows servers.

`salt.states.win_snmp.agent_settings(name, contact, location, services=None)`

Manage the SNMP sysContact, sysLocation, and sysServices settings.

#### Parameters

- **contact** (*str*) -- The SNMP contact.
- **location** (*str*) -- The SNMP location.
- **services** (*str*) -- A list of selected services.

Example of usage:

```
snmp-agent-settings:
  win_snmp.agent_settings:
    - contact: Test Contact
    - location: Test Location
    - services:
      - Physical
      - Internet
```

`salt.states.win_snmp.auth_traps_enabled(name, status=True)`

Manage the sending of authentication traps.

#### Parameters

- **status** (*bool*) -- The enabled status.

Example of usage:

```

snmp-auth-traps:
  win_snmp.auth_traps_enabled:
    - status: True

```

`salt.states.win_snmp.community_names` (*name*, *communities=None*)

Manage the SNMP accepted community names and their permissions.

Parameters

**communities** (*str*) -- A dictionary of SNMP communities and permissions.

Example of usage:

```

snmp-community-names:
  win_snmp.community_names:
    - communities:
      TestCommunity: Read Only
      OtherCommunity: Read Write

```

### 26.19.329 salt.states.win\_system

Management of Windows system information

New in version 2014.1.0.

This state is used to manage system information such as the computer name and description.

```

ERIK-WORKSTATION:
  system.computer_name: []

```

This is Erik's computer, don't touch!:

```

system.computer_desc: []

```

`salt.states.win_system.computer_desc` (*name*)

Manage the computer's description field

**name**

The desired computer description

`salt.states.win_system.computer_description` (*name*)

This function is an alias of `computer_desc`.

Manage the computer's description field

**name**

The desired computer description

`salt.states.win_system.computer_name` (*name*)

Manage the computer's name

**name**

The desired computer name

`salt.states.win_system.hostname` (*name*)

New in version 2016.3.0.

Manage the hostname of the computer

**name**

The hostname to set

`salt.states.win_system.join_domain`(*name*, *username=None*, *password=None*, *account\_ou=None*, *account\_exists=False*, *restart=False*)

Checks if a computer is joined to the Domain. If the computer is not in the Domain, it will be joined.

#### Parameters

- **name** (*str*) -- The name of the Domain.
- **username** (*str*) -- Username of an account which is authorized to join computers to the specified domain. Need to be either fully qualified like `user@domain.tld` or simply user.
- **password** (*str*) -- Password of the account to add the computer to the Domain.
- **account\_ou** (*str*) -- The DN of the OU below which the account for this computer should be created when joining the domain, e.g. `ou=computers,ou=departm_432,dc=my-company,dc=com`.
- **account\_exists** (*bool*) -- Needs to be set to `True` to allow re-using an existing computer account.
- **restart** (*bool*) -- Needs to be set to `True` to restart the computer after a successful join.

Example:

```

join_to_domain:
  system.join_domain:
    - name: mydomain.local.com
    - username: myaccount@mydomain.local.com
    - password: mysecretpassword
    - restart: True

```

`salt.states.win_system.reboot`(*name*, *message=None*, *timeout=5*, *force\_close=True*, *in\_seconds=False*, *only\_on\_pending\_reboot=True*)

Reboot the computer

#### Parameters

- **message** (*str*) -- An optional message to display to users. It will also be used as a comment in the event log entry.

The default value is `None`.

- **timeout** (*int*) -- The number of minutes or seconds before a reboot will occur. Whether this number represents minutes or seconds depends on the value of `in_seconds`.

The default value is `5`.

- **in\_seconds** (*bool*) -- If this is `True`, the value of `timeout` will be treated as a number of seconds. If this is `False`, the value of `timeout` will be treated as a number of minutes.

The default value is `False`.

- **force\_close** (*bool*) -- If this is `True`, running applications will be forced to close without warning. If this is `False`, running applications will not get the opportunity to prompt users about unsaved data.

The default value is `True`.

- **only\_on\_pending\_reboot** (*bool*) -- If this is `True`, the reboot will only occur if the system reports a pending reboot. If this is `False`, the reboot will always occur.

The default value is `True`.

`salt.states.win_system.shutdown`(*name*, *message=None*, *timeout=5*, *force\_close=True*, *reboot=False*, *in\_seconds=False*, *only\_on\_pending\_reboot=False*)

Shutdown the computer

**Parameters**

- **message** (*str*) -- An optional message to display to users. It will also be used as a comment in the event log entry.

The default value is None.

- **timeout** (*int*) -- The number of minutes or seconds before a shutdown will occur. Whether this number represents minutes or seconds depends on the value of `in_seconds`.

The default value is 5.

- **in\_seconds** (*bool*) -- If this is True, the value of `timeout` will be treated as a number of seconds. If this is False, the value of `timeout` will be treated as a number of minutes.

The default value is False.

- **force\_close** (*bool*) -- If this is True, running applications will be forced to close without warning. If this is False, running applications will not get the opportunity to prompt users about unsaved data.

The default value is True.

- **reboot** (*bool*) -- If this is True, the computer will restart immediately after shutting down. If False the system flushes all caches to disk and safely powers down the system.

The default value is False.

- **only\_on\_pending\_reboot** (*bool*) -- If this is True, the shutdown will only occur if the system reports a pending reboot. If this is False, the shutdown will always occur.

The default value is False.

`salt.states.win_system.workgroup` (*name*)

New in version 3001.

Manage the workgroup of the computer

**Parameters**

- **name** (*str*) -- The workgroup to set

Example:

```
set workgroup:
system.workgroup:
- name: local
```

**26.19.330 salt.states.win\_task**

State module for adding and removing scheduled tasks using the Windows Task Scheduler.

`salt.states.win_task.absent` (*name*, *location*='')

Delete a task from the task scheduler.

New in version 3007.0.

**Parameters**

- **name** (*str*) -- The name of the task to delete.
- **location** (*str*) -- A string value representing the location of the task. Default is `"\"` which is the root for the task scheduler (C:WindowsSystem32tasks).

**Returns**

True if successful, otherwise False

**Return type**

bool

CLI Example:

```
test_win_task_absent:
  task.absent:
    - name: salt
    - location: ""
```

```
salt.states.win_task.present(name, location='\\', user_name='System', password=None, force=False,
                             **kwargs)
```

Create a new task in the designated location. This function has many keyword arguments that are not listed here. For additional arguments see:

New in version 3007.0.

- `edit_task()`
- `add_action()`
- `add_trigger()`

**Parameters**

- **name** (*str*) -- The name of the task. This will be displayed in the task scheduler.
- **location** (*str*) -- A string value representing the location in which to create the task. Default is "" which is the root for the task scheduler (C:WindowsSystem32tasks).
- **user\_name** (*str*) -- The user account under which to run the task. To specify the "System" account, use "System". The password will be ignored.
- **password** (*str*) -- The password to use for authentication. This should set the task to run whether the user is logged in or not, but is currently not working.
- **force** (*bool*) -- Overwrite the existing task.

**Returns**

A dictionary containing the results of the state

**Return type**

dict

CLI Example:

```
test_win_task_present:
  task.present:
    - name: salt
    - location: ""
    - force: True
    - action_type: Execute
    - cmd: "del /Q /S C:\\Temp"
    - trigger_type: Once
    - start_date: 12-1-16
    - start_time: 01:00
```

### 26.19.331 salt.states.win\_wua

Installation of Windows Updates using the Windows Update Agent

New in version 2017.7.0.

Salt can manage Windows updates via the "wua" state module. Updates can be installed and removed. Update management declarations are as follows:

For installation:

```
# Install a single update using the KB
KB3194343:
  wua.installed

# Install a single update using the name parameter
install_update:
  wua.installed:
    - name: KB3194343

# Install multiple updates using the updates parameter and a combination of
# KB number and GUID
install_updates:
  wua.installed:
    - updates:
      - KB3194343
      - bb1dbb26-3fb6-45fd-bb05-e3c8e379195c
```

For removal:

```
# Remove a single update using the KB
KB3194343:
  wua.removed

# Remove a single update using the name parameter
remove_update:
  wua.removed:
    - name: KB3194343

# Remove multiple updates using the updates parameter and a combination of
# KB number and GUID
remove_updates:
  wua.removed:
    - updates:
      - KB3194343
      - bb1dbb26-3fb6-45fd-bb05-e3c8e379195c
```

**salt.states.win\_wua.installed**(*name*, *updates=None*)

Ensure Microsoft Updates are installed. Updates will be downloaded if needed.

Parameters

- **name** (*str*) -- The identifier of a single update to install.
- **updates** (*list*) -- A list of identifiers for updates to be installed. Overrides name. Default is None.

---

**Note:** Identifiers can be the GUID, the KB number, or any part of the Title of the Microsoft update. GUIDs

and KBs are the preferred method to ensure you're installing the correct update.

**Warning:** Using a partial KB number or a partial Title could result in more than one update being installed.

#### Returns

A dictionary containing the results of the update. There are three keys under changes. *installed* is a list of updates that were successfully installed. *failed* is a list of updates that failed to install. *superseded* is a list of updates that were not installed because they were superseded by another update.

#### Return type

dict

CLI Example:

```
# using a GUID
install_update:
  wua.installed:
    - name: 28cf1b09-2b1a-458c-9bd1-971d1b26b211

# using a KB
install_update:
  wua.installed:
    - name: KB3194343

# using the full Title
install_update:
  wua.installed:
    - name: Security Update for Adobe Flash Player for Windows 10 Version
      ↪1607 (for x64-based Systems) (KB3194343)

# Install multiple updates
install_updates:
  wua.installed:
    - updates:
      - KB3194343
      - 28cf1b09-2b1a-458c-9bd1-971d1b26b211
```

`salt.states.win_wua.removed`(*name*, *updates=None*)

Ensure Microsoft Updates are uninstalled.

#### Parameters

- **name** (*str*) -- The identifier of a single update to uninstall.
- **updates** (*list*) -- A list of identifiers for updates to be removed. Overrides name. Default is None.

**Note:** Identifiers can be the GUID, the KB number, or any part of the Title of the Microsoft update. GUIDs and KBs are the preferred method to ensure you're uninstalling the correct update.

**Warning:** Using a partial KB number or a partial Title could result in more than one update being removed.

#### Returns

A dictionary containing the results of the removal. There are three keys under changes. *removed* is a list of updates that were successfully removed. *failed* is a list of updates that failed to be removed.

Return type  
dict

CLI Example:

```
# using a GUID
uninstall_update:
  wua.removed:
    - name: 28cf1b09-2b1a-458c-9bd1-971d1b26b211

# using a KB
uninstall_update:
  wua.removed:
    - name: KB3194343

# using the full Title
uninstall_update:
  wua.removed:
    - name: Security Update for Adobe Flash Player for Windows 10 Version
    ↪1607 (for x64-based Systems) (KB3194343)

# Install multiple updates
uninstall_updates:
  wua.removed:
    - updates:
      - KB3194343
      - 28cf1b09-2b1a-458c-9bd1-971d1b26b211
```

`salt.states.win_wua.uptodate` (*name*, *software=True*, *drivers=False*, *skip\_hidden=False*,  
*skip\_mandatory=False*, *skip\_reboot=True*, *categories=None*,  
*severities=None*)

Ensure Microsoft Updates that match the passed criteria are installed. Updates will be downloaded if needed.

This state allows you to update a system without specifying a specific update to apply. All matching updates will be installed.

Parameters

- **name** (*str*) -- The name has no functional value and is only used as a tracking reference
- **software** (*bool*) -- Include software updates in the results (default is True)
- **drivers** (*bool*) -- Include driver updates in the results (default is False)
- **skip\_hidden** (*bool*) -- Skip updates that have been hidden. Default is False.
- **skip\_mandatory** (*bool*) -- Skip mandatory updates. Default is False.
- **skip\_reboot** (*bool*) -- Skip updates that require a reboot. Default is True.
- **categories** (*list*) -- Specify the categories to list. Must be passed as a list. All categories returned by default.

Categories include the following:

- Critical Updates
- Definition Updates
- Drivers (make sure you set `drivers=True`)
- Feature Packs
- Security Updates

- Update Rollups
- Updates
- Update Rollups
- Windows 7
- Windows 8.1
- Windows 8.1 drivers
- Windows 8.1 and later drivers
- Windows Defender
- **severities** (*list*) -- Specify the severities to include. Must be passed as a list. All severities returned by default.

Severities include the following:

- Critical
- Important

#### Returns

A dictionary containing the results of the update. There are three keys under changes. *installed* is a list of updates that were successfully installed. *failed* is a list of updates that failed to install. *superseded* is a list of updates that were not installed because they were superseded by another update.

#### Return type

dict

CLI Example:

```
# Update the system using the state defaults
update_system:
  wua.uptodate

# Update the drivers
update_drivers:
  wua.uptodate:
    - software: False
    - drivers: True
    - skip_reboot: False

# Apply all critical updates
update_critical:
  wua.uptodate:
    - severities:
      - Critical
```

### 26.19.332 salt.states.win\_wusa

Microsoft Updates (KB) Management

This module provides the ability to enforce KB installations from files (.msu), without WSUS or Windows Update

New in version 2018.3.4.

`salt.states.win_wusa.installed`(*name*, *source*)

Ensure an update is installed on the minion

#### Parameters

- **name** (*str*) -- Name of the Windows KB ("KB123456")
- **source** (*str*) -- Source of .msu file corresponding to the KB

Example:

```
KB123456:  
wusa.installed:  
- source: salt://kb123456.msu
```

`salt.states.win_wusa.uninstalled`(*name*)

Ensure an update is uninstalled from the minion

Parameters

**name** (*str*) -- Name of the Windows KB ("KB123456")

Example:

```
KB123456:  
wusa.uninstalled
```

### 26.19.333 salt.states.winrepo

Manage Windows Package Repository

`salt.states.winrepo.genrepo`(*name*, *force=False*, *allow\_empty=False*)

Refresh the winrepo.p file of the repository (salt-run winrepo.genrepo)

If *force* is True no checks will be made and the repository will be generated if *allow\_empty* is True then the state will not return an error if there are 0 packages,

---

**Note:** This state only loads on minions that have the `roles: salt-master` grain set.

---

Example:

```
winrepo:  
winrepo.genrepo
```

### 26.19.334 salt.states.wordpress

This state module is used to manage Wordpress installations

**depends**

wp binary from <http://wp-cli.org/>

`salt.states.wordpress.activated`(*name*, *path*, *user*)

Activate wordpress plugins

**name**

name of plugin to activate

**path**

path to wordpress installation

**user**

user who should own the files in the wordpress installation

```
HyperDB:  
wordpress.activated:  
- path: /var/www/html  
- user: apache
```

`salt.states.wordpress.deactivated`(*name, path, user*)

Deactivate wordpress plugins

**name**  
name of plugin to deactivate

**path**  
path to wordpress installation

**user**  
user who should own the files in the wordpress installation

**HyperDB:**

**wordpress.deactivated:**

- **path:** /var/www/html
- **user:** apache

`salt.states.wordpress.installed`(*name, user, admin\_user, admin\_password, admin\_email, title, url*)

Run the initial setup of wordpress

**name**  
path to the wordpress installation

**user**  
user that owns the files for the wordpress installation

**admin\_user**  
username for wordpress website administrator user

**admin\_password**  
password for wordpress website administrator user

**admin\_email**  
email for wordpress website administrator user

**title**  
title for the wordpress website

**url**  
url for the wordpress website

**/var/www/html:**

**wordpress.installed:**

- **title:** Daniel's Awesome Blog
- **user:** apache
- **admin\_user:** dwallace
- **admin\_email:** dwallace@example.com
- **admin\_password:** password123
- **url:** https://blog.dwallace.com

### 26.19.335 salt.states.x509

Manage X509 Certificates

New in version 2015.8.0.

**depends**  
M2Crypto

Deprecated since version 3006.0.

**Warning:** This module has been deprecated and will be removed in Salt 3009 (Potassium). Please migrate to the replacement modules. For breaking changes between both versions, you can refer to the *x509\_v2 execution module docs*.

They will become the default x509 modules in Salt 3008 (Argon). You can explicitly switch to the new modules before that release by setting `features: {x509_v2: true}` in your minion configuration.

This module can enable managing a complete PKI infrastructure including creating private keys, CAs, certificates and CRLs. It includes the ability to generate a private key on a server, and have the corresponding public key sent to a remote CA to create a CA signed certificate. This can be done in a secure manner, where private keys are always generated locally and never moved across the network.

Here is a simple example scenario. In this example `ca` is the ca server, and `www` is a web server that needs a certificate signed by `ca`.

For remote signing, peers must be permitted to remotely call the `sign_remote_certificate` function.

```
/etc/salt/master.d/peer.conf
```

```
peer:
  .*:
    - x509.sign_remote_certificate
```

```
/srv/salt/top.sls
```

```
base:
  '*':
    - cert
  'ca':
    - ca
  'www':
    - www
```

This state creates the CA key, certificate and signing policy. It also publishes the certificate to the mine where it can be easily retrieved by other minions.

```
/srv/salt/ca.sls
```

```
/etc/salt/minion.d/x509.conf:
  file.managed:
    - source: salt://x509.conf

restart-salt-minion:
  cmd.run:
    - name: 'salt-call service.restart salt-minion'
    - bg: True
    - onchanges:
      - file: /etc/salt/minion.d/x509.conf

/etc/pki:
  file.directory

/etc/pki/issued_certs:
  file.directory
```

(continues on next page)

(continued from previous page)

```

/etc/pki/ca.key:
  x509.private_key_managed:
    - bits: 4096
    - backup: True

/etc/pki/ca.crt:
  x509.certificate_managed:
    - signing_private_key: /etc/pki/ca.key
    - CN: ca.example.com
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - basicConstraints: "critical CA:true"
    - keyUsage: "critical cRLSign, keyCertSign"
    - subjectKeyIdentifier: hash
    - authorityKeyIdentifier: keyid,issuer:always
    - days_valid: 3650
    - days_remaining: 0
    - backup: True
    - require:
      - file: /etc/pki

```

The signing policy defines properties that override any property requested or included in a CRL. It also can define a restricted list of minions which are allowed to remotely invoke this signing policy.

```
/srv/salt/x509.conf
```

```

mine_functions:
  x509.get_pem_entries: [/etc/pki/ca.crt]

x509_signing_policies:
  www:
    - minions: 'www'
    - signing_private_key: /etc/pki/ca.key
    - signing_cert: /etc/pki/ca.crt
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - basicConstraints: "critical CA:false"
    - keyUsage: "critical keyEncipherment"
    - subjectKeyIdentifier: hash
    - authorityKeyIdentifier: keyid,issuer:always
    - days_valid: 90
    - copypath: /etc/pki/issued_certs/

```

This state will instruct all minions to trust certificates signed by our new CA. Using Jinja to strip newlines from the text avoids dealing with newlines in the rendered YAML, and the `sign_remote_certificate` state will handle properly formatting the text before writing the output.

```
/srv/salt/cert.sls
```

```

/usr/local/share/ca-certificates:
  file.directory

```

(continues on next page)

(continued from previous page)

```

/usr/local/share/ca-certificates/intca.crt:
  x509.pem_managed:
    - text: {{ salt['mine.get']('ca', 'x509.get_pem_entries')['ca']['/etc/pki/
→ca.crt']|replace('\n', '') }}

```

This state creates a private key then requests a certificate signed by ca according to the www policy.

```
/srv/salt/www.sls
```

```

/etc/pki/www.crt:
  x509.private_key_managed:
    - name: /etc/pki/www.key
    - bits: 4096
    - backup: True

/etc/pki/www.crt:
  x509.certificate_managed:
    - ca_server: ca
    - signing_policy: www
    - public_key: /etc/pki/www.key
    - CN: www.example.com
    - days_remaining: 30
    - backup: True

```

This other state creates a private key then requests a certificate signed by ca according to the www policy but adds a strict date range for the certificate to be considered valid.

```
/srv/salt/www-time-limited.sls
```

```

/etc/pki/www-time-limited.crt:
  x509.certificate_managed:
    - ca_server: ca
    - signing_policy: www
    - public_key: /etc/pki/www-time-limited.key
    - CN: www.example.com
    - not_before: 2019-05-05 00:00:00
    - not_after: 2020-05-05 14:30:00
    - backup: True

```

```
salt.states.x509.certificate_managed(name, days_remaining=90, append_certs=None, **kwargs)
```

Manage a Certificate

**name**

Path to the certificate

**days\_remaining**

[90] Recreate the certificate if the number of days remaining on it are less than this number. The value should be less than `days_valid`, otherwise the certificate will be recreated every time the state is run. A value of 0 disables automatic renewal.

**append\_certs:**

A list of certificates to be appended to the managed file. They must be valid PEM files, otherwise an error will be thrown.

**kwargs:**

Any arguments supported by `x509.create_certificate` or `file.managed` are supported.

**not\_before:**

Initial validity date for the certificate. This date must be specified in the format '%Y-%m-%d %H:%M:%S'.

New in version 3001.

**not\_after:**

Final validity date for the certificate. This date must be specified in the format '%Y-%m-%d %H:%M:%S'.

New in version 3001.

Examples:

```
/etc/pki/ca.crt:
x509.certificate_managed:
- signing_private_key: /etc/pki/ca.key
- CN: ca.example.com
- C: US
- ST: Utah
- L: Salt Lake City
- basicConstraints: "critical CA:true"
- keyUsage: "critical cRLSign, keyCertSign"
- subjectKeyIdentifier: hash
- authorityKeyIdentifier: keyid,issuer:always
- days_valid: 3650
- days_remaining: 0
- backup: True
```

```
/etc/ssl/www.crt:
x509.certificate_managed:
- ca_server: pki
- signing_policy: www
- public_key: /etc/ssl/www.key
- CN: www.example.com
- days_valid: 90
- days_remaining: 30
- backup: True
```

```
salt.states.x509.crl_managed(name, signing_private_key, signing_private_key_passphrase=None,
                             signing_cert=None, revoked=None, days_valid=100, digest="",
                             days_remaining=30, include_expired=False, **kwargs)
```

Manage a Certificate Revocation List

**name**

Path to the certificate

**signing\_private\_key**

The private key that will be used to sign the CRL. This is usually your CA's private key.

**signing\_private\_key\_passphrase**

Passphrase to decrypt the private key.

**signing\_cert**

The certificate of the authority that will be used to sign the CRL. This is usually your CA's certificate.

**revoked**

A list of certificates to revoke. Must include either a serial number or a the certificate itself. Can optionally include the revocation date and notAfter date from the certificate. See example below for details.

**days\_valid**

[100] The number of days the certificate should be valid for.

**digest**

The digest to use for signing the CRL. This has no effect on versions of pyOpenSSL less than 0.14.

**days\_remaining**

[30] The CRL should be automatically recreated if there are less than `days_remaining` days until the CRL expires. Set to 0 to disable automatic renewal.

**include\_expired**

[False] If True, include expired certificates in the CRL.

**kwargs**

Any arguments supported by *file.managed* are supported.

Example:

```
/etc/pki/ca.crl:
x509.crl_managed:
- signing_private_key: /etc/pki/myca.key
- signing_cert: /etc/pki/myca.crt
- revoked:
-   compromised_Web_key:
-     certificate: /etc/pki/certs/badweb.crt
-     revocation_date: 2015-03-01 00:00:00
-     reason: keyCompromise
-   terminated_vpn_user:
-     serial_number: D6:D2:DC:D8:4D:5C:C0:F4
-     not_after: 2016-01-01 00:00:00
-     revocation_date: 2015-02-25 00:00:00
-     reason: cessationOfOperation
```

`salt.states.x509.csr_managed(name, **kwargs)`

Manage a Certificate Signing Request

**name:**

Path to the CSR

**properties:**

The properties to be added to the certificate request, including items like subject, extensions and public key. See above for valid properties.

**kwargs:**

Any arguments supported by *file.managed* are supported.

Example:

```
/etc/pki/mycert.csr:
x509.csr_managed:
- private_key: /etc/pki/mycert.key
- CN: www.example.com
- C: US
- ST: Utah
- L: Salt Lake City
- keyUsage: 'critical dataEncipherment'
```

`salt.states.x509.pem_managed(name, text, backup=False, **kwargs)`

Manage the contents of a PEM file directly with the content in text, ensuring correct formatting.

**name:**

The path to the file to manage

**text:**

The PEM formatted text to write.

**kwargs:**

Any arguments supported by *file.managed* are supported.

`salt.states.x509.private_key_managed(name, bits=2048, passphrase=None, cipher='aes_128_cbc', new=False, overwrite=False, verbose=True, **kwargs)`

Manage a private key's existence.

**name:**

Path to the private key

**bits:**

Key length in bits. Default 2048.

**passphrase:**

Passphrase for encrypting the private key.

**cipher:**

Cipher for encrypting the private key.

**new:**

Always create a new key. Defaults to `False`. Combining `new` with `prereq` can allow key rotation whenever a new certificate is generated.

**overwrite:**

Overwrite an existing private key if the provided passphrase cannot decrypt it.

**verbose:**

Provide visual feedback on stdout, dots while key is generated. Default is `True`.

New in version 2016.11.0.

**kwargs:**

Any kwargs supported by `file.managed` are supported.

Example:

The JINJA templating in this example ensures a private key is generated if the file doesn't exist and that a new private key is generated whenever the certificate that uses it is to be renewed.

```
/etc/pki/www.key:
  x509.private_key_managed:
    - bits: 4096
    - new: True
    {% if salt['file.file_exists']('/etc/pki/www.key') -%}
    - prereq:
      - x509: /etc/pki/www.crt
    {%- endif %}
```

## 26.19.336 salt.states.x509\_v2

### Manage X.509 certificates

New in version 3006.0: This module represents a complete rewrite of the original `x509` modules and is named `x509_v2` since it introduces breaking changes.

**depends**

cryptography

---

**Note:** All parameters that take a public key, private key, certificate, CSR or CRL can be specified either as a PEM/hex/base64 string or a path to a local file encoded in all supported formats for the type.

---

Configuration instructions and general remarks are documented in the [execution module docs](#).

For the list of breaking changes versus the previous `x509` modules, please also refer to the [execution module docs](#).

## About

This module can enable managing a complete PKI infrastructure, including creating private keys, CAs, certificates and CRLs. It includes the ability to generate a private key on a server, and have the corresponding public key sent to a remote CA to create a CA signed certificate. This can be done in a secure manner, where private keys are always generated locally and never moved across the network.

## Example

Here is a simple example scenario. In this example `ca` is the ca server, and `www` is a web server that needs a certificate signed by `ca`.

---

**Note:** Remote signing requires the setup of *Peer Communication* and signing policies. Please see the *execution module docs*.

---

```
/srv/salt/top.sls
```

```
base:
  '*':
    - cert
  'ca':
    - ca
  'www':
    - www
```

This state creates the CA key, certificate and signing policy. It also publishes the certificate to the mine, where it can be easily retrieved by other minions.

```
# /srv/salt/ca.sls

Configure the x509 module:
file.managed:
  - name: /etc/salt/minion.d/x509.conf
  - source: salt://x509.conf

Restart Salt minion:
cmd.run:
  - name: 'salt-call service.restart salt-minion'
  - bg: true
  - onchanges:
    - file: /etc/salt/minion.d/x509.conf

Ensure PKI directories exist:
file.directory:
  - name: /etc/pki/issued_certs
  - makedirs: true

Create CA private key:
x509.private_key_managed:
  - name: /etc/pki/ca.key
  - keysize: 4096
  - backup: true
```

(continues on next page)

(continued from previous page)

- **require:**
- **file:** /etc/pki/issued\_certs

**Create self-signed CA certificate:****x509.certificate\_managed:**

- **name:** /etc/pki/ca.crt
- **signing\_private\_key:** /etc/pki/ca.key
- **CN:** ca.example.com
- **C:** US
- **ST:** Utah
- **L:** Salt Lake City
- **basicConstraints:** "critical, CA:true"
- **keyUsage:** "critical, cRLSign, keyCertSign"
- **subjectKeyIdentifier:** hash
- **authorityKeyIdentifier:** keyid:always,issuer
- **days\_valid:** 3650
- **days\_remaining:** 0
- **backup:** true
- **require:**
- **x509:** /etc/pki/ca.key

```
# /srv/salt/x509.conf

# enable x509_v2
features:
  x509_v2: true

# publish the CA certificate to the mine
mine_functions:
  x509.get_pem_entries: [/etc/pki/ca.crt]

# define at least one signing policy for remote signing
x509_signing_policies:
  www:
    - minions: 'www'
    - signing_private_key: /etc/pki/ca.key
    - signing_cert: /etc/pki/ca.crt
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - basicConstraints: "critical CA:false"
    - keyUsage: "critical keyEncipherment"
    - subjectKeyIdentifier: hash
    - authorityKeyIdentifier: keyid:always,issuer
    - days_valid: 30
    - copypath: /etc/pki/issued_certs/
```

This example state will instruct all minions to trust certificates signed by our new CA. Mind that this example works for Debian-based OS only. Also note the Jinja call to encode the string to JSON, which will avoid YAML issues with newline characters.

```
# /srv/salt/cert.sls
```

(continues on next page)

(continued from previous page)

Ensure the CA trust bundle exists:

```
file.directory:
  - name: /usr/local/share/ca-certificates
```

Ensure our self-signed CA certificate is included:

```
x509.pem_managed:
  - name: /usr/local/share/ca-certificates/myca.crt
  - text: {{ salt["mine.get"]("ca", "x509.get_pem_entries")["ca"]["/etc/pki/
↪ca.crt"] | json }}
```

This state creates a private key, then requests a certificate signed by our CA according to the www policy.

```
# /srv/salt/www.sls
```

**Ensure PKI directory exists:**

```
file.directory:
  - name: /etc/pki
```

**Create private key for the certificate:**

```
x509.private_key_managed:
  - name: /etc/pki/www.key
  - keysize: 4096
  - backup: true
  - require:
    - file: /etc/pki
```

**Request certificate:**

```
x509.certificate_managed:
  - name: /etc/pki/www.crt
  - ca_server: ca
  - signing_policy: www
  - private_key: /etc/pki/www.key
  - CN: www.example.com
  - days_remaining: 7
  - backup: true
  - require:
    - x509: /etc/pki/www.key
```

```
salt.states.x509_v2.certificate_managed(name, days_remaining=None, ca_server=None,
signing_policy=None, encoding='pem',
append_certs=None, copypath=None, prepend_cn=False,
digest='sha256', signing_private_key=None,
signing_private_key_passphrase=None,
signing_cert=None, public_key=None, private_key=None,
private_key_passphrase=None, csr=None, subject=None,
serial_number=None, not_before=None, not_after=None,
days_valid=None, pkcs12_passphrase=None,
pkcs12_encryption_compat=False,
pkcs12_friendlyname=None, **kwargs)
```

Ensure an X.509 certificate is present as specified.

This function accepts the same arguments as `x509.create_certificate`, as well as most ones for

`:py:func: `file.managed` <salt.states.file.managed>.`

**name**

The path the certificate should be present at.

**days\_remaining**

The certificate will be recreated once the remaining certificate validity period is less than this number of days. Defaults to 90 (until v3009) or 7 (from v3009 onwards).

**ca\_server**

Request a remotely signed certificate from `ca_server`. For this to work, a `signing_policy` must be specified, and that same policy must be configured on the `ca_server`. Also, the Salt master must permit peers to call the `x509.sign_remote_certificate` function. See the [execution module docs](#) for details.

**signing\_policy**

The name of a configured signing policy. Parameters specified in there are hardcoded and cannot be overridden. This is required for remote signing, otherwise optional.

**encoding**

Specify the encoding of the resulting certificate. It can be serialized as a `pem` (or `pkcs7_pem`) text file or in several binary formats (`der`, `pkcs7_der`, `pkcs12`). Defaults to `pem`.

**append\_certs**

A list of additional certificates to append to the new one, e.g. to create a CA chain.

---

**Note:** Mind that when `der` encoding is in use, appending certificatees is prohibited.

---

**copypath**

Create a copy of the issued certificate in PEM format in this directory. The file will be named `<serial_number>.crt` if `prepend_cn` is false.

**prepend\_cn**

When `copypath` is set, prepend the common name of the certificate to the file name like so: `<CN>-<serial_number>.crt`. Defaults to false.

**digest**

The hashing algorithm to use for the signature. Valid values are: `sha1`, `sha224`, `sha256`, `sha384`, `sha512`, `sha512_224`, `sha512_256`, `sha3_224`, `sha3_256`, `sha3_384`, `sha3_512`. Defaults to `sha256`. This will be ignored for `ed25519` and `ed448` key types.

**signing\_private\_key**

The private key corresponding to the public key in `signing_cert`. Required.

**signing\_private\_key\_passphrase**

If `signing_private_key` is encrypted, the passphrase to decrypt it.

**signing\_cert**

The CA certificate to be used for signing the issued certificate.

**public\_key**

The public key the certificate should be issued for. Other ways of passing the required information are `private_key` and `csr`. If neither are set, the public key of the `signing_private_key` will be included, i.e. a self-signed certificate is generated.

**private\_key**

The private key corresponding to the public key the certificate should be issued for. This is one way of specifying the public key that will be included in the certificate, the other ones being `public_key` and `csr`.

**private\_key\_passphrase**

If `private_key` is specified and encrypted, the passphrase to decrypt it.

**csr**

A certificate signing request to use as a base for generating the certificate. The following information will be respected, depending on configuration:

- `public_key`
- `extensions`, if not otherwise specified (arguments, `signing_policy`)

**subject**

The subject's distinguished name embedded in the certificate. This is one way of passing this information (see `kwargs` below for the other). This argument will be preferred and allows to control the order of RDNs in the DN as well as to embed RDNs with multiple attributes. This can be specified as a RFC4514-encoded string (`CN=example.com,O=Example Inc,C=US`, mind that the rendered order is reversed from what is embedded), a list of RDNs encoded as in RFC4514 (`["C=US", "O=Example Inc", "CN=example.com"]`) or a dictionary (`{"CN": "example.com", "C": "US", "O": "Example Inc"}`, default ordering). Multiple name attributes per RDN are concatenated with a `+`.

---

**Note:** Parsing of RFC4514 strings requires at least cryptography release 37.

---

**serial\_number**

A serial number to be embedded in the certificate. If unspecified, will autogenerate one. This should be an integer, either in decimal or hexadecimal notation.

**not\_before**

Set a specific date the certificate should not be valid before. The format should follow `%Y-%m-%d %H:%M:%S` and will be interpreted as GMT/UTC. Defaults to the time of issuance.

**not\_after**

Set a specific date the certificate should not be valid after. The format should follow `%Y-%m-%d %H:%M:%S` and will be interpreted as GMT/UTC. If unspecified, defaults to the current time plus `days_valid` days.

**days\_valid**

If `not_after` is unspecified, the number of days from the time of issuance the certificate should be valid for. Defaults to 365 (until v3009) or 30 (from v3009 onwards).

**pkcs12\_passphrase**

When encoding a certificate as `pkcs12`, encrypt it with this passphrase.

---

**Note:** PKCS12 encryption is very weak and [should not be relied on for security](#).

---

**pkcs12\_encryption\_compat**

OpenSSL 3 and cryptography v37 switched to a much more secure default encryption for PKCS12, which might be incompatible with some systems. This forces the legacy encryption. Defaults to `False`.

**pkcs12\_friendlyname**

When encoding a certificate as `pkcs12`, a name for the certificate can be included.

**kwargs**

Embedded X.509v3 extensions and the subject's distinguished name can be controlled via supplemental keyword arguments. See [x509.create\\_certificate](#) for an overview.

```
salt.states.x509_v2.crl_managed(name, signing_private_key, revoked, days_remaining=None,
                               signing_cert=None, signing_private_key_passphrase=None,
                               include_expired=False, days_valid=None, digest='sha256',
                               encoding='pem', extensions=None, **kwargs)
```

Ensure a certificate revocation list is present as specified.

This function accepts the same arguments as [x509.create\\_crl](#), as well as most ones for `:py:func:file.managed <salt.states.file.managed>`.

**name**

The path the certificate revocation list should be present at.

**signing\_private\_key**

Your certificate authority's private key. It will be used to sign the CRL. Required.

**revoked**

A list of dicts containing all the certificates to revoke. Each dict represents one certificate. A dict must contain either the key `serial_number` with the value of the serial number to revoke, or

`certificate` with some reference to the certificate to revoke.

The dict can optionally contain the `revocation_date` key. If this key is omitted, the revocation date will be set to now. It should be a string in the format `%Y-%m-%d %H:%M:%S`.

The dict can also optionally contain the `not_after` key. This is redundant if the `certificate` key is included. If the `certificate` key is not included, this can be used for the logic behind the `include_expired` parameter. It should be a string in the format `%Y-%m-%d %H:%M:%S`.

The dict can also optionally contain the `extensions` key, which allows to set CRL entry-specific extensions. The following extensions are supported:

**certificateIssuer**

Identifies the certificate issuer associated with an entry in an indirect CRL. The format is the same as for `subjectAltName`.

**CRLReason**

Identifies the reason for certificate revocation. Available choices are `unspecified`, `keyCompromise`, `CACompromise`, `affiliationChanged`, `superseded`, `cessationOfOperation`, `certificateHold`, `privilegeWithdrawn`, `aACompromise` and `removeFromCRL`.

**invalidityDate**

Provides the date on which the certificate became invalid. The value should be a string in the same format as `revocation_date`.

**days\_remaining**

The certificate revocation list will be recreated once the remaining CRL validity period is less than this number of days. Defaults to 30 (until v3009) or 3 (from v3009 onwards). Set to 0 to disable automatic renewal without anything changing.

**signing\_cert**

The CA certificate to be used for signing the issued certificate.

**signing\_private\_key\_passphrase**

If `signing_private_key` is encrypted, the passphrase to decrypt it.

**include\_expired**

Also include already expired certificates in the CRL. Defaults to false.

**days\_valid**

The number of days that the CRL should be valid for. This sets the `Next Update` field in the CRL. Defaults to 100 (until v3009) or 7 (from v3009 onwards).

**digest**

The hashing algorithm to use for the signature. Valid values are: `sha1`, `sha224`, `sha256`, `sha384`, `sha512`, `sha512_224`, `sha512_256`, `sha3_224`, `sha3_256`, `sha3_384`, `sha3_512`. Defaults to `sha256`. This will be ignored for `ed25519` and `ed448` key types.

**encoding**

Specify the encoding of the resulting certificate revocation list. It can be serialized as a `pem` text or binary `der` file. Defaults to `pem`.

**extensions**

Add CRL extensions. See [x509.create\\_crl](#) for details.

---

**Note:** For `crlNumber`, in addition the value `auto` is supported, which automatically increases the counter every time a new CRL is issued.

---

Example:

```
Manage CRL:
x509.crl_managed:
- name: /etc/pki/ca.crl
- signing_private_key: /etc/pki/myca.key
```

(continues on next page)

(continued from previous page)

```

- signing_cert: /etc/pki/myca.crt
- revoked:
  - certificate: /etc/pki/certs/badweb.crt
    revocation_date: 2022-11-01 00:00:00
    extensions:
      CRLReason: keyCompromise
  - serial_number: D6:D2:DC:D8:4D:5C:C0:F4
    not_after: 2023-03-14 00:00:00
    revocation_date: 2022-10-25 00:00:00
    extensions:
      CRLReason: cessationOfOperation
- extensions:
  CRLNumber: auto

```

`salt.states.x509_v2.csr_managed`(*name*, *private\_key*, *private\_key\_passphrase*=None, *digest*='sha256', *encoding*='pem', *subject*=None, *\*\*kwargs*)

Ensure a certificate signing request is present as specified.

This function accepts the same arguments as `x509.create_csr`, as well as most ones for `file.managed`.

**name**

The path the certificate signing request should be present at.

**private\_key**

The private key corresponding to the public key the certificate should be issued for. The CSR will be signed by it. Required.

**private\_key\_passphrase**

If `private_key` is encrypted, the passphrase to decrypt it.

**digest**

The hashing algorithm to use for the signature. Valid values are: sha1, sha224, sha256, sha384, sha512, sha512\_224, sha512\_256, sha3\_224, sha3\_256, sha3\_384, sha3\_512. Defaults to sha256. This will be ignored for ed25519 and ed448 key types.

**encoding**

Specify the encoding of the resulting certificate revocation list. It can be serialized as a pem text or binary der file. Defaults to pem.

**kwargs**

Embedded X.509v3 extensions and the subject's distinguished name can be controlled via supplemental keyword arguments. See `x509.create_certificate` for an overview. Mind that some extensions are not available for CSR (`authorityInfoAccess`, `authorityKeyIdentifier`, `issuerAltName`, `crlDistributionPoints`).

`salt.states.x509_v2.pem_managed`(*name*, *text*, *\*\*kwargs*)

Manage the contents of a PEM file directly with the content in text, ensuring correct formatting.

**name**

The path to the file to manage.

**text**

The PEM-formatted text to write.

**kwargs**

Most arguments supported by `file.managed` are passed through.

`salt.states.x509_v2.private_key_managed`(*name*, *algo*='rsa', *keysize*=None, *passphrase*=None, *encoding*='pem', *new*=False, *overwrite*=False, *pkcs12\_encryption\_compat*=False, *\*\*kwargs*)

Ensure a private key is present as specified.

This function accepts the same arguments as `x509.create_private_key`, as well as most ones for

*file.managed*.

---

**Note:** If `mode` is unspecified, it will default to `0400`.

---

**name**

The path the private key should be present at.

**algo**

The digital signature scheme the private key should be based on. Available: `rsa`, `ec`, `ed25519`, `ed448`. Defaults to `rsa`.

**keysize**

For `rsa`, specifies the bitlength of the private key (2048, 3072, 4096). For `ec`, specifies the NIST curve to use (256, 384, 521). Irrelevant for Edwards-curve schemes (`ed25519`, `ed448`). Defaults to 2048 for RSA and 256 for EC.

**passphrase**

If this is specified, the private key will be encrypted using this passphrase. The encryption algorithm cannot be selected, it will be determined automatically as the best available one.

**encoding**

Specify the encoding of the resulting private key. It can be serialized as a `pem` text, binary `der` or `pkcs12` file. Defaults to `pem`.

**new**

Always create a new key. Defaults to `false`. Combining `new` with `prereq` can allow key rotation whenever a new certificate is generated.

**overwrite**

Overwrite an existing private key if the provided passphrase cannot decrypt it. Defaults to `false`.

**pkcs12\_encryption\_compat**

Some operating systems are incompatible with the encryption defaults for PKCS12 used since OpenSSL v3. This switch triggers a fallback to `PBESv1SHA1And3KeyTripleDESCBC`. Please consider the [notes on PKCS12 encryption](#).

Example:

The Jinja templating in this example ensures a new private key is generated if the file does not exist and whenever the associated certificate is to be renewed.

```

Manage www private key:
x509.private_key_managed:
  - name: /etc/pki/www.key
  - keysize: 4096
  - new: true
{%- if salt["file.file_exists"]("/etc/pki/www.key") %}
  - prereq:
    - x509: /etc/pki/www.crt
{%- endif %}

```

## 26.19.337 salt.states.xml

### XML Manager

State management of XML files

`salt.states.xml.value_present` (*name, xpath, value, \*\*kwargs*)

New in version 3000.

Manages a given XML file

**name**

[string] The location of the XML file to manage, as an absolute path.

**xpath**

[string] xpath location to manage

**value**

[string] value to ensure present

```
server-warning-message:
  xml.value_present:
    - name: /tmp/test.xml
    - xpath: ../playwright[@id='1']
    - value: William Shakespeare
```

## 26.19.338 salt.states.xmpp

### Sending Messages over XMPP

New in version 2014.1.0.

This state is useful for firing messages during state runs, using the XMPP protocol

```
server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipient: admins@xmpp.example.com/salt
```

`salt.states.xmpp.send_msg` (*name, recipient, profile*)

Send a message to an XMPP user

```
server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipient: admins@xmpp.example.com/salt
```

**name**

The message to send to the XMPP user

`salt.states.xmpp.send_msg_multi` (*name, profile, recipients=None, rooms=None*)

Send a message to an list of recipients or rooms

```

server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipients:
      - admins@xmpp.example.com/salt
    - rooms:
      - qa@conference.xmpp.example.com

```

**name**

The message to send to the XMPP user

**26.19.339 salt.states.zabbix\_action**

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix Action object over Zabbix API.

New in version 2017.7.0.

**codeauthor**

Jakub Sliva <jakub.sliva@ultimum.io>

**salt.states.zabbix\_action.absent**(*name*, *\*\*kwargs*)

Makes the Zabbix Action to be absent (either does not exist or delete it).

**Parameters**

- **name** -- Zabbix Action name
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

zabbix-action-absent:
  zabbix_action.absent:
    - name: Action name

```

**salt.states.zabbix\_action.present**(*name*, *params*, *\*\*kwargs*)

Creates Zabbix Action object or if differs update it according defined parameters

**Parameters**

- **name** -- Zabbix Action name
- **params** -- Definition of the Zabbix Action
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

If there is a need to get a value from current zabbix online (e.g. id of a hostgroup you want to put a discovered system into), put a dictionary with two keys "query\_object" and "query\_name" instead of the value. In this example we want to get object id of hostgroup named "Virtual machines" and "Databases".

```

zabbix-action-present:
  zabbix_action.present:
    - name: VMs
    - params:
      eventsources: 2
      status: 0
      filter:
        evaltype: 2
        conditions:
          - conditiontype: 24
            operator: 2
            value: 'virtual'
          - conditiontype: 24
            operator: 2
            value: 'kvm'
      operations:
        - operationtype: 2
        - operationtype: 4
      opgroup:
        - groupid:
          query_object: hostgroup
          query_name: Virtual machines
        - groupid:
          query_object: hostgroup
          query_name: Databases

```

### 26.19.340 salt.states.zabbix\_host

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix hosts.

**codeauthor**

Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_host.absent`(*name*, *\*\*kwargs*)

Ensures that the host does not exist, eventually deletes host.

New in version 2016.3.0.

**Param**

*name*: technical name of the host

**Parameters**

- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

**TestHostWithInterfaces:**

`zabbix_host.absent`

`salt.states.zabbix_host.assign_templates(host, templates, **kwargs)`

Ensures that templates are assigned to the host.

New in version 2017.7.0.

#### Parameters

- **host** -- technical name of the host
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
add_zabbix_templates_to_host:
  zabbix_host.assign_templates:
    - host: TestHost
    - templates:
      - "Template OS Linux"
      - "Template App MySQL"
```

`salt.states.zabbix_host.present(host, groups, interfaces, **kwargs)`

Ensures that the host exists, eventually creates new host. NOTE: please use argument `visible_name` instead of `name` to not mess with name from salt sls. This function accepts all standard host properties: keyword argument names differ depending on your zabbix version, see: <https://www.zabbix.com/documentation/2.4/manual/api/reference/host/object#host>

New in version 2016.3.0.

#### Parameters

- **host** -- technical name of the host
- **groups** -- groupids of host groups to add the host to
- **interfaces** -- interfaces to be created for the host
- **proxy\_host** -- Optional proxy name or proxyid to monitor host
- **inventory** -- Optional list or dictionary of inventory names and values
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)
- **visible\_name** -- Optional - string with visible name of the host, use 'visible\_name' instead of 'name' parameter to not mess with value supplied from Salt sls file.
- **inventory\_clean** -- Optional - Boolean value that selects if the current inventory will be cleaned and overwritten by the declared inventory list (True); or if the inventory will be kept and only updated with inventory list contents (False). Defaults to True

```
create_test_host:
  zabbix_host.present:
    - host: TestHostWithInterfaces
    - proxy_host: 12345
    - groups:
      - 5
      - 6
      - 7
```

(continues on next page)

(continued from previous page)

```

- interfaces:
  - test1.example.com:
    - ip: '192.168.1.8'
    - type: 'Agent'
    - port: 92
  - testing2_create:
    - ip: '192.168.1.9'
    - dns: 'test2.example.com'
    - type: 'agent'
    - main: false
  - testovacil_ipmi:
    - ip: '192.168.100.111'
    - type: 'ipmi'
- inventory:
  - alias: some alias
  - asset_tag: jlm3937

```

### 26.19.341 salt.states.zabbix\_hostgroup

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix host groups.

#### codeauthor

Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_hostgroup.absent` (*name*, *\*\*kwargs*)

Ensures that the host group does not exist, eventually delete host group.

New in version 2016.3.0.

#### Parameters

- **name** -- name of the host group
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

`delete_testing_host_group:`

`zabbix_hostgroup.absent:`

```
- name: 'My hostgroup name'
```

`salt.states.zabbix_hostgroup.present` (*name*, *\*\*kwargs*)

Ensures that the host group exists, eventually creates new host group.

New in version 2016.3.0.

#### Parameters

- **name** -- name of the host group
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)

- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
create_testing_host_group:
  zabbix_hostgroup.present:
    - name: 'My hostgroup name'
```

### 26.19.342 salt.states.zabbix\_mediatype

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix mediatypes.

#### codeauthor

Raymond Kuiper <[qix@the-wired.net](mailto:qix@the-wired.net)>

`salt.states.zabbix_mediatype.absent` (*name*, *\*\*kwargs*)

Ensures that the mediatype does not exist, eventually deletes the mediatype.

#### Parameters

- **name** -- name of the mediatype
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
delete_mediatype:
  zabbix_mediatype.absent:
    - name: 'Email'
```

`salt.states.zabbix_mediatype.present` (*name*, *mediatype*, *\*\*kwargs*)

Creates new mediatype. NOTE: This function accepts all standard mediatype properties: keyword argument names differ depending on your zabbix version, see: [https://www.zabbix.com/documentation/3.0/manual/api/reference/host/object#host\\_inventory](https://www.zabbix.com/documentation/3.0/manual/api/reference/host/object#host_inventory)

#### Parameters

- **name** -- name of the mediatype
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
make_new_mediatype:
  zabbix_mediatype.present:
    - name: 'Email'
    - mediatype: 0
    - smtp_server: smtp.example.com
```

(continues on next page)

(continued from previous page)

- **smtp\_hello**: zabbix.example.com
- **smtp\_email**: zabbix@example.com

### 26.19.343 salt.states.zabbix\_template

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

New in version 2017.7.0.

Management of Zabbix Template object over Zabbix API.

#### codeauthor

Jakub Sliva <jakub.sliva@ultimum.io>

`salt.states.zabbix_template.absent`(*name*, *\*\*kwargs*)

Makes the Zabbix Template to be absent (either does not exist or delete it).

#### Parameters

- **name** -- Zabbix Template name
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
zabbix-template-absent:
zabbix_template.absent:
- name: Ceph OSD
```

`salt.states.zabbix_template.is_present`(*name*, *\*\*kwargs*)

Check if Zabbix Template already exists.

#### Parameters

- **name** -- Zabbix Template name
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
does_zabbix-template-exist:
zabbix_template.is_present:
- name: Template OS Linux
```

`salt.states.zabbix_template.present`(*name*, *params*, *static\_host\_list=True*, *\*\*kwargs*)

Creates Zabbix Template object or if differs update it according defined parameters. See Zabbix API documentation.

Zabbix API version: >3.0

#### Parameters

- **name** -- Zabbix Template name

- **params** -- Additional parameters according to Zabbix API documentation
- **static\_host\_list** -- If hosts assigned to the template are controlled only by this state or can be also assigned externally
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

---

**Note:** If there is a need to get a value from current zabbix online (e.g. ids of host groups you want the template to be associated with), put a dictionary with two keys "query\_object" and "query\_name" instead of the value. In this example we want to create template named "Testing Template", assign it to hostgroup Templates, link it to two ceph nodes and create a macro.

---

---

**Note:** IMPORTANT NOTE: Objects (except for template name) are identified by name (or by other key in some exceptional cases) so changing name of object means deleting old one and creating new one with new ID !!!

---

**Note:**

NOT SUPPORTED FEATURES:

- linked templates
  - trigger dependencies
  - groups and group prototypes for host prototypes
- 

SLS Example:

```

zabbix-template-present:
  zabbix_template.present:
    - name: Testing Template
      # Do not touch existing assigned hosts
      # True will detach all other hosts than defined here
    - static_host_list: False
    - params:
      description: Template for Ceph nodes
      groups:
        # groups must already exist
        # template must be at least in one hostgroup
        - groupid:
          query_object: hostgroup
          query_name: Templates
      macros:
        - macro: "{$CEPH_CLUSTER_NAME}"
          value: ceph
      hosts:
        # hosts must already exist
        - hostid:
          query_object: host
          query_name: ceph-osd-01
        - hostid:

```

(continues on next page)

(continued from previous page)

```

        query_object: host
        query_name: ceph-osd-02
    # templates:
    # Linked templates - not supported by state module but can be
    →linked manually (will not be touched)

    applications:
    - name: Ceph OSD
    items:
    - name: Ceph OSD avg fill item
      key_: ceph.osd_avg_fill
      type: 2
      value_type: 0
      delay: 60
      units: '%'
      description: 'Average fill of OSD'
      applications:
      - applicationid:
        query_object: application
        query_name: Ceph OSD

    triggers:
    - description: "Ceph OSD filled more that 90%"
      expression: "{{'{'}}Testing Template:ceph.osd_avg_fill.
    →last(){{'}}'}}>90"
      priority: 4
    discoveries:
    - name: Mounted filesystem discovery
      key_: vfs.fs.discovery
      type: 0

              y: 0
              resourcetype: 0
              resourceid:
                  query_object: graph
                  query_name: Ceph OSD avg fill graph

```

### 26.19.344 salt.states.zabbix\_user

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix users.

#### codeauthor

Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_user.absent` (*name*, *\*\*kwargs*)

Ensures that the user does not exist, eventually delete user.

New in version 2016.3.0.

#### Parameters

- **name** -- user alias
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

#### George:

`zabbix_user.absent`

`salt.states.zabbix_user.admin_password_present` (*name*, *password=None*, *\*\*kwargs*)

Initial change of Zabbix Admin password to password taken from one of the sources (only the most prioritized one):

1. 'password' parameter
  2. '\_connection\_password' parameter
  3. pillar 'zabbix.password' setting
- 1) Tries to log in as Admin with password found in state password parameter or `_connection_password` or pillar or default zabbix password in this precise order, if any of them is present.
  - 2) If one of above passwords matches, it tries to change the password to the most prioritized one.
  - 3) If not able to connect with any password then it fails.

## Parameters

- **name** -- Just a name of state
- **password** -- Optional - desired password for Admin to be set
- **\_connection\_user** -- Optional - Ignored in this state (always assumed 'Admin')
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
# password taken from pillar or _connection_password
zabbix-admin-password:
  zabbix_user.admin_password_present

# directly set password
zabbix-admin-password:
  zabbix_user.admin_password_present:
    - password: SECRET_PASS
```

`salt.states.zabbix_user.present` (*alias, passwd, usrgrps, medias=None, password\_reset=False, \*\*kwargs*)

Ensures that the user exists, eventually creates new user. NOTE: use argument `firstname` instead of `name` to not mess values with `name` from salt sls.

New in version 2016.3.0.

## Parameters

- **alias** -- user alias
- **passwd** -- user's password
- **usrgrps** -- user groups to add the user to
- **medias** -- Optional - user's medias to create
- **password\_reset** -- whether or not to reset password at update
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)
- **firstname** -- string with firstname of the user, use 'firstname' instead of 'name' parameter to not mess with value supplied from Salt sls file.

```
make_user:
  zabbix_user.present:
    - alias: George
    - passwd: donottellanyonE@456x
    - password_reset: True
    - usrgrps:
      - 13
      - 7
    - medias:
      - me@example.com:
        - mediatype: mail
        - period: '1-7,00:00-24:00'
        - severity: NIWAHD
      - make_jabber:
        - active: true
```

(continues on next page)

(continued from previous page)

```

- mediatype: jabber
- period: '1-5,08:00-19:00'
- sendto: jabbera@example.com
- text_me_morning_disabled:
- active: false
- mediatype: sms
- period: '1-5,09:30-10:00'
- severity: D
- sendto: '+42032132588568'

```

### 26.19.345 salt.states.zabbix\_usergroup

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix user groups.

#### codeauthor

Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_usergroup.absent` (*name*, *\*\*kwargs*)

Ensures that the user group does not exist, eventually delete user group.

New in version 2016.3.0.

#### Parameters

- **name** -- name of the user group
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

delete_thai_monks_usrgrp:
  zabbix_usergroup.absent:
    - name: 'Thai monks'

```

`salt.states.zabbix_usergroup.present` (*name*, *\*\*kwargs*)

Creates new user group. NOTE: This function accepts all standard user group properties: keyword argument names differ depending on your zabbix version, see: [https://www.zabbix.com/documentation/2.0/manual/appendix/api/usergroup/definitions#user\\_group](https://www.zabbix.com/documentation/2.0/manual/appendix/api/usergroup/definitions#user_group)

New in version 2016.3.0.

#### Parameters

- **name** -- name of the user group
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

make_new_thai_monks_usergroup:
  zabbix_usergroup.present:
    - name: 'Thai monks'
    - gui_access: 1
    - debug_mode: 0
    - users_status: 0

```

### 26.19.346 salt.states.zabbix\_usermacro

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix usermacros. :codeauthor: Raymond Kuiper <qix@the-wired.net>

salt.states.zabbix\_usermacro.**absent**(*name*, *hostid*=None, **\*\*kwargs**)

Ensures that the mediatype does not exist, eventually deletes the mediatype.

#### Parameters

- **name** -- name of the usermacro
- **hostid** -- id's of the hosts to apply the usermacro on, if missing a global usermacro is assumed.
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

delete_usermacro:
  zabbix_usermacro.absent:
    - name: '{$SNMP_COMMUNITY}'

```

salt.states.zabbix\_usermacro.**present**(*name*, *value*, *hostid*=None, **\*\*kwargs**)

Creates a new usermacro.

#### Parameters

- **name** -- name of the usermacro
- **value** -- value of the usermacro
- **hostid** -- id's of the hosts to apply the usermacro on, if missing a global usermacro is assumed.
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

override host usermacro:
  zabbix_usermacro.present:
    - name: '{$SNMP_COMMUNITY}'
    - value: 'public'
    - hostid: 21

```

## 26.19.347 salt.states.zabbix\_valuemap

**Warning:** This module will be removed from Salt in version 3009 in favor of the [zabbix Salt Extension](#).

Management of Zabbix Valuemap object over Zabbix API.

New in version 2017.7.0.

**codeauthor**

Jakub Sliva <jakub.sliva@ultimum.io>

salt.states.zabbix\_valuemap.**absent**(*name*, *\*\*kwargs*)

Makes the Zabbix Value map to be absent (either does not exist or delete it).

**Parameters**

- **name** -- Zabbix Value map name
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

**zabbix-valuemap-absent:**

**zabbix\_valuemap.absent:**

- **name:** Value map name

salt.states.zabbix\_valuemap.**present**(*name*, *params*, *\*\*kwargs*)

Creates Zabbix Value map object or if differs update it according defined parameters

**Parameters**

- **name** -- Zabbix Value map name
- **params** -- Definition of the Zabbix Value map
- **\_connection\_user** -- Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **\_connection\_password** -- Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **\_connection\_url** -- Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

**zabbix-valuemap-present:**

**zabbix\_valuemap.present:**

- **name:** Number mapping
- **params:**
  - mappings:**
    - **value:** 1  
**newvalue:** one
    - **value:** 2  
**newvalue:** two

## 26.19.348 salt.states.zcbuildout

### Management of zc.buildout

This module is inspired from minitage's buildout maker (<https://github.com/minitage/minitage/blob/master/src/minitage/core/makers/buildout.py>)

New in version 2016.3.0.

---

**Note:** This state module is beta; the API is subject to change and no promise as to performance or functionality is yet present

---

### Available Functions

- built

```
installed1
  buildout.installed:
    - name: /path/to/buildout

installed2
  buildout.installed:
    - name: /path/to/buildout
    - parts:
      - a
      - b
    - python: /path/to/pythonpath/bin/python
    - unless: /bin/test_something_installed
    - onlyif: /bin/test_else_installed
```

`salt.states.zcbuildout.installed`(*name*, *config*='buildout.cfg', *quiet*=False, *parts*=None, *user*=None, *env*=(), *buildout\_ver*=None, *test\_release*=False, *distribute*=None, *new\_st*=None, *offline*=False, *newest*=False, *python*='/builds/saltstack/open/docs/builddocs/venv/bin/python3', *debug*=False, *verbose*=False, *unless*=None, *onlyif*=None, *use\_vt*=False, *loglevel*='debug', *\*\*kwargs*)

Install buildout in a specific directory

It is a thin wrapper to modules.buildout.buildout

**name**

directory to execute in

**quiet**

do not output console & logs

**config**

buildout config to use (default: buildout.cfg)

**parts**

specific buildout parts to run

**user**

user used to run buildout as

New in version 2014.1.4.

**env**  
environment variables to set when running

**buildout\_ver**  
force a specific buildout version (1 | 2)

**test\_release**  
buildout accept test release

**new\_st**  
Forcing use of setuptools >= 0.7

**distribute**  
use distribute over setuptools if possible

**offline**  
does buildout run offline

**python**  
python to use

**debug**  
run buildout with -D debug flag

**onlyif**  
Only execute cmd if statement on the host return 0

**unless**  
Do not execute cmd if statement on the host return 0

**newest**  
run buildout in newest mode

**verbose**  
run buildout in verbose mode (-vvvvv)

**use\_vt**  
Use the new salt VT to stream output [experimental]

**loglevel**  
loglevel for buildout commands

### 26.19.349 salt.states.zenoss

State to manage monitoring in Zenoss.

New in version 2016.3.0.

This state module depends on the 'zenoss' Salt execution module.

Allows for setting a state of minions in Zenoss using the Zenoss API. Currently Zenoss 4.x and 5.x are supported.

```
enable_monitoring:
  zenoss.monitored:
    - name: web01.example.com
    - device_class: /Servers/Linux
    - collector: localhost
    - prod_state: 1000
```

`salt.states.zenoss.monitored(name, device_class=None, collector='localhost', prod_state=None)`

Ensure a device is monitored. The 'name' given will be used for Zenoss device name and should be resolvable.

```
enable_monitoring:
  zenoss.monitored:
    - name: web01.example.com
    - device_class: /Servers/Linux
```

(continues on next page)

(continued from previous page)

- **collector**: localhost
- **prod\_state**: 1000

### 26.19.350 salt.states.zfs

States for managing zfs datasets

**maintainer**

Jorge Schrauwen <sjorge@blackdot.be>

**maturity**

new

**depends**

salt.utils.zfs, salt.modules.zfs

**platform**

smartos, illumos, solaris, freebsd, linux

New in version 2016.3.0.

Changed in version 2018.3.1: Big refactor to remove duplicate code, better type conversions and improved consistency in output.

```

test/shares/yuki:
  zfs.filesystem_present:
    - create_parent: true
    - properties:
      quota: 16G

test/iscsi/haruhi:
  zfs.volume_present:
    - create_parent: true
    - volume_size: 16M
    - sparse: true
    - properties:
      readonly: on

test/shares/yuki@frozen:
  zfs.snapshot_present

moka_origin:
  zfs.hold_present:
    - snapshot: test/shares/yuki@frozen

test/shares/moka:
  zfs.filesystem_present:
    - cloned_from: test/shares/yuki@frozen

test/shares/moka@tsukune:
  zfs.snapshot_absent

```

`salt.states.zfs.bookmark_absent` (*name*, *force=False*, *recursive=False*)

ensure bookmark is absent on the system

**name**  
[string] name of snapshot

**force**  
[boolean] try harder to destroy the dataset (zfs destroy -f)

**recursive**  
[boolean] also destroy all the child datasets (zfs destroy -r)

`salt.states.zfs.bookmark_present` (*name, snapshot*)

ensure bookmark exists

**name**  
[string] name of bookmark

**snapshot**  
[string] name of snapshot

`salt.states.zfs.filesystem_absent` (*name, force=False, recursive=False*)

ensure filesystem is absent on the system

**name**  
[string] name of filesystem

**force**  
[boolean] try harder to destroy the dataset (zfs destroy -f)

**recursive**  
[boolean] also destroy all the child datasets (zfs destroy -r)

**Warning:** If a volume with name exists, this state will succeed without destroying the volume specified by name. This module is dataset type sensitive.

`salt.states.zfs.filesystem_present` (*name, create\_parent=False, properties=None, cloned\_from=None*)

ensure filesystem exists and has properties set

**name**  
[string] name of filesystem

**create\_parent**  
[boolean] creates all the non-existing parent datasets. any property specified on the command line using the -o option is ignored.

**cloned\_from**  
[string] name of snapshot to clone

**properties**  
[dict] additional zfs properties (-o)

---

**Note:** `cloned_from` is only use if the filesystem does not exist yet, when `cloned_from` is set after the filesystem exists it will be ignored.

---

---

**Note:** Properties do not get cloned, if you specify the properties in the state file they will be applied on a subsequent run.

---

`salt.states.zfs.hold_absent` (*name, snapshot, recursive=False*)

ensure hold is absent on the system

**name**  
[string] name of hold

**snapshot**  
[string] name of snapshot

**recursive**

[boolean] recursively releases a hold with the given tag on the snapshots of all descendent file systems.

`salt.states.zfs.hold_present(name, snapshot, recursive=False)`

ensure hold is present on the system

**name**

[string] name of holdt

**snapshot**

[string] name of snapshot

**recursive**

[boolean] recursively add hold with the given tag on the snapshots of all descendent file systems.

`salt.states.zfs.promoted(name)`

ensure a dataset is not a clone

**name**

[string] name of fileset or volume

**Warning:** only one dataset can be the origin, if you promote a clone the original will now point to the promoted dataset

`salt.states.zfs.scheduled_snapshot(name, prefix, recursive=True, schedule=None)`

maintain a set of snapshots based on a schedule

**name**

[string] name of filesystem or volume

**prefix**

[string] prefix for the snapshots e.g. 'test' will result in snapshots being named 'test-yyyymmdd\_hhmm'

**recursive**

[boolean] create snapshots for all children also

**schedule**

[dict] dict holding the schedule, the following keys are available (minute, hour, day, month, and year) by default all are set to 0 the value indicated the number of snapshots of that type to keep around.

**Warning:** snapshots will only be created and pruned every time the state runs. a schedule must be setup to automatically run the state. this means that if you run the state daily the hourly snapshot will only be made once per day!

Changed in version 2018.3.0: switched to localtime from gmtime so times now take into account timezones.

`salt.states.zfs.snapshot_absent(name, force=False, recursive=False)`

ensure snapshot is absent on the system

**name**

[string] name of snapshot

**force**

[boolean] try harder to destroy the dataset (zfs destroy -f)

**recursive**

[boolean] also destroy all the child datasets (zfs destroy -r)

`salt.states.zfs.snapshot_present(name, recursive=False, properties=None)`

ensure snapshot exists and has properties set

**name**

[string] name of snapshot

**recursive**

[boolean] recursively create snapshots of all descendent datasets

**properties**

[dict] additional zfs properties (-o)

`salt.states.zfs.volume_absent` (*name*, *force=False*, *recursive=False*)

ensure volume is absent on the system

**name**

[string] name of volume

**force**

[boolean] try harder to destroy the dataset (zfs destroy -f)

**recursive**

[boolean] also destroy all the child datasets (zfs destroy -r)

**Warning:** If a filesystem with `name` exists, this state will succeed without destroying the filesystem specified by `name`. This module is dataset type sensitive.

`salt.states.zfs.volume_present` (*name*, *volume\_size*, *sparse=False*, *create\_parent=False*, *properties=None*, *cloned\_from=None*)

ensure volume exists and has properties set

**name**

[string] name of volume

**volume\_size**

[string] size of volume

**sparse**

[boolean] create sparse volume

**create\_parent**

[boolean] creates all the non-existing parent datasets. any property specified on the command line using the -o option is ignored.

**cloned\_from**

[string] name of snapshot to clone

**properties**

[dict] additional zfs properties (-o)

---

**Note:** `cloned_from` is only use if the volume does not exist yet, when `cloned_from` is set after the volume exists it will be ignored.

---

---

**Note:** Properties do not get cloned, if you specify the properties in the state file they will be applied on a subsequent run.

`volume_size` is considered a property, so the volume's size will be corrected when the properties get updated if it differs from the original volume.

The `sparse` parameter is ignored when using `cloned_from`.

---

## 26.19.351 salt.states.zk\_concurrency

## Control concurrency of steps within state execution using zookeeper

**depends**

kazoo

**configuration**See `salt.modules.zookeeper` for setup instructions.

This module allows you to "wrap" a state's execution with concurrency control. This is useful to protect against all hosts executing highstate simultaneously if your services don't all HUP restart. The common way of protecting against this is to run in batch mode, but that doesn't protect from another person running the same batch command (and thereby having 2x the number of nodes deploying at once).

This module will block while acquiring a slot, meaning that however the command gets called it will coordinate with zookeeper to ensure that no more than `max_concurrency` steps are executing with a single path.

```

acquire_lock:
  zk_concurrency.lock:
  - name: /trafficserver
  - zk_hosts: 'zookeeper:2181'
  - max_concurrency: 4
  - prereq:
    - service: trafficserver

trafficserver:
  service.running:
  - watch:
    - file: /etc/trafficserver/records.config

/etc/trafficserver/records.config:
  file.managed:
  - source: salt://records.config

release_lock:
  zk_concurrency.unlock:
  - name: /trafficserver
  - require:
    - service: trafficserver

```

This example would allow the file state to change, but would limit the concurrency of the trafficserver service restart to 4.

```

salt.states.zk_concurrency.lock(name, zk_hosts=None, identifier=None, max_concurrency=1,
                                timeout=None, ephemeral_lease=False, profile=None, scheme=None,
                                username=None, password=None, default_acl=None)

```

Block state execution until you are able to get the lock (or hit the timeout)

```

salt.states.zk_concurrency.min_party(name, zk_hosts, min_nodes, blocking=False, profile=None,
                                       scheme=None, username=None, password=None,
                                       default_acl=None)

```

Ensure that there are `min_nodes` in the party at `name`, optionally blocking if not available.

```

salt.states.zk_concurrency.unlock(name, zk_hosts=None, identifier=None, max_concurrency=1,
                                   ephemeral_lease=False, profile=None, scheme=None,
                                   username=None, password=None, default_acl=None)

```

Remove lease from semaphore.

### 26.19.352 salt.states.zone

Management of Solaris Zones

```

maintainer
    Jorge Schrauwen <sjorge@blackdot.be>

maturity
    new

depends
    salt.modules.zoneadm, salt.modules.zonecfg

platform
    solaris
  
```

New in version 2017.7.0.

Below are some examples of how to use this state. Lets start with creating a zone and installing it.

```

omipkg1_configuration:
  zone.present:
    - name: omipkg1
    - brand: ipkg
    - zonepath: /zones/omipkg1
    - properties:
      - autoboot: true
      - ip-type: exclusive
      - cpu-shares: 50
    - resources:
      - attr:
        - name: owner
        - value: Jorge Schrauwen
        - type: string
      - attr:
        - name: description
        - value: OmniOS ipkg zone for testing
        - type: string
      - capped-memory:
        - physical: 64M
  omipkg1_installation:
    zone.installed:
      - name: omipkg1
      - require:
        - zone: omipkg1_configuration
  omipkg1_running:
    zone.booted:
      - name: omipkg1
      - require:
        - zone: omipkg1_installation
  
```

A zone without network access is not very useful. We could update the zone.present state in the example above to add a network interface or we could use a separate state for this.

```
omipkg1_network:
  zone.resource_present:
    - name: omipkg1
    - resource_type: net
    - resource_selector_property: mac-addr
    - resource_selector_value: "02:08:20:a2:a3:10"
    - physical: znic1
    - require:
      - zone: omipkg1_configuration
```

Since this is a single tenant system having the owner attribute is pointless. Let's remove that attribute.

---

**Note:** The following state run the omipkg1\_configuration state will add it again! If the entire configuration is managed it would be better to add resource\_prune and optionally the resource\_selector\_property properties to the resource.

---

```
omipkg1_strip_owner:
  zone.resource_present:
    - name: omipkg1
    - resource_type: attr
    - resource_selector_property: name
    - resource_selector_value: owner
    - require:
      - zone: omipkg1_configuration
```

Let's bump the zone's CPU shares a bit.

---

**Note:** The following state run the omipkg1\_configuration state will set it to 50 again. Update the entire zone configuration is managed you should update it there instead.

---

```
omipkg1_more_cpu:
  zone.property_present:
    - name: omipkg1
    - property: cpu-shares
    - value: 100
```

Or we can remove the limit altogether!

---

**Note:** The following state run the omipkg1\_configuration state will set it to 50 again. Update the entire zone configuration is managed you should set the property to None (nothing after the :) instead.

---

```
omipkg1_no_cpu:
  zone.property_absent:
    - name: omipkg1
    - property: cpu-shares
```

```
salt.states.zone.absent(name, uninstall=False)
    Ensure a zone is absent
```

**name**  
[string] name of the zone

**uninstall**  
[boolean] when true, uninstall instead of detaching the zone first.

`salt.states.zone.attached(name, force=False)`

Ensure zone is attached

**name**  
[string] name of the zone

**force**  
[boolean] force attach the zone

`salt.states.zone.booted(name, single=False)`

Ensure zone is booted

**name**  
[string] name of the zone

**single**  
[boolean] boot in single usermode

`salt.states.zone.detached(name)`

Ensure zone is detached

**name**  
[string] name of the zone

`salt.states.zone.export(name, path, replace=False)`

Export a zones configuration

**name**  
[string] name of the zone

**path**  
[string] path of file to export too.

**replace**  
[boolean] replace the file if it exists

`salt.states.zone.halted(name, graceful=True)`

Ensure zone is halted

**name**  
[string] name of the zone

**graceful**  
[boolean] use shutdown instead of halt if true

`salt.states.zone.import_(name, path, mode='import', nodataset=False, brand_opts=None)`

Import a zones configuration

**name**  
[string] name of the zone

**path**  
[string] path of the configuration file to import

**mode**  
[string] either import, install, or attach

**nodataset**  
[boolean] do not create a ZFS file system

**brand\_opts**  
[boolean] brand specific options to pass

---

**Note:** The mode argument can be set to `import`, `install`, or `attach`. `import`: will only import the configuration `install`: will import and then try to install the zone `attach`: will import and then try to

attach of the zone

---

```
omipkg1:
  zone.import:
    - path: /foo/bar/baz
```

`salt.states.zone.installed`(*name*, *nodataset=False*, *brand\_opts=None*)

Ensure zone is installed

**name**

[string] name of the zone

**nodataset**

[boolean] do not create a ZFS file system

**brand\_opts**

[boolean] brand specific options to pass

`salt.states.zone.present`(*name*, *brand*, *zonepath*, *properties=None*, *resources=None*)

Ensure a zone with certain properties and resources

**name**

[string] name of the zone

**brand**

[string] brand of the zone

**zonepath**

[string] path of the zone

**properties**

[list of key-value pairs] dict of properties

**resources**

[list of key-value pairs] dict of resources

---

**Note:** If the zone does not exist it will not be installed. You can use the `zone.installed` state for this.

---

**Note:**

**Default resource selectors:**

- fs: dir
  - net: mac-addr
  - device: match
  - rctl: name
  - attr: name
  - dataset: name
  - admin: user
- 

**Warning:** Properties and resource will not be removed when they are absent from the state!

For properties, simple set them to `None`.

For resources, add the `resource_prune` property and set it to `True`. Also specify the `resource_selector_property` if the default is not the one you want.

`salt.states.zone.property_absent`(*name*, *property*)

Ensure property is absent

**name**  
[string] name of the zone

**property**  
[string] name of property

---

**Note:** This does a zoneacfg clear call. So the property may be reset to a default value! Does has the side effect of always having to be called.

---

`salt.states.zone.property_present` (*name, property, value*)

Ensure property has a certain value

**name**  
[string] name of the zone

**property**  
[string] name of property

**value**  
[string] value of property

`salt.states.zone.resource_absent` (*name, resource\_type, resource\_selector\_property, resource\_selector\_value*)

Ensure resource is absent

**name**  
[string] name of the zone

**resource\_type**  
[string] type of resource

**resource\_selector\_property**  
[string] unique resource identifier

**resource\_selector\_value**  
[string] value for resource selection

**Warning:** Both `resource_selector_property` and `resource_selector_value` must be provided, some properties like `name` are already reserved by salt in these states.

---

**Note:** You can set both `resource_selector_property` and `resource_selector_value` to `None` for resources that do not require them.

---

`salt.states.zone.resource_present` (*name, resource\_type, resource\_selector\_property, resource\_selector\_value, \*\*kwargs*)

Ensure resource exists with provided properties

**name**  
[string] name of the zone

**resource\_type**  
[string] type of resource

**resource\_selector\_property**  
[string] unique resource identifier

**resource\_selector\_value**  
[string] value for resource selection

**kwargs**  
[string|int|...] resource properties

**Warning:** Both `resource_selector_property` and `resource_selector_value` must be provided, some properties like `name` are already reserved by salt in states.

---

**Note:** You can set both `resource_selector_property` and `resource_selector_value` to `None` for resources that do not require them.

---

`salt.states.zone.uninstalled`(*name*)

Ensure zone is uninstalled

**name**

[string] name of the zone

### 26.19.353 `salt.states.zookeeper`

Zookeeper State

**depends**

kazoo

**configuration**

See `salt.modules.zookeeper` for setup instructions.

#### ACLS

For more information about acls, please checkout the kazoo documentation.

[http://kazoo.readthedocs.io/en/latest/api/security.html#kazoo.security.make\\_digest\\_acl](http://kazoo.readthedocs.io/en/latest/api/security.html#kazoo.security.make_digest_acl)

The following options can be included in the acl dictionary:

**param username**

Username to use for the ACL.

**param password**

A plain-text password to hash.

**param write**

Write permission.

**type write**

bool

**param create**

Create permission.

**type create**

bool

**param delete**

Delete permission.

**type delete**

bool

**param admin**

Admin permission.

**type admin**  
bool

**param all**  
All permissions.

**type all**  
bool

**salt.states.zookeeper.absent** (*name, version=-1, recursive=False, profile=None, hosts=None, scheme=None, username=None, password=None, default\_acl=None*)

Make sure znode is absent

**name**

path to znode

**version**

Specify the version which should be deleted Default: -1 (always match)

**recursive**

Boolean to indicate if children should be recursively deleted Default: False

**profile**

Configured Zookeeper profile to authenticate with (Default: None)

**hosts**

Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')

**scheme**

Scheme to authenticate with (Default: 'digest')

**username**

Username to authenticate (Default: None)

**password**

Password to authenticate (Default: None)

**default\_acl**

Default acls to assign if a node is created in this connection (Default: None)

**delete znode:**

**zookeeper.absent:**

- **name:** /test
- **recursive:** True

**salt.states.zookeeper.acls** (*name, acls, version=-1, profile=None, hosts=None, scheme=None, username=None, password=None, default\_acl=None*)

Update acls on a znode

**name**

path to znode

**acls**

list of acl dictionaries to set on znode

**version**

Specify the version which should be deleted Default: -1 (always match)

**profile**

Configured Zookeeper profile to authenticate with (Default: None)

**hosts**

Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')

**scheme**

Scheme to authenticate with (Default: 'digest')

**username**

Username to authenticate (Default: None)

**password**

Password to authenticate (Default: None)

**default\_acl**

Default acls to assign if a node is created in this connection (Default: None)

```

update acls:
  zookeeper.acls:
    - name: /test/name
    - acls:
      - username: daniel
        password: test
        all: True
      - username: gtmanfred
        password: test
        all: True
  
```

`salt.states.zookeeper.present` (*name, value, acls=None, ephemeral=False, sequence=False, makepath=False, version=-1, profile=None, hosts=None, scheme=None, username=None, password=None, default\_acl=None*)

Make sure znode is present in the correct state with the correct acls

**name**

path to znode

**value**

value znode should be set to

**acls**

list of acl dictionaries to set on znode (make sure the ones salt is connected with are included) Default: None

**ephemeral**

Boolean to indicate if ephemeral znode should be created Default: False

**sequence**

Boolean to indicate if znode path is suffixed with a unique index Default: False

**makepath**

Boolean to indicate if the parent paths should be created Default: False

**version**

For updating, specify the version which should be updated Default: -1 (always match)

**profile**

Configured Zookeeper profile to authenticate with (Default: None)

**hosts**

Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')

**scheme**

Scheme to authenticate with (Default: 'digest')

**username**

Username to authenticate (Default: None)

**password**

Password to authenticate (Default: None)

**default\_acl**

Default acls to assign if a node is created in this connection (Default: None)

```

add znode:
  zookeeper.present:
    - name: /test/name
    - value: gtmanfred
    - makepath: True
  
```

**update znode:**

(continues on next page)

(continued from previous page)

```

zookeeper.present:
- name: /test/name
- value: daniel
- acls:
  - username: daniel
    password: test
    read: true
  - username: gtmanfred
    password: test
    read: true
    write: true
    create: true
    delete: true
    admin: true
- makepath: True

```

### 26.19.354 salt.states.zpool

States for managing zpools

**maintainer**

Jorge Schrauwen <[sjorge@blackdot.be](mailto:sjorge@blackdot.be)>

**maturity**

new

**depends**

salt.utils.zfs, salt.modules.zpool

**platform**

smartos, illumos, solaris, freebsd, linux

New in version 2016.3.0.

Changed in version 2018.3.1: Big refactor to remove duplicate code, better type conversions and improved consistency in output.

```

oldpool:
  zpool.absent:
    - export: true

newpool:
  zpool.present:
    - config:
      import: false
      force: true
    - properties:
      comment: salty storage pool
    - layout:
      - mirror:
        - /dev/disk0
        - /dev/disk1
      - mirror:
        - /dev/disk2

```

(continues on next page)

(continued from previous page)

```

- /dev/disk3

partitionpool:
  zpool.present:
    - config:
      import: false
      force: true
    - properties:
      comment: disk partition salty storage pool
      ashift: '12'
      feature@lz4_compress: enabled
    - filesystem_properties:
      compression: lz4
      atime: on
      relatime: on
    - layout:
      - /dev/disk/by-uuid/3e43ce94-77af-4f52-a91b-6cdbb0b0f41b

simplepool:
  zpool.present:
    - config:
      import: false
      force: true
    - properties:
      comment: another salty storage pool
    - layout:
      - /dev/disk0
      - /dev/disk1

```

**Warning:** The layout will never be updated, it will only be used at time of creation. It's a whole lot of work to figure out if a devices needs to be detached, removed, etc. This is best done by the sysadmin on a case per case basis.

Filesystem properties are also not updated, this should be managed by the `zfs` state module.

`salt.states.zpool.absent` (*name*, *export=False*, *force=False*)

ensure storage pool is absent on the system

**name**

[string] name of storage pool

**export**

[boolean] export instead of destroy the zpool if present

**force**

[boolean] force destroy or export

`salt.states.zpool.present` (*name*, *properties=None*, *filesystem\_properties=None*, *layout=None*, *config=None*)

ensure storage pool is present on the system

**name**

[string] name of storage pool

**properties**

[dict] optional set of properties to set for the storage pool

**filesystem\_properties**

[dict] optional set of filesystem properties to set for the storage pool (creation only)

**layout: dict**

disk layout to use if the pool does not exist (creation only)

**config**

[dict] fine grain control over this state

**Note:**

The following configuration properties can be toggled in the config parameter.

- import (true) - try to import the pool before creating it if absent
- import\_dirs (None) - specify additional locations to scan for devices on import (comma-separated)
- device\_dir (None, SunOS=/dev/dsk, Linux=/dev) - specify device directory to prepend for none absolute device paths
- force (false) - try to force the import or creation

**Note:** It is no longer needed to give a unique name to each top-level vdev, the old layout format is still supported but no longer recommended.

```
- mirror:
  - /tmp/vdisk3
  - /tmp/vdisk2
- mirror:
  - /tmp/vdisk0
  - /tmp/vdisk1
```

The above yaml will always result in the following zpool create:

```
zpool create mypool mirror /tmp/vdisk3 /tmp/vdisk2 mirror /tmp/vdisk0 /
↳tmp/vdisk1
```

**Warning:** The legacy format is also still supported but not recommended, because ID's inside the layout dict must be unique they need to have a suffix.

```
mirror-0:
  /tmp/vdisk3
  /tmp/vdisk2
mirror-1:
  /tmp/vdisk0
  /tmp/vdisk1
```

**Warning:** Pay attention to the order of your dict!

```
- mirror:
  - /tmp/vdisk0
  - /tmp/vdisk1
  - /tmp/vdisk2
```

The above will result in the following zpool create:

```
zpool create mypool mirror /tmp/vdisk0 /tmp/vdisk1 /tmp/vdisk2
```

Creating a 3-way mirror! While you probably expect it to be mirror root vdev with 2 devices + a root vdev of 1 device!

## 26.20 thorium modules

|               |  |
|---------------|--|
| <i>calc</i>   | Used to manage the thorium register.   |
| <i>check</i>  | The check Thorium state is used to create gateways to commands, the checks make it easy to make states that watch registers for changes and then just succeed or fail based on the state of the register, this creates the pattern of having a command execution get gated by a check state via a requisite. |
| <i>file</i>   | Writes matches to disk to verify activity, helpful when testing  |
| <i>key</i>    | The key Thorium State is used to apply changes to the accepted/rejected/pending keys   |
| <i>local</i>  | Run remote execution commands via the local client   |
| <i>reg</i>    | Used to manage the thorium register.   |
| <i>runner</i> | React by calling asynchronous runners  |
| <i>status</i> | This thorium state is used to track the status beacon events and keep track of the active status of minions  |
| <i>timer</i>  | Allow for flow based timers.   |
| <i>wheel</i>  | React by calling asynchronous runners  |

### 26.20.1 salt.thorium.calc

Used to manage the thorium register. The thorium register is where compound values are stored and computed, such as averages etc.

New in version 2016.11.0.

#### depends

statistics PyPi module

`salt.thorium.calc.add`(*name*, *num*, *minimum=0*, *maximum=0*, *ref=None*)

Adds together the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.add:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.calc`(*name*, *num*, *oper*, *minimum=0*, *maximum=0*, *ref=None*)

Perform a calculation on the num most recent values. Requires a list. Valid values for *oper* are:

- add: Add last num values together
- mul: Multiple last num values together
- mean: Calculate mean of last num values
- median: Calculate median of last num values

- `median_low`: Calculate low median of last `num` values
- `median_high`: Calculate high median of last `num` values
- `median_grouped`: Calculate grouped median of last `num` values
- `mode`: Calculate mode of last `num` values

USAGE:

```
foo:
  calc.calc:
    - name: myregentry
    - num: 5
    - oper: mean
```

`salt.thorium.calc.mean`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.mean:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_grouped`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the grouped mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_grouped:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_high`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the high mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_high:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_low`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the low mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_low:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.mode`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mode of the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.mode:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.mul`(*name, num, minimum=0, maximum=0, ref=None*)

Multiplies together the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.mul:
    - name: myregentry
    - num: 5
```

## 26.20.2 salt.thorium.check

The check Thorium state is used to create gateways to commands, the checks make it easy to make states that watch registers for changes and then just succeed or fail based on the state of the register, this creates the pattern of having a command execution get gated by a check state via a requisite.

`salt.thorium.check.contains`(*name, value, count\_lt=None, count\_lte=None, count\_eq=None, count\_gte=None, count\_gt=None, count\_ne=None*)

Only succeed if the value in the given register location contains the given value

USAGE:

```
foo:
  check.contains:
    - value: itni

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

`salt.thorium.check.eq`(*name, value*)

Only succeed if the value in the given register location is equal to the given value

USAGE:

```

foo:
  check.eq:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.event(name)`

Checks for a specific event match and returns result True if the match happens

USAGE:

```

salt/foo/*/bar:
  check.event

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: salt/foo/*/bar

```

`salt.thorium.check.gt(name, value)`

Only succeed if the value in the given register location is greater than the given value

USAGE:

```

foo:
  check.gt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.gte(name, value)`

Only succeed if the value in the given register location is greater or equal than the given value

USAGE:

```

foo:
  check.gte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'

```

(continues on next page)

(continued from previous page)

- ```
- func: test.ping
- require:
- check: foo
```

`salt.thorium.check.len_eq(name, value)`

Only succeed if the length of the given register location is equal to the given value.

USAGE:

```
foo:
  check.len_eq:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.len_gt(name, value)`

Only succeed if length of the given register location is greater than the given value.

USAGE:

```
foo:
  check.len_gt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.len_gte(name, value)`

Only succeed if the length of the given register location is greater or equal than the given value

USAGE:

```
foo:
  check.len_gte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.len_lt(name, value)`

Only succeed if the length of the given register location is less than the given value.

USAGE:

```
foo:
  check.len_lt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.len_lte`(*name, value*)

Only succeed if the length of the given register location is less than or equal the given value

USAGE:

```
foo:
  check.len_lte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.len_ne`(*name, value*)

Only succeed if the length of the given register location is not equal to the given value.

USAGE:

```
foo:
  check.len_ne:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo
```

`salt.thorium.check.lt`(*name, value*)

Only succeed if the value in the given register location is less than the given value

USAGE:

```
foo:
  check.lt:
    - value: 42

run_remote_ex:
```

(continues on next page)

(continued from previous page)

```

local.cmd:
- tgt: '*'
- func: test.ping
- require:
- check: foo

```

`salt.thorium.check.lte`(*name*, *value*)

Only succeed if the value in the given register location is less than or equal the given value

USAGE:

```

foo:
  check.lte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo

```

`salt.thorium.check.ne`(*name*, *value*)

Only succeed if the value in the given register location is not equal to the given value

USAGE:

```

foo:
  check.ne:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
    - check: foo

```

### 26.20.3 salt.thorium.file

Writes matches to disk to verify activity, helpful when testing

Normally this is used by giving the name of the file (without a path) that the data will be saved to. If for instance you use `foo` as the name:

```

foo:
  file.save

```

Then the file will be saved to:

```

<salt cachedir>/thorium/saves/foo

```

You may also provide an absolute path for the file to be saved to:

```
/tmp/foo.save:
  file.save
```

Files will be saved in JSON format. However, JSON does not support `set()`'s. If you are saving a register entry that contains a `set()`, then it will fail to save to JSON format. However, you may pass data through a filter which makes it JSON compliant:

```
foo:
  file.save:
    filter: True
```

Be warned that if you do this, then the file will be saved, but not in a format that can be re-imported into Python.

`salt.thorium.file.save`(*name*, *filter=False*)

Save the register to `<salt cachedir>/thorium/saves/<name>`, or to an absolute path.

If an absolute path is specified, then the directory will be created non-recursively if it doesn't exist.

USAGE:

```
foo:
  file.save

/tmp/foo:
  file.save
```

#### 26.20.4 salt.thorium.key

The key Thorium State is used to apply changes to the accepted/rejected/pending keys

New in version 2016.11.0.

`salt.thorium.key.timeout`(*name*, *delete=0*, *reject=0*)

If any minion's status is older than the timeout value then apply the given action to the timed out key. This example will remove keys to minions that have not checked in for 300 seconds (5 minutes)

USAGE:

```
statreg:
  status.reg

clean_keys:
  key.timeout:
    - require:
      - status: statreg
    - delete: 300
```

### 26.20.5 salt.thorium.local

Run remote execution commands via the local client

`salt.thorium.local.cmd(name, tgt, func, arg=(), tgt_type='glob', ret='', kwarg=None, **kwargs)`

Execute a remote execution command

USAGE:

```
run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.sleep
    - arg:
      - 30

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.sleep
    - kwarg:
      length: 30
```

### 26.20.6 salt.thorium.reg

Used to manage the thorium register. The thorium register is where compound values are stored and computed, such as averages etc.

`salt.thorium.reg.clear(name)`

Clear the namespace from the register

USAGE:

```
clearns:
  reg.clear:
    - name: myregister
```

`salt.thorium.reg.delete(name)`

Delete the namespace from the register

USAGE:

```
deletens:
  reg.delete:
    - name: myregister
```

`salt.thorium.reg.list_(name, add, match, stamp=False, prune=0)`

Add the specified values to the named list

If `stamp` is `True`, then the timestamp from the event will also be added if `prune` is set to an integer higher than 0, then only the last `prune` values will be kept in the list.

USAGE:

```
foo:
  reg.list:
    - add: bar
    - match: my/custom/event
    - stamp: True
```

`salt.thorium.reg.mean(name, add, match)`

Accept a numeric value from the matched events and store a running average of the values in the given register. If the specified value is not numeric it will be skipped

USAGE:

```
foo:
  reg.mean:
    - add: data_field
    - match: my/custom/event
```

`salt.thorium.reg.set_(name, add, match)`

Add a value to the named set

USAGE:

```
foo:
  reg.set:
    - add: bar
    - match: my/custom/event
```

### 26.20.7 salt.thorium.runner

React by calling asynchronous runners

`salt.thorium.runner.cmd(name, func=None, arg=(), **kwargs)`

Execute a runner asynchronous:

USAGE:

```
run_cloud:
  runner.cmd:
    - func: cloud.create
    - arg:
      - my-ec2-config
      - myinstance

run_cloud:
  runner.cmd:
    - func: cloud.create
    - kwargs:
      provider: my-ec2-config
      instances: myinstance
```

### 26.20.8 salt.thorium.status

This thorium state is used to track the status beacon events and keep track of the active status of minions

New in version 2016.11.0.

`salt.thorium.status.reg(name)`

Activate this register to turn on a minion status tracking register, this register keeps the current status beacon data and the time that each beacon was last checked in.

### 26.20.9 salt.thorium.timer

Allow for flow based timers. These timers allow for a sleep to exist across multiple runs of the flow

`salt.thorium.timer.hold(name, seconds)`

Wait for a given period of time, then fire a result of True, requiring this state allows for an action to be blocked for evaluation based on time

USAGE:

```
hold_on_a_moment:  
  timer.hold:  
    - seconds: 30
```

### 26.20.10 salt.thorium.wheel

React by calling asynchronous runners

`salt.thorium.wheel.cmd(name, fun=None, arg=(), **kwargs)`

Execute a runner asynchronous:

USAGE:

```
run_cloud:  
  wheel.cmd:  
    - fun: key.delete  
    - match: minion_id
```

## 26.21 token modules

---

*localfs*

Stores eauth tokens in the filesystem of the master.

*rediscluster*

Provide token storage in Redis cluster.

---

### 26.21.1 salt.tokens.localfs

Stores eauth tokens in the filesystem of the master. Location is configured by the master config option 'token\_dir'

`salt.tokens.localfs.get_token(opts, tok)`

Fetch the token data from the store.

**Parameters**

- **opts** -- Salt master config options
- **tok** -- Token value to get

**Returns**

Token data if successful. Empty dict if failed.

`salt.tokens.localfs.list_tokens(opts)`

List all tokens in the store.

**Parameters**

- **opts** -- Salt master config options

**Returns**

List of dicts (tokens)

`salt.tokens.localfs.mk_token(opts, tdata)`

Mint a new token using the config option hash\_type and store tdata with 'token' attribute set to the token. This module uses the hash of random 512 bytes as a token.

**Parameters**

- **opts** -- Salt master config options
- **tdata** -- Token data to be stored with 'token' attribute of this dict set to the token.

**Returns**

tdata with token if successful. Empty dict if failed.

`salt.tokens.localfs.rm_token(opts, tok)`

Remove token from the store.

**Parameters**

- **opts** -- Salt master config options
- **tok** -- Token to remove

**Returns**

Empty dict if successful. None if failed.

### 26.21.2 salt.tokens.rediscluster

Provide token storage in Redis cluster.

To get started simply start a redis cluster and assign all hashslots to the connected nodes. Add the redis hostname and port to master configs as eauth\_redis\_host and eauth\_redis\_port. Default values for these configs are as follow:

```
eauth_redis_host: localhost
eauth_redis_port: 6379
```

**depends**

- redis-py-cluster Python package

`salt.tokens.rediscluster.get_token(opts, tok)`

Fetch the token data from the store.

**Parameters**

- **opts** -- Salt master config options
- **tok** -- Token value to get

**Returns**

Token data if successful. Empty dict if failed.

`salt.tokens.rediscluster.list_tokens(opts)`

List all tokens in the store.

**Parameters**

**opts** -- Salt master config options

**Returns**

List of dicts (token\_data)

`salt.tokens.rediscluster.mk_token(opts, tdata)`

Mint a new token using the config option `hash_type` and store `tdata` with 'token' attribute set to the token. This module uses the hash of random 512 bytes as a token.

**Parameters**

- **opts** -- Salt master config options
- **tdata** -- Token data to be stored with 'token' attribute of this dict set to the token.

**Returns**

`tdata` with token if successful. Empty dict if failed.

`salt.tokens.rediscluster.rm_token(opts, tok)`

Remove token from the store.

**Parameters**

- **opts** -- Salt master config options
- **tok** -- Token to remove

**Returns**

Empty dict if successful. None if failed.

## 26.22 master tops modules

<code>cobbler</code>	Cobbler Tops
<code>ext_nodes</code>	External Nodes Classifier
<code>mongo</code>	Read tops data from a mongodb collection
<code>reclass_adapter</code>	Read tops data from a reclass database
<code>saltclass</code>	Saltclass Configuration
<code>varstack_top</code>	Use Varstack to provide tops data

### 26.22.1 salt.tops.cobbler

#### Cobbler Tops

Cobbler Tops is a master tops subsystem used to look up mapping information from Cobbler via its API. The same `cobbler.*` parameters are used for both the Cobbler tops and Cobbler pillar modules.

```

master_tops:
  cobbler: {}
cobbler.url: https://example.com/cobbler_api #default is http://localhost/
↳cobbler_api
cobbler.user: username # default is no username
cobbler.password: password # default is no password

```

## Module Documentation

`salt.tops.cobbler.top(**kwargs)`

Look up top data in Cobbler for a minion.

### 26.22.2 salt.tops.ext\_nodes

#### External Nodes Classifier

The External Nodes Classifier is a master tops subsystem that retrieves mapping information from major configuration management systems. One of the most common external nodes classifiers system is provided by Cobbler and is called `cobbler-ext-nodes`.

The `cobbler-ext-nodes` command can be used with this configuration:

```
master_tops:
ext_nodes: cobbler-ext-nodes
```

It is noteworthy that the Salt system does not directly ingest the data sent from the `cobbler-ext-nodes` command, but converts the data into information that is used by a Salt top file.

Any command can replace the call to 'cobbler-ext-nodes' above, but currently the data must be formatted in the same way that the standard 'cobbler-ext-nodes' does.

See (admittedly degenerate and probably not complete) example:

```
classes:
- basepackages
- database
```

The above essentially is the same as a top.sls containing the following:

```
base:
  '*':
    - basepackages
    - database

base:
  '*':
    - basepackages
    - database
```

`salt.tops.ext_nodes.top(**kwargs)`

Run the command configured

### 26.22.3 salt.tops.mongo

Read tops data from a mongodb collection

This module will load tops data from a mongo collection. It uses the node's id for lookups.

#### Salt Master Mongo Configuration

The module shares the same base mongo connection variables as `salt.returners.mongo_return`. These variables go in your master config file.

- `mongo.db` - The mongo database to connect to. Defaults to 'salt'.
- `mongo.host` - The mongo host to connect to. Supports replica sets by specifying all hosts in the set, comma-delimited. Defaults to 'salt'.
- `mongo.port` - The port that the mongo database is running on. Defaults to 27017.
- `mongo.user` - The username for connecting to mongo. Only required if you are using mongo authentication. Defaults to ''.
- `mongo.password` - The password for connecting to mongo. Only required if you are using mongo authentication. Defaults to ''.

#### Configuring the Mongo Tops Subsystem

```
master_tops:
  mongo:
    collection: tops
    id_field: _id
    re_replace: ""
    re_pattern: \.example\.com
    states_field: states
    environment_field: environment
```

#### Module Documentation

`salt.tops.mongo.top(**kwargs)`

Connect to a mongo database and read per-node tops data.

##### Parameters

- **collection** (\*) -- The mongodb collection to read data from. Defaults to 'tops'.
- **id\_field** (\*) -- The field in the collection that represents an individual minion id. Defaults to '\_id'.
- **re\_pattern** (\*) -- If your naming convention in the collection is shorter than the minion id, you can use this to trim the name. `re_pattern` will be used to match the name, and `re_replace` will be used to replace it. Backrefs are supported as they are in the Python standard library. If `None`, no mangling of the name will be performed - the collection will be searched with the entire minion id. Defaults to `None`.
- **re\_replace** (\*) -- Use as the replacement value in node ids matched with `re_pattern`. Defaults to `"`. Feel free to use backreferences here.
- **states\_field** (\*) -- The name of the field providing a list of states.
- **environment\_field** (\*) -- The name of the field providing the environment. Defaults to `environment`.

## 26.22.4 salt.tops.reclass\_adapter

Read tops data from a reclass database

This *master\_tops* plugin provides access to the **reclass** database, such that state information (top data) are retrieved from **reclass**.

You can find more information about **reclass** at <http://reclass.pantsfullofunix.net>.

To use the plugin, add it to the `master_tops` list in the Salt master config and tell **reclass** by way of a few options how and where to find the inventory:

```

master_tops:
  reclass:
    storage_type: yaml_fs
    inventory_base_uri: /srv/salt

```

This would cause **reclass** to read the inventory from YAML files in `/srv/salt/nodes` and `/srv/salt/classes`.

If you are also using **reclass** as `ext_pillar` plugin, and you want to avoid having to specify the same information for both, use YAML anchors (take note of the differing data types for `ext_pillar` and `master_tops`):

```

reclass: &reclass
  storage_type: yaml_fs
  inventory_base_uri: /srv/salt
  reclass_source_path: ~/code/reclass

ext_pillar:
  - reclass: *reclass

master_tops:
  reclass: *reclass

```

If you want to run **reclass** from source, rather than installing it, you can either let the master know via the `PYTHONPATH` environment variable, or by setting the configuration option, like in the example above.

`salt.tops.reclass_adapter.top(**kwargs)`

Query **reclass** for the top data (states of the minions).

## 26.22.5 salt.tops.saltclass

Saltclass Configuration

```

master_tops:
  saltclass:
    path: /srv/saltclass

```

## Description

This module clones the behaviour of reclass (<http://reclass.pantsfullofunix.net/>), without the need of an external app, and add several features to improve flexibility. Saltclass lets you define your nodes from simple yaml files (.yaml) through hierarchical class inheritance with the possibility to override pillars down the tree.

## Features

- Define your nodes through hierarchical class inheritance
- Reuse your reclass datas with minimal modifications
  - applications => states
  - parameters => pillars
- Use Jinja templating in your yaml definitions
- Access to the following Salt objects in Jinja
  - `__opts__`
  - `__salt__`
  - `__grains__`
  - `__pillars__`
  - `minion_id`
- Chose how to merge or override your lists using ^ character (see examples)
- Expand variables `${}` with possibility to escape them if needed ``${}` (see examples)
- Ignores missing node/class and will simply return empty without breaking the pillar module completely - will be logged

An example subset of datas is available here: <http://git.mauras.ch/salt/saltclass/src/master/examples>

Terms usable in yaml files	Description
classes	A list of classes that will be processed in order
states	A list of states that will be returned by <code>master_tops</code> function
pillars	A yaml dictionary that will be returned by the <code>ext_pillar</code> function
environment	Node saltenv that will be used by <code>master_tops</code>

A class consists of:

- zero or more parent classes
- zero or more states
- any number of pillars

A child class can override pillars from a parent class. A node definition is a class in itself with an added `environment` parameter for `saltenv` definition.

## Class names

Class names mimic salt way of defining states and pillar files. This means that `default.users` class name will correspond to one of these:

- `<saltclass_path>/classes/default/users.yml`
- `<saltclass_path>/classes/default/users/init.yml`

## Saltclass file hierarchy

A saltclass tree would look like this:

## Saltclass Examples

<saltclass\_path>/nodes/lausanne/qls.node1.yml

```
environment: base

classes:
{% for class in ['default'] %}
  - {{ class }}
{% endfor %}
- subsidiaries.{{ __grains__['id'].split('.')[0] }}
```

<saltclass\_path>/classes/default/init.yml

```
classes:
- default.users
- default.motd

states:
- openssh

pillars:
default:
  network:
    dns:
      srv1: 192.168.0.1
      srv2: 192.168.0.2
      domain: example.com
    ntp:
      srv1: 192.168.10.10
      srv2: 192.168.10.20
```

<saltclass\_path>/classes/subsidiaries/gnv.yml

```
pillars:
default:
  network:
    sub: Geneva
    dns:
      srv1: 10.20.0.1
      srv2: 10.20.0.2
      srv3: 192.168.1.1
      domain: gnv.example.com
    users:
      adm1:
        uid: 1210
        gid: 1210
        gecos: 'Super user admin1'
        homedir: /srv/app/adm1
      adm3:
        uid: 1203
        gid: 1203
        gecos: 'Super user adm'
```

## Variable expansions

Escaped variables are rendered as is: `${test}`

Missing variables are rendered as is: `${net:dns:srv2}`

```
pillars:
  app:
  config:
  dns:
    srv1: ${default:network:dns:srv1}
    srv2: ${net:dns:srv2}
  uri: https://application.domain/call?\${test}
  prod_parameters:
    - p1
    - p2
    - p3
  pkg:
    - app-core
    - app-backend
```

## List override

Not using `^` as the first entry will simply merge the lists

```
pillars:
  app:
  pkg:
    - ^
    - app-frontend
```

### Note: Known limitation

Currently you can't have both a variable and an escaped variable in the same string as the escaped one will not be correctly rendered - `'${xx}'` will stay as is instead of being rendered as `'${xx}'`

```
salt.tops.saltclass.top(**kwargs)
    Compile tops
```

## 26.22.6 salt.tops.varstack\_top

Use [Varstack](#) to provide tops data

This *master\_tops* plugin provides access to the **varstack** hierarchical yaml files, so you can use **varstack** as a full *external node classifier* and store state information (top data) in it.

## Configuring Varstack

To use varstack as a master top external node classifier, install varstack as documented. Then, add to your master's configuration:

```
master_tops:
  varstack: /path/to/the/config/file/varstack.yaml
```

Varstack will then use `/path/to/the/config/file/varstack.yaml` (usually `/etc/varstack.yaml`) to determine which configuration data to return as adapter information. From there you can take a look at the [README](#) of varstack to learn how this file is evaluated. The ENC part will just return the 'states' dictionary for the node.

Ie, if `my.fqdn.yaml` file contains:

```
---
states:
  - sudo
  - openssh
  - apache
  - salt.minion
```

these will be returned as `{'base': ['sudo', 'openssh', 'apache', 'salt.minion']}` and managed by salt as if given from a `top.sls` file.

```
salt.tops.varstack_top.top(**kwargs)
    Query varstack for the top data (states of the minions).
```

## 26.23 wheel modules

<code>config</code>	Manage the master configuration file
<code>error</code>	Error generator to enable integration testing of salt wheel error handling
<code>file_roots</code>	Read in files from the <code>file_root</code> and save files to the file root
<code>key</code>	Wheel system wrapper for the Salt key system to be used in interactions with the Salt Master programmatically.
<code>minions</code>	Wheel system wrapper for connected minions
<code>pillar_roots</code>	The <code>pillar_roots</code> wheel module is used to manage files under the pillar roots directories on the master server.

### 26.23.1 salt.wheel.config

Manage the master configuration file

```
salt.wheel.config.apply(key, value)
    Set a single key
```

---

**Note:** This will strip comments from your config file

---

`salt.wheel.config.update_config(file_name, yaml_contents)`

Update master config with `yaml_contents`.

Writes `yaml_contents` to a file named `file_name.conf` under the folder specified by `default_include`. This folder is named `master.d` by default. Please look at `include-configuration` for more information.

Example low data:

```
data = {
  'username': 'salt',
  'password': 'salt',
  'fun': 'config.update_config',
  'file_name': 'gui',
  'yaml_contents': {'id': 1},
  'client': 'wheel',
  'eauth': 'pam',
}
```

`salt.wheel.config.values()`

Return the raw values of the config file

### 26.23.2 salt.wheel.error

Error generator to enable integration testing of salt wheel error handling

`salt.wheel.error.error(name=None, message="")`

If name is None Then return empty dict

Otherwise raise an exception with `__name__` from name, message from message

CLI Example:

```
salt-wheel error
salt-wheel error.error name="Exception" message="This is an error."
```

### 26.23.3 salt.wheel.file\_roots

Read in files from the `file_root` and save files to the file root

`salt.wheel.file_roots.find(path, saltenv='base')`

Return a dict of the files located with the given path and environment

`salt.wheel.file_roots.list_env(saltenv='base')`

Return all of the file paths found in an environment

`salt.wheel.file_roots.list_roots()`

Return all of the files names in all available environments

`salt.wheel.file_roots.read(path, saltenv='base')`

Read the contents of a text file, if the file is binary then ignore it

`salt.wheel.file_roots.write(data, path, saltenv='base', index=0)`

Write the named file, by default the first file found is written, but the index of the file can be specified to write to a lower priority file root

## 26.23.4 salt.wheel.key

Wheel system wrapper for the Salt key system to be used in interactions with the Salt Master programmatically.

The key module for the wheel system is meant to provide an internal interface for other Salt systems to interact with the Salt Master. The following usage examples assume that a `WheelClient` is available:

```
import salt.config
import salt.wheel
opts = salt.config.master_config('/etc/salt/master')
wheel = salt.wheel.WheelClient(opts)
```

Note that importing and using the `WheelClient` must be performed on the same machine as the Salt Master and as the same user that runs the Salt Master, unless `external_auth` is configured and the user is authorized to execute wheel functions.

The function documentation starts with the `wheel` reference from the code sample above and use the `WheelClient` functions to show how they can be called from a Python interpreter.

The wheel key functions can also be called via a `salt` command at the CLI using the `saltutil execution module`.

`salt.wheel.key.accept` (*match*, *include\_rejected=False*, *include\_denied=False*)

Accept keys based on a glob match. Returns a dictionary.

**match**

The glob match of keys to accept.

**include\_rejected**

To include rejected keys in the match along with pending keys, set this to `True`. Defaults to `False`.

**include\_denied**

To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

```
>>> wheel.cmd('key.accept', ['minion1'])
{'minions': ['minion1']}
```

`salt.wheel.key.accept_dict` (*match*, *include\_rejected=False*, *include\_denied=False*)

Accept keys based on a dict of keys. Returns a dictionary.

**match**

The dictionary of keys to accept.

**include\_rejected**

To include rejected keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

**include\_denied**

To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

Example to move a list of keys from the `minions_pre` (pending) directory to the `minions` (accepted) directory:

```
>>> wheel.cmd('key.accept_dict',
{
  'minions_pre': [
    'jerry',
    'stuart',
    'bob',
  ],
```

(continues on next page)

(continued from previous page)

```
})
{'minions': ['jerry', 'stuart', 'bob']}
```

`salt.wheel.key.delete`(*match*)

Delete keys based on a glob match. Returns a dictionary.

**match**

The glob match of keys to delete.

```
>>> wheel.cmd_async({'fun': 'key.delete', 'match': 'minion1'})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.delete_dict`(*match*)

Delete keys based on a dict of keys. Returns a dictionary.

**match**

The dictionary of keys to delete.

```
>>> wheel.cmd_async({'fun': 'key.delete_dict',
'match': {
  'minions': [
    'jerry',
    'stuart',
    'bob',
  ],
}},
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.finger`(*match*, *hash\_type=None*)

Return the matching key fingerprints. Returns a dictionary.

**match**

The key for with to retrieve the fingerprint.

**hash\_type**

The hash algorithm used to calculate the fingerprint

```
>>> wheel.cmd('key.finger', ['minion1'])
{'minions': {'minion1': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}
→}
```

`salt.wheel.key.finger_master`(*hash\_type=None*)

Return the fingerprint of the master's public key

**hash\_type**

The hash algorithm used to calculate the fingerprint

```
>>> wheel.cmd('key.finger_master')
{'local': {'master.pub': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca
→'}}
```

`salt.wheel.key.gen`(*id\_=None*, *keysize=2048*)

Generate a key pair. No keys are stored on the master. A key pair is returned as a dict containing pub and priv keys. Returns a dictionary containing the pub and priv keys with their generated values.

**id\_**

Set a name to generate a key pair for use with salt. If not specified, a random name will be specified.

**keysize**

The size of the key pair to generate. The size must be 2048, which is the default, or greater. If set to a value less than 2048, the key size will be rounded up to 2048.

```
>>> wheel.cmd('key.gen')
{'pub': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBC
...
BBPfamX9gGPQTpN9e8HwcZjXQnmg80rcUl10WHw09SDWLOlnW+ueTWugEQpPt\niQIDAQAB\n
-----END PUBLIC KEY-----',
'priv': '-----BEGIN RSA PRIVATE KEY-----\nMIIEpAIBAACKCAQEA42Kf+w9XeZWgguzv
...
QH3/W74X1+WTBlx4R2KGLYBiH+bCCFEQ/Zvcu4Xp4bIOPtRKozEQ==\n
-----END RSA PRIVATE KEY-----'}
```

**salt.wheel.key.gen\_accept**(*id\_*, *keysize=2048*, *force=False*)

Generate a key pair then accept the public key. This function returns the key pair in a dict, only the public key is preserved on the master. Returns a dictionary.

**id\_**

The name of the minion for which to generate a key pair.

**keysize**

The size of the key pair to generate. The size must be 2048, which is the default, or greater. If set to a value less than 2048, the key size will be rounded up to 2048.

**force**

If a public key has already been accepted for the given minion on the master, then the `gen_accept` function will return an empty dictionary and not create a new key. This is the default behavior. If `force` is set to `True`, then the minion's previously accepted key will be overwritten.

```
>>> wheel.cmd('key.gen_accept', ['foo'])
{'pub': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBC
...
BBPfamX9gGPQTpN9e8HwcZjXQnmg80rcUl10WHw09SDWLOlnW+ueTWugEQpPt\niQIDAQAB\n
-----END PUBLIC KEY-----',
'priv': '-----BEGIN RSA PRIVATE KEY-----\nMIIEpAIBAACKCAQEA42Kf+w9XeZWgguzv
...
QH3/W74X1+WTBlx4R2KGLYBiH+bCCFEQ/Zvcu4Xp4bIOPtRKozEQ==\n
-----END RSA PRIVATE KEY-----'}
```

We can now see that the `foo` minion's key has been accepted by the master:

```
>>> wheel.cmd('key.list', ['accepted'])
{'minions': ['foo', 'minion1', 'minion2', 'minion3']}
```

**salt.wheel.key.gen\_keys**(*keydir=None*, *keyname=None*, *keysize=None*, *user=None*)

Generate minion RSA public keypair

**salt.wheel.key.gen\_signature**(*priv*, *pub*, *signature\_path*, *auto\_create=False*, *keysize=None*)

Generate master public-key-signature

**salt.wheel.key.key\_str**(*match*)

Return information about the key. Returns a dictionary.

**match**

The key to return information about.

```
>>> wheel.cmd('key.print', ['minion1'])
{'minions': {'minion1': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0B
...
TWugEQpPt\niQIDAQAB\n-----END PUBLIC KEY-----'}}
```

`salt.wheel.key.list_(match)`

List all the keys under a named status. Returns a dictionary.

**match**

The type of keys to list. The `pre`, `un`, and `unaccepted` options will list unaccepted/unsigned keys. `acc` or `accepted` will list accepted/signed keys. `rej` or `rejected` will list rejected keys. Finally, `all` will list all keys.

```
>>> wheel.cmd('key.list', ['accepted'])
{'minions': ['minion1', 'minion2', 'minion3']}
```

`salt.wheel.key.list_all()`

List all the keys. Returns a dictionary containing lists of the minions in each salt-key category, including `minions`, `minions_rejected`, `minions_denied`, etc. Returns a dictionary.

```
>>> wheel.cmd('key.list_all')
{'local': ['master.pem', 'master.pub'], 'minions_rejected': [],
 'minions_denied': [], 'minions_pre': [],
 'minions': ['minion1', 'minion2', 'minion3']}
```

`salt.wheel.key.master_key_str()`

Returns master's public key. Returns a dictionary

```
>>> wheel.cmd('key.master_key_str')
{'local': {'master.pub': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0B
...
TWugEQpPt\niQIDAQAB\n-----END PUBLIC KEY-----'}}
```

`salt.wheel.key.name_match(match)`

List all the keys based on a glob match

`salt.wheel.key.reject(match, include_accepted=False, include_denied=False)`

Reject keys based on a glob match. Returns a dictionary.

**match**

The glob match of keys to reject.

**include\_accepted**

To include accepted keys in the match along with pending keys, set this to `True`. Defaults to `False`.

**include\_denied**

To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

```
>>> wheel.cmd_async({'fun': 'key.reject', 'match': 'minion1'})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.reject_dict(match, include_accepted=False, include_denied=False)`

Reject keys based on a dict of keys. Returns a dictionary.

**match**

The dictionary of keys to reject.

**include\_accepted**

To include accepted keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

#### **include\_denied**

To include denied keys in the match along with pending keys, set this to True. Defaults to False.

New in version 2016.3.4.

```
>>> wheel.cmd_async({'fun': 'key.reject_dict',
'match': {
  'minions': [
    'jerry',
    'stuart',
    'bob',
  ],
}})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

### 26.23.5 salt.wheel.minions

Wheel system wrapper for connected minions

**salt.wheel.minions.connected()**

List all connected minions on a salt-master

### 26.23.6 salt.wheel.pillar\_roots

The *pillar\_roots* wheel module is used to manage files under the pillar roots directories on the master server.

**salt.wheel.pillar\_roots.find**(*path*, *saltenv='base'*)

Return a dict of the files located with the given path and environment

**salt.wheel.pillar\_roots.list\_env**(*saltenv='base'*)

Return all of the file paths found in an environment

**salt.wheel.pillar\_roots.list\_roots**()

Return all of the files names in all available environments

**salt.wheel.pillar\_roots.read**(*path*, *saltenv='base'*)

Read the contents of a text file, if the file is binary then

**salt.wheel.pillar\_roots.write**(*data*, *path*, *saltenv='base'*, *index=0*)

Write the named file, by default the first file found is written, but the index of the file can be specified to write to a lower priority file root

## 27.1 Python client API

Salt provides several entry points for interfacing with Python applications. These entry points are often referred to as `*Client()` APIs. Each client accesses different parts of Salt, either from the master or from a minion. Each client is detailed below.

---

**Note:** For Tiamat-bundled Salt distribution, you need to use the bundled Python runtime as the system Python won't be able to access Salt internals.

To execute scripts via bundled Python runtime, either run the script with `/path/to/salt python script.py` or use `#!/path/to/salt python shebang`

---

See also:

There are many ways to access Salt programmatically.

Salt can be used from CLI scripts as well as via a REST interface.

See Salt's *outputter system* to retrieve structured data from Salt as JSON, or as shell-friendly text, or many other formats.

See the *state.event* runner to utilize Salt's event bus from shell scripts.

Salt's *netapi module* provides access to Salt externally via a REST interface. Review the *netapi module* documentation for more information.

### 27.1.1 Salt's `opts` dictionary

Some clients require access to Salt's `opts` dictionary. (The dictionary representation of the *master* or *minion* config files.)

A common pattern for fetching the `opts` dictionary is to defer to environment variables if they exist or otherwise fetch the config from the default location.

```
salt.config.client_config(path, env_var='SALT_CLIENT_CONFIG', defaults=None)
```

Load Master configuration data

Usage:

```
import salt.config
master_opts = salt.config.client_config('/etc/salt/master')
```

Returns a dictionary of the Salt Master configuration file with necessary options needed to communicate with a locally-running Salt Master daemon. This function searches for client specific configurations and adds them to the data from the master configuration.

This is useful for master-side operations like *LocalClient*.

```
salt.config.minion_config(path, env_var='SALT_MINION_CONFIG', defaults=None,
                        cache_minion_id=False, ignore_config_errors=True, minion_id=None,
                        role='minion')
```

Reads in the minion configuration file and sets up special options

This is useful for Minion-side operations, such as the *Caller* class, and manually running the loader interface.

```
import salt.config
minion_opts = salt.config.minion_config('/etc/salt/minion')
```

## 27.1.2 Salt's Loader Interface

Modules in the Salt ecosystem are loaded into memory using a custom loader system. This allows modules to have conditional requirements (OS, OS version, installed libraries, etc) and allows Salt to inject special variables (`__salt__`, `__opts__`, etc).

Most modules can be manually loaded. This is often useful in third-party Python apps or when writing tests. However some modules require and expect a full, running Salt system underneath. Notably modules that facilitate master-to-minion communication such as the *mine*, *publish*, and *peer* execution modules. The error `KeyError: 'master_uri'` is a likely indicator for this situation. In those instances use the *Caller* class to execute those modules instead.

Each module type has a corresponding loader function.

```
salt.loader.minion_mods(opts, context=None, utils=None, whitelist=None, initial_load=False,
                      loaded_base_name=None, notify=False, static_modules=None, proxy=None,
                      file_client=None)
```

Load execution modules

Returns a dictionary of execution modules appropriate for the current system by evaluating the `__virtual__()` function in each module.

### Parameters

- **opts** (*dict*) -- The Salt options dictionary
- **context** (*dict*) -- A Salt context that should be made present inside generated modules in `__context__`
- **utils** (*dict*) -- Utility functions which should be made available to Salt modules in `__utils__`. See *utils\_dirs* in `salt.config` for additional information about configuration.
- **whitelist** (*list*) -- A list of modules which should be whitelisted.
- **initial\_load** (*bool*) -- Deprecated flag! Unused.
- **loaded\_base\_name** (*str*) -- The imported modules namespace when imported by the salt loader.
- **notify** (*bool*) -- Flag indicating that an event should be fired upon completion of module loading.

Example:

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
```

(continues on next page)

(continued from previous page)

```

__grains__ = salt.loader.grains(__opts__)
__opts__['grains'] = __grains__
__utils__ = salt.loader.utils(__opts__)
__salt__ = salt.loader.minion_mods(__opts__, utils=__utils__)
__salt__['test.ping']()

```

`salt.loader.raw_mod(opts, name, functions, mod='modules', loaded_base_name=None)`

Returns a single module loaded raw and bypassing the `__virtual__` function

#### Parameters

- **opts** (*dict*) -- The Salt options dictionary
- **name** (*str*) -- The name of the module to load
- **functions** (*LazyLoader*) -- A *LazyLoader* instance returned from `minion_mods`.
- **mod** (*str*) -- The extension type.
- **loaded\_base\_name** (*str*) -- The imported modules namespace when imported by the salt loader.

Example:

```

import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
testmod = salt.loader.raw_mod(__opts__, 'test', None)
testmod['test.ping']()

```

`salt.loader.states(opts, functions, utils, serializers, whitelist=None, proxy=None, context=None, loaded_base_name=None, file_client=None)`

Returns the state modules

#### Parameters

- **opts** (*dict*) -- The Salt options dictionary
- **functions** (*LazyLoader*) -- A *LazyLoader* instance returned from `minion_mods`.
- **runners** (*LazyLoader*) -- A *LazyLoader* instance returned from `runner`.
- **utils** (*LazyLoader*) -- A *LazyLoader* instance returned from `utils`.
- **serializers** (*LazyLoader*) -- An optional *LazyLoader* instance returned from `serializers`.
- **proxy** (*LazyLoader*) -- An optional *LazyLoader* instance returned from `proxy`.
- **whitelist** (*list*) -- A list of modules which should be whitelisted.
- **context** (*dict*) -- A Salt context that should be made present inside generated modules in `__context__`
- **loaded\_base\_name** (*str*) -- The imported modules namespace when imported by the salt loader.

```

import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
statemods = salt.loader.states(__opts__, None, None)

```

`salt.loader.grains(opts, force_refresh=False, proxy=None, context=None, loaded_base_name=None)`

Return the functions for the dynamic grains and the values for the static grains.

#### Parameters

- **opts** (*dict*) -- The Salt options dictionary
- **force\_refresh** (*bool*) -- Force the refresh of grains
- **context** (*dict*) -- A Salt context that should be made present inside generated modules in `__context__`
- **proxy** (*LazyLoader*) -- An optional LazyLoader instance returned from proxy.
- **loaded\_base\_name** (*str*) -- The imported modules namespace when imported by the salt loader.

Since grains are computed early in the startup process, grains functions do not have `__salt__` or `__proxy__` available. At proxy-minion startup, this function is called with the proxymodule LazyLoader object so grains functions can communicate with their controlled device.

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
__grains__ = salt.loader.grains(__opts__)
print __grains__['id']
```

`salt.loader.grain_funcs(opts, proxy=None, context=None, loaded_base_name=None)`

Returns the grain functions

#### Parameters

- **opts** (*dict*) -- The Salt options dictionary
- **context** (*dict*) -- A Salt context that should be made present inside generated modules in `__context__`
- **proxy** (*LazyLoader*) -- An optional LazyLoader instance returned from proxy.
- **loaded\_base\_name** (*str*) --  
The imported modules namespace when imported by the salt loader.

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
grainfuncs = salt.loader.grain_funcs(__opts__)
```

### 27.1.3 Salt's Client Interfaces

#### LocalClient

**class** `salt.client.LocalClient`(*c\_path='/etc/salt/master', mopts=None, skip\_perm\_errors=False, io\_loop=None, keep\_loop=False, auto\_reconnect=False, listen=False*)

The interface used by the **salt** CLI tool on the Salt Master

`LocalClient` is used to send a command to Salt minions to execute *execution modules* and return the results to the Salt Master.

Importing and using `LocalClient` must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as. (Unless *external\_auth* is configured and authentication credentials are included in the execution).

---

**Note:** The `LocalClient` uses a Tornado IOloop, this can create issues when using the `LocalClient` inside an existing IOloop. If creating the `LocalClient` in partnership with another IOloop either create the IOloop

before creating the LocalClient, or when creating the IOloop use `ioloop.current()` which will return the ioloop created by LocalClient.

```
import salt.client

local = salt.client.LocalClient()
local.cmd('*', 'test.fib', [10])
```

**cmd** (*tgt*, *fun*, *arg=()*, *timeout=None*, *tgt\_type='glob'*, *ret=""*, *jid=""*, *full\_return=False*, *kwarg=None*, *\*\*kwargs*)

Synchronously execute a command on targeted minions

The cmd method will execute and wait for the timeout period for all minions to reply, then it will return all minion data at once.

```
>>> import salt.client
>>> local = salt.client.LocalClient()
>>> local.cmd('*', 'cmd.run', ['whoami'])
{'jerry': 'root'}
```

With extra keyword arguments for the command function to be run:

```
local.cmd('*', 'test.arg', ['arg1', 'arg2'], kwarg={'foo': 'bar'})
```

Compound commands can be used for multiple executions in a single publish. Function names and function arguments are provided in separate lists but the index values must correlate and an empty list must be used if no arguments are required.

```
>>> local.cmd('*', [
    'grains.items',
    'sys.doc',
    'cmd.run',
],
[
    [],
    [],
    ['uptime'],
])
```

#### Parameters

- **tgt** (*string or list*) -- Which minions to target for the execution. Default is shell glob. Modified by the `tgt_type` option.
- **fun** (*string or list of strings*) -- The module and function to call on the specified minions of the form `module.function`. For example `test.ping` or `grains.items`.

#### Compound commands

Multiple functions may be called in a single publish by passing a list of commands. This can dramatically lower overhead and speed up the application communicating with Salt.

This requires that the `arg` param is a list of lists. The `fun` list and the `arg` list must correlate by index meaning a function that does not take arguments must still have a corresponding empty list at the expected index.

- **arg** (*list or list-of-lists*) -- A list of arguments to pass to the remote function. If the function takes no arguments `arg` may be omitted except

when executing a compound command.

- **timeout** -- Seconds to wait after the last minion returns but before all minions return.
- **tgt\_type** -- The type of `tgt`. Allowed values:
  - `glob` - Bash glob completion - Default
  - `pcre` - Perl style regular expression
  - `list` - Python list of hosts
  - `grain` - Match based on a grain comparison
  - `grain_pcre` - Grain comparison with a regex
  - `pillar` - Pillar data comparison
  - `pillar_pcre` - Pillar data comparison with a regex
  - `nodegroup` - Match on nodegroup
  - `range` - Use a Range server for matching
  - `compound` - Pass a compound match string
  - `ipcidr` - Match based on Subnet (CIDR notation) or IPv4 address.

Changed in version 2017.7.0: Renamed from `expr_form` to `tgt_type`

- **ret** -- The returner to use. The value passed can be single returner, or a comma delimited list of returners to call in order on the minions
- **kwarg** -- A dictionary with keyword arguments for the function.
- **full\_return** -- Output the job return only (default) or the full return including exit code and other job metadata.
- **kwargs** -- Optional keyword arguments. Authentication credentials may be passed when using `external_auth`.

For example: `local.cmd('*', 'test.ping', username='saltdev', password='saltdev', eauth='pam')`. Or: `local.cmd('*', 'test.ping', token='5871821ea51754fdcea8153c1c745433')`

#### Returns

A dictionary with the result of the execution, keyed by minion ID. A compound command will return a sub-dictionary keyed by function name.

**cmd\_async** (*tgt, fun, arg=(), tgt\_type='glob', ret="", jid="", kwarg=None, \*\*kwargs*)

Asynchronously send a command to connected minions

The function signature is the same as `cmd()` with the following exceptions.

#### Returns

A job ID or 0 on failure.

```
>>> local.cmd_async('*', 'test.sleep', [300])
'20131219215921857715'
```

**cmd\_batch** (*tgt, fun, arg=(), tgt\_type='glob', ret="", kwarg=None, batch='10%', \*\*kwargs*)

Iteratively execute a command on subsets of minions at a time

The function signature is the same as `cmd()` with the following exceptions.

#### Parameters

**batch** -- The batch identifier of systems to execute on

#### Returns

A generator of minion returns

```
>>> returns = local.cmd_batch('*', 'state.highstate', batch='10%')
>>> for ret in returns:
...     print(ret)
{'jerry': {...}}
```

(continues on next page)

(continued from previous page)

```
{'dave': {...}}
{'stewart': {...}}
```

**cmd\_iter**(*tgt, fun, arg=(), timeout=None, tgt\_type='glob', ret="", kwarg=None, \*\*kwargs*)

Yields the individual minion returns as they come in

The function signature is the same as *cmd()* with the following exceptions.

Normally *cmd\_iter()* does not yield results for minions that are not connected. If you want it to return results for disconnected minions set *expect\_minions=True* in *kwargs*.

#### Returns

A generator yielding the individual minion returns

```
>>> ret = local.cmd_iter('*', 'test.ping')
>>> for i in ret:
...     print(i)
{'jerry': {'ret': True}}
{'dave': {'ret': True}}
{'stewart': {'ret': True}}
```

**cmd\_iter\_no\_block**(*tgt, fun, arg=(), timeout=None, tgt\_type='glob', ret="", kwarg=None, show\_jid=False, verbose=False, \*\*kwargs*)

Yields the individual minion returns as they come in, or None when no returns are available.

The function signature is the same as *cmd()* with the following exceptions.

#### Returns

A generator yielding the individual minion returns, or None when no returns are available. This allows for actions to be injected in between minion returns.

```
>>> ret = local.cmd_iter_no_block('*', 'test.ping')
>>> for i in ret:
...     print(i)
None
{'jerry': {'ret': True}}
{'dave': {'ret': True}}
None
{'stewart': {'ret': True}}
```

**cmd\_subset**(*tgt, fun, arg=(), tgt\_type='glob', ret="", kwarg=None, subset=3, cli=False, progress=False, full\_return=False, \*\*kwargs*)

Execute a command on a random subset of the targeted systems

The function signature is the same as *cmd()* with the following exceptions.

#### Parameters

- **subset** -- The number of systems to execute on
- **cli** -- When this is set to True, a generator is returned, otherwise a dictionary of the minion returns is returned

```
>>> SLC.cmd_subset('*', 'test.ping', subset=1)
{'jerry': True}
```

**get\_cli\_returns**(*jid, minions, timeout=None, tgt='\*', tgt\_type='glob', verbose=False, show\_jid=False, \*\*kwargs*)

Starts a watcher looking at the return data for a specified JID

**Returns**

all of the information for the JID

**get\_event\_iter\_returns** (*jid*, *minions*, *timeout=None*)

Gather the return data from the event system, break hard when timeout is reached.

**run\_job** (*tgt*, *fun*, *arg=()*, *tgt\_type='glob'*, *ret=""*, *timeout=None*, *jid=""*, *kwarg=None*, *listen=False*, *\*\*kwargs*)

Asynchronously send a command to connected minions

Prep the job directory and publish a command to any targeted minions.

**Returns**

A dictionary of (validated) `pub_data` or an empty dictionary on failure. The `pub_data` contains the job ID and a list of all minions that are expected to return data.

```
>>> local.run_job('*', 'test.sleep', [300])
{'jid': '20131219215650131543', 'minions': ['jerry']}
```

**Salt Caller**

**class** `salt.client.Caller` (*c\_path='/etc/salt/minion'*, *mopts=None*)

`Caller` is the same interface used by the **salt-call** command-line tool on the Salt Minion.

Changed in version 2015.8.0: Added the `cmd` method for consistency with the other Salt clients. The existing `function` and `sminion.functions` interfaces still exist but have been removed from the docs.

Importing and using `Caller` must be done on the same machine as a Salt Minion and it must be done using the same user that the Salt Minion is running as.

Usage:

```
import salt.client
caller = salt.client.Caller()
caller.cmd('test.ping')
```

Note, a running master or minion daemon is not required to use this class. Running `salt-call --local` simply sets `file_client` to `'local'`. The same can be achieved at the Python level by including that setting in a minion config file.

New in version 2014.7.0: Pass the minion config as the `mopts` dictionary.

```
import salt.client
import salt.config
__opts__ = salt.config.minion_config('/etc/salt/minion')
__opts__['file_client'] = 'local'
caller = salt.client.Caller(mopts=__opts__)
```

**cmd** (*fun*, *\*args*, *\*\*kwargs*)

Call an execution module with the given arguments and keyword arguments

Changed in version 2015.8.0: Added the `cmd` method for consistency with the other Salt clients. The existing `function` and `sminion.functions` interfaces still exist but have been removed from the docs.

```
caller.cmd('test.arg', 'Foo', 'Bar', baz='Baz')

caller.cmd('event.send', 'myco/myevent/something',
           data={'foo': 'Foo'}, with_env=['GIT_COMMIT'], with_grains=True)
```

## Salt Proxy Caller

**class** salt.client.ProxyCaller(*c\_path='/etc/salt/proxy', mopts=None*)

ProxyCaller is the same interface used by the **salt-call** with the args `--proxyid <proxyid>` command-line tool on the Salt Proxy Minion.

Importing and using ProxyCaller must be done on the same machine as a Salt Minion and it must be done using the same user that the Salt Minion is running as.

Usage:

```
import salt.client
caller = salt.client.ProxyCaller()
caller.cmd('test.ping')
```

Note, a running master or minion daemon is not required to use this class. Running `salt-call --local` simply sets `file_client` to `'local'`. The same can be achieved at the Python level by including that setting in a minion config file.

```
import salt.client
import salt.config
__opts__ = salt.config.proxy_config('/etc/salt/proxy', minion_id='quirky_
→edison')
__opts__['file_client'] = 'local'
caller = salt.client.ProxyCaller(mopts=__opts__)
```

**Note:** To use this for calling proxies, the `is_proxy` functions requires that `--proxyid` be an argument on the commandline for the script this is used in, or that the string `proxy` is in the name of the script.

**cmd**(*fun, \*args, \*\*kwargs*)

Call an execution module with the given arguments and keyword arguments

```
caller.cmd('test.arg', 'Foo', 'Bar', baz='Baz')

caller.cmd('event.send', 'myco/myevent/something',
           data={'foo': 'Foo'}, with_env=['GIT_COMMIT'], with_grains=True)
```

## RunnerClient

**class** salt.runner.RunnerClient(*opts, context=None*)

The interface used by the **salt-run** CLI tool on the Salt Master

It executes *runner modules* which run on the Salt Master.

Importing and using RunnerClient must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as.

Salt's *external\_auth* can be used to authenticate calls. The eauth user must be authorized to execute runner modules: (@runner). Only the `master_call()` below supports eauth.

**asynchronous** (*fun, low, user='UNKNOWN', pub=None, local=True*)

Execute the function in a multiprocessing and return the event tag to use to watch for the return

**cmd** (*fun, arg=None, pub\_data=None, kwarg=None, print\_event=True, full\_return=False*)

Execute a function

```

>>> opts = salt.config.master_config('/etc/salt/master')
>>> runner = salt.runner.RunnerClient(opts)
>>> runner.cmd('jobs.list_jobs', [])
{
  '20131219215650131543': {
    'Arguments': [300],
    'Function': 'test.sleep',
    'StartTime': '2013, Dec 19 21:56:50.131543',
    'Target': '*',
    'Target-type': 'glob',
    'User': 'saltdev'
  },
  '20131219215921857715': {
    'Arguments': [300],
    'Function': 'test.sleep',
    'StartTime': '2013, Dec 19 21:59:21.857715',
    'Target': '*',
    'Target-type': 'glob',
    'User': 'saltdev'
  },
}

```

**cmd\_async** (*low*)

Execute a runner function asynchronously; eauth is respected

This function requires that *external\_auth* is configured and the user is authorized to execute runner functions: (@runner).

```

runner.cmd_async({
  'fun': 'jobs.list_jobs',
  'username': 'saltdev',
  'password': 'saltdev',
  'eauth': 'pam',
})

```

**cmd\_sync** (*low, timeout=None, full\_return=False*)

Execute a runner function synchronously; eauth is respected

This function requires that `external_auth` is configured and the user is authorized to execute runner functions: (@runner).

```
runner.cmd_sync({
    'fun': 'jobs.list_jobs',
    'username': 'saltdev',
    'password': 'saltdev',
    'eauth': 'pam',
})
```

## WheelClient

**class** salt.wheel.WheelClient(*opts, context=None*)

An interface to Salt's wheel modules

*Wheel modules* interact with various parts of the Salt Master.

Importing and using `WheelClient` must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as. Unless `external_auth` is configured and the user is authorized to execute wheel functions: (@wheel).

Usage:

```
import salt.config
import salt.wheel
opts = salt.config.master_config('/etc/salt/master')
wheel = salt.wheel.WheelClient(opts)
```

**asynchronous** (*fun, low, user='UNKNOWN', pub=None, local=True*)

Execute the function in a multiprocess and return the event tag to use to watch for the return

**cmd** (*fun, arg=None, pub\_data=None, kwarg=None, print\_event=True, full\_return=False*)

Execute a function

```
>>> wheel.cmd('key.finger', ['jerry'])
{'minions': {'jerry':
  ↳ '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

**cmd\_async** (*low*)

Execute a function asynchronously; eauth is respected

This function requires that `external_auth` is configured and the user is authorized

```
>>> wheel.cmd_async({
    'fun': 'key.finger',
    'match': 'jerry',
    'eauth': 'auto',
    'username': 'saltdev',
    'password': 'saltdev',
})
{'jid': '20131219224744416681', 'tag': 'salt/wheel/
  ↳ 20131219224744416681'}
```

**cmd\_sync** (*low*, *timeout=None*, *full\_return=False*)

Execute a wheel function synchronously; eauth is respected

This function requires that *external\_auth* is configured and the user is authorized to execute runner functions: (@wheel).

```
>>> wheel.cmd_sync({
'fun': 'key.finger',
'match': 'jerry',
'eauth': 'auto',
'username': 'saltdev',
'password': 'saltdev',
})
{'minions': {'jerry':
  ↳ '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

## CloudClient

**class** salt.cloud.**CloudClient** (*path=None*, *opts=None*, *config\_dir=None*, *pillars=None*)

The client class to wrap cloud interactions

**action** (*fun=None*, *cloudmap=None*, *names=None*, *provider=None*, *instance=None*, *kwargs=None*)

Execute a single action via the cloud plugin backend

Examples:

```
client.action(fun='show_instance', names=['myinstance'])
client.action(fun='show_image', provider='my-ec2-config',
  kwargs={'image': 'ami-10314d79'})
)
```

**create** (*provider*, *names*, *\*\*kwargs*)

Create the named VMs, without using a profile

Example:

```
client.create(provider='my-ec2-config', names=['myinstance'],
  image='ami-1624987f', size='t1.micro', ssh_username='ec2-user',
  securitygroup='default', delvol_on_destroy=True)
```

**destroy** (*names*)

Destroy the named VMs

**extra\_action** (*names*, *provider*, *action*, *\*\*kwargs*)

Perform actions with block storage devices

Example:

```
client.extra_action(names=['myblock'], action='volume_create',
  provider='my-nova', kwargs={'voltype': 'SSD', 'size': 1000})
)
client.extra_action(names=['salt-net'], action='network_create',
  provider='my-nova', kwargs={'cidr': '192.168.100.0/24'})
)
```

**full\_query** (*query\_type='list\_nodes\_full'*)

Query all instance information

**list\_images** (*provider=None*)

List all available images in configured cloud systems

**list\_locations** (*provider=None*)

List all available locations in configured cloud systems

**list\_sizes** (*provider=None*)

List all available sizes in configured cloud systems

**low** (*fun, low*)

Pass the cloud function and low data structure to run

**map\_run** (*path=None, \*\*kwargs*)

To execute a map

**min\_query** (*query\_type='list\_nodes\_min'*)

Query select instance information

**profile** (*profile, names, vm\_overrides=None, \*\*kwargs*)

Pass in a profile to create, names is a list of vm names to allocate  
vm\_overrides is a special dict that will be per node options overrides

Example:

```
>>> client= salt.cloud.CloudClient(path='/etc/salt/cloud')
>>> client.profile('do_512_git', names=['minion01',])
{'minion01': {'backups_active': 'False',
              'created_at': '2014-09-04T18:10:15Z',
              'droplet': {'event_id': 31000502,
                          'id': 2530006,
                          'image_id': 5140006,
                          'name': 'minion01',
                          'size_id': 66},
              'id': '2530006',
              'image_id': '5140006',
              'ip_address': '107.XXX.XXX.XXX',
              'locked': 'True',
              'name': 'minion01',
              'private_ip_address': None,
              'region_id': '4',
              'size_id': '66',
              'status': 'new'}}
```

**query** (*query\_type='list\_nodes'*)

Query basic instance information

**select\_query** (*query\_type='list\_nodes\_select'*)

Query select instance information

## SSHClient

**class** salt.client.ssh.client.**SSHClient**(*c\_path='/etc/salt/master', mopts=None, disable\_custom\_roster=False*)

Create a client object for executing routines via the salt-ssh backend

New in version 2015.5.0.

**cmd**(*tgt, fun, arg=(), timeout=None, tgt\_type='glob', kwarg=None, \*\*kwargs*)

Execute a single command via the salt-ssh subsystem and return all routines at once

New in version 2015.5.0.

**cmd\_iter**(*tgt, fun, arg=(), timeout=None, tgt\_type='glob', ret="", kwarg=None, \*\*kwargs*)

Execute a single command via the salt-ssh subsystem and return a generator

New in version 2015.5.0.

## 27.2 netapi modules

netapi modules provide API access to Salt functionality over the network.

The included *netapi modules* support REST (over HTTP and WSGI) and WebSockets.

Modules expose functions from the *NetapiClient* and give access to the same functionality as the Salt command-line tools (**salt**, **salt-run**, etc).

### 27.2.1 Client interfaces

Salt's client interfaces provide the ability to execute functions from execution, runner, and wheel modules.

The client interfaces available via netapi modules are defined in the *NetapiClient*, which is a limited version of the *Python API*.

The client interfaces accept a dictionary with values for the function and its arguments.

Available interfaces:

- local - run execution modules on minions
- local\_subset - run execution modules on a subset of minions
- runner - run runner modules on master
- ssh - run salt-ssh commands
- wheel - run wheel modules

The local, runner, and wheel clients also have async variants to run modules asynchronously.

## 27.2.2 Configuration

The `netapi_enable_clients` list in the master config sets which client interfaces are available. It is recommended to only enable the client interfaces required to complete the tasks needed to reduce the amount of Salt functionality exposed via the netapi. See the [netapi\\_enable\\_clients](#) documentation.

### Enabling netapi client interfaces

From Salt's 3006.0 release onwards, all netapi client interfaces are disabled by default.

To enable netapi/**salt-api** functionality, users should follow the process in this documentation. If the `netapi_enable_clients` configuration is not added to the Salt master configuration, then the netapi/**salt-api** will not function.

---

### Breaking change in Salt 3006.0 and above

Users of netapi/**salt-api** upgrading to Salt 3006.0 **must** follow the process in this documentation to enable the required netapi client interfaces. If the `netapi_enable_clients` configuration is not added to the Salt master configuration netapi/**salt-api** will not function

---

### Steps to enable netapi client interfaces

1. *Select client interfaces to enable*
2. *Update Salt master config*
3. *Restart salt-master and salt-api*
4. *Verify required functionality*

### Select client interfaces to enable

Salt's client interfaces provide the ability to execute functions from execution, runner, wheel modules, and via the salt-ssh system.

It is recommended to only enable the client interfaces required to complete the tasks needed to reduce the amount of Salt functionality exposed via the netapi. For example, if the salt-ssh system is not in use, not enabling the ssh client interface will help protect the Salt master from attacks which look to exploit salt-ssh.

The main client interfaces are:

- local - run execution modules on minions
- local\_subset - run execution modules on a subset of minions
- runner - run runner modules on master
- ssh - run salt-ssh commands
- wheel - run wheel modules

The local, runner, and wheel clients also have async variants to run modules asynchronously. See `netapi_enable_clients` for the complete list.

Most scenarios will require enabling the local client (and potentially its `local_subset` and `local_async` variants). The local client is equivalent to the **salt** command line tool and is required to run execution modules against minions.

Many deployments may also require the ability to call runner functions on the master (for example, where orchestrations are used), but the runner client should only be enabled if this is the case.

As there is not a standard netapi client application, existing users will need to assess which client interfaces are in use. Where an application or tool is making a request to a netapi module, it will usually pass an option indicating which client to use and it should be possible to inspect the source of any tools to understand which client interfaces should be enabled.

For common command line clients, such as `pepper` they will normally default to using the local client interface unless passed an option to specify a different client interface.

### Update Salt master config

Once it has been established which client interfaces will be required or are currently in use, those should be listed in the Salt master config, under the `netapi_enable_clients` key.

Example configuration to enable only the local client interfaces:

#### `netapi_enable_clients:`

- `local`
- `local_async`
- `local_batch`
- `local_subset`

Example configuration to enable local client functionality and runners:

#### `netapi_enable_clients:`

- `local`
- `local_async`
- `local_batch`
- `local_subset`
- `runner`
- `runner_async`

See `netapi_enable_clients` for the full list of available client interfaces.

### Restart salt-master and salt-api

Changes to the Salt master configuration require a restart of the `salt-master` service. The `salt-api` service should also be restarted.

## Verify required functionality

Testing that the required functionality is available can be done using curl. It is recommended to also check that client interfaces that are not required are not enabled.

### Examples

Examples will have to be adjusted to set the correct username, password and *external authentication* values for the user's system.

Checking that the local client is enabled:

```
curl -sSki https://localhost:8000/run \
  -H 'Accept: application/x-yaml' \
  -d client='local' \
  -d tgt='*' \
  -d fun='test.ping' \
  -d username='saltdev' \
  -d password='saltdev' \
  -d eauth='auto'

HTTP/1.1 200 OK
Content-Type: application/x-yaml
Server: CherryPy/18.8.0
Date: Mon, 23 Jan 2023 14:54:58 GMT
Allow: GET, HEAD, POST
Access-Control-Allow-Origin: *
Access-Control-Expose-Headers: GET, POST
Access-Control-Allow-Credentials: true
Vary: Accept-Encoding
Content-Length: 25

return:
- saltdev1: true
```

Checking that the runner client is **not** enabled:

```
curl -sSki https://localhost:8000/run \
  -H 'Accept: application/x-yaml' \
  -d client='runner' \
  -d fun='test.arg' \
  -d arg='test arg' \
  -d username='saltdev' \
  -d password='saltdev' \
  -d eauth='auto'

HTTP/1.1 400 Bad Request
Content-Type: text/html;charset=utf-8
Server: CherryPy/18.8.0
Date: Mon, 23 Jan 2023 14:59:33 GMT
Allow: GET, HEAD, POST
Access-Control-Allow-Origin: *
Access-Control-Expose-Headers: GET, POST
```

(continues on next page)

(continued from previous page)

```
Access-Control-Allow-Credentials: true
Content-Length: 750
Vary: Accept-Encoding
...
```

Further examples are available in the *netapi modules* documentation.

Individual netapi modules can be enabled by adding the module configuration section to the master config. The required configuration and dependencies are documented for each *module*.

The **salt-api** daemon manages netapi modules instances and must be started to enable the configured netapi modules. It is possible to run multiple netapi modules and multiple instances of each module.

---

### netapi\_enable\_clients

Prior to Salt's 3006.0 release all client interfaces were enabled and it was not possible to disable clients individually.

---

## 27.2.3 Developing modules

Developing custom netapi modules for new transports or protocols is documented in the *Writing netapi modules* and *NetapiClient* documentation.

### Writing netapi modules

netapi modules, put simply, bind a port and start a service. They are purposefully open-ended and can be used to present a variety of external interfaces to Salt, and even present multiple interfaces at once.

See also:

*The full list of netapi modules*

### Configuration

All netapi configuration is done in the *Salt master config* and takes a form similar to the following:

```
rest_cherry:
  port: 8000
  debug: True
  ssl_cert: /etc/pki/tls/certs/localhost.crt
  ssl_key: /etc/pki/tls/certs/localhost.key
```

## The `__virtual__` function

Like all module types in Salt, `netapi` modules go through Salt's loader interface to determine if they should be loaded into memory and then executed.

The `__virtual__` function in the module makes this determination and should return `False` or a string that will serve as the name of the module. If the module raises an `ImportError` or any other errors, it will not be loaded.

## The `start` function

The `start()` function will be called for each `netapi` module that is loaded. This function should contain the server loop that actually starts the service. This is started in a multiprocessing.

## Multiple instances

New in version 2016.11.0.

`rest_cherryipy` and `rest_tornado` support running multiple instances by copying and renaming entire directory of those. To start the copied multiple `netapi` modules, add configuration blocks for the copied `netapi` modules in the Salt Master config. The name of each added configuration block must match with the name of each directory of the copied `netapi` module.

## Inline documentation

As with the rest of Salt, it is a best-practice to include liberal inline documentation in the form of a module docstring and docstrings on any classes, methods, and functions in your `netapi` module.

## Loader “magic” methods

The loader makes the `__opts__` data structure available to any function in a `netapi` module.

## NetapiClient

The `NetapiClient` class provides access to *Python API client interfaces* when *developing netapi modules*

**class** `salt.netapi.NetapiClient(opts)`

Provide a uniform method of accessing the various client interfaces in Salt in the form of low-data data structures. For example:

```
>>> client = NetapiClient(__opts__)
>>> lowstate = {'client': 'local', 'tgt': '*', 'fun': 'test.ping', 'arg':
→ ''}
>>> client.run(lowstate)
```

**local** (\*args, \*\*kwargs)

Run *execution modules* synchronously

See `salt.client.LocalClient.cmd()` for all available parameters.

Sends a command from the master to the targeted minions. This is the same interface that Salt's own CLI uses. Note the `arg` and `kwarg` parameters are sent down to the minion(s) and the given function, `fun`, is called with those parameters.

**Returns**

Returns the result from the execution module

**local\_async** (\*args, \*\*kwargs)

Run *execution modules* asynchronously

Wraps `salt.client.LocalClient.run_job()`.

**Returns**

job ID

**local\_subset** (\*args, \*\*kwargs)

Run *execution modules* against subsets of minions

New in version 2016.3.0.

Wraps `salt.client.LocalClient.cmd_subset()`

**run**(low)

Execute the specified function in the specified client by passing the lowstate

**runner**(fun, timeout=None, full\_return=False, \*\*kwargs)

Run *runner modules* <all-salt.runners> synchronously

Wraps `salt.runner.RunnerClient.cmd_sync()`.

Note that runner functions must be called using keyword arguments. Positional arguments are not supported.

**Returns**

Returns the result from the runner module

**runner\_async**(fun, \*\*kwargs)

Run *runner modules* <all-salt.runners> asynchronously

Wraps `salt.runner.RunnerClient.cmd_async()`.

Note that runner functions must be called using keyword arguments. Positional arguments are not supported.

**Returns**

event data and a job ID for the executed function.

**ssh** (\*args, \*\*kwargs)

Run salt-ssh commands synchronously

Wraps `salt.client.ssh.client.SSHClient.cmd_sync()`.

**Returns**

Returns the result from the salt-ssh command

**wheel**(fun, \*\*kwargs)

Run *wheel modules* synchronously

Wraps `salt.wheel.WheelClient.master_call()`.

Note that wheel functions must be called using keyword arguments. Positional arguments are not supported.

**Returns**

Returns the result from the wheel module

**wheel\_async**(fun, \*\*kwargs)

Run *wheel modules* asynchronously

Wraps `salt.wheel.WheelClient.master_call()`.

Note that wheel functions must be called using keyword arguments. Positional arguments are not supported.

**Returns**

Returns the result from the wheel module

## ARCHITECTURE

If you are used to configuration management tools that require you to plan down to the last detail before you install anything, you are probably wondering why this section doesn't appear before the installation instructions. With Salt, you can switch to a high availability architecture at any time, and add additional components to scale your deployment as you go.

Since a single Salt master can manage thousands of systems, we usually recommend that you start by deploying a single Salt master, and then modifying your deployment as needed for redundancy, geographical distribution, and scale.

### 28.1 High Availability Features in Salt

Salt supports several features for high availability and fault tolerance. Brief documentation for these features is listed alongside their configuration parameters in *Configuration file examples*.

#### 28.1.1 Master Cluster

New in version 3007.

Salt masters can be configured to act as a cluster. All masters in a cluster are peers. Job workloads are shared across the cluster. Master clusters provide a way to scale masters horizontally. They do not require changes to the minions' configuration to add more resources. Cluster implementations are expected to use a load balancer, shared filesystem, and run on a reliable network.

*Master Cluster Tutorial*

#### 28.1.2 Multimaster

Salt minions can connect to multiple masters at one time by configuring the *master* configuration parameter as a YAML list of all the available masters. By default, all masters are "hot", meaning that any master can direct commands to the Salt infrastructure.

In a multimaster configuration, each master must have the same cryptographic keys, and minion keys must be accepted on all masters separately. The contents of *file\_roots* and *pillar\_roots* need to be kept in sync with processes external to Salt as well.

A tutorial on setting up multimaster with "hot" masters is here:

*Multimaster Tutorial*

### 28.1.3 Multimaster with Failover

Changing the `master_type` parameter from `str` to `failover` will cause minions to connect to the first responding master in the list of masters. Every `master_alive_interval` seconds the minions will check to make sure the current master is still responding. If the master does not respond, the minion will attempt to connect to the next master in the list. If the minion runs out of masters, the list will be recycled in case dead masters have been restored. Note that `master_alive_interval` must be present in the minion configuration, or else the recurring job to check master status will not get scheduled.

Failover can be combined with PKI-style encrypted keys, but PKI is NOT REQUIRED to use failover.

Multimaster with PKI and Failover is discussed in [this tutorial](#)

`master_type: failover` can be combined with `random_master: True` to spread minion connections across all masters (one master per minion, not each minion connecting to all masters). Adding Salt Syndics into the mix makes it possible to create a load-balanced Salt infrastructure. If a master fails, minions will notice and select another master from the available list.

### 28.1.4 Syndic

Salt's Syndic feature is a way to create differing infrastructure topologies. It is not strictly an HA feature, but can be treated as such.

With the syndic, a Salt infrastructure can be partitioned in such a way that certain masters control certain segments of the infrastructure, and "Master of Masters" nodes can control multiple segments underneath them.

Syndics are covered in depth in [Salt Syndic](#).

### 28.1.5 Syndic with Multimaster

New in version 2015.5.0.

Syndic with Multimaster lets you connect a syndic to multiple masters to provide an additional layer of redundancy in a syndic configuration.

Syndics are covered in depth in [Salt Syndic](#).

## 28.2 Salt Syndic

The most basic or typical Salt topology consists of a single Master node controlling a group of Minion nodes. An intermediate node type, called Syndic, when used offers greater structural flexibility and scalability in the construction of Salt topologies than topologies constructed only out of Master and Minion node types.

A Syndic node can be thought of as a special passthrough Minion node. A Syndic node consists of a `salt-syndic` daemon and a `salt-master` daemon running on the same system. The `salt-master` daemon running on the Syndic node controls a group of lower level Minion nodes and the `salt-syndic` daemon connects higher level Master node, sometimes called a Master of Masters.

The `salt-syndic` daemon relays publications and events between the Master node and the local `salt-master` daemon. This gives the Master node control over the Minion nodes attached to the `salt-master` daemon running on the Syndic node.

## 28.2.1 Configuring the Syndic

To setup a Salt Syndic you need to tell the Syndic node and its Master node about each other. If your Master node is located at 10.10.0.1, then your configurations would be:

On the Syndic node:

```
# /etc/salt/master
syndic_master: 10.10.0.1 # may be either an IP address or a hostname
```

```
# /etc/salt/minion

# id is shared by the salt-syndic daemon and a possible salt-minion daemon
# on the Syndic node
id: my_syndic
```

On the Master node:

```
# /etc/salt/master
order_masters: True
```

The `syndic_master` option tells the Syndic node where to find the Master node in the same way that the `master` option tells a Minion node where to find a Master node.

The `id` option is used by the `salt-syndic` daemon to identify with the Master node and if unset will default to the hostname or IP address of the Syndic just as with a Minion.

The `order_masters` option configures the Master node to send extra information with its publications that is needed by Syndic nodes connected directly to it.

**Warning:** The syndic process must be run as the same user as the syndic master.

**Note:** Each Syndic must provide its own `file_roots` directory. Files will not be automatically transferred from the Master node.

## 28.2.2 Configuring the Syndic with Multimaster

New in version 2015.5.0.

Syndic with Multimaster lets you connect a syndic to multiple masters to provide an additional layer of redundancy in a syndic configuration.

Higher level masters should first be configured in a multimaster configuration. See [Multimaster Tutorial](#).

On the syndic, the `syndic_master` option is populated with a list of the higher level masters.

Since each syndic is connected to each master, jobs sent from any master are forwarded to minions that are connected to each syndic. If the `master_id` value is set in the master config on the higher level masters, job results are returned to the master that originated the request in a best effort fashion. Events/jobs without a `master_id` are returned to any available master.

### 28.2.3 Running the Syndic

The `salt-syndic` daemon is a separate process that needs to be started in addition to the `salt-master` daemon running on the Syndic node. Starting the `salt-syndic` daemon is the same as starting the other Salt daemons.

The Master node in many ways sees the Syndic as an ordinary Minion node. In particular, the Master will need to accept the Syndic's Minion key as it would for any other Minion.

On the Syndic node:

```
# salt-syndic
or
# service salt-syndic start
```

On the Master node:

```
# salt-key -a my_syndic
```

The Master node will now be able to control the Minion nodes connected to the Syndic. Only the Syndic key will be listed in the Master node's key registry but this also means that key activity between the Syndic's Minions and the Syndic does not encumber the Master node. In this way, the Syndic's key on the Master node can be thought of as a placeholder for the keys of all the Minion and Syndic nodes beneath it, giving the Master node a clear, high level structural view on the Salt cluster.

On the Master node:

```
# salt-key -L
Accepted Keys:
my_syndic
Denied Keys:
Unaccepted Keys:
Rejected Keys:

# salt '*' test.version
minion_1:
  2018.3.4
minion_2:
  2018.3.4
minion_4:
  2018.3.4
minion_3:
  2018.3.4
```

### 28.2.4 Topology

A Master node (a node which is itself not a Syndic to another higher level Master node) must run a `salt-master` daemon and optionally a `salt-minion` daemon.

A Syndic node must run `salt-syndic` and `salt-master` daemons and optionally a `salt-minion` daemon.

A Minion node must run a `salt-minion` daemon.

When a `salt-master` daemon issues a command, it will be received by the Syndic and Minion nodes directly connected to it. A Minion node will process the command in the way it ordinarily would. On a Syndic node, the `salt-syndic` daemon will relay the command to the `salt-master` daemon running on the Syndic node, which then propagates the command to the Minions and Syndics connected to it.

When events and job return data are generated by `salt-minion` daemons, they are aggregated by the `salt-master` daemon they are connected to, which `salt-master` daemon then relays the data back through its `salt-syndic` daemon until the data reaches the Master or Syndic node that issued the command.

### 28.2.5 Syndic wait

`syndic_wait` is a master configuration file setting that specifies the number of seconds the Salt client should wait for additional syndics to check in with their lists of expected minions before giving up. This value defaults to 5 seconds.

The `syndic_wait` setting is necessary because the higher-level master does not have a way of knowing which minions are below the syndics. The higher-level master has its own list of expected minions and the masters below them have their own lists as well, so the Salt client does not know how long to wait for all returns. The `syndic_wait` option allows time for all minions to return to the Salt client.

---

**Note:** To reduce the amount of time the CLI waits for Minions to respond, install a Minion on the Syndic or tune the value of the `syndic_wait` configuration.

---

While it is possible to run a Syndic without a Minion installed on the same system, it is recommended, for a faster CLI response time, to do so. Without a Minion installed on the Syndic node, the timeout value of `syndic_wait` increases significantly - about three-fold. With a Minion installed on the Syndic, the CLI timeout resides at the value defined in `syndic_wait`.

---

**Note:** If you have a very large infrastructure or many layers of Syndics, you may find that the CLI doesn't wait long enough for the Syndics to return their events. If you think this is the case, you can set the `syndic_wait` value in the Master configs on the Master or Syndic nodes from which commands are executed. The default value is 5, and should work for the majority of deployments.

---

In order for a Master or Syndic node to return information from Minions that are below their Syndics, the CLI requires a short wait time in order to allow the Syndics to gather responses from their Minions. This value is defined in the `syndic_wait` config option and has a default of five seconds.

### 28.2.6 Syndic config options

These are the options that can be used to configure a Syndic node. Note that other than `id`, Syndic config options are placed in the Master config on the Syndic node.

- `id`: Syndic id (shared by the `salt-syndic` daemon with a potential `salt-minion` daemon on the same system)
- `syndic_master`: Master node IP address or hostname
- `syndic_master_port`: Master node `ret_port`
- `syndic_log_file`: path to the logfile (absolute or not)
- `syndic_pidfile`: path to the pidfile (absolute or not)
- `syndic_wait`: time in seconds to wait on returns from this syndic

### 28.2.7 Minion Data Cache

Beginning with Salt 2016.11.0, the *Pluggable Minion Data Cache* was introduced. The minion data cache contains the Salt Mine data, minion grains, and minion pillar information cached on the Salt Master. By default, Salt uses the `localfs` cache module, but other external data stores can be used instead.

Using a pluggable minion cache modules allows for the data stored on a Salt Master about Salt Minions to be replicated on other Salt Masters the Minion is connected to. Please see the *Minion Data Cache* documentation for more information and configuration examples.

## MINION DATA CACHE

New in version 2016.11.0.

The Minion data cache contains the Salt Mine data, minion grains and minion pillar information cached on the Salt Master. By default, Salt uses the `localfs` cache module to save the data in a `msgpack` file on the Salt Master.

### 29.1 Pluggable Data Cache

While the default Minion data cache is the `localfs` cache, other external data stores can also be used to store this data such as the `consul` module. To configure a Salt Master to use a different data store, the `cache` setting needs to be established:

```
cache: consul
```

The pluggable data cache streamlines using various Salt topologies such as a *Multi-Master* or *Salt Syndics* configuration by allowing the data stored on the Salt Master about a Salt Minion to be available to other Salt Syndics or Salt Masters that a Salt Minion is connected to.

Additional minion data cache modules can be easily created by modeling the custom data store after one of the existing cache modules.

See *cache modules* for a current list.

### 29.2 Configuring the Minion Data Cache

The default `localfs` Minion data cache module doesn't require any configuration. External data cache modules with external data stores such as Consul require a configuration setting in the master config.

Here's an example config for Consul:

```
consul.host: 127.0.0.1  
consul.port: 8500  
consul.token: None  
consul.scheme: http  
consul.consistency: default  
consul.dc: dc1  
consul.verify: True  
  
cache: consul
```

New in version 2018.3.0.

Changed in version 3000.

---

**Note:** This functionality is under development and could be changed in the future releases

---

Many times it is useful to store the results of a command during the course of an execution. Salt Slots are designed to allow you to store this information and use it later during the *highstate* or other job execution.

Slots extend the state syntax and allows you to do things right before the state function is executed. So you can make a decision in the last moment right before a state is executed.

## 30.1 Execution functions

---

**Note:** Using execution modules return data as a state values is a first step of Slots development. Other functionality is under development.

---

Slots allow you to use the return from a remote-execution function as an argument value in states.

Slot syntax looks close to the simple python function call.

```
__slot__:salt:<module>.<function>(<args>, ..., <kwargs...>, ...)
```

For the 3000 release, this syntax has been updated to support parsing functions which return dictionaries and for appending text to the slot result.

```
__slot__:salt:<module>.<function>(<args>..., <kwargs...>, ...).dictionary ~  
↔append
```

There are some specifics in the syntax coming from the execution functions nature and a desire to simplify the user experience. First one is that you don't need to quote the strings passed to the slots functions. The second one is that all arguments handled as strings.

Here is a simple example:

```
copy-some-file:  
  file.copy:  
    - name: __slot__:salt:test.echo(text=/tmp/some_file)  
    - source: __slot__:salt:test.echo(/etc/hosts)
```

This will execute the `test.echo` execution functions right before calling the state. The functions in the example will return `/tmp/some_file` and `/etc/hosts` strings that will be used as a target and source arguments in the state function `file.copy`.

Here is an example of result parsing and appending:

```
file-in-user-home:  
file.copy:  
- name: __slot__:salt:user.info(someuser).home ~ /subdirectory  
- source: salt://somefile
```

## 30.2 Example Usage

In Salt, slots are a powerful feature that allows you to populate information dynamically within your Salt states. One of the best use cases for slots is when you need to reference data that is created or modified during the course of a Salt run.

Consider the following example, where we aim to add a user named 'foobar' to a group named 'known\_users' with specific user and group IDs. To achieve this, we utilize slots to retrieve the group ID of 'known\_users' as it is created or modified during the Salt run.

```
add_group_known_users:  
group.present:  
- name: known_users  
  
add_user:  
user.present:  
- name: foobar  
- uid: 600  
- gid: __slot__:salt:group.info("known_users").gid  
- require:  
- group: add_group_known_users
```

In this example, the `add_group_known_users` state ensures the presence of the 'known\_users' group. Then, within the `add_user` state, we use the slot `__slot__:salt:group.info("known_users").gid` to dynamically retrieve the group ID of 'known\_users,' which may have been modified during the execution of the previous state. This approach ensures that our user 'foobar' is associated with the correct group, even if the group information changes during the Salt run.

Slots offer a flexible way to work with changing data and dynamically populate your Salt states, making your configurations adaptable and robust.

## 30.3 Execution module returns as file contents or data

The following examples demonstrate how to use execution module returns as file contents or data in Salt states. These examples show how to incorporate the output of execution functions into file contents or data in the `file.managed` and `file.serialize` states.

### 30.3.1 Content from execution modules

You can use the results of execution modules directly as file contents in Salt states. This can be useful for dynamically generating file content based on the output of execution functions.

#### Example 1: Using `test.echo` Output as File Content

The following Salt state uses the `test.echo` execution function to generate the text "hello world." This output is then used as the content of the file `/tmp/things.txt`:

```
content-from-slots:
file.managed:
- name: /tmp/things.txt
- contents: __slot__:salt:test.echo("hello world")
```

#### Example 2: Using Multiple `test.echo` Outputs as Appended Content

In this example, two `test.echo` execution functions are used to generate "hello" and "world" strings. These strings are then joined by newline characters and then used as the content of the file `/tmp/things.txt`:

```
content-from-multiple-slots:
file.managed:
- name: /tmp/things.txt
- contents:
- __slot__:salt:test.echo("hello")
- __slot__:salt:test.echo("world")
```

### 30.3.2 Serializing data from execution modules

You can also serialize data obtained from execution modules and write it to files using Salt states. This allows you to capture and store structured data for later use.

#### Example: Serializing `grains.items()` Output to JSON

In this example, the `grains.items()` execution function retrieves system information. The obtained data is then serialized into JSON format and saved to the file `/tmp/grains.json`:

```
serialize-dataset-from-slots:
file.serialize:
- name: /tmp/grains.json
- serializer: json
- dataset: __slot__:salt:grains.items()
```

These examples showcase how to leverage Salt's flexibility to use execution module returns as file contents or serialized data in your Salt states, allowing for dynamic and customized configurations.

## WINDOWS

This section contains details on the Windows Package Manager, and specific information you need to use Salt on Windows.

### 31.1 Multi-minion setup on Windows

There may be a scenario where having a minion running in the context of the current, logged-in user would be useful. For example, the normal minion running under the service account would perform machine-wide, administrative tasks. The minion running under the user context could be launched when the user logs in and would be able to perform configuration tasks as if it were the user itself.

The steps required to do this are as follows:

1. Create new `root_dir`
2. Set `root_dir` permissions
3. Create directory structure
4. Write minion config
5. Start the minion
6. Register the minion as a service (optional)

---

**Note:** The Salt Project has created a powershell script that will configure an additional minion on the system for you. It can be found in the root of the Salt installation. The script is named `multi-minion.ps1`. You can get help on how to use the script by running the following in a PowerShell prompt:

```
Get-Help .\multi-minion.ps1 -Detailed
```

---

The following guide explains these steps in more detail.

### 31.1.1 1. Create new `root_dir`

The minion requires a root directory to store config, cache, logs, etc. The user must have full permissions to this directory. The easiest way to do this is to put the `root_dir` in the Local AppData directory (`$env:LocalAppData`).

```
New-Item -Path "$env:LocalAppData\Salt Project\Salt" -Type Directory
```

### 31.1.2 2. Set `root_dir` permissions

The user running Salt requires full access to the `root_dir`. If you have placed the `root_dir` in a location that the user does not have access to, you'll need to give the user full permissions to that directory. Replace the <placeholder variables> in this example with your own configuration information.

```
$RootDir = "<new root_dir location>"
$User    = "<user running salt>"
$acl = Get-Acl -Path "$RootDir"
$access_rule = New-Object System.Security.AccessControl.FileSystemAccessRule(
    →$User, "Modify", "Allow")
$acl.AddAccessRule($access_rule)
Set-Acl -Path "$RootDir" -AclObject $acl
```

### 31.1.3 3. Create directory structure

Salt expects a certain directory structure to be present to avoid unnecessary messages in the logs. This is usually handled by the installer. Since you're running your own instance, you need to do it. Make sure the following directories are present:

- `root_dir\conf\minion.d`
- `root_dir\conf\pki`
- `root_dir\var\log\salt`
- `root_dir\var\run`
- `root_dir\var\cache\salt\minion\extmods\grains`
- `root_dir\var\cache\salt\minion\proc`

```
$RootDir = "<new root_dir location>"
$cache_dir = "$RootDir\var\cache\salt\minion"
New-Item -Path "$RootDir\conf" -Type Directory
New-Item -Path "$RootDir\conf\minion.d" -Type Directory
New-Item -Path "$RootDir\conf\pki" -Type Directory
New-Item -Path "$RootDir\var\log\salt" -Type Directory
New-Item -Path "$RootDir\var\run" -Type Directory
New-Item -Path "$cache_dir\extmods\grains" -Type Directory
New-Item -Path "$cache_dir\proc" -Type Directory
```

### 31.1.4 4. Write minion config

The minion will need its own config, separate from the system minion config. This config tells the minion where everything is located in the file structure and also defines the master and minion id. Create a minion config file named `minion` in the `conf` directory.

```
New-Item -Path "$env:LocalAppData\Salt Project\Salt\conf\minion" -Type File
```

Make sure the config file has at least the following contents:

```

master: <ip address, dns name, etc>
id: <minion id>

root_dir: <root_dir>
log_file: <root_dir>\val\log\salt\minion
utils_dirs:
  - <root_dir>\var\cache\salt\minion\extmods
winrepo_dir: <root_dir>\srv\salt\win\repo
winrepo_dir_ng: <root_dir>\srv\salt\win\repo-ng

file_roots:
  base:
    - <root_dir>\srv\salt
    - <root_dir>\srv\spm\salt

pillar_roots:
  base:
    - <root_dir>\srv\pillar
    - <root_dir>\srv\spm\pillar

thorium_roots:
  base:
    - <root_dir>\srv\thorium

```

### 31.1.5 5. Run the minion

Everything is now set up to run the minion. You can start the minion as you would normally, but you need to specify the full path to the config file you created above.

```
salt-minion.exe -c <root_dir>\conf
```

### 31.1.6 6. Register the minion as a service (optional)

You can also register the minion as a service, but you need to understand the implications of doing so.

- You will need to have administrator privileges to register this minion service.
- You will need the password to the user account that will be running the minion.
- If the user password changes, you will have to update the service definition to reflect the new password.
- The minion runs all the time under the user context, whether that user is logged in or not.

- This requires great trust from the user as the minion will be able to perform operations under the user's name without the user knowing, whether they are logged in or not.
- If you decide to run the new minion under the Local System account, it might as well just be a normal minion.
- The helper script does not support registering the second minion as a service.

To register the minion as a service, use the `ssm.exe` binary that came with the Salt installation. Run the following commands, replacing `<service-name>`, `<root_dir>`, `<user_name>`, and `<password>` as necessary:

```
ssm.exe install <service-name> "salt-minion.exe" "-c `<root_dir>\conf`" -l␣
↪quiet"
ssm.exe set <service-name> Description "Salt Minion <user_name>"
ssm.exe set <service-name> Start SERVICE_AUTO_START
ssm.exe set <service-name> AppStopMethodConsole 24000
ssm.exe set <service-name> AppStopMethodWindow 2000
ssm.exe set <service-name> AppRestartDelay 60000
ssm.exe set <service-name> ObjectName ".\<user_name>" "<password>"
```

## 31.2 Windows Package Manager

### 31.2.1 Introduction

Salt provides a Windows package management tool for installing, updating, removing, and managing software packages on remote Windows systems. This tool provides a software repository and a package manager similar to what is provided by `yum` and `apt` on Linux. The repository contains a collection of package definition files.

#### What are package definition files?

A package definition file is a YAML/JINJA2 file with a `.sls` file extension that contains all the information needed to install software using Salt. It defines:

- Full name of the software package
- The version of the software package
- Download location of the software package
- Command-line switches for silent install and uninstall
- Whether or not to use the Windows task scheduler to install the package

Package definition files can be hosted in one or more Git repositories. The `.sls` files used to install Windows packages are not distributed by default with Salt. You have to initialize and clone the default repository [salt-winrepo-ng](#) which is hosted on GitHub by SaltStack. The repository contains package definition files for many common Windows packages and is maintained by SaltStack and the Salt community. Anyone can submit a pull request to this repo to add new package definitions.

You can manage the package definition file through either Salt or Git. You can download software packages from either a git repository or from HTTP(S) or FTP URLs. You can store the installer defined in the package definition file anywhere as long as it is accessible from the host running Salt.

You can use the Salt Windows package manager like `yum` on Linux. You do not have to know the underlying command to install the software.

- Use `pkg.install` to install a package using a package manager based on the OS the system runs on.

- Use `pkg.installed` to check if a particular package is installed in the minion.

---

**Note:** The Salt Windows package manager does not automatically resolve dependencies while installing, updating, or removing packages. You have to manage the dependencies between packages manually.

---

## Quickstart

This quickstart guides you through using the Windows Salt package manager (`winrepo`) to install software packages in four steps:

1. (Optional) *Install libraries*
2. *Populate the local Git repository*
3. *Update minion database*
4. *Install software packages*

### 31.2.2 Install libraries

(Optional) If you are using the Salt Windows package manager with package definition files hosted on a Salt Git repo, install the libraries `GitPython` or `pygit2`.

### 31.2.3 Populate the local Git repository

The SLS files used to install Windows packages are not distributed by default with Salt. Assuming no changes to the default configuration (`file_roots`), initialize and clone `salt-winrepo-ng` repository.

```
salt-run winrepo.update_git_repos
```

On successful execution of `winrepo.update_git_repos`, the `winrepo` repository is cloned on the master in the location specified in `winrepo_dir_ng` and all package definition files are pulled down from the Git repository.

On a masterless minion, use `salt-call` to initialize and clone the `salt-winrepo-ng`

```
salt-call --local winrepo.update_git_repos
```

On successful execution of the runner, the `winrepo` repository is cloned on the minion in the location specified in `winrepo_dir_ng` and all package definition files are pulled down from the Git repository.

### 31.2.4 Update minion database

Run `pkg.refresh_db` on all Windows minions to create a database entry for every package definition file and build the package database.

```
# From the master
salt -G 'os:windows' pkg.refresh_db

# From the minion in masterless mode
salt-call --local pkg.refresh_db
```

The `pkg.refresh_db` command parses the YAML/JINJA package definition files and generates the database. The above command returns the following summary denoting the number of packages that succeeded or failed to compile:

```
local:
-----
failed:
  0
success:
  301
total:
  301
```

---

**Note:** This command can take a few minutes to complete as all the package definition files are copied to the minion and the database is generated.

---

---

**Note:** You can use `pkg.refresh_db` when writing new Windows package definitions to check for errors in the definitions against one or more Windows minions.

---

### 31.2.5 Install software package

You can now install a software package using `pkg.install`:

```
# From the master
salt * pkg.install 'firefox_x64'

# From the minion in masterless mode
salt-call --local pkg.install "firefox_x64"
```

The above command installs the latest version of Firefox on the minions.

### 31.2.6 Configuration

The Github repository (winrepo) is synced to the `file_roots` in a location specified by the `winrepo_dir_ng` setting in the config. The default value of `winrepo_dir_ng` is as follows:

- Linux master: `/srv/salt/win/repo-ng` (`salt://win/repo-ng`)
- Masterless minion: `C:\salt\srv\salt\win\repo-ng` (`salt://win/repo-ng`)

#### Master Configuration

The following settings are available for configuring the winrepo on the master:

- `winrepo_dir`
- `winrepo_dir_ng`
- `winrepo_remotes`
- `winrepo_remotes_ng`
- `winrepo_branch`

- `winrepo_provider`
- `winrepo_ssl_verify`

See [here](#) for detailed information on all master config options for winrepo.

### **winrepo\_dir**

`winrepo_dir` (str)

This setting is maintained for backwards compatibility with legacy minions. It points to the location in the `file_roots` where the winrepo files are kept. The default is: `/srv/salt/win/repo`

### **winrepo\_dir\_ng**

`winrepo_dir_ng` (str)

The location in the `file_roots` where the winrepo files are kept. The default is `/srv/salt/win/repo-ng`.

**Warning:** You can change the location of the winrepo directory. However, it must always be set to a path that is inside the `file_roots`. Otherwise, the software definition files will be unreachable by the minion.

---

**Important:** A common mistake is to change the `file_roots` setting and fail to update the `winrepo_dir_ng` and `winrepo_dir` settings so that they are inside the `file_roots`

---

### **winrepo\_remotes**

`winrepo_remotes` (list)

This setting is maintained for backwards compatibility with legacy minions. It points to the legacy git repo. The default is a list containing a single URL:

<https://github.com/saltstack/salt-winrepo>

The legacy repo can be disabled by setting it to an empty list in the master config.

```
winrepo_remotes: []
```

### **winrepo\_remotes\_ng**

`winrepo_remotes_ng` (list)

This setting tells the `winrepo.update_git_repos` command where the next generation winrepo is hosted. This is a list of URLs to multiple git repos. The default is a list containing a single URL:

<https://github.com/saltstack/salt-winrepo-ng>

### **winrepo\_refspecs**

*winrepo\_refspecs* (list)

Specify what references to fetch from remote repositories. The default is ['+refs/heads/\*:refs/remotes/origin/\*', '+refs/tags/\*:refs/tags/\*']

### **winrepo\_branch**

*winrepo\_branch* (str)

The branch of the git repo to checkout. The default is master

### **winrepo\_provider**

*winrepo\_provider* (str)

The provider to be used for winrepo. Default is pygit2. Falls back to gitpython when pygit2 is not available

### **winrepo\_ssl\_verify**

*winrepo\_ssl\_verify* (bool)

Ignore SSL certificate errors when contacting remote repository. Default is False

### **Master Configuration (pygit2)**

The following configuration options only apply when the *winrepo\_provider* option is set to pygit2.

- *winrepo\_insecure\_auth*
- *winrepo\_passphrase*
- *winrepo\_password*
- *winrepo\_privkey*
- *winrepo\_pubkey*
- *winrepo\_user*

### **winrepo\_insecure\_auth**

*winrepo\_insecure\_auth* (bool)

Used only with pygit2 provider. Whether or not to allow insecure auth. Default is False

**winrepo\_passphrase***winrepo\_passphrase* (str)

Used only with `pygit2` provider. Used when the SSH key being used to authenticate is protected by a passphrase. Default is `''`

**winrepo\_privkey***winrepo\_privkey* (str)

Used only with `pygit2` provider. Used with *winrepo\_pubkey* to authenticate to SSH remotes. Default is `''`

**winrepo\_pubkey***winrepo\_pubkey* (str)

Used only with `pygit2` provider. Used with *winrepo\_privkey* to authenticate to SSH remotes. Default is `''`

**winrepo\_user***winrepo\_user* (str)

Used only with `pygit2` provider. Used with *winrepo\_password* to authenticate to HTTPS remotes. Default is `''`

**winrepo\_password***winrepo\_password* (str)

Used only with `pygit2` provider. Used with *winrepo\_user* to authenticate to HTTPS remotes. Default is `''`

**Minion Configuration**

Refreshing the package definitions can take some time, these options were introduced to allow more control of when it occurs. These settings apply to all minions whether in masterless mode or not.

- *winrepo\_cache\_expire\_max*
- *winrepo\_cache\_expire\_min*
- *winrepo\_cache\_file*
- *winrepo\_source\_dir*

### winrepo\_cache\_expire\_max

*winrepo\_cache\_expire\_max* (int)

Sets the maximum age in seconds of the winrepo metadata file to avoid it becoming stale. If the metadata file is older than this setting, it will trigger a `pkg.refresh_db` on the next run of any `pkg` module function that requires the metadata file. Default is 604800 (1 week).

Software package definitions are automatically refreshed if stale after *winrepo\_cache\_expire\_max*. Running a highstate forces the refresh of the package definitions and regenerates the metadata, unless the metadata is younger than *winrepo\_cache\_expire\_max*.

### winrepo\_cache\_expire\_min

*winrepo\_cache\_expire\_min* (int)

Sets the minimum age in seconds of the winrepo metadata file to avoid refreshing too often. If the metadata file is older than this setting, the metadata will be refreshed unless you pass `refresh: False` in the state. Default is 1800 (30 min).

### winrepo\_cachefile

*winrepo\_cachefile* (str)

The file name of the winrepo cache file. The file is placed at the root of `winrepo_dir_ng`. Default is `winrepo.p`.

### winrepo\_source\_dir

*winrepo\_source\_dir* (str)

The location of the `.sls` files on the Salt file server. Default is `salt://win/repo-ng/`.

**Warning:** If the default for `winrepo_dir_ng` is changed, then this setting will also need to be changed on each minion. The default setting for `winrepo_dir_ng` is `/srv/salt/win/repo-ng`. If that were changed to `/srv/salt/new/repo-ng` then the `winrepo_source_dir` would need to be changed to `salt://new/repo-ng`

## Masterless Minion Configuration

The following settings are available for configuring the winrepo on a masterless minion:

- *winrepo\_dir*
- *winrepo\_dir\_ng*
- *winrepo\_remotes*
- *winrepo\_remotes\_ng*

See [here](#) for detailed information on all minion config options for winrepo.

## winrepo\_dir

*winrepo\_dir* (str)

This setting is maintained for backwards compatibility with legacy minions. It points to the location in the `file_roots` where the winrepo files are kept. The default is: `C:\ProgramData\Salt Project\Salt\srv\salt\win\repo`

## winrepo\_dir\_ng

*winrepo\_dir\_ng* (str)

The location in the `file_roots` where the winrepo files are kept. The default is `C:\ProgramData\Salt Project\Salt\srv\salt\win\repo-ng`.

**Warning:** You can change the location of the winrepo directory. However, it must always be set to a path that is inside the `file_roots`. Otherwise, the software definition files will be unreachable by the minion.

---

**Important:** A common mistake is to change the `file_roots` setting and fail to update the `winrepo_dir_ng` and `winrepo_dir` settings so that they are inside the `file_roots`. You might also want to verify `winrepo_source_dir` on the minion as well.

---

## winrepo\_remotes

*winrepo\_remotes* (list)

This setting is maintained for backwards compatibility with legacy minions. It points to the legacy git repo. The default is a list containing a single URL:

<https://github.com/saltstack/salt-winrepo>

The legacy repo can be disabled by setting it to an empty list in the minion config.

```
winrepo_remotes: []
```

## winrepo\_remotes\_ng

*winrepo\_remotes\_ng* (list)

This setting tells the `winrepo.update_git_repos` command where the next generation winrepo is hosted. This is a list of URLs to multiple git repos. The default is a list containing a single URL:

<https://github.com/saltstack/salt-winrepo-ng>

## 31.2.7 Sample Configurations

### Masterless

The configs in this section are for working with winrepo on a Windows minion using `salt-call --local`.

### Default Configuration

This is the default configuration if nothing is configured in the minion config. The config is shown here for clarity. These are the defaults:

```
file_roots:
  base:
    - C:\ProgramData\Salt Project\Salt\srv\salt
winrepo_source_dir: 'salt://win/repo-ng'
winrepo_dir_ng: C:\ProgramData\Salt Project\Salt\srv\salt\win\repo-ng
```

The `winrepo.update_git_repos` command will clone the repository to `win\repo-ng` on the `file_roots`.

### Multiple Salt Environments

This starts to get a little tricky. The winrepo repository doesn't get cloned to each environment when you run `winrepo.update_git_repos`, so to make this work, all environments share the same winrepo. Applying states using the `saltenv` option will find the state files in the appropriate environment, but the package definition files will always be pulled from the same location. Therefore, you have to put the same winrepo location in each saltenv. Here's how this would look:

```
file_roots:
  base:
    - C:\ProgramData\Salt Project\Salt\srv\salt\base
    - C:\ProgramData\Salt Project\Salt\srv\salt\winrepo
  test:
    - C:\ProgramData\Salt Project\Salt\srv\salt\test
    - C:\ProgramData\Salt Project\Salt\srv\salt\winrepo
winrepo_source_dir: 'salt://salt-winrepo-ng'
winrepo_dir_ng: C:\ProgramData\Salt Project\Salt\srv\salt\winrepo
winrepo_dir: C:\ProgramData\Salt Project\Salt\srv\salt\winrepo
```

When you run `winrepo.update_git_repos` the Git repository will be cloned to the location specified in the `winrepo_dir_ng` setting. I specified the `winrepo_dir` setting just so everything gets cloned to the same place. The directory that gets cloned is named `salt-winrepo-ng` so you specify that in the `winrepo_source_dir` setting.

The winrepo directory should only contain the package definition files. You wouldn't want to place any states in the winrepo directory as they will be available to both environments.

## Master

When working in a Master/Minion environment you have to split up some of the config settings between the master and the minion. Here are some sample configs for winrepo in a Master/Minion environment.

### Default Configuration

This is the default configuration if nothing is configured. The config is shown here for clarity. These are the defaults on the master:

```
file_roots:
  base:
    - /srv/salt
winrepo_dir_ng: /srv/salt/win/repo-ng
```

This is the default in the minion config:

```
winrepo_source_dir: 'salt://win/repo-ng'
```

The `winrepo.update_git_repos` command will clone the repository to `win\repo-ng` on the `file_roots`.

### Multiple Salt Environments

To set up multiple saltenvs using a Master/Minion configuration set the following in the master config:

```
file_roots:
  base:
    - /srv/salt/base
    - /srv/salt/winrepo
  test:
    - /srv/salt/test
    - /srv/salt/winrepo
winrepo_dir_ng: /srv/salt/winrepo
winrepo_dir: /srv/salt/winrepo
```

Use the winrepo runner to set up the winrepo repository on the master.

```
salt-run winrepo.update_git_repos
```

The winrepo will be cloned to `/srv/salt/winrepo` under a directory named `salt-winrepo-ng`.

Set the following on the minion config so the minion knows where to find the package definition files in the `file_roots`:

```
winrepo_source_dir: 'salt://salt-winrepo-ng'
```

The same stipulations apply in a Master/Minion configuration as they do in a Masterless configuration

### 31.2.8 Usage

After completing the configuration and initialization, you can use the Salt package manager commands to manage software on Windows minions.

**Note:** The following example commands can be run from the master using `salt` or on a masterless minion using `salt-call`

	Command	Description
1	<code>pkg.list_pkgs</code>	Displays a list of all packages installed in the system.
2	<code>pkg.list_available</code>	Displays the versions available of a particular package to be installed.
3	<code>pkg.install</code>	Installs a given package.
4	<code>pkg.remove</code>	Uninstalls a given package.

#### List installed packages

Use `pkg.list_pkgs` to display a list of packages installed on the system.

```
# From the master
salt -G 'os:windows' pkg.list_pkgs

# From the minion in masterless mode
salt-call --local pkg.list_pkgs
```

The command displays the software name and the version for every package installed on the system irrespective of whether it was installed by the Salt package manager.

```
local:
-----
Frhed 1.6.0:
  1.6.0
GNU Privacy Guard:
  2.2.16
Gpg4win (3.1.9):
  3.1.9
git:
  2.17.1.2
nsis:
  3.03
python3_x64:
  3.7.4150.0
salt-minion-py3:
  2019.2.3
```

The software name indicates whether the software is managed by Salt or not.

If Salt finds a match in the winrepo database, then the software name is the short name as defined in the package definition file. It is usually a single-word, lower-case name.

All other software names are displayed as the full name as shown in Add/Remove Programs. In the above example, Git (git), Nullsoft Installer (nsis), Python 3.7 (python3\_x64), and Salt (salt-minion-py3) have corresponding package definition files and are managed by Salt, while Frhed 1.6.0, GNU Privacy guard, and GPG4win are not.

### List available versions

Use `pkg.list_available` to display a list of versions of a package available for installation. You can pass the name of the software in the command. You can refer to the software by its name or its `full_name` surrounded by quotes.

```
# From the master
salt winminion pkg.list_available firefox_x64

# From the minion in masterless mode
salt-call --local pkg.list_available firefox_x64
```

The command lists all versions of Firefox available for installation.

```
winminion:
  - 69.0
  - 69.0.1
  - 69.0.2
  - 69.0.3
  - 70.0
  - 70.0.1
  - 71.0
  - 72.0
  - 72.0.1
  - 72.0.2
  - 73.0
  - 73.0.1
  - 74.0
```

**Note:** For a Linux master, you can surround the file name with single quotes. However, for the cmd shell on Windows, use double quotes when wrapping strings that may contain spaces. Powershell accepts either single quotes or double quotes.

### Install a package

Use `pkg.install`: to install a package.

```
# From the master
salt winminion pkg.install 'firefox_x64'

# From the minion in masterless mode
salt-call --local pkg.install "firefox_x64"
```

The command installs the latest version of Firefox.

```
# From the master
salt winminion pkg.install 'firefox_x64' version=74.0

# From the minion in masterless mode
salt-call --local pkg.install "firefox_x64" version=74.0
```

The command installs version 74.0 of Firefox.

If a different version of the package is already installed, then the old version is replaced with the version in the winrepo (only if the package supports live updating).

You can also specify the full name of the software while installing:

```
# From the master
salt winminion pkg.install 'Mozilla Firefox 17.0.1 (x86 en-US)'

# From the minion in masterless mode
salt-call --local pkg.install "Mozilla Firefox 17.0.1 (x86 en-US)"
```

## Remove a package

Use `pkg.remove` to remove a package.

```
# From the master
salt winminion pkg.remove firefox_x64

# From the minion in masterless mode
salt-call --local pkg.remove firefox_x64
```

## Package definition file directory structure and naming

All package definition files are stored in the location configured in the `winrepo_dir_ng` setting. All files in this directory with a `.sls` file extension are considered package definition files. These files are evaluated to create the metadata file on the minion.

You can maintain standalone package definition files that point to software on other servers or on the internet. In this case the file name is the short name of the software with the `.sls` extension, for example, `firefox.sls`.

You can also store the binaries for your software together with their software definition files in their own directory. In this scenario, the directory name is the short name for the software and the package definition file stored that directory is named `init.sls`.

Look at the following example directory structure on a Linux master assuming default config settings:

```
srv/
|---salt/
|   |---win/
|       |---repo-ng/
|           |---custom_defs/
|               |---ms_office_2013_x64/
|                   |---access.en-us/
|                       |---excel.en-us/
|                           |---outlook.en-us/
```

(continues on next page)

(continued from previous page)

```

|---powerpoint.en-us/
|---word.en-us/
|---init.sls
|---setup.dll
|---setup.exe
|---openssl.sls
|---zoom.sls
|---salt-winrepo-ng/
|---auditbeat/
|---init.sls
|---install.cmd
|---install.ps1
|---remove.cmd
|---gpg4win/
|---init.sls
|---silent.ini
|---7zip.sls
|---adobereader.sls
|---audacity.sls
|---ccleaner.sls
|---chrome.sls
|---firefox.sls

```

In the above directory structure:

- The `custom_defs` directory contains the following custom package definition files.
  - A folder for MS Office 2013 that contains the installer files for all the MS Office software and a package definition file named `init.sls`.
  - Two additional standalone package definition files `openssl.sls` and `zoom.sls` to install OpenSSL and Zoom.
- The `salt-winrepo-ng` directory contains the clone of the git repo specified by the `winrepo_remotes_ng` config setting.

**Warning:** Do not modify the files in the `salt-winrepo-ng` directory as it breaks future runs of `winrepo.update_git_repos`.

**Warning:** Do not place any custom software definition files in the `salt-winrepo-ng` directory as the `winrepo.update_git_repos` command wipes out the contents of the `salt-winrepo-ng` directory each time it is run and any extra files stored in the Salt winrepo are lost.

## Writing package definition files

You can write your own software definition file if you know:

- The full name of the software as shown in Add/Remove Programs
- The exact version number as shown in Add/Remove Programs
- How to install your software silently from the command line

Here is a YAML software definition file for Firefox:

```
firefox_x64:
  '74.0':
    full_name: Mozilla Firefox 74.0 (x64 en-US)
    installer: 'https://download-installer.cdn.mozilla.net/pub/firefox/
    ↪releases/74.0/win64/en-US/Firefox%20Setup%2074.0.exe'
    install_flags: '/S'
    uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
    uninstall_flags: '/S'
  '73.0.1':
    full_name: Mozilla Firefox 73.0.1 (x64 en-US)
    installer: 'https://download-installer.cdn.mozilla.net/pub/firefox/
    ↪releases/73.0.1/win64/en-US/Firefox%20Setup%2073.0.1.exe'
    install_flags: '/S'
    uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
    uninstall_flags: '/S'
```

The package definition file itself is a data structure written in YAML with three indentation levels:

- The first level item is a short name that Salt uses to reference the software. This short name is used to install and remove the software and it must be unique across all package definition files in the repo. Also, there must be only one short name in the file.
- The second level item is the version number. There can be multiple version numbers for a package but they must be unique within the file.

---

**Note:** When running `pkg.list_pkgs`, the short name and version number are displayed when Salt finds a match in the repo. Otherwise, the full package name is displayed.

---

- The third indentation level contains all parameters that Salt needs to install the software. The parameters are:
  - `full_name` : The full name as displayed in Add/Remove Programs
  - `installer` : The location of the installer binary
  - `install_flags` : The flags required to install silently
  - `uninstaller` : The location of the uninstaller binary
  - `uninstall_flags` : The flags required to uninstall silently
  - `msiexec` : Use msiexec to install this package
  - `allusers` : If this is an MSI, install to all users
  - `cache_dir` : Cache the entire directory in the installer URL if it starts with `salt://`
  - `cache_file` : Cache a single file in the installer URL if it starts with `salt://`
  - `use_scheduler` : Launch the installer using the task scheduler

- `source_hash` : The hash sum for the installer

### Example package definition files

This section provides some examples of package definition files for different use cases such as:

- Writing a *simple package definition file*
- Writing a *JINJA templated package definition file*
- Writing a package definition file to *install the latest version of the software*
- Writing a package definition file to *install an MSI patch*

These examples enable you to gain a better understanding of the usage of different file parameters. To understand the examples, you need a basic [Understanding Jinja](#). For an exhaustive dive into Jinja, refer to the official [Jinja Template Designer](#) documentation.

#### Example: Simple

Here is a pure YAML example of a simple package definition file for Firefox:

```
firefox_x64:
  '74.0':
    full_name: Mozilla Firefox 74.0 (x64 en-US)
    installer: 'https://download-installer.cdn.mozilla.net/pub/firefox/
↳releases/74.0/win64/en-US/Firefox%20Setup%2074.0.exe'
    install_flags: '/S'
    uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
    uninstall_flags: '/S'
  '73.0.1':
    full_name: Mozilla Firefox 73.0.1 (x64 en-US)
    installer: 'https://download-installer.cdn.mozilla.net/pub/firefox/
↳releases/73.0.1/win64/en-US/Firefox%20Setup%2073.0.1.exe'
    install_flags: '/S'
    uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
    uninstall_flags: '/S'
```

The first line is the short name of the software which is `firefox_x64`.

---

**Important:** The short name must be unique across all other short names in the software repository. The `full_name` combined with the version must also be unique.

---

The second line is the `software version` and is indented two spaces.

---

**Important:** The version number must be enclosed in quotes or the YAML parser removes the trailing zeros. For example, if the version number `74.0` is not enclosed within quotes, then the version number is rendered as `74`.

---

The lines following the `version` are indented two more spaces and contain all the information needed to install the Firefox package.

**Important:** You can specify multiple versions of software by specifying multiple version numbers at the same indentation level as the first with its software definition below it.

---

**Important:** The `full_name` must match exactly what is shown in Add/Remove Programs (`appwiz.cpl`)

---

### Example: JINJA templated package definition file

JINJA is the default templating language used in package definition files. You can use JINJA to add variables and expressions to package definition files that get replaced with values when the `.sls` go through the Salt renderer.

When there are tens or hundreds of versions available for a piece of software, the definition file can become large and cumbersome to maintain. In this scenario, JINJA can be used to add logic, variables, and expressions to automatically create the package definition file for software with multiple versions.

Here is an example of a package definition file for Firefox that uses JINJA:

```
{%- set lang = salt['config.get']('firefox:pkg:lang', 'en-US') %}

firefox_x64:
  {% for version in ['74.0',
                    '73.0.1', '73.0',
                    '72.0.2', '72.0.1', '72.0',
                    '71.0', '70.0.1', '70.0',
                    '69.0.3', '69.0.2', '69.0.1'] %}
    '{{ version }}':
      full_name: 'Mozilla Firefox {{ version }} (x64 {{ lang }})'
      installer: 'https://download-installer.cdn.mozilla.net/pub/firefox/
→releases/{{ version }}/win64/{{ lang }}/Firefox%20Setup%20{{ version }}.exe'
      install_flags: '/S'
      uninstaller: '%ProgramFiles%\Mozilla Firefox\uninstall\helper.exe'
      uninstall_flags: '/S'
  {% endfor %}
```

In this example, JINJA is used to generate a package definition file that defines how to install 12 versions of Firefox. Jinja is used to create a list of available versions. The list is iterated through a `for` loop where each version is placed in the `version` variable. The version is inserted everywhere there is a `{{ version }}` marker inside the `for` loop.

The single variable (`lang`) defined at the top of the package definition identifies the language of the package. You can access the Salt modules using the `salt` keyword. In this case, the `config.get` function is invoked to retrieve the language setting. If the `lang` variable is not defined then the default value is `en-US`.

**Example: Package definition file to install the latest version**

Some software vendors do not provide access to all versions of their software. Instead, they provide a single URL to what is always the latest version. In some cases, the software keeps itself up to date. One example of this is the Google Chrome web browser.

To handle situations such as these, set the version to *latest*. Here's an example of a package definition file to install the latest version of Chrome.

```
chrome:
  latest:
    full_name: 'Google Chrome'
    installer: 'https://dl.google.com/edgedl/chrome/install/
↳GoogleChromeStandaloneEnterprise.msi'
    install_flags: '/qn /norestart'
    uninstaller: 'https://dl.google.com/edgedl/chrome/install/
↳GoogleChromeStandaloneEnterprise.msi'
    uninstall_flags: '/qn /norestart'
    msiexec: True
```

In the above example:

- Version is set to *latest*. Salt then installs the latest version of Chrome at the URL and displays that version.
- `msiexec` is set to `True`, hence the software is installed using an MSI.

**Example: Package definition file to install an MSI patch**

For MSI installers, when the `msiexec` parameter is set to `true`, the `/i` option is used for installation, and the `/x` option is used for uninstallation. However, when installing an MSI patch, the `/i` and `/x` options cannot be combined.

Here is an example of a package definition file to install an MSI patch:

```
MyApp:
  '1.0':
    full_name: MyApp
    installer: 'salt://win/repo-ng/MyApp/MyApp.1.0.msi'
    install_flags: '/qn /norestart'
    uninstaller: '{B5B5868F-23BA-297A-917D-0DF345TF5764}'
    uninstall_flags: '/qn /norestart'
    msiexec: True
  '1.1':
    full_name: MyApp
    installer: 'salt://win/repo-ng/MyApp/MyApp.1.0.msi'
    install_flags: '/qn /norestart /update "%cd%\MyApp.1.1.msp" '
    uninstaller: '{B5B5868F-23BA-297A-917D-0DF345TF5764}'
    uninstall_flags: '/qn /norestart'
    msiexec: True
    cache_file: salt://win/repo-ng/MyApp/MyApp.1.1.msp
```

In the above example:

- Version `1.0` of the software installs the application using the `1.0` MSI defined in the `installer` parameter.
- There is no file to be cached and the `install_flags` parameter does not include any special values.

Version 1.1 of the software uses the same installer file as Version 1.0. Now, to apply a patch to Version 1.0, make the following changes in the package definition file:

- Place the patch file (MSP file) in the same directory as the installer file (MSI file) on the `file_roots`
- In the `cache_file` parameter, specify the path to the single patch file.
- In the `install_flags` parameter, add the `/update` flag and include the path to the MSP file using the `%cd%` environment variable. `%cd%` resolves to the current working directory, which is the location in the minion cache where the installer file is cached.

For more information, see issue #32780.

The same approach could be used for applying MST files for MSIs and answer files for other types of .exe-based installers.

### Parameters

This section describes the parameters placed under the `version` in the package definition file. Examples can be found on the [Salt winrepo repository](#).

#### full\_name (str)

The full name of the software as shown in "Add/Remove Programs". You can also retrieve the full name of the package by installing the package manually and then running `pkg.list_pkgs`. Here's an example of the output from `pkg.list_pkgs`:

```
salt 'test-2008' pkg.list_pkgs
test-2008
-----
7-Zip 9.20 (x64 edition):
  9.20.00.0
Mozilla Firefox 74.0 (x64 en-US)
  74.0
Mozilla Maintenance Service:
  74.0
salt-minion-py3:
  3001
```

Notice the full Name for Firefox: `Mozilla Firefox 74.0 (x64 en-US)`. The `full_name` parameter in the package definition file must match this name.

The example below shows the `pkg.list_pkgs` for a machine that has Mozilla Firefox 74.0 installed with a package definition file for that version of Firefox.

```
test-2008:
-----
7zip:
  9.20.00.0
Mozilla Maintenance Service:
  74.0
firefox_x64:
  74.0
salt-minion-py3:
  3001
```

---

On running `pkg.list_pkgs`, if any of the software installed on the machine matches the full name defined in any one of the software definition files in the repository, then the package name is displayed in the output.

---

**Important:** The version number and `full_name` must match the output of `pkg.list_pkgs` so that the installation status can be verified by the state system.

---

---

**Note:** You can successfully install packages using `pkg.install`, even if the `full_name` or the version number doesn't match. The module will complete successfully, but continue to display the full name in `pkg.list_pkgs`. If this is happening, verify that the `full_name` and the `version` match exactly what is displayed in Add/Remove Programs.

---

---

**Tip:** To force Salt to display the full name when there's already an existing package definition file on the system, you can pass a bogus `saltenv` parameter to the command like so: `pkg.list_pkgs saltenv=NotARealEnv`

---

---

**Tip:** It's important use `pkg.refresh_db` to check for errors and ensure the latest package definition is on any minion you're testing new definitions on.

---

### installer (str)

The path to the binary (`.exe`, `.msi`) that installs the package.

This can be a local path or a URL. If it is a URL or a Salt path (`salt://`), then the package is cached locally and then executed. If it is a path to a file on disk or a file share, then it is executed directly.

---

**Note:** When storing software in the same location as the winrepo:

- Create a sub folder named after the package.
  - Store the package definition file named `init.sls` and the binary installer in the same sub folder if you are hosting those files on the `file_roots`.
- 

---

**Note:** The `pkg.refresh_db` command processes all `.sls` files in all sub directories in the `winrepo_dir_ng` directory.

---

### install\_flags (str)

The flags passed to the installer for silent installation.

You may be able to find these flags by adding `/?` or `/h` when running the installer from the command line. See [WPKG project wiki](#) for information on silent install flags.

**Warning:** Always ensure that the installer has the ability to install silently, otherwise Salt appears to hang while the installer waits for user input.

## uninstaller (str)

The path to the program to uninstall the software.

This can be the path to the same `.exe` or `.msi` used to install the software. If you use a `.msi` to install the software, then you can either use the GUID of the software or the same `.msi` to uninstall the software.

You can find the uninstall information in the registry:

- Software\Microsoft\Windows\CurrentVersion\Uninstall
- Software\WOW6432Node\Microsoft\Windows\CurrentVersion\Uninstall

Here's an example that uses the GUID to uninstall software:

```
7zip:
'9.20.00.0':
  full_name: 7-Zip 9.20 (x64 edition)
  installer: salt://win/repo-ng/7zip/7z920-x64.msi
  install_flags: '/qn /norestart'
  uninstaller: '{23170F69-40C1-2702-0920-000001000000}'
  uninstall_flags: '/qn /norestart'
  msiexec: True
```

Here's an example that uses the MSI installer to uninstall software:

```
7zip:
'9.20.00.0':
  full_name: 7-Zip 9.20 (x64 edition)
  installer: salt://win/repo-ng/7zip/7z920-x64.msi
  install_flags: '/qn /norestart'
  uninstaller: salt://win/repo-ng/7zip/7z920-x64.msi
  uninstall_flags: '/qn /norestart'
  msiexec: True
```

## uninstall\_flags (str)

The flags passed to the uninstaller for silent uninstallation.

You may be able to find these flags by adding `/?` or `/h` when running the uninstaller from the command-line. See [WPKG project wiki](#) for information on silent uninstall flags.

**Warning:** Always ensure that the installer has the ability to uninstall silently, otherwise Salt appears to hang while the uninstaller waits for user input.

**msiexec (bool, str)**

This setting informs Salt to use `msiexec /i` to install the package and `msiexec /x` to uninstall. This setting only applies to `.msi` installations.

Possible options are:

- True
- False (default)
- the path to `msiexec.exe` on your system

**7zip:**

```
'9.20.00.0':
  full_name: 7-Zip 9.20 (x64 edition)
  installer: salt://win/repo/7zip/7z920-x64.msi
  install_flags: '/qn /norestart'
  uninstaller: salt://win/repo/7zip/7z920-x64.msi
  uninstall_flags: '/qn /norestart'
  msiexec: 'C:\Windows\System32\msiexec.exe'
```

**allusers (bool)**

This parameter is specific to `.msi` installations. It tells `msiexec` to install the software for all users. The default is True.

**cache\_dir (bool)**

This setting requires the software to be stored on the `file_roots` and only applies to URLs that begin with `salt:/`. If set to True, then the entire directory where the installer resides is recursively cached. This is useful for installers that depend on other files in the same directory for installation.

**Warning:** If set to True, then all files and directories in the same location as the installer file are copied down to the minion. For example, if you place your package definition file with `cache_dir: True` in the root of `winrepo (/srv/salt/win/repo-ng)` then the entire contents of `winrepo` is cached to the minion. Therefore, it is best practice to place your package definition file along with its installer files in a subdirectory if they are stored in `winrepo`.

Here's an example using `cache_dir`:

**sqlexpress:**

```
'12.0.2000.8':
  full_name: Microsoft SQL Server 2014 Setup (English)
  installer: 'salt://win/repo/sqlexpress/setup.exe'
  install_flags: '/ACTION=install /IACCEPTSQLSERVERLICENSETERMS /Q'
  cache_dir: True
```

**cache\_file (str)**

This setting requires the file to be stored on the `file_roots` and only applies to URLs that begin with `salt://`. It indicates that the single file specified is copied down for use with the installer. It is copied to the same location as the installer. Use this setting instead of `cache_dir` when you only need to cache a single file.

**use\_scheduler (bool)**

If set to `True`, Windows uses the task scheduler to run the installation. A one-time task is created in the task scheduler and launched. The return to the minion is that the task was launched successfully, not that the software was installed successfully.

---

**Note:** This is used in the package definition for Salt itself. The first thing the Salt installer does is kill the Salt service, which then kills all child processes. If the Salt installer is launched via Salt, then the installer is killed with the `salt-minion` service, leaving Salt on the machine but not running. Using the task scheduler allows an external process to launch the Salt installer so its processes aren't killed when the Salt service is stopped.

---

**source\_hash (str)**

This setting informs Salt to compare a hash sum of the installer to the provided hash sum before execution. The value can be formatted as `<hash_algorithm>=<hash_sum>`, or it can be a URI to a file containing the hash sum.

For a list of supported algorithms, see the [hashlib documentation](#).

Here's an example using `source_hash`:

```
messageanalyzer:
  '4.0.7551.0':
    full_name: 'Microsoft Message Analyzer'
    installer: 'salt://win/repo/messageanalyzer/MessageAnalyzer64.msi'
    install_flags: '/quiet /norestart'
    uninstaller: '{1CC02C23-8FCD-487E-860C-311EC0A0C933}'
    uninstall_flags: '/quiet /norestart'
    msiexec: True
    source_hash: 'sha1=62875ff451f13b10a8ff988f2943e76a4735d3d4'
```

**Not Implemented**

The following parameters are often seen in the software definition files hosted on the Git repo. However, they are not implemented and do not affect the installation process.

- param bool reboot**  
Not implemented
- param str locale**  
Not implemented

### 31.2.9 Managing Windows Software on a Standalone Windows Minion

The Windows Software Repository functions similarly in a standalone environment, with a few differences in the configuration.

To replace the `winrepo` runner used on the Salt master, an `execution` module exists to provide the same functionality to standalone minions. The functions for the module share the same names with functions in the runner and are used in the same way; the only difference is that `salt-call` is used instead of `salt-run` to run those functions:

```
salt-call winrepo.update_git_repos
salt-call pkg.refresh_db
```

After executing the previous commands, the repository on the standalone system is ready for use.

### 31.2.10 Troubleshooting

#### My software installs correctly but `pkg.installed` says it failed

If you have a package that seems to install properly but Salt reports a failure then it is likely you have a `version` or `full_name` mismatch.

- Check the `full_name` and `version` of the package as shown in Add/Remove Programs (`appwiz.cpl`).
- Use `pkg.list_pkgs` to check that the `full_name` and `version` exactly match what is installed.
- Verify that the `full_name` and `version` in the package definition file match the full name and version in Add/Remove programs.
- Ensure that the `version` is wrapped in single quotes in the package definition file.

#### Changes to package definition files not being picked up

Make sure you refresh the database on the minion (`pkg.refresh_db`) after updating package definition files in the repo.

```
salt winminion pkg.refresh_db
```

#### Winrepo upgrade issues

To minimize potential issues, it is a good idea to remove any winrepo git repositories that were checked out by the legacy (pre-2015.8.0) winrepo code when upgrading the master to 2015.8.0 or later. Run `winrepo.update_git_repos` to clone them anew after the master is started.

### 31.2.11 pygit2 / GitPython Support for Maintaining Git Repos

pygit2 and GitPython are the supported python interfaces to Git. The runner `winrepo.update_git_repos` uses the same underlying code as `Git Fileserver Backend` and `Git External Pillar` to maintain and update its local clones of git repositories.

---

**Note:** If compatible versions of both pygit2 and GitPython are installed, then Salt will prefer pygit2. To override this behavior use the `winrepo_provider` configuration parameter, ie: `winrepo_provider: gitpython`

---

### 31.2.12 Accessing authenticated Git repos (pygit2)

pygit2 enables you to access authenticated git repositories and set per-remote config settings. An example of this is:

```
winrepo_remotes:
- https://github.com/saltstack/salt-winrepo.git
- git@github.com:myuser/myrepo.git:
  - pubkey: /path/to/key.pub
  - privkey: /path/to/key
  - passphrase: myaw3s0m3pa$$phr4$3
- https://github.com/myuser/privaterepo.git:
  - user: mygithubuser
  - password: CorrectHorseBatteryStaple
```

---

**Note:** The per-remote configuration settings work in the same manner as they do in gitfs, with global parameters being overridden by their per-remote counterparts. For instance, setting `winrepo_passphrase` sets a global passphrase for winrepo that applies to all SSH-based remotes, unless overridden by a `passphrase` per-remote parameter.

See [here](#) for a detailed explanation of how per-remote configuration works in gitfs. The same principles apply to winrepo.

---

### 31.2.13 Maintaining Git repos

A `clean` argument is added to the `winrepo.update_git_repos` runner to maintain the Git repos. When `clean=True` the runner removes directories under the `winrepo_dir_ng/winrepo_dir_ng` that are not explicitly configured. This eliminates the need to manually remove these directories when a repo is removed from the config file.

```
salt-run winrepo.update_git_repos clean=True
```

If a mix of git and non-git Windows Repo definition files are used, then do not pass `clean=True`, as it removes the directories containing non-git definitions.

### 31.2.14 Name collisions between repos

Salt detects collisions between repository names. The `winrepo.update_git_repos` runner does not execute successfully if any collisions between repository names are detected. Consider the following configuration:

```
winrepo_remotes:
- https://foo.com/bar/baz.git
- https://mydomain.tld/baz.git
- https://github.com/foobar/baz.git
```

With the above configuration, the `winrepo.update_git_repos` runner fails to execute as all three repos would be checked out to the same directory. To resolve this conflict, use the per-remote parameter called `name`.

```
winrepo_remotes:
- https://foo.com/bar/baz.git
- https://mydomain.tld/baz.git:
  - name: baz_junior
- https://github.com/foobar/baz.git:
  - name: baz_the_third
```

Now on running the `winrepo.update_git_repos`:

- `https://foo.com/bar/baz.git` repo is initialized and cloned under the `win_repo_dir_ng` directory.
- `https://mydomain.tld/baz.git` repo is initialized and cloned under the `win_repo_dir_ng\baz_junior` directory.
- `https://github.com/foobar/baz.git` repo is initialized and cloned under the `win_repo_dir_ng\baz_the_third` directory.

## 31.3 Windows-specific Behaviour

Salt is capable of managing Windows systems, however due to various differences between the operating systems, there are some things you need to keep in mind.

This document will contain any quirks that apply across Salt or generally across multiple module functions. Any Windows-specific behavior for particular module functions will be documented in the module function documentation. Therefore this document should be read in conjunction with the module function documentation.

### 31.3.1 Group parameter for files

Salt was originally written for managing Unix-based systems, and therefore the file module functions were designed around that security model. Rather than trying to shoehorn that model on to Windows, Salt ignores these parameters and makes non-applicable module functions unavailable instead.

One of the commonly ignored parameters is the `group` parameter for managing files. Under Windows, while files do have a 'primary group' property, this is rarely used. It generally has no bearing on permissions unless intentionally configured and is most commonly used to provide Unix compatibility (e.g. Services For Unix, NFS services).

Because of this, any file module functions that typically require a group, do not under Windows. Attempts to directly use file module functions that operate on the group (e.g. `file.chgrp`) will return a pseudo-value and cause a log message to appear. No group parameters will be acted on.

If you do want to access and change the 'primary group' property and understand the implications, use the `file.get_pgid` or `file.get_pgroup` functions or the `pgroup` parameter on the `file.chown` module function.

### 31.3.2 Dealing with case-insensitive but case-preserving names

Windows is case-insensitive, but however preserves the case of names and it is this preserved form that is returned from system functions. This causes some issues with Salt because it assumes case-sensitive names. These issues generally occur in the state functions and can cause bizarre looking errors.

To avoid such issues, always pretend Windows is case-sensitive and use the right case for names, e.g. specify `user=Administrator` instead of `user=administrator`.

Follow [issue 11801](#) for any changes to this behavior.

### 31.3.3 Dealing with various username forms

Salt does not understand the various forms that Windows usernames can come in, e.g. `username`, `mydomain\username`, `username@mydomain.tld` can all refer to the same user. In fact, Salt generally only considers the raw username value, i.e. the username without the domain or host information.

Using these alternative forms will likely confuse Salt and cause odd errors to happen. Use only the raw username value in the correct case to avoid problems.

Follow [issue 11801](#) for any changes to this behavior.

### 31.3.4 Specifying the None group

Each Windows system has built-in `_None_` group. This is the default 'primary group' for files for users not on a domain environment.

Unfortunately, the word `_None_` has special meaning in Python - it is a special value indicating 'nothing', similar to `null` or `nil` in other languages.

To specify the None group, it must be specified in quotes, e.g. `./salt '*' file.chgrp C:\path\to\file "None"`.

### 31.3.5 Symbolic link loops

Under Windows, if any symbolic link loops are detected or if there are too many levels of symlinks (defaults to 64), an error is always raised.

For some functions, this behavior is different to the behavior on Unix platforms. In general, avoid symlink loops on either platform.

## DEVELOPING SALT

### 32.1 Overview

In its most typical use, Salt is a software application in which clients, called "minions" can be commanded and controlled from a central command server called a "master".

Commands are normally issued to the minions (via the master) by calling a client script simply called, 'salt'.

Salt features a pluggable transport system to issue commands from a master to minions. The default transport is ZeroMQ.

### 32.2 Salt Client

#### 32.2.1 Overview

The salt client is run on the same machine as the Salt Master and communicates with the salt-master to issue commands and to receive the results and display them to the user.

The primary abstraction for the salt client is called 'LocalClient'.

When LocalClient wants to publish a command to minions, it connects to the master by issuing a request to the master's ReqServer (TCP: 4506)

The LocalClient system listens to responses for its requests by listening to the master event bus publisher (master\_event\_pub.ipc).

### 32.3 Salt Master

#### 32.3.1 Overview

The salt-master daemon runs on the designated Salt master and performs functions such as authenticating minions, sending, and receiving requests from connected minions and sending and receiving requests and replies to the 'salt' CLI.

### 32.3.2 Moving Pieces

When a Salt master starts up, a number of processes are started, all of which are called 'salt-master' in a process-list but have various role categories.

Among those categories are:

- Publisher
- EventPublisher
- MWorker

### 32.3.3 Publisher

The Publisher process is responsible for sending commands over the designated transport to connected minions. The Publisher is bound to the following:

- TCP: port 4505
- IPC: publish\_pull.ipc

Each salt minion establishes a connection to the master Publisher.

### 32.3.4 EventPublisher

The EventPublisher publishes master events out to any event listeners. It is bound to the following:

- IPC: master\_event\_pull.ipc
- IPC: master\_event\_pub.ipc

### 32.3.5 MWorker

Worker processes manage the back-end operations for the Salt Master.

The number of workers is equivalent to the number of 'worker\_threads' specified in the master configuration and is always at least one.

Workers are bound to the following:

- IPC: workers.ipc

### 32.3.6 ReqServer

The Salt request server takes requests and distributes them to available MWorker processes for processing. It also receives replies back from minions.

**The ReqServer is bound to the following:**

- TCP: 4506
- IPC: workers.ipc

Each salt minion establishes a connection to the master ReqServer.

### 32.3.7 Job Flow

The Salt master works by always publishing commands to all connected minions and the minions decide if the command is meant for them by checking themselves against the command target.

The typical lifecycle of a salt job from the perspective of the master might be as follows:

- 1) A command is issued on the CLI. For example, 'salt my\_minion test.version'.
- 2) The 'salt' command uses LocalClient to generate a request to the salt master by connecting to the ReqServer on TCP:4506 and issuing the job.
- 3) The salt-master ReqServer sees the request and passes it to an available MWorker over workers.ipc.
- 4) A worker picks up the request and handles it. First, it checks to ensure that the requested user has permissions to issue the command. Then, it sends the publish command to all connected minions. For the curious, this happens in ClearFuncs.publish().
- 5) The worker announces on the master event bus that it is about to publish a job to connected minions. This happens by placing the event on the master event bus (master\_event\_pull.ipc) where the EventPublisher picks it up and distributes it to all connected event listeners on master\_event\_pub.ipc.
- 6) The message to the minions is encrypted and sent to the Publisher via IPC on publish\_pull.ipc.
- 7) Connected minions have a TCP session established with the Publisher on TCP port 4505 where they await commands. When the Publisher receives the job over publish\_pull, it sends the jobs across the wire to the minions for processing.
- 8) After the minions receive the request, they decrypt it and perform any requested work, if they determine that they are targeted to do so.
- 9) When the minion is ready to respond, it publishes the result of its job back to the master by sending the encrypted result back to the master on TCP 4506 where it is again picked up by the ReqServer and forwarded to an available MWorker for processing. (Again, this happens by passing this message across workers.ipc to an available worker.)
- 10) When the MWorker receives the job it decrypts it and fires an event onto the master event bus (master\_event\_pull.ipc). (Again for the curious, this happens in AESFuncs.\_return()).
- 11) The EventPublisher sees this event and re-publishes it on the bus to all connected listeners of the master event bus (on master\_event\_pub.ipc). This is where the LocalClient has been waiting, listening to the event bus for minion replies. It gathers the job and stores the result.
- 12) When all targeted minions have replied or the timeout has been exceeded, the salt client displays the results of the job to the user on the CLI.

## 32.4 Salt Minion

### 32.4.1 Overview

The salt-minion is a single process that sits on machines to be managed by Salt. It can either operate as a stand-alone daemon which accepts commands locally via 'salt-call' or it can connect back to a master and receive commands remotely.

When starting up, salt minions connect *back* to a master defined in the minion config file. They connect to two ports on the master:

- **TCP: 4505**  
This is the connection to the master Publisher. It is on this port that the minion receives jobs from the master.
- **TCP: 4506**  
This is the connection to the master ReqServer. It is on this port that the minion sends job results back to the master.

### 32.4.2 Event System

Similar to the master, a salt-minion has its own event system that operates over IPC by default. The minion event system operates on a push/pull system with IPC files at `minion_event_<unique_id>_pub.ipc` and `minion_event_<unique_id>_pull.ipc`.

The astute reader might ask why have an event bus at all with a single-process daemon. The answer is that the salt-minion may fork other processes as required to do the work without blocking the main salt-minion process and this necessitates a mechanism by which those processes can communicate with each other. Secondly, this provides a bus by which any user with sufficient permissions can read or write to the bus as a common interface with the salt minion.

### 32.4.3 Minion Job Flow

When a salt minion starts up, it attempts to connect to the Publisher and the ReqServer on the salt master. It then attempts to authenticate and once the minion has successfully authenticated, it simply listens for jobs.

Jobs normally come either come from the 'salt-call' script run by a local user on the salt minion or they can come directly from a master.

The job flow on a minion, coming from the master via a 'salt' command is as follows:

- 1) A master publishes a job that is received by a minion as outlined by the master's job flow above.
- 2) The minion is polling its receive socket that's connected to the master Publisher (TCP 4505 on master). When it detects an incoming message, it picks it up from the socket and decrypts it.
- 3) A new minion process or thread is created and provided with the contents of the decrypted message. The `_thread_return()` method is provided with the contents of the received message.
- 4) The new minion thread is created. The `_thread_return()` function starts up and actually calls out to the requested function contained in the job.
- 5) The requested function runs and returns a result. [Still in thread.]
- 6) The result of the function that's run is published on the minion's local event bus with event tag `__master_req_channel_payload` [Still in thread.]
- 7) Thread exits. Because the main thread was only blocked for the time that it took to initialize the worker thread, many other requests could have been received and processed during this time.
- 8) Minion event handler gets the event with tag `__master_req_channel_payload` and sends the payload to master's ReqServer (TCP 4506 on master), via the long-running async request channel that was opened when minion first started up.

## 32.5 A Note on ClearFuncs vs. AESFuncs

A common source of confusion is determining when messages are passed in the clear and when they are passed using encryption. There are two rules governing this behaviour:

- 1) ClearFuncs is used for intra-master communication and during the initial authentication handshake between a minion and master during the key exchange.
- 2) AESFuncs is used everywhere else.

## 32.6 Changelog

With the addition of [SEP 01](#) the `keepachangelog` format was introduced into our `CHANGELOG.md` file. The Salt project is using the `towncrier` tool to manage the `CHANGELOG.md` file. The reason this tool was added to manage the changelog was because we were previously managing the file manually and it would cause many merge conflicts. This tool allows us to add changelog entries into separate files and before a release we simply need to run `towncrier --version=<version>` for it to compile the changelog correctly.

### 32.6.1 How do I add a changelog entry

To add a changelog entry you will need to add a file in the `changelog` directory. The file name should follow the syntax `<issue #>.<type>.md`. If it is a security fix then the following syntax will need to be used `cve-<cve-number>.security.md`.

The types are in alignment with `keepachangelog`:

- removed:**  
any features that have been removed
- deprecated:**  
any features that will soon be removed
- changed:**  
any changes in current existing features
- fixed:**  
any bug fixes
- added:**  
any new features added
- security:**  
any fixes for a cve

For example if you are fixing a bug for issue number #1234 your filename would look like this: `changelog/1234.fixed.md`. The contents of the file should contain a summary of what you are fixing. If there is a legitimate reason to not include an issue number with a given contribution you can add the PR number as the file name (`<PR #>.<type>.md`).

For a security fix your filename would look like this: `changelog/cve-2021-25283.security.md`.

If your PR does not align with any of the types, then you do not need to add a changelog entry.

---

**Note:** Requirement Files: Updates to package requirements files also require a changelog file. This will usually be associated with `.fixed` if its resolving an issue or `.security` if it's resolving a CVE issue in an upstream project. If updates are made to testing requirement files it does not require a changelog.

---

### 32.6.2 How to generate the changelog

This step is only used when we need to generate the changelog right before releasing. You should NOT run towncrier on your PR, unless you are preparing the final PR to update the changelog before a release.

You can run the *towncrier* tool directly or you can use *tools* to help run the command and ensure towncrier is installed in a virtual environment. The instructions below will detail both approaches.

#### Installing *tools*

If you want to see what output towncrier will produce before generating the change log you can run towncrier in draft mode:

```
towncrier --draft --version=3001
```

```
tools changelog update-changelog-md --draft 3000.1
```

Version will need to be set to whichever version we are about to release. Once you are confident the draft output looks correct you can now generate the changelog by running:

```
towncrier --version=3001
```

```
tools changelog update-changelog-md 3000.1
```

After this is run towncrier will automatically remove all the files in the changelog directory.

If you want to force towncrier to automatically remove all the files in the changelog directory without asking you to type yes, you can set force to True.

```
towncrier --yes --version=3001
```

The *tools changelog update-changelog-md <version>* command will automatically add *--yes* if *--draft* is not passed.

## 32.7 Contributing

So you want to contribute to the Salt project? Excellent! You can help in a number of ways:

- Use Salt and open well-written bug reports.
- Join a [working group](#).
- Answer questions on [irc](#), the [community Slack](#), the [salt-users mailing list](#), [Server Fault](#), or [r/saltstack on Reddit](#).
- Fix bugs.
- [Improve the documentation](#).
- Provide workarounds, patches, or other code without tests.
- Tell other people about problems you solved using Salt.

If you'd like to update docs or fix an issue, you're going to need the Salt repo. The best way to contribute is using [Git](#).

### 32.7.1 Environment setup

To hack on Salt or the docs you're going to need to set up your development environment. If you already have a workflow that you're comfortable with, you can use that, but otherwise this is an opinionated guide for setting up your dev environment. Follow these steps and you'll end out with a functioning dev environment and be able to submit your first PR.

This guide assumes at least a passing familiarity with [Git](#), a common version control tool used across many open source projects, and is necessary for contributing to Salt. For an introduction to Git, watch [Salt Docs Clinic - Git For the True Beginner](#). Because of its widespread use, there are many resources for learning more about Git. One popular resource is the free online book [Learn Git in a Month of Lunches](#).

#### pyenv, Virtual Environments, and you

We recommend [pyenv](#), since it allows installing multiple different Python versions, which is important for testing Salt across all the versions of Python that we support.

#### On Linux

Install pyenv:

```
git clone https://github.com/pyenv/pyenv.git ~/.pyenv
export PATH="$HOME/.pyenv/bin:$PATH"
git clone https://github.com/pyenv/pyenv-virtualenv.git $(pyenv root)/plugins/
↳ pyenv-virtualenv
```

#### On Mac

Install pyenv using brew:

```
brew update
brew install pyenv
brew install pyenv-virtualenv
```

Now add pyenv to your `.bashrc`:

```
echo 'export PATH="$HOME/.pyenv/bin:$PATH"' >> ~/.bashrc
pyenv init 2>> ~/.bashrc
pyenv virtualenv-init 2>> ~/.bashrc
```

For other shells, see [the pyenv instructions](#).

Go ahead and restart your shell. Now you should be able to install a new version of Python:

```
pyenv install 3.9.18
```

If that fails, don't panic! You're probably just missing some build dependencies. Check out [pyenv common build problems](#).

Now that you've got your version of Python installed, you can create a new virtual environment with this command:

```
pyenv virtualenv 3.9.18 salt
```

Then activate it:

```
pyenv activate salt
```

Sweet! Now you're ready to clone Salt so you can start hacking away! If you get stuck at any point, check out the resources at the beginning of this guide. IRC and Slack are particularly helpful places to go.

### Get the source!

Salt uses the fork and clone workflow for Git contributions. See [Using the Fork-and-Branch Git Workflow](#) for how to implement it. But if you just want to hurry and get started you can go ahead and follow these steps:

Clones are so shallow. Well, this one is anyway:

```
git clone --depth=1 --origin salt https://github.com/saltstack/salt.git
```

This creates a shallow clone of Salt, which should be fast. Most of the time that's all you'll need, and you can start building out other commits as you go. If you *really* want all 108,300+ commits you can just run `git fetch --unshallow`. Then go make a sandwich because it's gonna be a while.

You're also going to want to head over to GitHub and create your own [fork of Salt](#). Once you've got that set up you can add it as a remote:

```
git remote add yourname <YOUR SALT REMOTE>
```

If you use your name to refer to your fork, and `salt` to refer to the official Salt repo you'll never get `upstream` or `origin` confused.

---

**Note:** Each time you start work on a new issue you should fetch the most recent changes from `salt/upstream`.

---

### Set up pre-commit and nox

Here at Salt we use `pre-commit` and `nox` to make it easier for contributors to get quick feedback, for quality control, and to increase the chance that your merge request will get reviewed and merged. Nox enables us to run multiple different test configurations, as well as other common tasks. You can think of it as Make with superpowers. Pre-commit does what it sounds like: it configures some Git pre-commit hooks to run `black` for formatting, `isort` for keeping our imports sorted, and `pylint` to catch issues like unused imports, among others. You can easily install them in your virtualenv with:

```
python -m pip install pre-commit nox
pre-commit install
```

**Warning:** Currently there is an issue with the `pip-tools-compile` pre-commit hook on Windows. The details around this issue are included here: <https://github.com/saltstack/salt/issues/56642>. Please ensure you export `SKIP=pip-tools-compile` to skip `pip-tools-compile`.

Now before each commit, it will ensure that your code at least *looks* right before you open a pull request. And with that step, it's time to start hacking on Salt!

## Set up imagemagick

One last prerequisite is to have `imagemagick` installed, as it is required by Sphinx for generating the HTML documentation.

```
# On Mac, via homebrew
brew install imagemagick
```

```
# Example Linux installation: Debian-based
sudo apt install imagemagick
```

## 32.7.2 Salt issues

### Create your own

Perhaps you've come to this guide because you found a problem in Salt, and you've diagnosed the cause. Maybe you need some help figuring out the problem. In any case, creating quality bug reports is a great way to contribute to Salt even if you lack the skills, time, or inclination to fix it yourself. If that's the case, head on over to [Salt's issue tracker on GitHub](#).

Creating a **good** report can take a little bit of time - but every minute you invest in making it easier for others to reproduce and understand your issue is time well spent. The faster someone can understand your issue, the faster it will be able to get fixed correctly.

The thing that every issue needs goes by many names, but one at least as good as any other is MCVE - Minimum Complete Verifiable Example.

In a nutshell:

- **Minimum:** All of the **extra** information has been removed. Will 2 or 3 lines of master/minion config still exhibit the behavior?
- **Complete:** Minimum also means complete. If your example is missing information, then it's not complete. Salt, Python, and OS versions are all bits of information that make your example complete. Have you provided the commands that you ran?
- **Verifiable:** Can someone take your report and reproduce it?

Slow is smooth, and smooth is fast - it may feel like you're taking a long time to create your issue if you're creating a proper MCVE, but a MCVE eliminates back and forth required to reproduce/verify the issue so someone can actually create a fix.

### Pick an issue

If you don't already have an issue in mind, you can search for [help wanted](#) issues. If you also search for [good first issue](#) then you should be able to find some issues that are good for getting started contributing to Salt. [Documentation issues](#) are also good starter issues. When you find an issue that catches your eye (or one of your own), it's a good idea to comment on the issue and mention that you're working on it. Good communication is key to collaboration - so if you don't have time to complete work on the issue, just leaving some information about when you expect to pick things up again is a great idea!

### 32.7.3 Hacking away

#### Salt, tests, documentation, and you

Before approving code contributions, Salt requires:

- documentation
- meaningful passing tests
- correct code

Documentation fixes just require correct documentation.

#### What if I don't write tests or docs?

If you aren't into writing documentation or tests, we still welcome your contributions! But your PR will be labeled `Needs Testcase` and `Help Wanted` until someone can get to write the tests/documentation. Of course, if you have a desire but just lack the skill we are more than happy to collaborate and help out! There's the [documentation working group](#) and the [testing working group](#). We also regularly stream our test clinic [live on Twitch](#) every Tuesday afternoon and Thursday morning, Central Time. If you'd like specific help with tests, bring them to the clinic. If no community members need help, you can also just watch tests written in real time.

#### Documentation

Salt uses both docstrings, as well as normal reStructuredText files in the `salt/doc` folder for documentation. Sphinx is used to generate the documentation, and does require `imagemagick`. See [Set up imagemagick](#) for more information.

Before submitting a documentation PR, it helps to first build the Salt docs locally on your machine and preview them. Local previews helps you:

- Debug potential documentation output errors before submitting a PR.
- Saves you time by not needing to use the Salt CI/CD test suite to debug, which takes more than 30 minutes to run on a PR.
- Ensures the final output looks the way you intended it to look.

To set up your local environment to preview the core Salt and module documentation:

1. Install the documentation dependencies. For example, on Ubuntu:

```
sudo apt-get update

sudo apt-get install -y enchant-2 git gcc imagemagick make zlib1g-dev
↳ libc-dev libffi-dev g++ libxml2 libxml2-dev libxslt-dev libcurl4-
↳ openssl-dev libssl-dev libgnutls28-dev xz-utils inkscape
```

2. Navigate to the folder where you store your Salt repository and remove any `.nox` directories that might be in that folder:

```
rm -rf .nox
```

3. Install `pyenv` for the version of Python needed to run the docs. As of the time of writing, the Salt docs theme is not compatible with Python 3.10, so you'll need to run 3.9 or earlier. For example:

```
pyenv install 3.9.18
pyenv virtualenv 3.9.18 salt-docs
echo 'salt-docs' > .python-version
```

4. Activate *pyenv* if it's not auto-activated:

```
pyenv exec pip install -U pip setuptools wheel
```

5. Install *nox* into your *pyenv* environment, which is the utility that will build the Salt documentation:

```
pyenv exec pip install nox
```

Since we use *nox*, you can build your docs and view them in your browser with this one-liner:

```
python -m nox -e 'docs-html(compress=False, clean=False)'; cd doc/_build/html;
→ python -m webbrowser http://localhost:8000/contents.html; python -m http.
→server
```

The first time you build the docs, it will take a while because there are a *lot* of modules. Maybe you should go grab some dessert if you already finished that sandwich. But once *nox* and *Sphinx* are done building the docs, *python* should launch your default browser with the URL <http://localhost:8000/contents.html>. Now you can navigate to your docs and ensure your changes exist. If you make changes, you can simply run this:

```
cd -; python -m nox -e 'docs-html(compress=False, clean=False)'; cd doc/_
→build/html; python -m http.server
```

And then refresh your browser to get your updated docs. This one should be quite a bit faster since *Sphinx* won't need to rebuild everything.

Alternatively, you could build the docs on your local machine and then preview the build output. To build the docs locally:

```
pyenv exec nox -e 'docs-html(compress=False, clean=True)'
```

The output from this command will put the preview files in: `doc > _build > html`.

If your change is a docs-only change, you can go ahead and commit/push your code and open a PR. You can indicate that it's a docs-only change by adding [Documentation] to the title of your PR. Otherwise, you'll want to write some tests and code.

## Running development Salt

Note: If you run into any issues in this section, check the Troubleshooting section.

If you're going to hack on the Salt codebase you're going to want to be able to run Salt locally. The first thing you need to do is install Salt as an editable pip install:

```
python -m pip install -e .
```

This will let you make changes to Salt without having to re-install it.

After all of the dependencies and Salt are installed, it's time to set up the config for development. Typically Salt runs as *root*, but you can specify which user to run as. To configure that, just copy the master and minion configs. We have *.gitignore* setup to ignore the `local/` directory, so we can put all of our personal files there.

```
mkdir -p local/etc/salt/
```

Create a master config file as `local/etc/salt/master`:

```
cat <<EOF >local/etc/salt/master
user: $(whoami)
root_dir: $PWD/local/
publish_port: 55505
ret_port: 55506
EOF
```

And a minion config as `local/etc/salt/minion`:

```
cat <<EOF >local/etc/salt/minion
user: $(whoami)
root_dir: $PWD/local/
master: localhost
id: saltdev
master_port: 55506
EOF
```

Now you can start your Salt master and minion, specifying the config dir.

```
salt-master --config-dir=local/etc/salt/ --log-level=debug --daemon
salt-minion --config-dir=local/etc/salt/ --log-level=debug --daemon
```

Now you should be able to accept the minion key:

```
salt-key -c local/etc/salt -Ay
```

And check that your master/minion are communicating:

```
salt -c local/etc/salt \* test.version
```

Rather than running `test.version` from your master, you can run it from the minion instead:

```
salt-call -c local/etc/salt test.version
```

Note that you're running `salt-call` instead of `salt`, and you're not specifying the minion (`\*`), but if you're running the dev version then you still will need to pass in the config dir. Now that you've got Salt running, you can hack away on the Salt codebase!

If you need to restart Salt for some reason, if you've made changes and they don't appear to be reflected, this is one option:

```
kill -INT $(pgrep salt-master)
kill -INT $(pgrep salt-minion)
```

If you'd rather not use `kill`, you can have a couple of terminals open with your salt virtualenv activated and omit the `--daemon` argument. Salt will run in the foreground, so you can just use `ctrl+c` to quit.

### Test first? Test last? Test meaningfully!

You can write tests first or tests last, as long as your tests are meaningful and complete! *Typically* the best tests for Salt are going to be unit tests. Testing is a [whole topic on its own](#), But you may also want to write functional or integration tests. You'll find those in the `tests/` directory.

When you're thinking about tests to write, the most important thing to keep in mind is, "What, exactly, am I testing?" When a test fails, you should know:

- What, specifically, failed?
- Why did it fail?
- As much as possible, what do I need to do to fix this failure?

If you can't answer those questions then you might need to refactor your tests.

When you're running tests locally, you should make sure that if you remove your code changes your tests are failing. If your tests *aren't* failing when you haven't yet made changes, then it's possible that you're testing the wrong thing.

But whether you adhere to TDD/BDD, or you write your code first and your tests last, ensure that your tests are meaningful.

### Running tests

As previously mentioned, we use `nox`, and that's how we run our tests. You should have it installed by this point but if not you can install it with this:

```
python -m pip install nox
```

Now you can run your tests:

```
python -m nox -e "test-3(coverage=False)" -- tests/unit/cli/test_batch.py
```

It's a good idea to install `espeak` or use `say` on Mac if you're running some long-running tests. You can do something like this:

```
python -m nox -e "test-3(coverage=False)" -- tests/unit/cli/test_batch.py;
↪ espeak "Tests done, woohoo!"
```

That way you don't have to keep monitoring the actual test run.

```
python -m nox -e "test-3(coverage=False)" -- --core-tests
```

You can enable or disable test groups locally by passing their respected flag:

- `--no-fast-tests` - Tests that are ~10s or faster. Fast tests make up ~75% of tests and can run in 10 to 20 minutes.
- `--slow-tests` - Tests that are ~10s or slower.
- `--core-tests` - Tests of any speed that test the root parts of salt.
- `--flaky-jail` - Test that need to be temporarily skipped.

In your PR, you can enable or disable test groups by setting a label. All fast, slow, and core tests specified in the change file will always run.

- `test:no-fast`
- `test:core`

- test:slow
- test:flaky-jail

### Changelog and commit!

When you write your commit message you should use imperative style. Do this:

Add frobnosticate capability

Don't do this:

Added frobnosticate capability

But that advice is backwards for the changelog. We follow the [keepachangelog](#) approach for our changelog, and use towncrier to generate it for each release. As a contributor, all that means is that you need to add a file to the `salt/changelog` directory, using the `<issue #>.<type>` format. For instance, if you fixed issue 123, you would do:

```
echo "Made sys.doc inform when no minions return" > changelog/123.fixed
```

And that's all that would go into your file. When it comes to your commit message, it's usually a good idea to add other information, such as

- What does a reviewer need to know about the change that you made?
- If someone isn't an expert in this area, what will they need to know?

This will also help you out, because when you go to create the PR it will automatically insert the body of your commit messages.

See the [changelog](#) docs for more information.

### Pull request time!

Once you've done all your dev work and tested locally, you should check out our [PR guidelines](#). After you read that page, it's time to [open a new PR](#). Fill out the PR template - you should have updated or created any necessary docs, and written tests if you're providing a code change. When you submit your PR, we have a suite of tests that will run across different platforms to help ensure that no known bugs were introduced.

### Now what?

You've made your changes, added documentation, opened your PR, and have passing tests... now what? When can you expect your code to be merged?

When you open your PR, a reviewer will get automatically assigned. If your PR is submitted during the week you should be able to expect some kind of communication within that business day. If your tests are passing and we're not in a code freeze, ideally your code will be merged that week or month. If you haven't heard from your assigned reviewer, ping them on GitHub, [irc](#), or Community Slack.

It's likely that your reviewer will leave some comments that need addressing - it may be a style change, or you forgot a changelog entry, or need to update the docs. Maybe it's something more fundamental - perhaps you encountered the rare case where your PR has a much larger scope than initially assumed.

Whatever the case, simply make the requested changes (or discuss why the requests are incorrect), and push up your new commits. If your PR is open for a significant period of time it may be worth rebasing your changes on the most recent changes to Salt. If you need help, the previously linked Git resources will be valuable.

But if, for whatever reason, you're not interested in driving your PR to completion then just note that in your PR. Something like, "I'm not interested in writing docs/tests, I just wanted to provide this fix - someone else will need to complete this PR." If you do that then we'll add a "Help Wanted" label and someone will be able to pick up the PR, make the required changes, and it can eventually get merged in.

In any case, now that you have a PR open, congrats! You're a Salt developer! You rock!

### 32.7.4 Troubleshooting

#### zmq.core.error.ZMQError

Once the minion starts, you may see an error like the following:

```
::
```

```
zmq.core.error.ZMQError: ipc path "/path/to/your/virtualenv/var/run/salt/minion/minion_event_7824dcbcf7a8f6755939af70b9"
is longer than 107 characters (sizeof(sockaddr_un.sun_path)).
```

This means that the path to the socket the minion is using is too long. This is a system limitation, so the only workaround is to reduce the length of this path. This can be done in a couple different ways:

1. Create your virtualenv in a path that is short enough.
2. Edit the `:conf_minion:sock_dir` minion config variable and reduce its length. Remember that this path is relative to the value you set in `:conf_minion:root_dir`.

NOTE: The socket path is limited to 107 characters on Solaris and Linux, and 103 characters on BSD-based systems.

#### No permissions to access ...

If you forget to pass your config path to any of the `salt*` commands, you might see

```
No permissions to access "/var/log/salt/master", are you running as the
correct user?
```

Just pass `-c local/etc/salt` (or whatever you named it)

#### File descriptor limit

You might need to raise your file descriptor limit. You can check it with:

```
ulimit -n
```

If the value is less than 3072, you should increase it with:

```
ulimit -n 3072
# For c-shell:
limit descriptors 3072
```

### Pygit2 or other dependency install fails

You may see some failure messages when installing requirements. You can directly access your nox environment and possibly install pygit (or other dependency) that way. When you run nox, you'll see a message like this:

```
nox > Re-using existing virtual environment at .nox/pytest-parametrized-3-
↳crypto-none-transport-zeromq-coverage-false.
```

For this, you would be able to install with:

```
.nox/pytest-parametrized-3-crypto-none-transport-zeromq-coverage-false/bin/
↳python -m pip install pygit2
```

## 32.8 Deprecating Code

Salt should remain backwards compatible, though sometimes, this backwards compatibility needs to be broken because a specific feature and/or solution is no longer necessary or required. At first one might think, let me change this code, it seems that it's not used anywhere else so it should be safe to remove. Then, once there's a new release, users complain about functionality which was removed and they where using it, etc. This should, at all costs, be avoided, and, in these cases, *that* specific code should be deprecated.

In order to give users enough time to migrate from the old code behavior to the new behavior, the deprecation time frame should be carefully determined based on the significance and complexity of the changes required by the user.

Salt feature releases are based on the Periodic Table. Any new features going into the `master` branch will be named after the next element in the Periodic Table. For example, Magnesium was the feature release name associated with the `v3002` tag. At that point in time, any new features going into the `master` branch, after `v3002` was tagged, were part of the Aluminium feature release.

A deprecation warning should be in place for at least two major releases before the deprecated code and its accompanying deprecation warning are removed. More time should be given for more complex changes. For example, if the current release under development is `3001`, the deprecated code and associated warnings should remain in place and warn for at least `Aluminium`.

To help in this deprecation task, salt provides `salt.utils.versions.warn_until`. The idea behind this helper function is to show the deprecation warning to the user until salt reaches the provided version. Once that provided version is equaled `salt.utils.versions.warn_until` will raise a `RuntimeError` making salt stop its execution. This stoppage is unpleasant and will remind the developer that the deprecation limit has been reached and that the code can then be safely removed.

Consider the following example:

```
def some_function(bar=False, foo=None):
    if foo is not None:
        salt.utils.versions.warn_until(
            "Aluminium",
            "The 'foo' argument has been deprecated and its "
            "functionality removed, as such, its usage is no longer "
            "required.",
        )
```

Development begins on `Aluminium`, or `v3003`, after the `v3002` tag is applied to the `master` branch. Once this occurs, all uses of the `warn_until` function targeting `Aluminium`, along with the code they are warning about should be removed from the code.

### 32.8.1 Silence Deprecation Warnings

If you set the `PYTHONWARNINGS` environment variable to `ignore` Salt will not print the deprecation warnings.

## 32.9 Python 2 Deprecation FAQ

### FAQ

- *Python 2 Deprecation FAQ*
  - *Why are we deprecating Python 2?*
  - *Was this announced/decided before making the change?*
  - *Can I contribute Python 2 code?*
  - *What if my OS does not include Python 3 packages? Or, how do I upgrade from Salt on Python 2 to Salt on Python 3?*
    - \* *On Modern Platforms*
    - \* *On Other Platforms*
      - *Build Your Own*
      - *pop-build distributions*
  - *Will you support a Python 3 master with an older Python 2 minion?*
  - *Will you support Python 2 master with a new Python 3 minion?*
  - *How does this impact Salt-SSH support?*
  - *What is your plan for removing Python 2 code?*
  - *Will Salt continue to package for Python 2?*

### 32.9.1 Why are we deprecating Python 2?

Python 2.7.18 was the final release of Python2, released in April 2020. At this point, Python 2 will no longer receive any unpaid support. The Python core developers are focusing their efforts on improving and enhancing Python 3. Additionally, many libraries that Salt depends on have also dropped Python 2 support.

To take advantage of continued support and improvements, Salt is joining the ranks of projects that are dropping legacy Python support in favor of Python 3.

### 32.9.2 Was this announced/decided before making the change?

SEP 5 was approved in April, 2019.

### 32.9.3 Can I contribute Python 2 code?

For several years, Salt has been a Python 2/3 codebase, requiring Python 3 support for all contributions. The only changes contributors can expect to this process is that we will now accept Python 3-only code changes.

While there *is* a significant subset of Python that is compatible with both Python 3 and legacy Python, changes requiring `six` or otherwise removing Python 3-only code will not be accepted.

### 32.9.4 What if my OS does not include Python 3 packages? Or, how do I upgrade from Salt on Python 2 to Salt on Python 3?

There are several options to upgrade to Python 3.

#### On Modern Platforms

At this point, most modern Linux distributions have Python 3 packages. Ubuntu 20.04 LTS has moved to Python 3.8 as it's default system Python.

#### On Other Platforms

##### Build Your Own

If your current distribution does not have Python 3 it's *pretty simple to use Salt* to build and distribute Python 3 on your own. Installing Python 3 and pip installing Salt gives you the most control over your distribution.

##### pop-build distributions

Another approach is to use the `pop-build` distribution of Salt. With the Sodium release we will begin releasing packages for Salt using `pop-build`, in tandem with our normal build process. The `pop-build` distribution will contain Salt, Python, and any necessary dependencies, which will make it trivial to have a completely supported version of Salt.

### 32.9.5 Will you support a Python 3 master with an older Python 2 minion?

Yes! Our policy of keeping newer masters backwards compatible with *at least* the most recent minion version is not changing. You should be able to run modern Salt Masters on Python 3 with slightly older minions running on legacy Python. Of course, if you want your minions to be able to take advantage of the newest features in Salt, upgrading to Python 3 will be necessary.

### 32.9.6 Will you support Python 2 master with a new Python 3 minion?

In keeping with our existing policy, we make no guarantees about older masters with newer minions. It *may* work, but breakages are common and should be expected.

### 32.9.7 How does this impact Salt-SSH support?

Salt-SSH will need Python 3 on the target minions. We will be upgrading Salt-SSH to provide instructions or recommendations on adding Python3 if it is not detected.

### 32.9.8 What is your plan for removing Python 2 code?

Legacy Python code will be gradually removed from the Salt codebase.

While we could remove most of it at once, that introduces a high level of risk. Instead, beginning with the Sodium (v3001) release, Salt will simply drop support for Python 2. PRs will no longer be required to support Python 2 before merging.

Over time, as modules are changed, `six` and other legacy Python syntax will be removed. It may be at some point in the future it becomes necessary to remove the last vestiges of legacy Python from Salt, but currently the plan is to take a more measured approach.

### 32.9.9 Will Salt continue to package for Python 2?

No. Beginning with Sodium (v3001), Salt will no longer release packages for, or support Python 2.

## 32.10 Installing Salt for development

Clone the repository using:

```
git clone https://github.com/saltstack/salt
```

---

**Note:** tags

Just cloning the repository is enough to work with Salt and make contributions. However, fetching additional tags from git is required to have Salt report the correct version for itself. To do this, first add the git repository as an upstream source:

```
git remote add upstream https://github.com/saltstack/salt
```

Fetching tags is done with the git 'fetch' utility:

```
git fetch --tags upstream
```

---

Create a new `virtualenv`:

```
virtualenv /path/to/your/virtualenv
```

Avoid making your *virtualenv path too long*.

On Arch Linux, where Python 3 is the default installation of Python, use the `virtualenv2` command instead of `virtualenv`.

On Gentoo you must use `--system-site-packages` to enable `pkg` and `portage_config` functionality

---

**Note:** Using system Python modules in the virtualenv

To use already-installed python modules in virtualenv (instead of having pip download and compile new ones), run `virtualenv --system-site-packages` Using this method eliminates the requirement to install the salt dependencies again, although it does assume that the listed modules are all installed in the system PYTHONPATH at the time of virtualenv creation.

---

**Note:** Python development package

Be sure to install python devel package in order to install required Python modules. In Debian/Ubuntu run `sudo apt-get install -y python-dev`. In RedHat based system install `python-devel`

Activate the virtualenv:

```
source /path/to/your/virtualenv/bin/activate
```

Install Salt (and dependencies) into the virtualenv:

```
pip install pyzmq PyYAML pycrypto msgpack jinja2 psutil futures tornado
pip install -e ./salt # the path to the salt git clone from above
```

---

**Note:** Installing psutil

Python header files are required to build this module, otherwise the pip install will fail. If your distribution separates binaries and headers into separate packages, make sure that you have the headers installed. In most Linux distributions which split the headers into their own package, this can be done by installing the `python-dev` or `python-devel` package. For other platforms, the package will likely be similarly named.

---

**Note:** Installing dependencies on macOS.

You can install needed dependencies on macOS using homebrew or macports. See the [Salt install guide](#) for more information.

---

**Warning:** Installing on RedHat-based Distros

If installing from pip (or from source using `setup.py install`), be advised that the `yum-utils` package is needed for Salt to manage packages on RedHat-based systems.

### 32.10.1 Running a self-contained development version

During development it is easiest to be able to run the Salt master and minion that are installed in the virtualenv you created above, and also to have all the configuration, log, and cache files contained in the virtualenv as well.

The `/path/to/your/virtualenv` referenced multiple times below is also available in the variable `$VIRTUAL_ENV` once the virtual environment is activated.

Copy the master and minion config files into your virtualenv:

```
mkdir -p /path/to/your/virtualenv/etc/salt/pki/{master,minion}
cp ./salt/conf/master ./salt/conf/minion /path/to/your/virtualenv/etc/salt/
```

Edit the master config file:

1. Uncomment and change the `user: root` value to your own user.
2. Uncomment and change the `root_dir: /` value to point to `/path/to/your/virtualenv`.
3. Uncomment and change the `pki_dir: /etc/salt/pki/master` value to point to `/path/to/your/virtualenv/etc/salt/pki/master`
4. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-master.pid` value to point to `/path/to/your/virtualenv/salt-master.pid`.
5. If you are also running a non-development version of Salt you will have to change the `publish_port` and `ret_port` values as well.

Edit the minion config file:

1. Repeat the edits you made in the master config for the `user` and `root_dir` values as well as any port changes.
2. Uncomment and change the `pki_dir: /etc/salt/pki/minion` value to point to `/path/to/your/virtualenv/etc/salt/pki/minion`
3. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-minion.pid` value to point to `/path/to/your/virtualenv/salt-minion.pid`.
4. Uncomment and change the `master: salt` value to point at `localhost`.
5. Uncomment and change the `id:` value to something descriptive like "saltdev". This isn't strictly necessary but it will serve as a reminder of which Salt installation you are working with.
6. If you changed the `ret_port` value in the master config because you are also running a non-development version of Salt, then you will have to change the `master_port` value in the minion config to match.

---

**Note:** Using `salt-call` with a *Standalone Minion*

If you plan to run `salt-call` with this self-contained development environment in a masterless setup, you should invoke `salt-call` with `-c /path/to/your/virtualenv/etc/salt` so that salt can find the minion config file. Without the `-c` option, Salt finds its config files in `/etc/salt`.

---

Start the master and minion, accept the minion's key, and verify your local Salt installation is working:

```
cd /path/to/your/virtualenv
salt-master -c ./etc/salt -d
salt-minion -c ./etc/salt -d
salt-key -c ./etc/salt -L
```

(continues on next page)

(continued from previous page)

```
salt-key -c ./etc/salt -A
salt -c ./etc/salt '*' test.version
```

Running the master and minion in debug mode can be helpful when developing. To do this, add `-l debug` to the calls to `salt-master` and `salt-minion`. If you would like to log to the console instead of to the log file, remove the `-d`.

**Note:** Too long socket path?

Once the minion starts, you may see an error like the following:

```
zmq.core.error.ZMQError: ipc path "/path/to/your/virtualenv/
var/run/salt/minion/minion_event_7824dcbcfd7a8f6755939af70b96249f_pub.ipc"
is longer than 107 characters (sizeof(sockaddr_un.sun_path)).
```

This means that the path to the socket the minion is using is too long. This is a system limitation, so the only workaround is to reduce the length of this path. This can be done in a couple different ways:

1. Create your virtualenv in a path that is short enough.
2. Edit the `sock_dir` minion config variable and reduce its length. Remember that this path is relative to the value you set in `root_dir`.

**NOTE:** The socket path is limited to 107 characters on Solaris and Linux, and 103 characters on BSD-based systems.

**Note:** File descriptor limits

Ensure that the system open file limit is raised to at least 2047:

```
# check your current limit
ulimit -n

# raise the limit. persists only until reboot
# use 'limit descriptors 2047' for c-shell
ulimit -n 2047
```

To set file descriptors on macOS, see the [Salt install guide](#) instructions for macOS.

## Changing Default Paths

Instead of updating your configuration files to point to the new root directory and having to pass the new configuration directory path to all of Salt's CLI tools, you can explicitly tweak the default system paths that Salt expects:

```
GENERATE_SALT_SYSPATHS=1 pip install --global-option='--salt-root-dir=/path/
↳to/your/virtualenv/' \
-e ./salt # the path to the salt git clone from above
```

You can now call all of Salt's CLI tools without explicitly passing the configuration directory.

## Additional Options

If you want to distribute your virtualenv, you probably don't want to include Salt's clone `.git/` directory, and, without it, Salt won't report the accurate version. You can tell `setup.py` to generate the hardcoded version information which is distributable:

```
GENERATE_SALT_SYSPATHS=1 WRITE_SALT_VERSION=1 pip install --global-option='--
↳salt-root-dir=/path/to/your/virtualenv/' \
  -e ./salt # the path to the salt git clone from above
```

Instead of passing those two environmental variables, you can just pass a single one which will trigger the other two:

```
MIMIC_SALT_INSTALL=1 pip install --global-option='--salt-root-dir=/path/to/
↳your/virtualenv/' \
  -e ./salt # the path to the salt git clone from above
```

This last one will grant you an editable salt installation with hardcoded system paths and version information.

### 32.10.2 Installing Salt from the Python Package Index

If you are installing using `easy_install`, you will need to define a `USE_SETUPTOOLS` environment variable, otherwise dependencies will not be installed:

```
USE_SETUPTOOLS=1 easy_install salt
```

### 32.10.3 Editing and previewing the documentation

You need `sphinx-build` command to build the docs. In Debian/Ubuntu this is provided in the `python-sphinx` package. Sphinx can also be installed to a virtualenv using `pip`:

```
pip install Sphinx==1.3.1
```

Change to salt documentation directory, then:

```
cd doc; make html
```

- This will build the HTML docs. Run `make` without any arguments to see the available make targets, which include `html`, `man`, and `text`.
- The docs then are built within the `docs/_build/` folder. To update the docs after making changes, run `make` again.
- The docs use `reStructuredText` for markup. See a live demo at <http://rst.ninjs.org/>.
- The help information on each module or state is culled from the python code that runs for that piece. Find them in `salt/modules/` or `salt/states/`.
- To build the docs on Arch Linux, the `python2-sphinx` package is required. Additionally, it is necessary to tell `make` where to find the proper `sphinx-build` binary, like so:

```
make SPHINXBUILD=sphinx-build2 html
```

- To build the docs on RHEL/CentOS 6, the `python-sphinx10` package must be installed from EPEL, and the following make command must be used:

```
make SPHINXBUILD=sphinx-build html
```

Once you've updated the documentation, you can run the following command to launch a simple Python HTTP server to see your changes:

```
cd _build/html; python -m SimpleHTTPServer
```

### 32.10.4 Running unit and integration tests

Run the test suite with following command:

```
./setup.py test
```

See [here](#) for more information regarding the test suite.

### 32.10.5 Issue and Pull Request Labeling System

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the [Labels and Milestones](#) documentation for more information.

## 32.11 GitHub Labels and Milestones

SaltStack uses several label categories, as well as milestones, to triage incoming issues and pull requests in the GitHub issue tracker. Labels are used to sort issues by type, priority, severity, status, functional area, functional group, and targeted release and pull requests by status, functional area, functional group, type of change, and test status. Milestones are used to indicate whether an issue is fully triaged or is scheduled to be fixed by SaltStack in an upcoming sprint.

### 32.11.1 Milestones

All issues are assigned to a milestone, whereas pull requests are almost never assigned to a milestone as the mean lifetime of pull requests is short enough that there is no need to track them temporally.

SaltStack uses milestones to indicate which issues are blocked on submitter or upstream actions, are approved, or are scheduled to be fixed or implemented in an upcoming sprint. If an issue is not attached to a sprint milestone, you are welcome to work on it at your own desire and convenience. If it is attached to a sprint milestone and you have already begun working on it or have a solution in mind or have other ideas related to the issue, you are encouraged to coordinate with the assignee via the GitHub issue tracker to create the best possible solution or implementation.

- **Approved** - The issue has been validated and has all necessary information.
- **Blocked** - The issue is waiting on actions by parties outside of SaltStack, such as receiving more information from the submitter or resolution of an upstream issue. This milestone is usually applied in conjunction with the labels Info Needed, Question, Expected Behavior, Won't Fix For Now, or Upstream Bug.

## 32.11.2 Labels

Labels are used to sort and describe issues and pull requests. Some labels are usually reserved for one or the other, though most labels may be applied to both.

New issues will receive at least one label and a milestone, and new pull requests will receive at least one label. Except for the *functional area* and *functional group* label categories, issues will generally receive only up to one label per category.

### Type

Issues are categorized into one of several types. Type labels are almost never used for pull requests. GitHub treats pull requests like issues in many ways, so a pull request could be considered an issue with an implicit `Pull Request` type label applied.

- **Feature** - The issue is a request for new functionality including changes, enhancements, refactors, etc.
- **Bug** - The issue documents broken, incorrect, or confusing behavior. This label is always accompanied by a *severity label*.
- **Duplicate** - The issue is a duplicate of another feature request or bug report.
- **Upstream Bug** - The issue is a result of an upstream issue.
- **Question** - The issue is more of a question than a request for new features or a report of broken features, but can sometimes lead to further discussion or changes of confusing or incongruous behavior or documentation.
- **Expected Behavior** - The issue is a bug report of intended functionality.

### Priority

An issue's priority is relative to its *functional area*. If a bug report, for example, about `gitfs` indicates that all users of `gitfs` will encounter this bug, then a **P1** label will be applied, even though users who are not using `gitfs` will not encounter the bug. If a feature is requested by many users, it may be given a high priority.

- **P1** - The issue will be seen by all users.
- **P2** - The issue will be seen by most users.
- **P3** - The issue will be seen by about half of users.
- **P4** - The issue will not be seen by most users. Usually the issue is a very specific use case or corner case.

### Severity

Severity labels are almost always only applied to issues labeled **Bug**.

- **Blocker** - The issue is blocking an impending release.
- **Critical** - The issue causes data loss, crashes or hangs salt processes, makes the system unresponsive, etc.
- **High Severity** - The issue reports incorrect functionality, bad functionality, a confusing user experience, etc.
- **Medium Severity** - The issue reports cosmetic items, formatting, spelling, colors, etc.

### Functional Area

Many major components of Salt have corresponding GitHub labels. These labels are applied to all issues and pull requests as is reasonably appropriate. They are useful in organizing issues and pull requests according to the source code relevant to issues or the source code changed by pull requests.

- Execution Module
- File Servers
- Grains
- Multi-Master
- Packaging Related to packaging of Salt, not Salt's support for package management.
- Pillar
- RAET
- Returners
- Runners
- SPM
- Salt-API
- Salt-Cloud
- Salt-SSH
- Salt-Syndic
- State Module
- Tests
- Transport
- Windows
- ZMQ

### Functional Group

These labels sort issues and pull requests according to the internal SaltStack engineering teams.

- **Core** - The issue or pull request relates to code that is central or existential to Salt itself.
- **Platform** - The issue or pull request relates to support and integration with various platforms like traditional operating systems as well as containers, platform-based utilities like filesystems, command schedulers, etc., and system-based applications like webservers, databases, etc.
- **RIoT** - The issue or pull request relates to support and integration with various abstract systems like cloud providers, hypervisors, API-based services, etc.
- **Console** - The issue or pull request relates to the SaltStack enterprise console.
- **Documentation** - The issue or pull request relates to documentation.

## Status

Status labels are used to define and track the state of issues and pull requests. Not all potential statuses correspond to a label, but some statuses are common enough that labels have been created for them. If an issue has not been moved beyond the `Blocked` milestone, it is very likely that it will only have a status label.

- `Cannot Reproduce` - The issue is a bug and has been reviewed by a SaltStack engineer, but it cannot be replicated with the provided information and context. Those involved with the bug will need to work through additional ideas until the bug can be isolated and verified.
- `Confirmed` - The issue is a bug and has been confirmed by a SaltStack engineer, who often documents a minimal working example that reproduces the bug.
- `Fixed Pending Verification` - The issue is a bug and has been fixed by one or more pull requests, which should link to the issue. Closure of the issue is contingent upon confirmation of resolution from the submitter. If the submitter reports a negative confirmation, this label is removed. If no response is given after a few weeks, then the issue will be assumed fixed and closed.
- `Info Needed` - The issue needs more information before it can be verified and resolved. For a feature request this may include a description of the use cases. Almost all bug reports need to include at least the versions of salt and its dependencies, the system type and version, commands used, debug logs, error messages, and relevant configs.
- `Pending Changes` - The pull request needs additional changes before it can be merged.
- `Pending Discussion` - The issue or pull request needs more discussion before it can be closed or merged. The status of the issue or pull request is not clear or apparent enough for definite action to be taken, or additional input from SaltStack, the submitter, or another party has been requested.

If the issue is not a pull request, once the discussion has arrived at a cogent conclusion, this label will be removed and the issue will be accepted. If it is a pull request, the results of the discussion may require additional changes and thus, a `Pending Changes` label.

- `won't-fix` - The issue is legitimate, but it is not something the Salt core team is currently able or willing to fix or implement. Issues having this label may be revisited in the future, or solved by a Salt community member.

## Test Status

These labels relate to the status of the automated tests that run on pull requests.

- `has-failing-test` - The PR currently has one or more failing tests that prevent the PR from being merged.
- `Needs Testcase` - The PR has code changes, but lack any automated tests. These PRs need automated tests written before they may be merged.

## Other

These labels indicate miscellaneous issue types or statuses that are common or important enough to be tracked and sorted with labels.

- `Awesome` - The pull request implements an especially well crafted solution, or a very difficult but necessary change.
- `Help Wanted` - The issue appears to have a simple solution. Issues having this label should be a good starting place for new contributors to Salt.
- `Regression` - The issue is a bug that breaks functionality known to work in previous releases.

- **Story** - The issue is used by a SaltStack engineer to track progress on multiple related issues in a single place.
- **Stretch** - The issue is an optional goal for the current sprint but may not be delivered.
- **ZD** - The issue is related to a Zendesk customer support ticket.
- **<Release>** - The issue is scheduled to be implemented by <Release>. See here for a discussion of Salt's release codenames.

## 32.12 Logging Internals

TODO

## 32.13 Package Providers

This page contains guidelines for writing package providers.

### 32.13.1 Package Functions

One of the most important features of Salt is package management. There is no shortage of package managers, so in the interest of providing a consistent experience in *pkg* states, there are certain functions that should be present in a package provider. Note that these are subject to change as new features are added or existing features are enhanced.

#### **list\_pkgs**

This function should declare an empty dict, and then add packages to it by calling *pkg\_resource.add\_pkg*, like so:

```
__salt__["pkg_resource.add_pkg"](ret, name, version)
```

The last thing that should be done before returning is to execute *pkg\_resource.sort\_pkglist*. This function does not presently do anything to the return dict, but will be used in future versions of Salt.

```
__salt__["pkg_resource.sort_pkglist"](ret)
```

*list\_pkgs* returns a dictionary of installed packages, with the keys being the package names and the values being the version installed. Example return data:

```
{"foo": "1.2.3-4", "bar": "5.6.7-8"}
```

#### **latest\_version**

Accepts an arbitrary number of arguments. Each argument is a package name. The return value for a package will be an empty string if the package is not found or if the package is up-to-date. The only case in which a non-empty string is returned is if the package is available for new installation (i.e. not already installed) or if there is an upgrade available.

If only one argument was passed, this function return a string, otherwise a dict of name/version pairs is returned.

This function must also accept **\*\*kwargs**, in order to receive the **fromrepo** and **repo** keyword arguments from *pkg* states. Where supported, these arguments should be used to find the install/upgrade candidate in the specified

repository. The `fromrepo` kwarg takes precedence over `repo`, so if both of those kwargs are present, the repository specified in `fromrepo` should be used. However, if `repo` is used instead of `fromrepo`, it should still work, to preserve backwards compatibility with older versions of Salt.

### version

Like `latest_version`, accepts an arbitrary number of arguments and returns a string if a single package name was passed, or a dict of name/value pairs if more than one was passed. The only difference is that the return values are the currently-installed versions of whatever packages are passed. If the package is not installed, an empty string is returned for that package.

### upgrade\_available

Deprecated and destined to be removed. For now, should just do the following:

```
def myfunc():
    return __salt__["pkg.latest_version"](name) != ""
```

### install

The following arguments are required and should default to None:

1. `name` (for single-package pkg states)
2. `pkgs` (for multiple-package pkg states)
3. `sources` (for binary package file installation)

The first thing that this function should do is call `pkg_resource.parse_targets` (see below). This function will convert the SLS input into a more easily parsed data structure. `pkg_resource.parse_targets` may need to be modified to support your new package provider, as it does things like parsing package metadata which cannot be done for every package management system.

```
pkg_params, pkg_type = __salt__["pkg_resource.parse_targets"](name, pkgs,
↳sources)
```

Two values will be returned to the `install` function. The first of them will be a dictionary. The keys of this dictionary will be package names, though the values will differ depending on what kind of installation is being done:

- If `name` was provided (and `pkgs` was not), then there will be a single key in the dictionary, and its value will be `None`. Once the data has been returned, if the `version` keyword argument was provided, then it should replace the `None` value in the dictionary.
- If `pkgs` was provided, then `name` is ignored, and the dictionary will contain one entry for each package in the `pkgs` list. The values in the dictionary will be `None` if a version was not specified for the package, and the desired version if specified. See the **Multiple Package Installation Options** section of the `pkg.installed` state for more info.
- If `sources` was provided, then `name` is ignored, and the dictionary values will be the path/URI for the package.

The second return value will be a string with two possible values: `repository` or `file`. The `install` function can use this value (if necessary) to build the proper command to install the targeted package(s).

Both before and after the installing the target(s), you should run `list_pkgs` to obtain a list of the installed packages. You should then return the output of `salt.utils.data.compare_dicts()`:

```
def myfunc():  
    return salt.utils.data.compare_dicts(old, new)
```

### remove

Removes the passed package and return a list of the packages removed.

## 32.13.2 Package Repo Functions

There are some functions provided by `pkg` which are specific to package repositories, and not to packages themselves. When writing modules for new package managers, these functions should be made available as stated below, in order to provide compatibility with the `pkgrepo` state.

All repo functions should accept a `basedir` option, which defines which directory repository configuration should be found in. The default for this is dictated by the repo manager that is being used, and rarely needs to be changed.

```
basedir = "/etc/yum.repos.d"  
__salt__["pkg.list_repos"](basedir)
```

### list\_repos

Lists the repositories that are currently configured on this system.

```
__salt__["pkg.list_repos"]()
```

Returns a dictionary, in the following format:

```
{'reponame': 'config_key_1': 'config value 1',  
    'config_key_2': 'config value 2',  
    'config_key_3': ['list item 1 (when appropriate)',  
                    'list item 2 (when appropriate)]}
```

### get\_repo

Displays all local configuration for a specific repository.

```
__salt__["pkg.get_repo"](repo="myrepo")
```

The information is formatted in much the same way as `list_repos`, but is specific to only one repo.

```
{'config_key_1': 'config value 1',  
  'config_key_2': 'config value 2',  
  'config_key_3': ['list item 1 (when appropriate)',  
                  'list item 2 (when appropriate)]}
```

## del\_repo

Removes the local configuration for a specific repository. Requires a *repo* argument, which must match the locally configured name. This function returns a string, which informs the user as to whether or not the operation was a success.

```
__salt__["pkg.del_repo"](repo="myrepo")
```

## mod\_repo

Modify the local configuration for one or more option for a configured repo. This is also the way to create new repository configuration on the local system; if a repo is specified which does not yet exist, it will be created.

The options specified for this function are specific to the system; please refer to the documentation for your specific repo manager for specifics.

```
__salt__["pkg.mod_repo"](repo="myrepo", url="http://myurl.com/repo")
```

### 32.13.3 Low-Package Functions

In general, the standard package functions as describes above will meet your needs. These functions use the system's native repo manager (for instance, yum or the apt tools). In most cases, the repo manager is actually separate from the package manager. For instance, yum is usually a front-end for rpm, and apt is usually a front-end for dpkg. When possible, the package functions that use those package managers directly should do so through the low package functions.

It is normal and sane for pkg to make calls to lowpkgs, but lowpkg must never make calls to pkg. This affects functions which are required by both pkg and lowpkg, but the technique in pkg is more performant than what is available to lowpkg. When this is the case, the lowpkg function that requires that technique must still use the lowpkg version.

## list\_pkgs

Returns a dict of packages installed, including the package name and version. Can accept a list of packages; if none are specified, then all installed packages will be listed.

```
installed = __salt__["lowpkg.list_pkgs"]("foo", "bar")
```

Example output:

```
{"foo": "1.2.3-4", "bar": "5.6.7-8"}
```

## verify

Many (but not all) package management systems provide a way to verify that the files installed by the package manager have or have not changed. This function accepts a list of packages; if none are specified, all packages will be included.

```
installed = __salt__["lowpkg.verify"]("httpd")
```

Example output:

```
{
  "/etc/httpd/conf/httpd.conf": {
    "mismatch": ["size", "md5sum", "mtime"],
    "type": "config",
  }
}
```

## file\_list

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__["lowpkg.file_list"]("httpd", "apache")
```

This function does not return which files belong to which packages; all files are returned as one giant list (hence the *file\_list* function name. However, This information is still returned inside of a dict, so that it can provide any errors to the user in a sane manner.

```
{
  "errors": ["package apache is not installed"],
  "files": ["/etc/httpd", "/etc/httpd/conf", "/etc/httpd/conf.d", "...SNIP..
↪."],
}
```

## file\_dict

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__["lowpkg.file_dict"]("httpd", "apache", "kernel")
```

Unlike *file\_list*, this function will break down which files belong to which packages. It will also return errors in the same manner as *file\_list*.

```
{
  "errors": ["package apache is not installed"],
  "packages": {
    "httpd": ["/etc/httpd", "/etc/httpd/conf", "...SNIP..."],
    "kernel": [
      "/boot/.vmlinuz-2.6.32-279.el6.x86_64.hmac",
      "/boot/System.map-2.6.32-279.el6.x86_64",
      "...SNIP...",
    ]
  }
}
```

(continues on next page)

(continued from previous page)

```
}  
    },  
    ],  
}
```

## 32.14 Pull Requests

Salt is a large software project with many developers working together. We encourage all Salt users to contribute new features, bug fixes and documentation fixes. For those who haven't contributed to a large software project before we encourage you to consider the following questions when preparing a pull request.

This isn't an exhaustive list and these aren't necessarily hard and fast rules, but these are things we consider when reviewing a pull request.

- Does this change work on all platforms? In cases where it does not, is an appropriate and easy-to-understand reason presented to the user? Is it documented as-such? Have we thought about all the possible ways this code might be used and accounted as best we can for them?
- Will this code work on versions of all Python we support? Will it work on future versions?
- Are Python reserved keywords used? Are variables named in a way that will make it easy for the next person to understand what's going on?
- Does this code present a security risk in any way? What is the worst possible thing that an attacker could do with this code? If dangerous cases are possible, is it appropriate to document them? If so, has this been done? Would this change pass muster with a professional security audit? Is it obvious to a person using this code what the risks are?
- Is it readable? Does it conform to our [style guide](#)? Is the code documented such that the next person who comes along will be able to read and understand it? Most especially, are edge-cases documented to avoid regressions? Will it be immediately evident to the next person who comes along why this change was made?
- If appropriate, has the person who wrote the code which is being modified been notified and included in the process?
- What are the performance implications of this change? Is there a more efficient way to structure the logic and if so, does making the change balance itself against readability in a sensible way? Do the performance characteristics of the code change based on the way it is being invoked (i.e., through an API or various command-line tools.) Will it be easy to profile this change if it might be a problem?
- Are caveats considered and documented in the change?
- Will the code scale? More critically, will it scale in *both* directions? Salt runs in data-centers and on Raspberry Pi installations in the Sahara. It needs to work on big servers and tiny devices.
- Is appropriate documentation written both in public-facing docs and in-line? How will the user know how to use this? What will they do if it doesn't work as expected? Is this something a new user will understand? Can a user know all they need to about this functionality by reading the public docs?
- Is this a change in behavior? If so, is it in the appropriate branch? Are deprecation warnings necessary? Have those changes been fully documented? Have we fully thought through what implications a change in behavior might have?
- How has the code been tested? If appropriate are there automated tests which cover this? Is it likely to regress? If so, how has the potential of that regression been mitigated? What is the plan for ensuring that this code works going forward?
- If it's asynchronous code, what is the potential for a race condition?

- Is this code an original work? If it's borrowed from another project or found online are the appropriate licensing/attribution considerations handled?
- Is the reason for the change fully explained in the PR? If not for review, this is necessary so that somebody in the future can go back and figure out why it was necessary.
- Is the intended behavior of the change clear? How will that behavior be known to future contributors and to users?
- Does this code handle errors in a reasonable way? Have we gone back through the stack as much as possible to make sure that an error cannot be raised that we do not account for? Are errors tested for as well as proper functionality?
- If the code relies on external libraries, do we properly handle old versions of them? Do we require a specific version and if so is this version check implemented? Is the library available on the same platforms that module in question claims to support? If the code was written and tested against a particular library, have we documented that fact?
- Can this code freeze/hang/crash a running daemon? Can it stall a state run? Are there infinite loops? Are appropriate timeouts implemented?
- Is the function interface well documented? If argument types can not be inferred by introspection, are they documented?
- Are resources such as file-handles cleaned-up after they are used?
- Is it possible that a reference-cycle exists between objects that will leak memory?
- Has the code been linted and does it pass all tests?
- Does the change fully address the problem or is it limited to a small surface area? By this, I mean that it should be clear that the submitter has looked for other cases in the function or module where the given case might also be addressed. If additional changes are necessary are they documented in the code as a FIXME or the PR and in Github as an issue to be tracked?
- Will the code throw errors/warnings/stacktraces to the console during normal operation?
- Has all the debugging been removed?
- Does the code log any sensitive data? Does it show sensitive data in process lists? Does it store sensitive data to disk and if so, does it do so in a secure manner? Are there potential race conditions in between writing the data to disk and setting the appropriate permissions?
- Is it clear from the solution that the problem is well-understood? How can somebody who has never seen the problem feel confident that this proposed change is the best one?
- What's hard-coded that might not need to be? Are we making sensible decisions for the user and allowing them to tune and change things where appropriate?
- Are utility functions used where appropriate? Does this change re-implement something we already have code for?
- Is the right thing being fixed? There are cases where it's appropriate to fix a test and cases where it's appropriate to fix the code that's under test. Which is best for the user? Is this change a shortcut or a solution that will be solid in the months and years to come?
- How will this code react to changes elsewhere in the code base? What is it coupled to and have we fully thought through how best to present a coherent interface to consumers of a given function or method?
- Does this PR try to fix too many bugs/problems at once?
- Should this be split into multiple PRs to make them easier to test and reason about?

## 32.15 Pull Request Requirements

The following outlines what is required before a pull request can be merged into the salt project. For each of these requirements, an exception can be made that requires 3 approvals before merge. The exceptions are detailed more below.

### 32.15.1 All PR requirements

- Approval Required: approval review from core team member OR 1 approval review from captain of working group
- Cannot merge your own PR until 1 reviewer approves from defined list above that is not the author.
- All Tests Pass

### 32.15.2 Bug Fix PR requirements

- Test Coverage: regression test written to cover bug fix. Contributors only need to write test coverage for their specific changes.
- Point to the issue the PR is resolving. If there is not an issue one will need to be created.

### 32.15.3 Feature PR requirements

- Test Coverage: tests written to cover new feature. Contributors only need to write test coverage for their specific changes.
- Release Notes: Add note in release notes of new feature for relative release.
- Add `.. versionadded:: <release>` to module's documentation. If you are not certain which release your fix will be included in you can include TBD and the PR reviewer will let you know the correct name of the release you need to update to the versionadded.

### 32.15.4 Exceptions to all requirements

As previously stated, all of the above requirements can be bypassed with 3 approvals. PR's that do not require tests include:

- documentation
- cosmetic changes (for example changing from `log.debug` to `log.trace`)
- fixing tests
- pylint
- changes outside of the salt directory

## 32.16 Pull Request CI/CD test suite

By default, PRs run a limited subset of the test suite against the following operating systems:

- **Linux:**
  - Latest Rocky Linux x86\_64
  - Latest Amazon Linux aarch64
  - Latest Ubuntu LTS arm64
  - Latest Arch Linux x86\_64
- Latest Windows Server x86\_64
- Latest MacOS arm64

### 32.16.1 Optional OS additions

There are times where a PR is specifically addressing a target OS, or a core component of Salt is being updated that needs to be tested against all support operating systems. This is often required to fix nightly builds, or introduce a new operating system into CI/CD.

Labels can be applied to a PR, via those who have the appropriate permissions, using the `test:os:<os-name><os-arch>` format.

- Example: `test:os:debian-11-arm64` would also ensure the Debian 11 arm64 OS is included.

Optionally, `test:os:all` can be used as a way to target all operating systems that nightlies, staging, release target without having to add them all individually.

### 32.16.2 Optional test additions

If wanting to also increase the scope of tests themselves, not just the scope of operating systems, then additional labels can be used such as:

- `test:pkg`: Run all package-related tests that are otherwise not included by default on the currently selected operating systems.
- `test:full`: Run all tests in the Salt test suite that can be ran on the currently selected operating systems.
- `test:coverage`: Run all tests in the Salt test suite on all operating systems while collecting code coverage.
- `test:random-cache-seed`: Randomize the GH Actions cache seed to make sure no caches are used during the build.

## 32.17 Release Notes

You can edit the release notes to highlight a new feature being added to a given release. The release notes are templated with Jinja and are generated at release time.

### 32.17.1 How do I edit the release notes

To edit the release notes you need to look in `doc/topics/releases/templates` for your given release and edit the template. Do not edit the release note files in `doc/topics/releases/`, as this will be written over with the content in the template file. For example, if you want to add content to the 3006.0 release notes you would edit the `doc/topics/releases/templates/3006.0.md.template` file. Do not edit the changelog portion of the template file, since that is auto generated with the content generated for the changelog for each release.

### 32.17.2 How to generate the release notes

This step is only used when we need to generate the release notes before releasing. You should NOT need to run these steps as they are ran in the pipeline, but this is documented so you can test your changes to the release notes template.

To generate the release notes requires the `tools` command. The instructions below will detail how to install and use `tools`.

#### Installing `tools`

To view the output the release notes will produce before generating them you can run `tools` in draft mode:

```
tools changelog update-release-notes --draft
```

To generate the release notes just remove the `--draft` argument:

```
tools changelog update-release-notes
```

To specify a specific Salt version you add that version as an argument:

```
tools changelog update-release-notes 3006.0
```

To only generate the template for a new release

```
tools changelog update-release-notes --template-only
```

## 32.18 Reporting Bugs

Salt uses GitHub to track open issues and feature requests.

To file a bug, please navigate to the [new issue page for the Salt project](#).

In an issue report, please include the following information:

- The output of `salt --versions-report` from the relevant machines. This can also be gathered remotely by using `salt <my_tgt> test.versions_report`.
- A description of the problem including steps taken to cause the issue to occur and the expected behaviour.
- Any steps taken to attempt to remediate the problem.
- Any configuration options set in a configuration file that may be relevant.

- A reproducible test case. This may be as simple as an SLS file that illustrates a problem or it may be a link to a repository that contains a number of SLS files that can be used together to re-produce a problem. If the problem is transitory, any information that can be used to try and reproduce the problem is helpful.
- [Optional] The output of each salt component (master/minion/CLI) running with the `-ldebug` flag set.

---

**Note:** Please be certain to scrub any logs or SLS files for sensitive data!

---

## 32.19 Salt Extensions

Salt modules can be distributed as Salt Extensions.

The existing Salt modules will be carved up into one of three categories. Each category will be implemented in the following way:

### ## Core Modules

Core Modules will be kept inside the main Salt codebase, and development will be tied to the Salt release cycle.

### ## Supported Modules

Supported modules will be moved to their own repositories within the SaltStack Github organization where they can be maintained separately from the Salt codebase.

### ## Community Modules

Remaining modules will be deprecated from the Salt Core codebase and community members will be able to continue independent maintainership if they are interested. Some plugins are almost exclusively maintained by external corporations – if these corporations wish for formal documentation outlining transfer of ownership it can be handled on a case-by-case basis. The community modules can be hosted either in individual or corporate source control systems, alternatively they can also be hosted in the community run Salt Extensions Github organization, that will operate like the the Salt Formulas Github organization. The criteria to determine which category to place modules in will follow these rules:

### ## Core Modules

1. Required Salt Functionality
  - a. Modules such as state, sys, peer, grains, pillar, etc.
2. Modules critical to Salt's Multi OS support
  - a. Modules that function across multiple operating systems like cmd and file.

### ## Supported Modules

1. Modules to support specific operating systems traditionally maintained by the core team – such as RedHat, MacOS, Windows, Solaris, etc.
  2. Modules to support specific but critical applications, such as Apache, MySQL, etc.
3. Modules created and maintained as part of VMware backed support agreements and contracts.

### ## Community Extension Modules

1. Modules to support specific operating systems traditionally maintained by the OS vendor – such as SUSE, openBSD, NetBSD, etc.
  2. Modules to support cloud interfaces, such as AWS, Azure, etc.

3. Modules no longer maintained, or which we suspect are also no longer used or maintained, such as `moosefs`, `qemu_img`, etc.

### 32.19.1 How do I deprecate a Salt module to a Salt extension

To indicate that a Salt module is being deprecated in favor of a Salt extension, for each Salt module include `__deprecated__` tuple in the module. The tuple should include the version of Salt that the module will be removed, the name of the collection of modules that are being deprecated, and the URL where the source for the new extension can be found. The version should be 2 major versions from the next major release. For example, if the next major release of Salt is 3100, the deprecation version should be set to 3102.

## 32.20 Salt Topology

Salt is based on a powerful, asynchronous, network topology using ZeroMQ. Many ZeroMQ systems are in place to enable communication. The central idea is to have the fastest communication possible.

### 32.20.1 Servers

The Salt Master runs 2 network services. First is the ZeroMQ PUB system. This service by default runs on port `4505/tcp` and can be configured via the `publish_port` option in the master configuration.

Second is the ZeroMQ REP system. This is a separate interface used for all bi-directional communication with minions. By default this system binds to port `4506/tcp` and can be configured via the `ret_port` option in the master.

### 32.20.2 PUB/SUB

The commands sent out via the salt client are broadcast out to the minions via ZeroMQ PUB/SUB. This is done by allowing the minions to maintain a connection back to the Salt Master and then all connections are informed to download the command data at once. The command data is kept extremely small (usually less than 1K) so it is not a burden on the network.

### 32.20.3 Return

The PUB/SUB system is a one way communication, so once a `publish` is sent out the PUB interface on the master has no further communication with the minion. The minion, after running the command, then sends the command's return data back to the master via the `ret_port`.

## 32.21 Developing Salt Tutorial

This tutorial assumes you have:

- a web browser
- a GitHub account (<my\_account>)
- a command line (CLI)
- git

- a text editor

### 32.21.1 Fork

In your browser, navigate to the [saltstack/salt GitHub repository](#).

Click on Fork (<https://github.com/saltstack/salt/#fork-destination-box>).

---

**Note:** If you have more than one GitHub presence, for example if you are a member of a team, GitHub will ask you into which area to clone Salt. If you don't know where, then select your personal GitHub account.

---

### 32.21.2 Clone

In your CLI, navigate to the directory into which you want clone the Salt codebase and submit the following command:

```
$ git clone https://github.com/<my_account>/salt.git
```

where `<my_account>` is the name of your GitHub account. After the clone has completed, add SaltStack as a second remote and fetch any changes from upstream.

```
$ cd salt
$ git remote add upstream https://github.com/saltstack/salt.git
$ git fetch upstream
```

For this tutorial, we will be working off from the `master` branch, which is the default branch for the SaltStack GitHub project. This branch needs to track `upstream/master` so that we will get all upstream changes when they happen.

```
$ git checkout master
$ git branch --set-upstream-to upstream/master
```

### 32.21.3 Fetch

Fetch any upstream changes on the `master` branch and sync them to your local copy of the branch with a single command:

```
$ git pull --rebase
```

---

**Note:** For an explanation on `pull` vs `pull --rebase` and other excellent points, see [this article](#) by Mislav Marohnić.

---

### 32.21.4 Branch

Now we are ready to get to work. Consult the [sprint beginner bug list](#) and select an execution module whose `__virtual__` function needs to be updated. I'll select the `alternatives` module.

Create a new branch off from `master`. Be sure to name it something short and descriptive.

```
$ git checkout -b virt_ret
```

### 32.21.5 Edit

Edit the file you have selected, and verify that the changes are correct.

```
$ vim salt/modules/alternatives.py
$ git diff
```

```
diff --git a/salt/modules/alternatives.py b/salt/modules/alternatives.py
index 1653e5f..30c0a59 100644
--- a/salt/modules/alternatives.py
+++ b/salt/modules/alternatives.py
@@ -30,7 +30,7 @@ def __virtual__():
     '''
     if os.path.isdir('/etc/alternatives'):
         return True
-    return False
+    return (False, 'Cannot load alternatives module: /etc/alternatives
->dir not found')

def _get_cmd():
```

### 32.21.6 Commit

Stage and commit the changes. Write a descriptive commit summary, but try to keep it less than 50 characters. Review your commit.

```
$ git add salt/modules/alternatives.py
$ git commit -m 'modules.alternatives: __virtual__ return err msg'
$ git show
```

---

**Note:** If you need more room to describe the changes in your commit, run `git commit` (without the `-m`, message, option) and you will be presented with an editor. The first line is the commit summary and should still be 50 characters or less. The following paragraphs you create are free form and will be preserved as part of the commit.

---

### 32.21.7 Push

Push your branch to your GitHub account. You will likely need to enter your GitHub username and password.

```
$ git push origin virt_ret
Username for 'https://github.com': <my_account>
Password for 'https://<my_account>@github.com':
```

---

**Note:** If authentication over https does not work, you can alternatively setup [ssh keys](#). Once you have done this, you may need add the keys to your git repository configuration

```
$ git config ssh.key ~/.ssh/<key_name>
```

where <key\_name> is the file name of the private key you created.

---

### 32.21.8 Merge

In your browser, navigate to the [new pull request](#) page on the [saltstack/salt](#) GitHub repository and click on [compare across forks](#). Select <my\_account> from the list of head forks and the branch you are wanting to merge into master (`virt_ret` in this case).

When you have finished reviewing the changes, click [Create pull request](#).

If your pull request contains only a single commit, the title and comment will be taken from that commit's summary and message, otherwise the branch name is used for the title. Edit these fields as necessary and click [Create pull request](#).

---

**Note:** Although these instructions seem to be the official pull request procedure on github's website, here are two alternative methods that are simpler.

- If you navigate to your clone of salt, [https://github.com/<my\\_account>/salt](https://github.com/<my_account>/salt), depending on how old your branch is or how recently you pushed updates on it, you may be presented with a button to create a pull request with your branch.
  - I find it easiest to edit the following URL:  
[https://github.com/saltstack/salt/compare/master...<my\\_account>:virt\\_ret](https://github.com/saltstack/salt/compare/master...<my_account>:virt_ret)
- 

### 32.21.9 Resources

GitHub offers many great tutorials on various aspects of the git- and GitHub-centric development workflow:

<https://help.github.com/>

There are many topics covered by the Salt Developer documentation:

<https://docs.saltproject.io/en/latest/topics/development/index.html>

The contributing documentation presents more details on specific contributing topics:

<https://docs.saltproject.io/en/latest/topics/development/contributing.html>

## 32.22 Modular Systems

When first working with Salt, it is not always clear where all of the modular components are and what they do. Salt comes loaded with more modular systems than many users are aware of, making Salt very easy to extend in many places.

The most commonly used modular systems are execution modules and states. But the modular systems extend well beyond the more easily exposed components and are often added to Salt to make the complete system more flexible.

### 32.22.1 Developing New Modules

#### Interactive Debugging

Sometimes debugging with `print()` and extra logs sprinkled everywhere is not the best strategy.

IPython is a helpful debug tool that has an interactive python environment which can be embedded in python programs.

First the system will require IPython to be installed.

```
# Debian
apt-get install ipython

# Arch Linux
pacman -Syu ipython2

# RHEL/CentOS (via EPEL)
yum install python-ipython
```

Now, in the troubling python module, add the following line at a location where the debugger should be started:

```
test = "test123"
import IPython

IPython.embed_kernel()
```

After running a Salt command that hits that line, the following will show up in the log file:

```
[CRITICAL] To connect another client to this kernel, use:
[IPKernelApp] --existing kernel-31271.json
```

Now on the system that invoked `embed_kernel`, run the following command from a shell:

```
# NOTE: use ipython2 instead of ipython for Arch Linux
ipython console --existing
```

This provides a console that has access to all the vars and functions, and even supports tab-completion.

```
print(test)
test123
```

To exit IPython and continue running Salt, press `Ctrl-d` to logout.

## The Salt Loader

Salt's loader system is responsible for reading *Special Module Contents* and providing the context for the special *Dunder Dictionaries*. When modules developed for Salt's loader are imported directly, the dunder attributes won't be populated. You can use the *Loader Context* to work around this.

### Loader Context

Given the following.

```
# coolmod.py

def utils_func_getter(name):
    return __utils__[name]
```

You would not be able import coolmod and run `utils_func_getter` because `__utils__` would not be defined. You must run `coolmod.utils_func_getter` in the context of a loader.

```
import coolmod
import salt.loader

opts = {}
utils = salt.loader.utils(opts)
with salt.loader.context(utils):
    func = coolmod.utils_func_getter("foo.bar")
```

### Special Module Contents

These are things that may be defined by the module to influence various things.

`__virtual__`

`__virtual_aliases__`

`__virtualname__`

`__init__`

Called before `__virtual__()`

## `__proxyenabled__`

grains and proxy modules

`__proxyenabled__` as a list containing the names of the proxy types that the module supports.

## `__load__`

## `__func_alias__`

## `__outputter__`

## Dunder Dictionaries

Salt provides several special "dunder" dictionaries as a convenience for Salt development. These include `__opts__`, `__context__`, `__salt__`, and others. This document will describe each dictionary and detail where they exist and what information and/or functionality they provide.

The following dunder dictionaries are always defined, but may be empty

- `__context__`
- `__grains__`
- `__pillar__`
- `__opts__`

## `__opts__`

Changed in version 3006.0: The `__opts__` dictionary can now be accessed via `context``.

Defined in: All modules

The `__opts__` dictionary contains all of the options passed in the configuration file for the master or minion.

---

**Note:** In many places in salt, instead of pulling raw data from the `__opts__` dict, configuration data should be pulled from the salt *get* functions such as `config.get`

```
__salt__["config.get"]("foo:bar")
```

The *get* functions also allow for dict traversal via the `:` delimiter. Consider using *get* functions whenever using `__opts__` or `__pillar__` and `__grains__` (when using grains for configuration data)

---

The configuration file data made available in the `__opts__` dictionary is the configuration data relative to the running daemon. If the modules are loaded and executed by the master, then the master configuration data is available, if the modules are executed by the minion, then the minion configuration is available. Any additional information passed into the respective configuration files is made available

## `__salt__`

Defined in: Auth, Beacons, Engines, Execution, Executors, Outputters, Pillars, Proxies, Renderers, Returners, Runners, SDB, SSH Wrappers, State, Thorium

`__salt__` contains the execution module functions. This allows for all functions to be called as they have been set up by the salt loader.

```
__salt__["cmd.run"]("fdisk -l")
__salt__["network.ip_addrs"]()
```

---

**Note:** When used in runners or outputters, `__salt__` references other runner/outputter modules, and not execution modules.

---

## `__grains__`

Filled in for: Execution, Pillar, Renderer, Returner, SSH Wrapper, State.

The `__grains__` dictionary contains the grains data generated by the minion that is currently being worked with. In execution modules, state modules and returners this is the grains of the minion running the calls, when generating the external pillar the `__grains__` is the grains data from the minion that the pillar is being generated for.

While `__grains__` is defined for every module, it's only filled in for some.

## `__pillar__`

Filled in for: Execution, Renderer, Returner, SSH Wrapper, State

The `__pillar__` dictionary contains the pillar for the respective minion.

While `__pillar__` is defined for every module, it's only filled in for some.

## `__ext_pillar__`

Filled in for: Pillar

The `__ext_pillar__` dictionary contains the external pillar modules.

## `__context__`

During a state run the `__context__` dictionary persists across all states that are run and then is destroyed when the state ends.

When running an execution module `__context__` persists across all module executions until the modules are refreshed; such as when `saltutil.sync_all` or `state.apply` are executed.

```
if not "cp.fileclient" in __context__:
    __context__["cp.fileclient"] = salt.fileclient.get_file_client(__opts__)
```

---

**Note:** Because `__context__` may or may not have been destroyed, always be sure to check for the existence of the key in `__context__` and generate the key before using it.

---

### `__utils__`

Defined in: Cloud, Engine, Execution, File Server, Grain, Pillar, Proxy, Roster, Runner, SDB, State

### `__proxy__`

Defined in: Beacon, Engine, Execution, Executor, Proxy, Renderer, Returner, State, Util

### `__runner__`

Defined in: Engine, Roster, Thorium

---

**Note:** When used in engines, it should be called `__runners__` (plural)

---

### `__executors__`

Defined in: Executor

### `__ret__`

Defined in: Proxy

### `__thorium__`

Defined in: Thorium

### `__states__`

Defined in: Renderers, State

### `__serializers__`

Defined in: State

## `__sdb__`

Defined in: SDB

## `__file_client__`

Changed in version 3006.5.

The `__file_client__` dunder was added to states and execution modules. This enables the use of a file client without having to instantiate one in the module.

### 32.22.2 Configuration Options

A number of configuration options can affect the load process. This is a quick list of them:

- `autoload_dynamic_modules` (*Minion*)
- `cython_enable` (*Minion, Master*)
- `disable_modules` (*Minion*)
- `disable_returners` (*Minion*)
- `enable_zip_modules` (*Minion*)
- `extension_modules` (*Master*)
- `extmod_whitelist` (*Minion, Master*)
- `extmod_blacklist` (*Minion, Master*)
- `whitelist_modules` (*Minion*)
- `grains_dirs` (*Minion*)
- `module_dirs` (*Minion, Master*)
- `outputter_dirs` (*Minion, Master*)
- `providers` (*Minion*)
- `render_dirs` (*Minion*)
- `returner_dirs` (*Minion*)
- `runner_dirs` (*Master*)
- `states_dirs` (*Minion*)
- `utils_dirs` (*Minion*)

### 32.22.3 Loading Modules

Modules come primarily from several sources:

- The Salt package itself
- The Salt File Server
- The extmods directory
- Secondary packages installed

Using one source to override another is not supported.

#### The Salt Package

Salt itself ships with a large number of modules. These are part of the Salt package itself and don't require the user to do anything to use them. (Although a number of them have additional dependencies and/or configuration.)

#### The Salt File Server

The user may add modules by simply placing them in special directories in their *fileserver*.

The name of the directory inside of the file server is the directory name prepended by underscore, such as:

- `_grains`
- `_modules`
- `_states`

Modules must be synced before they can be used. This can happen a few ways, discussed below.

---

**Note:** Using `saltenvs` besides `base` may not work in all contexts.

---

#### Sync Via States

The minion configuration contains an option `autoload_dynamic_modules` which defaults to `True`. This option makes the state system refresh all dynamic modules when states are run. To disable this behavior set `autoload_dynamic_modules` to `False` in the minion config.

When dynamic modules are autoloaded via states, only the modules defined in the same saltenv as the states currently being run are synced.

#### Sync Via the saltutil Module

The `saltutil` module has a number of functions that can be used to sync all or specific dynamic modules. The `saltutil.sync_*execution functions` and `runner functions` can be used to sync modules to minions and the master, respectively.

If saltenv environments are used (through the *top file*, the `environment` option of the minion configuration file, or as an argument on the command line) modules will be synced from the applied environments.

## The extmods Directory

Any files placed in the directory set by `extension_modules` settings (minion, *master*, default `/var/cache/salt/*/extmods`) can also be loaded as modules. Note that these directories are also used by the `saltutil.sync_*` functions (mentioned above) and files may be overwritten.

## Secondary Packages

Third-party packages may also add modules to Salt if they are installed in the same system and Python environment as the Salt Minion or Master.

This is done via `setuptools` entry points:

```
setup(
    # ...
    entry_points={"salt.loader": ["module_dirs=spirofs.loader:module"]},
    # ...
)
```

Note that these are not synced from the Salt Master to the Minions. They must be installed independently on each Minion.

### 32.22.4 Module Types

The specific names used by each loading method above are as follows. See sections below for a short summary of each of these systems.

Module Type	Salt Package Name	FS/Directory Name	Entry Point
Auth	<code>salt.auth</code> ( <a href="#">index</a> )	<code>auth</code> <sup>1</sup>	<code>auth_dirs</code>
Beacon	<code>salt.beacons</code> ( <a href="#">index</a> )	<code>beacons</code>	<code>beacons_dirs</code>
Cache	<code>salt.cache</code> ( <a href="#">index</a> )	<code>cache</code>	<code>cache_dirs</code>
Cloud	<code>salt.cloud.clouds</code> ( <a href="#">index</a> )	<code>clouds</code>	<code>cloud_dirs</code>
Engine	<code>salt.engines</code> ( <a href="#">index</a> )	<code>engines</code>	<code>engines_dirs</code>
Execution	<code>salt.modules</code> ( <a href="#">index</a> )	<code>modules</code>	<code>module_dirs</code>
Executor	<code>salt.executors</code> ( <a href="#">index</a> )	<code>executors</code>	<code>executor_dirs</code>
File Server	<code>salt.fileserver</code> ( <a href="#">index</a> )	<code>fileserver</code>	<code>fileserver_dirs</code>
Grain	<code>salt.grains</code> ( <a href="#">index</a> )	<code>grains</code>	<code>grains_dirs</code>
Log Handler	<code>salt.log_handlers</code> ( <a href="#">index</a> )	<code>log_handlers</code>	<code>log_handlers_dirs</code>
Matcher	<code>salt.matchers</code>	<code>matchers</code>	<code>matchers_dirs</code>
Metaproxy	<code>salt.metaproxy</code>	<code>metaproxy</code> <sup>Page 4825, 1</sup>	<code>metaproxy_dirs</code>
Net API	<code>salt.netapi</code> ( <a href="#">index</a> )	<code>netapi</code> <sup>Page 4825, 1</sup>	<code>netapi_dirs</code>
Outputter	<code>salt.output</code> ( <a href="#">index</a> )	<code>output</code>	<code>outputter_dirs</code>
Pillar	<code>salt.pillar</code> ( <a href="#">index</a> )	<code>pillar</code>	<code>pillar_dirs</code>
Proxy	<code>salt.proxy</code> ( <a href="#">index</a> )	<code>proxy</code>	<code>proxy_dirs</code>
Queue	<code>salt.queues</code> ( <a href="#">index</a> )	<code>queues</code>	<code>queue_dirs</code>
Renderer	<code>salt.renderers</code> ( <a href="#">index</a> )	<code>renderers</code>	<code>render_dirs</code>

continues on next page

Table 1 – continued from previous page

Module Type	Salt Package Name	FS/Directory Name	Entry Point
Returner	salt.returners ( <i>index</i> )	returners	returner_dirs
Roster	salt.roster ( <i>index</i> )	roster	roster_dirs
Runner	salt.runners ( <i>index</i> )	runners	runner_dirs
SDB	salt.sdb ( <i>index</i> )	sdb	sdb_dirs
Serializer	salt.serializers ( <i>index</i> )	serializers <sup>Page 4825, 1</sup>	serializers_dirs
SPM pkgdb	salt.spm.pkgdb	pkgdb <sup>1</sup>	pkgdb_dirs
SPM pkgfiles	salt.spm.pkgfiles	pkgfiles <sup>1</sup>	pkgfiles_dirs
SSH Wrapper	salt.client.ssh.wrapper	wrapper	wrapper_dirs
State	salt.states ( <i>index</i> )	states	states_dirs
Thorium	salt.thorium ( <i>index</i> )	thorium	thorium_dirs
Tokens	salt.tokens	tokens	tokens_dirs
Top	salt.tops ( <i>index</i> )	tops	top_dirs
Util	salt.utils	utils	utils_dirs
Wheel	salt.wheels ( <i>index</i> )	wheel	wheel_dirs

**Note:** While it is possible to import modules directly with the import statement, it is strongly recommended that the appropriate *dunder dictionary* is used to access them instead. This is because a number of factors affect module names, module selection, and module overloading.

## Auth

The auth module system allows for external authentication routines to be easily added into Salt. The *auth* function needs to be implemented to satisfy the requirements of an auth module. Use the pam module as an example.

See *External Authentication System* for more about authentication in Salt.

## Beacon

- *Writing Beacons*

Beacons are polled by the Salt event loop to monitor non-salt processes. See *Beacons* for more information about the beacon system.

## Cache

The minion cache is used by the master to store various information about minions. See *Minion Data Cache* for more information.

<sup>1</sup> These modules cannot be loaded from the Salt File Server.

## Cloud

Cloud modules are backend implementations used by *Salt Cloud*.

## Engine

Engines are open-ended services managed by the Salt daemon (both master and minion). They may interact with event loop, call other modules, or a variety of non-salt tasks. See *Salt Engines* for complete details.

## Execution

Execution modules make up the core of the functionality used by Salt to interact with client systems. The execution modules create the core system management library used by all Salt systems, including states, which interact with minion systems.

Execution modules are completely open ended in their execution. They can be used to do anything required on a minion, from installing packages to detecting information about the system. The only restraint in execution modules is that the defined functions always return a JSON serializable object.

## Executor

Executors control how execution modules get called. The default is to just call them, but this can be customized.

## File Server

The file server module system is used to create file server backends used by the Salt Master. These modules need to implement the functions used in the fileserver subsystem. Use the `gitfs` module as an example.

See *File Server Backends* for more information.

## Grains

- *Writing Grains*

Grain modules define extra routines to populate grains data. All defined public functions will be executed and **MUST** return a Python dict object. The dict keys will be added to the grains made available to the minion.

See *Grains* for more.

## Log Handler

Log handlers allows the logs from salt (master or minion) to be sent to log aggregation systems.

## Matcher

Matcher modules are used to define the *minion targeting expressions*. For now, it is only possible to override the *existing matchers* (the required CLI plumbing for custom matchers is not implemented yet).

## Metaproxy

Metaproxy is an abstraction layer above the existing proxy minion. It enables adding different types of proxy minions that can still load existing proxymodules.

## Net API

Net API modules are the actual server implementation used by Salt API.

## Output

The output modules supply the outputter system with routines to display data in the terminal. These modules are very simple and only require the *output* function to execute. The default system outputter is the `nested` module.

## Pillar

### External Pillars

Salt provides a mechanism for generating pillar data by calling external pillar interfaces. This document will describe an outline of an `ext_pillar` module.

### Location

Salt expects to find your `ext_pillar` module in the same location where it looks for other python modules. If the `extension_modules` option in your Salt master configuration is set, Salt will look for a `pillar` directory under there and load all the modules it finds. Otherwise, it will look in your Python site-packages `salt/pillar` directory.

### Configuration

The external pillars that are called when a minion refreshes its pillars is controlled by the `ext_pillar` option in the Salt master configuration. You can pass a single argument, a list of arguments or a dictionary of arguments to your pillar:

```
ext_pillar:
- example_a: some argument
- example_b:
  - argumentA
  - argumentB
- example_c:
  keyA: valueA
  keyB: valueB
```

## The Module

### Imports and Logging

Import modules your external pillar module needs. You should first include generic modules that come with stock Python:

```
import logging
```

And then start logging. This is an idiomatic way of setting up logging in Salt:

```
log = logging.getLogger(__name__)
```

Finally, load modules that are specific to what you are doing. You should catch import errors and set a flag that the `__virtual__` function can use later.

```
try:
    import weird_thing

    EXAMPLE_A_LOADED = True
except ImportError:
    EXAMPLE_A_LOADED = False
```

### Options

If you define an `__opts__` dictionary, it will be merged into the `__opts__` dictionary handed to the `ext_pillar` function later. This is a good place to put default configuration items. The convention is to name things `modulename.option`.

```
__opts__ = {"example_a.someconfig": 137}
```

### Initialization

If you define an `__init__` function, it will be called with the following signature:

```
def __init__(__opts__):
    # Do init work here
    ...
```

**Note:** The `__init__` function is ran every time a particular minion causes the external pillar to be called, so don't put heavy initialization code here. The `__init__` functionality is a side-effect of the Salt loader, so it may not be as useful in pillars as it is in other Salt items.

## `__virtual__`

If you define a `__virtual__` function, you can control whether or not this module is visible. If it returns `False` then Salt ignores this module. If it returns a string, then that string will be how Salt identifies this external pillar in its `ext_pillar` configuration. If you're not renaming the module, simply return `True` in the `__virtual__` function, which is the same as if this function did not exist, then, the name Salt's `ext_pillar` will use to identify this module is its conventional name in Python.

This is useful to write modules that can be installed on all Salt masters, but will only be visible if a particular piece of software your module requires is installed.

```
# This external pillar will be known as `example_a`
def __virtual__():
    if EXAMPLE_A_LOADED:
        return True
    return False
```

```
# This external pillar will be known as `something_else`
__virtualname__ = "something_else"

def __virtual__():
    if EXAMPLE_A_LOADED:
        return __virtualname__
    return False
```

## `ext_pillar`

This is where the real work of an external pillar is done. If this module is active and has a function called `ext_pillar`, whenever a minion updates its pillar this function is called.

How it is called depends on how it is configured in the Salt master configuration. The first argument is always the current pillar dictionary, this contains pillar items that have already been added, starting with the data from `pillar_roots`, and then from any already-ran external pillars.

Using our example above:

```
ext_pillar(id, pillar, "some argument") # example_a
ext_pillar(id, pillar, "argumentA", "argumentB") # example_b
ext_pillar(id, pillar, keyA="valueA", keyB="valueB") # example_c
```

In the `example_a` case, `pillar` will contain the items from the `pillar_roots`, in `example_b` `pillar` will contain that plus the items added by `example_a`, and in `example_c` `pillar` will contain that plus the items added by `example_b`. In all three cases, `id` will contain the ID of the minion making the pillar request.

This function should return a dictionary, the contents of which are merged in with all of the other pillars and returned to the minion. **Note:** this function is called once for each minion that fetches its pillar data.

```
def ext_pillar(minion_id, pillar, *args, **kwargs):

    my_pillar = {"external_pillar": {}}

    my_pillar["external_pillar"] = get_external_pillar_dictionary()
```

(continues on next page)

(continued from previous page)

```
return my_pillar
```

You can call `pillar` with the dictionary's top name to retrieve its data. From above example, 'external\_pillar' is the top dictionary name. Therefore:

```
salt '*' pillar.get external_pillar
```

You shouldn't just add items to `pillar` and return that, since that will cause Salt to merge data that already exists. Rather, just return the items you are adding or changing. You could, however, use `pillar` in your module to make some decision based on pillar data that already exists.

This function has access to some useful globals:

**\_\_opts\_\_**

A dictionary of mostly Salt configuration options. If you had an `__opts__` dictionary defined in your module, those values will be included.

**\_\_salt\_\_**

A dictionary of Salt module functions, useful so you don't have to duplicate functions that already exist. E.g. `__salt__['cmd.run']('ls -l')` **Note**, runs on the *master*

**\_\_grains\_\_**

A dictionary of the grains of the minion making this pillar call.

### Example configuration

As an example, if you wanted to add external pillar via the `cmd_json` external pillar, add something like this to your master config:

```
ext_pillar:  
- cmd_json: 'echo {"arg":"value"}'
```

### Reminder

Just as with traditional pillars, external pillars must be refreshed in order for minions to see any fresh data:

```
salt '*' saltutil.refresh_pillar
```

Used to define optional external pillar systems. The pillar generated via the `filesystem` pillar is passed into external pillars. This is commonly used as a bridge to database data for pillar, but is also the backend to the `libvirt` state used to generate and sign `libvirt` certificates on the fly.

## Proxy

*Proxy Minions* are a way to manage devices that cannot run a full minion directly.

## Renderers

Renderers are the system used to render sls files into salt highdata for the state compiler. They can be as simple as the `py` renderer and as complex as `stateconf` and `pydsl`.

## Returners

Returners are used to send data from minions to external sources, commonly databases. A full returner will implement all routines to be supported as an external job cache. Use the `redis` returner as an example.

## Roster

The *Roster system* is used by Salt SSH to enumerate devices.

## Runners

Runners are purely master-side execution sequences.

## SDB

- *Writing SDB Modules*

SDB is a way to store data that's not associated with a minion. See *Storing Data in Other Databases*.

## Serializer

Primarily used with `file.serialize`.

## State

State modules are used to define the state interfaces used by Salt States. These modules are restrictive in that they must follow a number of rules to function properly.

---

**Note:** State modules define the available routines in sls files. If calling an execution module directly is desired, take a look at the *module* state.

---

## SPM pkgdb

- *SPM Development Guide: Package Database*

pkgdb modules provides storage backends to the package database.

## SPM pkgfiles

- *SPM Development Guide: Package Database*

pkgfiles modules handle the actual installation.

## SSH Wrapper

### SSH Wrapper

### Salt-SSH Background

Salt-SSH works by creating a tar ball of salt, a bunch of python modules, and a generated short minion config. It then copies this onto the destination host over ssh, then uses that host's local python install to run `salt-client --local` with any requested modules. It does not automatically copy over states or cache files and since it is uses a local `file_client`, modules that rely on `cp.cache*` functionality do not work.

### SSH Wrapper modules

To support cp modules or other functionality which might not otherwise work in the remote environment, a wrapper module can be created. These modules are run from the salt-master initiating the salt-ssh command and can include logic to support the needed functionality. SSH Wrapper modules are located in `/salt/client/ssh/wrapper/` and are named the same as the execution module being extended. Any functions defined inside of the wrapper module are called from the `salt-ssh module.function` command rather than executing on the minion.

### State Module example

Running salt states on an salt-ssh minion, obviously requires the state files themselves. To support this, a state module wrapper script exists at `salt/client/ssh/wrapper/state.py`, and includes standard state functions like `apply`, `sls`, and `highstate`. When executing `salt-ssh minion state.highstate`, these wrapper functions are used and include the logic to walk the `low_state` output for that minion to determine files used, gather needed files, tar them together, transfer the tar file to the minion over ssh, and run a state on the ssh minion. This state then extracts the tar file, applies the needed states and data, and cleans up the transferred files.

### Wrapper Handling

From the wrapper script any invocations of `__salt__['some.module']()` do not run on the master which is running the wrapper, but instead magically are invoked on the minion over ssh. Should the function being called exist in the wrapper, the wrapper function will be used instead.

One way of supporting this workflow may be to create a wrapper function which performs the needed file copy operations. Now that files are resident on the ssh minion, the next step is to run the original execution module function. But since that function name was already overridden by the wrapper, a function alias can be created in the original execution module, which can then be called from the wrapper.

## Example

The `saltcheck` module needs `sls` and `tst` files on the minion to function. The invocation of `saltcheck.run_state_tests` is run from the wrapper module, and is responsible for performing the needed file copy. The `saltcheck` execution module includes an alias line of `run_state_tests_ssh = salt.utils.functools.alias_function(run_state_tests, 'run_state_tests_ssh')` which creates an alias of `run_state_tests` with the name `run_state_tests_ssh`. At the end of the `run_state_tests` function in the wrapper module, it then calls `__salt__['saltcheck.run_state_tests_ssh']()`. Since this function does not exist in the wrapper script, the call is made on the remote minion, which then having the needed files, runs as expected.

Replacement execution modules for *Salt SSH*.

## Thorium

Modules for use in the *Thorium* event reactor.

## Tokens

Token stores for *External Authentication*. See the `salt.tokens` docstring for details.

---

**Note:** The runner to load tokens modules is `saltutil.sync_eauth_tokens`.

---

## Tops

Tops modules are used to convert external data sources into top file data for the state system.

## Util

Just utility modules to use with other modules via `__utils__` (see *Dunder Dictionaries*).

## Wheel

The wheel system is used to manage master side management routines. These routines are primarily intended for the API to enable master configuration.

## 32.23 Salt Extend

`salt-extend` is a templating tool for extending SaltStack. If you're looking to add a module to SaltStack, then the `salt-extend` utility can guide you through the process.

You can use Salt Extend to quickly create templated modules for adding new behaviours to some of the module subsystems within Salt.

Salt Extend takes a template directory and merges it into a SaltStack source code directory.

### 32.23.1 Command line usage

See *salt-extend*

### 32.23.2 Choosing a template

The following templates are available:

#### module

Creates a new execution module within `salt/modules/{{module_name}}.py`

#### module\_unit

Creates a new execution module unit test suite within `tests/unit/modules/test_{{module_name}}.py`

#### state

Creates a new state module within `salt/states/{{module_name}}.py`

#### state\_unit

Creates a new state module unit test suite within `tests/unit/states/test_{{module_name}}.py`

### 32.23.3 Adding templates

1. Create a directory under `<src>/templates`
2. Create a file template `.yml` containing properties for
  - `description` - a description of the template
  - `questions` - a collection of additional questions to ask the user, the name of the item will be used as the key in the context dictionary within the jinja template.
    - `question` - The question to ask the user, as a string
    - `default` - (optional) the default value, can contain Jinja2 template syntax and has access to the default context properties

#### Example `template.yml`

```
description: "Execution module"  
questions:  
  depending_libraries:  
    question: "What libraries does this module depend upon?"  
  virtual_name:  
    question: "What module virtual name to use?"  
    default: "{{module_name}}"
```

3. Create the files within `<src>/templates/<your template>` to match the target

---

**Note:** File names can contain Jinja 2 template syntax, e.g. `{{module_name}}.py}}`

---

### Example file in the template directory

```
print("Hello {{module_name}}")
__virtual__ = "{{__virtual_name__}}"
```

### Default context properties

The default context provides the following properties

- `description` - A description of the template
- `short_description` - A short description of the module as entered by the user
- `version` - The version name of the next release
- `module_name` - The module name as entered by the user
- `release_date` - The current date in the format `YYYY-MM-DD`
- `year` - The current year in the format `YYYY`

As well as any additional properties entered from the questions section of `template.yml`

## 32.23.4 API

### `salt.utils.extend module`

#### SaltStack Extend

A templating tool for extending SaltStack.

Takes a template directory and merges it into a SaltStack source code directory. This tool uses Jinja2 for templating.

This tool is accessed using `salt-extend`

#### codeauthor

Anthony Shaw <[anthonyshaw@apache.org](mailto:anthonyshaw@apache.org)>

`salt.utils.extend.apply_template(template_dir, output_dir, context)`

Apply the template from the template directory to the output using the supplied context dict.

#### Parameters

- **src** (str) -- The source path
- **dst** (str) -- The destination path
- **context** (dict) -- The dictionary to inject into the Jinja template as context

`salt.utils.extend.run(extension=None, name=None, description=None, salt_dir=None, merge=False, temp_dir=None)`

A template factory for extending the salt ecosystem

#### Parameters

- **extension** (str) -- The extension type, e.g. 'module', 'state', if omitted, user will be prompted
- **name** (str) -- Python-friendly name for the module, if omitted, user will be prompted

- **description** (str) -- A description of the extension, if omitted, user will be prompted
- **salt\_dir** (str) -- The targeted Salt source directory
- **merge** (bool) -- Merge with salt directory, *False* to keep separate, *True* to merge trees.
- **temp\_dir** (str) -- The directory for generated code, if omitted, system temp will be used

## 32.24 Salt's Test Suite

Salt comes with a powerful integration and unit test suite allowing for the fully automated run of integration and/or unit tests from a single interface. It uses the combination of pytest and nox to run these tests. Nox is used to manage all of the test python dependencies. When you run the test runner with nox, you will be installing the same python dependencies that we use to run our test suite on PRs and branch tests.

To learn the basics of how Salt's test suite works, be sure to check out the *Salt's Test Suite: An Introduction* tutorial.

### 32.24.1 Nox

Nox is used to manage all of the python dependencies used in the test suite and spins up the different nox sessions. You can look at the `noxfile.py` in the salt repo to view all of the current nox configurations. In that file you will notice various nox sessions. When creating each of these sessions, nox will create a virtualenv with the specified interpreter. Once the virtualenv is created it will also install all of the required python dependencies required for that session and run the tests.

For example if you want to run all of the tests using the zeromq transport on python3 you would need to specify the zeromq transport and python3.

```
nox -e 'test-zeromq-3(coverage=False)'
```

And because zeromq is the default transport, the following nox session can also be used:

```
nox -e 'test-zeromq-3(coverage=False)'
```

To run all the tests but on the tcp transport, you would need to specify the tcp session.

```
nox -e 'test-tcp-3(coverage=False)'
```

As a contrast, when using the deprecated `runtests.py` test runner, the command would be:

```
nox -e 'runtests-tcp-3(coverage=False)'
```

You can view all available sessions by running:

```
nox --list-sessions
```

For the most part you will only need nox to run the test suite, as this tool will install the exact same python dependencies we use to run on our test runs. The exception to this is when a system dependency is required, for example `mysql`. These system dependencies are installed with sls states managed in the [salt-ci-images](#) repo or you can manually install the dependency yourself.

### 32.24.2 System Dependencies

The system dependencies are installed from the `salt-ci-images` repo. The `golden-images-provision` state is what is run to determine what dependencies to install on which platform. We run this state only when we want to update our current VM images with new dependencies.

### 32.24.3 Test Directory Structure

Salt's test suite is located in the `tests/` directory in the root of Salt's codebase.

With the migration to PyTest, Salt has created a separate directory for tests that are written taking advantage of the full potential of PyTest. These are located under `tests/pytests`.

As for the old test suite, it is divided into two main groups:

- *Integration Tests*
- *Unit Tests*

Within each of these groups, the directory structure roughly mirrors the structure of Salt's own codebase. Notice that there are directories for `states`, `modules`, `runners`, `output`, and more in each testing group.

The files that are housed in the `modules` directory of either the unit or the integration testing factions contain respective integration or unit test files for Salt execution modules.

The PyTest only tests under `tests/pytests` should, more or less, follow the same grouping as the old test suite.

#### Integration Tests

The Integration section of Salt's test suite start up a number of Salt daemons to test functionality in a live environment. These daemons include two Salt Masters, one Syndic, and two Minions. This allows the Syndic interface to be tested and Master/Minion communication to be verified. All of the integration tests are executed as live Salt commands sent through the started daemons.

Integration tests are particularly good at testing modules, states, and shell commands, among other segments of Salt's ecosystem. By utilizing the integration test daemons, integration tests are easy to write. They are also SaltStack's generally preferred method of adding new tests.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is beneficial in learning why you might want to write integration tests vs. unit tests. Both testing arenas add value to Salt's test suite and you should consider adding both types of tests if possible and appropriate when contributing to Salt.

- *Integration Test Documentation*

#### Unit Tests

Unit tests do not spin up any Salt daemons, but instead find their value in testing singular implementations of individual functions. Instead of testing against specific interactions, unit tests should be used to test a function's logic as well as any `return` or `raises` statements. Unit tests also rely heavily on mocking external resources.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is useful in determining when you should consider writing unit tests instead of, or in addition to, integration tests when contributing to Salt.

- *Unit Test Documentation*

### 32.24.4 Running The Tests

There is only one requirement to install, to quickly get started running salt's test suite: nox.

```
pip install nox
```

Once this requirement is installed, you can use the nox binary to run all of the tests included in Salt's test suite:

```
nox -e 'test-3(coverage=False)'
```

For more information about options you can pass the test runner, see the `--help` option:

```
nox -e 'test-3(coverage=False)' -- --help
```

#### Running Test Subsections

Instead of running the entire test suite all at once, which can take a long time, there are several ways to run only specific groups of tests or individual tests:

- Run *unit tests only*: `nox -e 'test-3(coverage=False)' -- tests/unit/.`
- Run unit and integration tests for states: `nox -e 'test-3(coverage=False)' -- tests/unit/states/ tests/integration/states/.`
- Run integration tests for an individual module: `nox -e 'test-3(coverage=False)' -- tests/pytests/integration/modules/test_virt.py.`
- Run unit tests for an individual module: `nox -e 'test-3(coverage=False)' -- tests/unit/modules/test_virt.py.`
- Run an individual test by using the class and test name (this example is for the `test_default_kvm_profile` test in the `tests/pytests/integration/module/test_virt.py`): `nox -e 'test-3(coverage=False)' -- tests/pytests/integration/modules/test_virt.py::VirtTest::test_default_kvm_profile.`

For more specific examples of how to run various test subsections or individual tests, please see the [pytest](#) documentation on how to run specific tests or the [Running Specific Tests](#) section of the *Salt's Test Suite: An Introduction* tutorial.

#### Running Unit Tests Without Integration Test Daemons

Since the unit tests do not require a master or minion to execute, it is often useful to be able to run unit tests individually, or as a whole group, without having to start up the integration testing daemons. Starting up the master, minion, and syndic daemons takes a lot of time before the tests can even start running and is unnecessary to run unit tests. To run unit tests without invoking the integration test daemons, simply add the unit directory as an argument:

```
nox -e 'test-3(coverage=False)' -- tests/unit/
```

All of the other options to run individual tests, entire classes of tests, or entire test modules still apply.

## Running Destructive Integration Tests

Salt is used to change the settings and behavior of systems. In order to effectively test Salt's functionality, some integration tests are written to make actual changes to the underlying system. These tests are referred to as "destructive tests". Some examples of destructive tests are changes may be testing the addition of a user or installing packages. By default, destructive tests are disabled and will be skipped.

Generally, destructive tests should clean up after themselves by attempting to restore the system to its original state. For instance, if a new user is created during a test, the user should be deleted after the related test(s) have completed. However, no guarantees are made that test clean-up will complete successfully. Therefore, running destructive tests should be done with caution.

---

**Note:** Running destructive tests will change the underlying system. Use caution when running destructive tests.

---

To run tests marked as destructive, set the `--run-destructive` flag:

```
nox -e 'test-3(coverage=False)' -- --run-destructive
```

## Running Cloud Provider Tests

Salt's testing suite also includes integration tests to assess the successful creation and deletion of cloud instances using *Salt-Cloud* for providers supported by Salt-Cloud.

The cloud provider tests are off by default and run on sample configuration files provided in `tests/integration/files/conf/cloud.providers.d/`. In order to run the cloud provider tests, valid credentials, which differ per provider, must be supplied. Each credential item that must be supplied is indicated by an empty string value and should be edited by the user before running the tests. For example, DigitalOcean requires a client key and an api key to operate. Therefore, the default cloud provider configuration file for DigitalOcean looks like this:

```
digitalocean-config:
  driver: digitalocean
  client_key: ''
  api_key: ''
  location: New York 1
```

As indicated by the empty string values, the `client_key` and the `api_key` must be provided:

```
digitalocean-config:
  driver: digitalocean
  client_key: wFGEwgregeqw3435gDger
  api_key: GDE43t43REGTrkilg43934t34qT43t4dgegerGEgg
  location: New York 1
```

---

**Note:** When providing credential information in cloud provider configuration files, do not include the single quotes.

---

Once all of the valid credentials for the cloud provider have been supplied, the cloud provider tests can be run like:

```
nox -e 'test-cloud-3(coverage=False)'
```

### 32.24.5 Automated Test Runs

SaltStack maintains a Jenkins server to allow for the execution of tests across supported platforms. The tests executed from Salt's Jenkins server create fresh virtual machines for each test run, then execute destructive tests on the new, clean virtual machine.

SaltStack's Jenkins server continuously runs the entire test suite, including destructive tests, on an array of various supported operating systems throughout the day. Each actively supported branch of Salt's repository runs the tests located in the respective branch's code. Each set of branch tests also includes a pylint run. These branch tests help ensure the viability of Salt code at any given point in time as pull requests are merged into branches throughout the day.

In addition to branch tests, SaltStack's Jenkins server also runs tests on pull requests. These pull request tests include a smaller set of virtual machines that run on the branch tests. The pull request tests, like the branch tests, include a pylint test as well.

When a pull request is submitted to Salt's repository on GitHub, the suite of pull request tests are started by Jenkins. These tests are used to gauge the pull request's viability to merge into Salt's codebase. If these initial tests pass, the pull request can then be merged into the Salt branch by one of Salt's core developers, pending their discretion. If the initial tests fail, core developers may request changes to the pull request. If the failure is unrelated to the changes in question, core developers may merge the pull request despite the initial failure.

As soon as the pull request is merged, the changes will be added to the next branch test run on Jenkins.

For a full list of currently running test environments, go to <https://jenkins.saltproject.io>.

#### Using Salt-Cloud on Jenkins

For testing Salt on Jenkins, SaltStack uses *Salt-Cloud* to spin up virtual machines. The script using Salt-Cloud to accomplish this is open source and can be found here: [tests/jenkins.py](https://github.com/saltstack/salt/blob/master/tests/jenkins.py)

### 32.24.6 Writing Tests

The salt testing infrastructure is divided into two classes of tests, integration tests and unit tests. These terms may be defined differently in other contexts, but for Salt they are defined this way:

- Unit Test: Tests which validate isolated code blocks and do not require external interfaces such as `salt-call` or any of the salt daemons.
- Integration Test: Tests which validate externally accessible features.

Salt testing uses unittest2 from the python standard library and MagicMock.

- *Writing integration tests*
- *Writing unit tests*

## Naming Conventions

Any function in either integration test files or unit test files that is doing the actual testing, such as functions containing assertions, must start with `test_`:

```
def test_user_present(self): ...
```

When functions in test files are not prepended with `test_`, the function acts as a normal, helper function and is not run as a test by the test suite.

## Submitting New Tests

Which branch of the Salt codebase should new tests be written against? The location of where new tests should be submitted depends largely on the reason you're writing the tests.

### Tests for New Features

If you are adding new functionality to Salt, please write the tests for this new feature in the same pull request as the new feature. New features should always be submitted to the `master` branch.

If you have already submitted the new feature, but did not write tests in the original pull request that has already been merged, please feel free to submit a new pull request containing tests. If the feature was recently added to Salt's `master` branch, then the tests should be added there as well. However, if the feature was added to `master` some time ago and is already present in one or more release branches, please refer to the [Tests for Entire Files or Functions](#) section below for more details about where to submit tests for functions or files that do not already have tests.

### Tests to Accompany a Bugfix

If you are writing tests for code that fixes a bug in Salt, tests will be required before merging the PR. A great option for most bugfixes is to adopt a TDD style approach:

- reproduce the issue
- write a test that exhibits the behavior
- write the bugfix

This helps ensure that known issues are not reintroduced into the codebase.

### Tests for Entire Files or Functions

Sometimes entire files in Salt are completely untested. If you are writing tests for a file that doesn't have any tests written for it, write your test against the earliest supported release branch that contains the file or function you're testing.

Once your tests are submitted in a pull request and is merged into the branch in question, the tests you wrote will be merged-forward by SaltStack core engineers and the new tests will propagate to the newer release branches. That way the tests you wrote will apply to all current and relevant release branches, and not just the `master` branch, for example. This methodology will help protect against regressions on older files in Salt's codebase.

There may be times when the tests you write against an older branch fail in the merge-forward process because functionality has changed in newer release branches. In these cases, a Salt core developer may reach out to you for advice on the tests in question if the path forward is unclear.

**Note:** If tests are written against a file in an older release branch and then merged forward, there may be new functionality in the file that is present in the new release branch that is untested. It would be wise to see if new functionality could use additional testing once the test file has propagated to newer release branches.

---

### Module/Global Level Variables

If you need access to module or global level variables, please use a pytest fixture. The use of module and global variables can introduce mutable global objects and increases processing time because all globals are evaluated when collecting tests. If there is a use case where you cannot use a fixture and you are using a type of string, integer, or tuple you can use global/module level variables. Any mutable types such as lists and dictionaries must use pytest fixtures. For an example, if all of your tests need access to a string variable:

```
F00 = "bar"

def test_foo_bar():
    assert F00 == "bar"

def test_foo_not():
    assert not F00 == "foo"
```

We recommend using a pytest fixture:

```
import pytest

@pytest.fixture()
def foo():
    return "bar"

def test_foo_bar(foo):
    assert foo == "bar"

def test_foo_not(foo):
    assert not foo == "foo"
```

If you need a class to mock something, it can be defined at the global scope, but it should only be initialized on the fixture:

```
class Foo:
    def __init__(self):
        self.bar = True

@pytest.fixture
def foo():
    return Foo()
```

## Test Helpers

Several Salt-specific helpers are available. A full list is available by inspecting functions exported under `tests/support/*.py`.

## Test Markers

`@pytest.mark.expensive_test` -- Designates a test which typically requires a relatively costly external resource, like a cloud virtual machine. This decorator is not normally used by developers outside of the Salt core team.

`@pytest.mark.destructive_test` -- Marks a test as potentially destructive. It will not be run unless the `--run-destructive` flag is expressly passed.

`@pytest.mark.requires_network` -- Requires a network connection for the test to operate successfully. If a network connection is not detected, the test will not run.

These are just a small preview of the supported marker. For a full listing, please run:

```
nox -e 'test-3(coverage=False)' -- --markers
```

## 32.25 Integration Tests

The Salt integration tests come with a number of classes and methods which allow for components to be easily tested. These classes are generally inherited from and provide specific methods for hooking into the running integration test environment created by the integration tests.

It is noteworthy that since integration tests validate against a running environment that they are generally the preferred means to write tests.

The integration system is all located under `tests/integration` in the Salt source tree. Each directory within `tests/integration` corresponds to a directory in Salt's tree structure. For example, the integration tests for the `test.py` Salt module that is located in `salt/modules` should also be named `test.py` and reside in `tests/integration/modules`.

### 32.25.1 Preparing to Write Integration Tests

This guide assumes that your Salt development environment is already configured and that you have a basic understanding of contributing to the Salt codebase. If you're unfamiliar with either of these topics, please refer to the [Installing Salt for Development](#) and the [Contributing](#) pages, respectively.

This documentation also assumes that you have an understanding of how to [run Salt's test suite](#), including running the [test subsections](#), and running a single integration test file, class, or individual test.

## 32.25.2 Best Practices

Integration tests should be written to the following specifications.

### What to Test?

Since integration tests are used to validate against a running Salt environment, integration tests should be written with the Salt components, and their various interactions, in mind.

- Isolate testing functionality. Don't rely on the pass or failure of other, separate tests.
- Individual tests should test against a single behavior.
- Since it occasionally takes some effort to "set up" an individual test, it may be necessary to call several functions within a single test. However, be sure that once the work has been done to set up a test, make sure you are clear about the functionality that is being tested.

### Naming Conventions

Test names and docstrings should indicate what functionality is being tested. Test functions are named `test_<fcn>_<test-name>` where `<fcn>` is the function being tested and `<test-name>` describes the behavior being tested.

In order for integration tests to get picked up during a run of the test suite, each individual test must be prepended with the `test_` naming syntax, as described above.

If a function does not start with `test_`, then the function acts as a "normal" function and is not considered a testing function. It will not be included in the test run or testing output.

### The `setUp` and `tearDown` Functions

There are two special functions that can be utilized in the integration side of Salt's test suite: `setUp` and `tearDown`. While these functions are not required in all test files, there are many examples in Salt's integration test suite illustrating the broad usefulness of each function.

The `setUp` function is used to set up any repetitive or useful tasks that the tests in a test class need before running. For example, any of the `mac_*` integration tests should only run on macOS machines. The `setUp` function can be used to test for the presence of the Darwin kernel. If the Darwin kernel is not present, then the test should be skipped.

```
def setUp(self):
    """
    Sets up test requirements
    """
    os_grain = self.run_function("grains.item", ["kernel"])
    if os_grain["kernel"] not in "Darwin":
        self.skipTest("Test not applicable to '{kernel}' kernel".format(**os_
↪grain))
```

The `setUp` function can be used for many things. The above code snippet is only one example. Another example might be to ensure that a particular setting is present before running tests that would require the setting.

The `tearDown` function is used to clean up after any tests. This function is useful for restoring any settings that might have been changed during the test run.

**Note:** The `setUp` and `tearDown` functions run before and after each test in the test class that the `setUp` and `tearDown` functions are defined.

---

Be sure to read the *Destructive vs Non-Destructive Tests* section when using any kind of destructive functions that might alter the system running the test suite in either the `setUp` or `tearDown` function definitions.

## Testing Order

The test functions within a test class do not run in the order they were defined, but instead run in lexicographical order.

Note that if any `setUp` or `tearDown` functions are defined in the class, those functions will run before (for `setUp`) or after (for `tearDown`) each test case.

### 32.25.3 Integration Classes

The integration classes are located in `tests/integration/__init__.py` and can be extended therein. There are four classes available to extend:

- *ModuleCase*
- *ShellCase*
- *SSHCASE*
- *SyndicCase*

#### ModuleCase

Used to define executions run via the master to minions and to call single modules and states. The available testing functions are:

#### `run_function`

Run a single salt function and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

#### `run_state`

Run the `state.single` command and return the state return structure.

### **minion\_run**

Run a single salt function on the 'minion' target and condition the return down to match the behavior of the raw function call.

### **ShellCase**

Shell out to the scripts which ship with Salt. The testing functions are:

#### **run\_cp**

Execute salt-cp. Pass in the argument string as it would be passed on the command line.

#### **run\_call**

Execute salt-call, pass in the argument string as it would be passed on the command line.

#### **run\_cloud**

Execute the salt-cloud command. Pass in the argument string as it would be passed on the command line.

#### **run\_key**

Execute the salt-key command. Pass in the argument string as it would be passed on the command line.

#### **run\_run**

Execute the salt-run command. Pass in the argument string as it would be passed on the command line.

#### **run\_run\_plus**

Execute the runner function the and return the return data and output in a dict

#### **run\_salt**

Execute the salt command. Pass in the argument string as it would be passed on the command line.

### run\_script

Execute a salt script with the given argument string.

### run\_ssh

Execute the salt-ssh. Pass in the argument string as it would be passed on the command line.

### SSHCase

Used to execute remote commands via salt-ssh. The available methods are as follows:

#### run\_function

Run a single salt function via salt-ssh and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

### SyndicCase

Used to execute remote commands via a syndic and is only used to verify the capabilities of the Salt Syndic. The available methods are as follows:

#### run\_function

Run a single salt function and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

## 32.25.4 Examples

The following sections define simple integration tests present in Salt's integration test suite for each type of testing class.

### Module Example via ModuleCase Class

Import the integration module, this module is already added to the python path by the test execution. Inherit from the `integration.ModuleCase` class.

Now the workhorse method `run_function` can be used to test a module:

```
import os
from tests.support.case import ModuleCase

class TestModuleTest(ModuleCase):
    """
    Validate the test module
    """
```

(continues on next page)

(continued from previous page)

```

def test_ping(self):
    """
    test.ping
    """
    self.assertTrue(self.run_function("test.ping"))

def test_echo(self):
    """
    test.echo
    """
    self.assertEqual(self.run_function("test.echo", ["text"]), "text")

```

The first example illustrates the testing master issuing a `test.ping` call to a testing minion. The test asserts that the minion returned with a `True` value to the master from the `test.ping` call.

The second example similarly verifies that the minion executed the `test.echo` command with the `text` argument. The `assertEqual` call maintains that the minion ran the function and returned the data as expected to the master.

### Shell Example via ShellCase

Validating the shell commands can be done via shell tests:

```

import sys
import shutil
import tempfile

from tests.support.case import ShellCase

class KeyTest(ShellCase):
    """
    Test salt-key script
    """

    _call_binary_ = "salt-key"

    def test_list(self):
        """
        test salt-key -L
        """
        data = self.run_key("-L")
        expect = [
            "Unaccepted Keys:",
            "Accepted Keys:",
            "minion",
            "sub_minion",
            "Rejected:",
            "",
        ]
        self.assertEqual(data, expect)

```

This example verifies that the `salt-key` command executes and returns as expected by making use of the `run_key` method.

## SSH Example via SSHCase

Testing salt-ssh functionality can be done using the SSHCase test class:

```
from tests.support.case import SSHCase

class SSHGrainsTest(SSHCase):
    """
    Test salt-ssh grains functionality
    Depend on proper environment set by integration.SSHCase class
    """

    def test_grains_id(self):
        """
        Test salt-ssh grains id work for localhost.
        """
        cmd = self.run_function("grains.get", ["id"])
        self.assertEqual(cmd, "localhost")
```

## Testing Event System via SaltMinionEventAssertsMixin

The fundamentally asynchronous nature of Salt makes testing the event system a challenge. The SaltMinionEventAssertsMixin provides a facility for testing that events were received on a minion event bus.

```
import salt.utils.event
from tests.support.mixins import SaltEventAssertsMixin

class TestEvent(SaltEventAssertsMixin):
    """
    Example test of firing an event and receiving it
    """

    def test_event(self):
        e = salt.utils.event.get_event(
            "minion", sock_dir=self.minion_opts["sock_dir"], opts=self.minion_
→opts
        )

        e.fire_event({"a": "b"}, "/test_event")

        self.assertMinionEventReceived({"a": "b"})
```

## Syndic Example via SyndicCase

Testing Salt's Syndic can be done via the SyndicCase test class:

```
from tests.support.case import SyndicCase

class TestSyndic(SyndicCase):
    """
    Validate the syndic interface by testing the test module
    """

    def test_ping(self):
        """
        test.ping
        """
        self.assertTrue(self.run_function("test.ping"))
```

This example verifies that a `test.ping` command is issued from the testing master, is passed through to the testing syndic, down to the minion, and back up again by using the `run_function` located within the `SyndicCase` test class.

### 32.25.5 Integration Test Files

Since using Salt largely involves configuring states, editing files, and changing system data, the integration test suite contains a directory named `files` to aid in testing functions that require files. Various Salt integration tests use these example files to test against instead of altering system files and data.

Each directory within `tests/integration/files` contain files that accomplish different tasks, based on the needs of the integration tests using those files. For example, `tests/integration/files/ssh` is used to bootstrap the test runner for salt-ssh testing, while `tests/integration/files/pillar` contains files storing data needed to test various pillar functions.

The `tests/integration/files` directory also includes an integration state tree. The integration state tree can be found at `tests/integration/files/file/base`.

The following example demonstrates how integration files can be used with `ModuleCase` to test states:

```
# Import python libs
from __future__ import absolute_import
import os
import shutil

# Import Salt Testing libs
from tests.support.case import ModuleCase
from tests.support.paths import FILES, TMP
from tests.support.mixins import SaltReturnAssertsMixin

# Import salt libs
import salt.utils.files

HFILE = os.path.join(TMP, "hosts")
```

(continues on next page)

(continued from previous page)

```

class HostTest(ModuleCase, SaltReturnAssertsMixin):
    """
    Validate the host state
    """

    def setUp(self):
        shutil.copyfile(os.path.join(FILE, "hosts"), HFILE)
        super(HostTest, self).setUp()

    def tearDown(self):
        if os.path.exists(HFILE):
            os.remove(HFILE)
        super(HostTest, self).tearDown()

    def test_present(self):
        """
        host.present
        """
        name = "spam.bacon"
        ip = "10.10.10.10"
        ret = self.run_state("host.present", name=name, ip=ip)
        self.assertSaltTrueReturn(ret)
        with salt.utils.files.fopen(HFILE) as fp_:
            output = fp_.read()
            self.assertIn("{0}\t\t{1}".format(ip, name), output)

```

To access the integration files, a variable named `FILES` points to the `tests/integration/files` directory. This is where the referenced `host.present` sls file resides.

In addition to the static files in the integration state tree, the location `TMP` can also be used to store temporary files that the test system will clean up when the execution finishes.

### 32.25.6 Destructive vs Non-Destructive Tests

Since Salt is used to change the settings and behavior of systems, one testing approach is to run tests that make actual changes to the underlying system. This is where the concept of destructive integration tests comes into play. Tests can be written to alter the system they are running on. This capability is what fills in the gap needed to properly test aspects of system management like package installation.

Any test that changes the underlying system in any way, such as creating or deleting users, installing packages, or changing permissions should include the `@destructive` decorator to signal system changes and should be written with care. System changes executed within a destructive test should also be restored once the related tests have completed. For example, if a new user is created to test a module, the same user should be removed after the test is completed to maintain system integrity.

To write a destructive test, import, and use the `destructiveTest` decorator for the test method:

```

from tests.support.case import ModuleCase
from tests.support.helpers import destructiveTest, skip_if_not_root

class DestructiveExampleModuleTest(ModuleCase):
    """

```

(continues on next page)

(continued from previous page)

```

Demonstrate a destructive test
"""

@destructiveTest
@skip_if_not_root
def test_user_not_present(self):
    """
    This is a DESTRUCTIVE TEST it creates a new user on the minion.
    And then destroys that user.
    """
    ret = self.run_state("user.present", name="salt_test")
    self.assertSaltTrueReturn(ret)
    ret = self.run_state("user.absent", name="salt_test")
    self.assertSaltTrueReturn(ret)

```

### 32.25.7 Cloud Provider Tests

Cloud provider integration tests are used to assess *Salt-Cloud*'s ability to create and destroy cloud instances for various supported cloud providers. Cloud provider tests inherit from the ShellCase Integration Class.

Any new cloud provider test files should be added to the `tests/integration/cloud/providers/` directory. Each cloud provider test file also requires a sample cloud profile and cloud provider configuration file in the integration test file directory located at `tests/integration/files/conf/cloud.*.d/`.

The following is an example of the default profile configuration file for Digital Ocean, located at: `tests/integration/files/conf/cloud.profiles.d/digitalocean.conf`:

```

digitalocean-test:
  provider: digitalocean-config
  image: Ubuntu 14.04 x64
  size: 512MB

```

Each cloud provider requires different configuration credentials. Therefore, sensitive information such as API keys or passwords should be omitted from the cloud provider configuration file and replaced with an empty string. The necessary credentials can be provided by the user by editing the provider configuration file before running the tests.

The following is an example of the default provider configuration file for Digital Ocean, located at: `tests/integration/files/conf/cloud.providers.d/digitalocean.conf`:

```

digitalocean-config:
  driver: digitalocean
  client_key: ''
  api_key: ''
  location: New York 1

```

In addition to providing the necessary cloud profile and provider files in the integration test suite file structure, appropriate checks for if the configuration files exist and contain valid information are also required in the test class's `setUp` function:

```

from tests.support.case import ShellCase
from tests.support.paths import FILES

```

(continues on next page)

(continued from previous page)

```

class LinodeTest(ShellCase):
    """
    Integration tests for the Linode cloud provider in Salt-Cloud
    """

    def setUp(self):
        """
        Sets up the test requirements
        """
        super(LinodeTest, self).setUp()

        # check if appropriate cloud provider and profile files are present
        profile_str = "linode-config:"
        provider = "linode"
        providers = self.run_cloud("--list-providers")
        if profile_str not in providers:
            self.skipTest(
                "Configuration file for {0} was not found. Check {0}.conf
→files "
                "in tests/integration/files/conf/cloud.*.d/ to run these
→tests.".format(
                    provider
                )
            )

        # check if apikey and password are present
        path = os.path.join(FILE_PATH, "conf", "cloud.providers.d", provider + ".
→conf")
        config = cloud_providers_config(path)
        api = config["linode-config"]["linode"]["apikey"]
        password = config["linode-config"]["linode"]["password"]
        if api == "" or password == "":
            self.skipTest(
                "An api key and password must be provided to run these tests.
→Check "
                "tests/integration/files/conf/cloud.providers.d/{0}.conf".
→format(
                    provider
                )
            )

```

Repeatedly creating and destroying instances on cloud providers can be costly. Therefore, cloud provider tests are off by default and do not run automatically. To run the cloud provider tests, the `--cloud-provider-tests` flag must be provided:

```
./tests/runtests.py --cloud-provider-tests
```

Since cloud provider tests do not run automatically, all provider tests must be preceded with the `@expensiveTest` decorator. The expensive test decorator is necessary because it signals to the test suite that the `--cloud-provider-tests` flag is required to run the cloud provider tests.

To write a cloud provider test, import, and use the `expensiveTest` decorator for the test function:

```

from tests.support.helpers import expensiveTest

@expensiveTest
def test_instance(self):
    """
    Test creating an instance on Linode
    """
    name = "linode-testing"

    # create the instance
    instance = self.run_cloud("-p linode-test {0}".format(name))
    str = "          {0}".format(name)

    # check if instance with salt installed returned as expected
    try:
        self.assertIn(str, instance)
    except AssertionError:
        self.run_cloud("-d {0} --assume-yes".format(name))
        raise

    # delete the instance
    delete = self.run_cloud("-d {0} --assume-yes".format(name))
    str = "          True"
    try:
        self.assertIn(str, delete)
    except AssertionError:
        raise

```

## 32.25.8 Adding New Directories

If the corresponding Salt directory does not exist within `tests/integration`, the new directory must be created along with the appropriate test file to maintain Salt's testing directory structure.

In order for Salt's test suite to recognize tests within the newly created directory, options to run the new integration tests must be added to `tests/runtests.py`. Examples of the necessary options that must be added can be found here: [tests/runtests.py](#). The functions that need to be edited are `setup_additional_options`, `validate_options`, and `run_integration_tests`.

## 32.26 Writing Unit Tests

### 32.26.1 Introduction

Like many software projects, Salt has two broad-based testing approaches -- integration testing and unit testing. While integration testing focuses on the interaction between components in a sandboxed environment, unit testing focuses on the singular implementation of individual functions.

Unit tests should be used specifically to test a function's logic. Unit tests rely on mocking external resources.

While unit tests are good for ensuring consistent results, they are most useful when they do not require more than a few mocks. Effort should be made to mock as many external resources as possible. This effort is encouraged, but

not required. Sometimes the isolation provided by completely mocking the external dependencies is not worth the effort of mocking those dependencies.

In these cases, requiring an external library to be installed on the system before running the test file is a useful way to strike this balance. For example, the unit tests for the MySQL execution module require the presence of the MySQL python bindings on the system running the test file before proceeding to run the tests.

Overly detailed mocking can also result in decreased test readability and brittleness as the tests are more likely to fail when the code or its dependencies legitimately change. In these cases, it is better to add dependencies to the test runner dependency state.

### 32.26.2 Preparing to Write a Unit Test

This guide assumes that your Salt development environment is already configured and that you have a basic understanding of contributing to the Salt codebase. If you're unfamiliar with either of these topics, please refer to the *Installing Salt for Development* and the *Contributing* pages, respectively.

This documentation also assumes that you have an understanding of how to *run Salt's test suite*, including running the *unit test subsection*, running the unit tests *without testing daemons* to speed up development wait times, and running a unit test file, class, or individual test.

### 32.26.3 Best Practices

Unit tests should be written to the following specifications.

#### What to Test?

Since unit testing focuses on the singular implementation of individual functions, unit tests should be used specifically to test a function's logic. The following guidelines should be followed when writing unit tests for Salt's test suite:

- Each `raise` and `return` statement needs to be independently tested.
- Isolate testing functionality. Don't rely on the pass or failure of other, separate tests.
- Test functions should contain only one assertion, at most, multiple assertions can be made, but against the same outcome.
- Many Salt execution modules are merely wrappers for distribution-specific functionality. If there isn't any logic present in a simple execution module, consider writing an *integration test* instead of heavily mocking a call to an external dependency.

#### Mocking Test Data

A reasonable effort needs to be made to mock external resources used in the code being tested, such as APIs, function calls, external data either globally available or passed in through function arguments, file data, etc.

- Test functions should contain only one assertion and all necessary mock code and data for that assertion.
- External resources should be mocked in order to "block all of the exits". If a test function fails because something in an external library wasn't mocked properly (or at all), this test is not addressing all of the "exits" a function may experience. We want the Salt code and logic to be tested, specifically.
- Consider the fragility and longevity of a test. If the test is so tightly coupled to the code being tested, this makes a test unnecessarily fragile.

- Make sure you are not mocking the function to be tested so vigorously that the test return merely tests the mocked output. The test should always be testing a function's logic.

## Mocking Loader Modules

Salt loader modules use a series of globally available dunder variables, `__salt__`, `__opts__`, `__pillar__`, etc. To facilitate testing these modules `pytest-salt-factories` has a plugin which will prepare the module globals by patching and mocking the dunder variables prior to running each test, as long as the test module defines a fixture named `configure_loader_modules`. Check out the code for the `pytest-salt-factories` plugin to know how its internals work.

The reason for the existence of this plugin is because historically one would add these dunder variables directly on the imported module. This, however, introduces unexpected behavior when running the full test suite since those attributes would not be removed once we were done testing the module and would therefore leak to other modules being tested with unpredictable results. This is the kind of work that should be deferred to mock, and that's exactly what this plugin provides.

As an example, if one needs to specify some options which should be available to the module being tested one should do:

```
import pytest
import salt.modules.somemodule as somemodule

@pytest.fixture
def configure_loader_modules():
    """
    This fixture should return a dictionary which is what's going to be used
    ↪to
    patch and mock Salt's loader
    """
    return {somemodule: {"__opts__": {"test": True}}}
```

Consider this more extensive example from `tests/pytests/unit/beacons/test_sensehat.py`:

```
import pytest
import salt.beacons.sensehat as sensehat
from tests.support.mock import MagicMock

@pytest.fixture
def configure_loader_modules():
    return {
        sensehat: {
            "__salt__": {
                "sensehat.get_humidity": MagicMock(return_value=80),
                "sensehat.get_temperature": MagicMock(return_value=30),
                "sensehat.get_pressure": MagicMock(return_value=1500),
            },
        },
    }

def test_non_list_config():
```

(continues on next page)

(continued from previous page)

```
config = {}

ret = sensehat.validate(config)

assert ret == (False, "Configuration for sensehat beacon must be a list.")

def test_empty_config():
    config = [{}]

    ret = sensehat.validate(config)

    assert ret == (False, "Configuration for sensehat beacon requires sensors.
    ↪")

def test_sensehat_humidity_match():

    config = [{"sensors": {"humidity": "70%"}}]

    ret = sensehat.validate(config)
    assert ret == (True, "Valid beacon configuration")

    ret = sensehat.beacon(config)
    assert ret == [{"tag": "sensehat/humidity", "humidity": 80}]

def test_sensehat_temperature_match():

    config = [{"sensors": {"temperature": 20}}]

    ret = sensehat.validate(config)
    assert ret == (True, "Valid beacon configuration")

    ret = sensehat.beacon(config)
    assert ret == [{"tag": "sensehat/temperature", "temperature": 30}]

def test_sensehat_temperature_match_range():

    config = [{"sensors": {"temperature": [20, 29]}}]

    ret = sensehat.validate(config)
    assert ret == (True, "Valid beacon configuration")

    ret = sensehat.beacon(config)
    assert ret == [{"tag": "sensehat/temperature", "temperature": 30}]

def test_sensehat_pressure_match():

    config = [{"sensors": {"pressure": "1400"}}]
```

(continues on next page)

(continued from previous page)

```
ret = sensehat.validate(config)
assert ret == (True, "Valid beacon configuration")

ret = sensehat.beacon(config)
assert ret == [{"tag": "sensehat/pressure", "pressure": 1500}]

def test_sensehat_no_match():

    config = [{"sensors": {"pressure": "1600"}}]

    ret = sensehat.validate(config)
    assert ret == (True, "Valid beacon configuration")

    ret = sensehat.beacon(config)
    assert ret == []
```

What happens in the above example is we mock several calls of the `sensehat` module to return known expected values to assert against.

## Mocking Filehandles

---

**Note:** This documentation applies to the 2018.3 release cycle and newer. The extended functionality for `mock_open` described below does not exist in the 2017.7 and older release branches.

---

Opening files in Salt is done using `salt.utils.files.fopen()`. When testing code that reads from files, the `mock_open` helper can be used to mock filehandles. Note that is not the same `mock_open` as `unittest.mock.mock_open()` from the Python standard library, but rather a separate implementation which has additional functionality.

```
from tests.support.mock import patch, mock_open

import salt.modules.mymod as mymod

def test_something():
    fopen_mock = mock_open(read_data="foo\nbar\nbaz\n")
    with patch("salt.utils.files.fopen", fopen_mock):
        result = mymod.myfunc()
        assert result is True
```

This will force any filehandle opened to mimic a filehandle which, when read, produces the specified contents.

---

### Important: String Types

When configuring your `read_data`, make sure that you are using bytestrings (e.g. `b"foo\nbar\nbaz\n"`) when the code you are testing is opening a file for binary reading, otherwise the tests will fail. The mocked filehandles produced by `mock_open` will raise a `TypeError` if you attempt to read a bytestring when opening for non-binary reading, and similarly will not let you read a string when opening a file for binary reading. They will also not permit

bytestrings to be "written" if the mocked filehandle was opened for non-binary writing, and vice-versa when opened for non-binary writing. These enhancements force test writers to write more accurate tests.

## More Complex Scenarios

### Multiple File Paths

What happens when the code being tested reads from more than one file? For those cases, you can pass `read_data` as a dictionary:

```
import textwrap

from tests.support.mock import patch, mock_open

import salt.modules.mymod as mymod

def test_something():
    contents = {
        "/etc/foo.conf": textwrap.dedent(
            """\
            foo
            bar
            baz
            """
        ),
        "/etc/b*.conf": textwrap.dedent(
            """\
            one
            two
            three
            """
        ),
    }
    fopen_mock = mock_open(read_data=contents)
    with patch("salt.utils.files.fopen", fopen_mock):
        result = mymod.myfunc()
        assert result is True
```

This would make `salt.utils.files.fopen()` produce filehandles with different contents depending on which file was being opened by the code being tested. `/etc/foo.conf` and any file matching the pattern `/etc/b*.conf` would work, while opening any other path would result in a `FileNotFoundError` being raised.

Since file patterns are supported, it is possible to use a pattern of `'*'` to define a fallback if no other patterns match the filename being opened. The below two `mock_open` calls would produce identical results:

```
mock_open(read_data="foo\n")
mock_open(read_data={"*": "foo\n"})
```

**Note:** Take care when specifying the `read_data` as a dictionary, in cases where the patterns overlap (e.g. when both `/etc/b*.conf` and `/etc/bar.conf` are in the `read_data`). Dictionary iteration order will determine which pattern is attempted first, second, etc., with the exception of `*` which is used when no other pattern matches.

If your test case calls for specifying overlapping patterns, and you are not running Python 3.6 or newer, then an `OrderedDict` can be used to ensure matching is handled in the desired way:

```
contents = OrderedDict()
contents["/etc/bar.conf"] = "foo\nbar\nbaz\n"
contents["/etc/b*.conf"] = IOError(errno.EACCES, "Permission denied")
contents["*"] = 'This is a fallback for files not beginning with "/etc/b"\n'
fopen_mock = mock_open(read_data=contents)
```

## Raising Exceptions

Instead of a string, an exception can also be used as the `read_data`:

```
import errno

from tests.support.mock import patch, mock_open

import salt.modules.mymod as mymod

def test_something():
    exc = IOError(errno.EACCES, "Permission denied")
    fopen_mock = mock_open(read_data=exc)
    with patch("salt.utils.files.fopen", fopen_mock):
        mymod.myfunc()
```

The above example would raise the specified exception when any file is opened. The expectation would be that `mymod.myfunc()` would gracefully handle the `IOError`, so a failure to do that would result in it being raised and causing the test to fail.

## Multiple File Contents

For cases in which a file is being read more than once, and it is necessary to test a function's behavior based on what the file looks like the second (or third, etc.) time it is read, just specify the contents for that file as a list. Each time the file is opened, `mock_open` will cycle through the list and produce a mocked filehandle with the specified contents. For example:

```
import errno
import textwrap

from tests.support.mock import patch, mock_open

import salt.modules.mymod as mymod

def test_something():
    contents = {
        "/etc/foo.conf": [
            textwrap.dedent(
                """\
```

(continues on next page)

(continued from previous page)

```

        foo
        bar
        """
    ),
    textwrap.dedent(
        """\
        foo
        bar
        baz
        """
    ),
],
"/etc/b*.conf": [
    IOError(errno.ENOENT, "No such file or directory"),
    textwrap.dedent(
        """\
        one
        two
        three
        """
    ),
],
}
fopen_mock = mock_open(read_data=contents)
with patch("salt.utils.files.fopen", fopen_mock):
    result = mymod.myfunc()
    assert result is True

```

Using this example, the first time `/etc/foo.conf` is opened, it will simulate a file with the first string in the list as its contents, while the second time it is opened, the simulated file's contents will be the second string in the list.

If no more items remain in the list, then attempting to open the file will raise a `RuntimeError`. In the example above, if `/etc/foo.conf` were to be opened a third time, a `RuntimeError` would be raised.

Note that exceptions can also be mixed in with strings when using this technique. In the above example, if `/etc/bar.conf` were to be opened twice, the first time would simulate the file not existing, while the second time would simulate a file with string defined in the second element of the list.

---

**Note:** Notice that the second path in the `contents` dictionary above (`/etc/b*.conf`) contains an asterisk. The items in the list are cycled through for each match of a given pattern (*not* separately for each individual file path), so this means that only two files matching that pattern could be opened before the next one would raise a `RuntimeError`.

---

## Accessing the Mocked Filehandles in a Test

**Note:** The code for the `MockOpen`, `MockCall`, and `MockFH` classes (referenced below) can be found in `tests/support/mock.py`. There are extensive unit tests for them located in `tests/unit/test_mock.py`.

The above examples simply show how to mock `salt.utils.files.fopen()` to simulate files with the contents you desire, but you can also access the mocked filehandles (and more), and use them to craft assertions in your tests. To do so, just add an `as` clause to the end of the patch statement:

```
fopen_mock = mock_open(read_data="foo\nbar\nbaz\n")
with patch("salt.utils.files.fopen", fopen_mock) as m_open:
    # do testing here
    ...
    ...
```

When doing this, `m_open` will be a `MockOpen` instance. It will contain several useful attributes:

- **read\_data** - A dictionary containing the `read_data` passed when `mock_open` was invoked. In the event that *multiple file paths* are not used, then this will be a dictionary mapping \* to the `read_data` passed to `mock_open`.
- **call\_count** - An integer representing how many times `salt.utils.files.fopen()` was called to open a file.
- **calls** - A list of `MockCall` objects. A `MockCall` object is a simple class which stores the arguments passed to it, making the positional arguments available via its `args` attribute, and the keyword arguments available via its `kwargs` attribute.

```
from tests.support.mock import patch, mock_open, MockCall

import salt.modules.mymod as mymod

def test_something():
    with patch("salt.utils.files.fopen", mock_open(read_data=b"foo\n")) as m_open:
        mymod.myfunc()
        # Assert that only two opens attempted
        assert m_open.call_count == 2
        # Assert that only /etc/foo.conf was opened
        assert all(call.args[0] == "/etc/foo.conf" for call in m_open.calls)
        # Asser that the first open was for binary read, and the
        # second was for binary write.
        assert m_open.calls == [
            MockCall("/etc/foo.conf", "rb"),
            MockCall("/etc/foo.conf", "wb"),
        ]
```

Note that `MockCall` is imported from `tests.support.mock` in the above example. Also, the second assert above is redundant since it is covered in the final assert, but both are included simply as an example.

- **filehandles** - A dictionary mapping the unique file paths opened, to lists of `MockFH` objects. Each open creates a unique `MockFH` object. Each `MockFH` object itself has a number of useful attributes:

- `filename` - The path to the file which was opened using `salt.utils.files.fopen()`
- `call` - A `MockCall` object representing the arguments passed to `salt.utils.files.fopen()`. Note that this `MockCall` is also available in the parent `MockOpen` instance's `calls` list.
- The following methods are mocked using `unittest.mock.Mock` objects, and `Mock`'s built-in asserts (as well as the call data) can be used as you would with any other `Mock` object:
  - \* `.read()`
  - \* `.readlines()`
  - \* `.readline()`
  - \* `.close()`
  - \* `.write()`
  - \* `.writelines()`
  - \* `.seek()`
- The read functions (`.read()`, `.readlines()`, `.readline()`) all work as expected, as does iterating through the file line by line (i.e. `for line in fh:`).
- The `.tell()` method is also implemented in such a way that it updates after each time the mocked filehandle is read, and will report the correct position. The one caveat here is that `.seek()` doesn't actually work (it's simply mocked), and will not change the position. Additionally, neither `.write()` or `.writelines()` will modify the mocked filehandle's contents.
- The attributes `.write_calls` and `.writelines_calls` (no parenthesis) are available as shorthands and correspond to lists containing the contents passed for all calls to `.write()` and `.writelines()`, respectively.

## Examples

```
with patch("salt.utils.files.fopen", mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
    # Check that only the expected file was opened, and that it was opened
    # only once.
    assert m_open.call_count == 1
    assert list(m_open.filehandles) == ["/etc/foo.conf"]
    # "opens" will be a list of all the mocked filehandles opened
    opens = m_open.filehandles["/etc/foo.conf"]
    # Check that we wrote the expected lines ("expected" here is assumed to
    # be a list of strings)
    assert opens[0].write_calls == expected
```

```
with patch("salt.utils.files.fopen", mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
    # Check that .readlines() was called (remember, it's a Mock)
    m_open.filehandles["/etc/foo.conf"][0].readlines.assert_called()
```

```
with patch("salt.utils.files.fopen", mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
```

(continues on next page)

(continued from previous page)

```
# Check that we read the file and also wrote to it
m_open.filehandles["/etc/foo.conf"][0].read.assert_called_once()
m_open.filehandles["/etc/foo.conf"][1].writelines.assert_called_once()
```

## Naming Conventions

Test names and docstrings should indicate what functionality is being tested. Test functions are named `test_<fcn>_<test-name>` where `<fcn>` is the function being tested and `<test-name>` describes the raise or return being tested.

Unit tests for `salt/.../<module>.py` are contained in a file called `tests/pytests/unit/.../test_<module>.py`, e.g. the tests for `salt/modules/alternatives.py` are in `tests/pytests/unit/modules/test_alternatives.py`.

In order for unit tests to get picked up during a run of the unit test suite, each unit test file must be prefixed with `test_` and each individual test must also be prefixed with the `test_` naming syntax, as described above.

If a function does not start with `test_`, then the function acts as a "normal" function and is not considered a testing function. It will not be included in the test run or testing output. The same principle applies to unit test files that do not have the `test_*.py` naming syntax. This test file naming convention is how the test runner recognizes that a test file contains tests.

## Imports

Most commonly, the following imports are necessary to create a unit test:

```
import pytest
```

If you need mock support to your tests, please also import:

```
from tests.support.mock import MagicMock, patch, call
```

### 32.26.4 Evaluating Truth

A longer discussion on the types of assertions one can make can be found by reading [PyTest's documentation on assertions](#).

### 32.26.5 Tests Using Mock Objects

In many cases, the purpose of a Salt module is to interact with some external system, whether it be to control a database, manipulate files on a filesystem or something else. In these varied cases, it's necessary to design a unit test which can test the function whilst replacing functions which might actually call out to external systems. One might think of this as "blocking the exits" for code under tests and redirecting the calls to external systems with our own code which produces known results during the duration of the test.

To achieve this behavior, Salt makes heavy use of the [MagicMock package](#).

To understand how one might integrate Mock into writing a unit test for Salt, let's imagine a scenario in which we're testing an execution module that's designed to operate on a database. Furthermore, let's imagine two separate methods, here presented in psuedo-code in an imaginary execution module called 'db.py'.

```
def create_user(username):
    qry = "CREATE USER {0}".format(username)
    execute_query(qry)

def execute_query(qry):
    # Connect to a database and actually do the query...
    ...
```

Here, let's imagine that we want to create a unit test for the `create_user` function. In doing so, we want to avoid any calls out to an external system and so while we are running our unit tests, we want to replace the actual interaction with a database with a function that can capture the parameters sent to it and return pre-defined values. Therefore, our task is clear -- to write a unit test which tests the functionality of `create_user` while also replacing `'execute_query'` with a mocked function.

To begin, we set up the skeleton of our test much like we did before, but with additional imports for `MagicMock`:

```
from salt.modules import db
from tests.support.mock import MagicMock, patch, call

def test_create_user():
    """
    Test creating a user
    """
    # First, we replace 'execute_query' with our own mock function
    with patch.object(db, "execute_query", MagicMock()) as db_exq:

        # Now that the exits are blocked, we can run the function under test.
        db.create_user("testuser")

        # We could now query our mock object to see which calls were made
        # to it.
        ## print db_exq.mock_calls

        # Construct a call object that simulates the way we expected
        # execute_query to have been called.
        expected_call = call("CREATE USER testuser")

        # Compare the expected call with the list of actual calls. The
        # test will succeed or fail depending on the output of this
        # assertion.
        db_exq.assert_has_calls(expected_call)
```

### 32.26.6 Modifying `__salt__` In Place

At times, it becomes necessary to make modifications to a module's view of functions in its own `__salt__` dictionary. Luckily, this process is quite easy.

Below is an example that uses MagicMock's `patch` functionality to insert a function into `__salt__` that's actually a MagicMock instance.

```
import pytest
import salt.modules.my_module as my_module

@pytest.fixture
def configure_loader_modules():
    """
    This fixture should return a dictionary which is what's going to be used
    →to
    patch and mock Salt's loader
    """
    return {my_module: {}}

def show_patch(self):
    with patch.dict(my_module.__salt__, {"function.to_replace": MagicMock()}):
        # From this scope, carry on with testing, with a modified __salt__!
        ...
```

### 32.26.7 A Simple Example

Let's assume that we're testing a very basic function in an imaginary Salt execution module. Given a module called `fib.py` that has a function called `calculate(num_of_results)`, which given a `num_of_results`, produces a list of sequential Fibonacci numbers of that length.

A unit test to test this function might be commonly placed in a file called `tests/pytests/unit/modules/test_fib.py`. The convention is to place unit tests for Salt execution modules in `test/pytests/unit/modules/` and to name the tests module prefixed with `test_*.py`.

Tests are grouped around test cases, which are logically grouped sets of tests against a piece of functionality in the tested software. To return to our example, here's how we might write the skeleton for testing `fib.py`:

```
import salt.modules.fib as fib

def test_fib():
    """
    To create a unit test, we should prefix the name with `test_` so
    that it's recognized by the test runner.
    """
    fib_five = (0, 1, 1, 2, 3)
    assert fib.calculate(5) == fib_five
```

At this point, the test can now be run, either individually or as a part of a full run of the test runner. To ease development, a single test can be executed:

```
nox -e 'test-3(coverage=False)' -- -v tests/pytests/unit/modules/test_fib.py
```

This will report the status of the test: success, failure, or error. The `-v` flag increases output verbosity.

To review the results of a particular run, take a note of the log location given in the output for each test run:

```
...etc... --log-file=artifacts/logs/runtests-20210106103414.685791.log ...etc.
↪...
```

### 32.26.8 A More Complete Example

Consider the following function from `salt/modules/linux_sysctl.py`.

```
def get(name):
    """
    Return a single sysctl parameter for this minion

    CLI Example:

    .. code-block:: bash

        salt '*' sysctl.get net.ipv4.ip_forward
    """
    cmd = "sysctl -n {}".format(name)
    out = __salt__["cmd.run"](cmd, python_shell=False)
    return out
```

This function is very simple, comprising only four source lines of code and having only one return statement, so we know only one test is needed. There are also two inputs to the function, the `name` function argument and the call to `__salt__['cmd.run']()`, both of which need to be appropriately mocked.

Mocking a function parameter is straightforward, whereas mocking a function call will require, in this case, the use of `MagicMock`. For added isolation, we will also redefine the `__salt__` dictionary such that it only contains `'cmd.run'`.

```
import pytest
import salt.modules.linux_sysictl as linux_sysctl
from tests.support.mock import MagicMock, patch

@pytest.fixture
def configure_loader_modules():
    return {linux_sysctl: {}}

def test_get():
    """
    Tests the return of get function
    """
    mock_cmd = MagicMock(return_value=1)
    with patch.dict(linux_sysctl.__salt__, {"cmd.run": mock_cmd}):
        assert linux_sysctl.get("net.ipv4.ip_forward") == 1
```

Since `get()` has only one raise or return statement and that statement is a success condition, the test function is simply named `test_get()`. As described, the single function call parameter, `name` is mocked with `net.ipv4.ip_forward` and `__salt__['cmd.run']` is replaced by a `MagicMock` function object. We are only interested in the return value of `__salt__['cmd.run']`, which `MagicMock` allows us by specifying via `return_value=1`. Finally, the test itself tests for equality between the return value of `get()` and the expected return of 1. This assertion is expected to succeed because `get()` will determine its return value from `__salt__['cmd.run']`, which we have mocked to return 1.

### 32.26.9 A Complex Example

Now consider the `assign()` function from the same `salt/modules/linux_sysctl.py` source file.

```
def assign(name, value):
    """
    Assign a single sysctl parameter for this minion

    CLI Example:

    .. code-block:: bash

        salt '*' sysctl.assign net.ipv4.ip_forward 1
    """
    value = str(value)

    tran_tab = name.translate("".maketrans("./", "/."))

    sysctl_file = "/proc/sys/{}".format(tran_tab)
    if not os.path.exists(sysctl_file):
        raise CommandExecutionError("sysctl {} does not exist".format(name))

    ret = {}
    cmd = 'sysctl -w {}="{}"'.format(name, value)
    data = __salt__["cmd.run_all"](cmd, python_shell=False)
    out = data["stdout"]
    err = data["stderr"]

    # Example:
    # # sysctl -w net.ipv4.tcp_rmem="4096 87380 16777216"
    # net.ipv4.tcp_rmem = 4096 87380 16777216
    regex = re.compile(r"^\{\}\s+=\s+\{\}$".format(re.escape(name), re.
    ↪escape(value)))

    if not regex.match(out) or "Invalid argument" in str(err):
        if data["retcode"] != 0 and err:
            error = err
        else:
            error = out
        raise CommandExecutionError("sysctl -w failed: {}".format(error))
    new_name, new_value = out.split(" = ", 1)
    ret[new_name] = new_value
    return ret
```

This function contains two raise statements and one return statement, so we know that we will need (at least) three

tests. It has two function arguments and many references to non-builtin functions. In the tests below you will see that MagicMock's `patch()` method may be used as a context manager or as a decorator. When patching the salt dundered however, please use the context manager approach.

There are three test functions, one for each raise and return statement in the source function. Each function is self-contained and contains all and only the mocks and data needed to test the raise or return statement it is concerned with.

```
import pytest
import salt.modules.linux_sysctl as linux_sysctl
from salt.exceptions import CommandExecutionError
from tests.support.mock import MagicMock, patch

@pytest.fixture
def configure_loader_modules():
    return {linux_sysctl: {}}

def test_assign_proc_sys_failed():
    """
    Tests if /proc/sys/<kernel-subsystem> exists or not
    """
    with patch("os.path.exists", MagicMock(return_value=False)):
        cmd = {
            "pid": 1337,
            "retcode": 0,
            "stderr": "",
            "stdout": "net.ipv4.ip_forward = 1",
        }
        mock_cmd = MagicMock(return_value=cmd)
        with patch.dict(linux_sysctl.__salt__, {"cmd.run_all": mock_cmd}):
            with pytest.raises(CommandExecutionError):
                linux_sysctl.assign("net.ipv4.ip_forward", 1)

def test_assign_cmd_failed():
    """
    Tests if the assignment was successful or not
    """
    with patch("os.path.exists", MagicMock(return_value=True)):
        cmd = {
            "pid": 1337,
            "retcode": 0,
            "stderr": 'sysctl: setting key "net.ipv4.ip_forward": Invalid
→argument',
            "stdout": "net.ipv4.ip_forward = backward",
        }
        mock_cmd = MagicMock(return_value=cmd)
        with patch.dict(linux_sysctl.__salt__, {"cmd.run_all": mock_cmd}):
            with pytest.raises(CommandExecutionError):
                linux_sysctl.assign("net.ipv4.ip_forward", "backward")
```

(continues on next page)

(continued from previous page)

```
def test_assign_success():
    """
    Tests the return of successful assign function
    """
    with patch("os.path.exists", MagicMock(return_value=True)):
        cmd = {
            "pid": 1337,
            "retcode": 0,
            "stderr": "",
            "stdout": "net.ipv4.ip_forward = 1",
        }
        ret = {"net.ipv4.ip_forward": "1"}
        mock_cmd = MagicMock(return_value=cmd)
        with patch.dict(linux_sysctl.__salt__, {"cmd.run_all": mock_cmd}):
            assert linux_sysctl.assign("net.ipv4.ip_forward", 1) == ret
```

## 32.27 SaltStack Git Policy

The SaltStack team follows a git policy to maintain stability and consistency with the repository.

The git policy has been developed to encourage contributions and make contributing to Salt as easy as possible. Code contributors to SaltStack projects DO NOT NEED TO READ THIS DOCUMENT, because all contributions come into SaltStack via a single gateway to make it as easy as possible for contributors to give us code.

The primary rule of git management in SaltStack is to make life easy on contributors and developers to send in code. Simplicity is always a goal!

### 32.27.1 New Code Entry

All new SaltStack code should be submitted against `master`.

### 32.27.2 Release Branching

SaltStack maintains two types of releases, `Feature Releases` and `Point Releases` (also commonly referred to as `Bugfix Releases`). A feature release is managed by incrementing the first or second release point number, so 2015.5.5 -> 2015.8.0 signifies a feature release and 2015.8.0 -> 2015.8.1 signifies a point release.

#### Feature Release Branching

Each feature release is maintained in a dedicated git branch derived from the last applicable release commit on `develop`. All file changes relevant to the feature release will be completed in the `master` branch prior to the creation of the feature release branch. The feature release branch will be named after the relevant numbers to the feature release, which constitute the first two numbers. This means that the release branch for the 2015.8.0 series is named 2015.8.

A feature release branch is created with the following command:

```
# git checkout -b 2015.8 # From the master branch
# git push origin 2015.8
```

## Point Releases

As documented in [SEP 14](#), point releases should be rare.

## 32.28 Salt Conventions

### 32.28.1 Writing Salt documentation

For the latest information about writing Salt documentation, see:

- [Salt docs contributing guide](#)
- [Salt rST guide](#)
- [Salt style guide](#)

### 32.28.2 Salt Formulas

Formulas are pre-written Salt States. They are as open-ended as Salt States themselves and can be used for tasks such as installing a package, configuring, and starting a service, setting up users or permissions, and many other common tasks.

All official Salt Formulas are found as separate Git repositories in the "saltstack-formulas" organization on GitHub:

<https://github.com/saltstack-formulas>

As a simple example, to install the popular Apache web server (using the normal defaults for the underlying distro) simply include the `url` `apache-formula` from a top file:

```
base:
  'web*':
    - apache
```

## Installation

Each Salt Formula is an individual Git repository designed as a drop-in addition to an existing Salt State tree. Formulas can be installed in the following ways.

### Adding a Formula as a GitFS remote

One design goal of Salt's GitFS fileserver backend was to facilitate reusable States. GitFS is a quick and natural way to use Formulas.

1. *Install any necessary dependencies and configure GitFS.*
2. Add one or more Formula repository URLs as remotes in the `gitfs_remotes` list in the Salt Master configuration file:

```
gitfs_remotes:
  - https://github.com/saltstack-formulas/apache-formula
  - https://github.com/saltstack-formulas/memcached-formula
```

We strongly recommend forking a formula repository into your own GitHub account to avoid unexpected changes to your infrastructure.

Many Salt Formulas are highly active repositories so pull new changes with care. Plus any additions you make to your fork can be easily sent back upstream with a quick pull request!

3. Restart the Salt master.

Beginning with the 2018.3.0 release, using formulas with GitFS is now much more convenient for deployments which use many different fileserver environments (i.e. saltenvs). Using the `all_saltenvs` parameter, files from a single git branch/tag will appear in all environments. See [here](#) for more information on this feature.

### Adding a Formula directory manually

Formulas are simply directories that can be copied onto the local file system by using Git to clone the repository or by downloading and expanding a tarball or zip file of the repository. The directory structure is designed to work with `file_roots` in the Salt master configuration.

1. Clone or download the repository into a directory:

```
mkdir -p /srv/formulas
cd /srv/formulas
git clone https://github.com/saltstack-formulas/apache-formula.git

# or

mkdir -p /srv/formulas
cd /srv/formulas
wget -O apache-formula-master.tar.gz https://github.com/saltstack-
→formulas/apache-formula/archive/master.tar.gz
tar xf apache-formula-master.tar.gz
```

2. Add the new directory to `file_roots`:

```
file_roots:
  base:
    - /srv/salt
    - /srv/formulas/apache-formula
```

3. Restart the Salt Master.

### Usage

Each Formula is intended to be immediately usable with sane defaults without any additional configuration. Many formulas are also configurable by including data in Pillar; see the `pillar.example` file in each Formula repository for available options.

### Including a Formula in an existing State tree

Formula may be included in an existing `sls` file. This is often useful when a state you are writing needs to `require` or `extend` a state defined in the formula.

Here is an example of a state that uses the [url epel-formula](#) in a `require` declaration which directs Salt to not install the `python26` package until after the EPEL repository has also been installed:

```
include:
  - epel

python26:
  pkg.installed:
    - require:
      - pkg: epel
```

### Including a Formula from a Top File

Some Formula perform completely standalone installations that are not referenced from other state files. It is usually cleanest to include these Formula directly from a Top File.

For example the easiest way to set up an OpenStack deployment on a single machine is to include the [url openstack-standalone-formula](#) directly from a `top.sls` file:

```
base:
  'myopenstackmaster':
    - openstack
```

Quickly deploying OpenStack across several dedicated machines could also be done directly from a Top File and may look something like this:

```
base:
  'controller':
    - openstack.horizon
    - openstack.keystone
  'hyper-*':
    - openstack.nova
    - openstack.glance
  'storage-*':
    - openstack.swift
```

### Configuring Formula using Pillar

Salt Formulas are designed to work out of the box with no additional configuration. However, many Formula support additional configuration and customization through [Pillar](#). Examples of available options can be found in a file named `pillar.example` in the root directory of each Formula repository.

## Using Formula with your own states

Remember that Formula are regular Salt States and can be used with all Salt's normal state mechanisms. Formula can be required from other States with *require* declarations, they can be modified using *extend*, they can be made to watch other states with *The\_in version of requisites*.

The following example uses the stock `url apache-formula` alongside a custom state to create a vhost on a Debian/Ubuntu system and to reload the Apache service whenever the vhost is changed.

```
# Include the stock, upstream apache formula.
include:
  - apache

# Use the watch_in requisite to cause the apache service state to reload
# apache whenever the my-example-com-vhost state changes.
my-example-com-vhost:
  file:
    - managed
    - name: /etc/apache2/sites-available/my-example-com
    - watch_in:
      - service: apache
```

Don't be shy to read through the source for each Formula!

## Reporting problems & making additions

Each Formula is a separate repository on GitHub. If you encounter a bug with a Formula please file an issue in the respective repository! Send fixes and additions as a pull request. Add tips and tricks to the repository wiki.

## Writing Formulas

Each Formula is a separate repository in the `saltstack-formulas` organization on GitHub.

## Get involved creating new Formulas

The best way to create new Formula repositories for now is to create a repository in your own account on GitHub and notify a SaltStack employee when it is ready. We will add you to the Contributors team on the `saltstack-formulas` organization and help you transfer the repository over. Ping a SaltStack employee on IRC (`#salt` on LiberaChat), join the `#formulas` channel on the `salt-slack` (bridged to `#saltstack-formulas` on LiberaChat) or send an email to the `salt-users` mailing list. Note that IRC logs are available at <http://ngxbot.nginx.org/logs/%23salt/> and archives for FreeNode (up to mid-June 2021) <https://logbot-archive.s3.amazonaws.com/freenode/salt.gz> and <https://logbot-archive.s3.amazonaws.com/freenode/saltstack-formulas.gz>.

There are a lot of repositories in that organization! Team members can manage which repositories they are subscribed to on GitHub's watching page: <https://github.com/watching>.

Members of the Contributors team are welcome to participate in reviewing pull requests across the Organization. Some repositories will have regular contributors and some repositories will not. As you get involved in a repository be sure to communicate with any other contributors there on pull requests that are large or have breaking changes.

In general it is best to have another Contributor review and merge any pull requests that you open. Feel free to *at-mention* other regular contributors to a repository and request a review. However, there are a lot of formula

repositories so if a repository does not yet have regular contributors or if your pull request has stayed open for more than a couple days feel free to "selfie-merge" your own pull request.

## Style

Maintainability, readability, and reusability are all marks of a good Salt sls file. This section contains several suggestions and examples.

```
# Deploy the stable master branch unless version overridden by passing
# Pillar at the CLI or via the Reactor.

deploy_myapp:
  git.latest:
    - name: git@github.com/myco/myapp.git
    - version: {{ salt.pillar.get('myapp:version', 'master') }}
```

## Use a descriptive State ID

The ID of a state is used as a unique identifier that may be referenced via other states in *requisites*. It must be unique across the whole state tree (*it is a key in a dictionary*, after all).

In addition a state ID should be descriptive and serve as a high-level hint of what it will do, or manage, or change. For example, `deploy_webapp`, or `apache`, or `reload_firewall`.

## Use `module.function` notation

So-called "short-declaration" notation is preferred for referencing state modules and state functions. It provides a consistent pattern of `module.function` shared between Salt States, the Reactor, Salt Mine, the Scheduler, as well as with the CLI.

```
# Do
apache:
  pkg.installed:
    - name: httpd

# Don't
apache:
  pkg:
    - installed
    - name: httpd
```

Salt's state compiler will transform "short-decs" into the longer format *when compiling the human-friendly highstate structure into the machine-friendly lowstate structure*.

## Specify the name parameter

Use a unique and permanent identifier for the state ID and reserve name for data with variability.

The *name declaration* is a required parameter for all state functions. The state ID will implicitly be used as name if it is not explicitly set in the state.

In many state functions the name parameter is used for data that varies such as OS-specific package names, OS-specific file system paths, repository addresses, etc. Any time the ID of a state changes all references to that ID must also be changed. Use a permanent ID when writing a state the first time to future-proof that state and allow for easier refactors down the road.

## Comment state files

YAML allows comments at varying indentation levels. It is a good practice to comment state files. Use vertical whitespace to visually separate different concepts or actions.

```
# Start with a high-level description of the current sls file.
# Explain the scope of what it will do or manage.

# Comment individual states as necessary.
update_a_config_file:
  # Provide details on why an unusual choice was made. For example:
  #
  # This template is fetched from a third-party and does not fit our
  # company norm of using Jinja. This must be processed using Mako.
  file.managed:
    - name: /path/to/file.cfg
    - source: salt://path/to/file.cfg.template
    - template: mako

  # Provide a description or explanation that did not fit within the state
  # ID. For example:
  #
  # Update the application's last-deployed timestamp.
  # This is a workaround until Bob configures Jenkins to automate RPM
  # builds of the app.
  cmd.run:
    # FIXME: Joe needs this to run on Windows by next quarter. Switch these
    # from shell commands to Salt's file.managed and file.replace state
    # modules.
    - name: |
      touch /path/to/file_last_updated
      sed -e 's/foo/bar/g' /path/to/file_environment
    - onchanges:
      - file: a_config_file
```

Be careful to use Jinja comments for commenting Jinja code and YAML comments for commenting YAML code.

```
# BAD EXAMPLE
# The Jinja in this YAML comment is still executed!
# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %}
```

(continues on next page)

(continued from previous page)

```
# GOOD EXAMPLE
# The Jinja in this Jinja comment will not be executed.
{# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %} #}
```

### Easy on the Jinja!

Jinja templating provides vast flexibility and power when building Salt sls files. It can also create an unmaintainable tangle of logic and data. Speaking broadly, Jinja is best used when kept apart from the states (as much as is possible).

Below are guidelines and examples of how Jinja can be used effectively.

### Know the evaluation and execution order

High-level knowledge of how Salt states are compiled and run is useful when writing states.

The default *renderer* setting in Salt is Jinja piped to YAML. Each is a separate step. Each step is not aware of the previous or following step. Jinja is not YAML aware, YAML is not Jinja aware; they cannot share variables or interact.

- Whatever the Jinja step produces must be valid YAML.
- Whatever the YAML step produces must be a valid *highstate data structure*. (This is also true of the final step for *any of the alternate renderers* in Salt.)
- Highstate can be thought of as a human-friendly data structure; easy to write and easy to read.
- Salt's state compiler validates the *highstate* and compiles it to low state.
- Low state can be thought of as a machine-friendly data structure. It is a list of dictionaries that each map directly to a function call.
- Salt's state system finally starts and executes on each "chunk" in the low state. Remember that requisites are evaluated at runtime.
- The return for each function call is added to the "running" dictionary which is the final output at the end of the state run.

The full evaluation and execution order:

```
Jinja -> YAML -> Highstate -> low state -> execution
```

### Avoid changing the underlying system with Jinja

Avoid calling commands from Jinja that change the underlying system. Commands run via Jinja do not respect Salt's dry-run mode (`test=True`)! This is usually in conflict with the idempotent nature of Salt states unless the command being run is also idempotent.

## Inspect the local system

A common use for Jinja in Salt states is to gather information about the underlying system. The `grains` dictionary available in the Jinja context is a great example of common data points that Salt itself has already gathered. Less common values are often found by running commands. For example:

```
{% set is_selinux_enabled = salt.cmd.run('sestatus') == '1' %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

## Gather external data

One of the most common uses for Jinja is to pull external data into the state file. External data can come from anywhere like API calls or database queries, but it most commonly comes from flat files on the file system or Pillar data from the Salt Master. For example:

```
{% set some_data = salt.pillar.get('some_data', {'sane default': True}) %}

{# or #}

{% import_yaml 'path/to/file.yaml' as some_data %}

{# or #}

{% import_json 'path/to/file.json' as some_data %}

{# or #}

{% import_text 'path/to/ssh_key.pub' as ssh_pub_key %}

{# or #}

{% from 'path/to/other_file.jinja' import some_data with context %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

## Light conditionals and looping

Jinja is extremely powerful for programmatically generating Salt states. It is also easy to overuse. As a rule of thumb, if it is hard to read it will be hard to maintain!

Separate Jinja control-flow statements from the states as much as is possible to create readable states. Limit Jinja within states to simple variable lookups.

Below is a simple example of a readable loop:

```
{% for user in salt.pillar.get('list_of_users', []) %}

{# Ensure unique state IDs when looping. #}
{{ user.name }}-{{ loop.index }}:
```

(continues on next page)

(continued from previous page)

```

user.present:
  - name: {{ user.name }}
  - shell: {{ user.shell }}

{% endfor %}

```

Avoid putting a Jinja conditionals within Salt states where possible. Readability suffers and the correct YAML indentation is difficult to see in the surrounding visual noise. Parametrization (discussed below) and variables are both useful techniques to avoid this. For example:

```

{# ---- Bad example ---- #}

apache:
  pkg.installed:
    {% if grains.os_family == 'RedHat' %}
    - name: httpd
    {% elif grains.os_family == 'Debian' %}
    - name: apache2
    {% endif %}

{# ---- Better example ---- #}

{% if grains.os_family == 'RedHat' %}
{% set name = 'httpd' %}
{% elif grains.os_family == 'Debian' %}
{% set name = 'apache2' %}
{% endif %}

apache:
  pkg.installed:
    - name: {{ name }}

{# ---- Good example ---- #}

{% set name = {
  'RedHat': 'httpd',
  'Debian': 'apache2',
}.get(grains.os_family) %}

apache:
  pkg.installed:
    - name: {{ name }}

```

Dictionaries are useful to effectively "namespace" a collection of variables. This is useful with parametrization (discussed below). Dictionaries are also easily combined and merged. And they can be directly serialized into YAML which is often easier than trying to create valid YAML through templating. For example:

```

{# ---- Bad example ---- #}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg

```

(continues on next page)

(continued from previous page)

```

- template: jinja
{% if 'external_loadbalancer' in grains.roles %}
- source: salt://haproxy/external_haproxy.cfg
{% elif 'internal_loadbalancer' in grains.roles %}
- source: salt://haproxy/internal_haproxy.cfg
{% endif %}
- context:
  {% if 'external_loadbalancer' in grains.roles %}
  ssl_termination: True
  {% elif 'internal_loadbalancer' in grains.roles %}
  ssl_termination: False
  {% endif %}

{# ---- Better example ---- #}

{% load_yaml as haproxy_defaults %}
common_settings:
  bind_port: 80

internal_loadbalancer:
  source: salt://haproxy/internal_haproxy.cfg
  settings:
    bind_port: 8080
    ssl_termination: False

external_loadbalancer:
  source: salt://haproxy/external_haproxy.cfg
  settings:
    ssl_termination: True
{% endload %}

{% if 'external_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['external_loadbalancer'] %}
{% elif 'internal_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['internal_loadbalancer'] %}
{% endif %}

{% do haproxy.settings.update(haproxy_defaults.common_settings) %}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    - source: {{ haproxy.source }}
    - context: {{ haproxy.settings | yaml() }}

```

There is still room for improvement in the above example. For example, extracting into an external file or replacing the if-elif conditional with a function call to filter the correct data more succinctly. However, the state itself is simple and legible, the data is separate and also simple and legible. And those suggested improvements can be made at some future date without altering the state at all!

## Avoid heavy logic and programming

Jinja is not Python. It was made by Python programmers and shares many semantics and some syntax but it does not allow for arbitrary Python function calls or Python imports. Jinja is a fast and efficient templating language but the syntax can be verbose and visually noisy.

Once Jinja use within an sls file becomes slightly complicated -- long chains of if-elif-elif-else statements, nested conditionals, complicated dictionary merges, wanting to use sets -- instead consider using a different Salt renderer, such as the Python renderer. As a rule of thumb, if it is hard to read it will be hard to maintain -- switch to a format that is easier to read.

Using alternate renderers is very simple to do using Salt's "she-bang" syntax at the top of the file. The Python renderer must simply return the correct *highstate data structure*. The following example is a state tree of two sls files, one simple and one complicated.

/srv/salt/top.sls:

```
base:
  '*':
    - common_configuration
    - roles_configuration
```

/srv/salt/common\_configuration.sls:

```
common_users:
  user.present:
    - names:
      - larry
      - curly
      - moe
```

/srv/salt/roles\_configuration:

```
#!/py
def run():
    list_of_roles = set()

    # This example has the minion id in the form 'web-03-dev'.
    # Easily access the grains dictionary:
    try:
        app, instance_number, environment = __grains__["id"].split("-")
        instance_number = int(instance_number)
    except ValueError:
        app, instance_number, environment = ["Unknown", 0, "dev"]

    list_of_roles.add(app)

    if app == "web" and environment == "dev":
        list_of_roles.add("primary")
        list_of_roles.add("secondary")
    elif app == "web" and environment == "staging":
        if instance_number == 0:
            list_of_roles.add("primary")
        else:
            list_of_roles.add("secondary")
```

(continues on next page)

(continued from previous page)

```

# Easily cross-call Salt execution modules:
if __salt__["myutils.query_valid_ec2_instance"]():
    list_of_roles.add("is_ec2_instance")

return {
    "set_roles_grains": {
        "grains.present": [{"name": "roles"}, {"value": list(list_of_
→roles)}]},
    },
}

```

## Jinja Macros

In Salt sls files Jinja macros are useful for one thing and one thing only: creating mini templates that can be reused and rendered on demand. Do not fall into the trap of thinking of macros as functions; Jinja is not Python (see above).

Macros are useful for creating reusable, parameterized states. For example:

```

{% macro user_state(state_id, user_name, shell='/bin/bash', groups=[]) %}
{{ state_id }}:
  user.present:
    - name: {{ user_name }}
    - shell: {{ shell }}
    - groups: {{ groups | json() }}
{% endmacro %}

{% for user_info in salt.pillar.get('my_users', []) %}
{{ user_state('user_number_' ~ loop.index, **user_info) }}
{% endfor %}

```

Macros are also useful for creating one-off "serializers" that can accept a data structure and write that out as a domain-specific configuration file. For example, the following macro could be used to write a php.ini config file:

/srv/salt/php.sls:

```

php_ini:
  file.managed:
    - name: /etc/php.ini
    - source: salt://php.ini.tmpl
    - template: jinja
    - context:
        php_ini_settings: {{ salt.pillar.get('php_ini', {}) | json() }}

```

/srv/pillar/php.sls:

```

php_ini:
PHP:
  engine: 'On'
  short_open_tag: 'Off'
  error_reporting: 'E_ALL & ~E_DEPRECATED & ~E_STRICT'

```

/srv/salt/php.ini.tmpl:

```

{% macro php_ini_serializer(data) %}
{% for section_name, name_val_pairs in data.items() %}
[{{ section_name }}]
{% for name, val in name_val_pairs.items() -%}
{{ name }} = "{{ val }}"
{% endfor %}
{% endfor %}
{% endmacro %}

; File managed by Salt at <{{ source }}>.
; Your changes will be overwritten.

{{ php_ini_serializer(php_ini_settings) }}

```

### Abstracting static defaults into a lookup table

Separate data that a state uses from the state itself to increase the flexibility and reusability of a state.

An obvious and common example of this is platform-specific package names and file system paths. Another example is sane defaults for an application, or common settings within a company or organization. Organizing such data as a dictionary (aka hash map, lookup table, associative array) often provides a lightweight namespacing and allows for quick and easy lookups. In addition, using a dictionary allows for easily merging and overriding static values within a lookup table with dynamic values fetched from Pillar.

A strong convention in Salt Formulas is to place platform-specific data, such as package names and file system paths, into a file named `map.jinja` that is placed alongside the state files.

The following is an example from the MySQL Formula. The `grains.filter_by` function performs a lookup on that table using the `os_family` grain (by default).

The result is that the `mysql` variable is assigned to a *subset* of the lookup table for the current platform. This allows states to reference, for example, the name of a package without worrying about the underlying OS. The syntax for referencing a value is a normal dictionary lookup in Jinja, such as `{{ mysql['service'] }}` or the shorthand `{{ mysql.service }}`.

`map.jinja`:

```

{% set mysql = salt['grains.filter_by']({
  'Debian': {
    'server': 'mysql-server',
    'client': 'mysql-client',
    'service': 'mysql',
    'config': '/etc/mysql/my.cnf',
    'python': 'python-mysqldb',
  },
  'RedHat': {
    'server': 'mysql-server',
    'client': 'mysql',
    'service': 'mysqld',
    'config': '/etc/my.cnf',
    'python': 'MySQL-python',
  },
  'Gentoo': {
    'server': 'dev-db/mysql',

```

(continues on next page)

(continued from previous page)

```

    'client': 'dev-db/mysql',
    'service': 'mysql',
    'config': '/etc/mysql/my.cnf',
    'python': 'dev-python/mysql-python',
  },
}, merge=salt['pillar.get']('mysql:lookup')) %}

```

Values defined in the map file can be fetched for the current platform in any state file using the following syntax:

```

{% from "mysql/map.jinja" import mysql with context %}

mysql-server:
  pkg.installed:
    - name: {{ mysql.server }}
  service.running:
    - name: {{ mysql.service }}

```

### Organizing Pillar data

It is considered a best practice to make formulas expect all formula-related parameters to be placed under second-level lookup key, within a main namespace designated for holding data for particular service/software/etc, managed by the formula:

```

mysql:
  lookup:
    version: 5.7.11

```

### Collecting common values

Common values can be collected into a *base* dictionary. This minimizes repetition of identical values in each of the `lookup_dict` sub-dictionaries. Now only the values that are different from the base must be specified by the alternates:

map.jinja:

```

{% set mysql = salt['grains.filter_by']({
  'default': {
    'server': 'mysql-server',
    'client': 'mysql-client',
    'service': 'mysql',
    'config': '/etc/mysql/my.cnf',
    'python': 'python-mysqldb',
  },
  'Debian': {
  },
  'RedHat': {
    'client': 'mysql',
    'service': 'mysqld',
    'config': '/etc/my.cnf',
    'python': 'MySQL-python',
  },
})

```

(continues on next page)

(continued from previous page)

```

    },
    'Gentoo': {
        'server': 'dev-db/mysql',
        'client': 'dev-db/mysql',
        'python': 'dev-python/mysql-python',
    },
},
merge=salt['pillar.get']('mysql:lookup'), base='default') %}

```

### Overriding values in the lookup table

Allow static values within lookup tables to be overridden. This is a simple pattern which once again increases flexibility and reusability for state files.

The `merge` argument in `filter_by` specifies the location of a dictionary in Pillar that can be used to override values returned from the lookup table. If the value exists in Pillar it will take precedence.

This is useful when software or configuration files is installed to non-standard locations or on unsupported platforms. For example, the following Pillar would replace the `config` value from the call above.

```

mysql:
  lookup:
    config: /usr/local/etc/mysql/my.cnf

```

#### Note: Protecting Expansion of Content with Special Characters

When templating keep in mind that YAML does have special characters for quoting, flows, and other special structure and content. When a Jinja substitution may have special characters that will be incorrectly parsed by YAML care must be taken. It is a good policy to use the `yaml_encode` or the `yaml_dquote` Jinja filters:

```

{%- set foo = 7.7 %}
{%- set bar = none %}
{%- set baz = true %}
{%- set zap = 'The word of the day is "salty".' %}
{%- set zip = '"The quick brown fox . . ."' %}

foo: {{ foo|yaml_encode }}
bar: {{ bar|yaml_encode }}
baz: {{ baz|yaml_encode }}
zap: {{ zap|yaml_encode }}
zip: {{ zip|yaml_dquote }}

```

The above will be rendered as below:

```

foo: 7.7
bar: null
baz: true
zap: "The word of the day is \"salty\"."
zip: "\"The quick brown fox . . .\""

```

The `filter_by` function performs a simple dictionary lookup but also allows for fetching data from Pillar and

overriding data stored in the lookup table. That same workflow can be easily performed without using `filter_by`; other dictionaries besides data from Pillar can also be used.

```
{% set lookup_table = {...} %}
{% do lookup_table.update(salt.pillar.get('my:custom:data')) %}
```

### When to use lookup tables

The `map.jinja` file is only a convention within Salt Formulas. This greater pattern is useful for a wide variety of data in a wide variety of workflows. This pattern is not limited to pulling data from a single file or data source. This pattern is useful in States, Pillar and the Reactor, for example.

Working with a data structure instead of, say, a config file allows the data to be cobbled together from multiple sources (local files, remote Pillar, database queries, etc), combined, overridden, and searched.

Below are a few examples of what lookup tables may be useful for and how they may be used and represented.

### Platform-specific information

An obvious pattern and one used heavily in Salt Formulas is extracting platform-specific information such as package names and file system paths in a file named `map.jinja`. The pattern is explained in detail above.

### Sane defaults

Application settings can be a good fit for this pattern. Store default settings along with the states themselves and keep overrides and sensitive settings in Pillar. Combine both into a single dictionary and then write the application config or settings file.

The example below stores most of the Apache Tomcat `server.xml` file alongside the Tomcat states and then allows values to be updated or augmented via Pillar. (This example uses the BadgerFish format for transforming JSON to XML.)

`/srv/salt/tomcat/defaults.yaml:`

```
Server:
  '@port': '8005'
  '@shutdown': SHUTDOWN
GlobalNamingResources:
  Resource:
    '@auth': Container
    '@description': User database that can be updated and saved
    '@factory': org.apache.catalina.users.MemoryUserDatabaseFactory
    '@name': UserDatabase
    '@pathname': conf/tomcat-users.xml
    '@type': org.apache.catalina.UserDatabase
# <...snip...>
```

`/srv/pillar/tomcat.sls:`

```
appX:
  server_xml_overrides:
    Server:
```

(continues on next page)

(continued from previous page)

```

Service:
  '@name': Catalina
Connector:
  '@port': '8009'
  '@protocol': AJP/1.3
  '@redirectPort': '8443'
  # <...snip...>

```

```
/srv/salt/tomcat/server_xml.sls:
```

```

{% import_yaml 'tomcat/defaults.yaml' as server_xml_defaults %}
{% set server_xml_final_values = salt.pillar.get(
  'appX:server_xml_overrides',
  default=server_xml_defaults,
  merge=True)
%}

appX_server_xml:
  file.serialize:
    - name: /etc/tomcat/server.xml
    - dataset: {{ server_xml_final_values | json() }}
    - formatter: xml_badgerfish

```

The `file.serialize` state can provide a shorthand for creating some files from data structures. There are also many examples within Salt Formulas of creating one-off "serializers" (often as Jinja macros) that reformat a data structure to a specific config file format. For example, look at the ``Nginx vhosts`_ states` or the `php.ini` file template.

### Environment specific information

A single state can be reused when it is parameterized as described in the section below, by separating the data the state will use from the state that performs the work. This can be the difference between deploying *Application X* and *Application Y*, or the difference between production and development. For example:

```
/srv/salt/app/deploy.sls:
```

```

{# Load the map file. #}
{% import_yaml 'app/defaults.yaml' as app_defaults %}

{# Extract the relevant subset for the app configured on the current
  machine (configured via a grain in this example). #}
{% app = app_defaults.get(salt.grains.get('role')) %}

{# Allow values from Pillar to (optionally) update values from the lookup
  table. #}
{% do app_defaults.update(salt.pillar.get('myapp', {})) %}

deploy_application:
  git.latest:
    - name: {{ app.repo_url }}
    - version: {{ app.version }}
    - target: {{ app.deploy_dir }}

```

(continues on next page)

(continued from previous page)

```
myco/myapp/deployed:
  event.send:
    - data:
        version: {{ app.version }}
    - onchanges:
        - git: deploy_application
```

/srv/salt/app/defaults.yaml:

```
appX:
  repo_url: git@github.com/myco/appX.git
  target: /var/www/appX
  version: master
appY:
  repo_url: git@github.com/myco/appY.git
  target: /var/www/appY
  version: v1.2.3.4
```

### Single-purpose SLS files

Each sls file in a Formula should strive to do a single thing. This increases the reusability of this file by keeping unrelated tasks from getting coupled together.

As an example, the base Apache formula should only install the Apache httpd server and start the httpd service. This is the basic, expected behavior when installing Apache. It should not perform additional changes such as set the Apache configuration file or create vhosts.

If a formula is single-purpose as in the example above, other formulas, and also other states can `include` and use that formula with *Requisites and Other Global State Arguments* without also including undesirable or unintended side-effects.

The following is a best-practice example for a reusable Apache formula. (This skips platform-specific options for brevity. See the full [url apache-formula](#) for more.)

```
# apache/init.sls
apache:
  pkg.installed:
    [...]
  service.running:
    [...]

# apache/mod_wsgi.sls
include:
  - apache

mod_wsgi:
  pkg.installed:
    [...]
  - require:
    - pkg: apache

# apache/conf.sls
```

(continues on next page)

(continued from previous page)

```
include:
  - apache

apache_conf:
  file.managed:
    [...]
  - watch_in:
    - service: apache
```

To illustrate a bad example, say the above Apache formula installed Apache and also created a default vhost. The `mod_wsgi` state would not be able to include the Apache formula to create that dependency tree without also installing the unneeded default vhost.

*Formulas should be reusable.* Avoid coupling unrelated actions together.

## Parameterization

*Parameterization is a key feature of Salt Formulas* and also for Salt States. Parameterization allows a single Formula to be reused across many operating systems; to be reused across production, development, or staging environments; and to be reused by many people all with varying goals.

Writing states, specifying ordering and dependencies is the part that takes the longest to write and to test. Filling those states out with data such as users or package names or file locations is the easy part. How many users, what those users are named, or where the files live are all implementation details that **should be parameterized**. This separation between a state and the data that populates a state creates a reusable formula.

In the example below the data that populates the state can come from anywhere -- it can be hard-coded at the top of the state, it can come from an external file, it can come from Pillar, it can come from an execution function call, or it can come from a database query. The state itself doesn't change regardless of where the data comes from. Production data will vary from development data will vary from data from one company to another, however the state itself stays the same.

```
{% set user_list = [
    {'name': 'larry', 'shell': 'bash'},
    {'name': 'curly', 'shell': 'bash'},
    {'name': 'moe', 'shell': 'zsh'},
] %}

{# or #}

{% set user_list = salt['pillar.get']('user_list') %}

{# or #}

{% load_json "default_users.json" as user_list %}

{# or #}

{% set user_list = salt['acme_utils.get_user_list']() %}

{% for user in list_list %}
  {{ user.name }}:
  user.present:
```

(continues on next page)

(continued from previous page)

```

- name: {{ user.name }}
- shell: {{ user.shell }}
{% endfor %}

```

## Configuration

Formulas should strive to use the defaults of the underlying platform, followed by defaults from the upstream project, followed by sane defaults for the formula itself.

As an example, a formula to install Apache **should not** change the default Apache configuration file installed by the OS package. However, the Apache formula **should** include a state to change or override the default configuration file.

## Pillar overrides

Pillar lookups must use the safe `get()` and must provide a default value. Create local variables using the Jinja `set` construct to increase readability and to avoid potentially hundreds or thousands of function calls across a large state tree.

```

{% from "apache/map.jinja" import apache with context %}
{% set settings = salt['pillar.get']('apache', {}) %}

mod_status:
  file.managed:
    - name: {{ apache.conf_dir }}
    - source: {{ settings.get('mod_status_conf', 'salt://apache/mod_status.
→conf') }}
    - template: {{ settings.get('template_engine', 'jinja') }}

```

Any default values used in the Formula must also be documented in the `pillar.example` file in the root of the repository. Comments should be used liberally to explain the intent of each configuration value. In addition, users should be able copy-and-paste the contents of this file into their own Pillar to make any desired changes.

## Scripting

Remember that both State files and Pillar files can easily call out to Salt *execution modules* and have access to all the system grains as well.

```

{% if '/storage' in salt['mount.active']() %}
/usr/local/etc/myfile.conf:
  file:
    - symlink
    - target: /storage/myfile.conf
{% endif %}

```

Jinja macros to encapsulate logic or conditionals are discouraged in favor of *writing custom execution modules* in Python.

## Repository structure

A basic Formula repository should have the following layout:

```
foo-formula
|-- foo/
|   |-- map.jinja
|   |-- init.sls
|   `-- bar.sls
|-- CHANGELOG.rst
|-- LICENSE
|-- pillar.example
|-- README.rst
`-- VERSION
```

See also:

[url template-formula](#)

The [url template-formula](#) repository has a pre-built layout that serves as the basic structure for a new formula repository. Just copy the files from there and edit them.

## README.rst

The README should detail each available `.sls` file by explaining what it does, whether it has any dependencies on other formulas, whether it has a target platform, and any other installation or usage instructions or tips.

A sample skeleton for the `README.rst` file:

```
===
foo
===

Install and configure the F00 service.

**NOTE**

See the full `Salt Formulas installation and usage instructions
<https://docs.saltproject.io/en/latest/topics/development/conventions/
→formulas.html>`_.

Available states
=====

.. contents::
   :local:

``foo``
-----

Install the ``foo`` package and enable the service.

``foo.bar``
-----
```

(continues on next page)

(continued from previous page)

```
Install the ``bar`` package.
```

## CHANGELOG.rst

The `CHANGELOG.rst` file should detail the individual versions, their release date and a set of bullet points for each version highlighting the overall changes in a given version of the formula.

A sample skeleton for the `CHANGELOG.rst` file:

`CHANGELOG.rst`:

```
foo formula
=====

0.0.2 (2013-01-01)

- Re-organized formula file layout
- Fixed filename used for upstart logger template
- Allow for pillar message to have default if none specified
```

## Versioning

Formula are versioned according to Semantic Versioning, <https://semver.org/>.

---

**Note:** Given a version number MAJOR.MINOR.PATCH, increment the:

1. MAJOR version when you make incompatible API changes,
2. MINOR version when you add functionality in a backwards-compatible manner, and
3. PATCH version when you make backwards-compatible bug fixes.

Additional labels for pre-release and build metadata are available as extensions to the MAJOR.MINOR.PATCH format.

---

Formula versions are tracked using Git tags as well as the `VERSION` file in the formula repository. The `VERSION` file should contain the currently released version of the particular formula.

## Testing Formulas

A smoke-test for invalid Jinja, invalid YAML, or an invalid Salt state structure can be performed by with the `state.show_sls` function:

```
salt '*' state.show_sls apache
```

Salt Formulas can then be tested by running each `.sls` file via `state.apply` and checking the output for the success or failure of each state in the Formula. This should be done for each supported platform.

### 32.28.3 SaltStack Packaging Guide

Since Salt provides a powerful toolkit for system management and automation, the package can be spit into a number of sub-tools. While packaging Salt as a single package containing all components is perfectly acceptable, the split packages should follow this convention.

#### Patching Salt For Distributions

The occasion may arise where Salt source and default configurations may need to be patched. It is preferable if Salt is only patched to include platform specific additions or to fix release time bugs. It is preferable that configuration settings and operations remain in the default state, as changes here lowers the user experience for users moving across distributions.

In the event where a packager finds a need to change the default configuration it is advised to add the files to the master.d or minion.d directories.

#### Source Files

Release packages should always be built from the source tarball distributed via pypi. Release packages should *NEVER* use a git checkout as the source for distribution.

#### Single Package

Shipping Salt as a single package, where the minion, master, and all tools are together is perfectly acceptable and practiced by distributions such as FreeBSD.

#### Split Package

Salt Should always be split in a standard way, with standard dependencies, this lowers cross distribution confusion about what components are going to be shipped with specific packages. These packages can be defined from the Salt Source as of Salt 2014.1.0:

#### Salt Common

The *salt-common* or *salt* package should contain the files provided by the salt python package, or all files distributed from the `salt/` directory in the source distribution packages. The documentation contained under the `doc/` directory can be a part of this package but splitting out a doc package is preferred. Since salt-call is the entry point to utilize the libs and is useful for all salt packages it is included in the salt-common package.

#### Name

- *salt* OR *salt-common*

## Files

- *salt/\**
- *man/salt.7*
- *scripts/salt-call*
- *tests/\**
- *man/salt-call.1*

## Depends

- *Python 2.6-2.7*
- *PyYAML*
- *Jinja2*

## Salt Master

The *salt-master* package contains the applicable scripts, related man pages and init information for the given platform.

## Name

- *salt-master*

## Files

- *scripts/salt-master*
- *scripts/salt*
- *scripts/salt-run*
- *scripts/salt-key*
- *scripts/salt-cp*
- *pkg/<master init data>*
- *man/salt.1*
- *man/salt-master.1*
- *man/salt-run.1*
- *man/salt-key.1*
- *man/salt-cp.1*
- *conf/master*

## Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Syndic

The Salt Syndic package can be rolled completely into the Salt Master package. Platforms which start services as part of the package deployment need to maintain a separate *salt-syndic* package (primarily Debian based platforms).

The Syndic may optionally not depend on anything more than the Salt Master since the master will bring in all needed dependencies, but fall back to the platform specific packaging guidelines.

## Name

- *salt-syndic*

## Files

- *scripts/salt-syndic*
- *pkg/<syndic init data>*
- *man/salt-syndic.1*

## Depends

- *Salt Common*
- *Salt Master*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Minion

The Minion is a standalone package and should not be split beyond the *salt-minion* and *salt-common* packages.

### Name

- *salt-minion*

### Files

- *scripts/salt-minion*
- *pkg/<minion init data>*
- *man/salt-minion.1*
- *conf/minion*

### Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt SSH

Since Salt SSH does not require the same dependencies as the minion and master, it should be split out.

### Name

- *salt-ssh*

### Files

- *scripts/salt-ssh*
- *man/salt-ssh.1*
- *conf/cloud\**

## Depends

- *Salt Common*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Cloud

As of Salt 2014.1.0 Salt Cloud is included in the same repo as Salt. This can be split out into a separate package or it can be included in the salt-master package.

## Name

- *salt-cloud*

## Files

- *scripts/salt-cloud*
- *man/salt-cloud.1*

## Depends

- *Salt Common*
- *apache libcloud*  $\geq 0.14.0$

## Salt Doc

The documentation package is very distribution optional. A completely split package will split out the documentation, but some platform conventions do not prefer this. If the documentation is not split out, it should be included with the *Salt Common* package.

## Name

- *salt-doc*

## Files

- *doc/\**

## Optional Depends

- *Salt Common*
- *Python Sphinx*
- *Make*

## 32.28.4 Salt Release Process

The goal for Salt projects is to cut a new feature release every three to four months. This document outlines the process for these releases, and the subsequent bug fix releases which follow.

### Feature Release Process

When a new release is ready to be cut, the person responsible for cutting the release will follow the following steps (written using the 3000 release as an example):

1. Create first public draft of release notes with major features.
2. Remove any deprecations for the upcoming release.
3. Ensure all required features are merged.
4. Create issue to start the process of deprecating for the next feature release.
5. Run through a manual test run based off of the head of the feature branch.
6. Update all name references to version number in the docs. For example all neon references in the docs needs to be moved to v3000
7. Review the release notes with major features.
8. Generate the new man pages for the release.
9. Create internal RC tag for testing from the head of the master branch.
10. Build latest windows, mac, ubuntu, debian and redhat packages.
11. Run manual and package tests against new RC packages.
12. Push the internal tag live to salt's repo.
13. Publish release archive to pypi based off tag.
14. Push the RC packages live.
15. Announce new RC to salt-users and salt-announce google groups.
16. Triage incoming issues based on the new RC release.
17. Fix RC issues once they are categorized as a release blocker.
18. Depending on the issues found during the RC process make a decision on whether to release based off the RC or go through another RC process
19. If a RC is categorized as stable, build all required packages.
20. Test all release packages.
21. Test links from [repo.saltproject.io](https://repo.saltproject.io).
22. Update installation instructions with new release number at [repo.saltproject.io](https://repo.saltproject.io).
23. Review and update all impacted *Installation* documentation.

24. Update and build docs to include new version (3000) as the latest.
25. Pre-announce on salt-users google group that we are about to update our repo.
26. Publish release (v3000) archive to pypi based off tag.
27. Publish all packages live to repo.
28. Publish the docs.
29. Create release at [github](#)
30. Update win-repo-ng with new salt versions.
31. Announce release is live to irc, salt-users, salt-announce and release slack community channel.

### Bugfix Releases

Once a feature release branch has been cut from the `master` branch, if serious bugs or a CVE is found for the most recent release a bugfix release will need to be cut. A temporary branch will be created based off of the previous release tag. For example, if it is determined that a 3000.1 release needs to occur a 3000.1 branch will be created based off of the v3000 tag. The fixes that need to go into 3000.1 will be added and merged into this branch. Here are the steps for a bugfix release.

1. Ensure all required bug fixes are merged.
2. Create release branch with the version of the release. (ex. 3000.1)
3. Run through a manual test run based off of the head of the branch.
4. Generate the new man pages for the release.
5. Create internal tag for testing.(ex v3000.1)
6. Build all release packages.
7. Run manual and package tests against new packages.
8. Update installation instructions with new release number at [repo.saltproject.io](#).
9. Update and build docs to include new version. (ex. 3000.1)
10. Pre-announce on salt-users google groups that we are about to update our repo.
11. Push the internal tag live to salt's repo.
12. Publish release archive to pypi based off tag.
13. Push the packages live.
14. Publish release (v3000) archive to pypi based off tag.
15. Publish all packages live to repo.
16. Publish the docs.
17. Create release at [github](#)
18. Update win-repo-ng with new salt versions.
19. Announce release is live to irc, salt-users, salt-announce and release slack channel.

### 32.28.5 Salt Coding Style

To make it easier to contribute and read Salt code, SaltStack has adopted Black as its code formatter. There are a few places where Black is silent, and this guide should be used in those cases.

Coding style is NEVER grounds to reject code contributions, and is never grounds to talk down to another member of the community (There are no grounds to treat others without respect, especially people working to improve Salt)!

#### Linting

Most Salt style conventions are codified in Salt's `.pylintrc` file. Salt's linting has two major dependencies: `pylint` and `saltpylint`, the full lint requirements can be found under `requirements/static/ci/lint.in` and the pinned requirements at `requirements/static/ci/py3.<minor-version>/lint.txt`, however, linting should be done using `nox`, which is how pull requests are checked.

```
nox -e lint
```

One can target either salt's source code or the test suite(different pylint rules apply):

```
nox -e lint-salt
nox -e lint-tests
```

#### Variables

Variables should be a minimum of three characters and should provide an easy-to-understand name of the object being represented.

When keys and values are iterated over, descriptive names should be used to represent the temporary variables.

Multi-word variables should be separated by an underscore.

Variables which are two-letter words should have an underscore appended to them to pad them to three characters.

#### Formatting Strings

All strings which require formatting should use the `.format` string method:

Please do NOT use `printf` formatting, unless it's a log message.

Good:

```
data = "some text"
more = "{} and then some".format(data)
log.debug("%s and then some", data)
```

Bad:

```
data = "some text"
log.debug("{} and then some".format(data))
```

## Docstring Conventions

When adding a new function or state, where possible try to use a `versionadded` directive to denote when the function, state, or parameter was added.

```
def new_func(msg=""):
    """
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed.
    """
    print(msg)
```

If you are uncertain what version should be used, either consult a core developer in IRC or bring this up when opening your *pull request* and a core developer will let you know what version to add. Typically this will be the next element in the *periodic table*.

Similar to the above, when an existing function or state is modified (for example, when an argument is added), then under the explanation of that new argument a `versionadded` directive should be used to note the version in which the new argument was added. If an argument's function changes significantly, the `versionchanged` directive can be used to clarify this:

```
def new_func(msg="", signature=""):
    """
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed. Will be prepended with 'Greetings! '.
    .. versionchanged:: 0.17.1

    signature : None
        An optional signature.
    .. versionadded:: 0.17.0
    """
    print("Greetings! {0}\n\n{1}".format(msg, signature))
```

## Dictionaries

Dictionaries should be initialized using `{}` instead of `dict()`.

See [here](#) for an in-depth discussion of this topic.

## Imports

Salt code prefers importing modules and not explicit functions. This is both a style and functional preference. The functional preference originates around the fact that the module import system used by pluggable modules will include callable objects (functions) that exist in the direct module namespace. This is not only messy, but may unintentionally expose code python libs to the Salt interface and pose a security problem.

To say this more directly with an example, this is *GOOD*:

```
import os

def minion_path():
    path = os.path.join(self.opts["cachedir"], "minions")
    return path
```

This on the other hand is *DISCOURAGED*:

```
from os.path import join

def minion_path():
    path = join(self.opts["cachedir"], "minions")
    return path
```

The time when this is changed is for importing exceptions, generally directly importing exceptions is preferred:

This is a good way to import exceptions:

```
from salt.exceptions import CommandExecutionError
```

## Absolute Imports

Although *absolute imports* seems like an awesome idea, please do not use it. Extra care would be necessary all over salt's code in order for absolute imports to work as supposed. Believe it, it has been tried before and, as a tried example, by renaming `salt.modules.sysmod` to `salt.modules.sys`, all other salt modules which needed to import `sys` would have to also import `absolute_import`, which should be avoided.

---

**Note:** An exception to this rule is the `absolute_import` from `__future__` at the top of each file within the Salt project. This import is necessary for Py3 compatibility. This particular import looks like this:

```
from __future__ import absolute_import
```

This import is required for all new Salt files and is a good idea to add to any custom states or modules. However, the practice of avoiding absolute imports still applies to all other cases as to avoid a name conflict.

---

## Code Churn

Many pull requests have been submitted that only churn code in the name of PEP 8. Code churn is a leading source of bugs and is **strongly discouraged**. While style fixes are encouraged they should be isolated to a single file per commit, and the changes should be legitimate, if there are any questions about whether a style change is legitimate please reference this document and the official PEP 8 (<https://legacy.python.org/dev/peps/pep-0008/>) document before changing code. Many claims that a change is PEP 8 have been invalid, please double check before committing fixes.

## 32.29 Salt code and internals

Reference documentation on Salt's internal code.

### 32.29.1 Contents

#### `salt.aggregation`

#### `salt.utils.aggregation`

This library makes it possible to introspect dataset and aggregate nodes when it is instructed.

---

**Note:** The following examples will be expressed in YAML for convenience's sake:

- `!aggr-scalar` will refer to Scalar python function
  - `!aggr-map` will refer to Map python object
  - `!aggr-seq` will refer for Sequence python object
- 

#### How to instructs merging

This yaml document has duplicate keys:

```
foo: !aggr-scalar first
foo: !aggr-scalar second
bar: !aggr-map {first: foo}
bar: !aggr-map {second: bar}
baz: !aggr-scalar 42
```

but tagged values instruct Salt that overlapping values they can be merged together:

```
foo: !aggr-seq [first, second]
bar: !aggr-map {first: foo, second: bar}
baz: !aggr-seq [42]
```

### Default merge strategy is keep untouched

For example, this yaml document still has duplicate keys, but does not instruct aggregation:

```
foo: first
foo: second
bar: {first: foo}
bar: {second: bar}
baz: 42
```

So the late found values prevail:

```
foo: second
bar: {second: bar}
baz: 42
```

### Limitations

Aggregation is permitted between tagged objects that share the same type. If not, the default merge strategy prevails.

For example, these examples:

```
foo: {first: value}
foo: !aggr-map {second: value}

bar: !aggr-map {first: value}
bar: 42

baz: !aggr-seq [42]
baz: [fail]

qux: 42
qux: !aggr-scalar fail
```

are interpreted like this:

```
foo: !aggr-map{second: value}

bar: 42

baz: [fail]

qux: !aggr-seq [fail]
```

## Introspection

TODO: write this part

**class** salt.utils.aggregation.**Aggregate**

Aggregation base.

**class** salt.utils.aggregation.**Map**

Map aggregation.

**class** salt.utils.aggregation.**OrderedDict**

Dictionary that remembers insertion order

**clear**() → None. Remove all items from od.

**copy**() → a shallow copy of od

**fromkeys**(*value=None*)

Create a new ordered dictionary with keys from iterable and values set to value.

**items**() → a set-like object providing a view on D's items

**keys**() → a set-like object providing a view on D's keys

**move\_to\_end**(*key, last=True*)

Move an existing element to the end (or beginning if last is false).

Raise KeyError if the element does not exist.

**pop**(*k[, d]*) → v, remove specified key and return the corresponding

value. If key is not found, d is returned if given, otherwise KeyError is raised.

**popitem**(*last=True*)

Remove and return a (key, value) pair from the dictionary.

Pairs are returned in LIFO order if last is true or FIFO order if false.

**setdefault**(*key, default=None*)

Insert key with a value of default if key is not in the dictionary.

Return the value for key if key is in the dictionary, else default.

**update**(*[E], \*\*F*) → None. Update D from dict/iterable E and F.

If E is present and has a .keys() method, then does: for k in E: D[k] = E[k] If E is present and lacks a .keys() method, then does: for k, v in E: D[k] = v In either case, this is followed by: for k in F: D[k] = F[k]

**values**() → an object providing a view on D's values

salt.utils.aggregation.**Scalar**(*obj*)

Shortcut for Sequence creation

```
>>> Scalar('foo') == Sequence(['foo'])
True
```

**class** salt.utils.aggregation.**Sequence**(*iterable=(), /*)

Sequence aggregation.

`salt.utils.aggregation.aggregate`(*obj\_a*, *obj\_b*, *level=False*, *map\_class=<class 'salt.utils.aggregation.Map'>*, *sequence\_class=<class 'salt.utils.aggregation.Sequence'>*)

Merge *obj\_b* into *obj\_a*.

```
>>> aggregate('first', 'second', True) == ['first', 'second']
True
```

`salt.utils.aggregation.levelise`(*level*)

Describe which levels are allowed to do deep merging.

level can be:

**True**

all levels are True

**False**

all levels are False

**an int**

only the first levels are True, the others are False

**a sequence**

it describes which levels are True, it can be:

- a list of bool and int values
- a string of 0 and 1 characters

`salt.utils.aggregation.mark`(*obj*, *map\_class=<class 'salt.utils.aggregation.Map'>*, *sequence\_class=<class 'salt.utils.aggregation.Sequence'>*)

Convert *obj* into an Aggregate instance

## Exceptions

Salt-specific exceptions should be thrown as often as possible so the various interfaces to Salt (CLI, API, etc) can handle those errors appropriately and display error messages appropriately.

---

*salt.exceptions*

This module is a central location for all salt exceptions

---

### `salt.exceptions`

This module is a central location for all salt exceptions

**exception** `salt.exceptions.ArgumentValueError`(*message=""*, *info=None*)

Used when an invalid argument was passed to a command execution

**exception** `salt.exceptions.AuthenticationError`(*message=""*)

If sha256 signature fails during decryption

**exception** `salt.exceptions.AuthorizationError`(*message=""*)

Thrown when runner or wheel execution fails due to permissions

**exception** `salt.exceptions.CheckError`(*message=""*, *info=None*)

Used when a check fails

**exception** `salt.exceptions.CodePageError`(*message=""*, *info=None*)

Raised when an error occurs while getting or setting the windows code page

**exception** `salt.exceptions.CommandExecutionError` (*message=""*, *info=None*)

Used when a module runs a command which returns an error and wants to show the user the output gracefully instead of dying

**exception** `salt.exceptions.CommandNotFoundError` (*message=""*)

Used in modules or grains when a required binary is not available

**exception** `salt.exceptions.EauthAuthenticationError` (*message=""*)

Thrown when eauth authentication fails

**exception** `salt.exceptions.FileLockError` (*message*, *time\_start=None*, *\*args*, *\*\*kwargs*)

Used when an error occurs obtaining a file lock

**exception** `salt.exceptions.FileserverConfigError` (*message=""*)

Used when invalid fileserver settings are detected

**exception** `salt.exceptions.GitLockError` (*errno*, *message*, *\*args*, *\*\*kwargs*)

Raised when an uncaught error occurs in the midst of obtaining an update/checkout lock in `salt.utils.gitfs`.

NOTE: While this uses the `errno` param similar to an `OSError`, this exception class is *not* as subclass of `OSError`. This is done intentionally, so that this exception class can be caught in a `try/except` without being caught as an `OSError`.

**exception** `salt.exceptions.GitRemoteError` (*message=""*)

Used by `GitFS` to denote a problem with the existence of the "origin" remote or part of its configuration

**exception** `salt.exceptions.InvalidConfigError` (*message=""*, *info=None*)

Used when the config is invalid

**exception** `salt.exceptions.InvalidEntityError` (*message=""*, *info=None*)

Used when an entity fails validation

**exception** `salt.exceptions.InvalidKeyError` (*message=""*)

Raised when we encounter an invalid RSA key.

**exception** `salt.exceptions.LoaderError` (*message=""*)

Problems loading the right renderer

**exception** `salt.exceptions.LoggingRuntimeError`

Raised when we encounter an error while logging

**exception** `salt.exceptions.MasterExit`

Rise when the master exits

**exception** `salt.exceptions.MinionError` (*message=""*)

Minion problems reading uris such as `salt://` or `http://`

**exception** `salt.exceptions.MissingSmb` (*message=""*)

Raised when no smb library is found.

**exception** `salt.exceptions.NotImplemented` (*message=""*)

Used when a module runs a command which returns an error and wants to show the user the output gracefully instead of dying

**exception** `salt.exceptions.NxosCliError` (*message=""*)

NX-OS Cli Error raised when Cli command rejected by the NX-OS device

**exception** `salt.exceptions.NxosClientError` (*message=""*)

NX-OS Client Error raised for problems connecting to the NX-OS device

**exception** `salt.exceptions.NxosError` (*message=""*)

NX-OS Base Exception class

**exception** `salt.exceptions.NxosRequestNotSupported` (*message=""*)

Raised for unsupported client requests

**exception** `salt.exceptions.PkgParseError` (*message=""*)

Used when of the pkg modules cannot correctly parse the output from the CLI tool (pacman, yum, apt, aptitude, etc)

**exception** `salt.exceptions.PublishError` (*message=""*)

Problems encountered when trying to publish a command

**exception** `salt.exceptions.SaltCacheError` (*message=""*)

Thrown when a problem was encountered trying to read or write from the salt cache

**exception** `salt.exceptions.SaltClientError` (*message=""*)

Problem reading the master root key

**exception** `salt.exceptions.SaltClientTimeout` (*message, jid=None, \*args, \*\*kwargs*)

Thrown when a job sent through one of the Client interfaces times out

Takes the `jid` as a parameter

**exception** `salt.exceptions.SaltCloudConfigError` (*message=""*)

Raised when a configuration setting is not found and should exist.

**exception** `salt.exceptions.SaltCloudException` (*message=""*)

Generic Salt Cloud Exception

**exception** `salt.exceptions.SaltCloudExecutionFailure` (*message=""*)

Raised when too much failures have occurred while querying/waiting for data.

**exception** `salt.exceptions.SaltCloudExecutionTimeout` (*message=""*)

Raised when too much time has passed while querying/waiting for data.

**exception** `salt.exceptions.SaltCloudNotFound` (*message=""*)

Raised when some cloud provider function cannot find what's being searched.

**exception** `salt.exceptions.SaltCloudPasswordError` (*message=""*)

Raise when virtual terminal password input failed

**exception** `salt.exceptions.SaltCloudSystemExit` (*message, exit\_code=1*)

This exception is raised when the execution should be stopped.

**exception** `salt.exceptions.SaltConfigurationError` (*message=""*)

Configuration error

**exception** `salt.exceptions.SaltDaemonNotRunning` (*message=""*)

Throw when a running master/minion/syndic is not running but is needed to perform the requested operation (e.g., eauth).

**exception** `salt.exceptions.SaltDeserializationError` (*message=""*)

Thrown when salt cannot deserialize data.

**exception** `salt.exceptions.SaltException` (*message=""*)

Base exception class; all Salt-specific exceptions should subclass this

**pack**()

Pack this exception into a serializable dictionary that is safe for transport via msgpack

**exception** `salt.exceptions.SaltInvocationError` (*message=""*)

Used when the wrong number of arguments are sent to modules or invalid arguments are specified on the command line

**exception** `salt.exceptions.SaltMasterError` (*message=""*)

Problem reading the master root key

**exception** `salt.exceptions.SaltMasterUnresolvableError` (*message=""*)

Problem resolving the name of the Salt master

**exception** `salt.exceptions.SaltNoMinionsFound` (*message=""*)

An attempt to retrieve a list of minions failed

**exception** `salt.exceptions.SaltRenderError` (*message, line\_num=None, buf="", marker='<=====', trace=None*)

Used when a renderer needs to raise an explicit error. If a line number and buffer string are passed, `get_context` will be invoked to get the location of the error.

**exception** `salt.exceptions.SaltReqTimeoutError` (*message=""*)

Thrown when a salt master request call fails to return within the timeout

**exception** `salt.exceptions.SaltRunnerError` (*message=""*)

Problem in runner

**exception** `salt.exceptions.SaltSyndicMasterError` (*message=""*)

Problem while proxying a request in the syndication master

**exception** `salt.exceptions.SaltSystemExit` (*code=0, msg=None*)

This exception is raised when an unsolvable problem is found. There's nothing else to do, salt should just exit.

**exception** `salt.exceptions.SaltWheelError` (*message=""*)

Problem in wheel

**exception** `salt.exceptions.TemplateError` (*message=""*)

Used when a custom error is triggered in a template

**exception** `salt.exceptions.TimedProcTimeoutError` (*message=""*)

Thrown when a timed subprocess does not terminate within the timeout, or if the specified timeout is not an int or a float

**exception** `salt.exceptions.TimeoutError` (*message=""*)

Thrown when an operation cannot be completed within a given time limit.

**exception** `salt.exceptions.TokenAuthenticationError` (*message=""*)

Thrown when token authentication fails

**exception** `salt.exceptions.VMwareApiError` (*message="", info=None*)

Used when representing a generic VMware API error

**exception** `salt.exceptions.VMwareConnectionError` (*message="", info=None*)

Used when the client fails to connect to either a VMware vCenter server or to a ESXi host

**exception** `salt.exceptions.VMwareFileNotFoundError` (*message="", info=None*)

Used when representing a generic VMware error if a file not found

**exception** `salt.exceptions.VMwareMultipleObjectsError` (*message="", info=None*)

Used when multiple objects were retrieved (and one was expected)

**exception** `salt.exceptions.VMwareNotFoundError` (*message="", info=None*)

Used when a VMware object was not found

**exception** `salt.exceptions.VMwareObjectExistsError` (*message="", info=None*)

Used when a VMware object already exists

**exception** `salt.exceptions.VMwareObjectNotFoundError` (*message="", info=None*)

Used when a VMware object was not found

**exception** `salt.exceptions.VMwareObjectRetrievalError` (*message="", info=None*)

Used when a VMware object cannot be retrieved

**exception** `salt.exceptions.VMwarePowerOnError` (*message="", info=None*)

Used when error occurred during power on

**exception** `salt.exceptions.VMwareRuntimeError` (*message="", info=None*)

Used when a runtime error is encountered when communicating with the vCenter

**exception** `salt.exceptions.VMwareSaltError` (*message="", info=None*)

Used when a VMware object cannot be retrieved

**exception** `salt.exceptions.VMwareSystemError` (*message="", info=None*)

Used when representing a generic VMware system error

**exception** `salt.exceptions.VMwareVmCreationError` (*message="", info=None*)

Used when a configuration parameter is incorrect

**exception** `salt.exceptions.VMwareVmRegisterError` (*message="", info=None*)

Used when a configuration parameter is incorrect

`salt.exceptions.get_error_message` (*error*)

Get human readable message from Python Exception

## The Salt Fileserver and Client

### Introduction

Salt has a modular fileserver, and multiple client classes which are used to interact with it. This page serves as a developer's reference, to help explain how the fileserver and clients both work.

### Fileserver

The fileserver is not a daemon, so the fileserver and client are not a true server and client in the traditional sense. Instead, the fileserver is simply a class (`salt.fileserver.Fileserver`), located in `salt/fileserver/__init__.py`. This class has access to the configured fileserver backends via a loader instance, referenced as `self.servers`. When a request comes in from the fileclient, it will ultimately result in a `Fileserver` class function being run.

The functions in this class will run corresponding functions in the configured fileserver backends to perform the requested action. So, in summary:

1. A fileclient class makes a request...
2. which triggers the fileserver to run a function...
3. which runs a named function in each of the configured backends.

Not all of the functions will always execute on every configured backend. For instance, the `find_file` function in the fileserver will stop when it finds a match, so if it finds a match for the desired path in the first configured backend, it won't proceed and try to find the file in the next backend in the list.

Additionally, not all backends implement all functions in the `salt.fileserver.Fileserver` class. For instance, there is a function called `update`, which exists to update remote fileservers such as the `git`, `hg`, and `svn` backends. This action has no use however in the `roots` backend, so it is simply not implemented there, and thus the `roots` backend will be skipped if the `update` function is run on the fileserver.

Backends for the fileserver are located in `salt/fileserver/` (the files not named `__init__.py`).

## Fileclient

There are three fileclient classes:

### `salt.fileclient.RemoteClient`

This client is used when `file_client` is set to `remote`. This is how minions request files from the master.

Functions in this client will craft a payload and send it to the master via the transport channel. This is the same way that the minion asks the master to do other things, such as updating and requesting data from the mine. The payload will be a dictionary with a key called `cmd`, and other values as needed.

Payloads sent via the transport channel are processed by an `MWorker` instance on the master, and the `MWorker`'s `_handle_aes()` function will execute the command. The command will be a function attribute of the `salt.master.AESFuncs` class. The `AESFuncs` class' `__setup_fileserver()` function instantiates a `salt.fileserver.Fileserver` instance and maps its member functions to `AESFuncs` attributes. This is what makes the fileserver functions available remotely. The result of the function is returned back through the transport channel to the minion.

Transporting files is done in chunks, the size of which is decided by the `file_buffer_size` config option. If you look at the `serve_file()` function in any of the fileserver backends, you can see how the `loc` value in the payload determines the offset so that an intermediate chunk of the file can be served. The `RemoteClient`'s `get_file()` function will loop until the end of the file is reached, retrieving one chunk at a time.

### `salt.fileclient.FSClient`

This client is used when `file_client` is set to `local`. This is how masterless minions request files.

This class inherits from the `RemoteClient`, but instead of using a transport channel (`zmq`, `tcp`, etc.), it uses a "fake" transport channel (`salt.fileserver.FSChan`), which implements its own `send()` function. Thus, when a function that the `FSClient` inherits from the `RemoteClient` runs `self.channel.send()`, it's actually calling `salt.fileserver.FSChan.send()`, which calls corresponding functions in the `salt.fileserver.Fileserver()` class. The result is that local file requests use the same code as remote file requests, they just bypass sending them through an actual transport channel and instead call them on the `FSChan`'s `Fileserver` instance.

## `salt.fileclient.LocalClient`

This client is now used exclusively by Pillar. This used to be used when `file_client` was set to `local`, but the `FSChan` class was written to allow minions with `file_client: local` to access the full set of backends. This class will probably be renamed at some point as it is often confused with `salt.client.LocalClient`.

## The `cp` Module

Most of the user-facing interaction with the fileclient happens via the `cp` module. The functions in this module instantiate a fileclient instance (if one is not already saved to the `__context__` dunder) and run fileclient functions.

## Updating the Fileserver

The master daemon spawns a process dedicated to routine maintenance tasks upon startup. This process runs an instance of `salt.master.Maintenance`, which loops forever, running a series of functions and then sleeping for a length of time determined by the `loop_interval` config option. One of the maintenance tasks is to update the fileserver, and it essentially runs `salt.fileserver.Fileserver.update()`, which as we know from above will run all configured backends' `update()` functions, if present. This is now remote filesevers like `git`, `hg`, and `svn` stay up-to-date.

For the local `file_client` (`FSClient`), since it does not interact with the master, upon spawning of its `FSChan` it will update the fileserver.

## Salt `opts` dictionary

It is very common in the Salt codebase to see `opts` referred to in a number of contexts.

For example, it can be seen as `__opts__` in certain cases, or simply as `opts` as an argument to a function in others.

Simply put, this data structure is a dictionary of Salt's runtime configuration information that's passed around in order for functions to know how Salt is configured.

When writing Python code to use specific parts of Salt, it may become necessary to initialize a copy of `opts` from scratch in order to have it available for a given function.

To do so, use the utility functions available in `salt.config`.

As an example, here is how one might generate and print an options dictionary for a minion instance:

```
import salt.config

opts = salt.config.minion_config("/etc/salt/minion")
print(opts)
```

To generate and display `opts` for a master, the process is similar:

```
import salt.config

opts = salt.config.master_config("/etc/salt/master")
print(opts)
```

## Unicode in Salt

Though Unicode handling in large projects can often be complex, Salt adheres to several basic rules to help developers handle Unicode correctly.

(For a basic introduction to this problem, see Ned Batchelder's *excellent introduction to the topic* <<http://nedbatchelder.com/text/unipain/unipain.html>>.

Salt's basic workflow for Unicode handling is as follows:

- 1) Salt should convert whatever data is passed on CLI/API to Unicode. Internally, everything that Salt does should be Unicode unless it is printing to the screen or writing to storage.
- 2) Modules and various Salt pluggable systems use incoming data assuming Unicode.
  - 2.1) **For Salt modules that query an API; the module should convert the data** received from the API into Unicode.
  - 2.2) **For Salt modules that shell out to get output; the module should** convert data received into Unicode. (This does not apply if using the `cmd` execution module, which should handle this for you.
  - 2.3) **For Salt modules which print directly to the console (not via an** outputter) or which write directly to disk, a string should be encoded when appropriate. To handle this conversion, the global variable `__salt__system_encoding__` is available, which declares the locale of the system that Salt is running on.
- 3) When a function in a Salt module returns a string, it should return a `unicode` type in Python 2.
- 4) When Salt delivers the data to an outputter or a returner, it is the job of the outputter or returner to encode the Unicode before displaying it on the console or writing it to storage.

## 32.30 Salt Community Projects

This page contains links to Salt-related projects created by community members. If you come across a useful project please add it to the list!

### 32.30.1 Hubblestack

Hubble is a modular, open-source security compliance framework built on top of SaltStack. The project provides on-demand profile-based auditing, real-time security event notifications, automated remediation, alerting and reporting.

<https://hubblestack.io/>

### 32.30.2 alkali

alkali is a collections of SaltStack states and pillar data that provide just the basics for provisioning Linux instances that may be built upon. alkali is a starter kit of sorts, to help new users to SaltStack get up-and-running quickly with the most commonly used, core packages.

<https://github.com/zulily/alkali>

### 32.30.3 buoyant

buoyant leverages docker to provide an alternative to VM-centric SaltStack development environments. buoyant containers may be spun up nearly instantly, once an initial docker image has been built.

<https://github.com/zulily/buoyant>

### 32.30.4 Salt Sandbox

Salt Sandbox is a multi-VM Vagrant-based Salt development environment used for creating and testing new Salt state modules outside of your production environment. It's also a great way to learn firsthand about Salt and its remote execution capabilities.

<https://github.com/elasticdog/salt-sandbox>

### 32.30.5 Salt Vagrant Demo

A Salt Demo using Vagrant.

<https://github.com/UtahDave/salt-vagrant-demo>

## RELEASE NOTES

This page links to the release notes for Salt, including the current, upcoming, and past releases.

- New releases and security updates are announced on the [Salt Project blog](#). You can subscribe to an [RSS feed](#) for announcements.
- See the version numbers page for more information about the version numbering scheme.

### 33.1 Upcoming release

(release-3007.0)=

#### 33.1.1 Salt 3007.0 release notes

##### Salt's `setup.py` customizations

**:warning: Deprecation Notice:** In Salt 3009, the `setup.py` file will be stripped of its custom additions and migrated to a plain `pyproject.toml` python package or whatever is found best during the process of removing the customizations. **If you're relying on these customizations please stop as your workflow will break in the future.**

##### Python 3.7 Support Dropped

Support for python 3.7 has been dropped since it reached end-of-line in 27 Jun 2023.

##### Azure Salt Extension

Starting from Salt version 3007.0, the Azure functionality previously available in the Salt code base is fully removed. To continue using Salt's features for interacting with Azure resources, users are required to utilize the Azure Salt extension. For more information, refer to the [Azure Salt Extension GitHub repository](#).

## New Package Grain

A new `package` grain was added in 3007.0. This detects how Salt was installed using the `_pkg.txt` in the root of the directory. If you are building packages of Salt you need to ensure this file is set to the correct package type that you are building. The options are `pip`, `onedir`, or `system`. By default this file is already set to `pip`.

## Improved Vault integration

This release features a much deeper integration with HashiCorp Vault, for which many parts of the implementation core were improved. Among other things, the Salt daemons now attempt to renew/revoke their access tokens and can manage long-lived leases, while the Salt master now distributes authentication secrets using response wrapping. An important new feature concerns the way Vault policies can be managed.

In versions before 3006, the Salt master only issued tokens to minions, whose policies could be templated with the minion ID and (insecure) grain values. 3006 introduced secure templating of those policies with pillar values, as well as templating of Vault external pillar paths with pillar values. These improvements reduced the overhead of managing Vault policies securely.

In addition, the Salt master can now be configured to issue AppRoles to minions and manage their metadata using a similar templating approach. Since this metadata can be taken advantage of in templated policies on the Vault side, the need for many boilerplate policies is reduced even further:

```
path "salt/data/minions/{{identity.entity.metadata.minion-id}}" {
  capabilities = ["create", "read", "write", "delete", "patch"]
}

path "salt/data/roles/{{identity.entity.metadata.role}}" {
  capabilities = ["read"]
}
```

Although existing configurations will keep working without intervention after upgrading the Salt master, it is strongly recommended to adjust the `peer_run` configuration to include the new issuance endpoints in order to avoid unnecessary overhead:

```
peer_run:
  .*:
  - vault.get_config
  - vault.generate_new_token
```

Please see the [Vault execution module docs](#) for details and setup instructions regarding AppRole issuance.

Note: The Vault modules are being moved to a Salt extension, but this improvement has still been merged into core for a smoother transition.

## Changelog

### Removed

- Removed RHEL 5 support since long since end-of-lifed #62520
- Removing Azure-Cloud modules from the code base. #64322
- Dropped Python 3.7 support since it's EOL in 27 Jun 2023 #64417
- Remove `salt.payload.Serial` #64459

- Remove `netmiko_conn` and `pyeapi_conn` from `salt.modules.napalm_mod` #64460
- Removed 'transport' arg from `salt.utils.event.get_event` #64461
- Removed the usage of retired Linode API v3 from Salt Cloud #64517

## Deprecated

- Deprecate all Proxmox cloud modules #64224
- Deprecate all the Vault modules in favor of the Vault Salt Extension <https://github.com/salt-extensions/saltext-vault>. The Vault modules will be removed in Salt core in 3009.0. #64893
- Deprecate all the Docker modules in favor of the Docker Salt Extension <https://github.com/saltstack/saltext-docker>. The Docker modules will be removed in Salt core in 3009.0. #64894
- Deprecate all the Zabbix modules in favor of the Zabbix Salt Extension <https://github.com/salt-extensions/saltext-zabbix>. The Zabbix modules will be removed in Salt core in 3009.0. #64896
- Deprecate all the Apache modules in favor of the Apache Salt Extension <https://github.com/salt-extensions/saltext-apache>. The Apache modules will be removed in Salt core in 3009.0. #64909
- Deprecation warning for Salt's backport of `OrderedDict` class which will be removed in 3009 #65542
- Deprecate Kubernetes modules for move to `saltext-kubernetes` in version 3009 #65565
- Deprecated all Pushover modules in favor of the Salt Extension at <https://github.com/salt-extensions/saltext-pushover>. The Pushover modules will be removed from Salt core in 3009.0 #65567
- Removed deprecated code:
  - All of `salt/log/` which has been on a deprecation path for a long time.
  - Some of the logging handlers found in `salt/_logging/handlers` have been removed since the standard library provides them.
  - Removed the deprecated `salt/modules/cassandra_mod.py` module and any tests for it.
  - Removed the deprecated `salt/returners/cassandra_return.py` module and any tests for it.
  - Removed the deprecated `salt/returners/django_return.py` module and any tests for it. #65986

## Changed

- Masquerade property will not default to false turning off masquerade if not specified. #53120
- Addressed Python 3.11 deprecations:
  - Switch to `FullArgSpec` since Py 3.11 no longer has `ArgSpec`, deprecated since Py 3.0
  - Stopped using the deprecated `cgi` module.
  - Stopped using the deprecated `pipes` module
  - Stopped using the deprecated `imp` module #64457
- changed 'gpg\_decrypt\_must\_succeed' default from False to True #64462

**Fixed**

- When an NFS or FUSE mount fails to unmount when mount options have changed, try again with a lazy unmount before mounting again. #18907
- fix autoaccept gpg keys by supporting it in refresh\_db module #42039
- Made cmd.script work with files from the fileserver via salt-ssh #48067
- Made slsutil.renderer work with salt-ssh #50196
- Fixed defaults.merge is not available when using salt-ssh #51605
- Fix extfs.mkfs missing parameter handling for -C, -d, and -e #51858
- Fixed Salt master does not renew token #51986
- Fixed salt-ssh continues state/pillar rendering with incorrect data when an exception is raised by a module on the target #52452
- Fix extfs.tune has 'reserved' documented twice and is missing the 'reserved\_percentage' keyword argument #54426
- Fix the ability of the 'selinux.port\_policy\_present' state to modify. #55687
- Fixed config.get does not support merge option with salt-ssh #56441
- Removed an unused assignment in file.patch #57204
- Fixed vault module fetching more than one secret in one run with single-use tokens #57561
- Use brew path from which in mac\_brew\_pkg module and rely on \_homebrew\_bin() everytime #57946
- Fixed Vault verify option to work on minions when only specified in master config #58174
- Fixed vault command errors configured locally #58580
- Fixed issue with basic auth causing invalid header error and 401 Bad Request, by using HTTPBasicAuthHandler instead of header. #58936
- Make the LXD module work with pyLXD > 2.10 #59514
- Return error if patch file passed to state file.patch is malformed. #59806
- Handle failure and error information from tuned module/state #60500
- Fixed sdb.get\_or\_set\_hash with Vault single-use tokens #60779
- Fixed state.test does not work with salt-ssh #61100
- Made slsutil.findup work with salt-ssh #61143
- Allow all primitive grain types for autosign\_grains #61416, #63708
- ipset.new\_set no longer fails when creating a set type that uses the family create option #61620
- Fixed Vault session storage to allow unlimited use tokens #62380
- fix the efi grain on FreeBSD #63052
- Fixed gpg.receive\_keys returns success on failed import #63144
- Fixed GPG state module always reports success without changes #63153
- Fixed GPG state module does not respect test mode #63156
- Fixed gpg.absent with gnupghome/user, fixed gpg.delete\_key with gnupghome #63159
- Fixed service module does not handle enable/disable if systemd service is an alias #63214

- Made x509\_v2 compound match detection use new runner instead of peer publishing #63278
- Need to make sure we update **pillar** during a pillar refresh to ensure that process\_beacons has the updated beacons loaded from pillar. #63583
- This implements the vpc\_uuid parameter when creating a droplet. This parameter selects the correct virtual private cloud (private network interface). #63714
- pkg.installed no longer reports failure when installing packages that are installed via the task manager #63767
- mac\_xattr.list and mac\_xattr.read will replace undecode-able bytes to avoid raising CommandExecutionError. #63779 #63779
- Fix aptpkg.latest\_version performance, reducing number of times to 'shell out' #63982
- Added option to use a fresh connection for mysql cache #63991
- [lxd] Fixed a bug in container\_create which prevented devices which are not of type disk to be correctly created and added to the container when passed via the devices parameter. #63996
- Skipped the isfile check to greatly increase speed of reading minion keys for systems with a large number of minions on slow file storage #64260
- Fix utf8 handling in 'pass' renderer #64300
- Upgrade tornado to 6.3.2 #64305
- Prevent errors due missing 'transactional\_update.apply' on SLE Micro and MicroOS. #64369
- Fix 'unable to unmount' failure to return False result instead of None #64420
- Fixed issue uninstalling duplicate packages in win\_appx execution module #64450
- Clean up tech debt, IPC now uses tcp transport. #64488
- Made salt-ssh more strict when handling unexpected situations and state.\* wrappers treat a remote exception as failure, excluded salt-ssh error returns from mine #64531
- Fix flaky test for LazyLoader with isolated mocking of threading.RLock #64567
- Fix possible KeyError exceptions in salt.utils.user.get\_group\_dict while reading improper duplicated GID assigned for the user. #64599
- changed vm\_config() to deep-merge vm\_overrides of specific VM, instead of simple-merging the whole vm\_overrides #64610
- Fix the way Salt tries to get the Homebrew's prefix
 

The first attempt to get the Homebrew's prefix is to look for the HOMEBREW\_PREFIX environment variable. If it's not set, then Salt tries to get the prefix from the brew command. However, the brew command can fail. So a last attempt is made to get the prefix by guessing the installation path. #64924
- Add missing MySQL Grant SERVICE\_CONNECTION\_ADMIN to mysql module. #64934
- Fixed slsutil.update with salt-ssh during template rendering #65067
- Keep track when an included file only includes sls files but is a requisite. #65080
- Fixed gpg.present succeeds when the keyserver is unreachable #65169
- Fix typo in nftables module to ensure unique nft family values #65295
- Dereference symlinks to set proper \_\_cli opt #65435
- Made salt-ssh merge master top returns for the same environment #65480
- Account for situation where the metadata grain fails because the AWS environment requires an authentication token to query the metadata URL. #65513

- Improve the condition of overriding target for pip with VENV\_PIP\_TARGET environment variable. #65562
- Added SSH wrapper for logmod #65630
- Include changes in the results when schedule.present state is run with test=True. #65652
- Fix extfs.tune doesn't pass retcode to module.run #65686
- Return an error message when the DNS plugin is not supported #65739
- Execution modules have access to regular fileclient durring pillar rendering. #66124
- Fixed a issue with server channel where a minion's public key would be rejected if it contained a final newline character. #66126

### Added

- Allowed publishing to regular minions from the SSH wrapper #40943
- Added syncing of custom salt-ssh wrappers #45450
- Made salt-ssh sync custom utils #53666
- Add ability to use file.managed style check\_cmd in file.serialize #53982
- Revised use of deprecated net-tools and added support for ip neighbour with IPv4 ip\_neighs, IPv6 ip\_neighs6 #57541
- Added password support to Redis returner. #58044
- Added a state (win\_task) for managing scheduled tasks on Windows #59037
- Added keyring param to gpg modules #59783
- Added new grain to detect the Salt package type: onedir, pip or system #62589
- Added Vault AppRole and identity issuance to minions #62823
- Added Vault AppRole auth mount path configuration option #62825
- Added distribution of Vault authentication details via response wrapping #62828
- Add salt package type information. Either onedir, pip or system. #62961
- Added signature verification to file.managed/archive.extracted #63143
- Added signed\_by\_any/signed\_by\_all parameters to gpg.verify #63166
- Added match runner #63278
- Added Vault token lifecycle management #63406
- adding new call for openscap xccdf eval supporting new parameters #63416
- Added Vault lease management utility #63440
- implement removal of ptf packages in zypper pkg module #63442
- add JUnit output for saltcheck #63463
- Add ability for file.keyvalue to create a file if it doesn't exist #63545
- added cleanup of temporary mountpoint dir for macpackage installed state #63905
- Add pkg.installed show installable version in test mode #63985
- Added patch option to Vault SDB driver #64096

- Added flags to create local users and groups #64256
- Added inline specification of trusted CA root certificate for Vault #64379
- Add ability to return False result in test mode of configurable\_test\_state #64418
- Switched Salt's onedir Python version to 3.11 #64457
- Added support for dnf5 and its new command syntax #64532
- Adding a new decorator to indicate when a module is deprecated in favor of a Salt extension. #64569
- Add jq-esque to\_entries and from\_entries functions #64600
- Added ability to use PYTHONWARNINGS=ignore to silence deprecation warnings. #64660
- Add follow\_symlinks to file.symlink exec module to switch to os.path.lexists when False #64665
- Strengthen Salt's HA capabilities with master clustering. #64939
- Added win\_appx state and execution modules for managing Microsoft Store apps and deprovisioning them from systems #64978
- Add support for show\_jid to salt-run  
Adds support for show\_jid master config option to salt-run, so its behaviour matches the salt cli command. #65008
- Add ability to remove packages by wildcard via apt execution module #65220
- Added support for master top modules on masterless minions #65479
- Allowed accessing the regular mine from the SSH wrapper #65645
- Allow enabling backup for Linode in Salt Cloud #65697
- Add a backup schedule setter fFunction for Linode VMs #65713
- Add acme support for manual plugin hooks #65744

## Security

- Upgrade to tornado>=6.3.3 due to <https://github.com/advisories/GHSA-qppv-j76h-2rpx> #64989
- Update to gitpython>=3.1.35 due to <https://github.com/advisories/GHSA-wfm5-v35h-vwf4> and <https://github.com/advisories/GHSA-cwvm-v4w8-q58c> #65137

(release-3007.1)=

## 33.1.2 Salt 3007.1 release notes

### Changelog

#### Removed

- The salt.utils.psutil\_compat was deprecated and now removed in Salt 3008. Please use the psutil module directly. #66160

### Fixed

- Fixes multiple issues with the `cmd` module on Windows. Scripts are called using the `-File` parameter to the `powershell.exe` binary. CLIXML data in `stderr` is now removed (only applies to encoded commands). Commands can now be sent to `cmd.powershell` as a list. Makes sure JSON data returned is valid. Strips whitespace from the return when using `runas`. #61166
- Fixed the `win_lgpo_netsh` salt util to handle non-English systems. This was a rewrite to use PowerShell instead of netsh to make the changes on the system #61534
- Fix typo in `nftables` module to ensure unique `nft` family values #65295
- Corrected `x509_v2` CRL creation `last_update` and `next_update` values when system timezone is not UTC #65837
- Fix for `NoneType` can't be used in 'await' expression error. #66177
- Log "Publish server binding pub to" messages to debug instead of error level. #66179
- Fix syndic startup by making payload handler a coroutine #66237
- Fixed `aptpkg.remove` "unable to locate package" error for non-existent package #66260
- Fixed `pillar.ls` doesn't accept `kwargs` #66262
- Fix cache directory setting in Master Cluster tutorial #66264
- Change log level of successful master cluster key exchange from error to info. #66266
- Made `file.managed` skip download of a remote source if the managed file already exists with the correct hash #66342
- Fixed `nftables.build_rule` breaks `ipv6` rules by using the wrong syntax for source and destination addresses #66382

### Added

- Added the ability to pass a version of `chocolatey` to install to the `chocolatey.bootstrap` function. Also added states to bootstrap and unbootstrap `chocolatey`. #64722
- Add Ubuntu 24.04 support #66180
- Add Fedora 40 support, replacing Fedora 39 #66300

### Security

- Bump to `pydantic==2.6.4` due to <https://github.com/advisories/GHSA-mr82-8j83-vxmv> #66433
- Bump to `jinj2==3.1.4` due to <https://github.com/advisories/GHSA-h75v-3vvj-5mfj> #66488

See [Install a release candidate](#) for more information about installing an RC when one is available.

## 33.2 Previous releases

(release-3006.0)=

### 33.2.1 Salt 3006.0 release notes

#### Onedir packaging

Going forward from the 3006.0 release, the Salt Project will only provide onedir packages to install or upgrade Salt. The classic, non-onedir packages will not be provided for supported operating systems. See [Upgrade to onedir](#) in the [Salt Install Guide](#) for information about upgrading from the classic packages to the onedir packages.

#### Linux Packaging Salt Master Salt User and Group

The linux Salt Master packages will now add a Salt user and group by default. The packages will add the `user: salt` config option to the Salt Master config. The Salt Master service will run as this user. If you do not want to run the Salt Master as a different user you can remove the `user: salt` config from `/etc/salt/master` or change the user to the desired user to run the Salt Master.

Since the Salt Master is running as a different user, you will need to ensure you set the owner and group to `salt` for your `file_roots` and `pillar_roots`(commonly `/srv/salt` and `/srv/pillar`).

If you are running a Salt Master, Salt-API and a Salt Minion on the same host using the new `salt` user and you install a pip dependency into the onedir environment using `salt-pip` or the `pip` module, you need to to `chown` the directory `/opt/saltstack/salt/lib/<python_version>/site-packages/` with the `salt` user and group.

#### Caveat of salt-pip

Salt ships with a wrapper script around pip called `salt-pip`. Users should use `salt-pip` to install any python packages needed to extend Salt. `salt-pip` installs python packages into an `extras-3.10` directory located in the root of the onedir directory, by setting the `--target` argument for pip. This ensures those packages remain installed when upgrading Salt. There is a known bug in pip when using `--target` where scripts and other non-python assets may not be cleaned up properly when un-installing. The Salt team is working to resolve this bug in the up-stream pip project.

#### Dropping support for Python 3.5 and 3.6

Python 3.5 and 3.6 will no longer be supported by Salt since they are end of life. Going forward our policy will be to align with Python's supported versions. See [Salt support for Python versions](#) for more information.

### All salt-api functionality disabled by default

All netapi clients, which provide the functionality to salt-api, will now be disabled by default as a security precaution. If you use salt-api, you must add the new netapi\_enable\_clients option to your salt master config. This is a breaking change and the salt-api will not function without this new configuration option. See [Enabling netapi client interfaces](#) for more information.

### How do I migrate to the onedir packages?

The migration path from the classic, non-onedir packages to the onedir packages will include:

- Repo File: You need to update your repo file to point to the new repo paths for your platform. After the repo file is updated, upgrade your Salt packages.
- Pip packages: You need to ensure any 3rd party pip packages are installed in the correct onedir path. This can be accomplished in two ways:
  - salt-pip install <package name>
  - Using the pip.installed Salt state.

To install python packages into the system python environment, user's must now provide the pip\_bin or bin\_env to the pip state module.

For example:

```
lib-foo:
  pip.installed:
    - pip_bin: /usr/bin/pip3
lib-bar:
  pip.installed:
    - bin_env: /usr/bin/python3
```

### Changelog

#### Removed

- Remove and deprecate the **orchestration** key from salt.runner and salt.wheel return data. To get it back, set features.enable\_deprecated\_orchestration\_flag master configuration option to True. The flag will be completely removed in Salt 3008 Argon. [#59917](#)
- Removed distutils and replaced with setuptools, given distutils is deprecated and removed in Python 3.12 [#60476](#)
- Removed runtests targets from noxfile.py [#62239](#)
- Removed the PyObjC dependency.

This addresses problems with building a one dir build for macOS. It became problematic because depending on the macOS version, it pulls different dependencies, and we would either have to build a macos onedir for each macOS supported release, or ship a crippled onedir(because it would be tied to the macOS version where the onedir was built). Since it's currently not being used, it's removed. [#62432](#)

- Removed SixRedirectImporter from Salt. Salt hasn't shipped six since Salt 3004. [#63874](#)

## Deprecated

- renamed `keep_jobs`, specifying job cache TTL in hours, to `keep_jobs_seconds`, specifying TTL in seconds. `keep_jobs` will be removed in the Argon release #55295
- Removing all references to `napalm-base` which is no longer supported. #61542
- The `'ip_bracket'` function has been moved from `salt/utils/zeromq.py` in `salt/utils/network.py` #62009
- The `expand_repo_def` function in `salt.modules.aptpkg` is now deprecated. It's only used in `salt.states.pkgrepo` and it has no use of being exposed to the CLI. #62485
- Deprecated defunct Django returner #62644
- Deprecate core ESXi and associated states and modules, `vcenter` and `vsphere` support in favor of Salt VMware Extensions #62754
- Removing `manufacture grain` which has been deprecated. #62914
- Removing deprecated `utils/boto3_elasticsearch.py` #62915
- Removing support for the now deprecated `_ext_nodes` from `salt/master.py`. #62917
- Deprecating the Salt Slack engine in favor of the Salt Slack Bolt Engine. #63095
- `salt.utils.version.StrictVersion` is now deprecated and it's use should be replaced with `salt.utils.version.Version`. #63383

## Changed

- More intelligent diffing in changes of `file.serialize` state. #48609
- Move deprecation of the `neutron` module to Argon. Please migrate to the `neutronng` module instead. #49430
- `umask` is now a global state argument, instead of only applying to `cmd` states. #57803
- Update `pillar.obfuscate` to accept `kwargs` in addition to `args`. This is useful when passing in keyword arguments like `saltenv` that are then passed along to `pillar.items`. #58971
- Improve support for listing macOS brew casks #59439
- Add missing MariaDB Grants to `mysql` module. MariaDB has added some grants in 10.4.x and 10.5.x that are not present here, which results in an error when creating. Also improved exception handling in `grant_add` which did not log the original error message and replaced it with a generic error. #61409
- Use `VENV_PIP_TARGET` environment variable as a default target for `pip` if present. #62089
- Disabled `FQDNs` grains on macOS by default #62168
- Replaced `pyroute2.IPDB` with `pyroute2.NDB`, as the former is deprecated #62218
- Enhance capture of error messages for `Zypper` calls in `zypperpkg` module. #62346
- Removed `GPG_1_3_1` check #62895
- Requisite state chunks now all consistently contain `__id__`, `__sls__` and `name`. #63012
- `netapi_enable_clients` option to allow enabling/disabling of clients in `salt-api`. By default all clients will now be disabled. Users of `salt-api` will need to update their master config to enable the clients that they use. Not adding the `netapi_enable_clients` option with required clients to the master config will disable `salt-api`. #63050
- Stop relying on `salt/_version.py` to write Salt's version. Instead use `salt/_version.txt` which only contains the version string. #63383
- Set `enable_fqdns_grains` to be `False` by default. #63595

- Changelog snippet files must now have a `.md` file extension to be more explicit on what type of rendering is done when they are included in the main `CHANGELOG.md` file. #63710
- Upgraded to `relenv==0.9.0` #63883

## Fixed

- Add kwargs to handle extra parameters for `http.query` #36138
- Fix mounted bind mounts getting active mount options added #39292
- Fix `sysctl.present` converts spaces to tabs. #40054
- Fixes state `pkg.purged` to purge removed packages on Debian family systems #42306
- Fix `fun_args` missing from `syndic` returns #45823
- Fix `mount.mounted` with 'mount: False' reports unmounted file system as unchanged when running with `test=True` #47201
- Issue #49310: Allow users to touch a file with Unix date of birth #49310
- Do not raise an exception in `pkg.info_installed` on nonzero return code #51620
- Passes the value of the `force` parameter from `file.copy` to its call to `file.remove` so that files with the read-only attribute are handled. #51739
- Fixed `x509.certificate_managed` creates new certificate every run in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #52167
- Don't check for cached pillar errors on `state.apply` #52354, #57180, #59339
- Swapping out args and kwargs for arg and kwarg respectively in the Slack engine when the command passed is a runner. #52400
- Ensure when we're adding chunks to the rules when running aggregation with the `iptables` state module we use a copy of the chunk otherwise we end up with a recursive mess. #53353
- When `user_create` or `user_remove` fail, return `False` instead of returning the error. #53377
- Include `sync_roster` when `sync_all` is called. #53914
- Avoid warning noise in `lograte.get` #53988
- Fixed listing revoked keys with `gpg.list_keys` #54347
- Fix `mount.mounted` does not handle blanks properly #54508
- Fixed `grain num_cpus` get wrong CPUs count in case of inconsistent CPU numbering. #54682
- Fix spelling error for `python_shell` argument in `dpkg_lower` module #54907
- Cleaned up bytes response data before sending to non-bytes compatible returners (`postgres`, `mysql`) #55226
- Fixed malformed state return when testing `file.managed` with unavailable source file #55269
- Included `stdout` in error message for `Zypper` calls in `zypperpkg` module. #56016
- Fixed `pillar.filter_by` with `salt-ssh` #56093
- Fix `boto_route53` issue with (multiple) VPCs. #57139
- Remove `log` from `mine runner` which was not used. #57463
- Fixed `x509.read_certificate` error when reading a Microsoft CA issued certificate in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #57535

- Updating Slack engine to use slack\_bolt library. #57842
- Fixed warning about replace=True with x509.certificate\_managed in the new cryptography x509 module. #58165
- Fix salt.modules.pip:is\_installed doesn't handle locally installed packages #58202
- Add missing MariaDB Grants to mysql module. MariaDB has added some grants in 10.4.x and 10.5.x that are not present here, which results in an error when creating. #58297
- linux\_shadow: Fix cases where malformed shadow entries cause user.present states to fail. #58423
- Fixed salt.utils.compat.cmp to work with dictionaries #58729
- Fixed formatting for terse output mode #58953
- Fixed RecursiveDictDiffer with added nested dicts #59017
- Fixed x509.certificate\_managed has DoS effect on master in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #59169
- Fixed salt.nado.websockets disconnecting immediately #59183
- Fixed x509.certificate\_managed rolls certificates every now and then in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #59315
- Fix postgres\_privileges.present not idempotent for functions #59585
- Fixed influxdb\_continuous\_query.present state to provide the client args to the underlying module on create. #59766
- Warn when using insecure (http:// based) key\_urls for apt-based systems in pkgrepo.managed, and add a kwarg that determines the validity of such a url. #59786
- add load balancing policy default option and ensure the module can be executed with arguments from CLI #59909
- Fix salt-ssh when using imports with extra-filerefs. #60003
- Fixed cache directory corruption startup error #60170
- Update docs remove dry\_run in docstring of file.blockreplace state. #60227
- Adds Parrot to OS\_Family\_Map in grains. #60249
- Fixed stdout and stderr being empty sometimes when use\_vt=True for the cmd.run[\*] functions #60365
- Use return code in iptables --check to verify rule exists. #60467
- Fix regression pip.installed does not pass env\_vars when calling pip.list #60557
- Fix xfs module when additional output included in mkfs.xfs command. #60853
- Fixed parsing new format of terraform states in roster.terraform #60915
- Fixed recognizing installed ARMv7 rpm packages in compatible architectures. #60994
- Fixing changes dict in pkg state to be consistent when installing and test=True. #60995
- Fix cron.present duplicating entries when changing timespec to special. #60997
- Made salt-ssh respect --wipe again #61083
- state.orchestrate\_single only passes a pillar if it is set to the state function. This allows it to be used with state functions that don't accept a pillar keyword argument. #61092
- Fix ipset state when the comment kwarg is set. #61122
- Fix issue with archive.unzip where the password was not being encoded for the extract function #61422

- Some Linux distributions (like AlmaLinux, Astra Linux, Debian, Mendel, Linux Mint, Pop!\_OS, Rocky Linux) report different `oscodename`, `osfullname`, `osfinger` grains if `lsb-release` is installed or not. They have been changed to only derive these OS grains from `/etc/os-release`. #61618
- Pop!\_OS uses the full version (`YY.MM`) in the `osfinger` grain now, not just the year. This allows differentiating for example between 20.04 and 20.10. #61619
- Fix `ssh` config roster to correctly parse the `ssh` config files that contain spaces. #61650
- Fix `SoftLayer` configuration not raising an exception when a domain is missing #61727
- Allow the minion to start or `salt-call` to run even if the user doesn't have permissions to read the `root_dir` value from the registry #61789
- Need to move the creation of the proxy object for the `ProxyMinion` further down in the initialization for sub proxies to ensure that all modules, especially any custom proxy modules, are available before attempting to run the `init` function. #61805
- Fixed malformed state return when `merge-serializing` to an improperly formatted file #61814
- Made `cmdmod._run[_all]_quiet` work during minion startup on MacOS with `runas` specified (which fixed `mac_service`) #61816
- When deleting the vault cache, also delete from the session cache #61821
- Ignore errors on reading license info with `dpkg_lowpkg` to prevent tracebacks on getting package information. #61827
- `win_lgpo`: Display conflicting policy names when more than one policy is found #61859
- `win_lgpo`: Fixed intermittent `KeyError` when getting policy setting using `lgpo.get_policy` #61860
- Fixed listing minions on OpenBSD #61966
- Make Salt to return an error on "pkg" modules and states when targeting duplicated package names #62019
- Fix return of REST-returned permissions when `auth_list` is set #62022
- Normalize package names once on using `pkg.installed/removed` with `yum` to make it possible to install packages with the name containing a part similar to a name of architecture. #62029
- Fix inconsistency regarding name and `pkgs` parameters between `zypperpkg.upgrade()` and `yumpkg.upgrade()` #62030
- Fix `attr=all` handling in `pkg.list_pkgs()` (`yum/zypper`). #62032
- Fixed the `humannname` being ignored in `pkgrepo.managed` on openSUSE Leap #62053
- Fixed issue with some LGPO policies having whitespace at the beginning or end of the element alias #62058
- Fix ordering of args to `libcloud_storage.download_object` module #62074
- Ignore extend declarations in `sls` files that are excluded. #62082
- Remove leftover usage of `impacket` #62101
- Pass executable path from `_get_path_exec()` is used when calling the program. The `$HOME` env is no longer modified globally. Only trailing newlines are stripped from the fetched secret. Pass process arguments are handled in a secure way. #62120
- Ignore some command return codes in `opensdrctl_service` to prevent spurious errors #62131
- Fixed extra period in filename output in `tls` module. Instead of "server.crt." it will now be "server.crt". #62139
- Make sure lingering `PAexec-*.exe` files in the Windows directory are cleaned up #62152
- Restored Salt's `DeprecationWarnings` #62185

- Fixed issue with forward slashes on Windows with file.recurse and clean=True #62197
- Recognize OSMC as Debian-based #62198
- Fixed Zypper module failing on RPM lock file being temporarily unavailable. #62204
- Improved error handling and diagnostics in the proxmox salt-cloud driver #62211
- Added EndeavourOS to the Arch os\_family. #62220
- Fix salt-ssh not detecting platform-python as a valid interpreter on EL8 #62235
- Fix pkg.version\_cmp on openEuler and a few other os flavors. #62248
- Fix localhost detection in glusterfs.peers #62273
- Fix Salt Package Manager (SPM) exception when calling spm create\_repo . #62281
- Fix matcher slowness due to loader invocation #62283
- Fixes the Puppet module for non-aio Puppet packages for example running the Puppet module on FreeBSD. #62323
- Issue 62334: Displays a debug log message instead of an error log message when the publisher fails to connect #62334
- Fix pyobjects renderer access to opts and sls #62336
- Fix use of random shuffle and sample functions as Jinja filters #62372
- Fix groups with duplicate GIDs are not returned by get\_group\_list #62377
- Fix the "zpool.present" state when enabling zpool features that are already active. #62390
- Fix ability to execute remote file client methods in saltcheck #62398
- Update all platforms to use pycparser 2.21 or greater for Py 3.9 or higher, fixes fips fault with openssl v3.x #62400
- Due to changes in the Netmiko library for the exception paths, need to check the version of Netmiko python library and then import the exceptions from different locations depending on the result. #62405
- When using preq on a state, then prereq state will first be run with test=True to determine if there are changes. When there are changes, the state with the prereq option will be run prior to the prereq state. If this state fails then the prereq state will not run and the state output uses the test=True run. However, the proposed changes are included for the prereq state are included from the test=True run. We should pull those out as there weren't actually changes since the prereq state did not run. #62408
- Added directory mode for file.copy with makedirs #62426
- Provide better error handling in the various napalm proxy minion functions when the device is not accessible. #62435
- When handling aggregation, change the order to ensure that the requisites are aggregated first and then the state functions are aggregated. Caching whether aggregate functions are available for particular states so we don't need to attempt to load them everytime. #62439
- The patch allows to bootstrap kubernetes clusters in the version above 1.13 via salt module #62451
- sysctl.persist now updates the in-memory value on FreeBSD even if the on-disk value was already correct. #62461
- Fixed parsing CDROM apt sources #62474
- Update sanitizing masking for Salt SSH to include additional password like strings. #62483
- Fix user/group checking on file state functions in the test mode. #62499

- Fix user.present to allow removing groups using optional\_groups parameter and enforcing idempotent group membership. #62502
- Fix possible tracebacks if there is a package with '-----' or '=====' in the description is installed on the Debian based minion. #62519
- Fixed the omitted "pool" parameter when cloning a VM with the proxmox salt-cloud driver #62521
- Fix rendering of pyobjects states in saltcheck #62523
- Fixes pillar where a corrupted CacheDisk file forces the pillar to be rebuilt #62527
- Use str() method instead of repo\_line for when python3-apt is installed or not in aptpkg.py. #62546
- Remove the connection\_timeout from netmiko\_connection\_args before netmiko\_connection\_args is added to context["netmiko\_device"]["args"] which is passed along to the Netmiko library. #62547
- Fix order specific mount.mounted options for persist #62556
- Fixed salt-cloud cloning a proxmox VM with a specified new vmid. #62558
- Fix runas with cmd module when using the onedir bundled packages #62565
- Update setproctitle version for all platforms #62576
- Fixed missing parameters when cloning a VM with the proxmox salt-cloud driver #62580
- Handle PermissionError when importing crypt when FIPS is enabled. #62587
- Correctly reraise exceptions in states.http #62595
- Fixed syndic eauth. Now jobs will be published when a valid eauth user is targeting allowed minions/functions. #62618
- updated rest\_cherry/app to properly detect arg sent as a string as curl will do when only one arg is supplied. #62624
- Prevent possible tracebacks in core grains module by ignoring non utf8 characters in /proc/1/environ, /proc/1/cmdline, /proc/cmdline #62633
- Fixed vault ext pillar return data for KV v2 #62651
- Fix saltcheck \_get\_top\_states doesn't pass saltenv to state.show\_top #62654
- Fix groupadd.\* functions hard code relative command name #62657
- Fixed pdbedit.create trying to use a bytes-like hash as string. #62670
- Fix dependency on legacy boto module in boto3 modules #62672
- Modified "\_get\_flags" function so that it returns regex flags instead of integers #62676
- Change startup ReqServer log messages from error to info level. #62728
- Fix kmod.\* functions hard code relative command name #62772
- Remove mako as a dependency in Windows and macOS. #62785
- Fix mac\_brew\_pkg to work with null taps #62793
- Fixing a bug when listing the running schedule if "schedule.enable" and/or "schedule.disable" has been run, where the "enabled" items is being treated as a schedule item. #62795
- Prevent annoying RuntimeWarning message about line buffering (buffering=1) not being supported in binary mode #62817
- Include UID and GID checks in modules.file.check\_perms as well as comparing ownership by username and group name. #62818

- Fix presence events on TCP transport by removing a client's presence when minion disconnects from publish channel correctly #62826
- Remove Azure deprecation messages from functions that always run w/ salt-cloud #62845
- Use select instead of iterating over entrypoints as a dictionary for importlib\_metadata>=5.0.0 #62854
- Fixed master job scheduler using when #62858
- LGPO: Added support for missing domain controller policies: VulnerableChannelAllowList and LdapEnforceChannelBinding #62873
- Fix unnecessarily complex gce metadata grains code to use googles metadata service more effectively. #62878
- Fixed dockermodule version\_info function for docker-py 6.0.0+ #62882
- Moving setting the LOAD\_BALANCING\_POLICY\_MAP dictionary into the try except block that determines if the cassandra\_cql module should be made available. #62886
- Updating various MongoDB module functions to work with latest version of pymongo. #62900
- Restored channel for Syndic minions to send job returns to the Salt master. #62933
- removed \_resolve\_deps as it required a library that is not generally available. and switched to apt-get for everything as that can auto resolve dependencies. #62934
- Updated pyzmq to version 22.0.3 on Windows builds because the old version was causing salt-minion/salt-call to hang #62937
- Allow root user to modify crontab lines for non-root users (except AIX and Solaris). Align crontab line changes with the file ones and also with listing crontab. #62940
- Fix systemd\_service.\* functions hard code relative command name #62942
- Fix file.symlink backupname operation can copy remote contents to local disk #62953
- Issue #62968: Fix issue where cloud deployments were putting the keys in the wrong location on Windows hosts #62968
- Fixed gpg\_passphrase issue with gpg decrypt/encrypt functions #62977
- Fix file.tidied FileNotFoundError #62986
- Fixed bug where module.wait states were detected as running legacy module.run syntax #62988
- Fixed issue with win\_wua module where it wouldn't load if the CryptSvc was set to Manual start #62993
- The \_\_opts\_\_ dunder dictionary is now added to the loader's pack if not already present, which makes it accessible via the salt.loader.context.NamedLoaderContext class. #63013
- Issue #63024: Fix issue where grains and config data were being place in the wrong location on Windows hosts #63024
- Fix btrfs.subvolume\_snapshot command failing #63025
- Fix file.retention\_schedule always reports changes #63033
- Fix mongo authentication for mongo\_ext\_pillar and mongo returner  
This fix also include the ability to use the mongo connection string for mongo\_ext\_pillar #63058
- Fixed x509.create\_csr creates invalid CSR by default in the new cryptography x509 module. #63103
- TCP transport documentation now contains proper master/minion-side filtering information #63120
- Fixed gpg.verify does not respect gnupghome #63145
- User responsible for the runner is now correctly reported in the events on the event bus for the runner. #63148

- Made pillar cache pass extra minion data as well #63208
- Fix serious performance issues with the file.tidied module #63231
- Fix rpm\_lowpkg version comparison logic when using rpm-vercmp and only one version has a release number. #63317
- Import StrictVersion and LooseVersion from setuputils.distutils.version or setuputils.\_distutils.version, if first not available #63350
- `service.status` on Windows does no longer throws a `CommandExecutionError` if the service is not found on the system. It now returns "Not Found" instead. #63577
- When the shell is passed as powershell or pwsh, only wrapper the shell in quotes if `cmd.run` is running on Windows. When quoted on Linux hosts, this results in an error when the keyword arguments are appended. #63590
- LGPO: Added support for "Relax minimum password length limits" #63596
- Fixed the ability to set a scheduled task to auto delete if not scheduled to run again (`delete_after`) #63650
- When a job is disabled only increase it's `_next_fire_time` value if the job would have run at the current time, eg. the current `_next_fire_time == now`. #63699
- have `salt.template.compile_template_str` cleanup its temp files. #63724
- Check file is not empty before attempting to read pillar disk cache file #63729
- Fixed an issue with generating fingerprints for public keys with different line endings #63742
- Add `fileserv_interval` and `maintenance_interval` master configuration options. These options control how often to restart the FileServerUpdate and Maintenance processes. Some file server and pillar configurations are known to cause memory leaks over time. A notable example of this are configurations that use pygit2. Salt can not guarantee dependency libraries like pygit2 won't leak memory. Restarting any long running processes that use pygit2 guarantees we can keep the master's memory usage in check. #63747
- `mac_xattr.list` and `mac_xattr.read` will replace undecode-able bytes to avoid raising `CommandExecutionError`. #63779 #63779
- Change default GPG keyserver from `pgp.mit.edu` to `keys.openpgp.org`. #63806
- fix cherryypy 400 error output to be less generic. #63835
- Ensure `kwargs` is passed along to `_call_appt` when passed into `install` function. #63847
- remove `eval` and `update` logging to be more informative on bad config #63879
- add `linux_distribution` to `util` to stop dep warning #63904
- Fix `valuerror` when trying to close `fileclient`. Remove usage of `del` and close the `fileclient` properly. #63920
- Handle the situation when a sub proxy minion does not init properly, eg. an exception happens, and the sub proxy object is not available. #63923
- Clarifying documentation for `extension_modules` configuration option. #63929
- Windows `pkg` module now properly handles versions containing strings #63935
- Handle the scenario when the `check_cmd` requisite is used with a state function when the state has a local `check_cmd` function but that function isn't used by that function. #63948
- Issue #63981: Allow users to pass `verify_ssl` to `pkg.install/pkg.installed` on Windows #63981
- Hardened permissions on `workers.ipc` and `master_event_pub.ipc`. #64063

## Added

- Introduce a `LIB_STATE_DIR` syspaths variable which defaults to `CONFIG_DIR`, but can be individually customized during installation by specifying `--salt-lib-state-dir` during installation. Change the default `pki_dir` to `<LIB_STATE_DIR>/pki/master` (for the master) and `<LIB_STATE_DIR>/pki/minion` (for the minion). #3396
- Allow users to enable 'queue=True' for all state runs via config file #31468
- Added pillar templating to vault policies #43287
- Add support for NVMeF as a transport protocol for hosts in a Pure Storage FlashArray #51088
- A new salt-ssh roster that generates a roster by parses a known\_hosts file. #54679
- Added Windows Event Viewer support #54713
- Added the `win_lgpo_reg` state and execution modules which will allow registry based group policy to be set directly in the Registry.pol file #56013
- Added resource tagging functions to boto\_dynamodb execution module #57500
- Added `openvswitch_db` state module and functions `bridge_to_parent`, `bridge_to_vlan`, `db_get`, and `db_set` to the `openvswitch` execution module. Also added optional `parent` and `vlan` parameters to the `openvswitch_bridge.present` state module function and the `openvswitch.bridge_create` execution module function. #58986
- State module to manage SysFS attributes #60154
- Added ability for `salt.wait_for_event` to handle `event_ids` that have a list value. #60430
- Added support for Linux ppc64le core grains (`cpu_model`, `virtual`, `productname`, `manufacturer`, `serialnumber`) and arm core grains (`serialnumber`, `productname`) #60518
- Added `autostart` option to `virt.defined` and `virt.running` states, along with `virt.update` execution modules. #60700
- Added .0 back to our versioning scheme for future versions (e.g. 3006.0) #60722
- Initial work to allow parallel startup of proxy minions when used as sub proxies with Deltaproxy. #61153
- Added node label support for GCE #61245
- Support the `--priority` flag when adding sources to Chocolatey. #61319
- Add namespace option to `ext_pillar.http_json` #61335
- Added a filter function to `ps` module to get a list of processes on a minion according to their state. #61420
- Add `postgres.timeout` option to `postgres` module for limiting postgres query times #61433
- Added new optional vault option, `config_location`. This can be either `master` or `local` and defines where vault will look for connection details, either requesting them from the master or using the local config. #61857
- Add `ipwrap()` jinja filter to wrap IPv6 addresses with brackets. #61931
- 'tcp' transport is now available in ipv6-only network #62009
- Add `diff_attr` parameter to `pkg.upgrade()` (zypper/yum). #62031
- Config option `pass_variable_prefix` allows to distinguish variables that contain paths to pass secrets. Config option `pass_strict_fetch` allows to error out when a secret cannot be fetched from pass. Config option `pass_dir` allows setting the `PASSWORD_STORE_DIR` env for pass. Config option `pass_gnupghome` allows setting the `$GNUPGHOME` env for pass. #62120

- Add file.pruned state and expanded file.rmdir exec module functionality #62178
- Added "dig.PTR" function to resolve PTR records for IPs, as well as tests and documentation #62275
- Added the ability to remove a KB using the DISM state/execution modules #62366
- Add "python" subcommand to allow execution of arbitrary scripts via bundled Python runtime #62381
- Add ability to provide conditions which convert normal state actions to no-op when true #62446
- Added debug log messages displaying the command being run when installing packages on Windows #62480
- Add biosvendor grain #62496
- Add ifelse Jinja function as found in CFEngine #62508
- Implementation of Amazon EC2 instance detection and setting `virtual_subtype` grain accordingly including the product if possible to identify. #62539
- Adds `__env__` substitution to `ext_pillar.stack`; followup of #61531, improved exception handling for stacked template (jinja) template rendering and yaml parsing in `ext_pillar.stack` #62578
- Increase file.tidied flexibility with regard to age and size #62678
- Added "connected\_devices" feature to netbox pillar module. It contains extra information about devices connected to the minion #62761
- Add atomic file operation for symlink changes #62768
- Add password/account locking/unlocking in user.present state on supported operating systems #62856
- Added onchange configuration for script engine #62867
- Added output and bare functionality to export\_key gpg module function #62978
- Add keyvalue serializer for environment files #62983
- Add ability to ignore symlinks in file.tidied #63042
- salt-cloud support IMDSv2 tokens when using 'use-instance-role-credentials' #63067
- Fix running fast tests twice and add git labels to suite. #63081
- Add ability for file.symlink to not set ownership on existing links #63093
- Restore the previous slack engine and deprecate it, rename replace the slack engine to slack\_bolt until deprecation #63095
- Add functions that will return the underlying block device, mount point, and filesystem type for a given path #63098
- Add ethtool execution and state module functions for pause #63128
- Add boardname grain #63131
- Added management of ECDSA/EdDSA private keys with x509 modules in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #63248
- Added x509 modules support for different output formats in the new cryptography x509 module. Please migrate to the new cryptography x509 module for this improvement. #63249
- Added deprecation\_warning test state for ensuring that deprecation warnings are correctly emitted. #63315
- Adds a state\_events option to state.highstate, state.apply, state.sls, state.sls\_id. This allows users to enable state\_events on a per use basis rather than having to enable them globally for all state runs. #63316
- Allow max queue size setting for state runs to prevent performance problems from queue growth #63356
- Add support of exposing meta\_server\_grains for Azure VMs #63606

- Include the version of `reLenv` in the versions report. #63827
- Added debug log messages displaying the command being run when removing packages on Windows #63866
- Adding the ability to exclude arguments from a state that end up passed to `cmd.retcode` when requisites such as `onlyif` or `unless` are used. #63956
- Add `--next-release` argument to `salt/version.py`, which prints the next upcoming release. #64023

## Security

- Upgrade Requirements Due to Security Issues.
  - Upgrade to `cryptography>=39.0.1` due to:
    - \* <https://github.com/advisories/GHSA-x4qr-2fvf-3mr5>
    - \* <https://github.com/advisories/GHSA-w7pp-m8wf-vj6r>
  - Upgrade to `pyopenssl==23.0.0` due to the cryptography upgrade.
  - Update to `markdown-it-py==2.2.0` due to:
    - \* <https://github.com/advisories/GHSA-jrwr-5x3p-hvc3>
    - \* <https://github.com/advisories/GHSA-vrjv-mxr7-vjf8> #63882

## 33.2.2 Salt 3006.1 release notes

### Changelog

#### Fixed

- Check that the return data from the cloud create function is a dictionary before attempting to pull values out. #61236
- Ensure `NamedLoaderContext`'s have their `value()` used if passing to other modules #62477
- add documentation note about reactor state ids. #63589
- Added support for `test=True` to the `file.cached` state module #63785
- Updated `source_hash` documentation and added a log warning when `source_hash` is used with a source other than `http`, `https` and `ftp`. #63810
- Fixed clear pillar cache on every highstate and added `clean_pillar_cache=False` to `saltutil` functions. #64081
- Fix `dmsetup` device names with hyphen being picked up. #64082
- Update all the scheduler functions to include a `fire_event` argument which will determine whether to fire the completion event onto the event bus. This event is only used when these functions are called via the schedule execution modules. Update all the calls to the schedule related functions in the `deltaproxy` proxy minion to include `fire_event=False`, as the event bus is not available when these functions are called. #64102, #64103
- Default to a 0 timeout if none is given for the terraform roster to avoid `-o ConnectTimeout=None` when using `salt-ssh` #64109
- Disable class level caching of the file client on `SaltCacheLoader` and properly use context managers to take care of initialization and termination of the file client. #64111

- Fixed several file client uses which were not properly terminating it by switching to using it as a context manager whenever possible or making sure `.destroy()` was called when using a context manager was not possible. #64113
- Fix running `setup.py` when passing in `--salt-config-dir` and `--salt-cache-dir` arguments. #64114
- Moved `/etc/salt/proxy` and `/lib/systemd/system/salt-proxy@.service` to the salt-minion DEB package #64117
- Stop passing `**kwargs` and be explicit about the keyword arguments to pass, namely, to `cp.cache_file` call in `salt.states.pkg` #64118
- `lgpo_reg.set_value` now returns `True` on success instead of `None` #64126
- Make salt user's home `/opt/saltstack/salt` #64141
- Fix `cmd.run` doesn't output changes in test mode #64150
- Move salt user and group creation to common package #64158
- Fixed issue in salt-cloud so that multiple masters specified in the cloud are written to the minion config properly #64170
- Make sure the `salt-ssh` CLI calls its `fsclient.destroy()` method when done. #64184
- Stop using the deprecated `salt.transport.client` imports. #64186
- Add a `.pth` to the Salt onedir env to ensure packages in extras are importable. Bump `releuv` to 0.12.3. #64192
- Fix `lgpo_reg` state to work with User policy #64200
- Cloud deployment directories are owned by salt user and group #64204
- `lgpo_reg` state now enforces and reports changes to the registry #64222

(release-3006.2)=

### 33.2.3 Salt 3006.2 release notes

#### Changelog

##### Fixed

- In scenarios where PythonNet fails to load, Salt will now fall back to WMI for gathering grains information #64897

##### Security

- fix CVE-2023-20897 by catching exception instead of letting exception disrupt connection #cve-2023-20897
- Fixed gitfs cacher\_dir\_basename to avoid hash collisions. Added MP Lock to gitfs. These changes should stop race conditions. #cve-2023-20898
- Upgrade to `requests==2.31.0`  
Due to:
  - <https://github.com/advisories/GHSA-j8r2-6x86-q33q> #64336
- Upgrade to `cryptography==41.0.3`(and therefor `pyopenssl==23.2.0` due to <https://github.com/advisories/GHSA-jm77-qphf-c4w8>)

This only really impacts pip installs of Salt and the windows onedir since the linux and macos onedir build every package dependency from source, not from pre-existing wheels.

Also resolves the following cryptography advisories:

Due to:

- <https://github.com/advisories/GHSA-5cpq-8wj7-hf2v>
- <https://github.com/advisories/GHSA-x4qr-2fvf-3mr5>
- <https://github.com/advisories/GHSA-w7pp-m8wf-vj6r>

There is no security upgrade available for Py3.5 #64595

- Bump to `certifi==2023.07.22` due to <https://github.com/advisories/GHSA-xqr8-7jwr-rhp7> #64718
- Upgrade `relenv` to `0.13.2` and Python to `3.10.12`

Addresses multiple CVEs in Python's dependencies: <https://docs.python.org/release/3.10.12/whatsnew/changelog.html#python-3-10-12> #64719

(release-3006.3)=

### 33.2.4 Salt 3006.3 release notes

#### Changelog

##### Removed

- Fedora 36 support was removed because it reached EOL #64315
- Handle deprecation warnings:
  - Switch to `FullArgSpec` since Py 3.11 no longer has `ArgSpec`, deprecated since Py 3.0
  - Stop using the deprecated `cgi` module
  - Stop using the deprecated `pipes` module
  - Stop using the deprecated `imp` module #64553

##### Changed

- Replace `libnacl` with `PyNaCl` #64372
- Don't hardcode the python version on the Salt Package tests and on the `pkg/debian/salt-cloud.postinst` file #64553
- Some more deprecated code fixes:
  - Stop using the deprecated `locale.getdefaultlocale()` function
  - Stop accessing deprecated attributes
  - `pathlib.Path.__enter__()` usage is deprecated and not required, a no-op #64565
- Bump to `pyyaml==6.0.1` due to <https://github.com/yaml/pyyaml/issues/601> and address lint issues #64657

**Fixed**

- Fix for assume role when used salt-cloud to create aws ec2. #52501
- fixes aptpkg module by checking for blank comps. #58667
- `wheel.file_roots.find` is now able to find files in subdirectories of the roots. #59800
- `pkg.latest` no longer fails when multiple versions are reported to be installed (e.g. updating the kernel) #60931
- Do not update the credentials dictionary in `utils/aws.py` while iterating over it, and use the correct delete functionality #61049
- fixed runner not having a proper exit code when runner modules throw an exception. #61173
- `pip.list_all_versions` now works with `index_url` and `extra_index_url` #61610
- speed up `file.recurse` by using prefix with `cp.list_master_dir` and remove an un-needed loop. #61998
- Preserve `test=True` condition while running sub states. #62590
- Job returns are only sent to originating master #62834
- Fixes an issue with failing subsequent state runs with the `lgpo` state module. The `lgpo.get_policy` function now returns all boolean settings. #63296
- Fix SELinux get policy with trailing whitespace #63336
- Fixes an issue with boolean settings not being reported after being set. The `lgpo.get_policy` function now returns all boolean settings. #63473
- Ensure body is returned when `salt.utils.http` returns something other than 200 with tornado backend. #63557
- Allow long running pillar and file client requests to finish using `request_channel_timeout` and `request_channel_tries` minion config. #63824
- Fix `state_queue` type checking to allow int values #64122
- Call global logger when catching `pip.list` exceptions in `states.pip.installed` Rename global logger `log` to `logger` inside `pip_state` #64169
- Fixes permissions created by the Debian and RPM packages for the salt user.  
The salt user created by the Debian and RPM packages to run the salt-master process, was previously given ownership of various directories in a way which compromised the benefits of running the salt-master process as a non-root user.  
This fix sets the salt user to only have write access to those files and directories required for the salt-master process to run. #64193
- Fix `user.present` state when `groups` is unset to ensure the groups are unchanged, as documented. #64211
- Fixes issue with `MasterMinion` class loading configuration from `/etc/salt/minion.d/*.conf`.  
The `MasterMinion` class (used for running orchestration on master and other functionality) was incorrectly loading configuration from `/etc/salt/minion.d/*.conf`, when it should only load configuration from `/etc/salt/master` and `/etc/salt/master.d/*.conf`. #64219
- Fixed issue in `mac_user.enable_auto_login` that caused the user's keychain to be reset at each boot #64226
- Fixed `KeyError` in logs when running a state that fails. #64231
- Fixed `x509_v2.create_private_key/create_crl` unknown kwargs: `__pub_fun...` #64232
- remove the hard coded python version in error. #64237
- `salt-pip` now properly errors out when being called from a non `onedir` environment. #64249

- Ensure we return an error when adding the key fails in the pkgrepo state for debian hosts. #64253
- Fixed file client private attribute reference on SaltMakoTemplateLookup #64280
- Fix pkgrepo.absent failures on apt-based systems when repo either a) contains a trailing slash, or b) there is an arch mismatch. #64286
- Fix detection of Salt codename by "salt\_version" execution module #64306
- Ensure selinux values are handled lowercase #64318
- Remove the `clr.AddReference`, it is causing an `Illegal characters in path` exception #64339
- Update `pkg.group_installed` state to support repo options #64348
- Fix salt user login shell path in Debian packages #64377
- Allow for multiple user's keys presented when authenticating, for example: root, salt, etc. #64398
- Fixed an issue with `lgpo_reg` where existing entries for the same key in `Registry.pol` were being overwritten in subsequent runs if the value name in the subsequent run was contained in the existing value name. For example, a key named `SetUpdateNotificationLevel` would be overwritten by a subsequent run attempting to set `UpdateNotificationLevel` #64401
- Add search for `%ProgramData%\Chocolatey\choco.exe` to determine if Chocolatey is installed or not #64427
- Fix regression for `user.present` on handling groups with dupe GIDs #64430
- Fix inconsistent use of args in `ssh_auth.managed` #64442
- Ensure we raise an error when the name argument is invalid in `pkgrepo.managed` state for systems using apt. #64451
- Fix `file.symlink` will not replace/update existing symlink #64477
- Fixed salt-ssh state.\* commands returning retcode 0 when state/pillar rendering fails #64514
- Fix `pkg.install` when using a port in the url. #64516
- `win_pkg` Fixes an issue running `pkg.install` with `version=latest` where the new installer would not be cached if there was already an installer present with the same name. #64519
- Added a `test:full` label in the salt repository, which, when selected, will force a full test run. #64539
- Syndic's `async_req_channel` uses the asynchronous version of request channel #64552
- Ensure runners properly save information to job cache. #64570
- Added `salt.ufw` to salt-master install on Debian and Ubuntu #64572
- Added support for Chocolatey 2.0.0+ while maintaining support for older versions #64622
- Updated `semanage fcontext` to use `--modify` if context already exists when adding context #64625
- Preserve request client socket between requests. #64627
- Show user friendly message when pillars timeout #64651
- File client timeouts during jobs show user friendly errors instead of tracbacks #64653
- `SaltClientError` does not log a traceback on minions, we expect these to happen so a user friendly log is shown. #64729
- Look in location salt is running from, this accounts for running from an unpacked onedir file that has not been installed. #64877
- Preserve credentials on spawning platforms, minions no longer re-authenticate with every job when using `multiprocessing=True`. #64914

- Fixed uninstaller to not remove the `salt` directory by default. This allows the `extras-3.##` folder to persist so salt-pip dependencies are not wiped out during an upgrade. #64957
- fix msteams by adding the missing header that Microsoft is now enforcing. #64973
- Fix `env` and improve cache cleaning see more info at pull #65017. #65002
- Better error message on inconsistent decoded payload #65020
- Handle permissions access error when calling `lsb_release` with the salt user #65024
- Allow schedule state module to update schedule when the minion is offline. #65033
- Fixed creation of wildcard DNS in SAN in `x509_v2` #65072
- The macOS installer no longer removes the `extras` directory #65073

### Added

- Added a script to automate setting up a 2nd minion in a user context on Windows #64439
- Several fixes to the CI workflow:
  - Don't override the `on Jinja` block on the `ci.yaml` template. This enables reacting to labels getting added/removed to/from pull requests.
  - Switch to using `tools` and re-use the event payload available instead of querying the GH API again to get the pull request labels
  - Concentrate test selection by labels to a single place
  - Enable code coverage on pull-requests by setting the `test:coverage` label #64547

### Security

- Upgrade to `cryptography==41.0.3` (and therefore `pyopenssl==23.2.0` due to <https://github.com/advisories/GHSA-jm77-qphf-c4w8>)

This only really impacts pip installs of Salt and the windows onedir since the linux and macos onedir build every package dependency from source, not from pre-existing wheels.

Also resolves the following cryptography advisories:

Due to:

- <https://github.com/advisories/GHSA-5cpq-8wj7-hf2v>
- <https://github.com/advisories/GHSA-x4qr-2fvf-3mr5>
- <https://github.com/advisories/GHSA-w7pp-m8wf-vj6r> #64595
- Bump to `aiohttp==3.8.5` due to <https://github.com/advisories/GHSA-45c4-8wx5-qw6w> #64687
- Bump to `certifi==2023.07.22` due to <https://github.com/advisories/GHSA-xqr8-7jwr-rhp7> #64718
- Upgrade `reenv` to `0.13.2` and Python to `3.10.12`  
Addresses multiple CVEs in Python's dependencies: <https://docs.python.org/release/3.10.12/whatsnew/changelog.html#python-3-10-12> #64719
- Update to `gitpython>=3.1.32` due to <https://github.com/advisories/GHSA-pr76-5cm5-w9cj> #64988

(release-3006.4)=

### 33.2.5 Salt 3006.4 release notes

#### Changelog

#### Security

- Fix CVE-2023-34049 by ensuring we do not use a predictable name for the script and correctly check returncode of scp command. This only impacts salt-ssh users using the pre-flight option. #cve-2023-34049
- Update to gitpython>=3.1.35 due to <https://github.com/advisories/GHSA-wfm5-v35h-vwf4> and <https://github.com/advisories/GHSA-cwvm-v4w8-q58c> #65163
- Bump to cryptography==41.0.4 due to <https://github.com/advisories/GHSA-v8gr-m533-ghj9> #65268
- Upgrade relenv to 0.13.12 to address CVE-2023-4807 #65316
- Bump to urllib3==1.26.17 or urllib3==2.0.6 due to <https://github.com/advisories/GHSA-v845-jxx5-vc9f> #65334
- Bump to gitpython==3.1.37 due to <https://github.com/advisories/GHSA-cwvm-v4w8-q58c> #65383

(release-3006.5)=

### 33.2.6 Salt 3006.5 release notes

#### Changelog

#### Removed

- Tech Debt - support for pysss removed due to functionality addition in Python 3.3 #65029

#### Fixed

- Improved error message when state arguments are accidentally passed as a string #38098
- Allow pip.install to create a log file that is passed in if the parent directory is writeable #44722
- Fixed merging of complex pillar overrides with salt-ssh states #59802
- Fixed gpg pillar rendering with salt-ssh #60002
- Made salt-ssh states not re-render pillars unnecessarily #62230
- Made Salt maintain options in Debian package repo definitions #64130
- Migrated all invoke tasks to python-tools-scripts.
  - tasks/docs.py -> tools/precommit/docs.py
  - tasks/docstrings.py -> tools/precommit/docstrings.py
  - tasks/loader.py -> tools/precommit/loader.py
  - tasks/filemap.py -> tools/precommit/filemap.py #64374
- Fix salt user login shell path in Debian packages #64377
- Fill out lsb\_distrib\_xxxx (best estimate) grains if problems with retrieving lsb\_release data #64473
- Fixed an issue in the file.directory state where the children\_only keyword argument was not being respected. #64497

- Move salt.ufw to correct location /etc/ufw/applications.d/ #64572
- Fixed salt-ssh stacktrace when retcode is not an integer #64575
- Fixed SSH shell seldomly fails to report any exit code #64588
- Fixed some issues in x509\_v2 execution module private key functions #64597
- Fixed grp.getgrall() in utils/user.py causing performance issues #64888
- Fix user.list\_groups omits remote groups via sssd, etc. #64953
- Ensure sync from \_grains occurs before attempting pillar compilation in case custom grain used in pillar file #65027
- Moved gitfs locks to salt working dir to avoid lock wipes #65086
- Only attempt to create a keys directory when --gen-keys is passed to the salt-key CLI #65093
- Fix nonce verification, request server replies do not stomp on eachother. #65114
- speed up yumpkg list\_pkgs by not requiring digest or signature verification on lookup. #65152
- Fix pkg.latest failing on windows for winrepo packages where the package is already up to date #65165
- Ensure kwarg is preserved when checking for kwargs. This change affects proxy minions when used with Deltaproxy, which had kwarg popped when targeting multiple minions id. #65179
- Fixes traceback when state id is an int in a reactor SLS file. #65210
- Install logrotate config as /etc/logrotate.d/salt-common for Debian packages Remove broken /etc/logrotate.d/salt directory from 3006.3 if it exists. #65231
- Use sha256 as the default hash\_type. It has been the default since Salt v2016.9 #65287
- Preserve ownership on log rotation #65288
- Ensure that the correct value of jid\_include is passed if the argument is included in the passed keyword arguments. #65302
- Upgrade relenv to 0.14.2
  - Update openssl to address CVE-2023-5363.
  - Fix bug in openssl setup when openssl binary can't be found.
  - Add M1 mac support. #65316
- Fix regex for filespec adding/deleting fcontext policy in selinux #65340
- Ensure CLI options take priority over Saltfile options #65358
- Test mode for state function saltmod.wheel no longer set's result to (None,) #65372
- Client only process events which tag conforms to an event return. #65400
- Fixes an issue setting user or machine policy on Windows when the Group Policy directory is missing #65411
- Fix regression in file module which was not re-using a file client. #65450
- pip.installed state will now properly fail when a specified user does not exists #65458
- Publish channel connect callback method properly closes it's request channel. #65464
- Ensured the pillar in SSH wrapper modules is the same as the one used in template rendering when overrides are passed #65483
- Fix file.comment ignore\_missing not working with multiline char #65501
- Warn when an un-closed transport client is being garbage collected. #65554

- Only generate the HMAC's for `libssl.so.1.1` and `libcrypto.so.1.1` if those files exist. #65581
- Fixed an issue where Salt Cloud would fail if it could not delete lingering PAexec binaries #65584

### Added

- Added Salt support for Debian 12 #64223
- Added Salt support for Amazon Linux 2023 #64455

### Security

- Bump to `cryptography==41.0.4` due to <https://github.com/advisories/GHSA-v8gr-m533-ghj9> #65268
  - Bump to `cryptography==41.0.7` due to <https://github.com/advisories/GHSA-jfhm-5ghh-2f97> #65643
- (release-3006.6)=

## 33.2.7 Salt 3006.6 release notes

### Changelog

#### Changed

- Salt no longer time bombs user installations on code using `salt.utils.versions.warn_until_date` #665924

#### Fixed

- Fix un-closed transport in tornado netapi #65759

### Security

- CVE-2024-22231 Prevent directory traversal when creating syndic cache directory on the master CVE-2024-22232 Prevent directory traversal attacks in the master's `serve_file` method. These vulnerabilities were discovered and reported by: Yudi Zhao(Huawei Nebula Security Lab),Chenwei Jiang(Huawei Nebula Security Lab) #565
  - Update some requirements which had some security issues:
    - Bump to `pycryptodome==3.19.1` and `pycryptodomex==3.19.1` due to <https://github.com/advisories/GHSA-j225-cvw7-qrx7>
    - Bump to `gitpython==3.1.41` due to <https://github.com/advisories/GHSA-2mqj-m65w-jghx>
    - Bump to `jinja2==3.1.3` due to <https://github.com/advisories/GHSA-h5c8-rqwp-cp95> #65830
- (release-3006.7)=

## 33.2.8 Salt 3006.7 release notes

### Changelog

#### Deprecated

- Deprecate and stop using `salt.features` #65951

#### Changed

- Change module search path priority, so Salt extensions can be overridden by synca-ble modules and `module_dirs`. You can switch back to the old logic by setting `features.enable_deprecated_module_search_path_priority` to true, but it will be removed in Salt 3008. #65938

#### Fixed

- Fix an issue with `mac_shadow` that was causing a command execution error when retrieving values that were not yet set. For example, retrieving last login before the user had logged in. #34658
- Fixed an issue when keys didn't match because of line endings #52289
- Corrected encoding of credentials for use with Artifactory #63063
- Use `send_multipart` instead of `send` when sending multipart message. #65018
- Fix an issue where the minion would crash on Windows if some of the grains failed to resolve #65154
- Fix issue with `openscap` when the error was outside the expected scope. It now returns failed with the error code and the error #65193
- Upgrade `relenv` to 0.15.0 to fix namespaced packages installed by `salt-pip` #65433
- Fix regression of `fileclient` re-use when rendering `sls` pillars and states #65450
- Fixes the `s3fs` backend computing the local cache's files with the wrong hash type #65589
- Fixed Salt-SSH pillar rendering and state rendering with nested SSH calls when called via `saltutil.cmd` or in an orchestration #65670
- Fix boto execution module loading #65691
- Removed PR 65185 changes since incomplete solution #65692
- catch only `ret/` events not all returning events. #65727
- Fix nonsensical time in `fileclient` timeout error. #65752
- Fixes an issue when reading/modifying `ini` files that contain unicode characters #65777
- added `https` proxy to the list of proxies so that requests knows what to do with `https` based proxies #65824
- Ensure minion channels are closed on any master connection error. #65932
- Fixed issue where Salt can't find `libcrypto` when `pip` installed from a cloned repo #65954
- Fix RPM package `systemd` scriptlets to make RPM packages more universal #65987
- Fixed an issue where `fileclient` requests during Pillar rendering cause `fileserver` backends to be needlessly refreshed. #65990
- Fix exceptions being set on futures that are already done in ZeroMQ transport #66006

- Use `hmac.compare_digest` method in `hashutil` module to mitigate potential timing attacks #66041
- Fix request channel default timeout regression. In 3006.5 it was changed from 60 to 30 and is now set back to 60 by default. #66061
- Upgrade `relevent` to 0.15.1 to fix `debugpy` support. #66094

## Security

- Bump to `cryptography==42.0.0` due to <https://github.com/advisories/GHSA-3ww4-gg4f-jr7f>  
In the process, we were also required to update to `pyOpenSSL==24.0.0` #66004
- Bump to `cryptography==42.0.3` due to <https://github.com/advisories/GHSA-3ww4-gg4f-jr7f> #66090

(release-3006.8)=

## 33.2.9 Salt 3006.8 release notes

### Changelog

#### Removed

- Removed deprecated code scheduled to be removed on 2024-01-01:
  - `TemporaryLoggingHandler` and `QueueHandler` in `salt/_logging/handlers.py`
  - All of the `salt/log` package.
  - The `salt/modules/cassandra_mod.py` module.
  - The `salt/returners/cassandra_return.py` returner.
  - The `salt/returners/django_return.py` returner. #66147

#### Deprecated

- Drop Fedora 37 and Fedora 38 support #65860
- Drop CentOS Stream 8 and 9 from CI/CD #66104
- Drop Photon OS 3 support #66105
- The `salt.utils.psutil_compat` module has been deprecated and will be removed in Salt 3008. Please use the `psutil` module directly. #66139

#### Fixed

- `user.add` on Windows now allows you to add user names that contain all numeric characters #53363
- Fix an issue with the `win_system` module detecting established connections on non-Windows systems. Uses `psutils` instead of parsing the return of `netstat` #60508
- `pkg.refresh_db` on Windows now honors `saltenv` #61807
- Fixed an issue with adding new machine policies and applying those same policies in the same state by adding a `refresh_cache` option to the `lgpo.set` state. #62734

- file.managed correctly handles file path with '#' #63060
- Fix master ip detection when DNS records change #63654
- Fix user and group management on Windows to handle the Everyone group #63667
- Fixes an issue in pkg.refresh\_db on Windows where new package definition files were not being picked up on the first run #63848
- Display a proper error when pki commands fail in the win\_pki module #64933
- Prevent full system upgrade on single package install for Arch Linux #65200
- When using s3fs, if files are deleted from the bucket, they were not deleted in the master or minion local cache, which could lead to unexpected file copies or even state applications. This change makes the local cache consistent with the remote bucket by deleting files locally that are deleted from the bucket.  
NOTE this could lead to **breakage** on your affected systems if it was inadvertently depending on previously deleted files. #65611
- Fixed an issue with file.directory state where paths would be modified in test mode if backupname is used. #66049
- Execution modules have access to regular fileclient durring pillar rendering. #66124
- Fixed a issue with server channel where a minion's public key would be rejected if it contained a final newline character. #66126
- Fix content type backwards compatability with http proxy post requests in the http utils module. #66127
- Fix systemctl with "try-restart" instead of "retry-restart" within the RPM spec, properly restarting upgraded services #66143
- Auto discovery of ssh, scp and ssh-keygen binaries. #66205
- Add leading slash to salt helper file paths as per dh\_links requirement #66280
- Fixed x509.certificate\_managed - ca\_server did not return a certificate #66284
- removed log line that did nothing. #66289
- Chocolatey: Make sure the return dictionary from chocolatey.version contains lowercase keys #66290
- fix caching inline pillar, by not rendering inline pillar during cache save function. #66292
- The file module correctly perserves file permissions on link target. #66400
- Upgrade relenv to 0.16.0 and python to 3.10.14 #66402
- backport the fix from #66164 to fix #65703. use OrderedDict to fix bad indexing. #66705

### Added

- Add Fedora 39 support #65859

## Security

- Upgrade to cryptography==42.0.5 due to a few security issues:
  - <https://github.com/advisories/GHSA-9v9h-cgj8-h64p>
  - <https://github.com/advisories/GHSA-3ww4-gg4f-jr7f>
  - [#66141](https://github.com/advisories/GHSA-6vqw-3v5j-54x4)
- Bump to idna==3.7 due to [#66377](https://github.com/advisories/GHSA-jjg7-2v4v-x38h)
- Bump to aiohttp==3.9.4 due to [#66411](https://github.com/advisories/GHSA-7gpw-8wmc-pm8g)

## 33.2.10 Salt 3005 release notes - Codename Phosphorus

### Python 3.5 and 3.6 deprecation

This will be the last release we will support Python versions 3.5 and 3.6. In Salt release 3006, we will only support Python versions 3.7 and higher. Going forward, our policy will be to align with Python's supported versions.

### OS support end of life

Debian and Raspbian 9 are now EOL, therefore we will no longer be building packages for these platforms.

### Raspberry Pi

We will no longer build the Raspberry Pi packages after the 3005 release but will provide open sources project links in an updated announcement later. Please see the announcement for more details: <https://saltproject.io/salt-project-announces-the-open-sourcing-of-several-saltstack-native-minions/>

### New packages available

With the release of Salt 3005, we are pleased to announce the new onedir packages using pyinstaller are now out of beta and ready for production. These new packages make the installation process easier. Onedir packages install Salt with one directory that includes all the executables Salt needs to run effectively, including the version of Python and the required dependencies that Salt needs. These packages make it easier to use Salt out of the box without installing Python first.

Going forward, any new OS platforms supported by the Salt Project from version 3005 can only be installed using onedir packages. For this release, this includes Redhat 9, Ubuntu 22.04, and Photon OS 3. The Salt Project will phase out the old ("classic") Salt package builds for currently supported operating systems by 3006. See [Upgrade to onedir](#) for more information.

On the day of the Phosphorus release, the onedir packages will be available on <https://repo.saltproject.io> for each platform. The instructions for installing onedir packages and the classic packages will be available on the new [Salt Install Guide](#).

If you want to test out the packages today, you can install them from <https://repo.saltproject.io/salt-dev/py3/> using the correct directory for your platform. If you find any issues with the packages, please open an issue on this repo: <https://gitlab.com/saltstack/open/salt-pkg>

## Classic, non-onedir packaging support

The classic, non-onedir packaging system previously used for Salt will also be provided for platforms supported in previous Salt versions. The classic packaging will only be available for the 3005 release. The 3006 release and all releases going forward will only provide the onedir packages.

## Platform package support

OS	New onedir packages	Classic, non-onedir packages
RHEL 7	yes	yes
RHEL 8	yes	yes
RHEL 9	yes	no
Ubuntu 18.04	yes	yes
Ubuntu 20.04	yes	yes
Ubuntu 22.04	yes	no
Debian 10	yes	yes
Debian 11	yes	yes
Raspbian 10	no	yes
Raspbian 11	no	yes
Fedora 35	yes	yes
Fedora 36	yes	yes
MacOS	yes	yes
Windows	yes	yes

## Repo paths

OS	Onedir path	Classic, Non-onedir path
RHEL	<a href="https://repo.saltproject.io/salt/py3/redhat/">https://repo.saltproject.io/salt/py3/redhat/</a>	<a href="https://repo.saltproject.io/py3/redhat/">https://repo.saltproject.io/py3/redhat/</a>
Ubuntu	<a href="https://repo.saltproject.io/salt/py3/ubuntu/">https://repo.saltproject.io/salt/py3/ubuntu/</a>	<a href="https://repo.saltproject.io/py3/ubuntu/">https://repo.saltproject.io/py3/ubuntu/</a>
Debian	<a href="https://repo.saltproject.io/salt/py3/debian/">https://repo.saltproject.io/salt/py3/debian/</a>	<a href="https://repo.saltproject.io/py3/debian/">https://repo.saltproject.io/py3/debian/</a>
Raspbian	Not available	<a href="https://repo.saltproject.io/py3/debian/">https://repo.saltproject.io/py3/debian/</a>
Fedora	Hosted on Fedora Repos	Hosted on Fedora Repos
MacOS	<a href="https://repo.saltproject.io/salt/py3/osx/">https://repo.saltproject.io/salt/py3/osx/</a>	<a href="https://repo.saltproject.io/osx/">https://repo.saltproject.io/osx/</a>
Windows	<a href="https://repo.saltproject.io/salt/py3/windows/">https://repo.saltproject.io/salt/py3/windows/</a>	<a href="https://repo.saltproject.io/windows/">https://repo.saltproject.io/windows/</a>

Note that the onedir paths above will not be available until the day of the Phosphorus release.

## How do I migrate to the onedir packages?

The migration path from the classic, non-onedir packages to the onedir packages will include:

- Repo File: You need to update your repo file to point to the new repo paths for your platform. After the repo file is updated, upgrade your Salt packages.
- Pip packages: You need to ensure any 3rd party pip packages are installed in the correct onedir path. This can be accomplished in two ways:
  - `salt-pip install <package name>`
  - Using the `pip.installed` Salt state.

To install python packages into the system python environment, users must now provide the `pip_bin` or `bin_env` to the `pip` state module.

For example:

```
lib-foo:
  pip.installed:
    - pip_bin: /usr/bin/pip3
lib-bar:
  pip.installed:
    - bin_env: /usr/bin/python3
```

### Known issues

- To make use of Salt 3005 or later on a Salt master connected to SaltStack Config, you must use SaltStack Config version 8.9.0 or later.

The root cause of the issue is a breaking change to `AsyncClient._proc_function()` in Salt, which is the function that the raas-master uses to run `salt-run` commands. As this is a private API, there's no expectation that the API should remain backward-compatible.

It is recommended to upgrade SaltStack Config before upgrading your Salt masters. However, if a Salt master is upgraded to version 3005 before upgrading SaltStack Config, the upgrade can still be completed.

After upgrading SaltStack Config, including the SSC plugin on each Salt master, restart the Salt masters.

- Salt does not currently support napalm 4. Users will need to install napalm 3.x to ensure they do not run into issue #62468

### Removed

- Deprecating and removing salt-unity. (#56055)
- Removed support for macos mojave (#61130)
- Removed `salt.utils.MultiprocessingProcess` and `salt.utils.SignalHandlingMultiprocessingProcess`. Please use `salt.utils.Process` and `salt.utils.SignalHandlingProcess` instead. (#61573)
- Remove the `grains.get_or_set_hash` function. Please reference pillar and SDB documentation for secure ways to manage sensitive information. Grains are an insecure way to store secrets. (#61691)
- Removed the `telnet_port`, `serial_type` and `console` parameters in `salt/modules/virt.py`. Use the `serials` and `consoles` parameters instead. Use the `serials` parameter with a value like `[[[{'type': 'tcp', 'protocol': 'telnet', 'port': {}}]]]` instead and a similar `consoles` parameter. (#61693)
- Remove `remove_lock` in `zypperpkg.py` in favor of `unhold`. Remove `add_lock` in `zypperpkg.py` in favor of `hold`. (#61694)
- Removed support for old-style Windows Group Policy names Recommended policy names will be displayed in comments (#61696)
- Remove the feature flag `feature.enable_slsvars_fixes` and enable the fixes for `sls_path`, `tpl_file`, and `tpldir` by default. Enabling this behavior by default will fix the following:
  - `tpldir`: If your directory name and your SLS file name are the same `tpldir` used to return a `.`, now it returns the correct directory name.
  - `slspath,slsdotpath,slscolonpath,sls_path`: If an `init.sls` file is accessed by its explicit name `path.to.init` instead of `path.to`, `init` shows up as a directory for in various `sls` context parameters, now it will only show as a file.
  - `tplfile`: When using `tplfile` in a SLS file in the root directory of file roots it returns empty. Now it returns the filename. (#61697)

- Remove SaltMessageServer.shutdown in favor of close. Remove LoadBalancerWorker.stop in favor of close. (#61698)
- Removed the PyObjC dependency.

This addresses problems with building a one dir build for macOS. It became problematic because depending on the macOS version, it pulls different dependencies, and we would either have to build a macos onedir for each macOS supported release, or ship a crippled onedir(because it would be tied to the macOS version where the onedir was built). Since it's currently not being used, it's removed. (#62432)

### Deprecated

- In etcd\_util, the recursive kwarg in the read and delete methods has been deprecated in favor of recurse for both client versions. In etcd\_util, the index kwarg in the watch method has been deprecated in favor of start\_revision for both client versions. In etcd\_util, the waitIndex kwarg in the read method has been deprecated in favor of start\_revision for both client versions. The etcd API v2 implementation has been deprecated in favor of etcd API v3. (#60325)
- Deprecated transport kwarg inside salt.utils.event.get\_event (#61275)
- Deprecated netmiko\_conn and pyeapi\_conn in napalm\_mod.py as these function should not be called from the CLI (#61566)
- Deprecate all Azure cloud modules (#62183)
- Deprecated defaults and preserve\_context for salt.utils.functools.namespaced\_function. Additionally, the behavior when preserve\_namespace=True was passed is now the default in order not to require duplicating imports on the modules that are namespacing functions. (#62272)
- Added a pyinstaller hook that traverses the python used on the tiamat package to add all possible modules as hidden imports. (#62362)
- Fix use of random shuffle and sample functions as Jinja filters (#62372)
- All of the requirements provided in the requirements files are now included. The job of evaluating platform markers is not Salt's it's pip's. (#62392)
- Update all platforms to use pycparser 2.21 or greater for Py 3.9 or higher, fixes fips fault with openssl v3.x (#62400)
- Due to changes in the Netmiko library for the exception paths, need to check the version of Netmiko python library and then import the exceptions from different locations depending on the result. (#62405)
- Deprecated the cassandra module in favor of the cassandra\_cql module/returner. (#62327)

### Changed

- alternatives: Do not access /var/lib/dpkg/alternatives directly (#58745)
- Enhance logging when there are errors at loading beacons (#60402)
- Updated mysql cache module to also store updated timestamp, making it consistent with default cache module. Users of mysql cache should ensure database size before updating, as ALTER TABLE will add the timestamp column. (#61081)
- Changed linux\_shadow to test success of commands using cmd.retcode instead of cmd.run (#61932)
- zabbix.user\_get returns full user info with groups and medias zabbix.user\_addmedia returns error for Zabbix 4.0+ due to user.addmedia method removal zabbix.user\_deletemedia returns error for Zabbix 4.0+ due to user.deletemedia method removal (#62012)

- "Sign before ending the testrun in x509.create\_certificate" (#62100)

## Fixed

- Fix salt-ssh using sudo with a password (#8882)
- Fix SSH password regex to not search for content after password:. (#25721)
- Addressing a few issues when having keep\_symlinks set to True with file.recurse. Also allow symlinks that are outside the salt fileserver root to be discoverable as symlinks when fileserver\_followsymlinks is set to False. (#29562)
- serialize to JSON only non string objects. (#35215)
- Fix archive.extracted doesn't set user/group ownership correctly (#38605)
- Make sys.argspec work on functions with annotations (#48735)
- Fixed pdbedit.list\_users with Samba 4.8 (#49648)
- Fixes a scenario where ipv6 is enabled but the master is configured as an ipv4 IP address. (#49835)
- Ensure that NOTIFY\_SOCKET is not passed to child processes created with cmdmod unless it's set explicitly for such call. (#50851)
- remove escaping of dbname in mysql.alter\_db function. (#51559)
- Fix runit module failing to find service if it is not symlinked. (#52759)
- Changed manage.versions to report minions offline if minion call fails. (#53513)
- Fixed events stream from /events endpoint not halting when auth token has expired. (#53742)
- Fixed user.present which was breaking when updating workphone,homephone, fullname and "other" fields in case int was passed instead of string (#53961)
- Fix error in webutil state module when attempting to grep a file that does not exist. (#53977)
- Fixed ability to modify the "Audit: Force audit policy subcategory settings..." policy (#54301)
- Fix timeout handling in netapi/saltnado. (#55394)
- Fixing REST auth so that we actually support using ACLs from the REST server like we said in the documentation. (#55654)
- Salt now correctly handles macOS after Py3.8 where python defaults to spawn instead of fork. (#55847)
- Factor out sum and sorting of permissions into separate functions. Additionally, the same logic was applied to the rest\_cherrypy netapi (#56495)
- Display packages that are marked NoRemove in pkg.list\_pkgs for Windows platforms (#56864)
- Attempt to fix 56957 by detecting the broken recursion and stopping it. (#56957)
- Fixed bytes vs. text issue when using sqlite for sdb backend. (#57133)
- Ensure test is added to opts when using the state module with salt-ssh. (#57144)
- Fixed RuntimeError OrderedDict mutated in network.managed for Debian systems. (#57721)
- Improved the multiprocessing classes to better handle spawning platforms (#57742)
- Config options are enforced according to config type (#57873)
- fixed 57992 fix multi item kv v2 items read. (#57992)

- Fixed thread leak during FQDN lookup when DNS entries had malformed PTR records, or other similar issues. (#58141)
- Remove unnecessary dot in template that cause the bridge interface to fail on debian. Fixes #58195 (#58195)
- update salt.module.schedule to check the job\_args and job\_kwargs for valid formatting. (#58329)
- Allow use of *roster* in salt.function state when using the SSH client. (#58662)
- Detect new and legacy styles of calling module.run and support them both. (#58763)
- Clean repo uri before checking if it's present, avoiding ghost change. (#58807)
- Fix error "'\_\_opts\_\_' is not defined" when using the boto v2 modules (#58934)
- hgfs: fix bytes vs str issues within hgfs. (#58963)
- Fixes salt-ssh error when targetting IPs or hostnames directly. (#59033)
- Allow for multiple configuration entries with keyword strict\_config=False on yum-based systems (#59090)
- Fixed error when running legacy code in winrepo.update\_git\_repos (#59101)
- Clarify the persist argument in the scheduler module. Adding code in the list function to indicate if the schedule job is saved or not. (#59102)
- Swap ret["retcode"] for ret.get("retcode") in the event that there is no retcode, eg. when a function is not passed with a module. (#59331)
- Fix race condition when caching vault tokens (#59361)
- The ssh module now accepts all ssh public key types as of openssh server version 8.7. (#59429)
- Set default transport and port settings for Napalm NXOS, if not set. (#59448)
- Use \_\_salt\_system\_encoding\_\_ when retrieving keystore certificate SHA1 str (#59503)
- Fix error being thrown on empty flags list given to file.replace (#59554)
- Update url for ez\_setup.py script in virtualenv\_mod.py (#59604)
- Changed yumpkg module to normalize versions to strings when they were ambiguously floats (example version=3005.0). (#59705)
- Fix pillar\_roots.write on subdirectories broken after CVE-2021-25282 patch. (#59935)
- Improved performance of zfs.filesystem\_present and zfs.volume\_present. When applying these states, only query specified ZFS properties rather than all properties. (#59970)
- Fixed highstate outputter not displaying with salt.function in orchestration when module returns a dictionary. (#60029)
- Update docs where python-dateutil is required for schedule. (#60070)
- Send un-parsed username to LookupAccountName function (#60076)
- Fix ability to set propagation on a folder to "this\_folder\_only" (#60103)
- Fix name attribute access error in spm. (#60106)
- Fix zeromq stream.send exception message (#60228)
- Exit gracefully on ctrl+c. (#60242)
- Corrected import statement for redis\_cache in cluster mode. (#60272)
- loader: Fix loading grains with annotations (#60285)

- fix `docker_network.present` when `com.docker.network.bridge.name` is being used as the unices can not have a bridge of the same name (#60316)
- Fix exception in `yumpkg.remove` for not installed package on calling `pkg.remove` or `pkg.removed` (#60356)
- Batch runs now return proper retcodes in a tuple of the form (result, retcode) (#60361)
- Fixed issue with `ansible roster __virtual__` when `ansible` is not installed. (#60370)
- Fixed error being thrown when `None` was passed as `src/defaults` or `dest` to `defaults.update` and `defaults.merge` (#60431)
- Allow for additional options for `xmit hash policy` in mode 4 NIC bonding on Redhat (#60583)
- Properly detect VMware grains on Windows Server 2019+ (#60593)
- Allow for minion failure to respond to job sent in batch mode (#60724)
- The mac assistive execution module no longer shells out to change the database. (#60819)
- Fix regression in `win_timezone.get_zone` which failed to resolve specific timezones that begin or end with `d/s/t/o/f/_` characters (#60829)
- The TCP transport resets it's unpacker on stream disconnects (#60831)
- Moving the call to the `validate` function earlier to ensure that beacons are in the right format before we attempt to do anything to the configuration. Adding a generic validation to ensure the beacon configuration is in the wrong format when a validation function does not exist. (#60838)
- Update the mac installer welcome and conclusion page, add docs for the salt-config tool (#60858)
- Fixed external node classifier not callable due to wrong parameter (#60872)
- Adjust Debian/Ubuntu package use of name 'ifenslave-2.6' to 'ifenslave' (#60876)
- Clear and update the Pillar Cache when running `saltutil.refresh_pillar`. This only affects users that have `pillar_cache` set to `True`. If you do not want to clear the cache you can pass the kwarg `clean_cache=False` to `saltutil.refresh_pillar`. (#60897)
- Handle the situation when apt repo lines have or do not have trailing slashes properly. (#60907)
- Fixed Python 2 syntax for Python 3, allow for view objects returned by dictionary keys() function (#60909)
- Fix REST CherryPY append the default permissions every request (#60955)
- Do not consider "skipped" targets as failed for "ansible.playbooks" states (#60983)
- Fix behavior for internal "\_netlink\_tool\_remote\_on" to filter results based on requested end (#61017)
- `schedule.job_status` module: Convert datetime objects into formatted strings (#61043)
- `virt`: don't crash if console doesn't have service or type attribute (#61054)
- Fixed conflict between `importlib_metada` from Salt and `importlib.metadata` from Python 3.10 (#61062)
- `sys.argspec` now works with `pillar.get`, `vault.read_secret`, and `vault.list_secrets` (#61084)
- Set virtual grain on FreeBSD EC2 instances (#61094)
- Fixed v3004 windows minion failing to open log file at `C:\ProgramData\Salt Project\Saltvarlogs\saltminion` (#61113)
- Correct returned result to `False` when an error exception occurs for `pip.installed` (#61117)
- fixed `extend` being too strict and wanting the `system_type` to exist when it is only needed for requisites. (#61121)
- Fixed bug where deserialization in script engine would throw an error after all output was read. (#61124)

- Adding missing import for salt.utils.beacons into beacons that were updated to use it. (#61135)
- added exception catch to salt.utils.vt.terminal.isalive(). (#61160)
- Re-factor transport to make them more plug-able (#61161)
- Remove max zeromq pinned version due to issues on FreeBSD (#61163)
- Fixing deltaproxy code to handle the situation where the control proxy is configured to control a proxy minion whose pillar data could not be loaded. (#61172)
- Prevent get\_tops from performing a Set operation on a List (#61176)
- Make "state.highstate" to acts on concurrent flag. Simplify "transactional\_update" module to not use SSH wrapper and allow more flexible execution (#61188)
- Fix a failure with salt.utils.vault.make\_request when namespace is not defined in the connection. (#61191)
- Fix race condition in salt.utils.verify.verify\_env and ignore directories starting with dot (#61192)
- LGPO: Search for policies in a case-sensitive manner first, then fall back to non case-sensitive names (#61198)
- Fixed state includes in dynamic environments (#61200)
- Minimize the number of network connections minions to the master (#61247)
- Fix salt-call event.event with pillar or grains (#61252)
- Fixed failing dcs.compile\_config where a successful compile errored with *AttributeError: 'list' object has no attribute 'get'*. (#61261)
- Make the salt.utils.win\_dacl.get\_name() function include the "NT Security" prefix for Virtual Accounts. Virtual Accounts can only be added with the fully qualified name. (#61271)
- Fixed tracebacks and print helpful error message when proxy\_return = True but no platform or primary\_ip set in NetBox pillar. (#61277)
- Ensure opts is included in pack for minion\_mods and config loads opts from the named\_context. (#61297)
- Added prefix length info for IPv6 addresses in Windows (#61316)
- Handle MariaDB 10.5+ SLAVE MONITOR grant (#61331)
- Fix secondary ip addresses being added to ip4\_interfaces and ip6\_interfaces at the same time (#61370)
- Do not block the deltaproxy startup. Wrap the call to the individual proxy initialization functions in a try...except, catching the exception, logging an error and moving onto the next proxy minion. (#61377)
- show\_instance of hetzner cloud provider should enforce an action like the other ones (#61392)
- Fix Hetzner Cloud config loading mechanism (#61399)
- Sets correctly the lvm grain even when lvm's command execution outputs a WARNING (#61412)
- Use net instead of sc in salt cloud when restarting the salt service (#61413)
- Fix use\_etag support in fileclient by removing case sensitivity of expected header (#61440)
- Expand environment variables in the root\_dir registry key (#61445)
- Use salt.utils.path.readlink everywhere instead of os.readlink (#61458)
- Fix state\_aggregate minion option not respected (#61478)
- Fixed wua.installed and wua.uptodate to return all changes, failures, and supersedences (#61479)
- When running with test=True and there are no changes, don't show that there are changes. (#61483)
- Fix issue with certutil when there's a space in the path to the certificate (#61494)

- Fix cmdmod not respecting config for saltenv (#61507)
- Convert Py 2'isms to Python 3, and add tests for set\_filesystems on AIX (#61509)
- Fix tracebacks caused by missing block device type and wrong mode used for gzip.open while calling inspector.export (#61530)
- win\_wua: Titles no longer limited to 40 characters (#61533)
- Fixed error when using network module on RHEL 8 due to the name of the service changing from "network" to "NetworkManager". (#61538)
- Allow symlink to be created even if source is missing on Windows (#61544)
- Print jinja error context on *UndefinedError*. Previously *jinja2.exceptions.UndefinedError* resulted in a *SaltRenderError* without source file context, unlike all of the other Jinja exceptions handled in *salt/utils/templates.py*. (#61553)
- Fix uptime on AIX systems when less than 24 hours (#61557)
- Fix issue with state.show\_state\_usage when a saltenv is not referenced in any topfile (#61614)
- Making the retry state system feature available when parallel is set to True. (#61630)
- modules/aptpkg.SourceEntry: fix parsing lines with arbitrary comments in case HAS\_APT=False (#61632)
- Fix file.comment incorrectly reports changes in test mode (#61662)
- Fix improper master caching of file listing in multiple dynamic environments (#61738)
- When configured beacons are empty write an empty beacon configuration file. (#61741)
- Fix file.replace updating mtime with no changes (#61743)
- Fixed etcd\_return being out of sync with the underlying etcd\_util. (#61756)
- Fixing items, values, and keys functions in the data module. (#61812)
- Ensure that *salt://* URIs never contain backslashes, converting them to forward slashes instead. A specific situation to handle is caching files on Windows minions, where Jinja relative imports introduce a backslash into the path. (#61829)
- Do not raise a UnicodeDecodeError when pillar cache cannot decode binary data. (#61836)
- Don't rely on `importlib.metadata`, even on Py3.10, use `importlib_metadata` instead. (#61839)
- Fix the reporting of errors for file.directory in test mode (#61846)
- Update Markup and contextfunction imports for jinja versions >=3.1. (#61848)
- Update states.chef for version 16.x and 17.x Chef Infra Client output. (#61891)
- Fixed some whitespace and `pathlib.Path` issues when not using the `system.aptsources` package. (#61936)
- fixed error when using backslash literal in file.replace (#61944)
- Fix an issue where under spawning platforms, one could exhaust the available multiprocessing semaphores. (#61945)
- Fix salt-cloud sync\_after\_install functionality (#61946)
- Ensure that *common\_prefix* matching only occurs if a directory name is identified (in the *archive.list* execution module function, which affects the *archive.extracted* state). (#61968)
- When states are running in parallel, ensure that the total run time produced by the highstate outputter takes that into account. (#61999)

- Temporary logging is now shutdown when logging has been configured. (#62005)
- `modules/lxd.FilesManager`: fix memory leak through `pylxd.modules.container.Container.FilesManager` (#62006)
- `utils/jinja.SaltCacheLoader`: fix leaking `SaltCacheLoader` through `atexit.register` (#62007)
- Fixed errors on calling `zabbix_user.admin_password_present` state, due to changed error message in Zabbix 6.0  
Fixed `zabbix.host_update` not mapping group ids list to list of dicts in format `[{"groupid": groupid}, ...]`  
Fixed `zabbix.user_update` not mapping usergroup id list to list of dicts in format `[{"usrgrp": usrgrp}, ...]` (#62012)
- `utils/yamlloader` and `yamlloader_old`: fix leaking `DuplicateKeyWarning` through a warnings module (#62021)
- Fix cache checking for Jinja templates (#62042)
- Fixed `salt.states.file.managed()` for `follow_symlinks=True` and `test=True` (#62066)
- Stop triggering the **GLIBC race condition** when parallelizing the resolution of the fqdns. (#62071)
- Fix `useradd` functions hard-coded relative command name (#62087)
- Fix #62092: Catch `zmq.error.ZMQError` to set HWM for `zmq >= 3`.  
Run `git show 0be0941` for more info. (#62092)
- Allow `emitatstartup` to work when delay option is setup. (#62095)
- Fix broken relative jinja includes in local mode bug introduced in #62043 (#62117)
- Fix broken `file.comment` functionality introduced in #62045 (#62121)
- Fixed an incompatibility preventing salt-cloud from deploying VMs on Proxmox VE 7 (#62154)
- Fix `sysctl` functions hard-coded relative command name (#62164)
- All of Salt's loaders now accept `loaded_base_name` as a keyword argument, allowing different namespacing the loaded modules. (#62186)
- Only functions defined on the modules being loaded will be added to the lazy loader, functions imported from other modules, unless they are properly namespaced, are not included. (#62190)
- Fixes issue in postgresql privileges detection: privileges on views were never retrieved and always recreated. (#57690)
- Fix `service.enabled` error for unavailable service in test mode (#62258)
- Fix variable reuse causing `requisite_in` problems (#62264)
- Adding `-G` option to `pkgdd cmd_prefix` list when `current_zone_only` is True. (#62206)
- Don't expect `lsyf` to be installed when trying check which minions are connected. (#62303)
- Fixed `urlparse` typo in `rpmbuild_pkgbuild.py` (#62442)
- Fixing changes dict in `pkg` state to be consistent when installing and `test=True`. (#60995)
- Use `fire_event_async` when expecting a coroutine (#62453)
- Fixes import error under windows. (#62459)
- account for revision number in formulas to account for difference between bottle and formula (#62466)
- Fixed `stacktrace` on Windows when running `pkg.list_pkgs` (#62479)
- Update sanitizing masking for Salt SSH to include additional password like strings. (#62483)
- Fixes an issue where the minion could not connect to a master after 2 failed attempts (#62489)

## Added

- Added ability to request VPC peering connections in different AWS regions (`boto_vpc`). (#50394)
- Added event return capability to Splunk returner (#50815)
- Added allow downgrades support to apt upgrade (#52977)
- added new grain for metadata to handle googles metadata differences (#53223)
- Added `win_shortcut` execution and state module that does not prepend the current working directory to paths. Use `shortcut.create` and `shortcut.present` instead of `file.shortcut`. (#53706)
- Add `__env__` substitution inside file and pillar root paths (#55747)
- Added support cpu hot add/remove, memory hot add, and nested virtualization to VMware salt-cloud driver. (#56144)
- Add a consul state module with `acl_present` and `acl_absent` functions. (#58101)
- Added restconf module/states/proxy code for network device automation (#59006)
- Adds the ability to get version information from a file on Windows systems (#59702)
- Add `aptkey=False` kwarg option to the `aptpkg.py` module and `pkgrepo` state. `Apt-key` is on the path to be deprecated. This will allow users to not use `apt-key` to manage the repo keys. It will set `aptkey=False` automatically if it does not detect `apt-key` exists on the machine. (#59785)
- Added "Instant Clone" feature in the existing VMware Cloud module (#60004)
- Added support for etcd API v3 (#60325)
- Added `pkg.held` and `pkg.unheld` state functions for Zypper, YUM/DNF and APT. Improved `zypperpkg.hold` and `zypperpkg.unhold` functions. (#60432)
- Added `suse_ip` module allowing to manage network interfaces on SUSE based Linux systems (#60702)
- Support querying for JSON data in SQL external pillar (#60905)
- Added support for yum and dnf on AIX (#60912)
- Added percent success/failure of state runs in highstate summary output via new `state_output_pct` option (#60990)
- Add support for retrieve IP-address from qemu agent by Salt-cloud on Proxmox (#61146)
- Added new shortcut execution and state module to better handle UNC shortcuts and to test more thoroughly (#61170)
- added `yamllint` utils module and `yaml` execution modules (#61182)
- Add `--no-return-event` option to `salt-call` to prevent sending return event back to master. (#61188)
- Add Etag support for `file.managed` web sources (#61270)
- Adding the ability to add, delete, purge, and modify Salt scheduler jobs when the Salt minion is not running. (#61324)
- Added a `force` option to `file.symlink` to overwrite an existing symlink with the same name (#61326)
- `gpg_decrypt_must_succeed` config to prevent gpg renderer from failing silently (#61418)
- Do not load a private copy of `__grains__` and `__salt__` for the sentry log handler if it is disabled. (#61484)
- Add Jinja filters for `itertools` functions, `flatten`, and a state template workflow (#61502)
- Add feature to allow roll-up of duplicate IDs with different names in highstate output (#61549)

- Allow cp functions to derive saltenv from config if not explicitly set (#61562)
- Multiprocessing logging no longer uses multiprocessing queues which penalized performance. Instead, each new process configures the terminal and file logging, and also any external logging handlers configured. (#61629)
- Add a function to the freezer module for comparison of packages and repos in two frozen states (#61682)
- Add grains\_refresh\_pre\_exec option to allow grains to be refreshed before any operation (#61708)
- Add possibility to pass extra parameters to salt-ssh pre flight script with *ssh\_pre\_flight\_args* (#61715)
- Add Etag support for archive.extracted web sources (#61763)
- Add regex exclusions, full path matching, symlink following, and mtime/ctime comparison to file.tidied (#61823)
- Add better handling for unit abbreviations and large values to salt.utils.stringutils.human\_to\_bytes (#61831)
- Provide PyInstaller hooks that provide some runtime adjustments when Salt is running from a onedir (PyInstaller) bundled package. (#61864)
- Add configurable onedir pip pypath location (#61937)
- Add CNAME record support to the dig exec module (#61991)
- Added support for changed user object in Zabbix 5.4+ Added compatibility with Zabbix 4.0+ for *zabbix.user\_getmedia* method Added support for setting medias in *zabbix.user\_update* for Zabbix 3.4+ (#62012)
- Add ignore\_missing parameter to file.comment state (#62044)
- General improvements on the "ansiblegate" module: \* Add "ansible.targets" method to gather Ansible inventory \* Add "ansible.discover\_playbooks" method to help collecting playbooks \* Fix crash when running Ansible playbooks if ansible-playbook CLI output is not the expected JSON. \* Fix issues when processing inventory and there are groups with no members. \* Allow new types of targets for Ansible roster (#60056)
- Add sample and shuffle functions from random (#62225)
- Add "<tiamat> python" subcommand to allow execution or arbitrary scripts via bundled Python runtime (#62381)

(\_release-3005-1)=

### 33.2.11 Salt 3005.1 Release Notes

Version 3005.1 is a bug fix release for 3005.

#### Changelog

### 33.2.12 Fixed

- Fix arch parsing issue in apt source files (#62247)
- Fixed parsing CDROM apt sources (#62474)
- Use str() method instead of repo\_line for when python3-apt is installed or not in *aptpkg.py*. (#62546)
- Remove the connection\_timeout from netmiko\_connection\_args before netmiko\_connection\_args is added to context["netmiko\_device"]["args"] which is passed along to the Netmiko library. (#62547)
- fixes #62553 by checking for disabled master\_type before starting master connection and skipping it if set. (#62553)

- Fix runas with cmd module when using the onedir bundled packages (#62565)
- Fix the Pyinstaller hooks to preserve the environment if None is passed. (#62567, #62628)
- pkgrepo.managed sets wrong permissions on keys installed to /etc/apt/keyring (#62569)
- pkgrepo.managed creates zero byte gpg files when dearmorizing contents to the same filename (#62570)
- Ensure default values for IPC Buffers are correct type (#62591)
- Fix a hang on salt-ssh when using sudo. (#62603)
- Renderers now have access to the correct set of salt functions. (#62610, #62620)
- Fix including Jinja template from absolute path (#62611)
- include jmespath in package requirements (#62613)
- Fix pkgrepo.managed signed-by in test=true mode (#62662)
- Ensure the status of the service is captured when the beacon function is called, even when the event is not being emitted. (#62675)
- The sub proxies controlled by Deltaproxy need to have their own req\_channel otherwise there are timeout exceptions when the \_\_master\_req\_channel\_payload is fired and reacted on. (#62708)

### 33.2.13 Salt 3005.2 Release Notes

Version 3005.2 is a CVE security fix release for 3005.

#### Changed

- Additional required package upgrades
  - It's now *pyzmq*  $\geq 20.0.0$  on all platforms, and  $\leq 22.0.3$  just for windows.
  - Upgrade to *pyopenssl*  $= 23.0.0$  due to the cryptography upgrade. (#63757)

#### Security

- fix CVE-2023-20897 by catching exception instead of letting exception disrupt connection (cve-2023-20897)
- Fixed gitfs cachedir\_basename to avoid hash collisions. Added MP Lock to gitfs. These changes should stop race conditions. (cve-2023-20898)
- Upgrade to *requests*  $= 2.31.0$

##### Due to:

- <https://github.com/advisories/GHSA-j8r2-6x86-q33q> (#64336)

- Upgrade to *cryptography*  $= 41.0.3$  (and therefor *pyopenssl*  $= 23.2.0$  due to <https://github.com/advisories/GHSA-jm77-qphf-c4w8>)

Also resolves the following cryptography advisories:

##### Due to:

- <https://github.com/advisories/GHSA-5cpq-8wj7-hf2v>
- <https://github.com/advisories/GHSA-x4qr-2fvf-3mr5>
- <https://github.com/advisories/GHSA-w7pp-m8wf-vj6r>

There is no security upgrade available for Py3.5 (#64595)

- Bump to *certifi*==2023.07.22 due to <https://github.com/advisories/GHSA-xqr8-7jwr-rhp7>
- Python 3.5 cannot get the updated requirements since certifi no longer supports this python version (#64720)

### 33.2.14 Salt 3005.3 Release Notes

Version 3005.3 is a Bug fix release for 3005.

#### Changed

- Fix `__env__` and improve cache cleaning see more info at pull #65017. (#65002)

#### Security

- Update to *gitpython*>=3.1.35 due to <https://github.com/advisories/GHSA-wfm5-v35h-vwf4> and <https://github.com/advisories/GHSA-cwvm-v4w8-q58c> (#65167)

### 33.2.15 Salt 3005.4 Release Notes

Version 3005.4 is a CVE security fix release for 3005.

#### Security

- Fix CVE-2023-34049 by ensuring we do not use a predictable name for the script and correctly check returncode of scp command. This only impacts salt-ssh users using the pre-flight option. (cve-2023-34049)
- Bump to *cryptography*==41.0.4 due to <https://github.com/advisories/GHSA-v8gr-m533-ghj9> (#65267)
- Bump to *urllib3*==1.26.17 or *urllib3*==2.0.6 due to <https://github.com/advisories/GHSA-v845-jxx5-vc9f> (#65334)
- Bump to *gitpython*==3.1.37 due to <https://github.com/advisories/GHSA-cwvm-v4w8-q58c> (#65383)

### 33.2.16 Salt 3005.5 Release Notes

Version 3005.5 is a CVE security fix release for 3005.

#### Security

- Fix CVE-2024-22231 by preventing directory traversal when creating syndic cache directory on the master.
- Fix CVE-2024-22232 Prevent directory traversal attacks in the master's `serve_file` method.

These vulnerabilities were discovered and reported by: Yudi Zhao(Huawei Nebula Security Lab),Chenwei Jiang(Huawei Nebula Security Lab) (#565)

## 33.2.17 Salt 3004 Release Notes - Codename Silicon

### New Features

#### Transactional System Support (MicroOS)

A transactional system, like MicroOS, can present some challenges when the user decided to manage it via Salt.

MicroOS provide a read-only rootfs and a tool, `transactional-update`, that takes care of the management of the system (updating, upgrading, installation or reboot, among others) in an atomic way.

Atomicity is the main feature of MicroOS, and to guarantee this property, this model leverages `snapper`, `zypper`, `btrfs` and `overlayfs` to create snapshots that will be updated independently of the currently running system, and that are activated after the reboot. This implies, for example, that some changes made on the system are not visible until the next reboot, as those changes are living in a different snapshot of the file system.

Salt 3004 (Silicon) support this type of system via two new modules (`transactional_update` and `rebootmgr`) and a new executor (`transactional_update`).

The new modules will provide all the low level API for interacting with transactional systems, like defining a maintenance window where the system is free to reboot and activate the new state, or install new software in a new transaction. It will also provide high level of abstractions that will allows us to execute Salt module functions or applying states inside new transactions.

The execution module will help us to treat the transactional system transparently (like the traditional ones), using a mechanism that will delegate some Salt modules execution into the new `transactional_update` module.

### Removed

- Removed the deprecated glance state and execution module in favor of the `glance_image` state module and the `glanceng` execution module. (#59079)
- Removed support for Ubuntu 16.04 (#59869)
- Removed the deprecated support for `gid_from_name` from the `user` state module (#60565)
- Removed deprecated `virt.migrate_non_shared`, `virt.migrate_non_shared_inc`, `ssh` from `virt.migrate`, and `python2/python3` args from `salt.utils.thin.gen_min` and `gen_thin` (#60893)

### Deprecated

- The `_ext_nodes` alias to the `master_tops` function was added back in 3004 to maintain backwards compatibility with older supported versions. This alias will now be removed in 3006. This change will break Master and Minion communication compatibility with Salt minions running versions 3003 and lower. (#60980)
- `utils/boto3_elasticsearch` is no longer needed (#59882)
- Changed "manufacture" grain to "manufacturer" for Solaris on SPARC to unify the name across all platforms. The old "manufacture" grain is now deprecated and will be removed in Sulfur (#60511)
- Deprecate `salt.payload.Serial` (#60953)

## Changed

- Changed `nginx.version` to return version without `nginx/` prefix. (#57111)
- Updated Slack webhook returner to support event returns on salt-master (#57182)
- Parsing Epoch out of version during pkg remove, since yum can't handle that in all of the cases. (#57881)
- Add extra onfail req check in the state engine to allow onfail to be used with onchanges and other reqs in the same state (#59026)
- Changed the default character set used by `utils.pycrypto.secure_password()` to include symbols and implemented arguments to control the used character set. (#59486)

## Fixed

- Set default 'bootstrap\_delay' to 0 (#61005)
- Fixed issue where multiple args to netapi were not preserved (#59182)
- Handle all repo formats in the aptpkg module. (#60971)
- Do not break master\_tops for minion with version lower to 3003 This is going to be removed in Salt 3006 (Sulfur) (#60980)
- Reverting changes in PR #60150. Updating installed and removed functions to return changes when test=True. (#60995)
- Handle signals and properly exit, instead of raising exceptions. (#60391, #60963)
- Redirect imports of `salt.ext.six` to `six` (#60966)
- Surface strerror to user state instead of returning false (#20789)
- Fixing `_get_envs()` to preserve the order of pillar\_roots. `_get_envs()` returned pillar\_roots in a non-deterministic order. (#24501)
- Fixes salt-cloud KeyError that occurs when there exists any subnets with no tags when profiles use `subnetname` (#44330)
- Fixes postgres\_local\_cache by removing duplicate unicode encoding. (#46942)
- Fixing the state aggregation system to properly handle requisities. Fixing pkg state to exclude packages from aggregation if the hold attribute is in the state. (#47628)
- fix issue that allows case sensitive files to be carried through (#47969)
- Allow GCE Salt Cloud to use previously created IP Addresses. (#48947)
- Fixing rabbitmq.list\_user\_permissions to ensure we are returning a permission list with three elements even when some values are empty. (#49115)
- Periodically restart the fileserver update process to avoid leaks (#50313)
- Fix default value to dictionary for mine\_function (#50695)
- Allow user.present to work on Alpine Linux by fixing linux\_shadow.info (#50979)
- Ensure that zypper is called with only one --no-refresh parameter (#51382)
- Fixed fileclient cachedir path switching from master to minion due to incorrect MasterMinion configuration (#52288)
- Fixed the container detection inside virtual machines (#53868)
- Fix invalid dnf command when obsoletes=True in pkg.update function (#54224)

- Jinja renderer resolves wrong relative paths when importing subdirectories (#55159)
- Fixed bug #55262 where `salt.modules.iptables` would call `cmd.run` and receive and interpret interspersed `stdout` and `stderr` output from subprocesses. (#55262)
- Updated pcs support to handle auth and setup for new syntax supporting version 0.10 (#56924)
- Reinstate `ignore_cidr` option in salt-cloud openstack driver (#57127)
- Fix for `network.wolmatch` runner displaying 'invalid arguments' error with valid arguments (#57473)
- Fixed bug 57490, which prevented package installation for Open Euler and Issabel PBX. Both Open Euler and Issabel PBX use Yum for package management, added them to `yumpkg.py`. (#57490)
- Better handling of bad RSA public keys from minions (#57733)
- Fixing various functions in the file state module that use `user.info` to get group information, certain hosts particularly proxy minions do not have the `user.info` function available. (#57786)
- Do not monkey patch yaml loaders: Prevent breaking Ansible filter modules (#57995)
- Fix `--subset` command line option, and support old 'sub' parameter name in `cmd_subset` for backwards compatibility (#58600)
- When calling `salt.utils.http.query` with a HEAD method to check for the existence of a source ensure that `decode_body` is False, so the file is not downloaded into memory when we don't need the contents. (#58881)
- Update the `runas` user on freebsd for postgres versions >9.5, since freebsd will be removing the package on 2021-05-13. (#58915)
- Fix pip module linked requirements file parsing (#58944)
- Fix incorrect hostname quoting in `/etc/sysconfig/networking` on Red Hat family OS. (#58956)
- Fix Xen DomU virt detection in grains for long running machines. (#59001)
- add encoding when windows encoding is not defaulting to utf8 (#59063)
- Fix `"aptpkg.normalize_name"` in case the arch is "all" for DEB packages (#59269)
- Astra Linux now considered a Debian family distro (#59332)
- Reworking the `mysql` module and state so that `passwordless` does not try to use `unix_socket` until `unix_socket` is set to True. (#59337)
- Fixed the `zabbix` module to read the connection data from pillar. (#59338)
- Fix crash on `"yumpkg"` execution module when unexpected output at listing patches (#59354)
- Remove return that had left over py2 code from `win_path.py` (#59396)
- Don't create `spicvmc` channel for Xen virtual machines (#59416)
- Fix `win_servermanager.install` so it will reboot when `restart=True` is passed (#59424)
- Clear the cached network interface grains during minion init and grains refresh (#59490)
- Normalized grain output for LXC containers (#59573)
- Fix typo in `'salt/states/cmd.py'` to use `"comment"` instead of `"commnd"`. (#59581)
- add aliyun linux support and set `alinux` as redhat family (#59686)
- Don't fail updating network without `netmask ip` attribute (#59692)
- Fixed using reserved keyword 'set' as function argument in `modules/ipset.py` (#59714)
- Return empty changes when nothing has been done in `virt.defined` and `virt.running` states (#59739)

- Import `salt.utils.azurearm` instead of using `__utils__` from loader in azure cloud. This fixes an issue where `__utils__` would become unavailable when we are using the `ThreadPool` in `azurearm`. (#59744)
- Fix an issue with the `LGPO` module when the `gpt.ini` file contains unix style line endings (`/n`). This was happening on a Windows Server 2019 instance created in Google Cloud Platform (GCP). (#59769)
- The `ansiblegate` module now correctly passes keyword arguments to Ansible module calls (#59792)
- Make sure `cmdmod._log_cmd` handles tuples properly (#59793)
- Updating the `add`, `delete`, `modify`, `enable_job`, and `disable_job` functions to return appropriate changes. (#59844)
- Apply pre-commit changes to entire codebase. (#59847)
- Fix Hetzner cloud driver does not recognize machines when rolling out a map (#59864)
- Update Windows build deps & DLLs, Use Python 3.8, `libsodium.dll` 1.0.18, `OpenSSL` dlls to 1.1.1k (#59865)
- Salt api verifies proper log file path when providing `'--log-file'` from the cli (#59880)
- Detect Mendel Linux as Debian (#59892)
- Fixed compilation of `requisite_ins` by also checking state type along with name/id (#59922)
- Fix `xen._get_vm()` to not break silently when a VM and a template on XenServer have the same name. (#59932)
- Added missing space for `nftables.build_rule` when using `saddr` or `daddr`. (#59958)
- Add back support to load old entrypoints by iterating instead of type checking (#59961)
- Fixed interrupting salt-call in a `pdb` session. (#59966)
- Validate we can import map files in states (#60003)
- Update `alter_db` to return True or False depending on the success of failure of the alter. Update `grant_exists` to only use the full list of available privileges when the grant is on the global level, eg. `database is "."`. (#60031)
- Fixed `firewalld.list_zones` when any "rich rules" is set (#60033)
- `IPCMessageSubscriber` objects expose their `connect` method as a corotine so they can be wrapped by `SyncWrapper`. (#60049)
- Allow for Napalm dependency `netmiko_mod` to load correctly when used by Napalm with Cisco IOS (#60061)
- Ensure proper access to the created temporary file when `runas` is passed to `cmd.exec_code_all` (#60072)
- Fixed an `IndexError` in `pkgng.latest_version` when querying an unknown package. (#60105)
- Fixed `pkgng.latest_version` when querying by origin (e.g. "shells/bash"). (#60108)
- Gracefully handle errors in `virt.vm_info` (#60132)
- The `LGPO` Module now uses "Success and Failure" for normal audit settings and advanced audit settings (#60142)
- Fixing `tests/pytests/unit/utils/scheduler/test_eval.py` tests so the sleep happens before the status, so the job is given time before we check it. (#60149)
- Update the external `ipaddress` to the latest 3.9.5 version which has some security fixes. Updating the `compat.p` to use the vendored version if the python version is below 3.9.5 and only run the `test_ipaddress.py` tests if below 3.9.5. (#60168)
- Fixed `ValueError` exception in `state.show_state_usage` (#60179)
- Redact the username and password when something goes wrong when using an HTTP source and we raise an exception. (#60203)
- Inject the Ansible functions into Salt's `ansiblegate` module which was broken on the 3001 release. (#60207)

- Figure out the available Python version inside containers when executing "dockermod.call" function (#60229)
- Handle IPv6 route types such as anycast, multicast, etc when returned from IPv6 route table queries (#60232)
- Move the commonly used code that converts a list to a dictionary into salt.utils.beacons. Fixing inotify beacon close function to ensure the configuration is converted from the provided list format into a dictionary. (#60241)
- Set name of engine subprocesses (#60259)
- Properly discover block devices path in virt.running (#60296)
- Avoid exceptions when handling some exception cases. (#60330)
- Fixed faulty error message in npm.installed state. (#60339)
- Port option reinstated for Junos Proxy (accidentally removed) (#60340)
- Now hosts.rm\_host can remove entries from /etc/hosts when this file have inline comments. (#60351)
- Fixes issue where the full same name is not used when making rights assignments with group policy (#60357)
- Fixed zabbix\_host.present to not overwrite inventory\_mode to "manual" every time inventory is updated. (#60382)
- Allowed zabbix\_host.present to do partial updates of inventory, also don't erase everything if inventory is missing in state definition. (#60389)
- Fixing the mysql\_cache module to handle binary inserting binary data into the database. Initially adding tests. (#60398)
- Fixed host\_inventory\_get to not throw an exception if host does not exist (#60418)
- Check for /dev/kvm to detect KVM hypervisor. (#60419)
- Fixing file.accumulated handling of dependencies when the state\_id is used instead of {function: state\_id} format. (#60426)
- Adding the ability for yumpkg.remove to handle package names with widdcards. (#60461)
- Pass emulator path to get guest capabilities from libvirt (#60491)
- virt.get\_disks: properly report qemu-img errors (#60512)
- Make all platforms have psutils. This prevents a minion from starting if an instance is all ready running. (#60523)
- Ignore configuration for 'enable\_fqdns\_grains' for AIX, Solaris and Juniper, assume False (#60529)
- Remove check for TIAMAT\_BUILD enforcing USE\_STATIC\_REQUIREMENTS, this is now controlled by Tiamat v7.10.1 and above (#60559)
- Have the beacon call run through a try...except, catching any errors, logging and firing an event that includes the error. Fixing the swapusage beacon to ensure value is a string before we attempt to filter out the %. (#60585)
- Refactor loader into logical sub-modules (#60594)
- Clean up references to ZMQDefaultLoop (#60617)
- change dep warn from Silicon to Phosphorus for the cmd,show,system\_info and add\_config functions in the nxos module. (#60669)
- Fix bug 60602 where the hetzner cloud provider isn't recognized correctly (#60675)
- Fix the pwd.getpwnam caching issue on macOS user module (#60676)
- Fixing beacons that can include a value in their configuration that may or may not included a percentage. We want to handle the situation where the percentage sign is not included and the value is not handled as a string. (#60684)

- Fix RuntimeError in process manager (#60749)
- Ensure all data that is being passed along to LDAP is in an OrderedSet and contains bytes. (#60760)
- Update the AWS API version so VMs spun up by salt-cloud where the VPC has it enabled to assign ipv6 addresses by default, actually get ipv6 addresses assigned by default. (#60804)
- Remove un-needed singletons from tranports (#60851)

## Added

- Add windows support for file.patch with patch.exe from git for windows optional packages (#44783)
- Added ability to pass exclude kwarg to salt.state inside orchestrate. (#49130)
- Added success\_stdout and success\_stderr arguments to cmd.run, to override default return code behavior. (#50597)
- The netbox pillar now been enhanced to add support for querying virtual machines (in addition to devices), as well as minion interfaces and associated IP addresses. (#51490)
- Add support for transactional systems, like openSUSE MicroOS (#58519)
- Added namespace headers to allow use of namespace from config to communicate with Vault Enterprise namespaces (#58585)
- boto3mod unit tests (#58713)
- New decorators allow\_one\_of() and require\_one\_of() (#58742)
- Added nosync switch to disable initial raid synchronization (#59193)
- Expanded the documentation for the netbox pillar. (#59398)
- Rocky Linux has been added to the RedHat os\_family. (#59682)
- Add "poudriere -i -j jail\_name" option to list jail information for poudriere (#59831)
- Added the grains.uuid on Windows platform (#59888)
- Add a salt.util.platform check to detect the AArch64 64-bit extension of the ARM architecture. (#59915)
- Adding support for Deltaproxy controlled proxy minions into Salt Open. (#60090)
- Added functions to slsutil execution module to test if files exist in the state tree Added function to slsutil execution module to search for a file by walking up the state tree (#60159)
- Allow module\_refresh to also refresh available beacons, eg. following a Python library being installed and "refresh\_modules" being passed as an argument in a state. (#60541)
- Add the detect\_remote\_minions and remote\_minions\_port options to allow the master to detect remote ports for connected minions. This will allow users to detect Heist-Salt minions the master is connected to over port 22 by default. (#60612)
- Add the python rpm-vercmp library in the rpm\_lowpkg.py module. (#60814)
- Allow a user to use the aptpkg.py module without installing python-apt. (#60818)

### 33.2.18 Salt 3004.1 Release Notes

Version 3004.1 is a CVE security fix release for [3004](#).

#### Important notice about upgrading

Version 3004.1 is a security release. 3004.1 minions are not able to communicate with masters older than 3004.1. You must upgrade your masters before upgrading minions.

#### Minion authentication security

Authentication between masters and minions rely on public/private key encryption and message signing. To secure minion authentication before you must pre-seed the master's public key on minions. To pre-seed the minions' master key, place a copy of the master's public key in the minion's pki directory as `minion_master.pub`.

#### Security

- Sign authentication replies to prevent MiTM (cve-2022-22935)
- Prevent job and fileservr replays (cve-2022-22936)
- Sign pillar data to prevent MiTM attacks. (cve-2202-22934)
- Fixed targeting bug, especially visible when using syndic and user auth. (CVE-2022-22941) (#60413)
- Fix denial of service in junos ifconfig output parsing.

### 33.2.19 Salt 3004.2 Release Notes

Version 3004.2 is a CVE security fix release for [3004](#).

#### Fixed

- Expand environment variables in the `root_dir` registry key (#61445)
- Update Markup and contextfunction imports for jinja versions  $\geq 3.1$ . (#61848)
- Fix bug in tcp transport (#61865)
- Make sure the correct key is being used when verifying or validating communication, eg. when a Salt syndic is involved use `syndic_master.pub` and when a Salt minion is involved use `minion_master.pub`. (#61868)

#### Security

- Fixed PAM auth to reject auth attempt if user account is locked. (cve-2022-22967)

## 33.2.20 Salt 3003 Release Notes - Codename Aluminium

### New Features

#### SCRAM-SHA-256 support for PostgreSQL passwords

Support for SCRAM-SHA-256 password hashes has been added to the `postgres_user.present` and `postgres_group.present` states. This allows migration away from the insecure and deprecated previous storage methods.

### Added

- Added "fips\_mode" config option to master and minion configs. (#59427)
- Firewall groups support to Vultr Salt Cloud provider
- Adding the ability to clear and show the pillar cache enabled when `pillar_cache` is True. (#37080)
- SCRAM-SHA-256 support for PostgreSQL passwords. Pass `encrypted=scram-sha-256` to the `postgres_user.present` (or `postgres_group.present`) state. (#51271)
- The `yumpkg` module has been updated to support VMWare's Photon OS, which uses `tdnf` (a C implementation of `dnf`). "VMware Photon OS" has been added to the "RedHat" `os_family` map as part of this change. (#51912)
- The `pkgrepo` state now supports VMware Photon OS. (#52550)
- Added `firewallgroups` to Vultr Salt Cloud provider (#53677)
- Added arbitrary `kwargs` support for `tojson` filter. (#56012)
- Add salt monitor beacon to execute salt execution module functions. (#56461)
- Allow the nameservers to be populated from `systemd-resolve`. (#57618)
- Adding `reactor_niceness` to the default minion configuration. (#57701)
- CPU model, topology and NUMA node tuning (#57880)
- Added `pkg.services_need_restart` which lists system services that should be restarted after package management operations. (#58261)
- Allow handling special first boot definition on virtual machine (#58589)
- Added `vgcreate` custom parameters to module call: `adtag`, `alloc`, `autobackup`, `metadatatype`, `zero` (#58747)
- Enhance console and serial support in `virt` module (#58844)
- Salt's versions report `salt --versions-report` now includes all installed salt extensions into its versions report. (#58938)
- Support loading entrypoints by passing a module instead of a function. (#58939)
- Added `shadow.gen_password` for BSD operating systems. (#59140)
- Add more network and PCI/USB host devices passthrough support to `virt` module and states (#59143)
- Add interface channels management support to `rh_ip` module. (#59147)
- Add new minion option `return_retry_tries` for dynamic return retry tries (#59236)
- Added salt-cloud support for Hetzner Cloud via the `hcloud` library of the provider. (#59301)
- "AlmaLinux" has been added to the "RedHat" `os_family` map (#59404)
- Added `blocks` and `attachments` params to the `slack_notify.post_message` function (#59428)

- Added `tcp_reconnect_backoff` minion config option for specifying reconnection backoff time for TCP transport (#59431)
- Added `swapusage` beacon to complement the existing `memusage` beacon. (#59460)
- The `salt-run` CLI now accepts `--jid` (#59527)
- Add `bytes` option for FreeBSD `pkg-stats(8)` module. (#59540)
- Adding `mod_beacon` function to `pkg`, `service`, and `file` state modules. This function will act similar to the `mod_watch` function. This will allow supported functions in those state modules to automatically add associated beacons to monitor for changes to the respective resources in the state file and fire events to the event bus when changes occur. (#59559)
- Add `-B` flag to FreeBSD `pkgng.check()` to regenerate the library dependency metadata for a package by extracting library requirement information from the binary ELF files in the package. (#59569)

### Changed

- The `pkg` module now supports `tdnf` used by VMWare Photon OS. As part of this change, VMWare Photon OS's `os_family` grain will now resolve as `RedHat`. This may require changes to existing uses of `grains.filter_by`
- The `salt-run` CLI now accepts `--jid` which allows scripting against it.
- Change `brew cask --list` to `brew list --cask` (#58381)
- Store git sha in `salt/_version.py` when installing from a tag so it can be found if needed later. (#59137)
- Changed package manager detection in `yumpkg` module (#59201)
- Updating the `pkg` beacon to fire the events when there are upgrades to packages, but also when watched packages are installed or removed. Breaking out the logic for listing `pkgs` from context into a separate function to aid in testing. Updating tests to ensure context is not used when `use_context` option to `list_pkgs` is `False`. (#59463)

### Removed

- Removed the deprecated `glance` state and execution module in favor of the `glance_image` state module and the `glanceng` execution module. (#59079)
- Removing the `_ext_nodes` deprecation warning and alias to the `master_tops` function. This change will break compatibility with a Salt master running versions 2017.7.8 and older and Salt minions running versions 3003 and newer. (#59804)
- removed the arg `managed_private_key` from 'salt.states.x509.certificate\_managed' (#59247)
- Drop support for python 3.5 on Windows (#59479)
- Removed support for Ubuntu 16.04 (#59913)

## Deprecated

- Added deprecation warning for `grains.get_or_set_hash` (#59425)

## Fixed

- When instantiating the loader grab values of grains and pillars if they are `NamedLoaderContext` instances. (#59773)
- Fixed installation on Apple Silicon Macs by checking `$HOMEBREW_PREFIX` for `libcrypto` instead of assuming `/usr/local`. (#59808)
- The Google Cloud Engine salt-cloud provider now requires `apache-libcloud>=2.5.0`. Service account authentication is broken on older versions.
- Fix incorrect documentation for `pillar_source_merging_strategy` (#26396)
- Don't iterate through cloud map errors (#34033)
- Suppress noisy warnings when very old `pyzmq` is used. (#50327)
- Fixed glusterfs version parsing for pre-4.0 (#50707)
- Prevent traceback when trying to list reactors when none are configured. (#53334)
- Fixed `zabbix_host.present` to accept all Zabbix host properties (#53838)
- Binaries for the salt installer package for OSX are now signed and the installer package is notarized (#54513)
- Guard `boto3_elasticsearch` loading properly (#55848)
- Use a capitalized string version of the value of `NodeState` instead (#56589)
- Adding missing error case to the validation for service beacon. (#56623)
- The GCE cloud driver only works with `apache-libcloud>=2.5.0`, prior versions have authentication issues (#56862)
- `zypperpkg add_lock` and `remove_lock` examples do not work (#56922)
- Compare bytes to bytes so we don't overwrite a correct value (#57212)
- Fixing `expand_repo_def` in `aptpkg` module to include the architecture in the line attribute when it is passed in. (#57600)
- When passing arguments pass them as keyword arguments so that we can be sure the right value is going where. (#58006, #58579, #59075)
- Improve module whitelist logic for file backends (#58041)
- Fix behavior for "onlyif/unless" state conditionals when multiple declarations (#58085)
- Ensure data is a valid keyword argument for the `event.wait` function. (#58182)
- Do not raise "StreamClosedError" traceback on the master logs but only log it (#58301)
- Fixed issue with `win_timezone` when `dst` is turned off. This was causing the minion not to start Use default timezone offset in scheduler when correct timezone cannot be determined (#58379)
- Pop!\_OS 20.04 and 20.10 now support using `pkg.* / aptpkg.*` (#58395)
- Restoring functionality of the `textfsm` module when using `textfsm_path` argument (#58499)
- Invalidate file list cache when cache file has a future last modified time (#58529)
- Fix issue with setting permissions in combination with the `win_perms_reset` option (#58541)

- Adds support for Powershell 7. It is specified by passing `shell="pwsh"`. Only valid if Powershell 7 is installed on the system. (#58598)
- Fixed the `zabbix.host_create` call on `zabbix_host.present` to include the optional parameter `visible_name`. Now working as documented. (#58602)
- Fixed some bugs to allow `zabbix_host.present` to update a host already existent on Zabbix server:
  - Added checks before "pop" the elements "bulk" and "details" from `hostinterfaces_get`'s response. Without that, the interface comparison didn't works with Zabbix  $\geq$  5.0
  - Fixed the "inventory" comparison. It failed when both current and new inventory were missing.
  - Rewrite of the `update_interfaces` routine to really "update" the interfaces and not trying to delete and recreate all interfaces, which almost always gives errors as interfaces with linked items can't be deleted. (#58603)
- Added the "details" mandatory object with the properly default values when creating a SNMP hostinterface in Zabbix 5.0 (#58620)
- Fixing an issue preventing running `pillar.get` against pillar values with integers as pillar keys. (#58714)
- Adding a new option to pass `client_flags` to MySQL connections, for example passing the option to support multiple statements in queries. (#58718)
- Fixed two performance bugs in the `sysctl.present` state. Their impact is especially great on FreeBSD machines with large amounts of RAM. (#58732)
- Fixed an issue when pillar files are included in the `top.sls` and then later included in another pillar file. (#58736)
- Left over py2 code was causing windows encoding to misbehave (#58749)
- Return `result=None` from `module.run` state to indicate that changes would be made Return `result=False` from `module.run` state when called with no functions (#58752)
- Fix duplicate IP addresses in `fqdn_ip4` and `fqdn_ip6` grains (#58799)
- Rename `salt.renderers.toml` to `salt.renderers.tomlmod` which fixes the import error issues as described in #58822 Do note that, the renderer is still called `toml`. (#58822)
- Fixing `unhold` in `yumpkg`. Removing unnecessary code and relying on the code that handles `dicts` later. Adding tests when `pkg.installed` is called with `hold=False`. (#58883)
- Converts the given "grant" to upper case before compare to "ALL". This fixes a problem granting "all privileges" to a MySQL user. (#58933)
- Strip trailing "/" from `repo.uri` when comparing repos in "apktpkg.mod\_repo" (#58962)
- When we are checking requisites, run `reconcile_procs` just on those requisite states not all running states. (#58976)
- Allow the `gpg` module to use `export_key`, `delete_key` and `create_key` without a passphrase in GnuPG  $\geq$  2.1 (#58980)
- Updated the documentation, handling and error messages for what size units are allowed by "size" parameter in `lvm.lv_present` (#58985)
- Fixing the two failing tests when running on Photon OS. Python 3 installed on Photon OS does not support MD4 hashing, so don't load `pdbedit` module and skip the `test_generate_nt_hash` test. Default unmask for files and directories results in them having only user and group permissions so update the `test_directory_max_depth` test. (#58991)
- Fixes to `netmiko` module and `proxy` module to handle situations where the device is unreachable during the initial connection phase. (#59011)

- Correct comment when updating postgres users and groups. Errors reported when removing postgres groups. Partial group membership changes in postgres groups. (#59034)
- Fixed an error when running `svn.latest` in test mode and using the `trust_failures` option. (#59069)
- Fixes to storing schedule items in pillar, when refreshing pillar only update the schedule items if something has changed. (#59104)
- Fixed timezone module to work in Slackware Linux (#59130)
- Enforces `pywinrm` to be version 0.3.0 or higher and upgrade to latest (#59138)
- Fix a race condition in the `ldx` module which sometimes caused devices not to be created during container creation. (#59145)
- Fix issue where passed `smb` port was being passed to the `smb` connection when deploying Windows with `salt-cloud` (#59153)
- Fixed an error when running on CentOS Stream 8. (#59161)
- Fix event publish retry when using TCP transport (#59162)
- Fix docs for `auth_timeout` (#59175)
- `virt.update` doesn't update the definition if `efi=True` and a loader is already set (#59188)
- Fixed `salt.modules.solaris_shadow` failing on bytes-like object is require, not 'str'. (#59191)
- Added support for `io2` volumes in `ec2` cloud (#59218)
- When checking if the mode had changed in the file state module, only do so if the passed mode is not `None`. (#59276)
- Fixing `_sanitize_comments` to use `sqlparse` instead of `re.sub`. (#59336)
- Allow use of query parameters in `cmd.script` source url (#59362)
- Access user from global group if local group fails to find user. (#59412)
- Detect and fix `grub.xen` path (#59484)
- Stop raising `StopIteration` on generators (#59512)
- Fix minion race conditions handling `SIGTERM` signal when loading modules (#59524)
- Support new output of `systemd` `systemctl list-unit-files` in the following modules `systemd_service.get_enabled`, `systemd_service.get_disabled` and `systemd_service.get_static` (#59526)
- Fix `pkg.upgrade` with `-U` arg on FreeBSD, `-L` flag was deprecated long time. (#59565)
- Fixing the virtual function for the `netimiko` module to allow it to run outside of a proxy minion. Adding additional tests. (#59635)
- Allow "extra\_filerefs" as sanitized kwargs for SSH client. Fix regression on "cmd.run" when passing tuples as `cmd`. (#59664)

### 33.2.21 Salt 3003.1 Release Notes

Version 3003.1 is a bug fix release for *3003*.

#### Fixed

- Fixed race condition in batch logic. Added *listen* option to *LocalClient* to prevent event subscriber from purging cached events during batch iteration. (#56273)
- Fixed dependencies for Amazon Linux 2 on <https://repo.saltproject.io> since Amazon Linux 2 now provides some of the python libraries in their repos. (#59982)
- IPCMessageSubscriber objects expose their connect method as a coroutine so they can be wrapped by SyncWrapper. (#60049)
- Import salt.utils.azurearm instead of using `__utils__` from loader in azure cloud. This fixes an issue where `__utils__` would become unavailable when we are using the ThreadPool in azurearm. (#59744)
- Use contextvars library from site-packages if it is intalled. Fixes salt ssh for targets with python <=3.6 (#59942)
- Add back support to load old entrypoints by iterating instead of type checking (#59961)
- Pass the value of the `__grains__` NamedContext to salt.pillar.get\_pillar, instead of the NamedContext object itself. (#59975)
- Fix pillar serialization in jinja templates (#60083)

### 33.2.22 Salt 3003.2 Release Notes

Version 3003.2 is a bug fix release for *3003*.

#### Fixed

- Periodically restart the fileserver update process to avoid leaks (#50313)
- Add `ssh_timeout` to kwargs in `deploy_script` (#59901)
- Update the external ipaddress to the latest 3.9.5 version which has some security fixes. Updating the compat.p to use the vendored version if the python version is below 3.9.5 and only run the test\_ipaddress.py tests if below 3.9.5. (#60168)
- Use the right crypto library for salt.utils.crypt.reinit\_crypto (#60215)
- Stop SSH from hanging if connection is lost. Also added args to customize grace period. (#60216)
- Improve reliability of Terminal class (#60504)
- Ignore configuration for 'enable\_fqdns\_grains' for AIX, Solaris and Juniper, assume False (#60529)

### 33.2.23 Salt 3003.3 (2021-08-20)

Version 3003.3 is a CVE security fix release for 3003.

#### Fixed

- Fix issue introduced in <https://github.com/saltstack/salt/pull/59648> (#60046)

#### Security

- Verify the owner of an existing config before trusting it during install. If the owner cannot be verified, back it up and use defaults. (CVE-2021-22004)
- Ensure that sourced file is cached using its hash name (cve-2021-21996)

### 33.2.24 Salt 3003.4 (2022-02-25)

Version 3003.4 is a CVE security fix release for 3003.

#### Important notice about upgrading

Version 3003.4 is a security release. 3003.4 minions are not able to communicate with masters older than 3003.4. You must upgrade your masters before upgrading minions.

#### Minion authentication security

Authentication between masters and minions rely on public/private key encryption and message signing. To secure minion authentication before you must pre-seed the master's public key on minions. To pre-seed the minions' master key, place a copy of the master's public key in the minion's pki directory as `minion_master.pub`.

#### Security

- Sign authentication replies to prevent MiTM (cve-2022-22935)
- Prevent job and fileserver replays (cve-2022-22936)
- Sign pillar data to prevent MiTM attacks. (cve-2202-22934)
- Fixed targeting bug, especially visible when using syndic and user auth. (CVE-2022-22941) (#60413)
- Fix denial of service in junos ifconfig output parsing.

### 33.2.25 Salt 3003.5 (2022-07-05)

Version 3003.5 is a CVE security fix release for *3003*.

#### Fixed

- Update Markup and contextfunction imports for jinja versions  $\geq 3.1$ . (#61848)
- Fix bug in tcp transport (#61865)
- Make sure the correct key is being used when verifying or validating communication, eg. when a Salt syndic is involved use `syndic_master.pub` and when a Salt minion is involved use `minion_master.pub`. (#61868)

#### Security

- Fixed PAM auth to reject auth attempt if user account is locked. (cve-2022-22967)

### 33.2.26 Salt 3002 Release Notes - Codename Magnesium

#### New Features

##### Network Teaming Support Added (RHEL/CentOS)

Support for two new interface types (`team` and `teamport`) has been added to the `network.managed` state. See the documentation for example usage.

#### Execution Module Changes

The `ip.get_bond` and `ip.build_bond` functions have been removed from the `ip` module for RHEL/CentOS. Configuring bonding opts in modprobe configurations has not been necessary since RHEL 4, and Salt was in fact redundantly both creating modprobe configurations *and* using the `BONDING_OPTS` interface configuration parameter.

#### Removed

- removed `boto_vpc.describe_route_table` please use `boto_vpc.describe_route_tables` (#58636)
- removed `show_ipv4` arg from all functions in `from salt.runners.manage` (#58638)
- removed `kwargs` from `mandrill.send` if you use "async" please use "asynchronous" (#58640)
- removed `salt/modules/mac_brew_pkg.__fix_cask_namespace` (#58641)
- `zfs.mount` Passing '-a' as name is deprecated please just pass 'None' (#58642)
- Remove `include_localhost` kwarg for `connected_ids` method in `salt/utls/minions.py` (#58224)
- deprecated `opts` default argument of `none` and removed deprecation warnings (#58635)

## Deprecated

- The `ssh` parameter of `virt.migrate` has been deprecated. Use a libvirt URI `target` value instead. Both `virt.migrate_non_shared` and `virt.migrate_non_shared_inc` have been deprecated. Use the `copy_storage` parameter with `virt.migrate` instead. (#57947)

## Changed

- Allow specifying a custom port for Proxmox connection (#50620)
- Changed the `lvm.lv_present` state to accept a `resizefs` switch. So, when the logical volume is resized, the filesystem will be resized too. (#55265)
- Change the `enable_fqdns_grains` setting to default to `False` on proxy minions as it is generally not needed and just slows down start up time.. (#57676)
- Adds network teaming support to `network.managed` state for RHEL-based distros. Removes `ip.get_bond` and `ip.build_bond` for the same, as is redundant and not needed for any current RHEL/CentOS/Fedora/etc. release. (#57775)
- The `serializer` argument has been added to the `file.serialize` state, as an alternative to `formatter`. This brings it more in line with the `serializer_opts` and `deserializer_opts` arguments. `formatter` is still supported, but using both `serializer` and `formatter` will cause the state to fail. (#57858)

## Fixed

- `file.read` exec module function no longer fails on binary data. (#58033)
- Remove `py2` support from `winrepo` execution module and runner (#58596)
- Create ini file if does not exist when using `ini.options_present` state module. (#34236)
- Added an bool "strict" argument to `sdb.get` module to force module to fail if the `sdb uri` is not correct. (#39163)
- Fixed issue with `postgres.has_privilege` breaking on ALL. (#48465)
- check for `azurearm` username in config before adding username and password to the virtual machine properties (#49063)
- Fixes `service.status` to return True/False instead of empty strings or PIDs of the service. This brings macOS into parity with the other service modules. (#49237)
- fix frequent `rest_tornado` non-fatal tracebacks (#49572)
- Do not use reverse DNS of the target used in `salt-ssh`. Use the target the user provides. (#49840)
- Fixes startup issue where it tried to load the `kernalparams` grain on Windows (#49901)
- Fixed error in `nirlt_ip.get_interfaces_details` when loading config. (#50416)
- Doesn't remove underscore when sanitizing hostname in `network salt util` (#50527)
- permit the use of int/float type for the version in:
  - the state `postgres_cluster.present`
  - the state `postgres_cluster.absent`
  - the module `postgres.cluster_create`
  - the module `postgres.cluster_remove` (#50899)

- Cleaned up a traceback in lvm.pv\_present when the disk doesn't exist. (#52363)
- Fixed UnboundLocalError when using win\_network.connect (#53371)
- Add accept\_ra 2 option to modules.debian\_ip (#54067)
- salt.runner test mode support (#54382)
- Fixed mkpart to allow the creation of a partition without filesystem (#54456)
- Fixes bogus warning message when an empty list is used for an environment in a topfile. This allows [] to be used as a placeholder in a topfile without needing to comment everything out as a workaround. (#54882)
- win\_certutil state will no longer fail on non-English systems upon successful additions and deletions of a certificate. (#55024)
- Fixed file.directory state always showing mode change for symlinks. (#55878)
- check for a docker error that the swarm already exists when calling swarm.swarm\_init on an existing docker swarm (#55949)
- Fixing stalekey engine so it deletes the keys when they are a list. (#55977)
- An invalid \_schedule.conf configuration file is renamed to \_schedule.confYAMLError. This avoids disabling the minion and busy polling the CPU on Windows. (#56216, #58177)
- Proper calculation of tpldir and related context parameters (#56410)
- Make gpg.encrypt examples work (#56646)
- Artifactory encoding of headers fixed for py3 (#56660)
- Fixed handling of extents extended attribute in file.managed state. (#57189)
- Remove buggy start parameter from virt.pool\_running docstring (#57275)
- Fixed saltcheck rendering of map.jinja files from saltenv (#57327)
- Fix for virt.get\_profiles resolves an error that appears due to new parameters introduced with \_disk\_profile() (#57431)
- Accept nested namespaces in spacewalk.api runner function. (#57442)
- virt.init fix the disk target names (#57477)
- Fix volume name for disk-typed pools in virt.defined (#57497)
- Fixes an issue with filesystems options ordering which kept already applied NFS fstab entries being updated. (#57520)
- Do not allow python2 to be added to salt-ssh tar since Salt deprecated Python 2. (#57647)
- Fixed exception on loading custom zipped modules. (#57674)
- corrected support for app\_id or local vault configurations (#57705)
- Fix the registration of libvirt pool and nodedev events (#57746)
- Pass cmd.run state arguments to unless and onlyif when they exist (#57760)
- The 2004 release of Windows 10 introduced a bug in the InstallationBehavior COM object where you can no longer get properties from that object. Calls to this object are now wrapped in a try/except block with sane defaults when it fails to read attributes.

Additionally, some pre-flight checks have been added to the win\_wua module to make sure Windows Update can actually run. (#57762)

- Changed `get_repo` in `yumpkg.py` to use `"repo"` as first parameter. This fixes #57778, a bug where every run of `pkgrepo.managed` state were marked as changed because the `get_repo` did fail to detect a previously applied run. (#57778)
- Raise `SaltClientError` in `parse_host_port` instead of `ValueError` so it is caught and handled properly when the minion is connecting to the master. (#57789)
- Fixed issue with the return dictionary from the `workgroup()` function in the `salt.states.win_system` module. This resulted in a windows-based minion logging an error and could also interfere with a highstate being applied. (#57790)
- Fixes broken `block_device_mapping` and `block_device_mapping_v2` type checks in the OpenStack cloud driver. Salt was looking for a dict and the shade library was looking for a list of dicts. This made it impossible to use those params. (#57802)
- Fixed incorrect parsing of `Set-Cookie` response headers. (#57829)
- When using `yumpkg`, report `stdout` when `stderr` is redirected to `stdout`. (#57862)
- Fixes an issue on macOS where if you try and restart the macOS using `service.restart salt-minion` it would fail because the service names are different on macOS. (#57878)
- Fixes an issue on macOS where salt would take extra time to run on a `service.dead` call and the service is missing. (#57907)
- Fixes an issue where a disabled macOS and Windows service would fail to start with `service.running`. (#57908)
- Use `"use_bin_type"` to differentiate between bytes and str when writing cache for pillar and grains. (#57918)
- Set the comment to `"No minions responded"` if `salt.function` fails to find any minions (#57920)
- Fix issue with `__utils__` usage in the `__virtual__` functions on a few of the execution modules. (#57948)
- remove encoding kwarg for both `pack(b)/unpack(b)` in `msgpack` for versions `>=1.0.0` <https://github.com/msgpack/msgpack-python/blob/master/ChangeLog.rst#100> (#57965)
- Replace deprecated `cgi.escape()` with `html.escape()` after it was removed from Python 3.8. (#57983)
- Fix `btrfs` state decorator, that produces exceptions when creating subvolumes. (#58012)
- Fix `kubeadm token_list` when the list of tokens is empty (#58116)
- Add a fix for the `mac_service` modules where it would fail to load in some new services and crash on Big Sur. (#58143)
- Fix blank `tplfile` context parameter when loading top level sls files (#58249)
- Do not include `init` directory in sls context parameters if explicitly specified (#58250)
- Fixing pillar caching when pillar environments are involved. (#58274)
- Make `proxy_config` read in the proxy specific configuration which is typically found in `/etc/salt/proxy.d/minionid/`. (#58307)
- Add `timeout` kwarg docs for `service.running` and `service.dead` (#58311)
- Return empty dict on `win_pdh.get_counters` rather than raising exception when no data are available (#58327)
- Leave boot parameters untouched if boot parameter is set to `None` in `virt.update` (#58331)
- Convert disks of volume type to file or block disks on Xen (#58333)
- Apparently Apple is using both `"10.16"` and `"11"` for versioning Big Sur, depending on where you look. The `mac_softwareupdate` module uses a different regex depending on OS version, and the determination was based on the `osrelease_info` grain. This results in a Big Sur machine not using the correct regex; `osrelease_info[1]` is 0 for Big Sur.

This change simply adds an additional clause to the if statement to handle `osmajorrelease > 10`. (#58340)

- Fixed zmq salt-call hang!

Some objects from the 3rd party module zmq fail to deconstruct if left to the GC when Python exits. This is because the objects get destroyed out of order. This only happens on some platforms like ubuntu 20.04 and some versions of FreeBSD. We fixed this hang by deconstructing all zmq objects in the right order before we exit salt-call. (#58364)

- Reactor runner functions will now ensure reactor system is available before attempting to run and error out if it is not available. (#58384)
- Fix endpoint typos (#58416)
- Make sure we repopulate `__utils__` on Windows when a job is run from the scheduler. (#58437)
- Adding a check when a source is an HTTP or FTP URL to do a query to ensure the URL is valid before returning, then we know if we need to move onto to the next source in the list or not. (#58441)
- Improved documentation for the LGPO state module (#58521)
- Remove old documented pending reboot key (#58530)
- On macOS, skip GUI dialog for Developer Command Line Tools when importing gitfs util. (#58575)
- Fixing a use case when multiple inotify beacons are defined but when notifications are fired the configuration from the first beacon are used. (#58655)

## Added

- salt-api will now work on Windows platforms with limited support. You will be able to configure the `rest_cherry.py` module, without `pam` external authentication and without `ssl` support. (#49949)
- Added `execution_timeout` support to `chocolatey.installed` state (#50449)
- Add new `verify_ssl` option to file modules. This allows a user to not validate the server certificate for HTTPS source and source hash's. (#52663)
- Added list target type support to the `scan` salt-ssh roster. (#52675)
- Added `pvresize` and `lvextend` to `linux_lvm` (#56089)
- Added `COPR` option to `states.pkgrepo` (#57258)
- Add "get\_return" key for `onlyif` and `unless` requisites to parse deep module results (#57470)
- Allow setting VM boot devices order in `virt.running` and `virt.defined` states (#57544)
- Added grains to show the LVM Volume Groups and their Logical Volumes. (#57629)
- Memory Tuning Support which allows much greater control of memory allocation (#57639)
- Add output filter to `saltcheck` to only display test failures (#57788)
- Added an execution module for running `idempotent` exec modules
- Added a state module for running `idempotent` states (#57969)
- Added the ability for states to return `sub_state_run`'s results from external state engines (#57993)
- Added salt-cloud support for Linode APIv4 via the `api_version` provider configuration parameter. (#58093)
- Added support to manage services in Slackware Linux. (#58206)
- Added `list_sources` to `chocolatey` module to have an overview of the repositories present on the minions. Added `source_added` to `chocolatey` state in order to add repositories to `chocolatey`. (#58588)

- Adding tests for changes to virtual function for netmiko module. Adding tests for netmiko proxy minion module. (#58609)
- Added features config option for feature flags. Added a feature flag `enable_slsvars_fixes` to enable fixes to `tpldir`, `tplfile` and `sls_path`. This flag will be deprecated in the Phosphorus release when this functionality becomes the default. (#58652)

### 33.2.27 Salt 3002.1 Release Notes

Version 3002.1 is a CVE fix release for *3002*.

#### Fixed

- Prevent shell injections in netapi ssh client (cve-2020-16846)
- Prevent creating world readable private keys with the tls execution module. (cve-2020-17490)
- Properly validate eauth credentials and tokens along with their ACLs. Prior to this change eauth was not properly validated when calling Salt ssh via the salt-api. Any value for 'eauth' or 'token' would allow a user to bypass authentication and make calls to Salt ssh. (CVE-2020-25592)

### 33.2.28 Salt 3002.2 Release Notes

Version 3002.2 is a bugfix release for *3002*.

#### Fixed

- Change dict check to `isinstance` instead of `type()` for `key_values` in `file.keyvalue`. (#57758)
- Fail when `func_ret` is `False` when using the new `module.run` syntax. (#57768)
- Fix comparison of certificate values (#58296)
- When using `ssh_pre_flight` if there is a failure, fail on `retcode` not `stderr`. (#58439)
- Fix use of `unauthd` cached `vmware` service instance (#58691)
- Removing use of undefined variable in `utils/slack.py`. (#58753)
- Restored the ability to specify the amount of extents for a Logical Volume as a percentage. (#58759)
- Ensuring that the version check function is run a second time in all the user related functions in case the user being managed is the connection user and the password has been updated. (#58773)
- Allow bytes in `gpg` renderer (#58794)
- Fix issue where `win_wua` module fails to load when `BITS` is set to `Manual` (#58848)
- Ensure that `elasticsearch.index_exists` is available before loading the `elasticsearch` returner. (#58851)
- Log a different object when debugging if we're using disk cache vs memory cache. The disk cache pillar class has the dict object but the cache pillar object which is used with the memory cache does not include a `_dict` object because it is a dict already. (#58861)
- Do not generate grains for every job run on Windows minions. This makes Windows conform more to the way posix OSes work today. (#58904)
- Fixes salt-ssh authentication when using `tty` (#58922)

- Revert LazyLoader finalizer. Removed the weakref.finalizer code. On some occasions, the finalized would run when trying to load a new module, firing a race condition. (#58947)

### 33.2.29 Salt 3002.3 Release Notes

Version 3002.3 is a CVE fix release for *3002*.

#### Fixed

- CVE-2020-28243 - Fix local privilege escalation in the restartcheck module.
- CVE-2020-28972 - Ensure authentication to vcenter, vsphere, and esxi server validates the SSL/TLS certificate by default. If you want to skip SSL verification you can use `verify_ssl: False`.
- CVE-2020-35662 - Ensure the asam runner, qingcloud, splunk returner, panos proxy, cimc proxy, zenoss module, esxi module, vsphere module, glassfish module, bigip module, and keystone module validate SSL by default. If you want to skip SSL verification you can use `verify_ssl: False`.
- CVE-2021-3148 - Fix a command injection in the Salt-API when using the Salt-SSH client.
- CVE-2021-3144 - Fix eauth tokens can be used once after expiration
- CVE-2021-25281 - Fix salt-api so it honors eauth credentials for the wheel\_async client.
- CVE-2021-25282 - Fix the salt.wheel.pillar\_roots.write method so it is not vulnerable to directory traversal.
- CVE-2021-25283 - Fix the jinja render to protect against server side template injection attacks.
- CVE-2021-25284 - Fix cmdmod so it will not log credentials to log levels info and error.
- CVE-2021-3197 - Fix ssh client to remove ProxyCommand from arguments provided by cli and netapi.

### 33.2.30 Salt 3002.4 Release Notes

Version 3002.4 is a bug fix release for *3002*.

#### Fixed

- Fix runners that broke when patching for CVE-2021-25281
- Fix issue with runners in SSE

#### Known Issue

When using the Salt-API with the SSH client some of the SSH options are not working currently and will be fixed in an upcoming bug fix release. We are currently testing and fixing which options still need to be fixed, but have confirmed the following ones do not work in this release: extra-filerefs, pre-flight. This does not impact normal Salt-SSH usage on the cli.

### 33.2.31 Salt 3002.5 Release Notes

Version 3002.5 is a cve fix release for *3002*.

#### Fixed

- Tests and fix for CVE-2021-25283

#### Known Issue

When using the Salt-API with the SSH client some of the SSH options are not working currently and will be fixed in an upcoming bug fix release. We are currently testing and fixing which options still need to be fixed, but have confirmed the following ones do not work in this release: extra-filerefs, pre-flight. This does not impact normal Salt-SSH usage on the cli.

### 33.2.32 Salt 3002.6 Release Notes

Version 3002.6 is a bug fix release for *3002*.

#### Changed

- Store git sha in salt/\_version.py when installing from a tag so it can be found if needed later. (#59137)

#### Fixed

- Fix argument injection bug in restartcheck.restartcheck. This change hardens the fix for CVE-2020-28243. (#200)
- Allow "extra\_filerefs" as sanitized kwargs for SSH client. Fix regression on "cmd.run" when passing tuples as cmd. (#59664)
- Allow all ssh kwargs as sanitized kwargs for SSH client. (#59748)

### 33.2.33 Salt 3002.7 (2021-08-20)

Version 3002.7 is a CVE security fix release for *3002*.

#### Fixed

- Verify the owner of an existing config before trusting it during install. If the owner cannot be verified, back it up and use defaults. (CVE-2021-22004)

## Security

- Fix the CVE-2021-31607 vulnerability. Additionally, an audit and a tool was put in place, `bandit`, to address similar issues throughout the code base, and prevent them. (CVE-2021-31607)
- Ensure that sourced file is cached using its hash name (`cve-2021-21996`)

### 33.2.34 Salt 3002.8 (2022-02-25)

Version 3002.8 is a CVE security fix release for *3002*.

#### Important notice about upgrading

Version 3002.8 is a security release. 3002.8 minions are not able to communicate with masters older than 3002.8. You must upgrade your masters before upgrading minions.

#### Minion authentication security

Authentication between masters and minions rely on public/private key encryption and message signing. To secure minion authentication before you must pre-seed the master's public key on minions. To pre-seed the minions' master key, place a copy of the master's public key in the minion's pki directory as `minion_master.pub`.

## Security

- Sign authentication replies to prevent MiTM (`cve-2020-22935`)
- Sign pillar data to prevent MiTM attacks. (`cve-2022-22934`)
- Prevent job and fileserver replays (`cve-2022-22936`)
- Fixed targeting bug, especially visible when using `syndic` and `user auth`. (CVE-2022-22941) (#60413)

### 33.2.35 Salt 3002.9 (2022-05-25)

Version 3002.9 is a CVE security fix release for *3002*.

#### Fixed

- Fixed an error when running on CentOS Stream 8. (#59161)
- Fix bug in `tcp transport` (#61865)
- Make sure the correct key is being used when verifying or validating communication, eg. when a Salt `syndic` is involved use `syndic_master.pub` and when a Salt minion is involved use `minion_master.pub`. (#61868)

## Security

- Fixed PAM auth to reject auth attempt if user account is locked. (cve-2022-22967)

## 33.2.36 Salt 3001 Release Notes - Codename Sodium

### Python 2 Dropped

Python 2 support has been dropped in Salt 3001. See <https://community.saltstack.com/blog/sunsetting-python-2-support/> for more info.

### Salt mine updates

#### Syntax update

The syntax for defining salt functions in config or pillar files has changed to also support the syntax used in *module.run*. The old syntax for the *mine\_function* - as a dict, or as a list with dicts that contain more than exactly one key - is still supported but discouraged in favor of the more uniform syntax of *module.run*.

#### State updates

The *creates* state requisite has been migrated from the *docker\_container* and *cmd* states to become a global option. This acts similar to an equivalent `unless: test -f filename` but can also accept a list of filenames. This allows all states to take advantage of the enhanced functionality released in Neon, of allowing salt execution modules for requisite checks.

When using salt functions *onlyif* or *unless* requisites, a *get\_return* key can now be used to specify a key to evaluate for truthiness. This can be used for execution modules which return status in a nested key.

```
test:
  test.nop:
    - name: foo
    - onlyif:
      - fun: consul.get
        consul_url: http://127.0.0.1:8500
        key: not-existing
        get_return: res
```

### State Execution Module

The *state.test* function can be used to test a state on a minion. This works by executing the *state.apply* function while forcing the *test* kwarg to `True` so that the *state.apply* function is not required to be called by the user directly. This also allows you to add the *state.test* function to a minion's *minion\_blackout\_whitelist* pillar if you wish to be able to test a state while a minion is in blackout.

## New Grains

### systempath

This grain provides the same information as the `path` grain, only formatted as a list of directories.

## Salt-SSH updates

### ssh\_pre\_flight

A new Salt-SSH roster option `ssh_pre_flight` has been added. This enables you to run a script before Salt-SSH tries to run any commands. You can set this option in the roster for a specific minion or use the `roster_defaults` to set it for all minions.

Example for setting `ssh_pre_flight` for specific host in roster file

```
minion1:
  host: localhost
  user: root
  passwd: P@ssword
  ssh_pre_flight: /srv/salt/pre_flight.sh
```

Example for setting `ssh_pre_flight` using `roster_defaults`, so all minions run this script.

```
roster_defaults:
  ssh_pre_flight: /srv/salt/pre_flight.sh
```

The `ssh_pre_flight` script will only run if the thin dir is not currently on the minion. If you want to force the script to run you have the following options:

- Wipe the thin dir on the targeted minion using the `-w` arg.
- Set `ssh_run_pre_flight` to `True` in the config.
- Run salt-ssh with the `--pre-flight` arg.

### set\_path

A new salt-ssh roster option `set_path` has been added. This allows you to set the path environment variable used to run the salt-ssh command on the target minion. You can set this setting in your roster file like so:

```
minion1:
  host: localhost
  user: root
  passwd: P@ssword
  set_path: '$PATH:/usr/local/bin/'
```

## auto\_detect

You can now auto detect the dependencies to be packed into the salt thin when using the `ssh_ext_alternatives` feature.

```
ssh_ext_alternatives:
  2019.2:
    py-version: [2, 7]           # Namespace, can be anything.
    path: /opt/2019.2/salt       # Constraint to specific interpreter version
    auto_detect: True           # Main Salt installation directory.
    py_bin: /usr/bin/python2.7  # Auto detect dependencies
    ↳dependencies                # Python binary path used to auto detect
```

This new `auto_detect` option needs to be set to `True` in your `ssh_ext_alternatives` configuration. Salt-ssh will attempt to auto detect the file paths required for the default dependencies to include in the thin. If you have a dependency already set in your configuration, it will not attempt to auto detect for that dependency.

You can also set the `py_bin` option to set the python binary to be used to auto detect the dependencies. If `py_bin` is not set, it will attempt to use the major Python version set in `py-version`. For example, if you set `py-version` to be `[2, 7]` it will attempt to find and use the `python2` binary.

## State Changes

- Adding a new option for the State compiler, `disabled_requisites` will allow requisites to be disabled during State runs.

## Salt Renderer updates

A new renderer for toml files has been added.

```
#!jinja|toml

{% set myvar = "sometext" %}

[["some id"."test.nop"]]
name = "{{ myvar }}"
[["some id"."test.nop"]]
txt = "hello"
[["some id"."test.nop"]]
"somekey" = "somevalue"
```

## Execution Module updates

### Vault Module

The `vault module` has been updated with the ability to cache generated tokens. By specifying `uses` and optionally `tTL`, the token generated on behalf of the minion will be allowed to persist and function for the defined time period or number of uses. Setting `uses: 0` creates an unlimited use token, that is only constrained by the `tTL`.

```
vault:
  auth:
    uses: 25
```

This functionality is configured by default on the master and is thus shared behavior for all minion token generation. To delegate use count to individual minions, specify `allow_minion_override: True` in the master config, and define `uses` and `tTL` in the minion config as directed above.

```
vault:
auth:
  method: token
  allow_minion_override: True
```

Additionally, the vault module now supports Vault secrets backend version 2. The appropriate secrets backend will be automatically detected, and cached in the same credentials file as long lived vault tokens mentioned above. For any configurations that worked around KV v2 handling by adding a manual data key to the end of vault lookups, `salt['vault'].read_secret('secret/my/secret')['data']`, these are automatically detected and will continue to function, but will generate a debug log message and can be removed.

The long lived token and secret metadata cache file can be cleared with the new `vault.clear_token_cache` execution function.

### 33.2.37 Salt 3001.1 Release Notes

Version 3001.1 is a bugfix release for *3001*.

#### Changed

- Change the `enable_fqdns_grains` setting to default to `False` on Windows to address some issues with slowness. (#56296, #57529)
- Handle the UCRT libraries the same way they are handled in the Python 3 installer (#57594)
- Changes the 'SSDs' grain name to 'ssds' as all grains needs to be resolved in lowered case. (#57612)

#### Fixed

- When running scheduled jobs from a proxy minion with multiprocessing turned off (default) a recursive error occurs as `__pub_fun_args` is repeated over and over again in the `kwargs` element in the data dictionary. Now we make a copy of `data['kwargs']` instead of using a reference. (#57941)
- The `x509.certificate_managed` state no longer triggers a change because of sorting issues if the certificate being evaluated was previously generated under Python 2. (#56556)
- Added support to `lo ip` alias in `network.managed` state by checking if `lo inet` data from `network.interfaces` contains label with the name of managed interface. Return status `True` if match found. (#56901)
- Redact passwords in the return when setting credentials using `win_iis.container_setting` (#57285)
- Fixes issue with `cmd.powershell`. Some powershell commands do not return anything in `stdout`. This causes the JSON parser to fail because an empty string is not valid JSON. This changes an empty string to `{}` which is valid JSON and will not cause the JSON loader to `stacktrace`. (#57493)
- Improves performance. Profiling `test.ping` on Windows shows that 13 of 17 seconds are wasted when the `esxi` grain loads `vsphere` before noting that the OS is not a `esxi` host. (#57529)
- Fixed permissions issue with certain `pip/virtualenv` states/modules when configured for non-root user. (#57550)
- Allow running `nox` sessions either using our `nox-py2 fork` or upstream `nox`. (#57583)

- Fixes issue with `lgpo.get` when there are unicode characters in the hostname (#57591)
- Fixes issue with virtual block devices, like loopbacks and LVMs, wrongly populating the "disks" or "ssds" grains. (#57612)
- Due to some optimization the *virtual* grain was never updated on illumos. Move the fallback in `prtdiag` output parsing outside the loop that now gets skipped due to the command exiting non-zero. (#57714)
- Grains module `delkey` and `delval` methods now support the `force` option. This is needed for deleting grains with complex (nested) values. (#57718)
- Moving `import salt.modules.vsphere` into `__virtual__` so we have access to `test_proxytype` in `opts`, previously this was causing a traceback when run on proxy minion as `__opts__` does not exist outside of any functions. Introducing a new `utils` function, `is_proxytype`, to check that the device is a proxy minion and also that the proxy type matches. (#57743)
- Fixed `fail_with_changes` in the test state to use the `comment` argument when passed. (#57766)
- Adds a fix so salt can run on the latest macOS version Big Sur. (#57787)
- Fixes `UnpackValueError` when using GPG cache by using `atomic open`. (#57798)
- The `gid_from_name` argument was removed from the `user.present` state in version 3001, with no deprecation path. It has been restored and put on a proper deprecation path. (#57843)
- Fixes dictionary being changed during iteration. (#57845)

#### Added

- Added docs demonstrating how to apply an MSI patch with `winrepo` (#32780)

### 33.2.38 Salt 3001.2 Release Notes

Version 3001.2 is a CVE fix release for *3001*.

#### Fixed

- Prevent shell injections in `netapi` ssh client (cve-2020-16846)
- Prevent creating world readable private keys with the `tls` execution module. (cve-2020-17490)

### 33.2.39 Salt 3001.3 Release Notes

Version 3001.3 is a CVE fix release for *3001*.

#### Fixed

- Properly validate `eauth` credentials and tokens along with their ACLs. Prior to this change `eauth` was not properly validated when calling Salt `ssh` via the `salt-api`. Any value for 'eauth' or 'token' would allow a user to bypass authentication and make calls to Salt `ssh`. (CVE-2020-25592)

### 33.2.40 Salt 3001.4 Release Notes

Version 3001.4 is a bugfix release for *3001*.

#### Fixed

- Fixes salt-ssh authentication when using tty (#58922)

### 33.2.41 Salt 3001.5 Release Notes

Version 3001.5 is a CVE fix release for *3001*.

#### Fixed

- CVE-2020-28243 - Fix local privilege escalation in the restartcheck module.
- CVE-2020-28972 - Ensure authentication to vcenter, vsphere, and esxi server validates the SSL/TLS certificate by default. If you want to skip SSL verification you can use *verify\_ssl: False*.
- CVE-2020-35662 - Ensure the asam runner, qingcloud, splunk returner, panos proxy, cimc proxy, zenoss module, esxi module, vsphere module, glassfish module, bigip module, and keystone module validate SSL by default. If you want to skip SSL verification you can use *verify\_ssl: False*.
- CVE-2021-3148 - Fix a command injection in the Salt-API when using the Salt-SSH client.
- CVE-2021-3144 - Fix eauth tokens can be used once after expiration
- CVE-2021-25281 - Fix salt-api so it honors eauth credentials for the wheel\_async client.
- CVE-2021-25282 - Fix the salt.wheel.pillar\_roots.write method so it is not vulnerable to directory traversal.
- CVE-2021-25283 - Fix the jinja render to protect against server side template injection attacks.
- CVE-2021-25284 - Fix cmdmod so it will not log credentials to log levels info and error.
- CVE-2021-3197 - Fix ssh client to remove ProxyCommand from arguments provided by cli and netapi.

### 33.2.42 Salt 3001.6 Release Notes

Version 3001.6 is a bug fix release for *3001*.

#### Fixed

- Fix runners that broke when patching for CVE-2021-25281
- Fix issue with runners in SSE

### Known Issue

When using the Salt-API with the SSH client some of the SSH options are not working currently and will be fixed in an upcoming bug fix release. We are currently testing and fixing which options still need to be fixed, but have confirmed the following ones do not work in this release: extra-filerefs, pre-flight. This does not impact normal Salt-SSH usage on the cli.

### 33.2.43 Salt 3001.7 Release Notes

Version 3001.7 is a bug fix release for *3001*.

#### Fixed

- Allow "extra\_filerefs" as sanitized kwargs for SSH client. Fix regression on "cmd.run" when passing tuples as cmd. (#59664)
- Allow all ssh kwargs as sanitized kwargs for SSH client. (#59748)
- Fix argument injection bug in restartcheck.restartcheck. This change hardens the fix for CVE-2020-28243.

### 33.2.44 Salt 3001.8 (2021-08-20)

Version 3001.8 is a CVE security fix release for *3001*.

#### Fixed

- Verify the owner of an existing config before trusting it during install. If the owner cannot be verified, back it up and use defaults. (CVE-2021-22004)

#### Security

- Fix the CVE-2021-31607 vulnerability. Additionally, an audit and a tool was put in place, `bandit`, to address similar issues throughout the code base, and prevent them. (CVE-2021-31607)
- Ensure that sourced file is cached using its hash name (cve-2021-21996)

### 33.2.45 Salt 3000 Release Notes - Codename Neon

#### Security Advisory

For historical reasons, Salt requires PyCrypto as a "lowest common denominator". However, PyCrypto is unmaintained and best practice is to manually upgrade to use a more maintained library such as PyCryptodome. See Issue #52674 and Issue #54115 for more info

## New Versioning

The neon release has removed the date versioning. Going forward we will use a non-date based version schema beginning at 3000. The version will be MAJOR.PATCH. For a planned release containing features and/or bug fixes the MAJOR version will be incremented. Please review the approved [SEP](#) for further details.

The new versioning scheme is PEP 440 compliant, but `distutils.StrictVersion` will result in an error `invalid version number`. If using `StrictVersion` to compare Salt's versions, please use `LooseVersion`. There is also the packaging library you can use to compare versions. Another alternative is using the `salt version module`

## Python 3.8 Not Supported

Please note that running Salt with Python 3.8 is currently not supported. It is recommended to not use a version higher than 3.7.

## Vendored Tornado Code Base

The Tornado code base has been included as `salt.ext.tornado`. This was done to provide a consistent version of Tornado across all operating systems while we continue to work on upgrading Tornado to a recent version. New code that uses Tornado should import the module from `salt.ext.tornado` instead of importing the system version of Tornado.

## Msgpack 1.0.0rc1 Incompatibility

Salt is currently incompatible with msgpack 1.0.0rc1. We recommend using versions < 1.0.0 . This impacts the Salt Master's ability to run commands against minions. Please see [Issue 56007](#) for more details and updates.

## Pip Installing Salt On Windows

This release will not install correctly on windows when using pip to install salt. This issue is addressed in [PR 56099](#). The workaround for this issue is:

```
pip install "pywin32==224" "WMI==1.4.9"
```

Those using the Salt Windows Installer are not affected by this issue.

## Saltcheck Updates

Available since 2018.3, the `saltcheck module` has been enhanced to:

- Support saltenv environments
- Associate tests with states by naming convention
- Adds `report_highstate_tests` function
- Adds empty and notempty assertions
- Adds skip keyword
- Adds `print_result` keyword
- Adds `assertion_section` keyword
- Use `saltcheck.state_apply` to run `state.apply` for test setup or teardown

- Changes output to display test time
- Works with salt-ssh

Saltcheck provides unittest like functionality requiring only the knowledge of salt module execution and yaml. Saltcheck uses salt modules to return data, then runs an assertion against that return. This allows for testing with all the features included in salt modules.

In order to run state and highstate saltcheck tests, a sub-folder in the state directory must be created and named `saltcheck-tests`. Tests for a state should be created in files ending in `*.tst` and placed in the `saltcheck-tests` folder. `tst` files are run through the salt rendering system, enabling tests to be written in yaml (or renderer of choice), and include jinja, as well as the usual grain and pillar information. Like states, multiple tests can be specified in a `tst` file. Multiple `tst` files can be created in the `saltcheck-tests` folder, and should be named the same as the associated state. The `id` of a test works in the same manner as in salt state files and should be unique and descriptive.

## Usage

Example file system layout:

```
/srv/salt/apache/  
  init.sls  
  config.sls  
  saltcheck-tests/  
    init.tst  
    config.tst  
    deployment_validation.tst
```

Tests can be run for each state by name, for all `apache/saltcheck/*.tst` files, or for all states assigned to the minion in `top.sls`. Tests may also be created with no associated state. These tests will be run through the use of `saltcheck.run_state_tests`, but will not be automatically run by `saltcheck.run_highstate_tests`.

```
salt '*' saltcheck.run_state_tests apache,apache.config  
salt '*' saltcheck.run_state_tests apache check_all=True  
salt '*' saltcheck.run_highstate_tests  
salt '*' saltcheck.run_state_tests apache.deployment_validation
```

## Example Tests

```
{# will run the common salt state before further testing #}  
setup_test_environment:  
  module_and_function: saltcheck.state_apply  
  args:  
    - common  
  pillar-data:  
    data: value  
  
{% for package in ["apache2", "openssh"] %}  
{# or another example #}  
{# for package in salt['pillar.get']("packages") #}  
jinja_test_{{ package }}_latest:
```

(continues on next page)

(continued from previous page)

```

module_and_function: pkg.upgrade_available
args:
  - {{ package }}
assertion: assertFalse
{% endfor %}

validate_user_present_and_shell:
  module_and_function: user.info
  args:
    - root
  assertion: assertEqual
  expected-return: /bin/bash
  assertion_section: shell
  print_result: False

skip_test:
  module_and_function: pkg.upgrade_available
  args:
    - apache2
  assertion: assertFalse
  skip: True

```

### Output Format Changes

Saltcheck output has been enhanced to display the time taken per test. This results in a change to the output format.

Previous Output:

```

local:
  |-----
  ntp:
    -----
    ntp-client-installed:
      Pass
    ntp-service-status:
      Pass
  |-----
  TEST RESULTS:
  -----
  Failed:
    0
  Missing Tests:
    0
  Passed:
    2

```

New output:

```
local:
|_
-----
ntp:
-----
ntp-client-installed:
-----
duration:
    1.0408
status:
    Pass
ntp-service-status:
-----
duration:
    1.464
status:
    Pass
|_
-----
TEST RESULTS:
-----
Execution Time:
    2.5048
Failed:
    0
Missing Tests:
    0
Passed:
    2
Skipped:
    0
```

### Unless and onlyif Enhancements

The `unless` and `onlyif` requisites can now be operated with salt modules. The dictionary must contain an argument `fun` which is the module that is being run, and everything else must be passed in under the `args` key or will be passed as individual `kwargs` to the module function.

---

**Note:** Certain states have an `unless/onlyif` implementation that predates this feature, and may not work as expected:

- `states.git`
- `states.cmd`
- `states.macpackage`
- `states.file`
- `states.docker_container`

---

Examples:

```

check external ip address:
http.query:
- name: https://icanhazip.com
- status: 200
- onlyif:
  - fun: file.file_exists
  - path: /usr/local/bin/whatever

```

is equivalent to

```

check another ip address:
http.query:
- name: https://icanhazip.com
- status: 200
- onlyif:
  - test -f /tmp/fnord.txt

```

Another example:

```

set mysql root password:
debconf.set:
- name: mysql-server-5.7
- data:
  - 'mysql-server/root_password': {'type': 'password', 'value': {{pillar[
→ 'mysql.pass']}} }
- unless:
  - fun: pkg.version
  - args:
    - mysql-server-5.7

```

## Keystore State and Module

A new *state* and *execution module* for managing Java Keystore files is now included. It allows for adding/removing/listing as well as managing keystore files.

```

# salt-call keystore.list /path/to/keystore.jks changeit
local:
  |
  |-----
  alias:
    hostname1
  expired:
    True
  sha1:
    CB:5E:DE:50:57:99:51:87:8E:2E:67:13:C5:3B:E9:38:EB:23:7E:40
  type:
    TrustedCertEntry
  valid_start:
    August 22 2012
  valid_until:
    August 21 2017

```

```

define_keystore:
  keystore.managed:
    - name: /tmp/statestore.jks
    - passphrase: changeit
    - force_remove: True
    - entries:
      - alias: hostname1
        certificate: /tmp/testcert.crt
      - alias: remotehost
        certificate: /tmp/512.cert
        private_key: /tmp/512.key
      - alias: stringhost
        certificate: |
          -----BEGIN CERTIFICATE-----
          MIICEjCCAX
          Hn+GmxZA
          -----END CERTIFICATE-----

```

## XML Module

A new state and execution module for editing XML files is now included. Currently it allows for editing values from an xpath query, or editing XML IDs.

```

# salt-call xml.set_attribute /tmp/test.xml "//actor[@id='3']" editedby
→ "Jane Doe"
local:
  True
# salt-call xml.get_attribute /tmp/test.xml "//actor[@id='3']"
local:
  -----
  editedby:
    Jane Doe
  id:
    3
# salt-call xml.get_value /tmp/test.xml "//actor[@id='2']"
local:
  Liam Neeson
# salt-call xml.set_value /tmp/test.xml "//actor[@id='2']" "Patrick Stewart"
local:
  True
# salt-call xml.get_value /tmp/test.xml "//actor[@id='2']"
local:
  Patrick Stewart

```

```

ensure_value_true:
  xml.value_present:
    - name: /tmp/test.xml
    - xpath: //actor[@id='1']
    - value: William Shatner

```

## LGPO Execution Module

Multiple fixes were made to the `win_lgpo` to expand support for additional policies and improve performance. Issues with encoding and unsupported characters (smart-quotes, em-dash, etc) found in the ADML files as well as whitespace in some policies have been addressed.

Speed enhancements include:

- Caching the compiled xml from ADMX/ADML files in `__context__`
- Lowercasing all keys before compiling XML to remove an expensive XPath lookup

Additional functionality:

- Adds the `lgpo.get_policy` function that allows you to get the current settings for a single policy.
- Changes some policy names that were overly long

## LGPO State Module

Multiple changes were made to the `win_lgpo` state to improve performance.

It now uses the `lgpo.get_policy` function instead of the `lgpo.get` to avoid reloading all settings on the machine at the beginning and end of each state run.

Supports the new shorter policy names but also attempts to resolve the older, longer policy names.

## Win\_network Salt Util

Now uses .NET libraries to obtain Interface information on Windows systems that support it. Unsupported systems fall back to the more expensive WMI calls. This is important as this data is gathered for grains and occurs each time a process is forked.

## Jinja enhancements

### Troubleshooting Jinja map files

A new `execution module` for `map.jinja` troubleshooting has been added.

Assuming the map is loaded in your formula SLS as follows:

```
{% from "myformula/map.jinja" import myformula with context %}
```

The following command can be used to load the map and check the results:

```
salt myminion jinja.load_map myformula/map.jinja myformula
```

The module can be also used to test json and yaml maps:

```
salt myminion jinja.import_yaml myformula/defaults.yaml
salt myminion jinja.import_json myformula/defaults.json
```

## json\_query filter

A port of Ansible `json_query` Jinja filter has been added. It allows making queries against JSON data using JMESPath language. Could be used to filter pillar data, yaml maps, and also useful with `http_query`.

Depends on the `jmespath` Python module.

## Slot Syntax Updates

The slot syntax has been updated to support parsing dictionary responses and to append text.

```
demo dict parsing and append:  
test.configurable_test_state:  
- name: slot example  
- changes: False  
- comment: __slot__:salt:test.arg(shell="/bin/bash").kwargs.shell ~ /  
↪ appended
```

```
local:  
-----  
      ID: demo dict parsing and append  
Function: test.configurable_test_state  
      Name: slot example  
      Result: True  
      Comment: /bin/bash/appended  
      Started: 09:59:58.623575  
      Duration: 1.229 ms  
      Changes:
```

Also, slot parsing is now supported inside of nested state data structures (dicts, lists, unless/onlyif args):

```
demo slot parsing for nested elements:  
file.managed:  
- name: /tmp/slot.txt  
- source: salt://slot.j2  
- template: jinja  
- context:  
  # Slot inside of the nested context dictionary  
  variable: __slot__:salt:test.echo(a_value)  
- unless:  
- fun: file.search  
  args:  
  # Slot as unless argument  
  - __slot__:salt:test.echo(/tmp/slot.txt)  
  - "DO NOT OVERRIDE"  
  ignore_if_missing: True
```

## State Changes

- The `file.symlink` state was fixed to remove existing file system entries other than files, directories and symbolic links properly.
- The `onchanges` and `prereq` *requisites* now behave properly in test mode, due to removing `pchanges`.
- Added new `ssh_auth.manage` state to ensure only the specified ssh keys are present for the specified user.
- Added new `saltutil` state to use instead of `module.run` to more easily handle change.

## Module Changes

- Added new `boto_ssm` module to set and query secrets in AWS SSM parameters.
- Added new `flatpak` module to work with flatpak packages.
- The `file.remove` module was fixed to remove file system entries other than files, directories and symbolic links properly.
- The `debian_ip` module used by the `network.managed` state has been heavily refactored. The order that options appear in `inet/inet6` blocks may produce cosmetic changes. Many options without an 'ipvX' prefix will now be shared between `inet` and `inet6` blocks. The options `enable_ipv4` and `enabled_ipv6` will now fully remove relevant `inet/inet6` blocks. Overriding options by prefixing them with 'ipvX' will now work with most options (i.e. `dns` can be overridden by `ipv4dns` or `ipv6dns`). The `proto` option is now required.

## Enhancements to Engines

Multiple copies of a particular Salt engine can be configured by including the `engine_module` parameter in the engine configuration.

```
engines:
- production_logstash:
  host: production_log.my_network.com
  port: 5959
  proto: tcp
  engine_module: logstash
- develop_logstash:
  host: develop_log.my_network.com
  port: 5959
  proto: tcp
  engine_module: logstash
```

- A new `fluent` engine has been added to export Salt events to `fluentd`.

```
engines:
- fluent
  host: localhost
  port: 24224
```

```
<source>
  @type forward
  port 24224
</source>
<match saltstack.**>
```

(continues on next page)

(continued from previous page)

```
@type file
path /var/log/td-agent/saltstack
</match>
```

### Enhancements to Beacons

Multiple copies of a particular Salt beacon can be configured by including the `beacon_module` parameter in the beacon configuration.

```
beacons:
  watch_important_file:
    - files:
        /etc/important_file: {}
    - beacon_module: inotify
  watch_another_file:
    - files:
        /etc/another_file: {}
    - beacon_module: inotify
```

### Enhancements to chroot

- New functions added to chroot *apply*, *sls*, and *highstate* that allow executing states in sls files or running apply/highstate inside of a chroot.

### Minion-side ACL

Salt has had master-side ACL for the salt mine for some time, where the master configuration contained `mine_get` that specified which minions could request which functions. However, now you can specify which minions can access a function in the salt mine function definition itself (or when calling `mine.send`). This targeting works the same as the generic minion targeting as specified [here](#). The parameters used are `allow_tgt` and `allow_tgt_type`. See also [the documentation of the Salt Mine](#). Please note that if you want to use this new feature both your minion and masters will need to be on at least version 3000.

### Deprecations

#### Raet Deprecated

- The Raet transport has been deprecated. Please use the supported transport protocols `tcp` or `zeromq`.

## Module Deprecations

- The `hipchat` module has been removed due to the service being retired. *Google Chat*, *MS Teams*, or *Slack* may be suitable replacements.
- The `dockermod` module has been changed as follows:
  - Support for the `tags` kwarg has been removed from the `dockermod.resolve_tag` function.
  - Support for the `network_id` kwarg has been removed from the `dockermod.connect_container_to_network` function. Please use `net_id` instead.
  - Support for the `name` kwarg has been removed from the `dockermod.sls_build` function. Please use `repository` and `tag` instead.
  - Support for the `image` kwarg has been removed from the following functions. In all cases, please use both the `repository` and `tag` options instead:
    - \* `dockermod.build`
    - \* `dockermod.commit`
    - \* `dockermod.import`
    - \* `dockermod.load`
    - \* `dockermod.tag`
- The `heat` module has removed the `environment` kwarg from the `heat.create_stack` and `heat.update_stack` functions due to a spelling error. Please use `environment` instead.
- The `ssh` execution module has been changed as follows:
  - Support for the `ssh.get_known_host` function has been removed. Please use the `ssh.get_known_host_entries` function instead.
  - Support for the `ssh.recv_known_host` function has been removed. Please use the `ssh.recv_known_host_entries` function instead.
- The `:py:mod`firewalld` <salt.modules.firewalld>`` module has been changed as follows:
  - The default setting for the `force_masquerade` option in the `firewalld.add_port` `<salt.module.firewalld.add_port()>` function has changed from `True` to `False`.
  - Support for the `force_masquerade` option in the `firewalld.add_port_fwd` `<salt.module.firewalld.add_port_fwd()>` function has been changed from `True` to `False`.

## State Deprecations

- The `hipchat` state has been removed due to the service being retired. *MS Teams* or *Slack* may be suitable replacements.
- The `cmd` state module has removed the `quiet` kwarg from the `cmd.run` function. Please set `output_loglevel` to `quiet` instead.
- The `heat` state module has removed the `environment` kwarg from the `heat.deployed` function due to a spelling error. Please use `environment` instead.
- The `:py:mod`firewalld` <salt.states.firewalld>`` state has been changed as follows:
  - The default setting for the `prune_services` option in the `firewalld.present` function has changed from `True` to `False`.

## Fileserver Deprecations

- The hgfs fileserver had the following config options removed:
  - The `hgfs_env_whitelist` config option has been removed in favor of `hgfs_saltenv_whitelist`.
  - The `hgfs_env_blacklist` config option has been removed in favor of `hgfs_saltenv_blacklist`.
- The svnfs fileserver had the following config options removed:
  - The `svnfs_env_whitelist` config option has been removed in favor of `svnfs_saltenv_whitelist`.
  - The `svnfs_env_blacklist` config option has been removed in favor of `svnfs_saltenv_blacklist`.
- The gitfs fileserver had the following config options removed:
  - The `gitfs_env_whitelist` config option has been removed in favor of `gitfs_saltenv_whitelist`.
  - The `gitfs_env_blacklist` config option has been removed in favor of `gitfs_saltenv_blacklist`.

## Engine Removal

- The hipchat engine has been removed due to the service being retired. For users migrating to Slack, the *slack* engine may be a suitable replacement.

## Returner Removal

- The hipchat returner has been removed due to the service being retired. For users migrating to Slack, the *slack* returner may be a suitable replacement.

## Grain Deprecations

For smartos some grains have been deprecated. These grains have been removed.

- The `hypervisor_uuid` has been replaced with `mdata:sdcc:server_uuid` grain.
- The `datacenter` has been replaced with `mdata:sdcc:datacenter_name` grain.

## Cloud Deprecations

- The nova cloud driver has been removed in favor of the openstack cloud driver.

## Jinja Filter Deprecations

- The following Jinja filters are set to be removed in the 3003 release:
  - `json_decode_dict` in favor of `tojson`
  - `json_decode_list` in favor of `tojson`

## Utils Deprecations

- All of the functions in `salt.utils.__init__.py` have been removed. These include:
  - `salt.utils.option`
  - `salt.utils.required_module_list`
  - `salt.utils.required_modules_error`
  - `salt.utils.get_accumulator_dir`. Please use `salt.state.get_accumulator_dir()` instead.
  - `salt.utils.fnmatch_multiple`. Please use `salt.utils.iterutils.fnmatch_multiple()` instead.
  - `salt.utils.appendproctitle`. Please use `salt.utils.process.appendproctitle()` instead.
  - `salt.utils.daemonize`. Please use `salt.utils.process.daemonize()` instead.
  - `salt.utils.daemonize_if`. Please use `salt.utils.process.daemonize_if()` instead.
  - `salt.utils.reinit_crypto`. Please use `salt.utils.crypto.reinit_crypto()` instead.
  - `salt.utils.pem_finger`. Please use `salt.utils.crypto.pem_finger()` instead.
  - `salt.utils.to_bytes`. Please use `salt.utils.stringutils.to_bytes()` instead.
  - `salt.utils.to_str`. Please use `salt.utils.stringutils.to_str()` instead.
  - `salt.utils.to_unicode`. Please use `salt.utils.stringutils.to_unicode()` instead.
  - `salt.utils.str_to_num`. Please use `salt.utils.stringutils.to_num()` instead.
  - `salt.utils.is_quoted`. Please use `salt.utils.stringutils.is_quoted()` instead.
  - `salt.utils.dequote`. Please use `salt.utils.stringutils.dequote()` instead.
  - `salt.utils.is_hex`. Please use `salt.utils.stringutils.is_hex()` instead.
  - `salt.utils.is_bin_str`. Please use `salt.utils.stringutils.is_binary()` instead.
  - `salt.utils.rand_string`. Please use `salt.utils.stringutils.random()` instead.
  - `salt.utils.contains_whitespace`. Please use `salt.utils.stringutils.contains_whitespace()` instead.
  - `salt.utils.build_whitespace_split_regex`. Please use `salt.utils.stringutils.build_whitespace_split_regex()` instead.
  - `salt.utils.expr_match`. Please use `salt.utils.stringutils.expr_match()` instead.
  - `salt.utils.check_whitelist_blacklist`. Please use `salt.utils.stringutils.check_whitelist_blacklist()` instead.
  - `salt.utils.check_include_exclude`. Please use `salt.utils.stringutils.check_include_exclude()` instead.
  - `salt.utils.print_cli`. Please use `salt.utils.stringutils.print_cli()` instead.

- `salt.utils.clean_kwargs`. Please use `salt.utils.args.clean_kwargs()` instead.
- `salt.utils.invalid_kwargs`. Please use `salt.utils.args.invalid_kwargs()` instead.
- `salt.utils.shlex_split`. Please use `salt.utils.args.shlex_split()` instead.
- `salt.utils.arg_lookup`. Please use `salt.utils.args.arg_lookup()` instead.
- `salt.utils.argspec_report`. Please use `salt.utils.args.argspec_report()` instead.
- `salt.utils.split_input`. Please use `salt.utils.args.split_input()` instead.
- `salt.utils.test_mode`. Please use `salt.utils.args.test_mode()` instead.
- `salt.utils.format_call`. Please use `salt.utils.args.format_call()` instead.
- `salt.utils.which`. Please use `salt.utils.path.which()` instead.
- `salt.utils.which_bin`. Please use `salt.utils.path.which_bin()` instead.
- `salt.utils.path_join`. Please use `salt.utils.path.join()` instead.
- `salt.utils.check_or_die`. Please use `salt.utils.path.check_or_die()` instead.
- `salt.utils.sanitize_win_path_string`. Please use `salt.utils.path.sanitize_win_path()` instead.
- `salt.utils.rand_str`. Please use `salt.utils.hashutils.random_hash()` instead.
- `salt.utils.get_hash`. Please use `salt.utils.hashutils.get_hash()` instead.
- `salt.utils.is_windows`. Please use `salt.utils.platform.is_windows()` instead.
- `salt.utils.is_proxy`. Please use `salt.utils.platform.is_proxy()` instead.
- `salt.utils.is_linux`. Please use `salt.utils.platform.is_linux()` instead.
- `salt.utils.is_darwin`. Please use `salt.utils.platform.is_darwin()` instead.
- `salt.utils.is_sunos`. Please use `salt.utils.platform.is_sunos()` instead.
- `salt.utils.is_smartos`. Please use `salt.utils.platform.is_smartos()` instead.
- `salt.utils.is_smartos_globalzone`. Please use `salt.utils.platform.is_smartos_globalzone()` instead.
- `salt.utils.is_smartos_zone`. Please use `salt.utils.platform.is_smartos_zone()` instead.
- `salt.utils.is_freebsd`. Please use `salt.utils.platform.is_freebsd()` instead.
- `salt.utils.is_netbsd`. Please use `salt.utils.platform.is_netbsd()` instead.
- `salt.utils.is_openbsd`. Please use `salt.utils.platform.is_openbsd()` instead.
- `salt.utils.is_aix`. Please use `salt.utils.platform.is_aix()` instead.
- `salt.utils.safe_rm`. Please use `salt.utils.files.safe_rm()` instead.
- `salt.utils.is_empty`. Please use `salt.utils.files.is_empty()` instead.
- `salt.utils.fopen`. Please use `salt.utils.files.fopen()` instead.
- `salt.utils.flopen`. Please use `salt.utils.files.flopen()` instead.
- `salt.utils.fpopen`. Please use `salt.utils.files.fpopen()` instead.
- `salt.utils.rm_rf`. Please use `salt.utils.files.rm_rf()` instead.
- `salt.utils.mkstemp`. Please use `salt.utils.files.mkstemp()` instead.
- `salt.utils.istextfile`. Please use `salt.utils.files.is_text_file()` instead.

- `salt.utils.is_bin_file`. Please use `salt.utils.files.is_binary()` instead.
- `salt.utils.list_files`. Please use `salt.utils.files.list_files()` instead.
- `salt.utils.safe_walk`. Please use `salt.utils.files.safe_walk()` instead.
- `salt.utils.st_mode_to_octal`. Please use `salt.utils.files.st_mode_to_octal()` instead.
- `salt.utils.normalize_mode`. Please use `salt.utils.files.normalize_mode()` instead.
- `salt.utils.human_size_to_bytes`. Please use `salt.utils.files.human_size_to_bytes()` instead.
- `salt.utils.backup_minion`. Please use `salt.utils.files.backup_minion()` instead.
- `salt.utils.str_version_to_evr`. Please use `salt.utils.pkg.rpm.version_to_evr()` instead.
- `salt.utils.parse_docstring`. Please use `salt.utils.doc.parse_docstring()` instead.
- `salt.utils.compare_versions`. Please use `salt.utils.versions.compare()` instead.
- `salt.utils.version_cmp`. Please use `salt.utils.versions.version_cmp()` instead.
- `salt.utils.warn_until`. Please use `salt.utils.versions.warn_until()` instead.
- `salt.utils.kwargs_warn_until`. Please use `salt.utils.versions.kwargs_warn_until()` instead.
- `salt.utils.get_color_theme`. Please use `salt.utils.color.get_color_theme()` instead.
- `salt.utils.get_colors`. Please use `salt.utils.color.get_colors()` instead.
- `salt.utils.gen_state_tag`. Please use `salt.utils.state.gen_tag()` instead.
- `salt.utils.search_onfail_requisites`. Please use `salt.utils.state.search_onfail_requisites()` instead.
- `salt.utils.check_onfail_requisites`. Please use `salt.utils.state.check_onfail_requisites()` instead.
- `salt.utils.check_state_result`. Please use `salt.utils.state.check_result()` instead.
- `salt.utils.get_user`. Please use `salt.utils.user.get_user()` instead.
- `salt.utils.get_uid`. Please use `salt.utils.user.get_uid()` instead.
- `salt.utils.get_specific_user`. Please use `salt.utils.user.get_specific_user()` instead.
- `salt.utils.chugid`. Please use `salt.utils.user.chugid()` instead.
- `salt.utils.chugid_and_umask`. Please use `salt.utils.user.chugid_and_umask()` instead.
- `salt.utils.get_default_group`. Please use `salt.utils.user.get_default_group()` instead.
- `salt.utils.get_group_list`. Please use `salt.utils.user.get_group_list()` instead.
- `salt.utils.get_group_dict`. Please use `salt.utils.user.get_group_dict()` instead.
- `salt.utils.get_gid_list`. Please use `salt.utils.user.get_gid_list()` instead.
- `salt.utils.get_gid`. Please use `salt.utils.user.get_gid()` instead.
- `salt.utils.enable_ctrl_logoff_handler`. Please use `salt.utils.win_functions.enable_ctrl_logoff_handler()` instead.
- `salt.utils.traverse_dict`. Please use `salt.utils.data.traverse_dict()` instead.
- `salt.utils.traverse_dict_and_list`. Please use `salt.utils.data.traverse_dict_and_list()` instead.

- *salt.utils.filter\_by*.Please use `salt.utils.data.filter_by()` instead.
- *salt.utils.subdict\_match*.Please use `salt.utils.data.subdict_match()` instead.
- *salt.utils.substr\_in\_list*.Please use `salt.utils.data.substr_in_list()` instead.
- *salt.utils.is\_dictlist*.Please use `salt.utils.data.is_dictlist()` instead.
- *salt.utils.repack\_dictlist*.Please use `salt.utils.data.repack_dictlist()` instead.
- *salt.utils.compare\_dicts*.Please use `salt.utils.data.compare_dicts()` instead.
- *salt.utils.compare\_lists*.Please use `salt.utils.data.compare_lists()` instead.
- *salt.utils.decode\_dict*.Please use `salt.utils.data.encode_dict()` instead.
- *salt.utils.decode\_list*.Please use `salt.utils.data.encode_list()` instead.
- *salt.utils.exactly\_n*.Please use `salt.utils.data.exactly_n()` instead.
- *salt.utils.exactly\_one*.Please use `salt.utils.data.exactly_one()` instead.
- *salt.utils.is\_list*.Please use `salt.utils.data.is_list()` instead.
- *salt.utils.is\_iter*.Please use `salt.utils.data.is_iter()` instead.
- *salt.utils.isorted*.Please use `salt.utils.data.sorted_ignorecase()` instead.
- *salt.utils.is\_true*.Please use `salt.utils.data.is_true()` instead.
- *salt.utils.mysql\_to\_dict*.Please use `salt.utils.data.mysql_to_dict()` instead.
- *salt.utils.simple\_types\_filter*.Please use `salt.utils.data.simple_types_filter()` instead.
- *salt.utils.ip\_bracket*.Please use `salt.utils.zeromq.ip_bracket()` instead.
- *salt.utils.gen\_mac*.Please use `salt.utils.network.gen_mac()` instead.
- *salt.utils.mac\_str\_to\_bytes*.Please use `salt.utils.network.mac_str_to_bytes()` instead.
- *salt.utils.refresh\_dns*.Please use `salt.utils.network.refresh_dns()` instead.
- *salt.utils.dns\_check*.Please use `salt.utils.network.dns_check()` instead.
- *salt.utils.get\_context*.Please use `salt.utils.stringutils.get_context()` instead.
- *salt.utils.get\_master\_key*.Please use `salt.utils.master.get_master_key()` instead.
- *salt.utils.get\_values\_of\_matching\_keys*.Please use `salt.utils.master.get_values_of_matching_keys()` instead.
- *salt.utils.date\_cast*.Please use `salt.utils.dateutils.date_cast()` instead.
- *salt.utils.date\_format*.Please use `salt.utils.dateutils.strftime()` instead.
- *salt.utils.total\_seconds*.Please use `salt.utils.dateutils.total_seconds()` instead.
- *salt.utils.find\_json*.Please use `salt.utils.json.find_json()` instead.
- *salt.utils.import\_json*.Please use `salt.utils.json.import_json()` instead.
- *salt.utils.namespaced\_function*.Please use `salt.utils.functools.namespaced_function()` instead.
- *salt.utils.alias\_function*.Please use `salt.utils.functools.alias_function()` instead.
- *salt.utils.profile\_func*.Please use `salt.utils.profile.profile_func()` instead.
- *salt.utils.activate\_profile*.Please use `salt.utils.profile.activate_profile()` instead.
- *salt.utils.output\_profile*.Please use `salt.utils.profile.output_profile()` instead.

### salt.auth.Authorize Class Removal

- The salt.auth.Authorize Class inside of the `salt/auth/__init__.py` file has been removed and the `any_auth` method inside of the file `salt/utils/minions.py`. These method and classes were not being used inside of the salt code base.

### 33.2.46 Salt 3000.1 Release Notes

Version 3000.1 is a bugfix release for *3000*.

#### Statistics

- Total Merges: 53
- Total Issue References: 15
- Total PR References: 54
- Contributors: 16 (Ch3LL, UtahDave, bryceml, cmcmarrow, dwoz, frogunder, garethgreenaway, lorengordon, mchugh19, oeuffete, raddessi, s0undt3ch, sjorge, terminalmage, twangboy, waynew)

#### Changelog for v3000..v3000.1

Generated at: 2020-03-27 16:48:41 UTC

- **PR #56455:** (s0undt3ch) Fix gitpython windows requirement @ 2020-03-27 16:31:57 UTC
  - c5a700e01e Merge pull request #56455 from s0undt3ch/hotfix/gitpython
  - d9791c393f Revert and fix windows requirements
  - 4b573c1c94 Revert "Fix win deps"
- **PR #56446:** (frogunder) 3000.1 releasenotes updates @ 2020-03-24 20:28:23 UTC
  - 7ba36325d9 Merge pull request #56446 from frogunder/releasenotes\_3000.1\_updates
  - 6b47f474af 3000.1 releasenotes updates
- **PR #56435:** (twangboy) Update mac build scripts @ 2020-03-24 19:47:40 UTC
  - 4d2bc7004d Merge pull request #56435 from twangboy/update\_mac\_build\_scripts
  - 5d244b0aa6 Merge branch 'master' into update\_mac\_build\_scripts
  - 8fdf52a243 Update gitpython to 2.1.15
  - afcedc5232 Remove --ignore-installed
  - e6cc2a6192 Separate pyobjc requirements
  - 262ad2e98a Compile static requirements
  - 224f72d0f2 Update noxfile and .precommit
  - 68a36f2e37 Add req\_ext.txt
  - 5851a5c2cd Roll back changes, fix dependencies
- **ISSUE #56433:** (Ch3LL) integration.states.test\_pip\_state.PipStateTest.test\_pip\_installed\_specific\_env failing on MAC (refs: #56436)

- **PR #56436:** (Ch3LL) Fix #56433 - test\_pip\_installed\_specific\_env @ 2020-03-24 19:47:20 UTC
  - 8a8ae8ebe4 Merge pull request #56436 from Ch3LL/pip\_custom\_pypi
  - 55655ff96c Merge branch 'master' into pip\_custom\_pypi
- **PR #56423:** (Ch3LL) Update changelog with package fixes @ 2020-03-24 16:42:17 UTC
  - 3a993d73a9 Merge pull request #56423 from Ch3LL/changelog\_again
  - 963c16e1a7 update pr number for mac build changes in changelog
  - 83e22b77c7 Update changelog with package fixes
- **PR #56417:** (twangboy) Update mac build scripts @ 2020-03-23 18:45:34 UTC
  - d2a5bd8add Merge pull request #56417 from twangboy/update\_mac\_build\_scripts
  - 3bda8ddb82 Update noxfile and pre-commit
  - de58c52d66 Merge branch 'update\_mac\_build\_scripts' of <https://github.com/twangboy/salt> into update\_mac\_build\_scripts
    - \* e7f08d5349 Update static requirements
    - \* a53977de5b Merge branch 'update\_mac\_build\_scripts' of github.com:twangboy/salt into update\_mac\_build\_scripts
    - \* 04e5cde9dd pkg/osx/req\_ext.txt no longer exists
    - \* be4a272d07 Update static requirements
  - 02dfe4119c Add pyobjc in its own requirements file
  - 6b2ac2be64 Remove pyobjc, enforce pip install location
  - 30ca5d04ec Remove cryptography, it gets installed by pyopenssl
  - fda8abf4a8 Update static requirements
  - 732ecc83c1 Update pre-commit config
  - 1fa9864e3d Don't set a version for pyopenssl
  - 461b198978 Update dependencies, remove req\_ext.txt
- **PR #56418:** (Ch3LL) Ensure version.py included before we install @ 2020-03-23 18:27:46 UTC
  - 74575a6993 Merge pull request #56418 from Ch3LL/egg\_version
  - 85d7c784ef Fix integration setup egg test
  - a8a22a4040 Ensure version.py included before we install
  - 86fe450c82 Fix #56433 - test\_pip\_installed\_specific\_env
- **PR #56403:** (frogunder) update 3000.1 releasenotes @ 2020-03-17 23:50:21 UTC
  - 249367b462 Merge pull request #56403 from frogunder/update\_releasenotes\_3000.1
  - 9d972c96e8 update 3000.1 releasenotes
- **PR #56398:** (Ch3LL) Add additional PRs to 3000.1 changelog @ 2020-03-17 18:08:15 UTC
  - 0de5c1e136 Merge pull request #56398 from Ch3LL/change\_3000.1
  - 79c337b3db Add additional PRs to 3000.1 changelog
- **PR #56376:** (twangboy) Fix win deps @ 2020-03-17 17:02:46 UTC
  - 5ac09decb9 Merge pull request #56376 from twangboy/fix\_win\_deps

- 6c83beeb9e Fix win deps
- **PR #56378:** (Ch3LL) Include `_version.py` if building wheel @ 2020-03-17 17:01:33 UTC
  - e72a8d2cbc Merge pull request #56378 from Ch3LL/wheel\_version
  - 22cccd2107 Use virtualenv test helper that already exists and fix `setup.py`
  - 293b1fddf2 cleanup code
  - ddfb065bfb add `bdist_wheel` test
  - fceff0287c ensure name is included in new version
  - 0cbf6d3246 Ensure `SaltStackVersion` attributes in `_version.py` correct
  - 39cdf5382d Include `_version.py` if building wheel
- **PR #56387:** (bryceml) update gpg key expiration date @ 2020-03-17 16:59:30 UTC
  - 6a9326fb70 Merge pull request #56387 from bryceml/update\_gpg\_key
  - b74b26ccf3 update gpg key expiration date
- **PR #55822:** (cmcmarrow) fix `Indefinitely_code` @ 2020-03-16 17:34:11 UTC
  - fcee692c4a Merge pull request #55822 from cmcmarrow/win\_task\_repeat
  - e257fb2804 Merge branch 'master' into win\_task\_repeat
  - 07cada0f8f Merge branch 'master' into win\_task\_repeat
  - 4b80301338 Merge branch 'master' into win\_task\_repeat
  - 9df94569c4 Merge branch 'master' into win\_task\_repeat
  - 22a2d0b9ec Merge branch 'master' into win\_task\_repeat
  - dee9c134e7 Merge branch 'master' into win\_task\_repeat
  - beaf05d514 Update `test_win_task.py`
  - 6e923f75fc Merge branch 'master' into win\_task\_repeat
  - 5839da81ee add test
  - 2aa6338ed0 fix `Indefinitely_code`
- **PR #56373:** (frogunder) update 3000.1 `releasenotes` @ 2020-03-13 18:58:43 UTC
  - c11ef89200 Merge pull request #56373 from frogunder/releasenotes\_3000.1
  - a5ca8b5277 Fix doc test errors
  - 47e483187e update 3000.1 `releasenotes`
- **PR #56365:** (Ch3LL) Update 3000.1 `changelog` @ 2020-03-13 17:21:02 UTC
  - 62857a9f0e Merge pull request #56365 from Ch3LL/changelog\_3000.1
  - 851d7d8fc7 Update 3000.1 `changelog`
- **PR #56360:** (Ch3LL) Use virtualenv 20.0.10 for macosx tests @ 2020-03-13 16:39:57 UTC
  - a660e96fb2 Merge pull request #56360 from Ch3LL/mac\_virtual
  - abda125086 Update static requirements files
  - dca3390c0c skip `zcbuidout` state test when virtualenv 20.0.0
  - fdae1f0e1 Use virtualenv 20.0.10 for macosx tests

- **ISSUE #56324:** (kiemlicz) Cannot use Saltcheck module (refs: #56327)
- **PR #56327:** (mchugh19) keep cache\_copied\_files variable a list @ 2020-03-13 16:39:32 UTC
  - d8fc07274c Merge pull request #56327 from mchugh19/56324
  - e1e2df2b1d Merge branch 'master' into 56324
  - 6d7572706d use includes for saltcheck integration test
  - 5b7073b01d keep cache\_copied\_files variable a list
- **PR #56023:** (cmcmarrow) add fix for bin\_env @ 2020-03-13 16:39:09 UTC
  - 2d31d61ab9 Merge pull request #56023 from cmcmarrow/binary\_fix\_pip\_bin\_env
  - f780fd013e Merge branch 'master' into binary\_fix\_pip\_bin\_env
  - d642c7c270 Merge branch 'master' into binary\_fix\_pip\_bin\_env
  - 82b39d26f8 Merge branch 'binary\_fix\_pip\_bin\_env' of <https://github.com/cmcmarrow/salt> into binary\_fix\_pip\_bin\_env
    - \* a5fa22528a Merge branch 'master' into binary\_fix\_pip\_bin\_env
  - 10ca0fa5d6 fix space
  - 22ff6c180 fix \_pip\_bin\_env
  - d5425e6630 Merge branch 'master' into binary\_fix\_pip\_bin\_env
  - ceda3fde00 add full support for when missing kwargs or args
  - cf4ab215b5 add fix for bin\_env
- **PR #56310:** (twangboy) Only process ADMX files when loading policies @ 2020-03-11 23:47:50 UTC
  - 19bb6aae0c Merge pull request #56310 from twangboy/fix\_lgpo\_admx
  - 4bc5b05586 Fix some lint
  - ce282f9754 Mark destructive test
  - 8af09c31ca Add test case
  - 547d35cf4c Only process ADMX files when loading policies
- **PR #56272:** (twangboy) Properly resolve the policy name @ 2020-03-11 22:11:02 UTC
  - 2d78931eaf Merge pull request #56272 from twangboy/fix\_lgpo\_names
  - 233ed12472 Add comments to helper function
  - a7369e41d7 Remove redundant code... some more
  - 1db3052b94 Consolidate duplicate code
  - b25b56299d Fix failing PY2 tests
  - 36a24ac28f Only load adml data once
  - bc13be6850 Add some tests
  - 2e9be6e461 Properly resolve the policy name
- **PR #56358:** (s0undt3ch) Fix version instantiation when minor is an empty string @ 2020-03-11 22:10:04 UTC
  - c6c6e2e3d9 Merge pull request #56358 from s0undt3ch/hotfix/version-parsing
  - cb22e78502 Fix version instantiation when minor is an empty string

- **PR #56160:** (twangboy) Fix issue with existing reg\_dword entries @ 2020-03-11 22:09:21 UTC
  - b33047c574 Merge pull request #56160 from twangboy/fix\_reg\_dword
  - 80650c2a8c Make test more explicit
  - 67dd1c18c7 Fix issue with existing reg\_dword entries
- **PR #56337:** (twangboy) Handle Adapter Type 53 and Undefined Types @ 2020-03-11 22:08:19 UTC
  - 8f23706871 Merge pull request #56337 from twangboy/fix\_win\_network\_type
  - 18a31a0b22 Merge branch 'master' into fix\_win\_network\_type
  - d92914ad91 Merge branch 'master' into fix\_win\_network\_type
  - 224629bdeb Handle Adapter Type 53 and Undefined Types
- **PR #56060:** (twangboy) Fix regex string for \*\*Del and \*\*DelVals @ 2020-03-11 22:05:43 UTC
  - e551ff6a31 Merge pull request #56060 from twangboy/fix\_lgpo\_regex
  - ca260ef582 Use byte-strings in the test
  - 7c81874a5b Add some tests
  - 944b022f33 Fix regex string for \*\*Del and \*\*DelVals
- **ISSUE #56131:** (thusoy) Salt v3000 crashes with unless clause if pip is missing (refs: #56215)
- **PR #56215:** (dwoz) Fix for unless requisite when pip is not installed @ 2020-03-11 22:04:30 UTC
  - c9bc9431c1 Merge pull request #56215 from dwoz/issue-56131
  - 5dd8f8eabe Fix linter
  - 7492c2f7c7 Remove crufty prints from test
  - 8ceaa6e6f3 Only remove pip related modules
  - 69b21e5e68 Add regression test for issue 56131
  - 9d23f55adc Fix for unless requisite when pip is not installed
- **PR #56339:** (twangboy) Fix win\_dns\_client when used with scheduler @ 2020-03-11 22:01:32 UTC
  - 74b67ea741 Merge pull request #56339 from twangboy/fix\_win\_dns\_client
  - d6a4fbe85d Fix bad test (lint)
  - 47bd67373f Add some tests
  - 995975649a Add missing import, improve docs
- **ISSUE #56288:** (loregordon) win\_lgpo: *lgpo.set* with *secdit* policy always generates *KeyError: u'lgpo.secdit\_data'* (refs: #56290)
- **PR #56290:** (loregordon) Ensures popping *lgpo.secdit\_data* does not throw *KeyError* @ 2020-03-11 17:27:04 UTC
  - 7701e8762d Merge pull request #56290 from lorengordon/pop-secdata
  - 62453bb6ce Merge branch 'master' into pop-secdata
  - 95d5cea9ff Merge branch 'master' into pop-secdata
  - 2979158a8b Tests the *if\_secdits*: logic path in *lgpo.set*
  - d1f776178c Ensures popping *lgpo.secdit\_data* does not throw *KeyError*
- **ISSUE #56119:** (finalduty) Release notes for v3000 do not mention changes to *slspath* variable (refs: #56341)

- **PR #56341:** (dwoz) Revert "Don't remove one directory level from slspath" @ 2020-03-11 17:03:33 UTC
  - 84c60708cd Merge pull request #56341 from dwoz/issue-56119
  - afe6e84c36 Clarify slspath documentation
  - 6dfc098fd1 Add debug for test asserts
  - 9fa9dab8b2 Fix linter warts
  - fd702bdd44 Add regression test for #56119
  - 3d3b673cec Revert "Don't remove one directory level from slspath"
- **PR #56185:** (terminalmage) Fix regression in service states with reload argument @ 2020-03-11 16:45:58 UTC
  - 4f9813a49c Merge pull request #56185 from terminalmage/issue56167
  - 65b3f4c9a0 Merge branch 'master' into issue56167
  - 7b41a00b4f Merge branch 'master' into issue56167
  - 8f7034d946 Merge branch 'master' into issue56167
  - e9fbb634e1 Skip on OSX for now
  - 5996280241 Add \_\_opts\_\_ and \_\_grains\_\_ just in case
  - af3e841d08 Fix failing test
  - 586f21aedc Add functional test
  - 1afb9c10f0 Fix regression in service states with reload argument
- **PR #56068:** (s0undt3ch) Update the bootstrap script to latest version, v2020.02.24 @ 2020-03-11 16:44:23 UTC
  - 74f8b2a926 Merge pull request #56068 from s0undt3ch/hotfix/update-bootstrap
  - ce83b190ed Merge branch 'master' into hotfix/update-bootstrap
  - ccd231d82d Merge branch 'master' into hotfix/update-bootstrap

  - 012fb5bc4b Update the bootstrap script to latest version, v2020.02.04
- **PR #56321:** (oeuftete) Tidy up formatting in boto\_secgroup docs @ 2020-03-11 08:14:48 UTC
  - 154257e2e9 Merge pull request #56321 from oeuftete/tidy-boto-secgroup-docs
  - 616f11b33e Merge branch 'master' into tidy-boto-secgroup-docs
  - 412bb4d62d Tidy up formatting in boto\_secgroup docs
- **PR #56336:** (Ch3LL) Fix test\_issue\_2594\_non\_invalidated\_cache test (update zope.interface) @ 2020-03-11 00:08:43 UTC
  - 11d33e3d90 Merge pull request #56336 from Ch3LL/fix\_56330
  - bbf37e090b Fix test\_issue\_2594\_non\_invalidated\_cache test (update zope.interface)
- **PR #56346:** (frogunder) Update man pages to 3000.1 @ 2020-03-11 00:07:31 UTC
  - a640bd30fc Merge pull request #56346 from frogunder/man\_pages\_3000\_1
  - 6d7c1b6482 Update man pages to 3000.1
- **PR #56099:** (s0undt3ch) Fix Windows and macOS requirements handling in setup.py @ 2020-03-11 00:04:37 UTC
  - 2f783d247e Merge pull request #56099 from s0undt3ch/hotfix/requirements

- c19f4a3fae Merge branch 'master' into hotfix/requirements
  - 1e7bc8fc8f Also take into account macOS requirements
  - 7eef14952c Also include req\_win.txt
- **PR #56218:** (raddessi) Changed StrictVersion checking of setuptools to LooseVersion @ 2020-03-10 23:59:54 UTC
  - 7c4d879073 Merge pull request #56218 from raddessi/master.v3000-conda
  - 44556f6d57 Merge branch 'master' into master.v3000-conda
  - 566c03b786 Merge branch 'master' into master.v3000-conda
  - 82773a9799 Removed now-unused StrictVersion import from setup.py
  - 31bb0f7cd1 Changed StrictVersion checking of setuptools to LooseVersion
- **PR #56128:** (waynew) Update CHANGELOG with release date and unreleased. @ 2020-03-10 23:58:15 UTC
  - acbd3556e5 Merge pull request #56128 from waynew/master
  - e3216db3e5 Update CHANGELOG with release date and unreleased.
- **PR #55937:** (twangboy) Update windows build scripts @ 2020-03-10 23:55:55 UTC
  - 12140545ab Merge pull request #55937 from twangboy/update\_deps
  - f00a504a48 Add back the pylauncher
  - 30b9c32356 Revert changes to req and req\_win
  - 98dc0e970c Fix some warts in the build\_env scripts
  - 8404141f65 Update dependencies
- **PR #55906:** (sjorge) smartos.vm\_present could not handle nics with vrrp\_vrid property @ 2020-03-10 23:54:44 UTC
  - 485a47cdf1 Merge pull request #55906 from sjorge/smartos\_vrrp
  - 5bd7dd009a Merge branch 'master' into smartos\_vrrp
  - f77719c179 smartos state should handle vrrp config
- **ISSUE #55185:** (sjorge) salt.modules.pdbedit doesn't work on samba older than 4.8 (refs: #55894)
- **PR #55894:** (sjorge) #55185 pdbedit module should check for version 4.8.x or newer @ 2020-03-10 23:54:21 UTC
  - 1fa8555360 Merge pull request #55894 from sjorge/pdbedit\_55185
  - 9dc7b71122 Merge branch 'master' into pdbedit\_55185
- **ISSUE #56195:** (loregordon) Windows: Using inline powershell in args with *cmd.script* and *shell: powershell* (refs: #56197)
- **PR #56197:** (loregordon) Allows use of inline powershell for cmd.script args @ 2020-03-10 23:52:47 UTC
  - 3e57d58db2 Merge pull request #56197 from lorengordon/file-or-no-file
  - fcd1699f5e Allows use of inline powershell for cmd.script args
  - be2e67c0a0 Tests that powershell processes inline powershell in args
- **ISSUE #53152:** (jbeaird) daily highstate fails after 2019.2 upgrade (refs: #56149)
- **PR #56149:** (garethgreenaway) [master] Fix to scheduler for use of when and splay @ 2020-03-10 23:52:16 UTC
  - 547c73e4cc Merge pull request #56149 from garethgreenaway/53152\_fix\_schedule\_when\_splay

- 8f068f6f9b Fix for when using a combination of when and splay. Previously comparing the wrong value when determining if the job should be run and next\_fire\_time updated. This resulted in multiple job runs when when and splay were used together. Code updated and test updated to ensure only one run at the specific time. Skip eval tests is dateutil.parser is unavailable.
- PR #56345: (s0undt3ch) Bump Windows Py3 builds timeout to 10 hours @ 2020-03-10 20:43:41 UTC
  - 192ce76a95 Merge pull request #56345 from s0undt3ch/hotfix/win-py3-timeouts
  - 11bdc38ae3 Bump Windows 2019 Py3 builds timeout to 10 hours
- PR #55888: (s0undt3ch) Disable codecov PR comments and status checks @ 2020-03-10 15:45:52 UTC
  - a204906c80 Merge pull request #55888 from s0undt3ch/hotfix/coverage-reporting
  - 4b8dc8a586 Disable codecov PR comments and status checks
  - cb0f4dff87 Apply the suggestion given by the codecov team
- ISSUE #56177: (jodok) mysql states fail because conv is `` instead of None (refs: #56174)
- ISSUE #56170: (jeffdyke) mariadb socket access must be enabled before highstate - salt 3K still tries empty password (refs: #56174)
- ISSUE #56124: (ymasson) MySQL state and module broken after upgrade to 3000 (refs: #56174)
- PR #56174: (garethgreenaway) [master] MySQL module fixes @ 2020-03-10 04:03:23 UTC
  - 3e913631bb Merge pull request #56174 from garethgreenaway/56124\_mysql\_module\_state\_fixes
  - fcc061368b Removing quotes from the plugin\_status query. Updating tests to reflect changes.
  - 3dc66393b2 Adding better error reporting around plugins. Updating tests. Only attempt to delete a user if they exist.
  - 1337da1e4e Ensure \_mysql\_user\_exists is using auth\_socket. Updating mysql and mariadb chpass functions to ensure that the respective plugins are enabled before attempting to use them.
  - 34995ba4e8 Reworking the unix\_socket code to support the differences between MySQL and MariaDB. Adding some functions to install, remove, and check the status of plugins which we can then use when adding users which will use the unix\_socket & auth\_socket plugins. Adding additional tests for these new functions as well as test to ensure the correct SQL is being generated when using passwordless and unix\_socket options.
  - 5bfd67c13e Minor tweak to mysql module. Fixing failing tests.
  - e871a3ffd1 Various fixes to the mysql module to break out the handling of user management into different functions based on MySQL variant.
- ISSUE #56063: (terminalmage) [master] Traceback in esxi grain module on import (refs: #56094)

  - 6a213a429a add pylint ignore in django returner
  - 759290a055 Use encoding when caching pillar data
- **ISSUE #56080:** (sagetherage) Update release notes, pip download page and install docs on pycrypto (refs: #56095)
- **PR #56095:** (waynew) Provide security advisory for PyCrypto @ 2020-02-10 18:42:00 UTC
  - 9adc2214c3 Merge pull request #56095 from waynew/crypto-warning
  - 484bc51f4b Add warnings to a couple of other places
  - 2711c04ca9 Provide security advisory for PyCrypto
- **PR #56092:** (twangboy) Add LGPO and Network PRs to changelogs @ 2020-02-10 18:17:28 UTC
  - 1acd492bb9 Merge pull request #56092 from twangboy/waynew-update-changelog
  - 4e03620d4e Fix a docs issue
  - e7b64277e1 Add LGPO and Network PRs to changelogs
- **PR #56115:** (s0undt3ch) Add information about the pip install salt on windows issue. @ 2020-02-10 17:33:44 UTC
  - 65d59b0ee9 Merge pull request #56115 from s0undt3ch/hotfix/release-notes
  - aeac9f36cd Add information about the pip install salt on windows issue.
  - a5179434e7 Merge branch 'master' into pdbedit\_55185
  - 95d46d6cc8 #55185 pdbedit module should check for version 4.8.x or newer

### 33.2.47 Salt 3000.2 Release Notes

Version 3000.2 is a CVE-fix release for *3000*.

#### Security Fix

##### CVE-2020-11651

An issue was discovered in SaltStack Salt before 2019.2.4 and 3000 before 3000.2. The salt-master process ClearFuncs class does not properly validate method calls. This allows a remote user to access some methods without authentication. These methods can be used to retrieve user tokens from the salt master and/or run arbitrary commands on salt minions.

##### CVE-2020-11652

An issue was discovered in SaltStack Salt before 2019.2.4 and 3000 before 3000.2. The salt-master process ClearFuncs class allows access to some methods that improperly sanitize paths. These methods allow arbitrary directory access to authenticated users.

#### Known Issue

Part of the fix for CVE-2020-11651 added better validation of the methods allowed to be called by remote clients. Both AESFuncs and ClearFuncs now have an explicit list of methods that can be called. The name of one of these whitelisted methods on AESFuncs had a typo. The `_minion_runner` method should be `minion_runner` (without the underscore prefix). This typo breaks the publish module's runner method. Calling runners, for example:

```
salt minion publish.runner manage.down
```

Will not work, and you will receive an empty reply from the salt master.

This will be addressed in the 3001 release of Salt set for mid-June 2020.

### 33.2.48 Salt 3000.3 Release Notes

Version 3000.3 is a bug-fix release for *3000*.

#### Statistics

- Total Merges: 2

## Changelog for v3000.2..v3000.3

Generated at: 2020-05-06 02:53:12 UTC

- **PR #57097:** (frogunder) Update man\_pages 3000.3 @ 2020-05-05 22:13:09 UTC
- **ISSUE #57027:** (ecarson) [BUG] Master running 2019.2.4 or 3000.2 unable to synchronize files using saltutil.sync\_all to 2017.7.1 minion due to CVE fix (refs: #57100)
- **ISSUE #57016:** (idontwanttosignin) [BUG] Requested method not exposed: minion\_runner (refs: #57100)
- **PR #57100:** (dwoz) Address Issues in CVE Release @ 2020-05-05 22:09:25 UTC

### 33.2.49 Salt 3000.4 Release Notes

Version 3000.4 is a CVE fix release for 3000.

#### Fixed

- Prevent shell injections in netapi ssh client (cve-2020-16846)
- Prevent creating world readable private keys with the tls execution module. (cve-2020-17490)

### 33.2.50 Salt 3000.5 Release Notes

Version 3000.5 is a CVE fix release for 3000.

#### Fixed

- Properly validate eauth credentials and tokens along with their ACLs. Prior to this change eauth was not properly validated when calling Salt ssh via the salt-api. Any value for 'eauth' or 'token' would allow a user to bypass authentication and make calls to Salt ssh. (CVE-2020-25592)

### 33.2.51 Salt 3000.6 Release Notes

Version 3000.6 is a bugfix release for 3000.

#### Fixed

- Fixes salt-ssh authentication when using tty (#58922)

### 33.2.52 Salt 3000.7 Release Notes

Version 3000.7 is a CVE fix release for 3000.

## Fixed

- CVE-2020-28243 - Fix local privilege escalation in the restartcheck module.
- CVE-2020-28972 - Ensure authentication to vcenter, vsphere, and esxi server validates the SSL/TLS certificate by default. If you want to skip SSL verification you can use `verify_ssl: False`.
- CVE-2020-35662 - Ensure the asam runner, qingcloud, splunk returner, panos proxy, cimc proxy, zenoss module, esxi module, vsphere module, glassfish module, bigip module, and keystone module validate SSL by default. If you want to skip SSL verification you can use `verify_ssl: False`.
- CVE-2021-3148 - Fix a command injection in the Salt-API when using the Salt-SSH client.
- CVE-2021-3144 - Fix eauth tokens can be used once after expiration
- CVE-2021-25281 - Fix salt-api so it honors eauth credentials for the wheel\_async client.
- CVE-2021-25282 - Fix the salt.wheel.pillar\_roots.write method so it is not vulnerable to directory traversal.
- CVE-2021-25283 - Fix the jinja render to protect against server side template injection attacks.
- CVE-2021-25284 - Fix cmdmod so it will not log credentials to log levels info and error.
- CVE-2021-3197 - Fix ssh client to remove ProxyCommand from arguments provided by cli and netapi.

### 33.2.53 Salt 3000.8 Release Notes

Version 3000.8 is a bug fix release for *3000*.

## Fixed

- Fix runners that broke when patching for CVE-2021-25281
- Fix issue with runners in SSE

## Known Issue

When using the Salt-API with the SSH client some of the SSH options are not working currently and will be fixed in an upcoming bug fix release. We are currently testing and fixing which options still need to be fixed, but have confirmed the following ones do not work in this release: `extra-filerefs`, `pre-flight`. This does not impact normal Salt-SSH usage on the cli.

### 33.2.54 Salt 3000.9 Release Notes

Version 3000.9 is a bug fix release for *3000*.

## Fixed

- Allow "extra\_filerefs" as sanitized kwargs for SSH client. Fix regression on "cmd.run" when passing tuples as cmd. (#59664)
- Allow all ssh kwargs as sanitized kwargs for SSH client. (#59748)
- Fix argument injection bug in restartcheck.restartcheck. This change hardens the fix for CVE-2020-28243.

## 33.2.55 Salt 2019.2.0 Release Notes - Codename Fluorine

### Python 2.7 Deprecation

In light of Python 2.7 reaching its End of Life (EOL) on Jan 1st 2020, Python 2 will be deprecated from SaltStack no earlier than the 3001 release, that is either the 3001 release or a later release. This decision is pending further community discussion.

### Known Issues

The following are known issues for the 2019.2.0 release and will be fixed for 2019.2.1:

- #51699

### Non-Backward-Compatible Change to YAML Renderer

In earlier releases, this was considered valid usage in Python 2, assuming that `data` was a list or dictionary containing keys/values which are unicode types:

```
/etc/foo.conf:
  file.managed:
    - source: salt://foo.conf.jinja
    - template: jinja
    - context:
      data: {{ data }}
```

One common use case for this is when using one of Salt's *custom Jinja filters* which return lists or dictionaries, such as the *ipv4* filter.

In Python 2, Jinja will render the unicode string types within the list/dictionary with the "u" prefix (e.g. {u'foo': u'bar'}). While not valid YAML, earlier releases would successfully load these values.

As of this release, the above SLS would result in an error message. To allow for a data structure to be dumped directly into your SLS file, use the *tojson Jinja filter*:

```
/etc/foo.conf:
  file.managed:
    - source: salt://foo.conf.jinja
    - template: jinja
    - context:
      data: {{ data|tojson }}
```

Another example where the new filter needs to be used is the following state example:

```
grafana_packages:
  pkg.installed:
    - names: {{ server.pkgs }}
```

This will fail when `pkgs` is a list or dictionary. You will need to update the state:

```
grafana_packages:
  pkg.installed:
    - names: {{ server.pkgs|tojson }}
```

This test case has also been tested with the `yaml` and `json` filters successfully.

---

**Note:** This filter was added in Jinja 2.9. However, fear not! The 2018.3.3 release added a `tojson` filter which will be used if this filter is not already present, making it available on platforms like RHEL 7 and Ubuntu 14.04 which provide older versions of Jinja.

---

---

**Important:** The `json_encode_dict` and `json_encode_list` filters do not actually dump the results to JSON. Since `tojson` accomplishes what those filters were designed to do, they are now deprecated and will be removed in the 3000 release. The `tojson` filter should be used in all cases where `json_encode_dict` and `json_encode_list` would have been used.

---

## Ansible Playbook State and Execution Modules

Along with the including the `ansible` modules in the Oxygen release, running playbooks has been added in 2019.2.0 with the `playbooks` function. This also includes an `ansible playbooks state module` which can be used on a targeted host to run ansible playbooks, or used in an orchestration state runner.

```
install nginx:
  ansible.playbooks:
    - name: install.yml
    - git_repo: git://github.com/gtmanfred/playbook.git
    - git_kwargs:
      rev: master
```

The `playbooks` modules also includes the ability to specify a git repo to clone and use, or a specific directory can be used when running the playbook.

## Network Automation

Beginning with this release, Salt provides much broader support for a variety of network operating systems, and features for configuration manipulation or operational command execution.

## NetBox

Added in the previous release, 2018.3.0, the capabilities of the *netbox* Execution Module have been extended, with a much longer list of available features:

- *netbox.create\_circuit*
- *netbox.create\_circuit\_provider*
- *netbox.create\_circuit\_termination*
- *netbox.create\_circuit\_type*
- *netbox.create\_device*
- *netbox.create\_device\_role*
- *netbox.create\_device\_type*
- *netbox.create\_interface*
- *netbox.create\_interface\_connection*
- *netbox.create\_inventory\_item*
- *netbox.create\_ipaddress*
- *netbox.create\_manufacturer*
- *netbox.create\_platform*
- *netbox.create\_site*
- *netbox.delete\_interface*
- *netbox.delete\_inventory\_item*
- *netbox.delete\_ipaddress*
- *netbox.get\_circuit\_provider*
- *netbox.get\_interfaces*
- *netbox.get\_ipaddresses*
- *netbox.make\_interface\_child*
- *netbox.make\_interface\_lag*
- *netbox.openconfig\_interfaces*
- *netbox.openconfig\_lacp*
- *netbox.update\_device*
- *netbox.update\_interface*

Besides this Execution Module, Salt users can load data directly from NetBox into the device Pillar, via the *netbox* External Pillar module.

## Netmiko

*Netmiko*, the multi-vendor library to simplify Paramiko SSH connections to network devices, is now officially integrated into Salt. The network community can use it via the *netmiko* Proxy Module or directly from any Salt Minions, passing the connection credentials - see the documentation for the *netmiko* Execution Module.

## Arista

Arista switches can now be managed running under the *pyeapi* Proxy Module, and execute RPC requests via the *pyeapi* Execution Module.

## Cisco Nexus

While support for SSH-based operations has been added in the release codename Carbon (2016.11), the new *nxos\_api* Proxy Module and *nxos\_api* allow management of Cisco Nexus switches via the NX-API.

It is important to note that these modules don't have third party dependencies, therefore they can be used straight away from any Salt Minion. This also means that the user may be able to install the regular Salt Minion on the Nexus switch directly and manage the network devices like a regular server.

## General-purpose Modules

The new *ciscoconfparse* Execution Module can be used for basic configuration parsing, audit or validation for a variety of network platforms having Cisco IOS style configuration (one space indentation), as well as brace-delimited configuration style.

The *iosconfig* can be used for various configuration manipulation for Cisco IOS style configuration, such as: *configuration cleanup*, *tree representation of the config*, etc.

## NAPALM

### Commit At and Commit Confirmed

Beginning with this release, NAPALM users are able to execute scheduled commits (broadly known as "commit at") and "commit confirmed" (revert the configuration change unless the user confirms by running another command). These features are available via the `commit_in`, `commit_at`, `revert_in`, or `revert_at` arguments for the *net.load\_config* and *net.load\_template* execution functions, or *netconfig.managed*.

The counterpart execution functions *net.confirm\_commit*, or *net.cancel\_commit*, as well as the State functions *netconfig.commit\_cancelled*, or *netconfig.commit\_confirmed* can be used to confirm or cancel a commit.

Please note that the commit confirmed and commit cancelled functionalities are available for any platform whether the network devices supports the features natively or not. However, be cautious and make sure you read and understand the caveats before using them in production.

## Multiple Templates Rendered Simultaneously

The `template_name` argument of the `net.load_template` Execution and `netconfig.managed` State function now supports a list of templates. This is particularly useful when a very large Jinja template is split into multiple smaller and easier to read templates that can eventually be reused in other States. For example, the following syntax is not correct to manage the configuration of NTP and BGP simultaneously, using two different templates and changing the device configuration through one single commit:

```
manage_bgp_and_ntp:
  netconfig.managed:
    - template_name:
      - salt://templates/bgp.jinja
      - salt://templates/ntp.jinja
    - context:
      bpg: {{ pillar.bgp }}
      ntp: {{ pillar.ntp }}
```

## Connection Re-establishment on Demand

Beginning with this release, any NAPALM command executed when running under a NAPALM Proxy Minion supports the `force_reconnect` magic argument.

Proxy Minions generally establish a connection with the remote network device at the time of the Minion startup and that connection is going to be used forever.

If one would need to execute a command on the device but is connecting using different parameters (due to various causes, e.g., unable to authenticate the user specified in the Pillar as the authentication system - say TACACS+ is not available, or the DNS resolver is currently down and would like to temporarily use the IP address instead, etc.), it implies updating the Pillar data and restarting the Proxy Minion process restart. In particular cases like that, you can pass the `force_reconnect=True` keyword argument, together with the alternative connection details, to enforce the command to be executed over a separate connection.

For example, if the usual command is `salt '*' net.arp`, you can use the following to connect using a different username instead:

```
salt '*' net.arp username=my-alt-usr force_reconnect=True
```

The same goes with any of the other configuration arguments required for the NAPALM connection - see [NAPALM proxy documentation](#).

## Configuration Replace Features

To replace various configuration chunks, you can use the new `net.replace_pattern` execution function, or the `netconfig.replace_pattern` State function. For example, if you want to update your configuration and rename a BGP policy referenced in many places, you can do so by running:

```
salt '*' net.replace_pattern OLD-POLICY-CONFIG new-policy-config
```

Similarly, you can also replace entire configuration blocks using the `net.blockreplace` function.

## Configuration Save Features

The `net.save_config` function can be used to save the configuration of the managed device into a file. For the State subsystem, the `netconfig.saved` function has been added which provides a complete list of facilities when managing the target file where the configuration of the network device can be saved.

For example, backup the running configuration of each device under its own directory tree:

```
/var/backups/{{ opts.id }}/running.cfg:  
netconfig.saved:  
- source: running  
- makedirs: true
```

All the new network automation modules mentioned above are directly exposed to the NAPALM users, without requiring any architectural changes, just eventually install some requirements:

## Junos

The features from the existing `junos` Execution Module are available via the following functions:

- `napalm.junos_cli`: Execute a CLI command and return the output as text or Python dictionary.
- `napalm.junos_rpc`: Execute an RPC request on the remote Junos device, and return the result as a Python dictionary, easy to digest and manipulate.
- `napalm.junos_install_os`: Install the given image on the device.
- `napalm.junos_facts`: The complete list of Junos facts collected by the `junos-eznc` underlying library.

---

**Note:** To be able to use these features, you must ensure that you meet the requirements for the `junos` module. As `junos-eznc` is already a dependency of NAPALM, you will only have to install `jxmlease`.

---

Usage examples:

```
salt '*' napalm.junos_cli 'show arp' format=xml  
salt '*' napalm.junos_rpc get-interface-information
```

## Netmiko

The features from the newly added `netmiko` Execution Module are available as:

- `napalm.netmiko_commands`: Execute one or more commands to be executed on the remote device, via Netmiko, and return the output as a text.
- `napalm.netmiko_config`: Load a list of configuration command on the remote device, via Netmiko. The commands can equally be loaded from a local or remote path, and passed through Salt's template rendering pipeline (by default using Jinja as the template rendering engine).

Usage examples:

```
salt '*' napalm.netmiko_commands 'show version' 'show interfaces'  
salt '*' napalm.netmiko_config config_file=https://bit.ly/2sgljCB
```

## Arista pyeapi

For various operations and various extension modules, the following features have been added to gate functionality from the *pyeapi* module:

- *napalm.pyeapi\_run\_commands*: Execute a list of commands on the Arista switch, via the *pyeapi* library.
- *napalm.pyeapi\_config*: Configure the Arista switch with the specified commands, via the *pyeapi* Python library. Similarly to *napalm.netmiko\_config*, you can use both local and remote files, with or without templating.

Usage examples:

```
salt '*' napalm.pyeapi_run_commands 'show version' 'show interfaces'
salt '*' napalm.pyeapi_config config_file=salt://path/to/template.jinja
```

## Cisco NX-API

In the exact same way as above, the user has absolute control by using the following primitives to manage Cisco Nexus switches via the NX-API:

- *napalm.nxos\_api\_show*: Execute one or more show (non-configuration) commands, and return the output as plain text or Python dictionary.
- *napalm.nxos\_api\_rpc*: Execute arbitrary RPC requests via the Nexus API.
- *napalm.nxos\_api\_config*: Configures the Nexus switch with the specified commands, via the NX-API. The commands can be loaded from the command line, or a local or remote file, eventually rendered using the templating engine of choice (default: *jinja*).

Usage examples:

```
salt '*' napalm.nxos_api_show 'show bgp sessions' 'show processes' raw_
↳text=False
```

## Ciscoconfparse

The following list of function may be handy when manipulating Cisco IOS or Junos style configurations:

- *napalm.config\_filter\_lines*: Return a list of detailed matches, for the configuration blocks (parent-child relationship) whose parent and children respect the regular expressions provided.
- *napalm.config\_find\_lines*: Return the configuration lines that match the regular expression provided.
- *napalm.config\_lines\_w\_child*: Return the configuration lines that match a regular expression, having child lines matching the child regular expression.
- *napalm.config\_lines\_wo\_child*: Return the configuration lines that match a regular expression, that don't have child lines matching the child regular expression.

---

**Note:** These functions require the *ciscoconfparse* Python library to be installed.

---

Usage example (find interfaces that are administratively shut down):

```
salt '*' napalm.config_lines_w_child 'interface' 'shutdown'
```

## IOSConfig

For Cisco IOS style configuration, the following features have been added to the *napalm* Execution Module:

- *napalm.config\_tree*: Transform Cisco IOS style configuration to structured Python dictionary, using the configuration of the interrogated network device.
- *napalm.config\_merge\_tree*: Return the merge tree of the configuration of the managed network device with a different configuration to be merged with (without actually loading any changes on the device).
- *napalm.config\_merge\_text*: Return the merge result (as text) of the configuration of the managed network device with a different configuration to be merged with.
- *napalm.config\_merge\_diff*: Return the merge diff after merging the configuration of the managed network device with a different configuration (without actually loading any changes on the device).

## SCP

Reusing the already available connection credentials provided for NAPALM, the following features are now available:

- *napalm.scp\_put*: Transfer files and directories to remote network device.
- *napalm.scp\_get*: Transfer files and directories from remote network device to the localhost of the Minion.

## PeeringDB

The *peeringdb* Execution Module is useful to gather information about other networks you can potentially peer with, and automatically establish BGP sessions, e.g., given just a specific AS number, the rest of the data (i.e., IP addresses, locations where the remote network is available, etc.) is retrieved from PeeringDB, and the session configuration is automated with minimal to no effort (typing the IP addresses manually can be both tedious and error prone).

## New Docker Proxy Minion

Docker containers can now be treated as actual minions without installing salt in the container, using the new *docker proxy minion*.

This proxy minion uses the *docker executor* to pass commands to the docker container using *docker.call*. Any state module calls are passed through the corresponding function from the *docker* module.

```
proxy:  
  proxytype: docker  
  name: keen_proskuriakova
```

## Terraform Salt-SSH Roster

You can now dynamically generate a Salt-SSH roster from the terraform resources defined with `terraform-provider-salt`.

This allows you to combine both terraform and Salt-SSH to provision and configure your hosts. See the *terraform roster* for an example on how to setup and use.

## Grains Dictionary Passed into Custom Grains

Starting in this release, if a custom grains function accepts a variable named `grains`, the Grains dictionary of the already compiled grains will be passed in. Because of the non-deterministic order that grains are rendered in, the only grains that can be relied upon to be passed in are `core.py` grains, since those are compiled first.

## More Precise `virtual` Grain

This release improves the accuracy of the `virtual` grain when running Salt in a nested virtualization environment (e.g. `systemd-nspawn` container inside a VM) and having `virt-what` installed.

Until now, the `virtual` grain was determined by matching against all output lines of `virt-what` instead of individual items which could lead to not quite precise results (e.g. reporting HyperV inside a `systemd-nspawn` container running within a Hyper-V-based VM).

## Configurable Module Environment

Salt modules (states, execution modules, returners, etc.) now can have custom environment variables applied when running shell commands. This can be configured by setting a `system-environment` key either in Grains or Pillar. The syntax is as follows:

```
system-environment:
<type>
  <module>:
    # Namespace for all functions in the module
    -:
      <key>: <value>

    # Namespace only for particular function in the module
    <function>:
      <key>: <value>
```

- `<type>` would be the type of module (i.e. `states`, `modules`, etc.).
- `<module>` would be the module's name.

---

**Note:** The module name can be either the virtual name (e.g. `pkg`), or the physical name (e.g. `yumpkg`).

---

- `<function>` would be the function name within that module. To apply environment variables to *all* functions in a given module, use an underscore (i.e. `_`) as the function name. For example, to set the same environment variable for all package management functions, the following could be used:

```
system-environment:
  modules:
    pkg:
      - SOMETHING: for_all
```

To set an environment variable in `pkg.install` only:

```
system-environment:
  modules:
    pkg:
      install:
        LC_ALL: en_GB.UTF-8
```

To set the same variable but only for SUSE minions (which use `zypper` for package management):

```
system-environment:
  modules:
    zypper:
      install:
        LC_ALL: en_GB.UTF-8
```

---

**Note:** This is not supported throughout Salt; the module must explicitly support this feature (though this may change in the future). As of this release, the only modules which support this are the following `pkg` virtual modules:

- `aptpkg`
  - `yumpkg`
  - `zypper`
- 

### “Virtual Package” Support Dropped for APT

In APT, some packages have an associated list of packages which they provide. This allows one to do things like run `apt-get install foo` when the real package name is `foo1.0`, and get the right package installed.

Salt has traditionally designated as “virtual packages” those which are provided by an installed package, but for which there is no real package by that name installed. Given the above example, if one were to run a `pkg.installed` state for a package named `foo`, then `pkg.list_pkgs` would show a package version of simply `1` for package `foo`, denoting that it is a virtual package.

However, while this makes certain aspects of package management convenient, there are issues with this approach that make relying on “virtual packages” problematic. For instance, Ubuntu has four different mutually-conflicting packages for `nginx`:

- `nginx-core`
- `nginx-full`
- `nginx-light`
- `nginx-extras`

All four of these provide `nginx`. Yet there is an `nginx` package as well, which has no actual content and merely has dependencies on any one of the above four packages. If one used `nginx` in a `pkg.installed` state, and none of the above four packages were installed, then the `nginx` metapackage would be installed, which would pull

in `nginx-core_`. Later, if `nginx` were used in a `pkg.removed` state, the `nginx` metapackage would be removed, leaving `nginx-core` installed. The result would be that, since `nginx-core_` provides `nginx_`, Salt would now see `nginx` as an installed virtual package, and the `pkg.removed` state would fail. Moreover, `nginx` would not actually have been removed, since `nginx-core` would remain installed.

Starting with this release, Salt will no longer support using "virtual package" names in `pkg` states, and package names will need to be specified using the proper package name. The `pkg.list_repo_pkgs` function can be used to find matching package names in the repositories, given a package name (or glob):

```
# salt myminion pkg.list_repo_pkgs 'nginx*'
myminion:
-----
nginx:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-common:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-core:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-core-dbg:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-doc:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-extras:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-extras-dbg:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-full:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-full-dbg:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-light:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
nginx-light-dbg:
  - 1.10.3-0ubuntu0.16.04.2
  - 1.9.15-0ubuntu1
```

Alternatively, the newly-added `pkg.show` function can be used to get more detailed information about a given package and help determine what package name is correct:

```
# salt myminion pkg.show 'nginx*' filter=description,provides
myminion:
-----
nginx:
-----
```

(continues on next page)

### Minion Startup Events

When a minion starts up it sends a notification on the event bus with a tag that looks like this: `salt/minion/<minion_id>/start`. For historical reasons the minion also sends a similar event with an event tag like this: `minion_start`. This duplication can cause a lot of clutter on the event bus when there are many minions. Set `enable_legacy_startup_events: False` in the minion config to ensure only the `salt/minion/<minion_id>/start` events are sent.

The new `enable_legacy_startup_events` minion config option defaults to `True`, but will be set to default to `False` beginning with the 3001 release of Salt.

The Salt Syndic currently sends an old style `syndic_start` event as well. The syndic respects `enable_legacy_startup_events` as well.

### Failhard changes

It is now possible to override a global failhard setting with a state-level failhard setting. This is most useful in case where global failhard is set to `True` and you want the execution not to stop for a specific state that could fail, by setting the state level failhard to `False`. This also allows for the use of `onfail*-requisites`, which would previously be ignored when a global failhard was set to `True`. This is a deviation from previous behavior, where the global failhard setting always resulted in an immediate stop whenever any state failed (regardless of whether the failing state had a failhard setting of its own, or whether any `onfail*-requisites` were used).

### Pass Through Options to `file.serialize` State

This allows for more granular control over the way in which the dataset is serialized. See the documentation for the new `serializer_opts` and `deserializer_opts` options in the `file.serialize` state for more information.

### `file.patch` State Rewritten

The `file.patch` state has been rewritten with several new features:

- Patch sources can now be remote files instead of only `salt://` URLs
- Multi-file patches are now supported
- Patch files can be templated

In addition, it is no longer necessary to specify what the hash of the patched file should be.

### New `no_proxy` Minion Configuration

Pass a list of hosts using the `no_proxy` minion config option to bypass an HTTP proxy.

---

**Note:** This key does nothing unless `proxy_host` is configured and it does not support any kind of wildcards.

---

```
no_proxy: [ '127.0.0.1', 'foo.tld' ]
```

### Changes to `slack` Engine

The output returned to Slack from functions run using this engine is now formatted using that function's proper outputter. Earlier releases would format the output in YAML for all functions except for when states were run.

### Enhancements to `wtmp` Beacon

A new key, `action`, has been added to the events fired by this beacon, which will contain either the string `login` or `logout`. This will simplify reactors which use this beacon's data, as it will no longer be necessary to check the integer value of the `type` key to know whether the event is a login or logout.

Additionally, in the event that your platform has a non-standard `utmp.h`, you can now configure which type numbers indicate a login and logout.

See the [\*wtmp beacon documentation\*](#) for more information.

## Deprecated and Removed Options

### API Removed Arguments

Support for *LocalClient*'s `expr_form` argument has been removed. Please use `tgt_type` instead. This change was made due to numerous reports of confusion among community members, since the targeting method is published to minions as `tgt_type`, and appears as `tgt_type` in the job cache as well.

Those who are using the *LocalClient* (either directly, or implicitly via a *netapi module*) need to update their code to use `tgt_type`.

```
>>> import salt.client
>>> local = salt.client.LocalClient()
>>> local.cmd("*", "cmd.run", ["whoami"], tgt_type="glob")
{'jerry': 'root'}
```

### Minion Configuration Deprecated Option

The *master\_shuffle* configuration option is deprecated as of the 2019.2.0 release. Please use the *random\_master* option instead.

### Module Removed Options

- The *napalm\_network* module has been changed as follows:
  - Support for the `template_path` has been removed from *net.load\_template* function. This is because support for NAPALM native templates has been dropped.
- The *pip* module has been changed as follows:
  - Support for the `no_chown` option has been removed from *pip.install* function.
- The *trafficserver* module has been changed as follows:
  - The *trafficserver.match\_var* function was removed. Please use *trafficserver.match\_metric* instead.
  - The *trafficserver.read\_var* function was removed. Please use *trafficserver.read\_config* instead.
  - The *trafficserver.set\_var* function was removed. Please use *trafficserver.set\_config* instead.
- The *win\_update* module has been removed. It has been replaced by *win\_wua*.
- The *win\_wua* module has been changed as follows:
  - The *win\_wua.download\_update* and *win\_wua.download\_updates* functions have been removed. Please use *win\_wua.download* instead.
  - The *win\_wua.install\_update* and *win\_wua.install\_updates* functions have been removed. Please use *win\_wua.install* instead.
  - The *win\_wua.list\_update* function has been removed. Please use functions have been removed. Please use *win\_wua.get* instead.
  - The *win\_wua.list\_updates* function has been removed. Please use functions have been removed. Please use *win\_wua.list* instead.

## Pillar Removed Option

- The *vault* external pillar has been changed as follows:
  - Support for the `profile` argument was removed. Any options passed up until and following the first `path=` are discarded.

## Roster Removed Option

- The *cache* roster has been changed as follows:
  - Support for `roster_order` as a list or tuple has been removed. As of the 2019.2.0 release, `roster_order` must be a dictionary.
  - The `roster_order` option now includes IPv6 in addition to IPv4 for the `private`, `public`, `global` or `local` settings. The syntax for these settings has changed to `ipv4-*` or `ipv6-*`, respectively.

## State Removed Modules and Options

- The `docker` state module has been removed
  - In 2017.7.0, the states from this module were split into four separate state modules:
    - \* *docker\_container*
    - \* *docker\_image*
    - \* *docker\_volume*
    - \* *docker\_network*
  - The `docker` module remained, for backward-compatibility, but it has now been removed. Please update SLS files to use the new state names:
    - \* `docker.running` => *docker\_container.running*
    - \* `docker.stopped` => *docker\_container.stopped*
    - \* `docker.absent` => *docker\_container.absent*
    - \* `docker.network_present` => *docker\_network.present*
    - \* `docker.network_absent` => *docker\_network.absent*
    - \* `docker.image_present` => *docker\_image.present*
    - \* `docker.image_absent` => *docker\_image.absent*
    - \* `docker.volume_present` => *docker\_volume.present*
    - \* `docker.volume_absent` => *docker\_volume.absent*
- The *docker\_network* state module has been changed as follows:
  - The `driver` option has been removed from *docker\_network.absent*. It had no functionality, as the state simply deletes the specified network name if it exists.
- The deprecated `ref` option has been removed from the *git.detached* state. Please use `rev` instead.
- The `k8s` state module has been removed in favor of the *kubernetes* state module. Please update SLS files as follows:
  - In place of `k8s.label_present`, use *kubernetes.node\_label\_present*

- In place of `k8s.label_absent`, use `kubernetes.node_label_absent`
- In place of `k8s.label_folder_absent`, use `kubernetes.node_label_folder_absent`
- Support for the `template_path` option in the `netconfig.managed` `<salt.states.netconfig.managed>` state has been removed. This is because support for NAPALM native templates has been dropped.
- Support for the `no_chown` option in the `pip.installed` state has been removed.
- The `trafficserver.set_var` state has been removed. Please use `trafficserver.config` instead.
- Support for the `no_chown` option in the `:py:func`virtualenv.managed` `<salt.states.virtualenv.managed>` function has been removed.
- The `win_update` state module has been removed. It has been replaced by `win_wua`.
- Support for virtual packages has been removed from the `py:mod:pkg state` `<salt.states.pkg>`.

### Utils Removed Options

The `cloud` `utils` module had the following changes:

- Support for the `cache_nodes_ip` function in `salt utils` module has been removed. The function was incomplete and non-functional.

The `vault` `utils` module had the following changes:

- Support for specifying Vault connection data within a 'profile' has been removed. Please see the `vault execution module` documentation for details on the new configuration schema.

### Dependency Deprecations

Salt-Cloud has been updated to use the `pypsexec` Python library instead of the `winexe` executable. Both `winexe` and `pypsexec` run remote commands against Windows OSes. Since `winexe` is not packaged for every system, it has been deprecated in favor of `pypsexec`.

Salt-Cloud has deprecated the use `impacket` in favor of `smbprotocol`. This changes was made because `impacket` is not compatible with Python 3.

### SaltSSH Major Updates

SaltSSH now works across different major Python versions. Python 2.7 ~ Python 3.x are now supported transparently. Requirement is, however, that the SaltMaster should have installed Salt, including all related dependencies for Python 2 and Python 3. Everything needs to be importable from the respective Python environment.

SaltSSH can bundle up an arbitrary version of Salt. If there would be an old box for example, running an outdated and unsupported Python 2.6, it is still possible from a SaltMaster with Python 3.5 or newer to access it. This feature requires an additional configuration in `/etc/salt/master` as follows:

```
ssh_ext_alternatives:
  2016.3:
    py-version: [2, 6]           # Namespace, can be actually anything.
    path: /opt/2016.3/salt      # Constraint to specific interpreter version
    dependencies:              # Main Salt installation
                              # List of dependencies and their installation
    ↪paths
    jinja2: /opt/jinja2
    yaml: /opt/yaml
```

(continues on next page)

(continued from previous page)

```

tornado: /opt/tornado
msgpack: /opt/msgpack
certifi: /opt/certifi
singledispatch: /opt/singledispatch.py
singledispatch_helpers: /opt/singledispatch_helpers.py
markupsafe: /opt/markupsafe
backports_abc: /opt/backports_abc.py

```

It is also possible to use several alternative versions of Salt. You can for instance generate a minimal tarball using runners and include that. But this is only possible, when such specific Salt version is also available on the Master machine, although does not need to be directly installed together with the older Python interpreter.

SaltSSH now support private key's passphrase. You can configure it by:

- `--priv-passwd` for salt-ssh cli
- `salt_priv_passwd` for salt master configure file
- `priv_passwd` for salt roster file

## State Module Changes

### **salt** State Module (used in orchestration)

The `test` option now defaults to `None`. A value of `True` or `False` set here is passed to the state being run and can be used to override a `test: True` option set in the minion's config file. In previous releases the minion's config option would take precedence and it would be impossible to run an orchestration on a minion with test mode set to `True` in the config file.

If a minion is not in permanent test mode due to the config file and the 'test' argument here is left as `None` then a value of `test=True` on the command-line is passed correctly to the minion to run an orchestration in test mode. At present it is not possible to pass `test=False` on the command-line to override a minion in permanent test mode and so the `test: False` option must still be set in the orchestration file.

### **event.send** State

The `event.send` state does not know the results of the sent event, so returns `changed` every state run. It can now be set to return `changed` or `unchanged`.

### **influxdb\_user.present** Influxdb User Module State

The `password` parameter has been changed to `passwd` to remove the name collusion with the influxdb client configuration (`client_kwargs`) allowing management of users when authentication is enabled on the influxdb instance

Old behavior:

```

influxdb_user.present:
- name: exampleuser
- password: exampleuserpassword
- user: admin
- password: adminpassword

```

New behavior:

```
influxdb_user.present:
- name: exampleuser
- passwd: exampleuserpassword
- user: admin
- password: adminpassword
```

### **winrepo\_cache\_expire\_min** Windows Package Definitions Caching

The `winrepo_cache_expire_min` has been changed from 0 to 1800 (30 minutes) For example if you run highstate the package definitions are normally updated, however now if the package definitions are younger than `winrepo_cache_expire_min` (30 minutes) the package definitions will not be refreshed, reducing the amount of time taken to run a 2nd highstate. To get the old behaviour change the value back to 0 in the minion configuration file. This also effects the behaviour of other functions which default to refresh. The `pkg.refresh_db` will always refresh the package definitions.

### **LDAP External Authentication**

#### **freeipa groupattribute support**

Previously, if Salt was using external authentication against a freeipa LDAP system it could only search for users via the `accountattributename` field. This release add an additional search using the `groupattribute` field as well. The original `accountattributename` search is done first then the `groupattribute` allowing for backward compatibility with previous Salt releases.

### **Jinja Include Relative Paths**

When a jinja include template name begins with `./` or `../` then the import will be relative to the importing file.

Prior practices required the following construct:

```
{% from tpldir ~ '/foo' import bar %}
```

A more "natural" construct is now supported:

```
{% from './foo' import bar %}
```

Comparatively when importing from a parent directory - prior practice:

```
{% from tpldir ~ '/../foo' import bar %}
```

New style for including from a parent directory:

```
{% from '../foo' import bar %}
```

## salt-api

### salt-api Windows support

Previously, salt-api was not supported on the Microsoft Windows platforms. Now it is! salt-api provides a RESTful interface to a running Salt system. It allows for viewing minions, runners, and jobs as well as running execution modules and runners of a running Salt system through a REST API that returns JSON. See [Salt-API](#) documentation. .. \_Salt-API: <https://docs.saltproject.io/en/latest/topics/netapi/index.html>

## Logging Changes

### Include Job ID (JID) in Minion and Master Logs

The Job ID (JID) can now be optionally included in both the minion and master logs by including `jid` in either the `log_fmt_console` or `log_fmt_logfile` configuration option:

```
log_fmt_console: "[% (levelname)-8s] %(jid)s %(message)s"
```

This will cause the JID to be included in any log entries that are related to a particular Salt job. The JID will be included using the default format, `[JID: %(jid)s]` but can be overridden with the `log_fmt_jid` configuration item.

```
log_fmt_jid: "[JID: %(jid)s]"
```

## Security

### Windows runas changes

A password is no longer required with `runas` under normal circumstances. The `password` option is only needed if the minion process is run under a restricted (non-administrator) account. In the aforementioned case, a password is only required when using the `runas` argument to run command as a different user.

## New Modules

### Execution Modules

- `salt.modules.ciscoconfparse_mod`
- `salt.modules.jira`
- `salt.modules.google_chat`
- `salt.modules.iosconfig`
- `salt.modules.netmiko`
- `salt.modules.nxos_api`
- `salt.modules.peeringdb`
- `salt.modules.purefb`
- `salt.modules.pyeapi`

### Pillar Modules

- `netbox`

### Proxy Modules

- `salt.proxy.netmiko`
- `salt.proxy.nxos_api`
- `salt.proxy.pyeapi`

## 33.2.56 Salt 2019.2.1 Release Notes

Version 2019.2.1 is a bugfix release for *2019.2.0*.

### Known Issues

- **ISSUE #54751:** Proxy minion fails to start. Fix planned in 2019.2.2 release.
- **ISSUE #54762:** URIs with IPv6 addresses are broken, preventing master-minion communication in IPv6-only environments. Fix planned in 2019.2.2 release.
- **ISSUE #54776:** Minion fails to start when it contains `ping_interval` in minion configuration file. Fix planned in 2019.2.2 release.
- **ISSUE #54731:** Returners (except for default salt master returner) not loading properly in Py3. Fix planned in 2019.2.2 release.
- **ISSUE #54758:** salt-call state.show\_states gives "Passed invalid arguments" error when a sls defined in top.sls file is missing. Fix planned in 2019.2.2 release.
- **ISSUE #54765:** Jinja from import is broken. Fix planned in 2019.2.2 release.
- **ISSUE #54771:** Affects only Debian 10. pkgrepo.managed does not work if used with proxy (configured at salt-minion). No fix date available yet.
- **ISSUE #54759:** Deprecation warnings for pyzmq. No fix date available yet.

### Change to YAML Renderer

```
/etc/foo.conf:
  file.managed:
    - source: salt://foo.conf.jinja
    - template: jinja
    - context:
      data: {{ data }}
```

In 2019.2.0, the above SLS will result in an error message following changes to the YAML renderer that now require the new Jinja filter `tojson`.

```

/etc/foo.conf:
file.managed:
- source: salt://foo.conf.jinja
- template: jinja
- context:
  data: {{ data|tojson }}

```

In 2019.2.1, we introduce a new configuration option for both the Salt master and Salt minion configurations to be able to support the older YAML renderer. Using the option `use_yaml_loader_old` will allow the YAML renderer to function as before.

## Statistics

  - 72cb24c releasenotes 2019.2.1
- **PR #54409:** (dwoz) Point salt-call to correct multi-master configs @ 2019-09-04 20:08:24 UTC
  - 04e28cf Merge pull request #54409 from dwoz/mm\_log
  - e207de6 Point salt-call to correct multi-master configs
- **PR #54396:** (dwoz) Use different logging port for multimaster tests @ 2019-09-03 23:20:23 UTC
  - 2c281e0 Merge pull request #54396 from dwoz/multimaster\_logging
  - 104e0a0 Use different logging port for multimaster tests
- **ISSUE #54256:** (sleminov-tc) Empty salt api token file breaks maintenance process. (refs: #54325, #54324, #54388, #54376)
- **ISSUE #37945:** (gstachowiak) Missing exception handling in salt.master.Maintenance. Process never completes. (refs: #54325, #54324, #54388, #54376)
- **PR #54388:** (dwoz) 54256 re fix empty api token 2019.2.1 @ 2019-09-03 23:19:20 UTC
  - **PR #54325:** (waynew) Delete bad API token files (refs: #54388)
  - **PR #54324:** (waynew) Delete bad API token files (refs: #54325, #54388)
  - 730a007 Merge pull request #54388 from dwoz/54256-re-fix-empty-api-token-2019.2.1
  - 80651d3 Fix linter
  - 982ed3d Delete bad API token files
- **ISSUE #54256:** (sleminov-tc) Empty salt api token file breaks maintenance process. (refs: #54325, #54324, #54388, #54376)
- **ISSUE #37945:** (gstachowiak) Missing exception handling in salt.master.Maintenance. Process never completes. (refs: #54325, #54324, #54388, #54376)
- **PR #54376:** (dwoz) Move tokens in place with an atomic operation @ 2019-09-03 20:40:50 UTC
  - 11016ce Merge pull request #54376 from dwoz/tmp\_token
  - 0b28c60 Fix linter complaints
  - 8e33343 Move tokens in place with an atomic operation
- **PR #54386:** (twangboy) Fix unit.utils.test\_win\_dacl (2019.2.1) @ 2019-09-03 16:57:25 UTC
  - 5161203 Merge pull request #54386 from twangboy/fix\_test\_win\_dacl\_2019.2.1
  - b8fa7d3 Sort the perms
- **PR #54355:** (s0undt3ch) [2019.2.1] [GitPillar Tests] Have the started processes log instead of just writing to stdout/stderr @ 2019-08-29 23:26:50 UTC

- b4caaad Merge pull request #54355 from s0undt3ch/hotfix/test-daemons-2019.2.1
- 561c0a2 Have the started processes log instead of just writing to stdout/stderr
- c2a3115 Don't overwrite the stderr logger
- PR #54353: (cmcmarrow) adds @skipIf not windows @ 2019-08-29 19:33:11 UTC
  - ce5b109 Merge pull request #54353 from cmcmarrow/2019\_win\_system\_skip
  - 8e28074 adds @skipIf not windows
- PR #54338: (dwoz) Log server closes completely during shutdown @ 2019-08-29 17:14:05 UTC
  - 94c03e5 Merge pull request #54338 from dwoz/logging\_fixup
  - a3e227e Log server closes completely during shutdown
- PR #54327: (garethgreenaway) [2019.2.1] Catch the AccessDenied exception and continue when running under Py3. @ 2019-08-29 16:59:34 UTC
  - 490ee69 Merge pull request #54327 from garethgreenaway/more\_test\_program\_fixes
  - 97b4d86 Catch the AccessDenied exception and continue when running under Py3.
- PR #54316: (Akm0d) Azure cleanup @ 2019-08-27 16:14:09 UTC
  - bb911c3 Merge pull request #54316 from Akm0d/azure-cleanup
  - 2072773 pass longer timeout to msazure destroyinstance
  - 34eb477 Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into azure-cleanup
  - 7ae48b1 Allow azure tests enough time to clean up interfaces
  - b45ae74 Clean up azure instances properly
- PR #54314: (garethgreenaway) [2019.2.1] Do not raise the exception in testprogram.py @ 2019-08-26 23:59:37 UTC
  - 9334e4e Merge pull request #54314 from garethgreenaway/testprogram\_access\_denied\_do\_not\_raise
  - a53bacb Do not raise the exception if a process can not be access, just continue
- PR #54305: (dwoz) Fix wart in test\_process tests on windows @ 2019-08-26 17:59:12 UTC
  - 71fb051 Merge pull request #54305 from dwoz/winfix
  - 4e68860 Fix wart in test\_process tests on windows
- PR #54303: (dwoz) Fix wart in periodic callback interval @ 2019-08-24 20:04:35 UTC
  - 4d80f0a Merge pull request #54303 from dwoz/periodic\_cb
  - bf5f7de Fix wart in periodic callback interval
- ISSUE #54219: (KChandrashekhar) integration.shell.test\_call.py and tests/integration/shell/test\_proxy.py (refs: #54259)
- ISSUE #54153: (KChandrashekhar) Ubuntu 16.04 Proxy failures (refs: #54259)
- PR #54259: (dwoz) Call os.fork less to avoid race conditions @ 2019-08-24 02:12:42 UTC
  - 5838851 Merge pull request #54259 from dwoz/less\_forking
  - bf4d0dd Fix process list tests on windows py3
  - 316ec78 Allow more time for slow test
  - 9baf86f Do not remove attributes from process class

- e7b6aa8 Clean up cruft
- ed7103a Attempt to fix integration.shell.test\_call test
- 659c805 Change noise log to debug
- 0660b1a Clean up typos
- 9f1fe42 Call os.fork less to avoid race conditions
- **ISSUE #50814:** (doesitblend) Minion continues trying down master (refs: #54239, #53417)
- **ISSUE #49680:** (doesitblend) Beacon events handled differently than event.send (refs: #53344, #54239)
- **ISSUE #49663:** (doesitblend) Beacon only fires to single random master in HA mode (refs: #53344, #54239)
- **PR #54247:** (DmitryKuzmenko) 2019.2.1 with multimaster bb fixes @ 2019-08-23 20:19:19 UTC
  - **PR #54239:** (DmitryKuzmenko) Multimaster tests with bb fixes (refs: #54247)
  - **PR #53848:** (DmitryKuzmenko) Features/multimaster tests (refs: #54239)
  - **PR #53417:** (DmitryKuzmenko) Multimaster minion hang on fire\_master (refs: #54239, #53848)
  - **PR #53344:** (DmitryKuzmenko) Run beacons on the only one minion instance. Return to all masters. (refs: #54239, #53848)
  - 531f3aa Merge pull request #54247 from DSRCorporation/2019.2.1\_with\_multimaster\_bb\_fixes
  - 62cd8cd Merge branch '2019.2.1' into 2019.2.1\_with\_multimaster\_bb\_fixes
- **PR #54235:** (github-abcde) Fix 46034 2019.2.1 @ 2019-08-22 22:32:09 UTC
  - 993c341 Merge pull request #54235 from ogd-software/fix\_46034-2019.2.1
  - 93bd30d Add alternative fix for "!" stomping Apparently (after watching Jenkins tests fail), what yaml.safe\_load returns depends not on the version of salt, but on some other external dependency. Because of this, fix both possible return values.
  - c95dd4d Add test for this specific bugfix
  - efc29d8 Prevent yamlify\_arg from stomping "!"
- **PR #54282:** (Akm0d) clean up renamed instances in the teardown @ 2019-08-22 22:13:51 UTC
  - 5d1a4d0 Merge pull request #54282 from Akm0d/clean-up-renamed
  - 11c1117 Removed redundant parenthesis
  - 802235d don't delete shutting down ec2 instances
  - 3602942 reversed the order in which an instance was renamed
  - 5500ede renamed \_alt\_name function
  - 23beab4 clean up renamed instances in the teardown
- **PR #54252:** (s0undt3ch) [2019.2.1] More control on spun test daemons on git pillar tests @ 2019-08-22 22:13:08 UTC
  - c181f5a Merge pull request #54252 from s0undt3ch/hotfix/git-pillar-2019.2.1
  - 4eb85fa Skip tests on RHEL family < 7
  - 64a1be8 Don't even go through the transport to get the system grains
  - d0f8efa Don't keep recreating the git repos. Restore from backup.
  - 6114e9d All prep work is done in setUpClass.

- 5b030dd Daemons are now started/stopped on tests, not by salt
- ed60f0d We don't actually need grains
- 911446d Lock `uwsgi` requirement.
  - \* 805f0ac Merge branch '2019.2.1' into 2019.2.1\_with\_multimaster\_bb\_fixes
- PR #54214: (Ch3LL) Remove unnecessary logging from minion.py @ 2019-08-22 18:08:26 UTC
  - b40cdbf Merge pull request #54214 from Ch3LL/fix\_logging
  - 8fd24cf Remove unnecessary logging from minion.py
    - \* 9d28098 Merge branch '2019.2.1' into 2019.2.1\_with\_multimaster\_bb\_fixes
- PR #54277: (dwoz) Win runas plus @ 2019-08-21 23:59:16 UTC
  - de77762 Merge pull request #54277 from dwoz/win\_runas\_plus
  - f719591 Update tests
  - d8749d9 Do not remove attributes from process class
  - ac5a2a4 Only close handle if it got created

  - 2c4afa0 Merge pull request #54274 from felippeb/2019.2.1
  - 9c0b216 #53931 never fail on codecov curls
- PR #54264: (dwoz) Fix unit utils jinja when run on their own @ 2019-08-21 17:22:10 UTC
  - b3c70c3 Merge pull request #54264 from dwoz/jinja\_units
  - 10a6d53 Fix unit utils jinja when run on their own
- PR #54266: (Akm0d) Fix incorrect types on failing cloud tests @ 2019-08-21 17:14:40 UTC

- 308ba55 Merge pull request #54266 from Akm0d/cloud\_test\_ultimate\_fix
- ff2125a Invert assertion to test for instance gone
- 82136a8 test for ec2 instance shutting down
- 283f631 run cloud --query if delete string is not available
- 33e6b6d changed deprecated assertEquals
- 41e6bc8 Cloud tests run correctly everywhere
- 03a8b2c reverted literal\_eval
- **PR #54251:** (Akm0d) reduced query calls to salt-cloud @ 2019-08-20 20:10:59 UTC
  - 25d0b52 Merge pull request #54251 from Akm0d/cloud\_test\_optimization
  - 5fe6bfc Optimized salt-cloud queries
  - 43418a4 Merge pull request #7 from Ch3LL/cloud\_provider\_files
    - \* b93944b Remove joyent config cloud test files
    - \* bd37849 Rename provider azure-config to azurearm-config
  - e7c06cb Added longer delays for ec2 tests
  - 5ceb47e Correctly check for GCE and EC2 deletion
  - 52c178c Added pretty yaml formatting to cloud-test logs
  - 4fc5e9e re-fixed simultaneous GCE tests
  - 326e9f2 Merge pull request #6 from Ch3LL/cloud\_provider\_files
    - \* adb1464 fix pylint
    - \* 51ce819 Move provider config setup into Setup/Teardown class
  - e58b40a Merge pull request #5 from Ch3LL/cloud\_provider\_files
    - \* ab8adcc Only use the provider conf.d file we are testing
  - 76609ad Merge branch '2019.2.1' into cloud\_test\_optimization
  - f764bc0 Clean up expensive queries
  - b3d02df reduced query calls to salt-cloud
- **PR #54240:** (Ch3LL) Fix TypeError python3 in get\_image\_id ec2 cloud @ 2019-08-20 20:10:01 UTC
  - ba81ca3 Merge pull request #54240 from Ch3LL/get\_image\_ec2
  - a3a39f3 Use ami variable instead in test
  - dc1ae52 Fix TypeError python3 in get\_image\_id
    - \* d6ad475 Merge branch '2019.2.1' into 2019.2.1\_with\_multimaster\_bb\_fixes
- **PR #54246:** (dwoz) Cut down on log noise @ 2019-08-19 17:20:03 UTC
  - 8404ec2 Merge pull request #54246 from dwoz/log\_noise
  - e572711 Cut down on log noise
- **PR #54245:** (dwoz) Fix the sshd pid file @ 2019-08-19 17:19:32 UTC
  - 5b3e925 Merge pull request #54245 from dwoz/sshd\_pid\_file
  - df95347 Fix the sshd pid file

- **PR #54237:** (dwoz) Do not dup2 things without fileno @ 2019-08-18 17:13:29 UTC
  - 268803b Merge pull request #54237 from dwoz/dup2
  - 2ebd22b Fix linter
  - 63c616a Do not dup2 things without fileno
    - \* 0b33498 Workaround for beacons.list\_available slowness.
    - \* b7a1058 Minor: Better support of named multimaster tests.
    - \* a5cccdf Minor: remove unneeded logging
    - \* 314bbb3 Support tcp transport in multimaster tests. Minor beacon update.
    - \* fcb8ff0 Properly set HAS\_IPTABLES from \_\_virtual\_\_ return.
    - \* a75db01 Multimaster related fixup: don't run test engine on minions
    - \* 8a88542 Multimaster beacons fix: put list into a dict to fire on the bus
    - \* 790fb41 Inotify beacons test logging and cleanup update
    - \* d84c8851 Inotify beacon test fixes and improvements.
    - \* 472ffc0 Give minion more time to handle beacon creation.
    - \* 17ceee0 Fixed Lint errors
    - \* 0bcf53c Fixed the unicode and timing inotify test issues.
    - \* f17bcf3 Improved assertion error diagnostic for master down test.
    - \* db0bae8 Run multimaster as well tests when no specific group is set
    - \* 723f363 Ignore the multimaster minion subgroup test in module names test.
    - \* 612191c Fixed lint failures
    - \* c1efae6 Multimaster test for events handling on master disconnect
    - \* 1654fe8 Multimaster inotify beacons test
    - \* 65dc47c Multimaster tests environment and test module test.
    - \* 2c178b0 Moved annoying message to trace log level.
    - \* 3e497c1 Handle minion events asynchronously.
    - \* 909323a Tests fixes
    - \* 6dad18f Cleanup event object
    - \* 2bf55be Run beacons on the only one minion instance. Return to all masters.
- **PR #54121:** (Akm0d) Refactored cloud tests @ 2019-08-16 17:24:14 UTC
  - 27d89bd Merge pull request #54121 from Akm0d/gce\_cloud\_test
  - 48c57b3 Try multiple times to detect deletion of an instance
  - 74300eb return a valid set
  - 2d63b87 Wait for an instance to be fully created if necessary
  - 83ad8b3 Merge branch '2019.2.1' of github.com:SaltStack/salt into gce\_cloud\_test
- **ISSUE #54174:** (dwoz) SignalHandlingMultiprocessingProcess bugs (refs: #54204)

- PR #54223: (dwoz) Test verify logs without a whole minion @ 2019-08-16 00:46:09 UTC
  - 99a8fc5 Merge pull request #54223 from dwoz/7754\_test\_removal
  - 4be711e Fix up linter warts
  - 7573826 Remove crufty un-needed tests
  - effa77d Test verify logs without a whole minion
    - \* b40f41f Revert fallback to default signals change
    - \* 1d83b10 Fix signal handling in subprocesses
      - f90fe66 Reverted foo/bar creds per #46265
      - 3f56bad Reduced the amount of informtaion in debuggings tatements
      - de53bf0 Merge branch '2019.2.1' of github.com:SaltStack/salt into gce\_cloud\_test
- PR #54203: (dwoz) Run transport test loops in single thread @ 2019-08-15 20:10:20 UTC
  - 8d440e0 Merge pull request #54203 from dwoz/transport\_tests
  - 22b9d38 Run transsport test loops in single thread
    - \* f6180a6 Even better logging of errors
    - \* a15dc4b better formatting and error reporting
    - \* 51fbc2a better logging on instance create failure
    - \* 1f7dd52 removed hack fixes from gce
    - \* 31cdc7c WAR ROOM SKIP GCE TESTS
    - \* 7d603be hasattr cannot find parent properties starting with \_\_
    - \* 686cab9 Separated assertInstanceDestroy and \_destry\_instance
    - \* 158a38c Revert "Removed subclass from cloud name"
    - \* b7cf43d Removed subclass from cloud name
    - \* 8c5eb18 fixed pylint error on format string
    - \* 59e20bc Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- PR #54191: (garethgreenaway) [2019.2.1] Addition logging in testprogram used by integration.shell.test\_minion.MinionTest.test\_exit\_status\_correct\_usage @ 2019-08-13 21:44:41 UTC
  - a05018e Merge pull request #54191 from garethgreenaway/test\_program\_test\_mininion
  - 8463f84 Adding some additional logging when the call to "proc\_cmdline = proc.cmdline()" results in a AccessDenied exception, so we can see what the process is and who the process is running as.
- PR #54202: (waynew) Only run one filter test @ 2019-08-13 21:33:32 UTC
  - e5e9299 Merge pull request #54202 from waynew/shorter-jinja-ssh-tests
  - c333ac8 Only run one filter test
    - \* 5912f24 Switched to Azurearm over msazure
- PR #54172: (Ch3LL) Migrate from azure to azurearm tests @ 2019-08-13 20:07:34 UTC

- a13cb3e Merge pull request #54172 from Ch3LL/azurearm\_tests
- 465523f Migrate from azure to azurearm tests
- ISSUE #50535: (wyardley) salt errors with current azure-storage because of no version set (refs: #50567)
- PR #54173: (Ch3LL) Cherry Pick #50567 and #53238 into 2019.2.1 @ 2019-08-13 20:07:09 UTC
  - PR #53238: (nicholasmhughes) Azure: Fixed ability to pass SSH key to Linux VMs (refs: #54173)
  - PR #50567: (rombert) azurefs: gracefully handle AttributeError (refs: #54173)
  - 39d0c59 Merge pull request #54173 from Ch3LL/azure\_fixes
  - 9052eaf reverting log string handling
  - a1a61ee fixed ability to pass ssh key to Linux VMs
  - 4a141a1 azurefs: gracefully handle AttributeError
    - \* 6fa28de fixed underscore
      - c35379a Moved finding installer into class
    - \* 95484f8 Moved finding installer into class
    - \* a86ae34 moved installer finder to SetUp method
    - \* 933964a removed default user/pass from profitbricks test file
    - \* 2a2437d fixed dictionary access
    - \* b9ee411 Fixed broken tests
    - \* 80efd26 fixed misspelled provider information
    - \* 511779b removed unused imports
    - \* 1cd1c13 setUp all cloud tests the same way
    - \* d322408 Got rid of unnecessary delay
    - \* 98ba18c fixed pylint error
    - \* c34c17e Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- PR #54178: (dwoz) Fix flaky set\_computer\_name in mac\_system module @ 2019-08-12 18:26:40 UTC
  - 19f4d5e Merge pull request #54178 from dwoz/mac\_computer\_name
  - e51100e Fix skip on non macos platforms
  - a3a9d92 Fix linter
  - c499d44 Revert unwanted flaky from non computer name tests
  - 941fcc8 Fix flaky set\_computer\_name in mac\_system module
    - \* 90e8350 Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- PR #54180: (dwoz) Point test-kitchen to my keepalive\_maxcount branch @ 2019-08-12 18:18:26 UTC
  - 6fe6799 Merge pull request #54180 from dwoz/keepalive\_maxcount
  - dc9ee21 Add reminder about kitchen version
  - 19a1f1b Point test-kitchen to my keepalive\_maxcount branch
    - \* 60f8351 Fixed failing Ec2 Tests
    - \* e2f085c removed py3-only function call

- \* 4406c57 fixed lint errors, more descriptive fails
- \* 6840d5f assert instances exist in unified way
- \* 03da233 skip EOL joyent tests, secure delete instances
- \* 3123bb1 Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- **ISSUE #53306:** (doesitblend) Fully Qualify CMD on Windows Minions (refs: #53311, #54033)

    - \* 14b7539 added back print statements for easy debug
    - \* 823b3b2 Removed print statements and broken re
    - \* 9696ed9 experiment with subclass names
    - \* 2fa6157 more verbose instance names based on test
    - \* 2acb2df undercased non-const variable and added print statements
    - \* c5e875d Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- **PR #54001:** (garethgreenaway) [2019.2.1] Porting metaproxy changes in #50183 to 2019.2.1 @ 2019-08-08 04:24:31 UTC
  - **PR #50183:** (cro) Allow proxy minion types to be dynamically loaded (refs: #54001)
  - 584e3f2 Merge pull request #54001 from garethgreenaway/add\_metaproxy\_2019\_2\_1
  - 8353467 Merge branch 'add\_metaproxy\_2019\_2\_1' of github.com:garethgreenaway/salt into add\_metaproxy\_2019\_2\_1
    - \* 1892d86 Merge branch '2019.2.1' into add\_metaproxy\_2019\_2\_1
  - ab72e1b Adding unit.test\_proxy\_minion to ignore list
  - 09f6fed Removing match tests, functionality does not exist in 2019.2.1
  - 4af95e4 Adding tests to ensure \_metaproxy\_call to called when ProxyMinion objects are created.
  - d162a88 Adding salt/metaproxy/proxy.py and tests/unit/modules/test\_match.py

- 51726b1 Porting metaproxy changes in #50183 to 2019.2.1
- **ISSUE #51008:** (cdalvaro) cwd option not working with cmd.run and runas (refs: #52632, #54079)
- **PR #54136:** (ScoreUnder) Fix cmd.run on MacOS (rebased) @ 2019-08-08 04:20:31 UTC
  - **PR #54079:** (ScoreUnder) Fix cmd.run on MacOS -- wrong environment variables (refs: #54136)
  - **PR #52632:** (cdalvaro) Prevent shell injection as root with cmd.run on macOS (refs: #54079)
  - **PR #47212:** (weswhet) fix macOS running as user. (refs: #54079)
  - bf863d0 Merge pull request #54136 from ScoreUnder/2019.2.1-patch-macos-cmd.run
  - 1182eb9 Add integration test justifying strange use of braces after cd in cmd.run
  - 733d2e7 Fixes to ITs
  - da38993 Add integration tests for cwd/runas changes on MacOS
  - ab8b39c Fix environment in cmd.run runas on MacOS
    - \* c9cb18f Don't call potentially missing shade library (#53734)
    - \* 5ef8414 Added more verbose logging to cloud tests
    - \* 2f3942f better logging and fail messages
    - \* 9454f4c Fixed pylint errors and temporary print statements
    - \* fd13ce1 Further refactored cloud test code
    - \* b03cc48 Assume the instance exists and needs to be deleted
    - \* 0991ff5 fixed pylint errors and failed tests
    - \* 55e502a Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into gce\_cloud\_test
- **PR #53974:** (Ch3LL) [2019.2.1] Add pygit2 requirement @ 2019-08-06 17:32:05 UTC
  - e268b95 Merge pull request #53974 from Ch3LL/add\_pygit2
  - 11864a0 Merge branch '2019.2.1' into add\_pygit2
  - d1b1452 Merge branch '2019.2.1' into add\_pygit2
  - a5698cc Merge branch '2019.2.1' into add\_pygit2
  - 7dd97a6 Merge branch '2019.2.1' into add\_pygit2
  - 358974a Skip Pygit2 tests on windows
  - bc64961 Use accurate file:/// URI on windows for gitfs tests
  - 894f958 Fix GitFS support for pygit2 >= 0.28.0
  - 4580030 [2019.2.1] Add pygit2 requirement
    - \* 4009bb5 fixed pylint errors
    - \* 459b16d put cloudtest base in separate file so that only one change needs to be made
    - \* 8e72335 Merge branch 'gce\_cloud\_test' of github.com:Akm0d/salt into gce\_cloud\_test
      - 0e2621e Merge branch '2019.2.1' into gce\_cloud\_test
    - \* 9f98b16 finished merge
- **PR #54108:** (dwoz) More robust azure instance deletion @ 2019-08-03 03:58:20 UTC
  - 46f5e2e Merge pull request #54108 from dwoz/azure\_test

- 754b719 Fix linter
- 773235d Fix missing time import
- 5a8f2ec More robust azure instance deletion
- **PR #54017:** ([dmurphy18](#)) Allow for main thread having terminated pid, before ThreadPoolExecutor threads @ 2019-08-02 18:11:48 UTC
  - 2cb5a0b Merge pull request #54017 from dmurphy18/fix\_deb9\_build90\_tests
  - 2866520 Skip process kill tests on Windows
  - 5577f14 Clean up lint errors
  - 4ca709e Merge branch '2019.2.1' into fix\_deb9\_build90\_tests
  - 264c767 Merge pull request #1 from dwoz/fix\_deb9\_build90\_tests
    - \* 9bb9466 Add unit tests for weird pid does not exist cases
    - \* 64d9752 Add warning messages to help determine why pids do not exist
  - 406d382 Adjusted for review comments
  - 2d20fbc Adjusted try/except statements on process checking
  - e189177 Removed typos
  - 2e3ca43 Updated for review comments
  - 68c29af Allow for main thread having terminated pid, before ThreadPoolExecutor threads
    - \* e3158c8 refactored all cloud tests
    - \* 194e0c7 Refactored GCE cloud test
- **PR #54080:** ([dmurphy18](#)) Disabling random website tests till allow for quota usage @ 2019-07-31 21:16:54 UTC
  - 4e2efcd Merge pull request #54080 from dmurphy18/u1804\_py3\_random\_skip
  - 0660e6e Disabling random website tests till allow for quota usage
- **PR #54063:** ([twangboy](#)) Make the skip apply to any system missing crypt @ 2019-07-30 19:22:07 UTC
  - dbbbcc9 Merge pull request #54063 from twangboy/fix\_test\_pycrypto\_2019.2.1
  - 6fcf035 Make the skip apply to any system missing crypt
- **PR #54050:** ([cmcmarrow](#)) fixes integration terminate error @ 2019-07-30 13:38:55 UTC
  - 4df6271 Merge pull request #54050 from cmcmarrow/integration\_terminate\_fix
  - ebb07f4 Merge branch '2019.2.1' into integration\_terminate\_fix
- **PR #54057:** ([dmurphy18](#)) Added support for is\_fedora and skip Minion test test\_issue\_7754 on Fedora @ 2019-07-29 22:41:25 UTC
  - 9d1bd63 Merge pull request #54057 from dmurphy18/fix\_fedora30\_test
  - 30f3bda Added support for is\_fedora and skip Minion test test\_issue\_7754
  - b3293a9 Merge branch '2019.2.1' into integration\_terminate\_fix
- **ISSUE #53948:** ([KChandrashekhar](#)) integration.shell.test\_call.CallTest.test\_issue\_2731\_masterless (refs: #54040)

- **PR #54040:** ([waynew](#)) Remove dead test @ 2019-07-29 17:23:45 UTC

- 5d3bcd7 Merge pull request #54040 from waynew/remove-dead-test
- e9a5a57 Remove dead test
  - \* ba3e867 Merge branch '2019.2.1' into integration\_terminate\_fix
- PR #54051: (twangboy) Skip get time test @ 2019-07-29 16:54:50 UTC
  - 70ffcec Merge pull request #54051 from twangboy/fix\_test\_system
  - ceaba05 Skip get time test
- PR #54038: (Ch3LL) Python3 digital ocean test fix: to\_str on key @ 2019-07-29 16:54:19 UTC
  - 4aed833 Merge pull request #54038 from Ch3LL/do\_py3\_fix
  - f7346db Python3 digital ocean test fix: to\_str on key
    - \* 05cd93f fixes integration terminate error
    - \* 69c3106 fixes integration terminate error
- PR #53735: (twangboy) Fix Windows tests in test\_system @ 2019-07-26 22:38:28 UTC
  - 3cedacd Merge pull request #53735 from twangboy/fix\_test\_system
  - a9e9c97 Add timeouts and account for those in assert
  - d3a160e Merge branch '2019.2.1' into fix\_test\_system
  - f95f0e7 Merge branch '2019.2.1' into fix\_test\_system
  - 87e02b8 Use setUpClass
  - 6a685bd Fix some tests in the Windows Class
- PR #53953: (Ch3LL) Send SIGTERM to webserver in teardown of gitfs tests @ 2019-07-25 21:12:42 UTC
  - cc1cda1 Merge pull request #53953 from Ch3LL/improve\_git\_test
  - 347ea1e Use Sigkill and add time.sleep before check
  - 637bf95 Merge branch '2019.2.1' into improve\_git\_test
  - c0be147 Send SIGTERM webserver during teardown of gitfs tests
  - b776c0c Check if gitfs server fails to setup for tests
- PR #53999: (Ch3LL) Generate new key each time for digital ocean key test @ 2019-07-25 21:07:45 UTC
  - 2324167 Merge pull request #53999 from Ch3LL/fix\_digital\_ocean
  - b0b6e3b Generate new key each time for digital ocean key test
- PR #53970: (garethgreenaway) [2019.2.1] Adding a WAR ROOM Skip for test\_directory\_clean\_require\_with\_name @ 2019-07-25 21:03:49 UTC
  - 32fec66 Merge pull request #53970 from garethgreenaway/osx\_skip\_test\_directory\_clean\_require\_with\_name
  - 362b84a Adding a WAR ROOM Skip for test\_directory\_clean\_require\_with\_name
- PR #54003: (dwoz) War room skip for tcp build @ 2019-07-24 22:52:18 UTC
  - 213dfff Merge pull request #54003 from dwoz/skip\_test
  - 6cdb8fa War room skip for tcp build
- PR #53897: (cmcmarrow) patches salt grains locale\_info decode error @ 2019-07-23 13:19:00 UTC
  - 048c097 Merge pull request #53897 from cmcmarrow/timezone\_fix

- d9e402d Merge branch '2019.2.1' into timezone\_fix
- **PR #53920:** (s0undt3ch) [2019.2.1] Update CI pipelines. Remove old jenkins cruft. @ 2019-07-20 12:33:01 UTC
  - 9a846b4 Merge pull request #53920 from s0undt3ch/hotfix/ci-pipelines-2019.2.1
  - b09963b Update CI pipelines. Remove old jenkins cruft.
- **PR #53728:** (garethgreenaway) [2019.2.1] Disabling test\_get\_set\_computer\_name on OS X and Py3 @ 2019-07-19 17:18:33 UTC
  - 15accefc Merge pull request #53728 from garethgreenaway/2019\_2\_1\_mac\_system\_disable\_test\_get\_set\_computer\_name
  - a6d853c Merge branch '2019.2.1' into 2019\_2\_1\_mac\_system\_disable\_test\_get\_set\_computer\_name
  - 5d537ed Missing six import. Updating skip message.
  - ac6dccd Disabling test\_get\_set\_computer\_name on OS X and Py3.
- **PR #53913:** (garethgreenaway) [2019.2.1] skip test\_issue\_2594\_non\_invalidated\_cache on MacOS @ 2019-07-19 17:17:36 UTC
  - a54ec89 Merge pull request #53913 from garethgreenaway/disable\_test\_issue\_2594\_non\_invalidated\_cache\_macos
  - c65c5d5 Skip the test test\_issue\_2594\_non\_invalidated\_cache on MacOS where it is flakey.
- **PR #53902:** (twangboy) Skip tests that modify date or time @ 2019-07-18 17:53:31 UTC
  - b091eb7 Merge pull request #53902 from twangboy/skip\_dt
  - 76cf936 Skip tests that modify date or time
- **PR #53901:** (s0undt3ch) [2019.2.1] Don't fail when combining coverage files @ 2019-07-18 17:46:32 UTC
  - 22b7b1a Merge pull request #53901 from s0undt3ch/hotfix/wrap-coverage-combine
  - b459a48 Don't fail when combining coverage files
- **PR #53542:** (dwoz) Fix leak of SaltMessageClient instances when using tcp transport @ 2019-07-18 17:44:44 UTC
  - 84e798a Merge pull request #53542 from dwoz/tcp\_leak
  - 3daeb4f Update TCP pipelines
  - 52f9556 Merge branch '2019.2.1' into tcp\_leak
  - f5313fd Fix tcp message client test
  - 3419bf5 Merge branch '2019.2.1' into tcp\_leak
  - 3125cd3 Merge branch '2019.2.1' into tcp\_leak
  - 9a33582 Merge branch '2019.2.1' into tcp\_leak
  - 7eb5d41 Merge branch '2019.2.1' into tcp\_leak
  - 481372b Fix torando loop thread issue
  - aff15d4 Fix linter wart
  - 9606db7 Comment the tcp message client test better
  - dcf576f Add unit test for tcp message client close method
  - 4420556 Download artifacts for tcp jobs
  - e6a09dd Merge remote-tracking branch 'origin/tcp\_leak' into tcp\_leak
    - \* f484f3f Merge branch '2019.2.1' into tcp\_leak

- 4a37234 Add tcp suffix to github notifications
- 4a2848b Add transport PR tests
- 9a4b407 Fix leak of SaltMessageClient instances when using tcp transport
  - \* 592f3fe undo test
  - \* bc550ad wip pytest test david
  - \* 75571e4 fixes timezone decode error
  - \* d041660 fixes timezone decode error
  - \* 1ddd1a9 fixes timezone decode error
  - \* e75dafa patches timezone grain
  - \* eaca473 patches salt grains locale\_info decode error

  - 3db4ddb Merge pull request #53697 from s0undt3ch/features/f30-reqs-2019.2.1
  - 36198cd Delete Opensuse 42 static requirements
  - 4413626 Delete Fedora 28 static requirements
  - 41809e5 Add Fedora 30 requirements files
- **PR #53680:** (Ch3LL) Pytest 5.0 contextmanager str: call value on ExceptionInfo objects @ 2019-07-04 00:12:56 UTC
  - f5c5da4 Merge pull request #53680 from Ch3LL/pytest\_5\_changes

- b5e2b0b Merge branch '2019.2.1' into pytest\_5\_changes
- **PR #53682:** (twangboy) Fix compare issue in lgpo state module @ 2019-07-03 04:43:22 UTC
  - 727843c Merge pull request #53682 from twangboy/fix\_lock\_1740\_lgpo
  - 62450db Merge branch '2019.2.1' into fix\_lock\_1740\_lgpo
  - f6276a3 Fix compare issue in lgpo state module
    - \* 110b953 Pytest 5.0 contextmanager str: call value on ExceptionInfo objects
    - \* b71b655 Merge forward #52065
    - \* 023c47d Fix typo
    - \* 43dd7b3 Merge Forward #52593
- **PR #53678:** (twangboy) Fix LGPO when string object is None @ 2019-07-02 23:47:05 UTC
  - 491bfa8 Merge pull request #53678 from twangboy/fix\_lock\_1688\_lgpo
  - 7b05bf8 Merge branch '2019.2.1' into fix\_lock\_1688\_lgpo
- **PR #53220:** (twangboy) Don't remove the pythonwin directory (2019.2.1) @ 2019-07-02 22:43:43 UTC
  - 4a4a91b Merge pull request #53220 from twangboy/fix\_pywin32\_2019.2.1
  - 748bf1c Merge branch '2019.2.1' into fix\_pywin32\_2019.2.1
- **PR #53614:** (Ch3LL) Increase flaky attempts on mac tests using systemsetup @ 2019-07-02 21:33:56 UTC
  - c2befe2 Merge pull request #53614 from Ch3LL/mac\_flaky
  - 5460031 Merge branch '2019.2.1' into mac\_flaky
  - 7dcaaf0 Increase flaky attempts on mac tests using systemsetup
- **PR #53624:** (Ch3LL) Allow yaml list notation for nodegroup expansion @ 2019-07-02 21:32:43 UTC
  - 02461cb Merge pull request #53624 from Ch3LL/nodegroup\_group\_list
  - 475d904 Merge branch '2019.2.1' into nodegroup\_group\_list
  - fbb15cd Add nodegroup list test
  - ee59d39 Merge branch '2019.2.1' into nodegroup\_group\_list
  - d236bd4 Allow yaml list notation for nodegroup expansion
- **PR #53562:** (Ch3LL) Move create key call into try/except in Digital Ocean key test @ 2019-07-02 16:08:08 UTC
  - 8857dbd Merge pull request #53562 from Ch3LL/do\_key\_test
  - 315eb35 Merge branch '2019.2.1' into do\_key\_test
  - 75ac708 Merge branch '2019.2.1' into do\_key\_test
  - 128ba07 Move create key call into try/except in Digital Ocean key test
    - \* 22d4a3a Merge branch '2019.2.1' into fix\_pywin32\_2019.2.1
    - \* 6bb6df7 Merge branch '2019.2.1' into fix\_pywin32\_2019.2.1
    - \* 534c984 Merge branch '2019.2.1' into fix\_pywin32\_2019.2.1
    - \* 382c637 Merge branch '2019.2.1' into fix\_pywin32\_2019.2.1
    - \* fb4090d update py3 script
    - \* 0ea70ba Don't remove pythonwin directory

- ba37276 Use string\_types instead of text\_types
- f6d0084 Add some unit tests, raise error on non-string types
- 35ed8be Create function for encoding string values
- c4c1082 Return encoded null when string value is None
- **PR #53627:** (dmurphy18) Cherry pick pr 53370 from 2018.3 into 2019.2.1 @ 2019-06-28 19:54:13 UTC
  - 164aaeb Merge pull request #53627 from dmurphy18/cherry-pick-pr-53370
  - 450d23d Merge branch '2019.2.1' into cherry-pick-pr-53370
- **ISSUE #53411:** (cro) Events can grow stale when event\_listen\_queue is set. (refs: #53587, #53412)
- **PR #53587:** (cro) Forward port from 2018.3 Add event\_listen\_queue\_max\_seconds to fix #53411 @ 2019-06-28 16:49:46 UTC
  - **PR #53412:** (cro) Stale events 53411 (refs: #53587)
  - 6559e4c Merge pull request #53587 from cro/53412-2019.2.1
  - 9e69bd4 Merge branch '2019.2.1' into 53412-2019.2.1
  - 949a026 Merge branch '2019.2.1' into 53412-2019.2.1
  - f5d81c9 Merge branch '2019.2.1' into 53412-2019.2.1
  - d74c313 Merge branch '2019.2.1' into 53412-2019.2.1
  - b3c3f52 Make doc build test pass.
  - 8001130 Add event\_listen\_queue\_max\_seconds to fix #53411
    - \* 34e38d7 Merge branch '2019.2.1' into cherry-pick-pr-53370
- **ISSUE #53283:** (Ch3LL) integration.states.test\_file.FileTest.test\_directory\_broken\_symlink (refs: #53295)
- **PR #53295:** (DmitryKuzmenko) Recurse kwarg of state.directory state shall be a list or None @ 2019-06-27 23:20:10 UTC
  - 14efced Merge pull request #53295 from DSRCorporation/bugs/test\_file\_recurse\_set
  - 2927b78 Merge branch '2019.2.1' into bugs/test\_file\_recurse\_set
  - 9c01670 Merge branch '2019.2.1' into bugs/test\_file\_recurse\_set
  - 571d82a Merge branch '2019.2.1' into bugs/test\_file\_recurse\_set
  - ee8f0e3 Merge branch '2019.2.1' into bugs/test\_file\_recurse\_set
  - 013e04c Recurse kwarg of state.directory state shall be a list of None
- **ISSUE #52926:** (waynew) integration.states.test\_beacon.BeaconStateTestCase.test\_present\_absent - Beacon "diskusage" is not available (refs: #53493, #53466)
- **ISSUE #52245:** (twangboy) integration.states.test\_beacon.BeaconStateTestCase.test\_present\_absent (refs: #53493, #53466)
- **PR #53466:** (dwoz) More robust beacon state test @ 2019-06-27 23:17:01 UTC
  - 75175bb Merge pull request #53466 from dwoz/test\_pres\_abs
  - f24bf06 Use new pipeline format
  - a74580b Clean up cruft
  - 68958f5 Do not create duplicate minion ids

- c47eeb4 Add amazon 2 to PR tests
- dc90b47 More robust beacon state test
  - \* 95b1819 Initial working tests for gpg fixes and import keys, signing
  - \* b2c9ae2 Update access to str/bytes with to\_unicode/to\_bytes for Python 3
- **PR #53609:** (s0undt3ch) CI Pipelines. Timeout after getting a node. Report exit code. @ 2019-06-27 16:09:54 UTC
  - 582ac5f Merge pull request #53609 from s0undt3ch/hotfix/fix-nox-bypass-2019.2.1
  - 024be84 CI Pipelines. Timeout after getting a node. Report exit code.
- **PR #53574:** (s0undt3ch) [2019.2.1] Minor fixes/adjustments to the new CI pipelines @ 2019-06-25 18:48:25 UTC
  - f568796 Merge pull request #53574 from s0undt3ch/hotfix/fix-nox-bypass-2019.2.1
  - e85e2f4 Minor fixes/adjustments to the new CI pipelines
- **PR #53584:** (dwoz) Add unit tests for recent SaltCacheLoader changes @ 2019-06-24 23:40:43 UTC
  - **PR #53563:** (twangboy) SaltCacheLoader does not create multiple FileClients (refs: #53584)
  - 77b7fc4 Merge pull request #53584 from dwoz/client\_cache
  - e9b61dc Add unit tests for recent SaltCacheLoader changes
    - \* 5558a0a Add reg to the whitelist
- **PR #53563:** (twangboy) SaltCacheLoader does not create multiple FileClients (refs: #53584) @ 2019-06-22 23:23:03 UTC
  - 6ed6c31 Merge pull request #53563 from twangboy/py3\_windows\_hang
  - 369720e Allow the file\_client to be overridden
  - f6c592c Don't instantiate the file\_client every time
- **PR #53432:** (garethgreenaway) [2019.2.1] Various fixes for 2019.2.1 to ensure tests pass on Mac OS X @ 2019-06-21 13:47:41 UTC
  - c606952 Merge pull request #53432 from garethgreenaway/2019\_2\_1\_mac\_fixes
  - 1974f11 Disabling a couple more tests in integration.modules.test\_cp that hang on OS X and Py2.
  - 7721151 Fixing lint.
  - 1d4e228 Updating various skips for tests to only skip if OS is OS X and Python is Python2.
  - 01dafdc Skipping integration.modules.test\_cp.CPModuleTest.test\_get\_file\_str\_https on OS X
  - c02db20 Disabling integration.modules.test\_state.StateModuleTest.test\_parallel\_state\_with\_long\_tag
  - 8788877 Skip integration.states.test\_file.FileTest.test\_issue\_11003\_immutable\_lazy\_proxy\_sum and integration.states.test\_pip\_state.PipStateTest.test\_22359\_pip\_installed\_unless\_does\_not\_trigger\_warnings when running on OS X.
  - cf76027 Removing wrong import of skipIf
  - b10e1e7 Moving the skipIf for OS X from the beacon state tests to the renderer state tests.
  - d2fef9a Disabling beacon state tests on OS X for the time being.
  - 1741bb0 Adding some timeouts to see if it helps the tests pass on OS X.
  - fd0ba0a Ensure the user and group used by @with\_system\_user\_and\_group are consistent.
  - e03ab81 Using salt.utils.path.which to find false, on OSX it lives under /usr/bin/

- 353f9d4 Fixing the beacons.reset function. Once the reset has taken place in beacons/\_\_init\_\_.py we need to fire an event back to complete the loop and ensure that everything worked as expected.
- ee3cbc7 fix to how the depends decorator works. Only run the dependency commands for the module we're checking.
- 8440176 Fixing a log issue that pops up after test\_gen\_thin\_compression\_fallback\_py3 on OS X, need to ensure that salt.utils.thin.os.close is mocked.
- 9767ddd Format for the sqlite3 database used for the assistive information changed in Mojave, additional columns added.
- 9c8a7e6 Fixing a bug when the roots fileservers and the location is a symlink to another location. This fix ensures that when fsroot is referenced we are using the real path and not the symlink path.
- **PR #53526:** (s0undt3ch) [2019.2.1] Update pipelines to work on old and new jenkins @ 2019-06-20 15:29:13 UTC
  - 59e2a1f Merge pull request #53526 from s0undt3ch/hotfix/fix-nox-bypass-2019.2.1
  - 24d6d09 Update pipelines to work on old and new jenkins
- **PR #53210:** (Ch3LL) Cherry-Pick #52787 into 2019.2.1 @ 2019-06-20 13:33:13 UTC
  - **PR #52787:** (garethgreenaway) [2018.3] Fixes to test\_pip state sls files (refs: #53210)
  - f5f80af Merge pull request #53210 from Ch3LL/cp-52787
  - f27c434 Merge branch '2019.2.1' into cp-52787
- **PR #53467:** (twangboy) Check valid username first (fixes failing symlink test) @ 2019-06-19 17:04:30 UTC
  - fd6cb35 Merge pull request #53467 from twangboy/fix\_test\_win\_file
  - 92950c5 Merge branch '2019.2.1' into fix\_test\_win\_file
  - 6a21edb Merge branch '2019.2.1' into fix\_test\_win\_file
  - 31ce1fb Fix some lint, skip some tests
  - 6de4db6 Monkeypatch in the class instead of globally
  - d663a1f Fix the failing BlockReplace test cases on Windows
  - 299f88f Update test\_managed\_contents
  - 81110e5 Fix test\_file\_copy\_make\_dirs that was failing on Linux
  - 8d0529d Fix some lint
  - 4a9c020 Fix issues with win\_runas
  - bceffa1 Remove privs message
  - 54be0a6 Verify username early in win\_runas
- **PR #53475:** (Ch3LL) Add pypsexec requirement for cloud tests @ 2019-06-19 13:30:25 UTC
  - 3230078 Merge pull request #53475 from Ch3LL/add\_pypsexec
  - ab59a55 Merge branch '2019.2.1' into add\_pypsexec
  - f954363 Merge branch '2019.2.1' into add\_pypsexec
  - 8f7cbfc Merge branch '2019.2.1' into add\_pypsexec
  - fa22b39 Add pypsexec requirement for cloud tests
- **PR #53491:** (Ch3LL) Update test\_gen\_hash for macosx @ 2019-06-19 13:16:04 UTC
  - bdd7c2c Merge pull request #53491 from Ch3LL/crypt\_test\_mac

- 85e96bd Merge branch '2019.2.1' into crypt\_test\_mac
- 700338e Merge branch '2019.2.1' into crypt\_test\_mac
- 4ce7fb1 Merge branch '2019.2.1' into crypt\_test\_mac
- 832ded6 Merge branch '2019.2.1' into crypt\_test\_mac
- 775b8c2 Merge branch '2019.2.1' into crypt\_test\_mac
- 0832b49 Update test\_gen\_hash for macosx
- **PR #53494:** (Ch3LL) Always delete digital ocean key for test\_key\_management test @ 2019-06-19 13:14:51 UTC
  - 8c2e952 Merge pull request #53494 from Ch3LL/do\_cloud\_test
  - 5053eab Merge branch '2019.2.1' into do\_cloud\_test
  - 64a3e8d Merge branch '2019.2.1' into do\_cloud\_test
  - 45c0c43 Merge branch '2019.2.1' into do\_cloud\_test
  - 3826c56 Allows delete digital ocean key for test\_key\_management test
    - \* 6b6dc66 Merge branch '2019.2.1' into cp-52787
- **PR #53434:** (weswhet) Update documentation for newer mac\_service module. @ 2019-06-19 01:15:19 UTC
  - 2e3778b Merge pull request #53434 from weswhet/patch-2
  - 89398a9 Update salt.modules.service.rst
  - b9c1b1a Update salt.modules.service.rst
  - a962a64 Merge branch '2019.2.1' into patch-2
- **PR #53498:** (amendlik) Fix broken documentation links @ 2019-06-18 23:44:05 UTC
  - f72ebba Merge pull request #53498 from amendlik/links
  - e360a70 Fix broken documentation links for service virtual module
  - 56f65ec Fix broken documentation links for pkg virtual module
    - \* 010a2c5 Update documentation for newer mac\_service module.
      - 1bbdc7f Merge branch '2019.2.1' into cp-52787
- **PR #53514:** (Ch3LL) Revert logging changes from #53492 @ 2019-06-18 20:49:04 UTC
  - **PR #53492:** (dwoz) Fix syndic connection when using tcp transport (refs: #53514)
  - 0793272 Merge pull request #53514 from Ch3LL/disable\_py3\_logging
  - 8c8f0ac import six runtests log handler
  - f442b33 Revert "Enable logging for test runs on py3"
    - \* b62be16 Merge branch '2019.2.1' into cp-52787
- **PR #53485:** (s0undt3ch) [2019.2.1] Workaround nox's install only flag @ 2019-06-18 09:35:34 UTC
  - 98285f9 Merge pull request #53485 from s0undt3ch/hotfix/fix-nox-bypass-2019.2.1
  - 69e1d84 Workaround nox's install only flag
    - \* 8622bba Merge branch '2019.2.1' into cp-52787
- **PR #53369:** (Akm0d) Added refs to AIX module documentation @ 2019-06-17 20:29:01 UTC
  - ff7370e Merge pull request #53369 from Akm0d/aix\_docs

- 2ece253 Merge branch '2019.2.1' into aix\_docs

- 45c3c06 Non optional full test runs for 2019.2.1
  - \* 928b05f only fetch pr target branch instead of all branches to save time and disk space
  - \* ccc6106 only keep last 10 builds of every pr on jenkins to reduce disk usage
    - b970bde Merge branch '2019.2.1' into cp-52787
- **PR #53287: (twangboy) Fix win system @ 2019-06-06 23:35:47 UTC**
  - d0810d7 Merge pull request #53287 from twangboy/fix\_win\_system
  - 0fc88fb Add TypeError
  - 5b4160d Try NumberOfEnabledCores
  - 49cbfd4 Add a note about skipping unavailable items
  - 044b56b Fix get\_system\_info for older versions of Windows
- **ISSUE #52173: (amendlik) file.directory fails to check directory permissions correctly (refs: #53385)**
  - **PR #53385: (Akm0d) Check dir\_mode recursively in file.directory**
- **PR #53386: (dwoz) Fix missing import @ 2019-06-06 20:45:59 UTC**
  - cf98b83 Merge pull request #53386 from dwoz/missing\_import
  - a23d6d9 Fix missing import
- **ISSUE #49559: (zyguy) Salt-cloud - proxmox driver - returns AttributeError: 'generator' object has no attribute 'next' (refs: #53240)**
  - **PR #53240: (FireGrace) change .next() to next() py2=>py3 leftover**
- **ISSUE #53274: (Ch3LL) integration.states.test\_pkg failing on amazon 1 py2 (refs: #53323)**
- **PR #53323: (dmurphy18) Fix for issue #53274, test on Amazon Linux 1 @ 2019-06-06 17:31:18 UTC**
  - 18991f9 Merge pull request #53323 from dmurphy18/fix\_53274
  - 6814852 Merge branch '2019.2.1' into fix\_53274
  - bb6c97a Merge branch '2019.2.1' into fix\_53274
  - b84833d Merge branch '2019.2.1' into fix\_53274
  - 7085f36 Fixed pylint issue on PR not showing when run pylint locally
  - 1200031 Updated to use package bash-doc if Amazon Linux 1 after review comments
  - b2a4a5e Fix for issue #53274, test on Amazon Linux 1
  - **PR #53356: (Akm0d) Updated paramiko to version 2.2.3 for python3.7 support**
- **ISSUE #53137: (bryceml) update doc pr's to be built using python3 and sphinx 2.0.1 (refs: #53273)**
- **PR #53273: (s0undt3ch) [2019.2.1] Switch docs building under Py3 @ 2019-06-05 10:01:03 UTC**
  - 1cf57e9 Merge pull request #53273 from s0undt3ch/hotfix/py3-nox-docs-2019.2.1
  - 98653c0 Allow docs to be built on Python >= 3.5, not just Python 3.6
  - c54f06f Have sphinx turn errors into warnings
  - 07f4327 Switch docs building under Py3

- **PR #53361:** (s0undt3ch) [2019.2.1] Only make a new log record if it's a dictionary. @ 2019-06-05 09:56:15 UTC
  - dfd36a2 Merge pull request #53361 from s0undt3ch/hotfix/fix-mp-logging-2019.2.1
  - d70d61f Fully revert 962b11687
- **ISSUE #53171:** (twangboy) integration.states.test\_network.NetworkTest.test\_managed (refs: #53351)
- **PR #53351:** (waynew) Add checks for Amazon Linux to ip module @ 2019-06-04 19:25:58 UTC
  - 5efb670 Merge pull request #53351 from waynew/53171-fix-network-managed
  - e801afe Add checks for Amazon Linux to ip module
- **PR #53242:** (s0undt3ch) [2019.2.1] newer msgpack ipc fixes @ 2019-06-03 23:39:09 UTC
  - **PR #52934:** (twangboy) Update msgpack calls for newer msgpack (refs: #53242)
  - **PR #52755:** (dwoz) Fix non raw msg pack msg decoding (refs: #53242)
  - **PR #52488:** (terminalmage) Fix deprecation warning in msgpack >= 0.5.2 (2018.3) (refs: #52755)
  - **PR #52487:** (terminalmage) Fix deprecation warning in msgpack >= 0.5.2 (develop) (refs: #53242)
  - ce5d79a Merge pull request #53242 from s0undt3ch/hotfix/msgpack-ipc-2019.2.1
  - d27a524 Merge branch '2019.2.1' into hotfix/msgpack-ipc-2019.2.1
- **PR #53289:** (cmcmarrow) stops pylint E1120 from showing @ 2019-06-01 04:57:27 UTC
  - df448c2 Merge pull request #53289 from cmcmarrow/test\_kubernetes\_lint\_failures\_silenced
  - 03eacac Merge branch '2019.2.1' into test\_kubernetes\_lint\_failures\_silenced
- **PR #53304:** (s0undt3ch) [2019.2.1] Refactor Jenkins PR pipelines to download artifacts after timeout @ 2019-05-31 17:10:19 UTC
  - 6fac22b Merge pull request #53304 from s0undt3ch/hotfix/jenkins-pipelines-refactor-2019.2.1
  - 6e778ef Refactor Jenkins PR pipelines to download artifacts after timeout
- **PR #53297:** (s0undt3ch) [2019.2.1] The TCP transport needs the exact same requirements as the ZeroMQ one @ 2019-05-30 19:42:29 UTC
  - d359513 Merge pull request #53297 from s0undt3ch/hotfix/tcp-transport-tests
  - bec7fa5 The TCP transport needs the exact same requirements as the ZeroMQ one
  - f93e7d3 stops pylint E1120 from showing
  - cbe6423 stops pylint E1120 from showing
  - c5a5d43 test\_kubernetes\_lint\_failures\_silenced
  - b838395 test\_kubernetes\_lint\_failures\_silenced
  - 997d0a8 stops pylint E1120 from showing
    - \* 5542fa8 Add the missing, and required, top pillar file.
    - \* 0ae2ef0 Under Py2 we still want raw to be set to True
    - \* 714d663 Re-submit #52934 fixed after being reverted in #52755
    - \* 243b512 Update msgpack calls for newer msgpack
      - 0f9077b Merge branch '2019.2.1' into cp-52787
- **PR #53264:** (s0undt3ch) [2019.2.1] Minion blackout tests - Add the missing, and required, top pillar file @ 2019-05-29 07:30:45 UTC

- 50e31ec Merge pull request #53264 from s0undt3ch/2019.2.1
- acabb70 Merge branch '2019.2.1' into 2019.2.1
- **PR #52966:** (s0undt3ch) Always run the full test suite on the 2019.2.1 release branch @ 2019-05-28 15:43:12 UTC
  - 749c626 Merge pull request #52966 from s0undt3ch/hotfix/full-test-run
  - 247c461 Always run the full test suite on the 2019.2.1 release branch
- **PR #53138:** (frogunder) vultr cloudtest fix @ 2019-05-28 14:34:22 UTC
  - a7afd31 Merge pull request #53138 from frogunder/fix\_vultr\_cloudtest
  - 9f4550c vultr cloudtest fix
    - \* 912b9b3 Add the missing, and required, top pillar file.
      - 9d21b75 Merge branch '2019.2.1' into cp-52787
- **PR #53258:** (s0undt3ch) [2019.2.1] Fix multiprocessing logging queue dict changing during iteration errors @ 2019-05-27 19:26:27 UTC
  - d011beb Merge pull request #53258 from s0undt3ch/2019.2.1
  - ad01dd2 More robust minion blackout tests
  - a0346d1 Try harder to get the minion grains
  - 36717bd Try and address the test flakyness
  - ce07d8c Add more information when the assertion fails
  - b99e914 Attempt to fix mine tests
  - fca981c One more known to return None
  - 951df48 One more known to return None
  - eb5fd3e Fix *integration.modules.test\_mine.MineTest.test\_get* for sub\_minion
  - 26314f5 Fix multiprocessing logging queue dict changing during iteration errors
- **PR #53153:** (s0undt3ch) [2019.2.1] Add Amazon Linux 2018.3 and 2 static requirements @ 2019-05-27 12:02:20 UTC
  - b69e080 Merge pull request #53153 from s0undt3ch/2019.2.1
  - 166067c Use *currentBuild.resultIsBetterOrEqualTo* instead
  - cefdd90 Stop error messages about missing roster file on syndic master
  - 6bf8f46 Don't complain when attempting to close sockets at this stage
  - e3f3cc9 Add Amazon Linux 2018.3 and 2 static requirements
  - 872acc0 Switch the ubuntu-14.04 exception with amzn-1
  - **PR saltstack/salt#52934:** (twangboy) Update msgpack calls for newer msgpack (refs: #53235)
- **PR #53235:** (s0undt3ch) Revert "Update msgpack calls for newer msgpack" @ 2019-05-24 13:35:20 UTC
  - 14aeeea Merge pull request #53235 from saltstack/revert-52934-fix\_msgpack
  - 3295aea Revert "Update msgpack calls for newer msgpack"
- **PR #53131:** (s0undt3ch) [2019.2.1] Update to salt-bootstrap v2019.05.20 @ 2019-05-24 07:45:57 UTC
  - 6923427 Merge pull request #53131 from s0undt3ch/hotfix/update-bootstrap-2019.2.1
  - 4cce4f4 Merge branch '2019.2.1' into hotfix/update-bootstrap-2019.2.1

- 6751ee1 Merge branch '2019.2.1' into hotfix/update-bootstrap-2019.2.1
- 6988e07 Update to salt-bootstrap v2019.05.20
- **PR #52934:** (twangboy) Update msgpack calls for newer msgpack (refs: #53242) @ 2019-05-23 23:18:23 UTC
  - a61db20 Merge pull request #52934 from twangboy/fix\_msgpack
  - f02a12e Merge branch '2019.2.1' into fix\_msgpack
  - 7e2cd34 Merge branch '2019.2.1' into fix\_msgpack
  - bc9ce8e Merge branch '2019.2.1' into fix\_msgpack
  - 0abd1ec Update msgpack calls for newer msgpack
    - \* 3366d59 update pylint exceptoin
    - \* 6c452b3 removing unwanted commits from this branch
    - \* e0b0ba8 Handling in flaky when maximum number of attempts raised and the exception should be raised. Different approaches depending on Py2 vs Py3.
    - \* 434dcda Disabling two tests when using Python 3 and OS X
    - \* 5784e80 Disabling integration.shell.test\_minion.MinionTest.test\_issue\_7754 test on OS X because it hangs the test suite.
    - \* 78aeb61 Dropping the version check for InstallationError down to anything 1.0 or greater. Removing the test that simulates versions of pip below 1.0.
    - \* 4ec90c2 Adding an jinja if statement to only the python parameter if the result from get\_python\_executable is a valid value. Maintaining backwards compatibility to run tests without Nox.
- **PR #53192:** (twangboy) Skip `test_gen_hash` test on Windows @ 2019-05-23 05:33:13 UTC
  - 8a57270 Merge pull request #53192 from twangboy/skip\_test\_gen\_hash
  - 758d020 Skip test on Windows
- **PR #53157:** (twangboy) Fix `unit.modules.test_win_file.WinFileTestCase.test_issue_52002_check_file_remove_symlink` @ 2019-05-22 22:32:26 UTC
  - 446e70c Merge pull request #53157 from twangboy/fix\_test\_win\_file\_symlink
  - 5672076 Merge branch '2019.2.1' into fix\_test\_win\_file\_symlink
- **PR #53141:** (Ch3LL) Check for all non-word characters when calling `secure_password` @ 2019-05-22 17:24:54 UTC
  - 6fbe9aa Merge pull request #53141 from Ch3LL/shadow\_fed\_fix
  - a3c4066 Merge branch '2019.2.1' into shadow\_fed\_fix
- **PR #53161:** (Ch3LL) Add `HAS_REQUIRED_CRYPT` var for `m2crypto` in `joyent` @ 2019-05-22 13:36:07 UTC
  - fb29512 Merge pull request #53161 from Ch3LL/joyent\_m2crypto
  - 08d03e0 Add `HAS_REQUIRED_CRYPT` var for `m2crypto` in `joyent`
  - 16ef3d2 Merge branch '2019.2.1' into shadow\_fed\_fix
  - 09ff867 Check for all non-word when calling `secure_password`
    - \* 334c93b Elevate token before creating symlink
- **PR #53073:** (Ch3LL) `salt-ssh: python binary exists before version check` @ 2019-05-20 22:36:34 UTC

- 85e9b2f Merge pull request #53073 from Ch3LL/ssh\_py3\_log
- 383e781 Improve logging in salt-ssh gen\_thin
- 4371434 salt-ssh: python binary exists before version check
- **PR #52957:** (Ch3LL) Set default\_flow\_style=None in yaml.dump calls @ 2019-05-16 19:42:35 UTC
  - bd02ea6 Merge pull request #52957 from Ch3LL/yaml\_flow\_style
  - 5f6581a Merge branch '2019.2.1' into yaml\_flow\_style
- **PR #53072:** (Ch3LL) Backport #52754 into 2019.2.1 @ 2019-05-16 19:29:22 UTC
  - **PR #52754:** (garethgreenaway) [2018.3] Fixes to multiprocessing queue when using MacOS (refs: #53072)
  - f410346 Merge pull request #53072 from Ch3LL/bp-52754-2019.2.1
  - 13e5e55 The maximum for the multiprocessing queue on MacOS is 32767, so if we running on MacOS then we use that maximum.
- **ISSUE #52817:** (waynew) unit.modules.test\_telegram.TelegramModuleTest.test\_post\_message (refs: #52972)
- **PR #52972:** (garethgreenaway) [2019.2.1] Fix to unit.modules.test\_telegram @ 2019-05-15 07:50:13 UTC
  - 06fa91b Merge pull request #52972 from garethgreenaway/52817\_unit\_modules\_test\_telegram\_telegrammoduletest\_test\_p
  - cea7131 Removing global declaration.
  - 5bf9a95 Fixing lint.
  - 4d3c46d fixing broken unit.modules.test\_telegram test.
- **PR #53025:** (Ch3LL) Change package name for suse pkg tests @ 2019-05-15 07:41:44 UTC
  - d340cbc Merge pull request #53025 from Ch3LL/suse15\_pkg\_test
  - 0a213ee Change package name for suse pkg tests
- **PR #53020:** (Ch3LL) Change ssh tops log message to debug @ 2019-05-14 16:56:42 UTC
  - c56fbb0 Merge pull request #53020 from Ch3LL/ssh\_tops
  - cbbc764 Merge branch '2019.2.1' into ssh\_tops
- **PR #52973:** (twangboy) Fix integration.states.test\_pip\_state.PipStateTest.test\_issue\_2028\_pip\_installed\_state on Windows @ 2019-05-13 20:56:28 UTC
  - ce099aa Merge pull request #52973 from twangboy/fix\_test\_pip\_state
  - 21838a1 Merge branch '2019.2.1' into fix\_test\_pip\_state
- **PR #52986:** (Ch3LL) Revert "Make sure --run-expensive runtests.py arg works" @ 2019-05-13 19:38:17 UTC
  - 055d374 Merge pull request #52986 from Ch3LL/expensive\_revert
  - 368c012 Revert "Make sure --run-expensive runtests.py arg works"
  - cce263e Merge branch '2019.2.1' into fix\_test\_pip\_state
  - 351d415 Return path to Python instead of None
    - \* c0538d2 Change ssh tops log message to debug
    - \* e317186 Merge branch '2019.2.1' into yaml\_flow\_style
- **PR #52968:** (s0undt3ch) [2019.2.1] Salt >= 2018.3.x supports Py3.7 @ 2019-05-12 21:44:57 UTC
  - ee05da5 Merge pull request #52968 from s0undt3ch/2019.2.1
  - 73c3726 Salt >= 2018.3.x supports Py3.7

- **ISSUE #50310:** (xuhcc) acme.cert falsely reports changes (refs: #50400)
- **PR #52796:** (Ch3LL) Backport #50400 and #50402 into 2019.2.1 @ 2019-05-10 19:30:12 UTC
  - **PR #50402:** (xuhcc) Fix typo in salt.modules.acme (refs: #52796)
  - **PR #50400:** (xuhcc) Fix incorrect change reporting in acme.cert (refs: #50402, #52796)
  - cae51c2 Merge pull request #52796 from Ch3LL/bp-50400
  - 0c2e3e7 Merge branch '2019.2.1' into bp-50400
  - 1268e3e Merge branch '2019.2.1' into bp-50400
  - 09fa9e3 Fix typo
  - 9be5c0c Fix incorrect change reporting in acme.cert
    - \* 9a27fb3 Merge branch '2019.2.1' into yaml\_flow\_style
- **PR #52770:** (twangboy) Fix test\_file\_managed\_should\_fall\_back\_to\_binary on Windows @ 2019-05-09 20:35:02 UTC
  - 20cccd8 Merge pull request #52770 from twangboy/fix\_test\_file
  - ac27e69 Merge branch '2019.2.1' into fix\_test\_file
  - 30a5093 Merge branch '2019.2.1' into fix\_test\_file
  - c08b10d Merge branch '2019.2.1' into fix\_test\_file
  - 340ee23 Pass encoding to \_validate\_str\_list
    - \* 0d0e354 Fix yamldumper test for both py2/py3
    - \* 20bc954 Update docs for yamldumper test
    - \* bf648e5 Update tests/unit/utills/test\_yamldumper.py
    - \* 70d578a Set default\_flow\_style=None in yaml.dump calls
- **PR #52943:** (Ch3LL) Fix elasticsearch state module: allow user to define empty aliases @ 2019-05-09 15:46:38 UTC
  - 4437764 Merge pull request #52943 from Ch3LL/fix\_elasticsearch
  - 451fb7e Merge branch '2019.2.1' into fix\_elasticsearch
  - ebf9b9 Fix elasticsearch state module: allow user to define empty aliases
- **PR #52952:** (s0undt3ch) [2019.2.1] More nox changes and test fixes @ 2019-05-09 15:03:07 UTC
  - 9b290b6 Merge pull request #52952 from s0undt3ch/merge-forward/2018.3-to-2019.2.1-cherry
  - a06d7ce We need to call the decorator
  - 77185af Partial revert since this is a class method
  - f5c5771 Lint fixes
  - 3e43c87 Revert "fix compare\_versions method"
  - 0e139bf Fix `GOLDEN_IMAGES_CI_BRANCH` value
  - 12a9408 Add Py3.7 static requirements
  - 8e505fb Move tests to existing test modules
  - 4681609 `tests/unit/config/__init__.py` -> `tests/unit/config/test_config.py`
  - b1dc7f6 Pin to `moto<=1.3.7` because of <https://github.com/spulec/moto/pull/1952>

- 0ffe7ca We no longer test against Ubuntu 14.04 which reached EOL
- 33743fc Don't traceback when trying to close a closed socket
- da2e147 Always cleanup the changed environ
- 087c74d No globals in tests, specially dictionaries!
- a814fc0 Fix underscore wart (and linter)
- 74b8f5f Fix deprecation warning in msgpack >= 0.5.2
- 962b116 Try to address dict changing during iteration
- c58af57 Tweak codeclimate settings for less noise
- 5bb7869 fix linter
- 0b81841 Cherry-pick test fix
- 99f9e1c fix compare\_versions method
- **PR #52853: (s0undt3ch) [2019.2.1] Bring nox into 2019.2.1 @ 2019-05-09 09:52:42 UTC**
  - a510edf Merge pull request #52853 from s0undt3ch/merge-forward/2018.3-to-2019.2.1-cherry
  - a8f7b46 Test is not destructive.
  - 63663cf We no longer test against Ubuntu 14.04 which reached EOL
  - 62574ee Typo
  - e3e3761 Proper english in requirements comments
  - e9f6a12 *identical\_signature\_wrapper* adds *\_\_wrapped\_\_* to function globals
  - 10283b4 Upload coverage reports on full test runs
  - 6e0b61b Less flaky mine tests
  - 3709ed7 msgpack returns string\_types
  - a36b15e Add regression test
  - ce782ff Fix non raw msg pack msg decoding
  - f193f0f Update Issue Template: questions removed
  - 4417095 Fix underscore wart (and linter)
  - e6c2ae4 Fix deprecation warning in msgpack >= 0.5.2
  - 6375944 Add ubuntu1804 to pr tests
  - 8fdb04d SIGKILL is not always available use a local variable
  - 4d6b8da Fix linter
  - 759bcc Fix test\_doc on windows by using grep yay!
  - 0ce086d Fix remaining failures on ubuntu 1404 and add to PR tests
  - fdf80fd Change py3 windows timeout from 6 to 8 hours
  - b0aa287 Fix missing class wart
  - 21ecb74 fix linter
  - 62c0f9f Skip tests when no libcloud
  - 1d92290 Fix unused import

- 72cdc91 Fix linter
- 238fd0f Fix broken pip state
- 89533ba Fix `NOX_ENV_NAME`
- 7cfc9e8 Fix `NOX_ENV_NAME`
- 2087c91 Fix `NOX_ENV_NAME`
- 2f1aff5 Rename kitchen-centos6-py3 to kitchen-centos6-py2
- 1eea990 Fix linter
- 52ca668 Skip tests when no libcloud
- 2cf4b98 Add centos-6-py2 and Debian 8,9 py2 and 3 to PR tests
- 522599d Don't fail just because some random process died
- 34cef86 Ignore super not called
- b7ace9c Fix linter
- aceb6d3 Skip libcloud unit tests when no libcloud
- f73420b Install mock on Python < 3.6
- 28fbde1 Add `moto` to the windows dependencies
- 8cbecc1 Pin kubernetes to <4.0
- 2acb0f3 Make sure `--run-expensive runttests.py` arg works
- 22cae20 Remove ref restricton from kitche-salt
- 67095df Add 'runFull' build parameter for PR tests
- 12d8d35 Stop w32time before and start after testing
- 7f1c22c Skip tests that fail on Windows
- f4ae97f Upgrade etcd to > 0.4.2
- 381f5fe Limit and reduce the amount of log records sent over the wire
- 0c94b5d More entries to ignore
- c3a21f5 As a script, not as a module
- 8948b69 Include `COVERAGE_FILE` as an env variable.
- 0af561e Each generated script is now prepared for code coverage
- 294d6f4 Use the system's path separator
- e52ab87 Always combine and generate the XML coverage report
- 666ca9f Fix proxy minion startup issue on the test suite
- 7838ace `impacket` does not support Py3
- ba8d0fe Allow `--install-only` to gather the required information
- eed7d68 Create nox lint virtualenvs before running them
- e9e57cf Syndic roster not in 2017.7.9
- 111c63a4d Create the roster even when not running ssh
- 11c02a0 Fix `unit.test_loader.LoaderGlobalsTest.test_states`

- 8694db1 Fix windows tests
- 82e9ac5 Avoid race condition in even assertions
- 9443451 Revert part of 927219c since it is not a fix
- 5fee762 Fix timeout logic
- 517650f check timeout when queue empty
- 7c0a9af fix linter
- 961dc40 Ignore missing variable in six module
- 0f5a7f0 Fix typo
- 6c8c418 Do not limit event assert to first event
- 3042292 Wait longer for ping reaction
- 8c10f5f Fix xml block causing docs to fail
- 6e5768a Add a nox session for the Jenkins tornado jobs
- 43321e8 Add a cloud nox session for both runtests and pytest
- b6b4e95 Lint cleanup
- 0670614 Add tests for wraps
- 1670b5d Use functools.wraps with decorators
- 5ae263c Update static requirements for 2018.3 branch
- 3482c4d Disable code coverage uploads.
- 0e5bc67 Lint fixes
- 337c737 Update CI jobs to point to 2018.3
- 72e8603 Skip test if required cypto libs are not available
- e6bc9f8 Default to Cryptodome, fallback to PyCrypto
- b2b0764 Be aware of the different path separators
- 7e79b18 We need to make sure the virtualenv path entry is removed when searching
- ff6d3c6 We don't need to be root to run these tests
- 5965ab4 Disable progress bars on pip installs
- f86a44e Use the real python executable path when running within a virtualenv
- 3d407e8 Add a helper to return the path to the real python executable
- ea9d246 We must also provide `venv_bin` when running within a virtualenv
- 31e91b0 Fix pip tests, in particular under windows
- 493f493 Don't fail if `pkg_resources` is not importable
- a1eb400 Specify the SHA we need
- 0b01f21 Let's fully unload pip
- 0b6f848 Fix docker entries
- 870b899 Remove unused argument
- 1656cb4 Disable re-running failed tests for now

- 6db4141 Also ignore multiprocessing coverage files
- 83dc97d Actually write the lint reports.
- 5f97270 Try to make sure some pip internal functions are always present in sys.modules after reloads
- 0090c55 Try and address the fact that some python packages are only provided by the distro
- 4a072fe These tests aren't destructive
- 5c7a956 Don't fail the build if the issue was sending a slack notification
- 361ef6e Don't try to change ownership on non existing paths
- 7b17352 More insight(context) on failure reports
- 93b6b95 Lock supervisor to 3.3.5, last kown working(passing tests) version
- 51114aa Watch out for too long shebang's
- d97fe82 The output is important to know why it failed.
- 9fef385 Strings and integers are not comparable under Python 3
- d308dce Be verbose in a CI context
- 8b7105e Fix failed tests re-run logic
- d6d8db1 Blacklist *enum34* on Py>=3.4. Update requirements.
- 1cd00c0 Update PR CI jobs for nox
- 19a83d5 Blacklist pycrypto and install pycryptodome instead
- 91376b3 Ignore the generated docs archive
- 207b83a Update compiled requirements
- 535e7a7 Add TCP transport nox sessions
- 680b3e5 Compile requirements for the TCP transport
- 49a1ebe Throw error when running either on Py<2.7 or Py>=3.7
- 10528b9 Don't repeat filed tests on missing/empty failed test files file
- 4886809 We currently only support running lint under Py2.7
- a76981b Remove dead code
- 7b2c1ce Don't require six
- a27ed35 Add nox env to build docs
- e1b3f1d Lock docs python requirements
- c8de644 Fix lint issues under tests
- 0372718 Fix lint issues on salt
- 9eab9f4 Add nox session/env/target to run lint against Salt and its test suite
- 123f771 Lock lint requirements
- 8df33ad Back to *+apache-libcloud==1.0.0* and skip windows for now
- 43e3ae6 Bump apache-libcloud requirement because 1.0.0 fails to install on windows
- d5f7813 Remove requiremens for platforms which aren't tested under Py3
- 8f02ee9 Recompile requirements

- 66626f2 Remove pycryptodome from compiled requirements files
- 75693e5 Use pycryptodomex on windows and PyCrypto on the rest
- 4a9c19c Update(fix) requirements
- 33a3467 We don't test OSX nor Windows under Py3.4
- fd44fce We want a more verbose pip-compile output
- c2ae2d5 We now compile requirements for each of the supported minor version
- 6ee1260 Static requirements are now placed on *py<major>.<minor>* subdirectories
- 3504804 The required crypto library is pulled in from zeromq.txt or raet.txt
- 3ffe03c PyZMQ is pulled in from zeromq.txt
- 7c2fe16 Instead of quoting session parameters, proxy nox sessions
- d3ae77b Add separate crypto sessions
- 0399620 Parametrize the transport
- d33fd03 Update/Generate static requirements to new layout
- 52ac533 Add pre-commit config to generate static requirements
- 3cfc13 Be aware of the new static requirements layout
- dc7e16a Don't lock the docker requirement. It's not locked on the other platforms
- 5476ba2 Kubernetes 3.0.0 does include the requirements files. pip-compile chokes on that
- 79a8261 Previously generated requirements were py2 only
- 1e29666 IOFLO is pulled in from the raet requirements
- 4945e35 Fix pylint on 2017.7.9
- 036bf68 Rerun failed tests
- 03a9601 Ignore *.nox* directory
- 50cb630 We have long files
- db2392f Update CodeClimate settings
- 899c80e Fix integration.client.test\_kwarg test timeouts
- **ISSUE #52836:** (Ch3LL) unit.utils.test\_args.ArgsTestCase.test\_argspec\_report failing (refs: #52852)
- **PR #52852:** (garethgreenaway) [2019.2.1] Fixes to unit.utils.test\_args.test\_argspec\_report @ 2019-05-07 19:25:48 UTC
  - 77355e2 Merge pull request #52852 from garethgreenaway/52836\_test\_argspec\_report\_failing
  - eee5a38 Merge branch '2019.2.1' into 52836\_test\_argspec\_report\_failing
- **PR #52845:** (Ch3LL) Backport #52780 into 2019.2.1 @ 2019-05-07 16:27:21 UTC
  - **PR #52780:** (sbrennan4) Handle ipv6 in \_netlink\_tool\_remote\_on (refs: #52845)
  - dcc5fde Merge pull request #52845 from Ch3LL/bp-52780
  - dfff09b Merge branch '2019.2.1' into bp-52780
- **PR #52851:** (Ch3LL) Reload matcher loader when ext\_pillar\_first set @ 2019-05-07 13:12:07 UTC
  - 2e4f296 Merge pull request #52851 from Ch3LL/matcher\_ext\_pillar

- bdcae5d Add docs for new reload kwarg
- fc70884 Reload matcher loader when ext\_pillar\_first set
- 8ac74e2 Merge branch '2019.2.1' into bp-52780
- 226c7ce Merge branch '2019.2.1' into bp-52780
- c1eae84 Add test
- 69fe65b Use rsplit
  - \* 8fdc48c Removing create\_autospec and having salt.utils.args.argspec\_report run against the \_test\_spec function directly. Depending on the python version, create\_autospec gives different results and cause the test to fail. The test is now more accurate at testing the arguments for the function.
- PR #52842: (s0undt3ch) *libcrypto.OpenSSL\_version\_num* might be a callable @ 2019-05-06 17:00:37 UTC
  - cc7a0d1 Merge pull request #52842 from s0undt3ch/2019.2.1
  - a944017 *libcrypto.OpenSSL\_version\_num* might be a callable
- PR #52839: (twangboy) Add support for EC2 @ 2019-05-04 17:28:54 UTC
  - b625a6a Merge pull request #52839 from twangboy/fix\_test\_grain
  - 1c9b372 Add support for EC2
- ISSUE #51982: (arsiesys) topic (minion\_id) need to be encoded before being hash and sent using zeroMQ (refs: #51983)
- PR #52767: (Ch3LL) [2019.2.1] Add tests to PR #51983 @ 2019-05-03 08:35:27 UTC
  - PR #51983: (arsiesys) encode topic before using hashlib (refs: #52767)
  - 6002939 Merge pull request #52767 from Ch3LL/zmq\_filter\_test
  - 1ee8f37 Merge branch '2019.2.1' into zmq\_filter\_test
  - d74b6ee Merge branch '2019.2.1' into zmq\_filter\_test
  - 3210274 Fix linter warnings
  - e7c9d6e increase timeout when gathering results
  - 784786d Add zmq\_filter unit tests
  - 805c5ee encode topic before using hashlib
- PR #52827: (twangboy) Add pymssql dependency for Windows builds @ 2019-05-03 08:21:40 UTC
  - 5996932 Merge pull request #52827 from twangboy/add\_pymssql
  - 6f0b8e2 Add pymssql dependency for Windows builds
- ISSUE #52717: (Ch3LL) debian9 tests segmentation fault (refs: #52797)
- PR #52797: (garethgreenaway) [2019.2.1] Only run the libcrypto init if less than OpenSSL 1.1.0 @ 2019-05-03 05:12:31 UTC
  - e3918c5 Merge pull request #52797 from garethgreenaway/52717\_debian\_tests\_segmentation\_fault
  - 7ab0961 Merge branch '52717\_debian\_tests\_segmentation\_fault' of github.com:garethgreenaway/salt into 52717\_debian\_tests\_segmentation\_fault
    - \* f8d816e Merge branch '2019.2.1' into 52717\_debian\_tests\_segmentation\_fault
- PR #52771: (twangboy) Fix *test\_gpg* tests on Windows @ 2019-05-02 13:30:18 UTC

- b68544f Merge pull request #52771 from twangboy/fix\_test\_gpg
- c7f45c2 Pass encoding to stringutils.to\_unicode
- PR #52783: (Ch3LL) Fix boto\_apigateway tests for PyYAML 5.1 @ 2019-05-02 13:26:34 UTC
  - 316d05b Merge pull request #52783 from Ch3LL/fix\_boto\_yaml
  - cde29cb Fix boto\_apigateway tests for PyYAML 5.1
  - 6ffbca5 Fixing lint.
  - e24f2f8 Only run the libcrypto init if less than OpenSSL 1.1.0.
- PR #52769: (twangboy) Remove domain grain from tests for Windows @ 2019-04-30 21:14:26 UTC
  - 3509465 Merge pull request #52769 from twangboy/fix\_test\_core
  - 0049f85 Remove domain grain from tests
- PR #52768: (twangboy) Remove pchanges... again... @ 2019-04-30 20:24:27 UTC
  - 30dc14b Merge pull request #52768 from twangboy/fix\_test\_win\_dacl
  - 123b607 Remove pchanges... again...
- PR #52753: (twangboy) Skip test\_gen\_thin\_compression\_fallback\_py3 @ 2019-04-30 03:36:27 UTC
  - 3e46f51 Merge pull request #52753 from twangboy/skip\_test\_gen\_thin
  - 811b381 Skip test\_gen\_thin\_compression\_fallback\_py3
- ISSUE #52721: (Ch3LL) unit.cloud.clouds.test\_ec2 test failing (refs: #52736)
- PR #52736: (dwoz) Skip password decryption test when no libraries available @ 2019-04-29 17:07:56 UTC
  - 6bfca94 Merge pull request #52736 from dwoz/ec2test
  - 04ad027 Merge branch '2019.2.1' into ec2test
- PR #52624: (tanlingyun2005) fix TypeError: argument of type int is not iterable @ 2019-04-29 13:15:42 UTC
  - 9a1ed78 Merge pull request #52624 from tanlingyun2005/2019.2.1
  - 2c6867e add test case to tests/unit/cli/test\_batch.py
  - cb7742e Merge branch '2019.2.1' into 2019.2.1
  - c943900 Merge branch '2019.2.1' into 2019.2.1
  - d4abddd fix TypeError: argument of type int is not iterable
  - ed908b3 Merge branch '2019.2.1' into 2019.2.1
  - 463b60e Merge branch '2019.2.1' into 2019.2.1
  - 65ee219 Merge branch '2019.2.1' of <https://github.com/tanlingyun2005/salt> into 2019.2.1
    - \* f71168d Merge branch '2019.2.1' into 2019.2.1
  - 509c797 bug fix salt/cli/batch.py
  - 211915c fix salt/cli/batch.py TypeError: argument of type int is not iterable
  - 070ae84 fix TypeError: argument of type int is not iterable
    - \* b770f96 Skip test requiring crypto when none available
    - \* e52b390 Warn when password decrypton requested but not possible
- PR #52696: (Ch3LL) Backport #50087 into 2019.2.1 @ 2019-04-25 20:33:13 UTC

- PR #50087: (rbthomp) Fix applying of attributes for returner rawfile\_json (refs: #52696)
- 806307a Merge pull request #52696 from Ch3LL/bp-50087
- 66e97e7 Fix applying of attributes for returner rawfile\_json
- PR #52659: (twangboy) Fix issues with the win\_file tests @ 2019-04-22 23:34:36 UTC
  - 174f558 Merge pull request #52659 from twangboy/fix\_test\_win\_file
  - 915c780 Fix issues with the win\_file tests
- PR #52655: (dwoz) Parse chattr version and fix test case @ 2019-04-22 01:46:29 UTC
  - d1a61a6 Merge pull request #52655 from dwoz/cron\_test\_fix
  - e69fcc5 Fix typo
  - 859d088 Merge remote-tracking branch 'origin/cron\_test\_fix' into cron\_test\_fix
    - \* 7f7bb90 Merge branch '2019.2.1' into cron\_test\_fix
- PR #52601: (Ch3LL) Cherry-Pick #52415 into 2019.2.1 @ 2019-04-21 19:33:03 UTC
  - PR #52415: (Ch3LL) Backport #49832 into 2018.3 (refs: #52601)
  - PR #49832: (terminalmage) Replace pchanges with changes to make onchanges/prereq work in test mode (refs: #52415)
  - f7d823c Merge pull request #52601 from Ch3LL/cp-52415
  - ecd6802 Merge branch '2019.2.1' into cp-52415
  - 538d5cf Remove pchanges from win\_dacl
  - 81b865f use same newfile message on linux for windows file state
  - 93bdd08 Update dict correctly in file state
  - f3c7f27 remove pchanges for windows file modules
  - fb3b75d Fix tests for pchanges backport into 2018.3
  - 0f296bb Update kernelpkg test to reflect pchanges removal
  - 885d6ff Update file.touch unit tests to reflect addition of changes in test mode
  - 4bc5fd0 Add integration tests for test mode onchanges/prereq
  - ed214c4 Make it possible to use prereq with test and saltmod state mods
  - ceb3f4d Add repack\_state\_returns to TestCase
  - 982e693 Add exception logging in flaky decorator
  - 0ba0ddf Add test mode changes to file.touch state
  - 6db2beb Replace "pchanges" with "changes" to fix onchanges/prereq requisites
    - \* 169c2d5 Chattr version py3 fix
    - \* cf88c27 Fix linter issues
    - \* 0ea007d Parse chattr version and fix test case
- ISSUE #52508: (Ch3LL) integration.modules.test\_publish test failures (refs: #52645)
- PR #52645: (dwoz) Fix salt.modules.publish and salt.states.x509 tests @ 2019-04-20 08:17:19 UTC
  - af4f204 Merge pull request #52645 from dwoz/test\_fixes

- 9b6f9f9 Clean up cruft
- c3971a5 Fix salt.modules.publish and salt.states.x509 tests
- **PR #52629:** (dwoz) Fix event assertion race condition @ 2019-04-19 19:03:20 UTC
  - **PR #52540:** (dwoz) Fix race condition in event assertion (refs: #52629)
  - 0a4d2d9 Merge pull request #52629 from dwoz/ping\_wait\_2019.2.1
  - c001022 Fix linter
  - 423f6f9 Fix vent assertion race condition
- **PR #52619:** (dwoz) Remove unused method from pytest engine @ 2019-04-18 23:45:35 UTC
  - 4859e6c Merge pull request #52619 from dwoz/pytest\_engine\_2019.2.1
  - 105784a Remove unused method from pytest engine
- **PR #52614:** (Ch3LL) [2019.2.1] Update integration.modules.test\_network.NetworkTest.test\_network\_ping... @ 2019-04-18 21:54:28 UTC
  - 77943e5 Merge pull request #52614 from Ch3LL/cp-test\_network-2019.2.1
  - 27c79d2 Update integration.modules.test\_network.NetworkTest.test\_network\_ping test address
- **ISSUE #32245:** (tkwilliams) git\_pillar should permit automatic mapping of environment to branch a-la gitfs (refs: #50768)
- **PR #52615:** (twangboy) Bring 51661 into 2019.2.1 @ 2019-04-18 21:53:35 UTC
  - **PR #51661:** (sathieu) git\_pillar: Fix all\_saltenvs on base env (refs: #52615)
  - **PR #51597:** (sathieu) git\_pillar: Fix all\_saltenvs on base env (refs: #51661)
  - **PR #50768:** (sathieu) git\_pillar: Add support for all\_saltenvs parameter (refs: #51597, #51661)
  - c6b4986 Merge pull request #52615 from twangboy/gitfs\_2019.2.1
  - d952674 Merge branch '2019.2.1' into gitfs\_2019.2.1
- **ISSUE #52547:** (cbosdo) virt.purge throws a libvirt exception on Xen hypervisor (refs: #52548)
- **PR #52548:** (cbosdo) Virt purge fix @ 2019-04-18 20:07:36 UTC
  - 8ee15a9 Merge pull request #52548 from cbosdo/virt-purge-fix
  - 6ca8f4b Try/except undefineFlags() as this operation is not supported on bhyve
    - \* 5a0464b Bring 51661 into 2019.2.1
- **PR #52591:** (Ch3LL) [2019.2.1] Update test\_schema to mirror the new ValidationErrors in 3.0.0 @ 2019-04-18 16:34:22 UTC
  - e03aed5 Merge pull request #52591 from Ch3LL/fix\_jsonschema\_2019.2
  - e09be842 Update test\_schema to mirror the new ValidationErrors in 3.0.0
- **ISSUE #52525:** (lomeroy) deserializer\_opts are not passed the serializer in file.serialize (refs: #52526)
- **PR #52526:** (lomeroy) Fix use of deserializer\_opts in file.serialize @ 2019-04-17 14:08:52 UTC
  - 21d6365 Merge pull request #52526 from lomeroy/deserializer\_opts\_fix
  - ea0520c update test for serialization opts
  - 84ff03a Correct attempting to use the serializer\_name to pull deserializer\_opts when deserializer\_name is used as the key in the deserializer\_options dict.

- **ISSUE #49147:** ([furgerf](#)) Log filled with "Exception occurred while Subscriber handling stream: Already reading" (refs: #51963)
- **PR #52570:** ([DmitryKuzmenko](#)) Simplify IPCClient and prevent corrupt messages (Turn 2) 2019.2 @ 2019-04-17 14:03:02 UTC
  - **PR #52564:** ([DmitryKuzmenko](#)) Simplify IPCClient and prevent corrupt messages (Turn 2) (refs: #52570)
  - **PR #52445:** ([dwoz](#)) Simplify IPCClient and prevent corrupt messages (refs: #52564)
  - **PR #51963:** ([DmitryKuzmenko](#)) Allow multiple instances of IPCMessageSubscriber in one process (refs: #52564)
  - e522ffe Merge pull request #52570 from DSRCorporation/bugs/revert\_51963\_2019.2
  - fabbcac A couple of race conditions fixes and a test update.
  - 9c85734 Drop singleton from IPCClient
  - 7cf6d54 Revert "Support parallel work of multiple IPCMessageSubscribers in one process"
  - 7f26e76 Revert "Update doc conf with the new import *tornado.queues*"
  - 69e9416 Revert "Minor: Fix typo in docstring"
- **ISSUE #52449:** ([Ch3LL](#)) integration.cloud.clouds.test\_gce.GCETest.test\_instance\_extra failure (refs: #52551)
- **PR #52551:** ([garethgreenaway](#)) [2019.2] Marking the two tests in test\_gce as flaky @ 2019-04-17 14:00:39 UTC
  - b173406 Merge pull request #52551 from garethgreenaway/52449\_test\_gce\_random\_failures
  - 28af717 Marking the two tests in test\_gce as flaky.
- **ISSUE #51842:** ([mattLLVW](#)) salt.auth.django docs use wrong model name (refs: #52553)
- **PR #52553:** ([mattLLVW](#)) fix: #51842 @ 2019-04-17 13:59:45 UTC
  - 8352362 Merge pull request #52553 from mattLLVW/fix\_django\_auth\_docs
  - 3baeedf fix: #51842
- **ISSUE #52134:** ([sploenix](#)) Regression: Include list of pillar files under different keys in 2019.2 (refs: #52490)
- **ISSUE #22063:** ([jeanpralo](#)) Wildcard inside top.sls file for pillar (refs: #52490)
- **PR #52490:** ([dwoz](#)) Fix pillar include regression @ 2019-04-17 13:54:39 UTC
  - 9faa49c Merge pull request #52490 from dwoz/issue\_52134
  - 876dd18 Fix merge wart
  - 2ed650b Merge remote-tracking branch 'saltstack/2019.2' into issue\_52134
  - b0af11f Run include tests when pillar source changes
  - 307cec6 Fix pillar tests
  - 1a33bde import `__future__.absolute_import`
  - 5dc5de9 Use file encoding and add docstring
  - e84cd41 Fix pillar include wart
  - c79f496 Add pillar include tests
  - 7745242 Revert "Fix #22063: pillar wildcard support include"
- **PR #52552:** ([twangboy](#)) Bring 52170 into 2019.2 @ 2019-04-17 13:54:17 UTC
  - **PR #52170:** ([twangboy](#)) Fix issue when task doesn't have delay\_random defined (refs: #52552)

- b0c0237 Merge pull request #52552 from twangboy/fix\_win\_task\_2019.2
- fd19cca Remove some warts in the docs
- deb0b10 Fix some lint
- a279d45 Final doc fixes
- 58f0cd2 Fix docs... attempt 6
- a66716e Fix docs... attempt 5
- f6f3381 Fix docs... attempt 4
- 18cfc15 Fix docs... attempt 3
- c691e0d More doc fixes
- e01077b Fix docs issue... maybe...
- b649495 Honor 80 character line limit
- eba4507 Bring 52170 into 2019.2
- **PR #52528: (Ch3LL) [2019.2]** Merge forward from 2018.3 to 2019.2 @ 2019-04-17 13:53:46 UTC
  - cc0cd5d Merge pull request #52528 from Ch3LL/merge-2019.2
  - 87cf385 increase timeout on test\_state for windows
  - 3442202 Increase timeout for test\_kwarg tests
  - 2c3ff2f Merge branch '2019.2' into merge-2019.2
- **PR #52534: (twangboy)** Add TLS support up to TLS 1.2 @ 2019-04-13 22:56:41 UTC
  - e91240b Merge pull request #52534 from twangboy/tls\_support\_2019.2
  - 9ec54c4 Add TLS support up to TLS 1.2
    - \* 474efa1 Fix pylint and state test failure
    - \* 048a82e Merge branch '2019.2' into merge-2019.2
- **PR #52536: (twangboy)** Bring #52191 into 2019.2 branch @ 2019-04-12 21:31:23 UTC
  - **PR #52191: (twangboy)** Fix issue where version doesn't detect when check\_remote=True (refs: #52536)
  - 2c42e4d Merge pull request #52536 from twangboy/fix\_choco\_2019.2
  - b394ad5 Bring #52191 into 2019.2 branch
  - 795a7f6 Fix windows tests - increase timeout
  - c70772c Fix linux state tests- add new comment
  - 2941567 Merge branch '2018.3' into '2019.2'
  - 262516c Merge pull request #52209 from twangboy/fix\_choco\_retcode
    - \* 7aec2d3 Merge branch '2018.3' into fix\_choco\_retcode
    - \* bfdc47b Handle new enhanced retcode 2
  - dd7a4ba Merge pull request #52046 from twangboy/use\_reg\_timezone
    - \* fc8e970 Merge branch '2018.3' into use\_reg\_timezone
    - \* d0987e6 Merge branch '2018.3' into use\_reg\_timezone
    - \* 1bf0cbc Merge branch '2018.3' into use\_reg\_timezone

- \* b466f8a Merge branch '2018.3' into use\_reg\_timezone
- \* 34bdae5 Merge branch '2018.3' into use\_reg\_timezone
- \* 9a8afa6 Fix tests, add null byte test
- \* 59b1d4f Revert back to using reg to get timezone
- 0d09608 Merge pull request [#52396](#) from dmurphy18/fix\_aix\_ssh
  - \* 8bfa340 Correct typo
  - \* 6d98577 Altered code to support salt-ssh on AIX
- 576478e Merge pull request [#52473](#) from Ch3LL/bp-49437
  - \* 781385f Merge branch '2018.3' into bp-49437
  - \* 3a3114d Fix merge conflict wart
  - \* bbfd412 Merge branch '2018.3' into bp-49437
  - \* 48ee82d Merge branch '2018.3' into bp-49437
  - \* f66d474 Add support to avoid calling refresh\_db in opkg.del\_repo
- d830bc6 Merge pull request [#52493](#) from dwoz/ping\_reaction\_test
  - \* 8b05e77 Merge branch '2018.3' into ping\_reaction\_test
  - \* 7083d21 Merge branch '2018.3' into ping\_reaction\_test
  - \* 7c963c1 Merge branch '2018.3' into ping\_reaction\_test
  - \* 75ddeb3 fix linter
  - \* e3e1d2e fix reactor ping test
- 9b7a0d1 Merge pull request [#52505](#) from bloomberg/2018\_zmq\_uri
  - \* b682ec5 transport.zmq: fix bug introduced by b7df7e75cf2
- 452bbeb Merge pull request [#52512](#) from dwoz/supervisord\_2018.3
  - \* cd5cd7d The exit code matters.
- 53228ae Merge pull request [#52475](#) from Ch3LL/bp-49464
  - \* a891fd3 Make opkg.del\_repo be compatible with pkrepo state module
- 6e79e24 Merge pull request [#52500](#) from terminalmage/invalid-archive-source
  - \* e9d175b Fix traceback when invalid source passed to archive.extracted
- 2df74ca Merge pull request [#52476](#) from bloomberg/win\_cmd\_2018
  - \* 0e0c42e 2018 backport: modules.cmdmod: handle windows environ better
- 4dfb2f8 Merge pull request [#52474](#) from Ch3LL/bp-49984
  - \* c8d547e Use prune option in Pygit2 provider when fetching
- d699485 Merge pull request [#52393](#) from waynew/52087-mine-delete-test-enhancements
  - \* e3f5be3 Use uncommon item in mine delete test
- 89bd258 Merge pull request [#52445](#) from dwoz/ipc\_fixes\_2018.3
  - \* 1bdaf29 Ensure exceptions in service future are handled
  - \* c7ad732 Use six.reraise for py3 compatibility

- \* 29999b0 Close message service on subscriber close
- \* 47203f7 Fix ipc unit tests
- \* 2b35437 Fix linter issues
- \* 503cdd2 Remove IPCClient singleton
- \* b374034 Re-raise queued exceptions with traceback
- **ISSUE #51879:** ([whytewolf](#)) 2019.2.0 binary pillar unicode error returns. (refs: [#52334](#))
- **PR #52334:** ([waynew](#)) 51879 fix binary pillar return error @ 2019-04-12 03:45:17 UTC
  - 6eb2bce Merge pull request [#52334](#) from waynew/51879-fix-binary-pillar-return-error
  - ead856e Merge branch '2019.2' into 51879-fix-binary-pillar-return-error
  - 2aa971d lint cleanup
  - 28c2945 keep\_pillar not needed
  - fb010c0 Add binary pillar to the docs
  - f2aebf9 Assume file contents are binary
  - 2b8c782 Test gpg render with replace newlines
  - c4b385b Allow binary pillar data
  - 604b671 Return binary data from gpg renderer
  - 32aafab Ignore vscode and fix swap ignore
- **ISSUE #52041:** ([arsiesys](#)) 2019.2 influxdb\_retention\_policy.present broken when used extra arguments (refs: [#52043](#))
- **PR #52043:** ([arsiesys](#)) fix missing client\_args in influxdb module @ 2019-04-12 03:43:03 UTC
  - 2d59705 Merge pull request [#52043](#) from arsesys/fix\_influxdb\_state\_rp
  - e617c5b Merge branch '2019.2' into fix\_influxdb\_state\_rp
  - 7661860 fix missing client\_args in influxdb module
- **PR #52146:** ([twangboy](#)) Add missing symlink test @ 2019-04-12 00:51:16 UTC
  - 1b969c3 Merge pull request [#52146](#) from twangboy/fix\_test\_symlink\_2019.2
  - 8e1c882 Merge branch '2019.2' into fix\_test\_symlink\_2019.2
  - a429542 Merge branch '2019.2' into fix\_test\_symlink\_2019.2
  - 401c253 Merge branch '2019.2' into fix\_test\_symlink\_2019.2
  - cce6200 Fixing lint
  - c7cb009 Merge branch '2019.2' into fix\_test\_symlink\_2019.2
  - 3eae05a Merge branch '2019.2' into fix\_test\_symlink\_2019.2
  - 83bed46 Add missing symlink test
- **PR #52341:** ([cbosdo](#)) virt.pool\_running: fix pool start @ 2019-04-12 00:14:52 UTC
  - 7a1b8ca Merge pull request [#52341](#) from cbosdo/virt-state-fixes
  - 89f0bd8 Merge branch '2019.2' into virt-state-fixes
  - 25b9681 virt.pool\_running: fix pool start

- 30981d2 Remove unneeded kwargs in virt states
- 0871c02 virt: allow defining the VM type and arch when creating it
- 1c65d25 Updating running domains in virt.running
- 13d7819 Add missing virt states unit tests
- 0681d86 virt.running support for all virt.init options
- c6a444b Add test case for virt.running
- 2db7a98 Let virt running state provide errors
- **ISSUE #52350:** (Ch3LL) Re-Add Python 2 unicode string literals in YAML renderer (refs: #52427)
- **PR #52427:** (garethgreenaway) [2019.2] Support for old yaml render @ 2019-04-12 00:06:37 UTC
  - 6040282 Merge pull request #52427 from garethgreenaway/52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - 82f010a Merge branch '2019.2' into 52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - ae81fee Merge branch '2019.2' into 52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - b618d44 Merge branch '2019.2' into 52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - b191bc0 Merge branch '2019.2' into 52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - 38a9818 Merge branch '2019.2' into 52350\_readd\_and\_gate\_unicode\_string\_literal\_support
  - 2767984 Removing logging entry
  - 71cd303 Adding missing yamlloader\_old.py
  - f848aa4 Adding support back in with, a gated configuration option, for the old YAML Loader.
- **ISSUE #51865:** (magenbrot) salt.match.search\_by resulting in 'None' since 2019.2 (refs: #52234)
- **PR #52234:** (garethgreenaway) [2019.2] Fixes to matchers when used in pillar @ 2019-04-12 00:05:48 UTC
  - 05ba7c5 Merge pull request #52234 from garethgreenaway/51865\_match\_search\_by\_master
  - 1760245 Merge branch '2019.2' into 51865\_match\_search\_by\_master
  - d50f011 Merge branch '2019.2' into 51865\_match\_search\_by\_master
  - b0cbb60 Merge branch '2019.2' into 51865\_match\_search\_by\_master
  - 799a08b Merge branch '2019.2' into 51865\_match\_search\_by\_master
  - 21891d6 Merge branch '2019.2' into 51865\_match\_search\_by\_master
  - a2173d7 Fixing a typo where attempting to get a list from \_\_opts\_\_ instead of an individual item
  - 6a5b5b2 swapping out if...else approach for \_\_opts\_\_.get approach.
  - aa2c626 With the change/addition of the matcher subsystem in 2019.2, the match.search\_by when used in pillar broke when targetting the minion that was also the salt master. This was caused by the id in \_\_opts\_\_ being used in all cases. This change updates the glob\_match function to use the preserved minion\_id of the master if it is available so that targeting works as expected.
- **PR #52160:** (cbosdo) Virt whitespace fix @ 2019-04-12 00:04:25 UTC
  - 80d7aea Merge pull request #52160 from cbosdo/virt-whitespace-fix
  - fd1f539 Merge branch '2019.2' into virt-whitespace-fix
  - b297e7d virt: handle whitespaces in VM names
- **ISSUE #51832:** (nocturo) pillar include stopped working (refs: #52008)

- **PR #52008:** (waynew) Allow / in pillar includes @ 2019-04-12 00:02:40 UTC
  - b551bbd Merge pull request #52008 from waynew/51832-re-allow-slash-includes
  - ee3115f Allow leading dots and / as pillar separators
  - 29c676d Ensure \_closing exists
  - eb517e1 Swap '/' for '.' when matching
- **ISSUE #51821:** (OrangeDog) 'comment' is an invalid keyword argument for 'test.fail\_without\_changes' (refs: #51937)
- **PR #51937:** (garethgreenaway) [2019.2] Fix to test state functions to allow arguments that mod\_watch uses @ 2019-04-11 23:57:44 UTC
  - d3159cb Merge pull request #51937 from garethgreenaway/51821\_ensure\_result\_comment\_changes\_valid\_arguments
  - 86c63b5 Merge branch '2019.2' into 51821\_ensure\_result\_comment\_changes\_valid\_arguments
  - 0966d61 Merge branch '2019.2' into 51821\_ensure\_result\_comment\_changes\_valid\_arguments
  - 5527dff Ensure the comment, changes, and result are valid arguments for various test state functions as they are valid arguments for mod\_watch.
- **ISSUE #51818:** (syphernl) salt.nacl.dec: expected str, bytearray, or unicode (refs: #51913)
- **PR #51913:** (garethgreenaway) [2019.2] Fixes to utils/nacl.py @ 2019-04-11 23:56:57 UTC
  - 7be0428 Merge pull request #51913 from garethgreenaway/51818\_fix\_when\_sk\_is\_empty
  - 55d7488 Merge branch '2019.2' into 51818\_fix\_when\_sk\_is\_empty
  - b2128e8 Merge branch '2019.2' into 51818\_fix\_when\_sk\_is\_empty
  - cb01a1b Merge branch '2019.2' into 51818\_fix\_when\_sk\_is\_empty
  - 1a1e333 Merge branch '51818\_fix\_when\_sk\_is\_empty' of github.com:garethgreenaway/salt into 51818\_fix\_when\_sk\_is\_empty
    - \* 102f0a3 Merge branch '2019.2' into 51818\_fix\_when\_sk\_is\_empty
    - \* 7fd04ec Merge branch '2019.2' into 51818\_fix\_when\_sk\_is\_empty
  - dd23069 Adding tests for NACL changes.
  - c314f51 Correctly handle the situation when with the secret key or public key values are empty.
- **ISSUE #52116:** (lordcirth) host.present always returns None when in test=True (refs: #52399)
- **PR #52399:** (waynew) Bring host.present in line with Salt's test conventions @ 2019-04-11 23:32:28 UTC
  - d6f0971 Merge pull request #52399 from waynew/52116-fix-host-present-fail
  - 8440ae1 Merge branch '2019.2' into 52116-fix-host-present-fail
  - dd002fd Fix linter
  - 9d1b2a0 Only return None on host.present changes when test
- **PR #52477:** (mattp-) 2019.2 backport #52472 modules.cmdmod: handle windows environ better @ 2019-04-11 23:13:34 UTC
  - **PR #52472:** (mattp-) modules.cmdmod: handle windows environ better (refs: #52476, #52477)
  - 7c709cf Merge pull request #52477 from bloomberg/win\_cmd\_2019
  - 736a437 2019.2 bacpkport: modules.cmdmod: handle windows environ better
- **ISSUE #49661:** (ephreal) Issues starting salt-master or salt-minion with openssl-1.1.1-1 (refs: #51655)

- **PR #52423:** (bbinet) Remove unused salt.crypt import @ 2019-04-11 21:44:41 UTC
  - **PR #51655:** (garethgreenaway) [2017.7] Removing unused salt.crypt imports (refs: #52423)
  - b0d3c76 Merge pull request #52423 from bbinet/unused-salt-crypt
  - dc330e7 Merge branch '2019.2' into unused-salt-crypt
  - 4b26dea Merge branch '2019.2' into unused-salt-crypt
  - 9607c38 Also remove unused salt.crypt import in pillar/\_\_init\_\_.py
  - 49f2631 Remove unused salt.crypt import
- **PR #52506:** (mattp-) 2019.2: transport.zmq: fix bug introduced by b7df7e75cf2 @ 2019-04-11 21:12:51 UTC
  - 4bb9185 Merge pull request #52506 from bloomberg/2019\_zmq\_uri
  - 1e9dd7f transport.zmq: fix bug introduced by b7df7e75cf2
- **ISSUE #52462:** (Ch3LL) integration.states.test\_supervisord test failing (refs: #52513, #52512)
- **PR #52513:** (dwoz) [2019.2] Fix supervisord @ 2019-04-11 21:09:17 UTC
  - 1532642 Merge pull request #52513 from dwoz/supervisord\_2019.2
  - dc9ace6 The exit code matters.
- **PR #52496:** (dwoz) Fix wart in IPC merge forward @ 2019-04-11 05:19:02 UTC
  - **PR #52482:** (dwoz) Ipc fixes 2019.2 (refs: #52496)
  - 978084d Merge pull request #52496 from dwoz/ipc\_wart
  - 9805f38 Fix wart in IPC merge forward
- **PR #52482:** (dwoz) Ipc fixes 2019.2 (refs: #52496) @ 2019-04-10 19:53:58 UTC
  - 791b646 Merge pull request #52482 from dwoz/ipc\_fixes\_2019.2
  - f45d29b Remove un-needed test
  - 0141b7f Fix merge wart
  - 82150f0 Remove un-used import
  - c9ec8b1 Ensure exceptions in service future are handled
  - 25f5a90 Use six.reraise for py3 compatibility
  - 6d80789 Fix ipc unit tests
  - c80da32 Fix linter issues
  - 024b4b6 Remove IPCClient singleton
  - f1d0e02 Re-raise queued exceptions with traceback
- **ISSUE #51932:** (tomlaredo) [REGRESSION] --output-diff doesn't display changes anymore with test=True since v2019.2.0 (refs: #51992)
- **PR #51992:** (garethgreenaway) [2019.2] Swapping pchanges for changes in file state. @ 2019-04-09 19:38:57 UTC
  - 3173673 Merge pull request #51992 from garethgreenaway/51932\_show\_diff\_when\_test\_True
  - 7c4abd6 changes needs to be a dictionary.
  - ac950b3 Merge branch '2019.2' into 51932\_show\_diff\_when\_test\_True
- **PR #52413:** (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-04-08 16:19:49 UTC

- bd3ad7b Merge pull request #52413 from Ch3LL/merge-2019.2
- 30783f4 Merge branch '2019.2' into merge-2019.2
- **PR #52151:** (simonflood) Fix typo in actual 2019.2.0 release notes @ 2019-04-08 13:36:28 UTC
  - **PR #51861:** (simonflood) Fix typo in 2019.2.0 release notes (refs: #52151)
  - a18abf2 Merge pull request #52151 from simonflood/patch-2
  - a4a5521 Merge branch '2019.2' into patch-2
  - 3d31102 Fix typo in actual 2019.2.0 release notes
    - \* 16733da Merge branch '2019.2' into merge-2019.2
    - \* fe13214 Merge branch '2018.3' into '2019.2'
      - b6028b9 Merge pull request #52403 from bdrung/fix-test-conditions
      - e74f78f Skip ExtendTestCase if templates directory is missing
      - 0473683 Skip SampleConfTest if sample conf directories are missing
      - e5a755d Merge pull request #52250 from twangboy/fix\_grains
      - a77ec81 Merge branch '2018.3' into fix\_grains
      - b405391 Refer to the windowsdomain grain
      - e103561 Add some documentation about the domain grain on Windows
      - c874831 Don't set the domain grain to windowsdomain
      - 65eb461 Add a test for windows grains
      - 173d1e7 Fix the domain grain on Windows
      - 0ce0c04 Merge branch '2019.2' into 51932\_show\_diff\_when\_test\_True
- **ISSUE #51869:** (eimantaszd) x509.sign\_remote\_certificate not working after upgrade to 2019.2.0 (refs: #52381)
- **PR #52381:** (dwoz) Fix issue #51869 and add cert signing test @ 2019-04-05 20:36:11 UTC
  - 6bae227 Merge pull request #52381 from dwoz/issue\_51869
  - cd78485 Merge branch '2019.2' into issue\_51869
- **ISSUE #21927:** (jfindlay) network.traceroute intermittently stacktraces (refs: #52370)
- **PR #52370:** (jfindlay) Fix network.traceroute exec module function @ 2019-04-03 16:39:20 UTC
  - c1063cf Merge pull request #52370 from jfindlay/traceroute
  - 2f49231 modules.network: update unit test
  - 5b64fc0 modules.network: log and skip problematic traceroute lines
  - e33f5c1 modules.network: standardize util check
- **PR #52397:** (garethgreenaway) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-04-02 22:12:45 UTC
  - 3675f1e Merge pull request #52397 from garethgreenaway/merge-2019.2
  - 28e76b1 Merge branch '2018.3' into merge-2019.2
  - 28f947e Merge pull request #52213 from garethgreenaway/beacon\_state\_dont\_save\_test\_true
    - \* 7f83b4b Swapping out if state looking for test in opts for a \_\_opts\_\_.get
    - \* e1cf599 Merge branch '2018.3' into beacon\_state\_dont\_save\_test\_true

- \* b751122 Merge branch '2018.3' into beacon\_state\_dont\_save\_test\_true
- \* a901ec4 Don't save beacons when test=True
- 10d041b Merge pull request #52344 from twangboy/os\_release\_embedded
  - \* 74ab4d3 Use old way to get osrelease if new way fails
- e88d3ba Merge pull request #52345 from garethgreenaway/52197\_incron\_cannot\_have\_comments
  - \* 070837a Merge branch '2018.3' into 52197\_incron\_cannot\_have\_comments
  - \* 8461608 Updating the incron module, state module and tests to remove use of comments.
    - 855f31a Remove un-used file
    - affd9b8 Fix setup/teardown methods
    - 215bf93 Refresh after modifying tmp pillars
    - 95c3aba Add config for listener
    - 5d231f4 remove unused import
    - 8c1b1db Use tmp pillar for signing policies
    - a0e2458 fix unused import
    - 7f5f7dd Fix requisite path
    - 5630498 Fix signing policies path
    - 0bd0826 Fix issue #51869 and add cert signing test
- PR #52347: (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-03-28 16:41:53 UTC
  - 27e6cbf Merge pull request #52347 from Ch3LL/merge-2019.2
  - 63962b5 Merge branch '2018.3' into '2019.2'
  - bda3ca2 Merge pull request #51749 from terminal-labs/salt-cloud-map-alt-update
    - \* 9ca0f72 Changed where to mention the map files compatibility for minion configuration options. This is a result of @Ch3LL suggestion on the PR itself for this doc change.
    - \* 364ef06 Added mention of map file alternative for minion configuration options.
  - a743fff Merge pull request #52113 from twangboy/fix\_lgpo
    - \* bb4a704 Merge branch '2018.3' into fix\_lgpo
    - \* 7186405 Merge branch '2018.3' into fix\_lgpo
    - \* 7656331 Change default language from 1033 to en\_US

  - 54ea40a Merge branch '2019.2' into merge-2019.2
  - 227ddb Fix linter
  - a168913 Merge branch '2018.3' into '2019.2'

- \* c68744a Merge pull request [#51975](#) from s0undt3ch/features/nox-2018.3
  - af4ae91 Lint fixes
  - 33955c9 Windows needs special treatment
  - d4f899f Requirements fixes
  - e550c60 We need a fixed winrm-fs so that dotfiles are also included
  - ada1ef3 use kitchen-salt from my fork for now
- \* a689177 Merge pull request [#51807](#) from Ch3LL/2018.3.5\_rn
  - 2c0b85c Add 2018.3.5 release notes
- \* 6aee2c4 Merge pull request [#51806](#) from twangboy/fix\_beacon
  - 2bf6179 Fix some lint
  - 0f38eea Add lowercase test
  - 1459985 Make sure drive letter is uppercase for re compare
  - 7cdc660 Add some tests
  - 48ae8c6 Fix disk.usage beacon on Windows
- \* da815ba Merge pull request [#51966](#) from twangboy/use\_winapi\_com
  - a38300b Use winapi.com instead of coinitalize
- \* 7673c69 Merge pull request [#51920](#) from twangboy/add\_zabbix
  - e2d496c Add zabbix to the Windows builds
- \* 77c2796 Merge pull request [#51802](#) from garethgreenaway/merge-2018.3.4
  - 2e20939 Merge branch '2018.3' into merge-2018.3.4
  - 769f002 Merge branch '2018.3.4' into merge-2018.3.4
  - b53a843 Merge pull request [#51713](#) from dwoz/gemstestagain\_2018.3.4
  - f2c6631 Merge branch '2018.3.4' into gemstestagain\_2018.3.4
  - 1c82d24 Fix ruby gems tests, again
- \* 496525d Merge pull request [#51930](#) from Ch3LL/release\_docs
  - 9a68136 Update release documentation
- \* a027c97 Merge pull request [#51931](#) from Ch3LL/bp\_51298
  - 873cabd Roll back some changes to \_compat.py
  - 1fcb0ff Fix edge case when minion ID is a 16-character string
- \* 1fa2072 Merge pull request [#51892](#) from twangboy/gate\_zfs
  - fbc2c0c Gate zfs grain on Windows
- \* 89b0991 Merge pull request [#51836](#) from stratusjerry/backport\_49039\_2018.3
  - 35fdc4c Update win\_pkg.py
- \* c1ab63d Merge pull request [#51771](#) from Ch3LL/doc\_conf\_2018
  - 904beb3 [2018.3] change build\_type and release in doc/conf.py
  - 3efcea5 Update release versions for the 2018.3 branch

- \* 98f1b03 Merge pull request #51775 from garethgreenaway/merge-2017.7
  - 92ffe03 fixing lint
  - 73b601d Merge branch '2017.7' into merge-2017.7
  - e04f735 Merge pull request #51502 from ogd-software/51501-states-boto3\_route53.py-fails-to-validate-ALIAS-A-records
  - e69ce9d Merge branch '2017.7' into 51501-states-boto3\_route53.py-fails-to-validate-ALIAS-A-records
  - 5093406 Implement PEP8 E711 styling fix
  - 7640e90 Ensure boto3\_route53 correctly validates existing ALIAS records
  - ff633b0 Ensure boto3\_route53 survives attempts to validate ALIAS records
  - 9c128aa Merge pull request #51732 from s0undt3ch/features/nox-2017.7
  - 328989d Add initial nox configuration. Tell *tox*'ers to use *nox*'.
  - 99ce48d Merge pull request #51712 from dwoz/gemstestagain
  - 0d3b227 Fix ruby gems tests, again
  - 18452c4 Merge pull request #51528 from twangboy/backport\_51471
  - 8c79f02 Merge branch '2017.7' into backport\_51471
  - 20a7ee5 Backport 51471
  - ee80ce3 Merge pull request #51655 from garethgreenaway/49661\_starting\_salt\_master\_openssl
  - f647b95 Merge branch '2017.7' into 49661\_starting\_salt\_master\_openssl
  - 1831e64 Removing options from libcrypto.OPENSSSL\_init\_crypto so it will simply use the defaults.
  - 8d0f801 removing salt.crypt from payload.py which is not used and causing salt-key to break.
  - a5a54c4 Removing unused import which is causing salt-master to not start when using openssl 1.1.1-1.
  - c9c082c Fix azurearm field list doc error
  - af0537f Add azure state and execution modules to doc index
- PR #52004: (chdamianos) Fixed comparison of *None* with constants (refs: #52030) @ 2019-03-06 17:41:52 UTC
  - 01bccf0 Merge pull request #52004 from chdamianos/fix-constants-comparison
  - 6fd60af Fixed comparison of *None* with constants
- PR #51981: (bryceml) Fix typo in 2019.2.0 release notes @ 2019-03-05 23:59:33 UTC
  - 8d6bb5d Merge pull request #51981 from bryceml/2019.2
  - ecf0ef0 Fix typo in 2019.2.0 release notes
    - \* a65e621 Adding an additional note warning that the file will not be changed because test=True, but could be changed by other states.
    - \* 6c0dcf2 Swapping pchanges for changes in file state.
- ISSUE #51825: (OrangeDog) schedule.disable doesn't work in 2019.2.0 (refs: #51855)

- **PR #51855:** (garethgreenaway) [2019.2] Global enable/disable was being ignored @ 2019-03-05 19:40:34 UTC
  - c3105df Merge pull request #51855 from garethgreenaway/51825\_scheduled\_global\_enabled
  - 301e773 Merge branch '51825\_scheduled\_global\_enabled' of github.com:garethgreenaway/salt into 51825\_scheduled\_global\_enabled
    - \* ae7ab06 Merge branch '2019.2' into 51825\_scheduled\_global\_enabled
    - \* ff13833 Merge branch '2019.2' into 51825\_scheduled\_global\_enabled
  - 9e7e4ed Fixing broken add\_job test.
  - 72466a5 Global enable/disable was being ignored
- **ISSUE #51745:** (fayak) Systemd update 241 on archlinux breaks systemd.py version() function (refs: #51946)
- **PR #51946:** (Ethyling) Fix retrieve systemd version using regex @ 2019-03-05 19:20:19 UTC
  - be28623 Merge pull request #51946 from Ethyling/fix-systemd-version
  - b557707 Add test for systemd version from git describe
  - 94809d0 Fix retrieve systemd version using regex
- **ISSUE #51816:** (jkrauz) pillar\_ldap broken in 2019.2.0 (refs: #51964)
- **PR #51964:** (dwoz) [2019.2] Make sure ldap attrs are string types on python 2 @ 2019-03-05 19:18:30 UTC
  - c310022 Merge pull request #51964 from dwoz/issue\_51816
  - a879140 Merge branch '2019.2' into issue\_51816
  - 0e61cf3 Fix linter errors/warnings
  - 171217a Revert debug logging
  - 8c641c6 make LDAP attr defaults string types on py2
- **PR #51976:** (s0undt3ch) [2019.2] Nox fixes @ 2019-03-05 18:56:49 UTC
  - cb817f1 Merge pull request #51976 from s0undt3ch/features/nox-2019.2
  - 0b4e68c Lint fixes
  - 257b3fc Windows needs special treatment
  - b298da0 Requirements fixes
  - 4f45a7e We need a fixed winrm-fs so that dotfiles are also included
  - fa70af2 use kitchen-salt from my fork for now
- **PR #51761:** (sdodsley) Add new module to release notes for 2019.2.0 @ 2019-03-05 09:44:56 UTC
  - **PR #51681:** (sdodsley) Add new module to release notes for 2019.2.0 (refs: #51761)
  - f867e6e Merge pull request #51761 from sdodsley/cheery\_pick\_fb\_releasenotes
  - 80192c8 Add new module to release notes for 2019.2.0
- **PR #51799:** (s0undt3ch) Catch attribute error @ 2019-03-05 09:38:08 UTC
  - 08e3956 Merge pull request #51799 from s0undt3ch/2019.2
  - 342244a Merge branch '2019.2' into 2019.2
  - 3e8a17e Catch attribute error
- **PR #51810:** (Ch3LL) Add 2019.2.1 release notes @ 2019-03-05 09:26:47 UTC

- ff5d7d6 Merge pull request #51810 from Ch3LL/2019.2.1\_rn
- aae5fa Add 2019.2.1 release notes
- ISSUE #51824: (OrangeDog) schedule.present state not idempotent in 2019.2.0 (refs: #51849)
- PR #51849: (garethgreenaway) [2019.2] Fix to schedule.list function to filter out attributes that are None @ 2019-03-01 19:56:17 UTC
  - PR #51647: (dwoz) [develop] increase batch test timeout on windows (refs: #51849)
  - 3732004 Merge pull request #51849 from garethgreenaway/51824\_splay\_breaking\_schedule\_present
  - a0af441 Merge branch '2019.2' into 51824\_splay\_breaking\_schedule\_present
- PR #51878: (Ch3LL) Add new terraform salt-ssh roster feature to release notes @ 2019-02-27 19:18:49 UTC
  - 3fdb564 Merge pull request #51878 from Ch3LL/terraform\_rn
  - 502d197 fix spelling error in release notes
  - 4d53b41 Add new terraform salt-ssh roster feature to release notes
- PR #51837: (stratusjerry) Update win\_pkg.py @ 2019-02-26 16:51:35 UTC
  - PR #49039: (stratusjerry) Update win\_pkg.py (refs: #51836, #51837)
  - e63c872 Merge pull request #51837 from stratusjerry/backport\_49039\_2019.2
  - 531b23d Update win\_pkg.py
  - 39b5645 Splay defaulting to None internally, broke schedule.present causing it to always report differences when a state is run. Updating the schedule.list function to check if an attribute is None and remove it.
- PR #51772: (Ch3LL) Update release versions for the 2019.2 branch @ 2019-02-25 14:16:40 UTC
  - 27dd9fb Merge pull request #51772 from Ch3LL/doc\_conf\_2019
  - f28cc9b [2019.2] change build\_type and release in doc/conf.py
  - 4c670e2 Update release versions for the 2019.2 branch
- PR #51776: (garethgreenaway) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-02-24 22:08:58 UTC
  - 45425a4 Merge pull request #51776 from garethgreenaway/merge-2018.3
  - 186306a reverting change in release notes, adding change to doc/ref/modules/all/index.rst.
  - 1ef140a Fixing lint.
  - 6173578 Fixing lint errors
  - 38dcab9 fixing lint
  - e37fc20 Merge branch '2018.3' into merge-2018.3
  - 7e3e71c Merge pull request #51756 from twangboy/fix\_case\_sensitive
    - \* 4c55040 Fix failing py3 tests
    - \* 64f45f8 Make recurse and directory case sensitive
  - e75fc1c Merge pull request #51747 from ymasson/fix\_mysql\_grants
    - \* f614dd7 Fix escaping for special characters
  - b1f7e85 Merge pull request #51387 from chrillux/make-binarydata-output-possible
    - \* 010393e Make binary data output possible

- 3475813 Merge pull request [#51694](#) from assafShapira/2018.3
  - \* 895b97a Merge branch '2018.3' into 2018.3
  - \* bc2d27a fix minion bootstrapping issue `"/usr/lib/python2.7/site-packages/salt/utils/cloud.py"`, line 472 Configuration value `u'provider'` needs to be set
- c7136cb Merge pull request [#51738](#) from garethgreenaway/nftables\_cleanup
  - \* 8201d1e Fixing lint.
  - \* d681064 Merge branch '2018.3' into nftables\_cleanup
  - \* e37458e Fixing a couple tests.
  - \* ed1b743 Additional cleanup. Adding additional documentation for state module.
  - \* dc4afbb More updates to nftables module, state modules, and unit tests.
  - \* 3ec96e3 initial work to cleanup the nftables module, state module, and the unit tests.
- 2121049 Merge pull request [#51733](#) from s0undt3ch/features/nox-2018.3
  - \* 97532c2 Add initial nox configuration. Tell `tox`'ers to use `nox`'.
- f4adf33 Merge pull request [#51728](#) from gtmanfred/virtualnames
  - \* 61b4390 fix modulenames from virtualnames tests
- d681fb9 Merge pull request [#51721](#) from dwoz/solarisipstests
  - \* 3263d31 Merge remote-tracking branch 'saltstack/2018.3' into solarisipstests
- fb0a538 Merge pull request [#51676](#) from Ch3LL/merge-2018.3.4
  - \* 8111479 Merge branch '2018.3' into merge-2018.3.4
- e08f08d Merge pull request [#50812](#) from gtmanfred/virtualnames
  - \* d59952f Merge branch '2018.3' into virtualnames
  - \* 33bb5bf fix use of virtualname
    - 2ca1253 Merge branch 'merge-2018.3.4' of github.com:Ch3LL/salt into merge-2018.3.4
    - 6d6910a Merge branch '2018.3' into merge-2018.3.4
    - b5a6265 Fix ruby gems tests, again
    - 05f2797 Merge branch '2018.3' into merge-2018.3.4
    - 9f0999f Merge branch '2018.3' into merge-2018.3.4
    - 139daa8 Merge branch '2018.3.4' into 2018.3
    - 9741289 Merge pull request [#51646](#) from dwoz/batch\_exit\_2018.3.4
    - a8f25bb increase batch test timeout on windows
    - 9caafec Skip solarisips when not on solaris
- 31c6785 Merge pull request [#51714](#) from dwoz/gemstestagain\_2018.3
  - \* fab74bb Fix ruby gems tests, again
- 39aadfb Merge pull request [#51689](#) from gtmanfred/2018.3
  - \* 8c35d51 fix import
  - \* 6a55cfd specify minimum version of shade module

- a475b70 Merge pull request #51469 from s0undt3ch/hotfix/fix-suse-locale-docker
  - \* 14f49b5 Don't prevent `get_locale` from working when running under docker
- a59585d Merge pull request #51671 from Ch3LL/merge-2018.3
  - \* 64322db Fix `is_windows` utils call
  - \* a5c8df0 Fix pylint
  - \* 547889b Merge branch '2017.7' into '2018.3'
    - bcc13db Merge pull request #51562 from gilbrechbuhler/fix\_rabbitmq\_policy\_change\_check
    - ed2b1e1 Fix RabbitMQ policy definition update check
    - cafaa98 Merge pull request #51648 from dwoz/increase\_wait
    - e2377a9 Merge branch '2017.7' into increase\_wait
    - e3d28d9 Merge pull request #51643 from dwoz/batch\_exit
    - 42d1d02 increase batch test timeout on windows
    - 7c2d7a4 Increase minion wait for slow boxes
    - b5ae53a Merge pull request #51631 from Ch3LL/lint-2017
    - c0aa4dc Fix linter by ignoring `async await` check.
    - 396622c Merge branch '2017.7' into lint-2017
    - ba8d0ea Merge pull request #51547 from s0undt3ch/2017.7
    - 8e009e0 Allow NOT to install pip dependencies
    - 30ce509 Merge pull request #51182 from lmf-mx/darwin-plist-update
    - 4297c0d Merge branch '2017.7' into darwin-plist-update
    - 68ac07f Merge pull request #51442 from dwoz/multi\_master
    - 40cb4db Merge branch '2017.7' into multi\_master
    - 2dc5171 Handle `multi_master` failover when daemonized
    - 8df083c Merge pull request #51608 from dwoz/wait\_minions\_2017.7
    - c55359f fix linter
    - 4702e22 Wait for minions to be pingable before starting tests
    - 5afa0a1 Merge branch '2017.7' into darwin-plist-update
    - f46e8be Fix service name in minion plist
    - 1da9cd9 Fix pylint on 2017.7
    - 39122ca Merge pull request #51589 from dwoz/script\_fix\_2017.7
    - 8697ce7 Disable pylint checks, only for 2017.7
    - e5972f5 Use the code directory instead of `cwd` for python path
- b8764fd Merge pull request #51680 from Ch3LL/bp-50336
  - \* 3502dbb `states.gpg`: fix missing existing keys; `modules.gpg`: fix set trust level command
- **PR #51734:** (s0undt3ch) [2019.2] Add initial `nox` configuration. Tell `tox`'ers to use `nox`'. @ 2019-02-21 17:39:29 UTC

- 1894082 Merge pull request #51734 from s0undt3ch/features/nox-2019.2
- 01b74c0 Add initial nox configuration. Tell *tox*'ers to use *nox*'.
- PR #51707: (isbm) Bugfix: pillar refresh @ 2019-02-21 15:12:49 UTC
  - 74db589 Merge pull request #51707 from isbm/isbm-pillar-refresh-fix
  - 269ae76 Refresh matchers and beacons on pillar refresh
- PR #51674: (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-02-20 17:35:07 UTC
  - 82cbd98 Merge pull request #51674 from Ch3LL/merge-2019.2
  - 4171271 Fix pylint, remove unused import
  - 3f14619 Remove skipif and change expected return for solarisips test
  - d3660d5 Merge branch '2019.2' into merge-2019.2
- PR #51715: (dwoz) [2019.2] Fix ruby gems tests, again @ 2019-02-19 21:44:21 UTC
  - 7a82c65 Merge pull request #51715 from dwoz/gemstestagain\_2019.2
  - 95ce288 Fix ruby gems tests, again
  - 043efa0 Skip solarisips when not on solaris
  - 7ed0d7d Fix ruby gems tests, again
  - b46eac3 Merge branch '2019.2' into merge-2019.2
- PR #51561: (isbm) SaltSSH: fix delay when creating thin TAR @ 2019-02-19 10:15:47 UTC
  - 0bd2d6e Merge pull request #51561 from isbm/isbm-saltssh-thintar-delay-fix
  - 2b02975 Give up on sync for Py3 because of the way tests for py2 are written here
  - f79c81a Update UT mocking, adjusting for temporary file
  - 2f90054 Use temporary filename instead of output directly to the "thin.tgz"
  - d841164 Copy over the result, cleanup afterwards
  - c6792ee Add a function that reserves temporary filename for further tarball generation
- PR #51678: (Ch3LL) [2019.2] Merge forward from 2019.2.0.rc1 to 2019.2 @ 2019-02-17 19:02:33 UTC
  - 5f9764a Merge pull request #51678 from Ch3LL/merge-2019.2.0.rc

- \* c4bbe1a Merge pull request [#51177](#) from nullify005/51069-ri-and-rdoc-removed
  - 6b1a201 Merge branch '2018.3' into 51069-ri-and-rdoc-removed
  - f339608 Merge branch '2018.3' into 51069-ri-and-rdoc-removed
  - e586370 Merge branch '2018.3' into 51069-ri-and-rdoc-removed
  - 13d3288 Fix lint issues
  - 5de5e64 Update tests
  - 22eda16 Fix lint violations
  - 2e6252c Support rubygems 3 cli param changes
  - 9e3a01b Use existing file instead of tzutil
  - 30c1832 Use tempfile to get temp dir

- e3d3c5a Add tests for issue 51309
- 1168141 Add test for explicit lists
- 84f5d63 Merge branch '2018.3' into fix\_51566
- 7376cb9 Handle explicit lists properly
- 28fc070 Merge branch '2018.3' into 51266\_schedule\_enable\_disable\_break\_save
- 0760133 adding integration.scheduler.test\_helpers to various files to by pass the test\_module\_name\_source\_match check.
- 1552fba lint cleanup
- 086066b Adding a test to ensure \_get\_schedule which is used by the save functionality works when there is an enabled attribute.
- 1c6d4fb When looping through the schedule to remove hidden attributes, we should only do that if the item in question is a dictionary. It could be the attribute that determines if the entire scheudle is enabled or disable.
- 5ed8eb6 Properly create the value for a "True" boolean element item
- \* f1e29c8 Merge pull request #51548 from s0undt3ch/2018.3
  - 611065e Merge branch '2018.3' into 2018.3
- \* 00a6246 Merge pull request #51622 from brejoc/2018.3-empty-job-workaround
  - d263410 Prevents crash when there is no job entry
  - 5342305 Allow NOT to install pip dependencies
- \* fdb13a3 Merge pull request #51523 from lomeroe/solarisips\_fixes
  - e8e91e3 Merge branch '2018.3' into solarisips\_fixes
  - b7bfe17 lint fixes
  - cdaccf4 add tests to validate command being sent to cmd.run\_all
  - eaa229d add unit test
  - 432428d Don't assume that each item in "pkgs" is a dict (as packed by pkg.installed state).
- \* e3d5fbe Merge pull request #51577 from garethgreenaway/merge-2017.7
  - e060b97 Merge branch '2018.3' into merge-2017.7
  - 3eee038 Fixing a couple issues that did not merge properly.
  - 25b2ca6 Merge branch '2018.3' into merge-2017.7
  - c337fce Merge branch '2018.3' into merge-2017.7
  - f9d6828 Fixing missed merge.
  - a041775 Merge branch '2017.7' into merge-2017.7
  - 61889ba Merge pull request #51452 from terminalmage/bp-50963
  - 54d2e02 Merge branch '2017.7' into bp-50963
  - 0c989f0 Merge pull request #51437 from twangboy/fix\_raise\_2017.7
  - ecd1637 Merge branch '2017.7' into fix\_raise\_2017.7
  - f3c9cd4 Add missing raise statement

- d06526c Allow for kwargs to be used in object initialization
- 0e760b5 pip states: Use case-insensitive dictionaries for pip.list return
- 5ca9f82 Add a CaseInsensitiveDict implementation
- 2aaa9f9 pip.installed: Fix traceback when `_find_key` doesn't return a match
- 67b7d28 Merge pull request #51370 from dwoz/setup\_py\_req\_fix
- e1e06a0 Fix python 3 path for shell test cases
- 09cd5fc Merge branch '2017.7' into setup\_py\_req\_fix
- 0de189d Handle pipenv like version restrictions
- e9b3d94 Merge pull request #51367 from dwoz/cloud\_config\_2017
- 3f4c5a3e Merge branch 'cloud\_config\_2017' of github.com:dwoz/salt into cloud\_config\_2017
- 8b8d41a Merge branch '2017.7' into cloud\_config\_2017
- 7bb4ceb Fix python 3 path for shell test cases
- a2bbf4d Fix linter issues
- 004d9b8 Cloud provider and profile configs are merged
- 3a21afa Coverage on windows chokes with the tox env var `COVERAGE_PROCESS_START`
- 1c62e27 Switch required PyTest dependency
- b80320d Merge pull request #51402 from dwoz/win\_test\_fix
- 21359e6 Merge branch '2017.7' into win\_test\_fix
- 1199530 Merge pull request #51397 from dwoz/gemstest
- 43ac36e Use gems.github.com no longer exists, use gemcutter.org
- bac652f Add testing path to run\_script commands
- f511ad2 Merge pull request #51227 from astronouth7303/doc-modules-additional-globals
- cbe1e17 Merge branch '2017.7' into doc-modules-additional-globals
- 2a9bf17 Merge pull request #51312 from s0undt3ch/features/tox-runtests
- 3840af8 "Tell" coverage to track subprocesses.
- f67a529 Remove unused imports
- 15ab061 Show objects on assertion failure
- 0281fc5 Don't fail the test because of order
- 9a31be7 Don't call `.keys()` on dictionaries
- 97ced3a Add `pytest-salt-from-filenames` to pytest requirements
- 8d2c4d2 Remove duplicate dependency
- 5eec144 Add `.coveragerc`
- aa108d5 Run tests from tox, whether runtests or pytest
- 80a3826 Update TODO
- 1945c30 Document the client-defined dunderers
- \* 5bb9b32 Merge pull request #51393 from garethgreenaway/various\_documentation\_fixes

- 8bb7535 Merge branch '2018.3' into various\_documentation\_fixes
- c15406a Merge branch '2018.3' into various\_documentation\_fixes
- 33bb4e4 Merge branch '2018.3' into various\_documentation\_fixes
- 3582f6e Fixing the underline.
- a8f42a0 Various documentation fixes.
- \* 884981f Merge pull request #51465 from ezh/50556
  - a3ee70c fix #50556 state.orchestrate\_show\_sls
- \* 231d6e2 Merge pull request #51541 from bdrung/silence-linux\_distribution-deprecation-warning
  - c4feea1 Merge branch '2018.3' into silence-linux\_distribution-deprecation-warning
  - e1dccb5 Silence linux\_distribution deprecation warning
- \* f87d5ec Merge pull request #51558 from bdrung/test-zypp-plugin
  - c34967d Merge branch '2018.3' into test-zypp-plugin
- \* edb1093 Merge pull request #51609 from dwoz/wait\_minions\_2018.3
  - d794edb fix linter
  - d6720d2 Wait for minions to be pingable before starting tests
- \* 8d79359 Merge pull request #51599 from terminalmage/bp-51510
  - ed194c7 grains: assign os\_family Debian to Debian derivative TurnKey Linux
- \* 24aa083 Merge pull request #51598 from terminalmage/add-grain-option-documentation
  - 4ee9440 Improve ec2 pillar documentation
  - 9c02104 Add link to metadata grain module docs
  - 997ce26 Add documentation for the metadata\_server\_grains config option
- \* d89c489 Merge pull request #51491 from terminalmage/issue51268
  - 550e9ab Don't log shell warning if output\_loglevel is quiet
  - 7678c28 Do not load zyppnotify file on module import
- \* c6dfded Merge pull request #51588 from dwoz/script\_fix\_2018.3
  - cbac390 Use the code directory instead of cwd for python path
- **PR #51658:** (dwoz) [2019.2] Let memcopy make the null bytes, better py3 support @ 2019-02-15 05:42:37 UTC
  - **PR #51586:** (garethgreenaway) [2019.2] Merge forward from 2018.3 to 2019.2 (refs: #51658)
  - 1ea6f4b Merge pull request #51658 from dwoz/pip\_test\_fix
  - c811a70 Let memcopy make the null bytes, better py3 support
- **PR #51650:** (dwoz) [2019.2] Increase minion wait for slow boxes @ 2019-02-14 16:31:59 UTC
  - 22a04c1 Merge pull request #51650 from dwoz/increase\_wait\_2019.2
  - ad294f3 Merge branch '2019.2' into increase\_wait\_2019.2
- **PR #51645:** (dwoz) [2019.2] increase batch test timeout on windows @ 2019-02-14 16:29:26 UTC
  - a0982f7 Merge pull request #51645 from dwoz/batch\_exit\_2019.2
  - 1a882d7 Merge branch '2019.2' into batch\_exit\_2019.2

- **PR #51586:** (garethgreenaway) [2019.2] Merge forward from 2018.3 to 2019.2 (refs: #51658) @ 2019-02-14 16:25:29 UTC
  - 705a62d Merge pull request #51586 from garethgreenaway/merge-2018.3
  - 09fb3e7 Merge branch '2019.2' into merge-2018.3
  - 95c505a Merge branch '2019.2' into merge-2018.3
  - 4abd9d0 Merge branch '2019.2' into merge-2018.3
  - 6c99cb1 Merge branch '2018.3' into merge-2018.3
    - \* 41e25a6 Merge pull request #51580 from garethgreenaway/merge-2018.3.4
      - 84e15ce Fixing lint
      - e891b3f Merge branch '2018.3.4' into merge-2018.3.4
      - d0cad3e Merge pull request #51553 from twangboy/update\_libsodium
      - 4177f64 Update url to libsodium for mac builds
      - 564a65a Merge pull request #51544 from twangboy/fix\_test\_ssh\_2018.3.4
      - 7771632 Fix ssh on Windows
      - b4299a3 Merge pull request #51532 from frogunder/new\_releasenotes
      - 09faf0b Merge branch '2018.3.4' into new\_releasenotes
      - c6bfe53 2018.3.4 releasenotes
      - c37bdb7 Merge pull request #51534 from twangboy/fix\_51309
      - 3ad95bc Convert data to string using salt util
      - 5b41af3 Merge pull request #51530 from garethgreenaway/48204\_mysql\_module\_handle\_mariadb\_versions
      - cdf5298 Later versions of MariaDB still support "ALL PRIVILEGES"
      - d31c902 Updating the mysql module to handle MariDB versions.
      - f3f345c Merge pull request #51529 from frogunder/releasenotes
      - fb678ee fix escaped asterisks
      - 6a4f0da 2018.3.4 releasenotes
      - a37fb7d Merge pull request #51525 from twangboy/backport\_51095\_2018.3.4
      - b6acc92 Backport 51095
      - 602ddc8 Merge pull request #51520 from frogunder/man\_pages
      - 0cbe3f8 Update man pages for 2018.3.4
      - 1f981c6 Merge pull request #51429 from yosnoop/replace-noclass-with-nocl-for-dig
      - 5231e73 Merge branch '2018.3.4' into replace-noclass-with-nocl-for-dig
      - 14e6fb7 In case the test machine can't resolve
      - 95e8a2f The +nocl is supported much wider than +noclass
      - a00d708 Test dig options for salt.utils.dns.lookup
      - 209ef32 Merge pull request #51441 from Ch3LL/bp-51366
      - 5bc466e Fix python 3 path for shell test cases

- 5351e5c Add testing path to run\_script commands
- 2d8a364 Fix linter issues
- 9b8718a Cloud provider and profile configs are merged
- 90a8682 Merge pull request #51458 from twangboy/add\_py2\_warning
- 05522c0 Merge branch '2018.3.4' into add\_py2\_warning
- b492021 Merge pull request #51460 from twangboy/update\_installer\_mac\_2018.3.4
- 3c92688 Merge branch '2018.3.4' into update\_installer\_mac\_2018.3.4
- 892d98c Merge pull request #51471 from twangboy/fix\_test\_win\_dns\_client
- c9f6b01 Merge branch '2018.3.4' into fix\_test\_win\_dns\_client
- a05305d Merge pull request #51462 from ShantonRU/fix-insecure-sql-queries-in-mysql-module-1
- d3ef2cb Merge branch '2018.3.4' into fix-insecure-sql-queries-in-mysql-module-1
- f47dda6 Fix improper use of socket authentication in mysql.user\_chpass
- ed62a2f Fix insecure SQL queries in mysql.user\_chpass
- 33922c9 Fix the failing dns test on Windows
- 48936c2 Merge pull request #51445 from terminalmage/fix-custom-grains-raise
- 191235d Remove custom grains module from 2018.3 branch
- 72fd1a2 Roll back icon change
- 7dd1704 Add welcome\_py2.rtf
- c93e9e3 Add Py2 Warning to installer package
- b658900 Add Py2 Warning for Py2 Installer
- a880e42 Merge pull request #51438 from twangboy/fix\_raise\_2018.3.4
- 5830fad Add missing raise statement
- 28b898c Merge pull request #51432 from Ch3LL/bp-51324
- bd41ff0 Fixing various bits in x509 module and unit test to ensure tests are passing on python2 & python3
- 01717d2 Merge pull request #51377 from twangboy/fix\_auditpol\_2018.3.4
- 19e5181 Fix issue when directory doesn't exist
- 43a9d2f Merge pull request #51338 from Ch3LL/bp-51207
- 345ae67 Backport PR# 50771 to 2018.3 branch
- 3dcd11d Merge pull request #51337 from Ch3LL/bp-51170
- 4e85505 Merge branch '2018.3.4' into bp-51170
- 7656aa5 Merge pull request #51340 from Ch3LL/bp-51252
- e74a6c6 Fix py3 managed.file test failure
- 6f2c7cf Remove un-needed log statement
- 824950c Fix 50221 regression test on Windows
- 1840af9 Preserve newlines from pillar data for file.managed

- e90ca1d Merge pull request #51290 from s0undt3ch/hotfix/fix-network
- da3aace Merge branch '2018.3.4' into hotfix/fix-network
- 04f16b8 Fix tests. We no longer get *ipaddress* instances back.
- c3fa82a Fix minion start issue
- c893dc4 Fix saltmod roster test
- b61854f Roster defines the roster system not a file
- 484bab4 Fix linter
- 5e2db2f Honor roster file for ssh orchestrations
- c8db7e3 Merge pull request #51317 from terminalmage/fix-pr-50417
- 4be2891 Merge branch '2018.3.4' into fix-pr-50417
- e246fdb Merge pull request #51311 from twangboy/fix\_test\_file.test\_managed
- f4177e0 Remove mode parameter on Windows
- 4c4ded3 Fix regression in dynamic pillarenv
- 40b20126 Merge pull request #51292 from Ch3LL/bp-51226
- aba114e Merge branch '2018.3.4' into bp-51226
- fc0bec5 Merge pull request #51295 from Ch3LL/bp-51279
- 5c4a7a4 Merge branch '2018.3.4' into bp-51279
- dacd1ea Merge pull request #51293 from Ch3LL/bp-51233-2
- a155fd7 Accounting for when permissions are not returned from `file.check_perms`, eg. windows systems.
- 53ba068 When `test=True` and there are permissions changes, report it.
- d2eba77 Remove `network.py` patch
- d431c71 Add `__context__` support
- de6c13d Handle spaces in `fstab` opts, similar fix to #39593
- 1abffb2 Merge pull request #51278 from dwoz/issue51248
- c614198 Use pillar roots validation method
- 0d2b0c6 Fix linter warnings
- 5b98895 Fix wart in `pillar_roots` validation
- \* f7d50b1 Merge pull request #50784 from sathieu/dynamic\_file\_roots
  - 7ca2aa4 Allow dynamic `file_roots`
- \* 5e840a5 Merge pull request #51527 from garethgreenaway/bp-51475
  - 801abf2 Fix Elasticsearch retuner
- \* 1f6da6a Merge pull request #50921 from terminalmage/issue49894
  - a35c023 Don't use a decorator that assumes `/etc/apt/sources.list.d` exists
  - 6a62e79 Add integration test for architecture support
  - 67ae5a5 Add support for architectures for APT `pkgrepo.managed` states

- \* 3f17776 Actually, remove python-ldap. It needs system deps. Have salt-jenkins do it.
- \* afcb6bd Fix the *ldap* package name in requirements/tests.txt
- \* 588cb87 Merge pull request #51454 from terminalmage/fix-deprecation-warning
  - 529cce0 Fix deprecation warning in nested outputter
- \* 13de0b8 Merge pull request #50963 from terminalmage/issue50942
  - c84be3f Allow for kwargs to be used in object initialization
  - 2bf93fd pip states: Use case-insensitive dictionaries for pip.list return
  - 792f054 Add a CaseInsensitiveDict implementation
  - 1410164 pip.installed: Fix traceback when `_find_key` doesn't return a match
- \* 60953b7 Merge pull request #51366 from dwoz/cloud\_config\_merge
  - ae351eb Fix python 3 path for shell test cases
  - 48062c8 Merge branch '2018.3' into cloud\_config\_merge
  - eeea289 Add testing path to run\_script commands
  - 542d857 Fix linter issues
  - a8af3ba Cloud provider and profile configs are merged
- \* 9ab2ec6 Coverage on windows chokes with the tox env var `COVERAGE_PROCESS_START`
- \* 4994c38 Switch required PyTest dependency
- \* 89710a7 Merge pull request #51401 from dwoz/run\_script\_win
  - 77fdf35 Add testing path to run\_script commands
- \* 1438a62 Merge pull request #51389 from terminalmage/proxy-fixes
  - 3cec85e Normalize results if test proxy is enabled
- \* 8acd9e5 Merge pull request #51368 from s0undt3ch/hotfix/tests
  - f4e1692 Fix test
- \* ab60782 Merge pull request #51319 from terminalmage/issue51255
  - 04eb66b Merge branch '2018.3' into issue51255
- \* fdf2cf4 Merge pull request #51250 from yosnoop/fix-salt-utils-dns-lookup
  - Oddfad1 Merge branch '2018.3' into fix-salt-utils-dns-lookup
  - 9fb4abe Merge branch '2018.3' into fix-salt-utils-dns-lookup
  - 67e4131 Merge branch '2018.3' into fix-salt-utils-dns-lookup
  - 9a34bcd Unit test for lookup with servers option
  - 9498fdc Fix `_lookup_host` to make it work when server specified
  - af867e1 Remove excessive whitespaces
  - 0d074a4 Fix a comment
  - 1363d2b Proper way to specify `_server_` to query with `_host_`
  - 7b2facc Fix broken lookup in salt/utils/dns.py
- \* 73528a5 Merge pull request #51339 from dwoz/aws\_role\_backport

- 156f532 Backport aws role support
- \* 7908875 Merge pull request #51341 from Ch3LL/bp-51299
  - e3080f1 Add sleep before sending stop over UDP
- \* 326425c Merge pull request #51352 from garethgreenaway/fixing\_service\_beacon\_documentation
  - 021fe85 Fixing the documentation for the service beacon. If not options are provided for the service then there needs to be an empty dictionary.
- \* 14a84e8 Merge pull request #51333 from Ch3LL/merge-2018.3
  - 27d7a89 Merge branch '2018.3' into merge-2018.3
- \* 31b921f Merge pull request #51304 from terminalmage/issue51270
  - 36673fb Merge branch '2018.3' into issue51270
- \* 2c3aef7 Merge pull request #51313 from s0undt3ch/features/tox-runttests-2018.3
  - 2eafc5c "Tell" coverage to track subprocesses.
  - f6babeb Remove unused imports
  - ff6824c Don't fail the test because of order
  - 4d12ccb Show objects on assertion failure
  - ee2f10a Add *pytest-salt-from-filenames* to pytest requirements
  - 4f4d019 Remove duplicate dependency
  - 1d4b9f5 Add *.coveragerc*
  - 78c6d68 Run tests from tox, whether runttests or pytest
  - c02757d gitfs: Fix use of deprecated pygit2 function
  - ae62ebc Merge branch '2017.7' into '2018.3'
  - 9309639 Merge pull request #51305 from s0undt3ch/2017.7
  - 09b20df Add 2017.7 codecov config
  - 4fa2a02 Merge pull request #51267 from ethframe/fix-file-directory
  - c108825 Fix missing file error in file.directory.
  - ad17ac5 Fix mocks to reflect changes to git.latest state
  - c817213 Don't try to run git.config\_get\_regexp from nonexistent cwd
  - f8c3e44 git.latest: add auth to merge/reset calls when LFS used with SSH auth
  - 4b11d6b increase batch test timeout on windows
  - a5af9c5 Increase minion wait for slow boxes
- **PR #51549:** (s0undt3ch) [2019.2] Allow NOT to install pip dependencies @ 2019-02-13 18:16:52 UTC
  - e7ee04e Merge pull request #51549 from s0undt3ch/2019.2
  - d2125aa Allow NOT to install pip dependencies
- **PR #51595:** (mirceaulinic) Fix ipaddress imports @ 2019-02-13 17:33:08 UTC
  - c96464b Merge pull request #51595 from mirceaulinic/mircea/port-824e0e5
  - 91bc4f Merge branch '2019.2' into mircea/port-824e0e5

- 84fc76d Fix ipaddress imports
- **PR #51517:** (damianosSemmlle) Fixed string format index out of range error @ 2019-02-13 08:18:38 UTC
  - e3c9a3e Merge pull request #51517 from damianosSemmlle/fix-string-format-index
  - c0959e2 Merge branch '2019.2' into fix-string-format-index
- **PR #51581:** (garethgreenaway) [2019.2] Merge forward from 2019.2.0rc1 to 2019.2 @ 2019-02-13 04:11:15 UTC
  - 82500bb Merge pull request #51581 from garethgreenaway/merge-2019.2.0rc1
  - b00e7e8 Merge branch '2019.2' into merge-2019.2.0rc1
- **PR #51607:** (dwoz) [2019.2] Wait for minions to be pingable before starting tests @ 2019-02-13 00:48:47 UTC
  - edb5e94 Merge pull request #51607 from dwoz/wait\_minions\_2019.2
  - ab0a6a3 fix linter
  - f2e4a30 Wait for minions to be pingable before starting tests
- **PR #51584:** (dwoz) [2019.2] Use the code directory instead of cwd for python path @ 2019-02-12 18:43:46 UTC
  - 1e0275e Merge pull request #51584 from dwoz/script\_fixes
  - dbf4356 Use the code directory instead of cwd for python path
  - cd24006 Merge branch '2019.2' into merge-2019.2.0rc1
  - 6e55164 Merge branch '2019.2.0.rc1' into merge-2019.2.0rc1
    - \* ac73745 Merge branch '2019.2' into fix-string-format-index
- **PR #51583:** (dwoz) Add testing path to run\_script commands @ 2019-02-11 21:38:51 UTC
  - f446c52 Merge pull request #51583 from dwoz/scriptfix
  - e49ba86 Add testing path to run\_script commands
  - 788f7e0 Fixed string format index out of range error
- **PR #51405:** (aplanas) Documentation: fix typo in "equivalent" @ 2019-02-01 21:11:12 UTC
  - c3e27be Merge pull request #51405 from aplanas/backport\_49669
  - 58279b4 Documentation: fix typo in "equivalent"
- **PR #51406:** (aplanas) states\_pt3: fix rST link format @ 2019-02-01 21:10:43 UTC
  - 5c26652 Merge pull request #51406 from aplanas/backport\_49670
  - 204432d Merge branch '2019.2' into backport\_49670
- **PR #51426:** (aplanas) mount: cache blkid information @ 2019-02-01 21:09:51 UTC
  - fb70bd3 Merge pull request #51426 from aplanas/backport\_51135
  - ac790a6 Merge branch '2019.2' into backport\_51135
  - 66743d6 mount: cache blkid information
- **PR #51425:** (aplanas) cmdmod: add sysfs into the chroot @ 2019-02-01 21:09:00 UTC
  - 2e8bf05 Merge pull request #51425 from aplanas/backport\_51094
  - 9193106 cmdmod: add sysfs into the chroot
- **PR #51419:** (aplanas) file: update attributes for lsattr and chattr @ 2019-02-01 21:04:54 UTC
  - d7a47f0 Merge pull request #51419 from aplanas/backport\_50607

- ab8a8b8 file: update attributes for lsattr and chatter
- **PR #51414:** (aplanas) service: SUSE is not based on sysvinit anymore @ 2019-02-01 21:02:33 UTC
  - 7e020dd Merge pull request #51414 from aplanas/backport\_50396
  - b5cff17 service: SUSE is not based on sysvinit anymore
- **PR #51408:** (aplanas) parted: fix the ordering of list command @ 2019-02-01 21:00:19 UTC
  - **PR #50473:** (aplanas) parted: support variable length output for print (refs: #51408)
  - **PR #49804:** (aplanas) parted: fix the ordering of list command (refs: #51408)
  - 9f87dda Merge pull request #51408 from aplanas/backport\_49804
  - 467daf2 parted: support variable length output for print
  - da2e632 parted: fix the ordering of list command
- **ISSUE #50097:** (aplanas) lowpkg.diff refers to a package name, but a package file is required (refs: #51410)
- **PR #51410:** (aplanas) Fix lowpkg.diff documentation and parameter name @ 2019-02-01 20:57:50 UTC
  - 7e14499 Merge pull request #51410 from aplanas/backport\_50126
  - d38622e Fix lowpkg.diff documentation and parameter name
    - \* e61a077 states\_pt3: fix rST link format
- **PR #51404:** (aplanas) blockdev: fix url from comment @ 2019-01-30 20:05:54 UTC
  - a16461b Merge pull request #51404 from aplanas/backport\_49668
  - da2e30d blockdev: fix url from comment
- **PR #51407:** (aplanas) parted: fix \_validate\_partition\_boundary @ 2019-01-30 20:05:02 UTC
  - 756c367 Merge pull request #51407 from aplanas/backport\_49803
  - b004b33 parted: fix \_validate\_partition\_boundary
- **PR #51435:** (damianosSemmler) Fixed not raised exceptions @ 2019-01-30 18:32:57 UTC
  - 1d45664 Merge pull request #51435 from damianosSemmler/fix-raise-exception
  - 7a9ff59 Fixed not raised exceptions
- **PR #51336:** (Ch3LL) [2019.2] Merge Forward from 2019.2.0.rc1 to 2019.2 @ 2019-01-27 23:55:08 UTC
  - d4b9093 Merge pull request #51336 from Ch3LL/merge-2019.2.0rc1
  - 62a20b1 Remove unused import
  - 2284ea5 Merge branch '2019.2' into merge-2019.2.0rc1
  - 18bf236 Merge branch '2019.2.0.rc1' into 2019.2
- **PR #51334:** (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-01-27 23:49:32 UTC
  - 02b43a0 Merge pull request #51334 from Ch3LL/merge-2019.2
  - 25ec653 Merge branch '2018.3' into '2019.2'
    - \* f62cc11 Merge pull request #51324 from garethgreenaway/1257\_something\_something\_bytes\_argh\_python2
      - bd7072f Merge branch '2018.3' into 1257\_something\_something\_bytes\_argh\_python2
    - \* b44cd84 Merge pull request #51323 from garethgreenaway/network\_dns\_check\_test
      - 055eadc Merge branch '2018.3' into network\_dns\_check\_test

- \* be57a0f Merge pull request [#51321](#) from terminalmage/issue51256
  - d9c4462 Fix 500 error when using wheel\_async
  - c847f54 Swap passed addr for string rather than ipaddress object.
  - 87f3972 removing another debugging log.
  - ad64efb Use MagicMock
  - 172ad2e removing debugging
  - 5812eae Adding a test to ensure dns\_check works as expected.
  - 0e542c5 Fixing various bits in x509 module and unit test to ensure tests are passing on python2 & python3
- \* 85e7ac6 Merge pull request [#51306](#) from s0undt3ch/2018.3
  - 5f0f296 Add 2018.3 codecov config
- \* 5a398a3 Merge pull request [#51207](#) from twangboy/fix\_test\_pkg
  - d4ab6d8 Merge branch '2018.3' into fix\_test\_pkg
- \* 7a97cb4 Merge pull request [#51252](#) from dwoz/issue-50221
  - f96828a Merge branch '2018.3' into issue-50221
- \* 253f5e4 Merge pull request [#51264](#) from gtmanfred/2018.3
  - f3ebd32 Merge branch '2018.3' into 2018.3
- \* aacc047 Merge pull request [#51274](#) from twangboy/fix\_network
  - 344bf65 Fix tests. We no longer get *ipaddress* instances back.
  - 345aa5b Fix minion start issue
  - f553be7 tuples don't have pop
  - 55ea80e don't shadow builtin
  - 6148c50 an argument is not always needed to be passed to open a file
- \* 8a89cb2 Merge pull request [#51279](#) from twangboy/backport\_lgpo
  - 06b1545 Remove network.py patch
  - 2356f25 Add `__context__` support
  - a5255f0 Merge remote-tracking branch 'saltstack/2018.3' into issue-50221
- \* 6796e65 Merge pull request [#51276](#) from garethgreenaway/merge-2018.3
  - 44ddc43 Merge branch '2018.3' into merge-2018.3
- \* 0adde9b Merge pull request [#51220](#) from sathieu/artifactory-classifier-2018.3
  - a85f146 fixes [#31179](#) by applying the same logic as used in the nexus module
- \* f6a7cad Merge pull request [#51225](#) from astronouth7303/loader-docs-2018.3
  - 6e7da95 Add the tokens system.
  - 7e2838c Add reference to the execution module docs
  - f30f9e8 Remove search system
  - f0cc183 Fileserver modules can be loaded from the fileserver.

- \* 1a2f680 Merge pull request #51239 from garethgreenaway/51208\_file\_manage\_escaped\_double\_quotes
    - 4251c0c Merge branch '2018.3' into 51208\_file\_manage\_escaped\_double\_quotes
    - 6a9daa7 Merge branch '2018.3' into 51208\_file\_manage\_escaped\_double\_quotes
    - 0bf468c Fixing lint. Using a constant instead of looking for the condition in the string.
    - a233dbc Ensuring we can handle a string that contains single quote + an escaped double quote.
  - \* d614127 Merge pull request #51261 from OrangeDog/patch-2
    - d809b9b Avoid double-counting errors and ignore test runs
    - 6ca7deb Remove unused host parameter and average/disaster keys
    - 2d44527 Just let zabbix\_sender use the config file
    - 6404e2c Fix fallback command so it's actually run
    - b79a55a Fix KeyError in Zabbix returner
    - 0971035 Merge branch '2018.3' into merge-2018.3
    - 243dc06 Merge branch '2017.7' into merge-2018.3
    - acfb7d8 Update pytest requirements
    - c19479b Move all of PyTest requirements to its own requirements file
    - 39e633f Merge pull request #51246 from garethgreenaway/bp-50358
    - c33c558 Backport #50358 to 2017.7
    - c1ea10f Fix py3 managed.file test failure
    - 537114c Remove un-needed log statement
    - ac978f0 Fix 50221 regression test on Windows
    - 65f38b5 preserve newlines from pillar data for file.managed
    - 464d813 Merge branch '2018.3' into fix\_test\_pkg
  - \* 276d621 Merge pull request #51197 from Ch3LL/tag\_manager
    - b9a0705 Merge branch '2018.3' into tag\_manager
    - 210238b Merge branch '2018.3' into tag\_manager
    - 827d6c3 Merge branch '2018.3' into tag\_manager
    - fcdfe69 Add Google Tag Manager to Docs
  - \* c8e70a9 Merge pull request #51206 from terminalmage/fix-reload
    - 8e23a6c Add missing import
    - 31ca7c6 Fix usage of reload for PY3 compatibility
  - \* 41ae390 Merge pull request #51231 from terminalmage/issue51056
    - 4a61477 Clarify documentation for the the gitfs "all\_saltenvs" config param
    - 0574476 Merge branch '2018.3' into fix\_test\_pkg
    - b91b2c6 Backport PR# 50771 to 2018.3 branch
- **PR #51314:** (s0undt3ch) [2019.2] Allow running runtests.py using tox @ 2019-01-25 18:56:01 UTC

- 95607d1 Merge pull request #51314 from s0undt3ch/features/tox-runtests-2019.2
- 39fb981 "Tell" coverage to track subprocesses.
- f27589a Remove unused imports
- 3000d20 Fix tests. We no longer get *ipaddress* instances back.
- 8fcf235 Fix minion start issue
- a26ba7f Don't fail the test because of order
- 138ca2e Show objects on assertion failure
- 840b3d2 Add *pytest-salt-from-filenames* to pytest requirements
- 716bda4 Remove duplicate dependency
- 6d62156 Add *.coveragerc*
- 6bb56ce Run tests from tox, whether runttests or pytest
- PR #51307: (s0undt3ch) Add 2019.2 codecov config @ 2019-01-24 13:34:25 UTC
  - b348034 Merge pull request #51307 from s0undt3ch/2019.2
  - 495aa5c Add 2019.2 codecov config
- PR #51280: (garethgreenaway) [2019.2] Merge forward from 2019.2.0rc1 to 2019.2 @ 2019-01-23 07:08:32 UTC
  - d224096 Merge pull request #51280 from garethgreenaway/merge-2019.2-rc
  - e78ede2 Merge branch '2019.2' into merge-2019.2-rc
  - a425de6 Merge branch '2019.2.0.rc1' into merge-2019.2-rc
- PR #51277: (garethgreenaway) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-01-23 07:01:29 UTC
  - 8596ee4 Merge pull request #51277 from garethgreenaway/merge-2019.2
  - f05e754 Merge branch '2019.2' into merge-2019.2
- ISSUE #51273: (isbm) How to properly fix API? (refs: #51285)
- PR #51285: (garethgreenaway) [2019.2] Add metadata to accepted keyword arguments @ 2019-01-22 23:07:44 UTC
  - 8cca51b Merge pull request #51285 from garethgreenaway/51273\_metadata\_auth\_keyword\_argument
  - bd82d80 Ensure metadata is an accepted keyword argument for authentication functions.
  - d0d5726 Merge branch '2018.3' into merge-2019.2
  - a6a9040 Merge pull request #51179 from terminalmage/fix-regex-chars
    - \* 9951b8d Fix possible oversight in nodegroup modifications
  - d5acd5b Merge pull request #51170 from dwoz/issue51158
    - \* b69c002 Fix saltmod roster test
    - \* 2594f24 Roster defines the roster system not a file
    - \* 05836b3 Merge branch '2018.3' into issue51158
    - \* bf47f6f Fix linter
    - \* 6223596 Honor roster file for ssh orchestrations
  - 5543a53 Update pytest requirements

- f958df5 Move all of PyTest requirements to its own requirements file
- 8f8ebbc Merge pull request #51226 from garethgreenaway/51195\_handle\_spaces\_in\_fstab\_opts
  - \* 1902ce8 Merge branch '2018.3' into 51195\_handle\_spaces\_in\_fstab\_opts
- e3a9e99 Merge pull request #51233 from Ch3LL/bp-51105
  - \* eef49e8 Merge branch '2018.3' into bp-51105
- e53e9b1 Merge pull request #51230 from Ch3LL/merge-2018.3
  - \* 0ef7675 Merge branch '2017.7' into '2018.3'
  - \* 4a12c5f Merge pull request #50852 from mirceaulinic/fix-capirca
    - fa91267 Merge branch '2017.7' into fix-capirca
    - 71913ff Merge branch '2017.7' into fix-capirca
    - 6fc3484 Lint?
    - 3d56750 Extra newline for lint
    - 5176cd8 Improve the Capirca and related modules for ACL config generation
  - \* 3f4759b Merge pull request #50923 from astronouth7303/patch-2
    - 4f631a6 Document {% include %}
  - \* 210e817 Merge pull request #51111 from s0undt3ch/2017.7
    - 08e0ae7 Update to salt-bootstrap v2019.01.08
    - c3520aa Accounting for when permissions are not returned from file.check\_perms, eg. windows systems.
    - cd80548 When test=True and there are permissions changes, report it.
    - 89345eb Handle spaces in fstab opts, similar fix to #39593
- **ISSUE #50538:** (sjorge) salt.modules.pdbedit broken on Samba 4.9.x (refs: #50540, #51221)
- **PR #51221:** (Ch3LL) Backport #50538 into 2019.2 @ 2019-01-18 22:42:36 UTC
  - **PR #50540:** (sjorge) Fix pdbedit module on samba 4.9 (Fixes #50538)
  - 0ccd5c3 Merge pull request #51221 from Ch3LL/bp-50540
  - 223e7c0 Merge branch '2019.2' into bp-50540
- **PR #51232:** (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-01-18 20:51:37 UTC
  - 3edaf18 Merge pull request #51232 from Ch3LL/merge-2019.2
  - 3b966f3 Merge branch '2019.2' into merge-2019.2
  - ffe23fa Merge branch '2018.3' into '2019.2'
    - \* 26008ef Merge pull request #51212 from sathieu/file\_roots\_slash
      - b769f18 Allow slash in file\_roots envs
      - f9437e2 Test for file\_roots envs with slash leads to "No such file or directory"
    - \* 5916282 Merge pull request #51209 from garethgreenaway/bp-51124
      - 82acce4 Handle encoding when opening file for both py2/py3
    - \* 094bd33 Merge pull request #51184 from twangboy/fix\_auditpol

- 2e68d35 directly call cmd.run\_all
- \* ac71922 Merge pull request #51191 from Ch3LL/bp-50918
  - 7300d84 Skip debian tests on Windows
  - 4622433 Fix *test\_debian\_ip* on Windows
- \* e7f53a3 Merge pull request #51144 from jgleissner/2018.3-azurearm-py3
  - 3178f1a msazure.py: remove unused imports
  - 99a4b9d azurearm: fix list\_locations
  - aebe34b azurearm: fix show\_instance function
  - d80669f msazure: fix object\_to\_dict for python 3
- \* 1206f92 Merge pull request #51171 from twangboy/fix\_crypt
  - 6caa93b Add random sleep time to avoid overloading Windows
- \* a96deed Merge pull request #51174 from jpsv/2018.3
  - 055823e Update opsgenie.py
  - 501c8df Merge branch '2018.3' into 2018.3
  - 220aa8a Update opsgenie.py
  - 5dc21cc Update to from V1 API to V2
  - f93ce7c Update to V2 API
- \* 563d487 Merge pull request #51010 from amendlik/ldap-groups
  - cd336ed Merge branch '2018.3' into ldap-groups
  - 94f8ee4 Update unit tests for auth.ldap
  - 08e36d0 Allow unauthenticated bind for listing LDAP groups
- \* 6dc3752 Merge pull request #51112 from s0undt3ch/2018.3
  - 4f1d846 Update to salt-bootstrap v2019.01.08

  - 5d60022 Fix invalid assignment in vsphere module
- \* fad8621 Merge pull request #51154 from twangboy/auditpol
  - 9064376 Add support for Advanced Audit policies
- \* f7a100c Merge pull request #51151 from Ch3LL/bp\_51061
  - ffd8e27 When writing output to stdout we want to ensure that the data is a string not bytes. Under py2 the salt.utils.data.encode function results in a string but under py3 the result is a bytestring. Swapping out salt.utils.data.encode for salt.utils.stringutils.to\_str.
- \* 3a50a57 Merge pull request #51150 from Ch3LL/bp-49508
  - 7ae53ad Do not silently ignore errors.
  - deb0134 Convert to string before sending via 'publish'.
  - 651c551 Use to\_str salt.utils when writing to a file.
- \* 8bb589d Merge pull request #51152 from garethgreenaway/50433\_handle\_grants\_better
  - f7caa4d Fixing lint
  - e8c8c0f Adding some tests to ensure "ALL PRIVILEGES" is handled correctly in 8.0 and 5.6
  - b4bfd9f Add additional grants. Adding logic to handle when ALL or ALL PRIVILEGES is passed for the grant, including some logic to handle the fact that the grants are split when show grants is run for a particular user.
  - 74edfd9 Fix pylint
  - 81a3d47 Merge branch '2017.7' into '2018.3'

- 8a76a19 Merge pull request #50858 from jasonarewhy/bugfix-2017.7/ubuntu-networking-searchdomain
- 3395a3d Merge branch '2017.7' into bugfix-2017.7/ubuntu-networking-searchdomain
- 69d25aa update debian\_ip test
- a6b896c get searchdomain in Ubuntu 12+
- \* dda1ebb Merge pull request #51133 from 5uper5hoot/issue-#50849
  - ec14e13 Fixes mysql server version comparison.
- \* 9d4321d Merge pull request #50878 from max-arnold/output-docs
  - d7403da Fix profile outputter docs
- \* ce87504 Merge pull request #51076 from OrangeDog/patch-1
  - 568e4fb Revert add -> check
  - 4d7ebe7 Typos in index\_template\_present documentation
- \* d08abf4 Merge pull request #51081 from garethgreenaway/merge-2018.3
  - 027804a Merge branch '2018.3' into merge-2018.3
- \* 335088b Merge pull request #51080 from garethgreenaway/50966\_nxos\_ensure\_kwargs\_list
- \* 230a66b Merge branch '2018.3' into 50966\_nxos\_ensure\_kwargs\_list
- \* 629dc25 Ensure kwargs is a list before we attempt to loop through. Similar fix to <https://github.com/rallytime/salt/commit/430c462f34eb4eedf2384e06fbee8dc19b8026f6> in the proxy module.
- \* a20791b Merge branch '2018.3' into merge-2018.3
- \* 9386aab Merge branch '2017.7' into merge-2018.3
- \* 998feca Merge pull request #51030 from terminalmage/issue38502
- \* 6dbd81f Add unit test to ensure we don't diff bare repos
- \* 3c4b243 Merge branch '2019.2' into bp-50540
- **PR #51234:** (KChandrashekhar) Added a note in Release notes about py 2.7 EOL @ 2019-01-18 15:53:51 UTC
  - e6ab913 Merge pull request #51234 from KChandrashekhar/2019.2-docs
  - e4afc81 Addressing Megan's comment to fix the py2.7 deprecation message in release notes
  - 8ec0296 Added a note in Release notes about py 2.7 EOL
- **PR #51198:** (Ch3LL) [2019.2] Merge forward from 2019.2.0.rc1 to 2019.2 @ 2019-01-17 21:23:34 UTC
  - 644ef8c Merge pull request #51198 from Ch3LL/merge-2019.2-rc
  - 810c611 Merge branch '2019.2.0.rc1' into 2019.2
  - 3f61e77 Fix pdbedit module on samba 4.9 (Fixes #50538)
- **PR #51148:** (Ch3LL) [2019.2] Merge forward from 2018.3 to 2019.2 @ 2019-01-14 22:49:02 UTC
  - 12901c3 Merge pull request #51148 from Ch3LL/merge-2019.2
  - 1d7329a Fix pylint
  - 5271636 Fixes mysql server version comparison.
  - b53f171 Ensure kwargs is a list before we attempt to loop through. Similar fix to <https://github.com/rallytime/salt/commit/430c462f34eb4eedf2384e06fbee8dc19b8026f6> in the proxy module.

- d0f2d15 Revert add -> check
- 437d8b5 Typos in index\_template\_present documentation
- 3bf189e Add unit test to ensure we don't diff bare repos
- 2f8e391 Fix profile outputter docs
- **PR #51100:** (dwoz) Fix typo in method name (2019.2) @ 2019-01-08 18:12:23 UTC
  - 4c2d76d Merge pull request #51100 from dwoz/cloud\_typo
  - 60f53d0 Fix typo in method name
- **PR #51099:** (terminalmage) Fix improper exception raises (2019.2) @ 2019-01-08 17:55:53 UTC
  - 39b28f4 Merge pull request #51099 from terminalmage/fix-exception-raise
  - 2a25530 Fix improper exception raise
- **PR #51084:** (s0undt3ch) [fluorine] Cleanup the singleton instances map. @ 2019-01-07 22:03:29 UTC
  - 8827193 Merge pull request #51084 from s0undt3ch/merge-singleton-last-ref-close-fluorine
  - 979fbac Merge branch '2019.2' into merge-singleton-last-ref-close-fluorine
  - 63f051a Merge branch '2019.2' into merge-singleton-last-ref-close-fluorine
  - bd6c46d Cleanup the singleton instances map.

### 33.2.57 Salt 2019.2.2 Release Notes

Version 2019.2.2 is a bugfix release for *2019.2.0*.

#### Statistics

- Total Merges: 26
- Total Issue References: 12
- Total PR References: 26
- Contributors: 13 (Akm0d, Ch3LL, Oloremo, OrlandoArcapix, bryceml, dhiltonp, dwoz, frogunder, gareth-greenaway, javierbertoli, pizzapanther, s0undt3ch, twangboy)

#### Changelog for v2019.2.1..v2019.2.2

Generated at: 2019-10-11 20:54:15 UTC

- **PR #54919:** (twangboy) Add missing docs for win\_wusa state and module (2019.2.1) @ 2019-10-11 18:28:11 UTC
  - 7d253bc Merge pull request #54919 from twangboy/update\_docs
  - 57ff199 Add docs for win\_wusa
- **ISSUE #54941:** (UtahDave) Pillar data is refreshed for EVERY salt command in 2019.2.1 and 2019.2.2 (refs: #54942)
- **PR #54942:** (dwoz) Fix for 54941 pillar\_refresh regression @ 2019-10-11 18:27:31 UTC
  - 2f817bc Merge pull request #54942 from dwoz/fix-54941
  - cb5d326 Add a test for 54941 using test.ping

- 348d1c4 Add regression tests for issue 54941
- 766f3ca Initial commit of a potential fix for 54941
- **PR #54897:** (bryceml) update version numbers to be correct @ 2019-10-05 01:59:14 UTC
  - f783108 Merge pull request #54897 from bryceml/2019.2.1\_fix\_docs
  - e9a2a70 update version numbers to be correct
- **PR #54894:** (bryceml) 2019.2.1 fix docs @ 2019-10-04 22:31:26 UTC
  - 3233663 Merge pull request #54894 from bryceml/2019.2.1\_fix\_docs
  - 2456aaa Porting PR #52948 to 2019.2.1
  - 94a1e3b Porting PR #52752 to 2019.2.1
  - c7b7474 modifying saltconf ads
  - d48057b add new saltconf ads
- **PR #54858:** (frogunder) remove in progress from releasenotes 2019.2.2 @ 2019-10-02 20:42:59 UTC
  - 4b06eca Merge pull request #54858 from frogunder/releasenotes\_remove2019.2.2
  - a697abd remove in progress from releasenotes 2019.2.2
- **PR #54854:** (frogunder) releasenotes 2019.2.2 @ 2019-10-02 18:58:21 UTC
  - aaf2d1c Merge pull request #54854 from frogunder/release\_notes\_2019.2.2
  - a41dc59 Update 2019.2.2.rst
  - 9bea043 releasenotes 2019.2.2
- **PR #54852:** (frogunder) Update man pages for 2019.2.2 @ 2019-10-02 18:27:07 UTC
  - 10d433f Merge pull request #54852 from frogunder/man\_pages\_2019.2.2
  - 92bc4b2 Update man pages for 2019.2.2
- **PR #54845:** (s0undt3ch) Remove debug print @ 2019-10-02 17:38:21 UTC
  - 8ca6b20 Merge pull request #54845 from s0undt3ch/hotfix/event-return-fix-2019.2.1
  - 3937890 Remove debug print
- **ISSUE #54755:** (Reiner030) 2019.2.1/2019.2.0 pip failures even when not using pip (refs: #54826)
- **PR #54826:** (dwoz) Fix issue 54755 and add regression tests @ 2019-10-01 20:07:46 UTC
  - 9e3914a Merge pull request #54826 from dwoz/issue\_54755
  - 0bad9cb Handle locals and globals separately
  - bcbe9a2 Only purge pip when needed
  - d2f98ca Fix issue 54755 and add regression tests
- **PR #54830:** (frogunder) Add known issues to 2019.2.1 release notes @ 2019-10-01 16:23:30 UTC
  - ba569d0 Merge pull request #54830 from frogunder/update\_relasenotes\_2019.2.1
  - 8cdb27b Update 2019.2.1.rst
  - 14f955c Add known issues to 2019.2.1 release notes
- **ISSUE #54521:** (Oloremo) [Regression] Failhard, batch and retcodes (refs: #54806)
- **PR #54806:** (Oloremo) [Regression] Batch with failhard fix @ 2019-10-01 14:51:47 UTC

- 433b6fa Merge pull request #54806 from Oloremo/failhard-batch-fix-2019.2.1
- 6684793 Merge branch '2019.2.1' into failhard-batch-fix-2019.2.1
- 3e0e928 Added tests for cli and runner
- 2416516 Made batch work properly with failhard in cli and runner
- **ISSUE #54820:** ([OrangeDog](#)) schedule.present not idempotent when scheduler disabled (refs: #54828)
- **PR #54828:** ([garethgreenaway](#)) [2019.2.1] Fix global disabling code in scheduler @ 2019-10-01 09:27:49 UTC
  - ed94aa5 Merge pull request #54828 from garethgreenaway/54820\_fix\_schedule\_disabled\_job\_enabled\_bug
  - be15a28 Rework code that handles individual jobs being disabled and scheduler being globally being disabled. Previously disabling the schedule would result in individual jobs being disabled when they were run through eval. This change does not change schedule items.
- **PR #54778:** ([Akm0d](#)) fix broken salt-cloud openstack query @ 2019-10-01 09:23:27 UTC
  - 435b40c Merge pull request #54778 from Akm0d/master\_openstack\_query\_fix
  - ba4ba2a fixed pylint errors in openstack test
  - d9a8517 Added openstack tests for openstack --query fix
  - 59214ad Fallback to image id if we don't have an image name
  - 3a42a4d fixed pylint error
  - 0074d18 created unit tests for openstack
  - 4255e3e Merge branch '2019.2.1' of <https://github.com/saltstack/salt> into HEAD
  - 1c2821b Return a configured provider, not a bool
  - c585550 fix broken salt-cloud openstack query
- **ISSUE #54762:** ([margau](#)) 2019.2.1: Breaks Minion-Master Communication (refs: #54823, #54784, #54807)
- **PR #54823:** ([dhiltonp](#)) ip\_bracket can now accept ipv6 addresses with brackets @ 2019-10-01 01:13:34 UTC
  - 93b1c4d Merge pull request #54823 from dhiltonp/maybe-bracket
  - faa1d98 ip\_bracket can now accept ipv6 addresses with brackets
- **ISSUE #54762:** ([margau](#)) 2019.2.1: Breaks Minion-Master Communication (refs: #54823, #54784, #54807)
- **PR #54807:** ([dwoz](#)) Fix pip state pip >=10.0 and <=18.0 @ 2019-09-30 09:20:14 UTC
  - **PR #54772:** ([OrlandoArcapix](#)) Fix import of pip modules (refs: #54807)
  - b61b30d Merge pull request #54807 from dwoz/patch-2
  - 664806b Add unit test for pip state fix
  - e637658 Revert change to pip version query
  - 42810a2 Fix import of pip modules
- **ISSUE #54741:** ([kjkneane](#)) Schedulers Fail to Run (refs: #54799)
- **PR #54799:** ([garethgreenaway](#)) Fix to scheduler when job without a time element is run with schedule.run\_job @ 2019-09-30 00:19:43 UTC
  - 4ee1ff6 Merge pull request #54799 from garethgreenaway/54741\_run\_job\_fails\_without\_time\_element
  - 44caa81 Merge branch '54741\_run\_job\_fails\_without\_time\_element' of [github.com:garethgreenaway/salt](https://github.com:garethgreenaway/salt) into 54741\_run\_job\_fails\_without\_time\_element

- \* 3ae4f75 Merge branch '2019.2.1' into 54741\_run\_job\_fails\_without\_time\_element
- 8afd2d8 Removing extra, unnecessary code.
- 549cfb8 Fixing test\_run\_job test to ensure the right data is being asserted. Updating unit/test\_module\_names.py to include integration.scheduler.test\_run\_job.
- 7d716d6 Fixing lint.
- ec68591 If a scheduled job does not contains a time element parameter then running that job with schedule.run\_job fails with a traceback because data['run'] does not exist.
- **PR #54785:** (Ch3LL) Fix state.show\_states when sls file missing in top file @ 2019-09-30 00:00:34 UTC
  - b90c3f2 Merge pull request #54785 from Ch3LL/fix\_show\_states
  - 96540be Clean up files after state.show\_states test
  - ad265ae Fix state.show\_states when sls file missing
- **ISSUE #54768:** (paul-palmer) 2019.2.1 Some Jinja imports not found (refs: #54780)
- **ISSUE #54765:** (awerner) 2019.2.1: Jinja from import broken (refs: #54780)
- **PR #54780:** (dwoz) Fix masterless jinja imports @ 2019-09-29 22:12:48 UTC
  - b9459e6 Merge pull request #54780 from dwoz/fix-masterless-jinja-imports
  - 5d873cc Merge branch '2019.2.1' into fix-masterless-jinja-imports
  - e901a83 Add regression tests for jinja import bug
  - 3925bb7 Fix broken jinja imports in masterless salt-call
- **ISSUE #54776:** (javierbertoli) Setting ping\_interval in salt-minion's config (version 2019.2.1) prevents it from starting (refs: #54777)
- **PR #54777:** (javierbertoli) Fix minion's remove\_periodic\_callback() @ 2019-09-29 21:33:53 UTC
  - 4c240e5 Merge pull request #54777 from netmanagers/2019.2.1
  - 459c790 Merge branch '2019.2.1' into 2019.2.1
- **PR #54805:** (bryceml) improve lint job @ 2019-09-29 21:24:05 UTC
  - 83f8f5c Merge pull request #54805 from bryceml/2019.2.1\_update\_lint\_salt
  - ffa4ed6 improve lint job
  - fa1a767 Merge branch '2019.2.1' into 2019.2.1
- **ISSUE #54751:** (jnmatlock) NXOS\_API Proxy Minions Error KeyError: 'proxy.post\_master\_init' after upgrading to 2019.2.1 (refs: #54783)
- **PR #54783:** (garethgreenaway) Ensure metaproxy directory is included in sdist @ 2019-09-29 02:17:23 UTC
  - 6b43fbe Merge pull request #54783 from garethgreenaway/54751\_fixing\_missing\_metaproxy\_directory
  - 67d9938 Merge branch '2019.2.1' into 54751\_fixing\_missing\_metaproxy\_directory
  - a35e609 Adding \_\_init\_\_.py to metaproxy directory so that metaproxy is included when running setup.py.
- **ISSUE #54762:** (margau) 2019.2.1: Breaks Minion-Master Communication (refs: #54823, #54784, #54807)
- **PR #54784:** (dhiltonp) fix dns\_check to return uri-compatible ipv6 addresses, add tests @ 2019-09-28 08:36:51 UTC
  - 7912b67 Merge pull request #54784 from dhiltonp/ipv46

- 042a101 Merge branch '2019.2.1' into ipv46
- **PR #54779:** (frogunder) Add 2019.2.2 release notes @ 2019-09-27 17:45:46 UTC
  - 2f94b44 Merge pull request #54779 from frogunder/releasenotes\_2019.2.2
  - 67f564b Add 2019.2.2 release notes
  - ac6b54f Merge branch '2019.2.1' into ipv46
  - 93ebd09 update mock (py2) from 2.0.0 to 3.0.5
  - 37bcc4c fix dns\_check to return uri-compatible ipv6 addresses, add tests
    - \* dd86c46 Merge pull request #1 from waynew/pull/54777-callback-typo
      - a57f7d0 Add tests
    - \* c19d0b0 Fix minion's remove\_periodic\_callback()
- **PR #54731:** (pizzapanther) Fix returners not loading properly @ 2019-09-26 17:24:27 UTC
  - 46bec3c Merge pull request #54731 from pizzapanther/not-so-\_\_new\_\_-and-shiny
  - bdf24f4 Make sure we tests salt-master's `event_return` setting
  - 5499518 remove unnecessary import
  - 3f8a382 fix module import
  - 0746aa7 remove `__new__` method since it was removed from parent class
- **PR #54706:** (bryceml) 2019.2.1 ruby @ 2019-09-23 16:00:27 UTC
  - e2b86bf Merge pull request #54706 from bryceml/2019.2.1\_ruby
  - 168a6c1 switch to ruby 2.6.3

### 33.2.58 Salt 2019.2.3 Release Notes

Version 2019.2.3 is a CVE-fix release for *2019.2.0*.

#### Security Fix

##### CVE-2019-17361

With the Salt NetAPI enabled in addition to having a SSH roster defined, unauthenticated access is possible when specifying the client as SSH. Additionally, when the `raw_shell` option is specified any arbitrary command may be run on the Salt master when specifying SSH options.

### 33.2.59 Salt 2019.2.4 Release Notes

Version 2019.2.4 is a CVE-fix release for *2019.2.0*.

## Security Fix

### CVE-2020-11651

An issue was discovered in SaltStack Salt before 2019.2.4 and 3000 before 3000.2. The salt-master process ClearFuncs class does not properly validate method calls. This allows a remote user to access some methods without authentication. These methods can be used to retrieve user tokens from the salt master and/or run arbitrary commands on salt minions.

### CVE-2020-11652

An issue was discovered in SaltStack Salt before 2019.2.4 and 3000 before 3000.2. The salt-master process ClearFuncs class allows access to some methods that improperly sanitize paths. These methods allow arbitrary directory access to authenticated users.

## Known Issue

Part of the fix for CVE-2020-11651 added better validation of the methods allowed to be called by remote clients. Both AESFuncs and ClearFuncs now have an explicit list of methods that can be called. The name of one of these whitelisted methods on AESFuncs had a typo. The `_minion_runner` method should be `minion_runner` (without the underscore prefix). This typo breaks the publish module's runner method. Calling runners, for example:

```
salt minion publish.runner manage.down
```

Will not work, and you will receive an empty reply from the salt master.

This will be addressed in the 3001 release of Salt set for mid-June 2020.

## 33.2.60 Salt 2019.2.5 Release Notes

Version 2019.2.5 is a bug-fix release for [2019.2.0](#).

### Statistics

- Total Merges: 2
- Total Issue References: 2
- Total PR References: 2
- Contributors: 2 ([dwoz](#), [frogunder](#))

### Changelog for v2019.2.4..v2019.2.5

Generated at: 2020-05-05 22:43:12 UTC

- **PR #57096:** ([frogunder](#)) Update man\_pages 2019.2.5 @ 2020-05-05 22:10:46 UTC
  - 6877b7259a Merge pull request #57096 from frogunder/man\_pages\_2019.2.5
  - 58ea351a59 Update man\_pages 2019.2.5
- **ISSUE #57027:** ([ecarson](#)) [BUG] Master running 2019.2.4 or 3000.2 unable to synchronize files using saltutil.sync\_all to 2017.7.1 minion due to CVE fix (refs: #57090)
- **ISSUE #57016:** ([idontwanttosignin](#)) [BUG] Requested method not exposed: minion\_runner (refs: #57090)
- **PR #57090:** ([dwoz](#)) Address Issues in CVE Release @ 2020-05-05 22:09:25 UTC

- 8fe0f66f94 Merge pull request #57090 from dwoz/bugs\_n\_stuff
- f3e8590bac Describe SEPs
- aa1a9d340d Update hardening doc to mention 4505/4506
- ca303f7c0c Add link to salt-announce to documentation
- c63253ef9c Address issues in cve release

### 33.2.61 Salt 2019.2.6 Release Notes

Version 2019.2.6 is a CVE fix release for *2019.2.0*.

#### Fixed

- Prevent shell injections in netapi ssh client (cve-2020-16846)
- Prevent creating world readable private keys with the tls execution module. (cve-2020-17490)

### 33.2.62 Salt 2019.2.7 Release Notes

Version 2019.2.7 is a CVE fix release for *2019.2.0*.

#### Fixed

- Properly validate eauth credentials and tokens along with their ACLs. Prior to this change eauth was not properly validated when calling Salt ssh via the salt-api. Any value for 'eauth' or 'token' would allow a user to bypass authentication and make calls to Salt ssh. (CVE-2020-25592)

### 33.2.63 Salt 2019.2.8 Release Notes

Version 2019.2.8 is a bugfix release for *2019.2.0*.

#### Fixed

- Fixes salt-ssh authentication when using tty (#58922)

### 33.2.64 Salt 2018.3.0 Release Notes - Codename Oxygen

**Warning:** If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
  file.mangedaged:
    - source: salt://foo.conf
    - template: jinja
    - defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:  
file.managed:  
- source: salt://foo.conf  
- template: jinja  
- defaults: {{ mydict | json }}
```

### Unicode/Python 3 Compatibility Improvements

This release fixes a number of nagging issues with Unicode strings in Salt under Python 2 (ex. `'ascii'` codec can't decode byte `0xd0`). For best results, use a UTF-8 locale (such as by setting the `LANG` environment variable to one which supports UTF-8. For example `en_US.UTF-8`, `de_DE.UTF-8`, `ru_RU.UTF-8`, `C.UTF-8`).

Additionally, a number of Python 3 compatibility fixes have been made, many of them having to do with file I/O and str/bytes mismatches.

We continue to work toward improving both Unicode and Python 3 compatibility and welcome any feedback.

### Lots of Docker Improvements

#### Much Improved Support for Docker Networking

The `docker_network.present` state has undergone a full rewrite, which includes the following improvements:

#### Full API Support for Network Management

The improvements made to input handling in the `docker_container.running` state for 2017.7.0 have now been expanded to `docker_network.present`. This brings with it full support for all tunable configuration arguments.

#### Custom Subnets

Custom subnets can now be configured. Both IPv4 and mixed IPv4/IPv6 networks are supported. See [here](#) for more information.

#### Network Configuration in `docker_container.running` States

A long-requested feature has finally been added! It is now possible to configure static IPv4/IPv6 addresses, as well as links and labels. See [here](#) for more information.

---

**Note:** While the `containers` argument to `docker_network.present` will continue to be supported, it will no longer be the recommended way of ensuring that a container is attached to a network.

---

## Improved Handling of Images from Custom Registries

Rather than attempting to parse the tag from the passed image name, Salt will now resolve that tag down to an image ID and use that ID instead.

---

**Important:** Due to this change, there are some backward-incompatible changes to image management. See below for a full list of these changes.

---

## Backward-incompatible Changes to Docker Image Management

Passing image names to the following functions must now be done using separate `repository` and `tag` arguments:

- `docker.build`
- `docker.commit`
- `docker.import`
- `docker.load`
- `docker.tag`
- `docker.sls_build`

Additionally, the `tag` argument must now be explicitly passed to the `docker_image.present` state, unless the image is being pulled from a docker registry.

## State and Execution Module Support for `docker run` Functionality

The `docker_container.running` state is good for containers which run services, but it is not as useful for cases in which the container only needs to run once. The `start` argument to `docker_container.running` can be set to `False` to prevent the container from being started again on a subsequent run, but for many use cases this is not sufficient. Therefore, the `docker.run_container` remote-execution function was added. When used on the Salt CLI, it will return information about the container, such as its name, ID, exit code, and any output it produces.

State support has also been added via the `docker_container.run` state. This state is modeled after the `cmd.run` state, and includes arguments like `onlyif`, `unless`, and `creates` to control whether or not the container is run.

## Full API Support for `docker.logs`

This function now supports all of the functions that its Docker API counterpart does, allowing you to do things like include timestamps, and also suppress stdout/stderr, etc. in the return.

### start Argument Added to docker.create Function

This removes the need to run `docker.start` separately when creating containers on the Salt CLI.

```
salt myminion docker.create image=foo/bar:baz command=/path/to/command
↳start=True
```

### Use SaltSSH Minions like regular Master-Minions

The Master process can now also call SSH minions as if they were connected to the master using ZeroMQ. By setting `enable_ssh_minions: True` in the master config file, the master will create a Salt SSH client process which connects to the minion and returns the output for the salt CLI to use like a regular minion. This can be used anywhere the LocalClient is used.

### Exceptions Raised for Authentication/Authorization Errors

When sending `publish` commands via `master.py` and `masterapi.py` and an authorization or authentication problem is encountered, Salt will now raise the appropriate exceptions instead of returning an empty string: `' '`.

The reasoning behind this change is to make it easier to debug various scenarios surrounding authentication and authorization issues more effectively.

### Comparison Operators in Package Installation

Salt now supports using comparison operators (e.g. `>=1.2.3`) when installing packages on minions which use `yum/dnf` or `apt`. This is supported both in the `pkg.installed` state and in the `pkg.install` remote execution function.

### Master Tops Changes

When both *Master Tops* and a *Top File* produce SLS matches for a given minion, the matches were being merged in an unpredictable manner which did not preserve ordering. This has been changed. The top file matches now execute in the expected order, followed by any master tops matches that are not matched via a top file.

To make master tops matches execute first, followed by top file matches, set the new `master_tops_first` minion config option to `True`.

### Several Jinja Filters Renamed

The following Jinja filters (originally added in 2017.7.0) have been renamed due to the fact that they were inaccurately named when initially added. The original names will be supported until the 3000 release of Salt.

- `rand_str` renamed to `random_hash`
- `jinja_decode_dict` renamed to `jinja_encode_dict`
- `jinja_decode_list` renamed to `jinja_encode_list`

## Return Codes for Runner/Wheel Functions

When using *orchestration*, runner and wheel functions used to report a `True` result if the function ran to completion without raising an exception. It is now possible to set a return code in the `__context__` dictionary, allowing runner and wheel functions to report that they failed. Here's some example pseudocode:

```
def myrunner():
    ...
    # do stuff
    ...
    if some_error_condition:
        __context__["retcode"] = 1
    return result
```

## Variable Update Intervals for Fileserver Backends

Prior to this release, fileserver updates would be performed as part of a dedicated "maintenance" process, in which various routine maintenance tasks were performed. This tied the update interval to the `loop_interval` config option, and also forced all fileserver updates to occur at the same interval.

2018.3.0 adds the following configuration options for the various fileserver backends:

- `roots_update_interval`
- `azurefs_update_interval`
- `gitfs_update_interval`
- `hgfs_update_interval`
- `minionfs_update_interval`
- `s3fs_update_interval`
- `svnfs_update_interval`

These allow for update intervals to be set for each individual backend. The default value for each of these is 60 seconds.

In addition, for *GitFS* it is also possible to apply intervals to individual remotes. See [here](#) for examples.

---

**Note:** `git_pillar` does not yet support variable update intervals, this is targeted for the next feature release (2019.2.0).

---

## LDAP via External Authentication Changes

In this release of Salt, if LDAP Bind Credentials are supplied, then these credentials will be used for all LDAP access except the first authentication when a job is submitted. The first authentication will use the user's credentials as passed on the CLI. This behavior is to accommodate certain two-factor authentication schemes where the authentication token can only be used once.

In previous releases the bind credentials would only be used to determine the LDAP user's existence and group membership. The user's LDAP credentials were used from then on.

## Stormpath External Authentication Removed

Per Stormpath's announcement, their API will be shutting down on 8/17/2017 at noon PST so the Stormpath external authentication module has been removed.

<https://stormpath.com/oktaplusstormpath>

## New (Proxy) Minion Configuration Options

To be able to connect the Minion to the Master using a certain source IP address or port, the following options have been added:

- *source\_interface\_name*
- *source\_address*
- *source\_ret\_port*
- *source\_publish\_port*

## environment config option renamed to saltenv

The *environment* config option predates referring to a salt fileserver environment as a **saltenv**. To pin a minion to a single environment for running states, one would use *environment*, but overriding that environment would be done with the **saltenv** argument. For consistency, *environment* is now simply referred to as *saltenv*. There are no plans to deprecate or remove *environment*, if used it will log a warning and its value will be used as *saltenv*.

## lock\_saltenv config option added

If set to **True**, this option will prevent a minion from allowing the **saltenv** argument to override the value set in *saltenv* when running states.

## Failed Minions for State/Function Orchestration Jobs Added to Changes Dictionary

For orchestration jobs which run states (or run remote execution functions and also use a *fail function* to indicate success or failure), minions which have **False** results were previously included as a formatted string in the comment field of the return for that orchestration job. This made the failed returns difficult to *parse programatically*. The failed returns in these cases are now included in the changes dictionary, making for much easier parsing.

## Grains

- *fc\_wwn* - Show all fibre channel world wide port names for a host, must be enabled with *fibre\_channel\_grains*
- *iscsi\_iqn* - Show the iSCSI IQN name for a host
- *swap\_total* - Show the configured *swap\_total* for Linux, \*BSD, OS X and Solaris/SunOS
- *virtual*:
  - identifies reports KVM and VMM hypervisors when running an OpenBSD guest
  - for detecting Solaris Logical Domains (LDMs) running on T-Series SPARC hardware. The *virtual\_subtype* grain is populated as a list of domain roles.

## Salt Minion Auto-discovery

Using auto-discovery, the Salt Minion now no longer needs to be configured against a specific DNS name or IP address of a Master.

For this feature Salt Master now requires port 4520 for UDP broadcast packets to be opened and the Salt Minion be able to send UDP packets to the same port.

### Configuration

By default, automatic discovery is disabled.

**Warning:** Due to the current limitations that will be changing in a future release, before you turn on auto-discovery, make sure your network is secured and trusted.

Auto-discovery is configured on Master and Minion. Both of them are configured via the `discovery` option as follows:

#### Master configuration

To use the default configuration, which accepts any minion, simply set `discovery` to `True`:

```
discovery: true
```

A sub-option called *mapping* allows auto-discovery to help find the proper Master. The mapping contains an arbitrary set of key/value pairs, which the Minion configuration can target. By default, no mappings are set.

Example:

```
discovery:  
  mapping:  
    description: SES 5.0  
    node: 1
```

It is also possible to change the port used from the default of 4520, by setting a `port` option under the Master's `discovery` configuration:

```
discovery:  
  port: 4567
```

---

**Note:** When using a port number other than the default, the Minion's `discovery` configuration must *also* have a port specified, otherwise the Minion will still attempt to contact the Master on port 4520.

---

#### Minion configuration

In addition to the `mapping` and `port` options, the following additional options are available to Minions:

- `attempts` - This option specifies how many broadcast requests should be sent to the network, waiting for any Master response. Each attempt takes a couple of seconds, so raising this value may result in a slower Minion startup. Note that, on a properly-configured network, autodiscovery should succeed on the first attempt. By default, this value is set to 3.
- `match` - This option can be set to either `all` or `any`, and it determines how the values configured in `mapping` are matched. If set to `all`, then all of the key/value pairs in the Minion's `mapping` must match a given Master. If set to `any` (the default), then any match to a key/value mapping will constitute a match.

- `pause` - The interval in seconds between attempts (default: 5).
- `fibre_channel_grains` - Enables the `fc_wwn` grain. (Default: False)
- `iscsi_grains` - Enables the `iscsi_iqn` grain. (Default: False)

### Connection to a type instead of DNS

By now each Minion was connecting to a Master by DNS or IP address. From now on it is possible also to connect to a `_type_` of a Master. For example, in a network there are three different Masters, each corresponds for a particular niche or environment or specific role etc. The Minion is supposed to connect only to one of those Masters that is described appropriately.

To achieve such an effect, each `/etc/salt/master` configuration should have a `discovery` option, which should have a `mapping` element with arbitrary key/value pairs. The same configuration should be on the Minion, so then when mapping matches, Minion recognises Master as its connection target.

Example for Master configuration (`/etc/salt/master`):

```
discovery:
  mapping:
    description: SES 5.0
    node: 1
```

The example above describes a system that is running a particular product, where `description` is an arbitrary key and `SES 5.0` is just a string. In order to match exactly this Master, the following configuration at Minion should be present:

```
discovery:
  match: all # Can be "all" or "any"
  mapping:
    description: SES 5.0
    node: 1
```

Notice `match` criteria is set to `all`. This would mean that from all found Masters select only that, which `description` is set to `SES 5.0` and `node` is set to `1`. All other Masters will be ignored.

### Limitations

This feature has a couple of `_temporary_` limitations that are subject to change in the future:

- Only one Master on the network is supported. Currently the Minion cannot select which Master out of few the same to choose. This will change to choosing the Master that is least loaded.
- Minions will accept `_any_` master that matches connection criteria without any particular security applied (priv/pub key check, signature, fingerprint etc). That implies that administrator is expected to know his network and make sure it is clean.

## New Modules

- `salt.modules.purefa`

## New NaCl Renderer

A new renderer has been added for encrypted data.

## New support for Cisco UCS Chassis

The salt proxy minion now allows for control of Cisco USC chassis. See the `cimc` modules for details.

## New support for Cassandra v3

The `cassandra_cql` module now supports Cassandra v3 which has changed its internal schema to define keyspaces and columns.

## New salt-ssh roster

A new roster has been added that allows users to pull in a list of hosts for salt-ssh targeting from a `~/.ssh` configuration. For full details, please see the `sshconfig` roster.

## New GitFS Features

Two new features which affect how GitFS maps branches/tags to fileserver environments (i.e. `saltenvs`) have been added:

1. It is now possible to completely turn off Salt's default mapping logic (aside from the mapping of the `base` `saltenv`). This can be triggered using the new `gitfs_disable_saltenv_mapping` config option.

---

**Note:** When this is disabled, only the `base` `saltenv` and any configured using *per-saltenv configuration parameters* will be available.

---

2. The types of refs which Salt will use as `saltenvs` can now be controlled. In previous releases, branches and tags were both mapped as environments, and individual commit SHAs could be specified as `saltenvs` in states (and when caching files using `cp.cache_file`). Using the new `gitfs_ref_types` config option, the types of refs which are used as `saltenvs` can be restricted. This makes it possible to ignore all tags and use branches only, and also to keep SHAs from being made available as `saltenvs`.

## Additional output modes

The `state_output` parameter now supports `full_id`, `changes_id` and `terse_id`. Just like `mixed_id`, these use the state ID as name in the highstate output. For more information on these output modes, see the docs for the *Highstate Outputter*.

## Windows

### Python Version

Python 2 Windows API was design when Windows did not support Unicode. Windows now supports Unicode however to keep backwards compatibility Python 2 Windows API has not been changed. Python 3 Windows API supports Unicode. Salt Python 3 installer is the recommend choice for users who need characters other than Non-ASCII (7bit) characters.

### pkg Execution module changes

Significant changes have been made to the *win\_pkg* execution module. Users should test this release against their existing package sls definition files. These changes are also in 2016.11.9 & 2017.7.3.

- `pkg.list_available` no longer defaults to refreshing the winrepo meta database.
- `pkg.install` without a `version` parameter no longer upgrades software if the software is already installed. Use `pkg.install version=latest` or in a state use `pkg.latest` to get the old behavior.
- `pkg.list_pkgs` now returns multiple versions if software installed more than once.
- `pkg.list_pkgs` now returns 'Not Found' when the version is not found instead of '(value not set)' which matches the contents of the sls definitions.
- `pkg.remove()` will wait up to 3 seconds (normally about a second) to detect changes in the registry after removing software, improving reporting of version changes.
- `pkg.remove()` can remove `latest` software, if `latest` is defined in sls definition.
- Documentation was update for the execution module to match the style in new versions, some corrections as well.
- All install/remove commands are prefix with `cmd.exe` shell and `cmdmod` is called with a command line string instead of a list. Some sls files in `saltstack/salt-winrepo-ng` expected the commands to be prefixed with `cmd.exe` (i.e. the use of `&`).
- Some execution module functions results, now behaviour more like their Unix/Linux versions.

## Installer

### Changes to config handling

Behavior with existing configuration has changed. With previous windows installers the existing config was used and the master and minion id could be modified via the installer. It was problematic in that it didn't account for configuration that may be defined in the `minion.d` directory. This change gives you the option via a drop-down list to use one of the following:

- Default Config: Use the config that comes with the installer
- Existing Config: Use the current config without changes
- Custom Config: Select a custom config using the file picker

The existing config option will only be available if the installer detects an existing config. If there is an existing config, and you choose `Default` or `Custom`, the existing config will be deleted, including the `minion.d` directory, and replaced by your selection.

The `Default Config` and `Custom Config` options will allow you to modify the Master and the Minion ID. `Existing Config` will leave the existing configuration unchanged.

These settings can be defined on the command line using the following switches:

- `/default-config`
- `/custom-config=C:\Path\To\Custom\Config\minion`

If neither option is passed and there is an existing config, the default is to use the existing config. If there is no existing config (new install) the default config will be used.

### Multi-master configuration

The installer now has the ability to apply a multi-master configuration either from the GUI or the command line. The `master` field in the GUI can accept either a single master or a comma-separated list of masters. The command-line switch (`/master=`) can accept the same.

### Command-line help

The Windows installer will now display command-line help when a help switch (`/?`) is passed.

### New utils module `salt.utils.pkg.win`

A new utils module has been added, which gathers information about windows installed software. This is currently not used by any salt execution module or state at this time. Users are encouraged to run this and report any issues. Running the command with the `detail` option will be useful for anyone developing windows package definitions. With salt installed in the default location the following command will print the help message.

```
chcp 65001
c:\salt\bin\python.exe c:\salt\bin\lib\site-packages\salt\utils\pkg\win.py
c:\salt\bin\python.exe c:\salt\bin\lib\site-packages\salt\utils\pkg\win.py
→detail system
```

## Salt Cloud Features

### OpenStack Revamp

The OpenStack Driver has been rewritten mostly from scratch. Salt is now using the *shade driver* <<https://docs.openstack.org/shade/latest/>>.

With this, the nova driver is being deprecated.

*openstack driver*

There have also been several new modules and states added for managing OpenStack setups using shade as well.

*keystone keystone role grant keystone group keystone role keystone service keystone user keystone domain keystone project keystone endpoint glance glance\_image neutron neutron subnet neutron secgroup neutron secgroup rule neutron network*

## Pre-Flight Commands

Support has been added for specified "preflight commands" to run on a VM before the deploy script is run. These must be defined as a list in a cloud configuration file. For example:

```
my-cloud-profile:
  provider: linode-config
  image: Ubuntu 16.04 LTS
  size: Linode 2048
  preflight_cmds:
    - whoami
    - echo 'hello world!'
```

These commands will run in sequence **before** the bootstrap script is executed.

## New salt-cloud Grains

When salt-cloud creates a new minion, it will now add grain information to the minion configuration file, identifying the resources originally used to create it.

The generated grain information will appear similar to:

```
grains:
  salt-cloud:
    driver: ec2
    provider: my_ec2:ec2
    profile: ec2-web
```

The generation of salt-cloud grains can be suppressed by the option `enable_cloud_grains: 'False'` in the cloud configuration file.

## Upgraded Saltify Driver

The salt-cloud Saltify driver is used to provision machines which are not controlled by a dedicated cloud supervisor (such as typical hardware machines) by pushing a salt-bootstrap command to them and accepting them on the salt master. Creation of a node has been its only function and no other salt-cloud commands were implemented.

With this upgrade, it can use the salt-api to provide advanced control, such as rebooting a machine, querying it along with conventional cloud minions, and, ultimately, disconnecting it from its master.

After disconnection from ("destroying" on) one master, a machine can be re-purposed by connecting to ("creating" on) a subsequent master.

## New Vagrant Driver

The salt-cloud Vagrant driver brings virtual machines running in a limited environment, such as a programmer's workstation, under salt-cloud control. This can be useful for experimentation, instruction, or testing salt configurations.

Using salt-api on the master, and a salt-minion running on the host computer, the Vagrant driver can create (`vagrant up`), restart (`vagrant reload`), and destroy (`vagrant destroy`) VMs, as controlled by salt-cloud profiles which designate a `Vagrantfile` on the host machine.

The master can be a very limited machine, such as a Raspberry Pi, or a small VagrantBox VM.

## Python PyWinRM Module

Versions of `pywinrm`  $\geq 0.2.1$  are finally able to disable validation of self signed certificates. [Here](#) for more information.

## DigitalOcean

The DigitalOcean driver has been renamed to conform to the company name. The new driver name is `digitalocean`. The old name `digital_ocean` and a short one `do` will still be supported through virtual aliases, this is mostly cosmetic.

## Azure Cloud

The azure sdk used for the `azurearm` cloud driver now depends on `azure-cli`  $\geq 2.0.12$

## New `saltclass` pillar/master\_tops modules

This module clones the behaviour of `reclass` (<http://reclass.pantsfullofunix.net/>), without the need of an external app, and add several features to improve flexibility. `Saltclass` lets you define your nodes from simple `yaml` files (`.yaml`) through hierarchical class inheritance with the possibility to override pillars down the tree.

### Features

- Define your nodes through hierarchical class inheritance
- Reuse your `reclass` data with minimal modifications
  - `applications => states`
  - `parameters => pillars`
- Use Jinja templating in your `yaml` definitions
- Access to the following Salt objects in Jinja
  - `__opts__`
  - `__salt__`
  - `__grains__`
  - `__pillars__`
  - `minion_id`
- Chose how to merge or override your lists using `^` character (see examples)
- Expand variables `$$` with possibility to escape them if needed `$$$` (see examples)
- Ignores missing node/class and will simply return empty without breaking the pillar module completely - will be logged

An example subset of data is available here: <https://git.mauras.ch/salt/saltclass/src/branch/master/examples>

Terms usable in yaml files	Description
classes	A list of classes that will be processed in order
states	A list of states that will be returned by master_tops function
pillars	A yaml dictionary that will be returned by the ext_pillar function
environment	Node saltenv that will be used by master_tops

A class consists of:

- zero or more parent classes
- zero or more states
- any number of pillars

A child class can override pillars from a parent class. A node definition is a class in itself with an added environment parameter for saltenv definition.

### Class Names

Class names mimic salt way of defining states and pillar files. This means that `default.users` class name will correspond to one of these:

- `<saltclass_path>/classes/default/users.yml`
- `<saltclass_path>/classes/default/users/init.yml`

### Saltclass Tree

A saltclass tree would look like this:

```

<saltclass_path>
├── classes
│   ├── app
│   │   ├── borgbackup.yml
│   │   └── ssh
│   │       └── server.yml
│   ├── default
│   │   ├── init.yml
│   │   ├── motd.yml
│   │   └── users.yml
│   ├── roles
│   │   ├── app.yml
│   │   ├── nginx
│   │   │   ├── init.yml
│   │   │   └── server.yml
│   └── subsidiaries
│       ├── gnv.yml
│       ├── qls.yml
│       └── zrh.yml
├── nodes
│   ├── geneva
│   │   └── gnv.node1.yml
│   └── lausanne

```

(continues on next page)

(continued from previous page)

```

├── qls.node1.yml
├── qls.node2.yml
├── node127.yml
├── zurich
│   ├── zrh.node1.yml
│   ├── zrh.node2.yml
│   └── zrh.node3.yml

```

**Examples**

```
<saltclass_path>/nodes/lausanne/qls.node1.yml
```

```
environment: base

classes:
{% for class in ['default'] %}
- {{ class }}
{% endfor %}
- subsidiaries.{{ __grains__['id'].split('.')[0] }}
```

```
<saltclass_path>/classes/default/init.yml
```

```
classes:
- default.users
- default.motd

states:
- openssh

pillars:
default:
network:
dns:
  srv1: 192.168.0.1
  srv2: 192.168.0.2
  domain: example.com
ntp:
  srv1: 192.168.10.10
  srv2: 192.168.10.20
```

```
<saltclass_path>/classes/subsidiaries/gnv.yml
```

```
pillars:
default:
network:
sub: Geneva
dns:
  srv1: 10.20.0.1
  srv2: 10.20.0.2
  srv3: 192.168.1.1
  domain: gnv.example.com
users:
```

(continues on next page)

(continued from previous page)

```

adm1:
  uid: 1210
  gid: 1210
  gecos: 'Super user admin1'
  homedir: /srv/app/adm1
adm3:
  uid: 1203
  gid: 1203
  gecos: 'Super user adm

```

Variable expansions:

Escaped variables are rendered as is - `${test}`

Missing variables are rendered as is - `${net:dns:srv2}`

```

pillars:
  app:
    config:
      dns:
        srv1: ${default:network:dns:srv1}
        srv2: ${net:dns:srv2}
      uri: https://application.domain/call?\${test}
      prod_parameters:
        - p1
        - p2
        - p3
    pkg:
      - app-core
      - app-backend

```

List override:

Not using `^` as the first entry will simply merge the lists

```

pillars:
  app:
    pkg:
      - ^
      - app-frontend

```

### Known limitation

Currently you can't have both a variable and an escaped variable in the same string as the escaped one will not be correctly rendered - `'${xx}'` will stay as is instead of being rendered as `'${xx}'`

### Lists of comments in state returns

State functions can now return a list of strings for the `comment` field, as opposed to only a single string. This is meant to ease writing states with multiple or multi-part comments.

### Beacon configuration changes

In order to remain consistent and to align with other Salt components such as states, support for configuring beacons using dictionary based configuration has been deprecated in favor of list based configuration. All beacons have a validation function which will check the configuration for the correct format and only load if the validation passes.

#### avahi\_announce

Old behavior:

```
beacons:
  avahi_announce:
    run_once: True
    servicetype: _demo._tcp
    port: 1234
    txt:
      ProdName: grains.productname
      SerialNo: grains.serialnumber
      Comments: 'this is a test'
```

New behavior:

```
beacons:
  avahi_announce:
    - run_once: True
    - servicetype: _demo._tcp
    - port: 1234
    - txt:
      ProdName: grains.productname

    - account_sid: "<account sid>"
    - auth_token: "<auth token>"
    - twilio_number: "+15555555555"
    - interval: 10
```

## wtmp

Old behavior:

```
beacons:
  wtmp: {}
```

New behavior:

```
beacons:
  wtmp: []
```

## New requisites available in state compiler

### require\_any

The use of `require_any` demands that one of the required states executes before the dependent state. The state containing the `require_any` requisite is defined as the dependent state. The states specified in the `require_any` statement are defined as the required states. If at least one of the required state's execution succeeds, the dependent state will then execute. If all of the executions by the required states fail, the dependent state will not execute.

### watch\_any

The state containing the `watch_any` requisite is defined as the watching state. The states specified in the `watch_any` statement are defined as the watched states. When the watched states execute, they will return a dictionary containing a key named "changes".

If the "result" of any of the watched states is `True`, the watching state *will execute normally*, and if all of them are `False`, the watching state will never run. This part of `watch` mirrors the functionality of the `require` requisite.

If the "result" of any of the watched states is `True` *and* the "changes" key contains a populated dictionary (changes occurred in the watched state), then the `watch` requisite can add additional behavior. This additional behavior is defined by the `mod_watch` function within the watching state module. If the `mod_watch` function exists in the watching state module, it will be called *in addition to* the normal watching state. The return data from the `mod_watch` function is what will be returned to the master in this case; the return data from the main watching function is discarded.

If the "changes" key contains an empty dictionary, the `watch` requisite acts exactly like the `require` requisite (the watching state will execute if "result" is `True`, and fail if "result" is `False` in the watched state).

### onchanges\_any

The `onchanges_any` requisite makes a state only apply one of the required states generates changes, and if one of the watched state's "result" is `True`. This can be a useful way to execute a post hook after changing aspects of a system.

### onfail\_any

The `onfail_any` requisite allows for reactions to happen strictly as a response to the failure of at least one other state. This can be used in a number of ways, such as executing a second attempt to set up a service or begin to execute a separate thread of states because of a failure.

The `onfail_any` requisite is applied in the same way as `require_any` and `watch_any`.

## Basic Slots support in state compiler

Slots extend the state syntax and allows you to do things right before the state function is executed. So you can make a decision in the last moment right before a state is executed.

Slot syntax looks close to the simple python function call. Here is a simple example:

```
copy-some-file:
  file.copy:
```

(continues on next page)

(continued from previous page)

- ```
- name: __slot__:salt:test.echo(text=/tmp/some_file)
- source: __slot__:salt:test.echo(/etc/hosts)
```

Read more *here*.

## Cryptographic layer changes

M2Crypto is coming back. We are making the crypto backend modular but in this release M2Crypto is enabled if it's importable by Python. If not Cryptodome or PyCrypto is used as it was in the previous releases. M2Crypto is used in the same way as PyCrypto so there would be no compatibility issues, different nodes could use different backends.

## NaCL Module and Runner changes

In addition to argument changes in both the NaCL module and runner for future removal in the 3000 release, the default "box\_type" has changed from secretbox to sealedbox. SecretBox is data encrypted using private key sk and Sealedbox is encrypted using public key pk.

## utils functions reorganized into separate modules

The Salt utility functions from `salt.utils` (typically used by those developing extension modules for Salt) have been moved into different modules, grouped logically based on their functionality. The old function names will continue to work until the 3000 release of Salt (due around Q1 2019).

The renamed functions are:

- `salt.utils.appendproctitle`: use `salt.utils.process.appendproctitle` instead.
- `salt.utils.daemonize`: use `salt.utils.process.daemonize` instead.
- `salt.utils.daemonize_if`: use `salt.utils.process.daemonize_if` instead.
- `salt.utils.reinit_crypto`: use `salt.utils.crypt.reinit_crypto` instead.
- `salt.utils.pem_finger`: use `salt.utils.crypt.pem_finger` instead.
- `salt.utils.to_bytes`: use `salt.utils.stringutils.to_bytes` instead.
- `salt.utils.to_str`: use `salt.utils.stringutils.to_str` instead.
- `salt.utils.to_unicode`: use `salt.utils.stringutils.to_unicode` instead.
- `salt.utils.str_to_num`: use `salt.utils.stringutils.to_num` instead.
- `salt.utils.is_quoted`: use `salt.utils.stringutils.is_quoted` instead.
- `salt.utils.dequote`: use `salt.utils.stringutils.dequote` instead.
- `salt.utils.is_hex`: use `salt.utils.stringutils.is_hex` instead.
- `salt.utils.is_bin_str`: use `salt.utils.stringutils.is_bin_str` instead.
- `salt.utils.rand_string`: use `salt.utils.stringutils.random` instead.
- `salt.utils.contains_whitespace`: use `salt.utils.stringutils.contains_whitespace` instead.
- `salt.utils.build_whitespace_split_regex`: use `salt.utils.stringutils.build_whitespace_split_regex` instead.
- `salt.utils.expr_match`: use `salt.utils.stringutils.expr_match` instead.

- `salt.utils.check_whitelist_blacklist`: use `salt.utils.stringutils.check_whitelist_blacklist` instead.
- `salt.utils.check_include_exclude`: use `salt.utils.stringutils.check_include_exclude` instead.
- `salt.utils.print_cli`: use `salt.utils.stringutils.print_cli` instead.
- `salt.utils.clean_kwarg`: use `salt.utils.args.clean_kwarg` instead.
- `salt.utils.invalid_kwarg`: use `salt.utils.args.invalid_kwarg` instead.
- `salt.utils.shlex_split`: use `salt.utils.args.shlex_split` instead.
- `salt.utils.arg_lookup`: use `salt.utils.args.arg_lookup` instead.
- `salt.utils.argspec_report`: use `salt.utils.args.argspec_report` instead.
- `salt.utils.split_input`: use `salt.utils.args.split_input` instead.
- `salt.utils.test_mode`: use `salt.utils.args.test_mode` instead.
- `salt.utils.format_call`: use `salt.utils.args.format_call` instead.
- `salt.utils.which`: use `salt.utils.path.which` instead.
- `salt.utils.which_bin`: use `salt.utils.path.which_bin` instead.
- `salt.utils.path_join`: use `salt.utils.path.join` instead.
- `salt.utils.check_or_die`: use `salt.utils.path.check_or_die` instead.
- `salt.utils.sanitize_win_path_string`: use `salt.utils.path.sanitize_win_path` instead.
- `salt.utils.rand_str`: use `salt.utils.hashutils.random_hash` instead.
- `salt.utils.get_hash`: use `salt.utils.hashutils.get_hash` instead.
- `salt.utils.is_windows`: use `salt.utils.platform.is_windows` instead.
- `salt.utils.is_proxy`: use `salt.utils.platform.is_proxy` instead.
- `salt.utils.is_linux`: use `salt.utils.platform.is_linux` instead.
- `salt.utils.is_darwin`: use `salt.utils.platform.is_darwin` instead.
- `salt.utils.is_sunos`: use `salt.utils.platform.is_sunos` instead.
- `salt.utils.is_smartos`: use `salt.utils.platform.is_smartos` instead.
- `salt.utils.is_smartos_globalzone`: use `salt.utils.platform.is_smartos_globalzone` instead.
- `salt.utils.is_smartos_zone`: use `salt.utils.platform.is_smartos_zone` instead.
- `salt.utils.is_freebsd`: use `salt.utils.platform.is_freebsd` instead.
- `salt.utils.is_netbsd`: use `salt.utils.platform.is_netbsd` instead.
- `salt.utils.is_openbsd`: use `salt.utils.platform.is_openbsd` instead.
- `salt.utils.is_aix`: use `salt.utils.platform.is_aix` instead.
- `salt.utils.safe_rm`: use `salt.utils.files.safe_rm` instead.
- `salt.utils.is_empty`: use `salt.utils.files.is_empty` instead.
- `salt.utils.fopen`: use `salt.utils.files.fopen` instead.

- `salt.utils.flopen`: use `salt.utils.files.flopen` instead.
- `salt.utils.fpopen`: use `salt.utils.files.fpopen` instead.
- `salt.utils.rm_rf`: use `salt.utils.files.rm_rf` instead.
- `salt.utils.mkstemp`: use `salt.utils.files.mkstemp` instead.
- `salt.utils.istextfile`: use `salt.utils.files.is_text_file` instead.
- `salt.utils.is_bin_file`: use `salt.utils.files.is_binary` instead.
- `salt.utils.list_files`: use `salt.utils.files.list_files` instead.
- `salt.utils.safe_walk`: use `salt.utils.files.safe_walk` instead.
- `salt.utils.st_mode_to_octal`: use `salt.utils.files.st_mode_to_octal` instead.
- `salt.utils.normalize_mode`: use `salt.utils.files.normalize_mode` instead.
- `salt.utils.human_size_to_bytes`: use `salt.utils.files.human_size_to_bytes` instead.
- `salt.utils.backup_minion`: use `salt.utils.files.backup_minion` instead.
- `salt.utils.str_version_to_evr`: use `salt.utils.pkg.rpm.version_to_evr` instead.
- `salt.utils.parse_docstring`: use `salt.utils.doc.parse_docstring` instead.
- `salt.utils.compare_versions`: use `salt.utils.versions.compare` instead.
- `salt.utils.version_cmp`: use `salt.utils.versions.version_cmp` instead.
- `salt.utils.warn_until`: use `salt.utils.versions.warn_until` instead.
- `salt.utils.kwargs_warn_until`: use `salt.utils.versions.kwargs_warn_until` instead.
- `salt.utils.get_color_theme`: use `salt.utils.color.get_color_theme` instead.
- `salt.utils.get_colors`: use `salt.utils.color.get_colors` instead.
- `salt.utils.gen_state_tag`: use `salt.utils.state.gen_tag` instead.
- `salt.utils.search_onfail_requisites`: use `salt.utils.state.search_onfail_requisites` instead.
- `salt.utils.check_state_result`: use `salt.utils.state.check_result` instead.
- `salt.utils.get_user`: use `salt.utils.user.get_user` instead.
- `salt.utils.get_uid`: use `salt.utils.user.get_uid` instead.
- `salt.utils.get_specific_user`: use `salt.utils.user.get_specific_user` instead.
- `salt.utils.chugid`: use `salt.utils.user.chugid` instead.
- `salt.utils.chugid_and_umask`: use `salt.utils.user.chugid_and_umask` instead.
- `salt.utils.get_default_group`: use `salt.utils.user.get_default_group` instead.
- `salt.utils.get_group_list`: use `salt.utils.user.get_group_list` instead.
- `salt.utils.get_group_dict`: use `salt.utils.user.get_group_dict` instead.
- `salt.utils.get_gid_list`: use `salt.utils.user.get_gid_list` instead.
- `salt.utils.get_gid`: use `salt.utils.user.get_gid` instead.
- `salt.utils.enable_ctrl_logoff_handler`: use `salt.utils.win_functions.enable_ctrl_logoff_handler` instead.

- `salt.utils.traverse_dict`: use `salt.utils.data.traverse_dict` instead.
- `salt.utils.traverse_dict_and_list`: use `salt.utils.data.traverse_dict_and_list` instead.
- `salt.utils.filter_by`: use `salt.utils.data.filter_by` instead.
- `salt.utils.subdict_match`: use `salt.utils.data.subdict_match` instead.
- `salt.utils.substr_in_list`: use `salt.utils.data.substr_in_list` instead.
- `salt.utils.is_dictlist`: use `salt.utils.data.is_dictlist`.
- `salt.utils.repack_dictlist`: use `salt.utils.data.repack_dictlist` instead.
- `salt.utils.compare_dicts`: use `salt.utils.data.compare_dicts` instead.
- `salt.utils.compare_lists`: use `salt.utils.data.compare_lists` instead.
- `salt.utils.decode_dict`: use `salt.utils.data.encode_dict` instead.
- `salt.utils.decode_list`: use `salt.utils.data.encode_list` instead.
- `salt.utils.exactly_n`: use `salt.utils.data.exactly_n` instead.
- `salt.utils.exactly_one`: use `salt.utils.data.exactly_one` instead.
- `salt.utils.is_list`: use `salt.utils.data.is_list` instead.
- `salt.utils.is_iter`: use `salt.utils.data.is_iter` instead.
- `salt.utils.isorted`: use `salt.utils.data.sorted_ignorecase` instead.
- `salt.utils.is_true`: use `salt.utils.data.is_true` instead.
- `salt.utils.mysql_to_dict`: use `salt.utils.data.mysql_to_dict` instead.
- `salt.utils.simple_types_filter`: use `salt.utils.data.simple_types_filter` instead.
- `salt.utils.ip_bracket`: use `salt.utils.zeromq.ip_bracket` instead.
- `salt.utils.gen_mac`: use `salt.utils.network.gen_mac` instead.
- `salt.utils.mac_str_to_bytes`: use `salt.utils.network.mac_str_to_bytes` instead.
- `salt.utils.refresh_dns`: use `salt.utils.network.refresh_dns` instead.
- `salt.utils.dns_check`: use `salt.utils.network.dns_check` instead.
- `salt.utils.get_context`: use `salt.utils.stringutils.get_context` instead.
- `salt.utils.get_master_key`: use `salt.utils.master.get_master_key` instead.
- `salt.utils.get_values_of_matching_keys`: use `salt.utils.master.get_values_of_matching_keys` instead.
- `salt.utils.date_cast`: use `salt.utils.dateutils.date_cast` instead.
- `salt.utils.date_format`: use `salt.utils.dateutils.strptime` instead.
- `salt.utils.total_seconds`: use `salt.utils.dateutils.total_seconds` instead.
- `salt.utils.find_json`: use `salt.utils.json.find_json` instead.
- `salt.utils.import_json`: use `salt.utils.json.import_json` instead.
- `salt.utils.namespaced_function`: use `salt.utils.functools.namespaced_function` instead.
- `salt.utils.alias_function`: use `salt.utils.functools.alias_function` instead.

- `salt.utils.profile_func`: use `salt.utils.profile.profile_func` instead.
- `salt.utils.activate_profile`: use `salt.utils.profile.activate_profile` instead.
- `salt.utils.output_profile`: use `salt.utils.profile.output_profile` instead.

## Deprecations

### Configuration Option Deprecations

- The `requests_lib` configuration option has been removed. Please use `backend` instead.

### Profitbricks Cloud Updated Dependency

The minimum version of the `profitbrick` python package for the `profitbricks` cloud driver has changed from 3.0.0 to 3.1.0.

### Execution Module Deprecations

- The `blockdev` execution module has been removed. Its functions were merged with the `disk` module.
- The `lxc` execution module has been changed as follows:
  - The `dnsservers` option to `lxc.cloud_init_interface` no longer defaults to 4.4.4.4 and 8.8.8.8.
  - The `dns_via_dhcp` option to `lxc.cloud_init_interface` now defaults to `True` instead of `False`.
- The `win_psget` module has been changed as follows:
  - The `psget.psversion` function was removed. Please use `cmd.shell_info` instead.
- The `win_service` module (which provides the `service` module on Windows platforms) has been changed as follows:
  - The `config` function was removed. Please use `service.modify` instead.
  - The following arguments to the `service.create` function have been renamed:
    - \* `binpath` has been renamed to `bin_path`
    - \* `depend` has been renamed to `dependencies`
    - \* `DisplayName` has been renamed to `display_name`
    - \* `error` has been renamed to `error_control`
    - \* `group` has been renamed to `load_order_group`
    - \* `obj` has been renamed to `account_name`
    - \* `password` has been renamed to `account_password`
    - \* `start` has been renamed to `start_type`
    - \* `type` has been renamed to `service_type`
- The `nacl` module has been changed as follows:
  - The following arguments have been renamed in the `nacl.keygen`, `nacl.enc`, and `nacl.dec`:

- \* `key_file` has been renamed to `sk_file`
- \* `key` has been renamed to `sk`

### Runner Deprecations

- The *manage* runner has been changed as follows:
  - `root_user` argument was removed from the *manage.bootstrap* function. Please use `salt-ssh` roster entries for the host instead.
- The *nacl* runner has been changed as follows:
  - The following arguments have been renamed in the *nacl.keygen*, *nacl.enc*, and *nacl.dec*:
    - \* `key_file` has been renamed to `sk_file`
    - \* `key` has been renamed to `sk`

### State Deprecations

- In the *archive* state, the `tar_options` and `zip_options` options were removed. Please use `options` instead.
- The *cmd* state had the following changes:
  - The `user` and `group` options were removed from the following functions (please use `runas` instead):
    - \* *cmd.run*
    - \* *cmd.script*
    - \* *cmd.wait*
    - \* *cmd.wait\_script*
- In the *file* states, the `show_diff` option was removed in all states where it was previously supported. Please use `show_changes` instead.

### Grain Deprecations

- For *smartos*, some grains have been deprecated. These grains will be removed in 3000:
  - The `hypervisor_uuid` grain has been replaced with `mdata:sdcc:server_uuid`
  - The `datacenter` grain has been replaced with `mdata:sdcc:datacenter_name`

### Pillar Deprecations

The legacy configuration for `git_pillar` has been removed. Please use the new configuration for `git_pillar` which was added in 2015.8.0, which is documented [here](#).

## Utils Deprecations

- In `salt.utils.cloud`, the `fire_event` function now requires a `sock_dir` argument. It was previously optional.

## Other Miscellaneous Deprecations

- In `version.py`, the `rc_info` function was removed. Please use `pre_info` instead.
- Warnings for moving away from the `env` option were removed. `saltenv` should be used instead. The removal of these warnings does not have a behavior change. Only the warning text was removed.

## Minion Blackout

During a blackout, minions will not execute any remote execution commands, except for `saltutil.refresh_pillar`. Previously, support was added so that blackouts are enabled using a special pillar key, `minion_blackout` set to `True` and an optional pillar key `minion_blackout_whitelist` to specify additional functions that are permitted during blackout. This release adds support for using this feature in the grains as well, by using special grains keys `minion_blackout` and `minion_blackout_whitelist`.

## Sentry Log Handler

Configuring sentry raven python client via `project`, `servers`, `public_key` and `secret_key` is deprecated and won't work with sentry clients > 3.0. Instead, the `dsn` config param must be used.

## RAET transport

We haven't been doing development on RAET for quite some time and decided that 2018.3.0 is the time to announce the deprecation. RAET support will be removed in 3000. Please consider to move to `zeromq` or `tcp` transport instead of `raet`.

## 33.2.65 Salt 2018.3.1 Release Notes

Version 2018.3.1 is a bugfix release for *2018.3.0*.

### Statistics

- Total Merges: 525
- Total Issue References: 74
- Total PR References: 255
- Contributors: 55 (Ch3LL, DmitryKuzmenko, Giandom, Kimol, L4rS6, LukeCarrier, OrlandoArcapix, TamCore, The-Loeki, UtahDave, aesposito91, bbinet, bdrung, boltronics, bosatsu, clan, corywright, damon-atkins, din-camihai, dmurphy18, dnABic, douglasjreynolds, dwoz, edgan, ejparker12, esell, ezh, femnad, folti, gareth-greenaway, gtmanfred, isbm, jasperla, johnj, mateiw, mcalmer, mirceaulinic, morganwillcock, opdude, pcn, pruiiz, psagers, psyer, rallytime, robinro, s0undt3ch, samodid, shengis, skjaro, tankywoo, terminalmage, twang-boy, vutny, yannj-fr, zmedico)

**Warning:** If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
file.manged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:
file.manged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict | json }}
```

### Tornado 5.0 Support for Python 2 Only

Tornado 5.0 moves to using `asyncio` for all `python3` versions. Because of this and changes in `asyncio` between `python` 3.4 and 3.5 to only be able to use one `ioloop`, which requires some rearchitecting, support for `tornado 5.0` and `python3` versions of `salt` has been delayed to a later release.

For now, to use `tornado 5.0`, the `python 2` version of `salt` must be used.

### Changes to Slack Engine pillars

When using `groups_pillar_name` for the `slack` engine, the engine should be used as part of a `salt-minion` process running on the master. This will allow the minion to have pillars assigned to it, and will still allow the engine to create a `LocalClient` connection to the master `ipc` sockets to control environments.

### Changes to Automatically Updating the Roster File

In `2018.3.0` `salt-ssh` was configured to automatically update the flat roster file if a minion was not found for `salt-ssh`. This was decided to be undesirable as a default. The `--skip-roster` flag has been removed and replaced with `--update-roster`, which will enable `salt-ssh` to add minions to the flat roster file. This behavior can also be enabled by setting `ssh_update_roster: True` in the master config file.

### Changes to `file.blockreplace` State

The `append_newline` argument was added to this state. Additionally, to improve idempotence, if the string represented by `marker_end` is found in the middle of the line, the content preceding the marker will be removed when the block is replaced. This allows one to remove `append_newline: False` from the SLS and have the block properly replaced if the end of the content block is immediately followed by the `marker_end` (i.e. no newline before the marker).

**Note:** This will require changes to your SLS if your `marker_end` does not include the very beginning of the content you want to keep.

---

See the `file.blockreplace` state documentation for further information.

### Changelog for v2018.3.0..v2018.3.1

Generated at: 2018-06-06 17:43:01 UTC

- **ISSUE #47955:** (frogunder) 2018.3.1 Creating Windows machine in Amazon using salt-cloud fails. (refs: #47989)
- **PR #47998:** (rallytime) Back-port #47989 to 2018.3.1 @ 2018-06-06 17:08:04 UTC
  - **PR #47989:** (dwoz) Properly decode password from aws using m2crypto (refs: #47998)
  - 605463ca0d Merge pull request #47998 from rallytime/bp-47989
  - 1b7e9ac2d3 Lint fixes
  - 0545152ddd Properly decode password from aws using m2crypto
- **PR #47965:** (Ch3LL) Add PR 47924 from 2018.3 branch @ 2018-06-06 13:54:09 UTC
  - dbc798ac68 Merge pull request #47965 from Ch3LL/gitpy\_mac\_3.1
  - bf608abd44 Catch all exceptions in git import for salt.utils.gitfs
- **PR #47973:** (terminalmage) salt.modules.testinframod: fix TypeError invoking types.FunctionType @ 2018-06-06 13:53:46 UTC
  - 864d640633 Merge pull request #47973 from terminalmage/fix-testinfra
  - 4518c89484 Lint: Remove unused six import
  - c6816b2149 salt.modules.testinframod: fix TypeError invoking types.FunctionType
- **ISSUE #47236:** (MorphBonehunter) x509.private\_key\_managed broken after upgrade to 2018.3.0 (refs: #47957)
- **PR #47967:** (rallytime) Back-port #47957 to 2018.3.1 @ 2018-06-06 13:53:28 UTC
  - **PR #47957:** (garethgreenaway) [2018.8] Ensure x509 passphrase is a string (refs: #47967)
  - 5ddcff420 Merge pull request #47967 from rallytime/bp-47957
  - 9a55579af1 removing unnecessary change
  - 329b2e5956 Ensuring that when a passphrase is passed in, it is returned as a string from the passphrase callback.
- **PR #47902:** (Ch3LL) Remove In Progress for 2018.3.1 Release Notes @ 2018-05-30 18:26:49 UTC
  - 9c964fdbce Merge pull request #47902 from Ch3LL/rn\_in\_progress
  - f560a151cd Remove In Progress for 2018.3.1 Release Notes
- **PR #47897:** (Ch3LL) Add changelog to 2018.3.1 release notes @ 2018-05-30 15:04:42 UTC
  - ea7b4fdc08 Merge pull request #47897 from Ch3LL/rn\_2018
  - e27ee273a7 Add == line to changelog line for release notes
  - 61e56d275d Add changelog to 2018.3.1 release notes
- **ISSUE #47784:** (jpsv) win\_lgpo.py line 5368; AttributeError: 'OrderedDict' object has no attribute 'lower' (refs: #47848)

- **PR #47848:** (twangboy) Fix some major issues with the LGPO module @ 2018-05-30 13:37:32 UTC
  - f15e636d5e Merge pull request #47848 from twangboy/fix\_47784
  - 98fac8dc8 Remove log.debug statement in \_\_virtual\_\_
  - f037fa4064 Fix some major issues with the LGPO module
- **PR #47881:** (gtmanfred) quote python\_version in requirements.txt @ 2018-05-29 21:12:05 UTC
  - 92b8c4c08e Merge pull request #47881 from gtmanfred/2018.3.1
  - 3d874b5529 quote python\_version in requirements.txt
- **PR #47874:** (gtmanfred) Tornado 5.0 is only supported on python 2 for now @ 2018-05-29 19:45:44 UTC
  - 705bf8172d Merge pull request #47874 from gtmanfred/2018.3.1
  - 13f920415a add tornado5 note to 2018.3.1
  - aeacd2b749 allow tornado 5.0 to be installed only for python2
- **PR #47820:** (Ch3LL) Remove output\_loglevel in mac\_system module @ 2018-05-25 13:10:36 UTC
  - 09e8c5f0cd Merge pull request #47820 from Ch3LL/mac\_system
  - 362414e53b Remove output\_loglevel in mac\_system module
- **PR #47798:** (rallytime) Back-port #47776 to 2018.3.1 @ 2018-05-23 15:10:43 UTC
  - **PR #47776:** (garethgreenaway) [2018.3] Fixes to failing \_before\_connect tests (refs: #47798)
  - 7e314c26c8 Merge pull request #47798 from rallytime/bp-47776
  - ae881547d2 Fixing unit.test\_minion.MinionTestCase.test\_beacons\_before\_connect and unit.test\_minion.MinionTestCase.test\_scheduler\_before\_connect.
- **PR #47782:** (rallytime) Back-port #47775 to 2018.3.1 @ 2018-05-22 20:56:37 UTC
  - **PR #47775:** (gtmanfred) catch UnsupportedOperation with AssertionError (refs: #47782)
  - 9c610da0bc Merge pull request #47782 from rallytime/bp-47775
  - bab9c966c5 catch UnsupportedOperation with AssertionError
- **PR #47770:** (rallytime) Back-port #47769 to 2018.3.1 @ 2018-05-22 17:27:20 UTC
  - **PR #47769:** (gtmanfred) skip test that breaks test suite (refs: #47770)
  - 4adf10b20b Merge pull request #47770 from rallytime/bp-47769
  - 3cfb95c7bc skip test that breaks test suite
- **PR #47724:** (terminalmage) 2 master\_tops/ext\_nodes fixes @ 2018-05-21 15:59:04 UTC
  - bbe8e62a98 Merge pull request #47724 from terminalmage/master\_tops\_fixes
  - 48b8c5acd1 Merge branch '2018.3.1' into master\_tops\_fixes
  - 89b3070d4c Change deprecation warning to debug logging
  - ceb6e10f87 Fix spurious "Malformed request" error
- **ISSUE #47484:** (whytewolf) Windows: pkg.latest state not updating packages. (refs: #47702)
- **PR #47739:** (rallytime) Back-port #47702 to 2018.3.1 @ 2018-05-21 15:37:03 UTC
  - **PR #47702:** (damon-atkins) State pkg.latest called win pkg.install with list of pkgs and the required versions (refs: #47739)
  - 97d6fe7434 Merge pull request #47739 from rallytime/bp-47702

- f79da64bb0 Update is\_windows path to use *platform*
- f04b19b5b6 Ensure targeted\_pkgs always contains value for non-windows.
- 14659f9cad Adjusted based on feed back.
- 9f18f7cdf5 Whitespace lint issues
- 2a29b28ee6 pkg.install execution module on windows ensures the software package is installed when no version is specified, it does not upgrade the software to the latest. This is per the design. pkg.latest must provide the versions to install to pkg.install
- **PR #47730:** (rallytime) Back-port #47700 to 2018.3.1 @ 2018-05-21 15:36:16 UTC
  - **PR #47700:** (yannj-fr) fix roots modification time check (refs: #47730)
  - cfbe0ba73e Merge pull request #47730 from rallytime/bp-47700
  - 9bc35b88ea fix roots modification time check
- **PR #47727:** (Ch3LL) Fix salt.utils.versions.warn\_until spelling @ 2018-05-21 13:41:00 UTC
  - 3614d3d83a Merge pull request #47727 from Ch3LL/spelling
  - 47a8de5b73 Fix salt.utils.versions.warn\_until spelling
- **PR #47736:** (Ch3LL) mac\_utils test: patch \_\_salt\_\_['cmd.run\*'] @ 2018-05-21 13:38:59 UTC
  - bb45cdaefe Merge pull request #47736 from Ch3LL/fix\_util\_mac\_test
  - ee90c779a8 mac\_utils test: patch \_\_salt\_\_['cmd.run\*']
- **PR #47641:** (gtmanfred) fix \_create\_stream and tornado 5.0 @ 2018-05-18 14:25:36 UTC
  - 43930f8bac Merge pull request #47641 from gtmanfred/2018.3.1
  - 037fd92f59 fix pylint
  - 75d42d8963 Fix last test for tornado
  - a046512287 allow using tornado 5.0
  - 05e651f038 fix \_create\_stream and tornado 5.0
- **ISSUE #47532:** (edgan) roster auto-add feature in salt-ssh-2018.3.0 (refs: #47541)
- **PR #47541:** (gtmanfred) switch skip-roster to update-roster @ 2018-05-18 13:29:50 UTC
  - 9f926bcd1a Merge pull request #47541 from gtmanfred/2018.3
  - 8c5c780292 switch skip-roster to update-roster
- **PR #47719:** (rallytime) Back-port #47692 to 2018.3.1 @ 2018-05-18 13:22:02 UTC
  - **PR #47692:** (dwoz) Default windows to m1.small for ec2-classic (refs: #47719)
  - a963f1b558 Merge pull request #47719 from rallytime/bp-47692
  - 1d9f247fb7 Default windows to m1.small for ec2-classic
- **PR #47706:** (Ch3LL) Add cmd.\_run\_all\_quiet to mac\_utils and \_\_utils\_\_ in mac\_service @ 2018-05-18 01:11:46 UTC
  - c9108893ab Merge pull request #47706 from Ch3LL/mac\_service\_util
  - 3611af699f remove added space
  - 9921caa143 fix pylint
  - 317e41d3c0 use cmd.\_run\_quiet and cmd.\_run\_all\_quiet instead of importing minion\_mods in \_\_salt\_\_

- a78652515a Add `__salt__` to `mac_utils` and `__utils__` in `mac_service`
- **PR #47664:** (rallytime) Back-port #47645 to 2018.3.1 @ 2018-05-15 18:25:27 UTC
  - **PR #47645:** (Ch3LL) query the pip path for test `test_issue_2087_missing_pip` (refs: #47664)
  - fb3bf1ff3e Merge pull request #47664 from rallytime/bp-47645
  - 0a732d8e66 query the pip path for test `test_issue_2087_missing_pip`
- **PR #47647:** (rallytime) Back-port #47601 and #47643 to 2018.3.1 @ 2018-05-15 14:07:54 UTC
  - **PR #47643:** (dwoz) Remove unwanted file (refs: #47647)
  - **PR #47601:** (dwoz) Skip tests when we can not use `runas` (refs: #47647)
  - 9039fee104 Merge pull request #47647 from rallytime/bp-47601-and-47643-2018.3.1
  - 7214fe17c8 Fix typo
  - 506dceed17 Remove unwanted file
  - b6a21dfda3 use `ignore-undefined-variable`
  - 2429f9fe8a Ignore pylint `WindowsError`
  - 2d63682fea Better doc string
  - ec2adff699 Skip tests when we can not use `runas`
- **PR #47596:** (rallytime) Back-port #47568 to 2018.3.1 @ 2018-05-10 22:09:09 UTC
  - **PR #47568:** (terminalmage) `salt.serializers.yaml/yamlex: remove invalid multi_constructor` (refs: #47596)
  - 17b5265d95 Merge pull request #47596 from rallytime/bp-47568
  - ecf5dc8b9f Add exception logging on `serialize/deserialize` exceptions
  - 9659b19819 `salt.serializers.yaml/yamlex: remove invalid multi_constructor`
- **PR #47595:** (rallytime) Back-port #47569 to 2018.3.1 @ 2018-05-10 22:08:53 UTC
  - **PR #47569:** (Ch3LL) Update `salt.utils.path` mock in virtual core test (refs: #47595)
  - c4c400f3e9 Merge pull request #47595 from rallytime/bp-47569
  - 0763f96458 update `salt.utils.platform` path for virt core test
  - 718252c1ef Update `salt.utils.path` mock in virtual core test
- **PR #47599:** (rallytime) Back-port #47570 to 2018.3.1 @ 2018-05-10 22:06:44 UTC
  - **PR #47570:** (gtmanfred) Update dependency to `msgpack` (refs: #47599)
  - ec7de14be0 Merge pull request #47599 from rallytime/bp-47570
  - 9334c03da9 Update dependency to `msgpack`
- **PR #47571:** (rallytime) [2018.3.1] Update man pages @ 2018-05-10 16:21:57 UTC
  - 2a10d92669 Merge pull request #47571 from rallytime/man-pages
  - ade5e9f664 [2018.3.1] Update man pages
- **PR #47550:** (pcn) Fixes a bad deletion I did that only surfaced in 2018.3 @ 2018-05-09 13:36:33 UTC
  - 85284caaf9 Merge pull request #47550 from pcn/fix-disable-term-protect-in-2018.3
  - d58a56877c Fixes a bad deletion I did that only surfaced in 2018.3

- **ISSUE #47553:** (douglasjreynolds) Unicode version error in lxc (refs: #47554)
- **PR #47554:** (douglasjreynolds) Converted unicode str version to a LooseVersion; matching line 2080. @ 2018-05-09 13:34:13 UTC
  - f9083ff77e Merge pull request #47554 from douglasjreynolds/lxc\_unicode\_fix
  - e6bce581c6 Converted unicode str version to \_LooseVersion to match line 2080.
- **PR #47518:** (Ch3LL) Fix 47364: ensure we are not caching zfs.is\_supported @ 2018-05-09 13:29:07 UTC
  - fe4e79f1de Merge pull request #47518 from Ch3LL/zfs\_support
  - d19fef963e remove unnecessary patch in zfs.is\_supported test
  - 58c4f29f96 Fix 47364: ensure we are not caching zfs.is\_supported
- **PR #47159:** (terminalmage) Fix for whitelist/blacklist checking for non-list iterables @ 2018-05-08 20:43:51 UTC
  - 332e9f13a6 Merge pull request #47159 from terminalmage/whitelist\_blacklist-iter-fix
  - ca936de372 Treat empty whitelist/blacklist as no whitelist/blacklist
  - bcccaf2621 Raise a TypeError when invalid input passed to check\_whitelist\_blacklist
  - 2ae510ff2b Fix comment in test
  - 17398efcf7 Fix for whitelist/blacklist checking for non-list iterables
- **PR #47514:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-08 18:36:54 UTC
  - 21809ddc02 Merge pull request #47514 from rallytime/merge-2018.3
  - e2616b605f Update the pip tests to use the parsing syntax generated in PR #47196
  - b13b59791f Remove double instance of adding --format=json in pip module
  - 2ad60c7e81 Lint: remove duplicate function in helpers.py
  - 75480158b3 Lint: cur\_version should just be pip\_version
  - 5565d5e9b1 Update old utils paths with new utils paths
  - 786076ac03 Merge branch '2017.7' into '2018.3'
    - \* 611ca1fc03 Merge pull request #47476 from gtmanfred/2017.7
      - 1f91a85587 specify cache dir for pip install
      - 99e150e09c check for kitchen-vagrant gem before loading windows tests
    - \* 7c3f2c56da Merge pull request #47412 from twangboy/fix\_47125
      - c9bab0b8e3 Merge branch '2017.7' into fix\_47125
      - 2600e404d5 Fix overly long line
      - 5c8db05769 Fix issue where the cwd was being removed
    - \* 4846e957c4 Merge pull request #47467 from twangboy/cleanup\_settings
      - 9d498293b1 Remove unused settings, update NSIS
    - \* da9871d36b Merge pull request #47196 from twangboy/fix\_47024
      - 14ee5537b9 Add @with\_tmpdir helper
      - 6c3b5fa6fa Fix typo
      - f031710af2 Merge branch '2017.7' into fix\_47024

- 7c46d9d0d4 Fix integration.modules.test\_pip
- 22ac81df63 Fix integration.modules.test\_pip
- 57d98224d4 Merge pull request #9 from terminalmage/twangboy/fix\_47024
- 37a13d8004 Update pip unit tests to reflect changes
- 7f86779be0 Lint fix
- c48d8f4f61 DRY and other fixes in pip module
- b1117896a0 Change from global variable to `__context__`
- 3e6e524eca Fix some tests
- c94f0f20e4 Fix lint error
- fd47b21530 Fix merge conflict
- \* e8c4524bae Merge pull request #47455 from Ch3LL/unreleased\_rn
  - b6d0cc2ab7 Add In Progress Warning for 2017.7.6 Release Notes
- \* 2c7a4b6179 Merge pull request #47459 from gtmanfred/2017.7
  - d228e72477 update ubuntu-rolling to 18.04
- \* 64a64c0ed7 Merge pull request #47462 from terminalmage/docs
  - 6d7803ece0 Fix docs build on Sphinx 1.7+
- \* 6cd0d31c03 Merge pull request #47438 from lomerode/double\_admx\_test
  - 4902f1e2ba check if a policy has either an enabled value or enabled list entry or a disabled value or disabled list entry when determining the state of the policy
- \* ed69821d19 Merge pull request #47433 from s0undt3ch/2017.7
  - 5abadf25d6 Add missing requirements files not committed in #47106
- **ISSUE #47443:** (skylerberg) Input validation does not raise SaltInvocationError in win\_dsc.py (refs: #47505)
- **PR #47516:** (rallytime) Back-port #47505 to 2018.3 @ 2018-05-08 13:32:33 UTC
  - **PR #47505:** (dwoz) Raise proper invocation errors (refs: #47516)
  - 9559ac7679 Merge pull request #47516 from rallytime/bp-47505
  - 7c60e4071e Raise proper invocation errors
- **ISSUE #47502:** (psagers) service.enable (and .disable) destroys /etc/rc.conf on FreeBSD (refs: #47503)
- **PR #47515:** (rallytime) Back-port #47503 to 2018.3 @ 2018-05-08 13:32:03 UTC
  - **PR #47503:** (psagers) Fix #47502: Remove an extraneous (accidentally introduced?) call to rstrip() (refs: #47515)
  - bf79acfb8 Merge pull request #47515 from rallytime/bp-47503
  - 821dbb88a0 Fix #47502: Remove an extraneous (accidentally introduced?) call to rstrip.
- **ISSUE #47511:** (joesusecom) sshconfig salt-ssh roster is missing in the documentation (refs: #47531)
- **PR #47531:** (gtmanfred) add ssh config doc for rosters @ 2018-05-07 22:26:30 UTC
  - 779b3ed056 Merge pull request #47531 from gtmanfred/2018.3
  - 92ded7162c add ssh config doc for rosters
- **PR #47520:** (rallytime) Cleanup weird spaces @ 2018-05-07 19:50:58 UTC

- 95b2f9db30 Merge pull request #47520 from rallytime/cleanup-spaces
- e9cb080a00 Cleanup weird spaces
- **PR #47495:** (dwoz) Fix crufty nssm.exe reference @ 2018-05-07 19:12:49 UTC
  - 05fc52f124 Merge pull request #47495 from dwoz/uninstall\_wart
  - caa36c9064 Merge branch '2018.3' into uninstall\_wart
- **ISSUE #47322:** (masau) lxc clone not working (refs: #47494)
- **PR #47494:** (ejparker12) Fixed lxc.clone unhandled exception in salt/modules/lxc.py @ 2018-05-07 19:03:58 UTC
  - 3cc7d3ae7c Merge pull request #47494 from ejparker12/fix-lxc-clone
  - e0e2c9782d Fixed lxc.clone unhandled exception in salt/modules/lxc.py
- **ISSUE #47496:** (mateiw) salt-ssh --extra-filerefs doesn't include any files if no refs in state files (refs: #47497)
- **PR #47497:** (mateiw) Fix salt-ssh --extra-filerefs to include files even if no refs in states to apply @ 2018-05-07 19:02:50 UTC
  - adde83f639 Merge pull request #47497 from mateiw/2018.3-fix-ssh-extra-files-refs-issue-47496
  - d67239aae7 --extra-filerefs include files even if no refs in states to apply
- **ISSUE #47404:** (shengis) Localized version of yum breaks pkg.install (refs: #47441)
- **PR #47441:** (shengis) Fix \_run to reset LANGUAGE env variable @ 2018-05-07 18:29:25 UTC
  - 34b1b1ee53 Merge pull request #47441 from shengis/fix-run-env-reset
  - 62fc16b721 Merge branch '2018.3' into fix-run-env-reset
  - 3b02b0bdc1 Merge branch '2018.3' into fix-run-env-reset
  - ee2ab38c8c Fix \_run to reset LANGUAGE env variable
- **ISSUE #47479:** (whytewolf) win\_task.info on py3 throwing error, but works in py2 (refs: #47507)
- **PR #47507:** (gtmanfred) fix win\_task for py3 @ 2018-05-07 17:41:21 UTC
  - 17cfd4f7cf Merge pull request #47507 from gtmanfred/2018.3
  - 19db39f402 fix win\_task for py3
- **PR #47472:** (terminalmage) salt.utils.hashutils: Fix UnicodeEncodeError in several funcs @ 2018-05-07 13:31:07 UTC
  - a4c2df8fb2 Merge pull request #47472 from terminalmage/hashutils
  - 7266c9984d salt.utils.hashutils: Fix UnicodeEncodeError in several funcs
- **PR #47485:** (gtmanfred) add openstack modules to doc index.rst @ 2018-05-07 13:11:42 UTC
  - 8b0a370189 Merge pull request #47485 from gtmanfred/2018.3
  - c86163d79f add openstack modules to doc index.rst
    - \* 3557fc5fa6 Fix crufty nssm.exe reference
- **PR #47482:** (gtmanfred) add all autodoc for new salt openstack modules @ 2018-05-04 21:03:38 UTC
  - 8df37f734a Merge pull request #47482 from gtmanfred/2018.3
  - 1f65d5cb73 add all autodoc for new salt openstack modules
- **PR #47447:** (dwoz) Fix failing test due to windows console encoding @ 2018-05-04 16:41:29 UTC
  - d20ca15c5d Merge pull request #47447 from dwoz/strv

- 8c01773833 Use the same non decodable bytes for all tests
- 983881a2a1 Add bytes that will not decode using cp1252
- **PR #47466:** (dwoz) bytes file that decodes the same utf-8 and cp1252 @ 2018-05-04 15:54:24 UTC
  - 8c5b30b541 Merge pull request #47466 from dwoz/randbytes
  - fd9bc06aab bytes file that decodes the same utf-8 and cp1252
- **ISSUE #46660:** (mruepp) top file merging same does produce conflicting ids with gitfs (refs: #47354, #46751)
- **PR #47465:** (rallytime) Back-port #47354 to 2018.3 @ 2018-05-04 13:06:04 UTC
  - **PR #47354:** (folti) fix forward port of #46751 (refs: #47465)
  - **PR #46751:** (folti) top file merging strategy 'same' works again (refs: #47354)
  - 3658604c43 Merge pull request #47465 from rallytime/bp-47354
  - 3df6fa7990 fix forward port of #46751
- **PR #47435:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-04 13:05:32 UTC
  - fa293f8fac Merge pull request #47435 from rallytime/merge-2018.3
  - be0731da5f Add skipIfs back in for rest\_tornado tests
  - fd98ee3dc1 Lint: Add missing blank line
  - 561718b20b Update old is\_windows utils path to new utils path
  - a94cdf8a0d Merge branch '2017.7' into '2018.3'
    - \* 7ae3497b0c Merge pull request #47429 from gtmanfred/2017.7
      - 8ae32033cc server\_list\_min should use state, not status
    - \* 2f5fc4ecc5 Merge pull request #47399 from isbm/isbm-zeromq17-deprecationwarning-2017.7.2-v2
      - a36e49fd27 fix pylint
      - 98b5629b36 Fix imports
      - d94c0f0152 Remove unnecessary variable
      - 8e377b5653 Lintfix: E0203 and attribute access
      - 2aab70b1b8 Install ZMQ handler if <15 version
      - 296c589f4b Use ZMQ switch utility in the integration tests
      - ab5fa34d7c Use ZMQ\_VERSION\_INFO constant everywhere
      - 43b5558b82 Add trace logging on ZMQ sockets communication
      - 164204a9fe Remove duplicate code for ZMQ monitor handling
      - 834b1e4ff0 Remove obsolete ZMQIOLoop direct instance
      - 1c90cbdb3c Remove an empty line
      - ef2e0acd66 Add logging on ZMQ socket exception
      - 38ceed371d Lintfix: ident
      - 1ece6a5f52 Lintfix: line too long
      - 4e650c0b44 Remove code duplicate by reusing utilities functions
      - 57da54b676 Fix imports

- 948368e9a1 Add libzmq version info builder
- 0b4a17b859 Update log exception message
- 116e1809fc Put a message alongside the exception to the logs
- 4bc43124b7 Remove unnecessary ZMQ import and check for its presence
- 05f4d40269 Use utility for ZMQ import handling in SSH client
- 457ef7d9a5 Use utility for ZMQ import handling in flo/zero
- 08dee6f5bd Use utility for ZMQ import handling
- e2a353cfb0 Remove unnecessary ZMQ extra-check for cache utils
- c8f2cc271d Remove unnecessary ZMQ extra-check for master utils
- 3940667bb9 Remove old ZMQ import handling
- f34a53e029 Use ZMQ utility for version check
- cbb26dcb28 Use ZMQ installer for master
- 453e83210a Add ZMQ version build
- af9601e21d Use ZMQ importer utility in async
- d50b2b2023 Incorporate tornado-5 fixes
- 1fd9af0655 Add ZMQ backward-compatibility tornado installer for older versions
- ad4b40415c Add one place for handling various ZMQ versions and IOloop classes
- \* b14e974b5f Merge pull request [#47343](#) from Ch3LL/win\_srv\_test
  - 2173b6f549 ensure we are enabling/disabling before test
  - d58be06751 Add additional service module integration tests and enable for windows
- \* b0f3fb577f Merge pull request [#47375](#) from terminalmage/issue47310
  - fa2bea52bb Remove extra blank line to appease linter
  - f8ab2be81c Add debug logging if we fail to detect virtual packages
  - 67c4fc56ac Warn on use of virtual packages in pkg.installed state
- \* 56235032f4 Merge pull request [#47415](#) from kstreee/fix-local-client-tgt-bug
  - b8d37e0a1e To add a test case for the syndic environment, copies the test case which was written by @mattp- that was already merged into develop branch, related pr is [#46692](#).
  - 4627bad1fd Realizes 'tgt' field into actual minions using ckminions to subscribe results of the minions before publishing a payload.
- \* d65ceae03 Merge pull request [#47286](#) from baniobloom/vpc\_peering\_connection\_name\_fix
  - a968965087 Merge branch '2017.7' into vpc\_peering\_connection\_name\_fix
- \* 8a5d4437bb Merge pull request [#47270](#) from meaksh/2017.7-fix-retcode-on-schedule-utils
  - d299cf3385 Merge branch '2017.7' into 2017.7-fix-retcode-on-schedule-utils
  - b6da600fff Initialize \_\_context\_\_ retcode for functions handled via schedule util module
- \* 5b51075384 Merge pull request [#47371](#) from rallytime/fix-47264
  - a43485b49c Fix "of pass" typo in grains.delval docs: change to "or pass"
- \* a86e53be66 Merge pull request [#47389](#) from dwoz/moregittestfix

- 67745c1362 Older GitPython versions will not have close
- \* a5367eaf63 Merge pull request #47388 from dwoz/test\_pip\_fix
  - eb26321e8b Fix missing import
- \* 9b59b991c2 Merge pull request #47380 from gtmanfred/2017.7
  - 93d1445ec1 add io\_loop handling to runtests engine
- \* 37822c0cbb Merge pull request #47384 from dwoz/test\_pip\_fix
  - a37a9da1fb Fix py2 version of pip test
- \* eefd96732e Merge pull request #47382 from dwoz/gitfs\_tests
  - 1570708fac Close the repo and fix multiple tests
- \* 57c75ff660 Merge pull request #47369 from terminalmage/ldap\_pillar
  - 085883ae2d Return an empty dict if no search\_order in ldap ext\_pillar config file
- \* bcc66dd9bf Merge pull request #47363 from DSRCorporation/bugs/replace\_exc\_info\_with\_exception
  - 3f7b93a23c Tornado5.0: Future.exc\_info is dropped
- \* bcef34f7e1 Merge pull request #47334 from terminalmage/ldap\_pillar
  - 0175a8687c pillar\_ldap: Fix cryptic errors when config file fails to load
  - 65c3ba7ff1 Remove useless documentation
  - 5d67cb27de Remove unnecessary commented line
  - 8de3d41adb fixed vpc\_peering\_connection\_name option
- **PR #47464:** (dwoz) Skip tests not applicable to windows @ 2018-05-04 13:04:38 UTC
  - 51d21afd4f Merge pull request #47464 from dwoz/skiP\_syslog\_tests
  - ca9393b7fb Skip tests not applicable to windows
- **PR #47456:** (dwoz) Sysname returns text type @ 2018-05-04 02:57:50 UTC
  - 3219430dcc Merge pull request #47456 from dwoz/sysname
  - 559ee1961f Sysname returns text type
- **PR #47458:** (Ch3LL) Add In Progress Warning for 2018.3.1 Release Notes @ 2018-05-03 20:40:46 UTC
  - f3918514a7 Merge pull request #47458 from Ch3LL/unreleased\_rn\_2018
  - 6a261e5e3a Add In Progress Warning for 2018.3.1 Release Notes
- **PR #47448:** (dwoz) Fix missing import in test suite @ 2018-05-03 14:30:23 UTC
  - 9fbdcbe994 Merge pull request #47448 from dwoz/transport\_import
  - 7e04eb82e1 Fix missing import in test suite
- **ISSUE #47260:** (mew1033) disable\_saltenv\_mapping not working as expected (refs: #47410)
- **PR #47410:** (terminalmage) gitfs: Fix identification of base env when saltenv mapping is disabled @ 2018-05-03 14:12:27 UTC
  - 157a32af7f Merge pull request #47410 from terminalmage/issue47260
  - 3ab332ad0e Update tests to reflect bugfix
  - 7b8127f336 gitfs: Fix identification of base env when saltenv mapping is disabled

- **PR #47413:** (dmurphy18) Repobuild improvements for Ubuntu 18.04 lack of gpg2 and better error checking @ 2018-05-02 16:21:31 UTC
  - 091e4cf9a6 Merge pull request #47413 from saltstack/repobuild\_improv
  - c064032110 Removed extra spaces for pylint
  - 20c50b3331 Minor cleanup due to review comments
  - c143b359e9 Update for Ubuntu 18.04 lack of gpg2 and enhanced error checking
- **PR #47216:** (twangboy) Reg docs @ 2018-05-02 13:33:27 UTC
  - 5e5774fd37 Merge pull request #47216 from twangboy/reg\_docs
  - 0beeb58b16 Fix lint, add bytes
  - bad441f8dc Fix some lint`
  - af5139c2ff Add additional examples
  - 24df6ec1b7 Additional docs formatting
  - ff46b27a60 Update reg docs, fix formatting issues
- **PR #47417:** (gtmanfred) revert instantiating a Caller Client in the engine @ 2018-05-01 18:58:06 UTC
  - 63baf4c4f8 Merge pull request #47417 from gtmanfred/slack
  - 5c8ea7f506 Update slack.py
  - ee8a5eeb10 revert instantiating a Caller Client in the engine
- **ISSUE #45790:** (bdarnell) Test with Tornado 5.0b1 (refs: #46066, #47106, #47433)
- **PR #47368:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-01 18:56:20 UTC
  - **PR #47106:** (DmitryKuzmenko) Tornado50 compatibility fixes (refs: #47374, #47368, #47433)
  - **PR #46002:** (isbm) Pyzmq 17.0.0 proper handling (refs: #47374, #47368)
  - 0bdfaa5ffe Merge pull request #47368 from rallytime/merge-2018.3
  - 46806e595b Update test assertion comment for pip pkgs
  - d9d24de49e Lint: Add missing import
  - c7b73d132e Merge branch '2017.7' into '2018.3'
    - \* 31db8ca7ad Merge pull request #47347 from dwoz/test\_mysql\_fix\_again
      - add78fb618 Fix linter warnings
      - 2644cc7553 Fix linter nits
      - 799c601184 Proper fix for mysql tests
  - fefc0cc3ca Update old utils paths to use new utils paths
  - 13e8124031 Merge branch '2017.7' into '2018.3'
    - \* e573236848 Merge pull request #47359 from gtmanfred/2017.7
      - 6214ed8133 add mention of the formulas channel to the formulas docs
    - \* 629503b2a8 Merge pull request #47317 from dwoz/threadshutdown
      - 6db2a0e4d3 Log exceptions at exception level
      - d4ae787595 Do not join a thread that is stopped

- \* aacd5cefe3 Merge pull request #47304 from cachedout/test\_cli\_timeout\_arg
  - 85025af83c Pass timeout to salt CLI for tests
- \* 55534fb659 Merge pull request #47311 from Ch3LL/firewall\_windows
  - 4e16c18c16 Add firewall module windows tests to whitelist
  - 4b2fc4ec66 Add windows firewall execution modules integration tests
- \* 1667375a80 Merge pull request #47348 from dwoz/no\_symlinks
  - 94a70e847a Ignore gitfs tests when symlinks not enabled
- \* dac04261b5 Merge pull request #47342 from dwoz/test\_mysql\_fix
  - 7496f4c5a8 Fix mysql test cases
- \* 34e78ef564 Merge pull request #47341 from dwoz/inet\_pton\_fix
  - 85451f48d4 Fix python 3 support for inet\_pton function
- \* e4779f3246 Merge pull request #47339 from dwoz/ssh\_key\_test\_fix
  - e37a93a1ca Remove redundant close call
  - b2ae5889b7 Close the temporary file handle
  - 9f7f83a975 Use salt.utils.fopen for line ending consistency
- \* b221860151 Merge pull request #47335 from dwoz/pip\_test\_fix
  - dcb6a22c00 Remove un-needed string-escape
- \* 1c527bfd3a Merge pull request #47331 from dwoz/py3\_wingroup\_fix
  - cc154ef857 Do not encode usernames
- \* 708078b152 Merge pull request #47329 from cachedout/frank\_credit
  - 33c0644ac4 Credit Frank Spierings
- \* a545e55543 Merge pull request #47281 from Ch3LL/system\_test
  - c9181a75a6 Add destructivetest decorator on tests
  - 0d0c8987fc Add win\_system integration module tests
- \* b64d930df0 Merge pull request #47283 from Ch3LL/ntp\_test
  - ced7f86546 Add windows ntp integration module tests
- \* 910aff910f Merge pull request #47314 from Ch3LL/net\_mac\_test
  - 67beb1451c Skip netstat test on macosx as its not supported
- \* 0549ef7c16 Merge pull request #47307 from rallytime/bp-47257
  - 6c5b2f92bc Role is not a list but a dictionary
- \* d6ff4689f6 Merge pull request #47312 from rallytime/update-bootstrap-release
  - 765cce06a2 Update bootstrap script to latest release: 2018.04.25
- \* e0765f5719 Merge pull request #47279 from dwoz/py3\_build\_fix
  - 21dc1bab91 Pep-8 line endings
  - 717abedaf7 Fix comman wart
  - 4100dcd64c Close might get called more than once

- db671f943 Stop socket before queue on delete
- 9587f5c69e Silence pylint import-error for six.moves
- 4b0c7d3b34 Fix typo
- 05adf7c2b1 Use six.moves for queue import
- fe340778fa Gracefully shutdown worker threads
- \* 44f19b2f94 Merge pull request #47113 from jfindlay/iptables\_state
  - 8bd08012ee modules,states.iptables support proto for policy ext
- \* b7a6206330 Merge pull request #47302 from Ch3LL/dead\_code
  - daa68b4877 Add virtual grains test for core grains
  - a59dd2785d Remove dead code in core grains file for virt-what
- \* e29362acfc Merge pull request #47303 from baniobloom/bug\_fix\_doc
  - b97c9df5f3 added clarity on how to figure out what is the oldest supported main release branch
- \* 0d9d55e013 Merge pull request #47106 from DSRCorporation/bugs/tornado50
  - 39e403b18d Merge branch '2017.7' into bugs/tornado50
  - 6706b3a2d1 Run off of a temporary config
  - d6873800d5 Allow running pytest>=3.5.0
  - 2da3983740 Tornado 5.0 compatibility fixes
- \* 2e014f4746 Merge pull request #47271 from gtmanfred/amazon
  - 8a53908908 Do not load rh\_service module when booted with systemd
  - e4d1d5bf11 Revert "support amazon linux 2 for service module"
- \* 599b0ed1e9 Merge pull request #47246 from cloudflare/fix-44847-2017.7
  - ad80028104 This way, we can pass flags such as debug into the state, but also test.
- \* 4e2e1f0719 Merge pull request #47220 from benediktwerner/fix-pip-2017.7
  - 0197c3e973 Fix pip test
  - 34bf66c09f Fix pip.installed with pip>=10.0.0
- \* 92e606251f Merge pull request #47272 from rallytime/reg-windows-codeowners
  - 9445af0185 Add windows tests and reg module/state to CODEOWNERS file for team-windows
- \* 9dca5c0221 Merge pull request #47252 from rallytime/codeowners-fixes
  - 204b6af92b Fix the matching patterns in the CODEOWNERS file to use fnmatch patterns
- \* 3de1bb49c8 Merge pull request #47177 from fpicot/fix\_47173\_pkg\_normalize
  - 149f846f34 fix normalize parameter in pkg.installed
- \* 10e30515dc Merge pull request #47251 from Ch3LL/pub\_fix\_rn
  - fa4c2e6575 Update Docs to remove unnecessary + sign
- \* bb7850a431 Merge pull request #47249 from Ch3LL/pub\_fix\_rn
  - 24dea24b7e Add CVE number to 2016.3.6 Release

- \* 56933eb0b2 Merge pull request [#47227](#) from pr Luiz/pr Luiz/zfs-dataset-present-slow-2017.7
  - [fded61f19b](#) Fix issue [#47225](#): avoid zfs.filesystem\_present slowdown when dataset has lots of snapshots
- \* 9825065048 Merge pull request [#47167](#) from smitty42/vbox-sk-d-fix
  - [5de53139cd](#) Merge branch '2017.7' into vbox-sk-d-fix

- **ISSUE #47006:** (cedwards) marathon & fx2 grain modules cause master and minion failure (refs: #47401)
- **PR #47401:** (gtmanfred) fix proxy virtual checks for marathon and fx2 @ 2018-04-30 18:44:46 UTC
  - 3bb00cbb55 Merge pull request #47401 from gtmanfred/proxy
  - 99f9231759 fix proxy virtual checks for marathon and fx2
- **PR #47397:** (rallytime) Add 2018.3.1 Release Notes @ 2018-04-30 14:44:38 UTC
  - c160fe36ce Merge pull request #47397 from rallytime/2018.3.1-release-notes
  - 3b40cdad2a Add 2018.3.1 Release Notes
- **ISSUE #45790:** (bdarnell) Test with Tornado 5.0b1 (refs: #46066, #47106, #47433)
- **PR #47374:** (DmitryKuzmenko) tornado50 merge forward for 2018.3 @ 2018-04-29 16:29:12 UTC
  - **PR #47106:** (DmitryKuzmenko) Tornado50 compatibility fixes (refs: #47374, #47368, #47433)
  - **PR #46002:** (isbm) Pyzmq 17.0.0 proper handling (refs: #47374, #47368)
  - 3400f829c4 Merge pull request #47374 from DSRCorporation/bugs/tornado50-2018.3
  - 400999c54f fix pylint
  - 47b6d409d1 add io\_loop handling to runtests engine
  - fd074fdb7d use salt.utils.zeromq
  - 4ae33c5d9a Run off of a temporary config
  - 7938b4906e Allow running pytest>=3.5.0
  - 34058c181e Tornado 5.0 compatibility fixes
- **ISSUE #47124:** (mchugh19) Vault module problem in 2018.3.0 (refs: #47379)
- **PR #47379:** (dwoz) Properly encode messages when creating/validating signatures with m2crypto @ 2018-04-28 08:38:23 UTC
  - 2afe4bee95 Merge pull request #47379 from dwoz/m2crypto\_regression
  - 068f2d430d Always sign and verify bytes
  - 7810ebaba9 Add sign regression tests
  - f4441c3a1c Adding regression test for 47124
- **PR #47277:** (morganwillcock) Fix minion crash on NetBSD @ 2018-04-27 15:02:21 UTC
  - 7390b72808 Merge pull request #47277 from morganwillcock/netbsdswap
  - 0bcb1a079a Merge branch '2018.3' into netbsdswap
  - 30478e8c9c Use swapctl for NetBSD
- **PR #47320:** (twangboy) Change from NSSM to SSM @ 2018-04-27 14:37:50 UTC
  - 2b7c7ef704 Merge pull request #47320 from twangboy/win\_ssm
  - 5549d83aae Use ssm instead of nssm
- **PR #47308:** (rallytime) Back-port #47287 to 2018.3 @ 2018-04-27 13:50:49 UTC
  - **PR #47287:** (esell) convert unicode ssh pass to str for azure (refs: #47308)
  - b6df5facce Merge pull request #47308 from rallytime/bp-47287
  - 5f392a23fe convert unicode ssh pass to str for azure

- **ISSUE #47324:** (rlschilperoort) archive.extracted keep and/or keep\_source not working (refs: #47332)
- **PR #47332:** (garethgreenaway) [2018.3] Removing duplicate code from state/archive.py @ 2018-04-27 13:12:51 UTC
  - efa3aab800 Merge pull request #47332 from garethgreenaway/47324\_archive\_extracted\_keep\_keep\_source
  - cc10bfec6b Removing redundant code which is preventing keep & keep\_source from being set.
- **PR #47326:** (The-Loeki) Some Redis fixes @ 2018-04-26 17:12:47 UTC
  - 245d62ca16 Merge pull request #47326 from The-Loeki/redis-cache-sockets
  - d86fbe5bdd redis\_return: add unix\_socket\_path to docs
  - ee9f533765 redis\_cache: document UNIX socket access
  - 5337558a5a redis\_return: Let redis handle pool creation, add UNIX socket support
  - c90f83b0f9 redis\_return: cluster\_mode default to False in \_\_virtual\_\_ to prevent KeyError stacktraces
  - 71e3286829 redis\_return: Fix code blocks in docs
  - e6605f1c78 redis\_cache fix code blox in docs
  - 40e67747ee redis\_cache: add socket to options
- **PR #47319:** (dwoz) Skip unix group tests on windows. @ 2018-04-26 15:59:35 UTC
  - 27a438f0ff Merge pull request #47319 from dwoz/skip\_tests
  - d9442d043e Skip tests not applicable to windows
- **PR #47293:** (dwoz) The grp module is not available on windows @ 2018-04-25 20:22:34 UTC
  - 057f668788 Merge pull request #47293 from dwoz/win\_build\_fix
  - 0386216005 Fix sneaky indention
  - 082b8d0b3d Use salt.utils.platform
  - cc2538e08f The grp modules is not available on windows
- **ISSUE #46862:** (kivoli) Setting locale.system fails in 2018.3 (refs: #47280, #46869)
- **PR #47280:** (gtmanfred) make sure not to send invalid information @ 2018-04-25 17:46:45 UTC
  - fff4f8c1a5 Merge pull request #47280 from gtmanfred/localectl
  - 7c212cbb2d fix pylint
  - 6754787e8e update localemod tests
  - 9075070573 make sure not to send invalid information
- **ISSUE #46977:** (gtmanfred) [2018.3.0] Backwards compatibility breaking change in 2018.3.0 (refs: #47038)
- **PR #47038:** (garethgreenaway) [2018.3] fix to fileclient.py @ 2018-04-25 14:57:04 UTC
  - 205701dcbe Merge pull request #47038 from garethgreenaway/46977\_fixing\_fileclient\_forward\_compatibility
  - ba01d2133a Updating version.py to include Magnesium.
  - 10c823dd79 The \_ext\_nodes master function has been renamed to \_master\_tops. To ensure compatibility when using older Salt masters we continue to pass the function as \_ext\_nodes until the Magnesium release.
- **ISSUE #47059:** (OrlandoArcapix) Some states incorrectly return None instead of an empty dict when there are no changes (refs: #47060)

- **ISSUE #46985:** (OrlandoArcapix) grafana4\_user.present and grafana4\_org.present states not working in 2018.3.0 (refs: #47048)
- **PR #47060:** (OrlandoArcapix) Return an empty dict for 'changes' instead of 'None' @ 2018-04-25 14:55:24 UTC
  - **PR #47048:** (OrlandoArcapix) Issue46985 fix grafana4 state (refs: #47060)
  - 89daf4fdc7 Merge pull request #47060 from OrlandoArcapix/Issue47059-return\_dict\_from\_state
  - 5378e4fd07 Update grafana\_datasource test to check for empty dict being returned on no changes, rather than None
  - f115452653 Return an empty dict for 'changes' instead of 'None'
- **ISSUE #47089:** (syphernl) UnicodeDecodeError: 'ascii' codec can't decode byte 0xc3 in position 404: ordinal not in range(128) (refs: #47153)
- **PR #47153:** (terminalmage) salt.modules.ssh: properly encode/decode I/O @ 2018-04-25 14:53:51 UTC
  - 10cc0d312b Merge pull request #47153 from terminalmage/issue47089
  - bdb52797f8 salt.modules.ssh: properly encode/decode I/O
- **ISSUE #47199:** (tkaehn) Targeting by list (-L) broken for minions behind syndic? (refs: #47275)
- **PR #47275:** (terminalmage) Fix false failure events sent when using syndic @ 2018-04-25 13:56:47 UTC
  - b5d64f1a70 Merge pull request #47275 from terminalmage/issue47199
  - 8012ad12f8 Fix false failure events sent when using syndic
- **ISSUE #47267:** (skjaro) Problem with beacon diskusage on windows platform in 2018.3 (refs: #47284)
- **PR #47284:** (skjaro) Fix beacon diskusage documentation for the new behavior mentioned in issue #47267 @ 2018-04-25 13:52:30 UTC
  - 6215a995d8 Merge pull request #47284 from skjaro/beacon\_diskusage\_doc\_fix
  - fcc042aa5f Fix beacon documentation for the new behavior mentioned in issue #47267
- **PR #47291:** (bosatsu) Fix proxy minion beacon doc @ 2018-04-25 13:42:36 UTC
  - 3ef4fe6ed2 Merge pull request #47291 from bosatsu/fix-proxy-minion-beacon-doc
  - 01980b4c43 Fix topics/releases/2018.3.0.rst to include correct example of proxy\_example beacon yaml configuration.
  - 9682e26eec Fix topics/proxyminion/beacon.rst to include correct example of salt\_proxy beacon yaml configuration.
- **ISSUE #47239:** (bosatsu) Unable to load salt\_proxy beacon on minion in 2018.3.0 (refs: #47255)
- **PR #47255:** (garethgreenaway) [2018.3] Fixes to salt\_proxy beacon and beacon tests @ 2018-04-25 13:41:51 UTC
  - ea2d68b865 Merge pull request #47255 from garethgreenaway/47239\_fixes\_to\_salt\_proxy\_beacon
  - a2a8d78cb0 Fixing status beacon tests.
  - c87d6cae23 Ensure the salt\_proxy is returning the correct tuple when the configuration is valid. Update various beacon unit tests to ensure they are testing the results of the validate function for a True result.
- **PR #47292:** (dwoz) Fix decorator wart @ 2018-04-25 04:25:23 UTC
  - **PR #47290:** (dwoz) Run cache\_master test in tmp dir (refs: #47292)
  - 19f9e8258f Merge pull request #47292 from dwoz/cp\_fix\_again
  - 7d045eb235 Fix decorator wart

- **PR #47285:** (dwoz) Fix reg grains test @ 2018-04-25 00:16:56 UTC
  - da532aa1ac Merge pull request #47285 from dwoz/core\_test\_fix
  - 884f4c1829 Fix extra space
  - 8a9027c0c9 Fix reg grains test
- **PR #47290:** (dwoz) Run cache\_master test in tmp dir (refs: #47292) @ 2018-04-24 23:37:21 UTC
  - f591cff643 Merge pull request #47290 from dwoz/test\_cp\_fix
  - 5ff51affbd Run cache\_master test in tmp dir
- **ISSUE #47092:** (syphernl) [2018.3.0] pkg.installed breaks with virtual packages (refs: #47250)
- **ISSUE #38838:** (Zorlin) Failing to remove nginx (refs: #44455)
- **PR #47250:** (terminalmage) Fix virtual package detection @ 2018-04-24 19:22:24 UTC
  - **PR #44455:** (samodid) Fix for #38838 (refs: #47250)
  - 6d323aa8f0 Merge pull request #47250 from terminalmage/issue47092
  - b8630a70be Fix virtual package detection
- **ISSUE #47225:** (pruiz) zfs.filesystem\_present takes forever on a dataset with lots (10k+) of snapshots (refs: #47228, #47227, #47226)
- **PR #47228:** (pruiz) Fix issue #47225: avoid zfs.filesystem\_present slowdown when dataset has lots of snapshots (2018.3 branch) @ 2018-04-24 13:35:21 UTC
  - **PR #47226:** (pruiz) Fix issue #47225: avoid zfs.filesystem\_present slowdown when dataset has lots of snapshots (refs: #47228, #47227)
  - 428e915d6a Merge pull request #47228 from pruiz/pruiz/zfs-dataset-present-slow-2018.3
  - cbf136ab2 Fix issue #47225: avoid zfs.filesystem\_present slowdown when dataset has lots of snapshots
- **ISSUE #46943:** (Auha) Slack.Engine could not start (refs: #47262, #47109)
- **PR #47262:** (garethgreenaway) [2018.3] Fixes to targeting in Slack engine @ 2018-04-24 13:18:36 UTC
  - 0b836106b9 Merge pull request #47262 from garethgreenaway/slack\_engine\_target\_fix
  - bcdef641e8 Removing target and tgt\_type from the cmdline that is passed along to Salt, the target is used else where and including it in the cmdline causes problem when it is passed along. Adding an additional test to ensure we are getting the right target.
- **ISSUE #47047:** (Giandom) Pillars aren't evaluated when alias is passed in Slack Engine (refs: #47142)
- **PR #47142:** (garethgreenaway) [2018.3] pillar and output formatting fixes to Slack engine @ 2018-04-23 19:55:07 UTC
  - 2ed4b38b02 Merge pull request #47142 from garethgreenaway/47047\_passing\_pillar\_to\_slack\_aliases
  - 6f183e1d80 Initial commit for unit/engines/test\_slack\_engine
  - a2840fc230 Only include the rest of the cmdline if the cmd is an alias.
  - e846df7409 Fixing a bug when passing pillar values to aliases for the Slack engine. Cleaned up the formatting of the results, color codes don't translate well into Slack output. For any state runs, eg. highstate. apply, sls, we run the output through the highstate formater. For anything else run it though the yaml outputer. Running it though highstate causes errors when the output does match what the highstate output is expecting.
- **PR #47245:** (terminalmage) Ensure we pass hexid as bytes when zmq\_filtering enabled @ 2018-04-23 16:54:57 UTC

- 42a0e655dc Merge pull request #47245 from terminalmage/zeromq-bytes
- a7acc0548 Ensure we pass hexid as bytes when zmq\_filtering enabled
- PR #47242: (aesposito91) PY3 fix for zeromq setsockopt @ 2018-04-23 16:38:09 UTC
  - 73525d1460 Merge pull request #47242 from aesposito91/2018.3
  - b225351e6d Update napalm\_syslog.py
- ISSUE #47117: (prashanthtuttu) Napalm / Capirca Issue (refs: #47241)
- PR #47241: (mirceaulinic) Fix the imports into the netacl execution and state modules @ 2018-04-23 14:56:32 UTC
  - b78295aee9 Merge pull request #47241 from cloudflare/fix-47117
  - 26c5583264 #47117: fix the napalm imports in the netacl state module
  - 48396467c1 #47117: fix the napalm imports in the netacl execution module
- PR #47219: (garethgreenaway) [2018.3] Fixing a backward compatibility issue with vault module & runner @ 2018-04-23 14:10:19 UTC
  - 88557ea991 Merge pull request #47219 from garethgreenaway/vault\_backward\_compatibility
  - 1758081ffe When using the vault module on a 2018.3 minion against a 2017.7 master, the 2018.3 minion is expecting a verify element in the results from the Salt runner on the master. The runner in 2017.7 did not include a verify element, which results in an error. This change accounts for this by using the default in 2018.3 which is not to verify if not configured.
- PR #47186: (dmurphy18) backport of issue 46933, updated ZFS handling to Salt 2018.3.x @ 2018-04-23 14:07:06 UTC
  - 370feadb2 Merge pull request #47186 from dmurphy18/zfs\_backport\_46933
  - 283359d315 Corrected typo in comma-seprated and 2018.3.0 -> 2018.3.1
  - b7f8d5a22f Replace use of Fluorine with 2018.3.0 for comma-separated warnings
  - 3f30ab2ed6 ZFS backport of 46933 to 2018.3.1
- PR #47217: (twangboy) Remove installation of pywin32 from setup.py @ 2018-04-23 13:32:54 UTC
  - bf3a67d11b Merge pull request #47217 from twangboy/fix\_setup
  - eb3d45bb08 Remove installation of pywin32 from setup.py
- PR #47195: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-20 19:25:30 UTC
  - 8e21703f13 Merge pull request #47195 from rallytime/merge-2018.3
  - f90fd8c663 Test fix: file strings must be unicode in master config
  - bee4948df1 Lint: use full path for event utils function
  - 120c5446b7 Update old utils paths to new utils paths
  - 4718d31e53 Merge branch '2017.7' into '2018.3'
    - \* 65f344e371 Merge pull request #47184 from Ch3LL/status\_test
      - 25a84428b8 Add status module integration modules tests for Windows
    - \* 965600ad6c Merge pull request #47163 from rallytime/jenkins-autodoc
      - 0039395017 Updage jenkins module autodocs to use jenkinsmod name instead
    - \* 0a43dde5fc Merge pull request #47185 from twangboy/add\_tests

- 345daa0423 Add additional integration tests to whitelist
- \* 1a600bb9a4 Merge pull request #47172 from dwoz/cover\_without\_admin
  - cadd759727 Use warnings to warn user
  - 144c68e214 Allow non admin name based runs on windows
- \* d5997d2301 Merge pull request #47110 from kstreee/fix-misusing-of-timeout
  - 0624aee0ed Fixes misusing of the timeout option.
- \* 87ca2b4003 Merge pull request #40961 from terminalmage/issue40948
  - 6ba66cca41 Fix incorrect logic in exception check
  - fed5041c5f Make error more specific to aid in troubleshooting
  - 8c67ab53b4 Fix path in log message
  - 3198ca8b19 Make error more explicit when PKI dir not present for salt-call
- \* f5e63584d4 Merge pull request #47134 from Ch3LL/user\_win\_test
  - e7c9bc4038 Add user integration tests for windows OS
- \* da2f6a3fac Merge pull request #47131 from gtmanfred/cli
  - 1b1c29bf62 add \_\_cli for master processes
- \* 9b8e6ffb8c Merge pull request #47129 from rallytime/bp-47121
  - 11da526b21 add ImportError
  - bd0c23396c fix pip.req import error in pip 10.0.0
- \* eb5ac51a48 Merge pull request #47102 from gtmanfred/2017.7
  - 3dc93b310b fix tests
  - 8497e08f8e fix pip module for 10.0.0
  - 4c07a3d1e9 fix other tests
  - b71e3d8a04 don't allow using no\_use\_wheel for pip 10.0.0 or newer
- \* c1dc42e67e Merge pull request #47037 from twangboy/fix\_dev\_scripts
  - 990a24d7ed Fix build\_env scripts
- **ISSUE #46906:** ([whytewolf](#)) Windows failure with PR 46541 (refs: [#47168](#))
- **PR #47168:** ([gtmanfred](#)) fix metadata grain for py3 and windows @ 2018-04-20 19:07:50 UTC
  - a56eb7e05d Merge pull request #47168 from gtmanfred/metadata
  - 396f7906e3 fix metadata grain for py3 and windows
- **ISSUE #46918:** ([AmbicaY](#)) napalm/capirca issue (refs: [#47202](#))
- **PR #47202:** ([mirceaulinic](#)) Fix #46918: add the TTL field @ 2018-04-20 14:34:09 UTC
  - 6135b76e2c Merge pull request #47202 from cloudflare/fix-46918
  - 1e74141cc0 Fix #46918
- **ISSUE #47150:** ([srkunze](#)) [Regression] ip\_to\_host and SSH.\_expand\_target require missing reverse-lookup (refs: [#47191](#))
- **PR #47191:** ([terminalmage](#)) salt-ssh: Do not attempt to match host/ip to minion ID if reverse lookup fails @ 2018-04-20 14:20:05 UTC

- 7f1115e611 Merge pull request [#47191](#) from terminalmage/issue47150
- 95a6f075cb Add debug logging when ip\_to\_host fails
- 45696e622b salt-ssh: Do not attempt to match host/ip to minion ID if reverse lookup fails
- **PR [#47122](#): (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-19 20:44:18 UTC
  - 1947ffdf56 Merge pull request [#47122](#) from rallytime/merge-2018.3
  - 878fa06134 Test fix: remove tornado testing lib from class
  - a40f007962 lint: get\_context is in stringutils.py now
  - 3416e398c6 Update old utils paths references to use new paths
  - 94c2a12be6 Merge branch '2017.7' into '2018.3'
    - \* 6a4c0b8a1a Merge pull request [#47108](#) from dwoz/async\_test\_fix
      - 3d85e30ce5 AsyncTestCase is required for AsyncEventPublisher
    - \* 03892eaf0b Merge pull request [#47068](#) from cachedout/catch\_value\_error\_socket\_test
      - 7db5625632 Catch an operation on a closed socket in a test
    - \* 1ea2885ec2 Merge pull request [#47065](#) from dwoz/jinja\_test\_fix
      - 673cd31c65 Merge branch '2017.7' into jinja\_test\_fix
    - \* 5293b5b5ca Merge pull request [#47077](#) from dwoz/test\_state\_fix
      - 444da3f893 Fix py3 wart (chr vs bytesstring)
      - e8acca01c2 Fix failing state test by normalizing line endings
    - \* ca967de5da Merge pull request [#47067](#) from gtmanfred/2017.7
      - f913a7859c use the recommended opennebula lookup method
    - \* 7fddad6cd9 Merge pull request [#47064](#) from dwoz/roots\_tests\_fix
      - 25fd7c0694 fix py3 wart, encode os.linesep
      - d79f1a1961 Fix fileserver roots tests
    - \* 977c6939c4 Merge pull request [#47069](#) from cachedout/match\_timeout\_arg
      - b8990f5258 Pass the timeout variable to the CLI when calling salt in tests
    - \* 2c4c19c622 Merge pull request [#47074](#) from dwoz/ignore\_artifacts
      - c3941efad0 Kitchn should ignore artifacts directory
    - \* c484c0bd71 Merge pull request [#47055](#) from bloomberg/GH-47000
      - 8af3f5b874 GH-47000: add proper handling of full\_return in cmd\_subset
    - \* f3496030cc Merge pull request [#47039](#) from twangboy/win\_fix\_winrm\_script
      - 6635b9003f Fix winrm powershell script
      - 46fa2c04de Fix py3 os.linesep wart
      - 3c565d7e54 Use salt.utils.fopen
      - aa965310f1 Clean up cruft
      - efc9866580 Jinja test fixes
- **PR [#47162](#): (terminalmage)** Partial backport of [#47161](#) to 2018.3 branch @ 2018-04-19 19:28:47 UTC

- PR #47161: (terminalmage) Fix failing pillar unit test (refs: #47162)
- 291cca7ed8 Merge pull request #47162 from terminalmage/bp-47161
- d185f97a47 mocked file\_roots and pillar\_roots should be dicts
- ISSUE #47081: (sjorge) file.directory with recursion fails if there are non-ascii characters in the path (refs: #47165)
- PR #47165: (terminalmage) Make sure a str type is passed to os.walk @ 2018-04-19 14:59:16 UTC
  - 2ee8006da3 Merge pull request #47165 from terminalmage/issue47081
  - 9e29acb477 Make sure a str type is passed to os.walk
- PR #47070: (terminalmage) Use decorators for temp files/dirs in test suite @ 2018-04-19 14:01:48 UTC
  - 6257862bbb Merge pull request #47070 from terminalmage/with\_tempdir
  - 048728d2b7 Remove unused imports
  - 879c557264 Use decorators for temp files/dirs in test suite
- PR #47155: (mcalmer) Fix patchinstall for yumpkg @ 2018-04-18 19:24:17 UTC
  - b46365614b Merge pull request #47155 from mcalmer/fix-patchinstall
  - 382afba457 fix invalid string compare
  - 8c19368938 provide kwargs to pkg\_resource.parse\_targets required to detect advisory type
- ISSUE #47042: (valentin2105) [ERROR] Unable to manage file: 'utf8' codec can't decode byte (refs: #47061)
- PR #47061: (terminalmage) Fix diffing binary files in file.get\_diff (refs: #47405) @ 2018-04-18 18:52:10 UTC
  - 13ae1a2413 Merge pull request #47061 from terminalmage/issue47042
  - 87f6cefea3 Rewrite flaky utf8 state to make it easier to troubleshoot
  - df6e535f05 Fix diffing binary files in file.get\_diff
- PR #47058: (terminalmage) Fix calls to file.lsattr when lsattr is not installed @ 2018-04-18 16:30:12 UTC
  - cba0f13cd9 Merge pull request #47058 from terminalmage/lsattr
  - eeb067e910 Fix calls to file.lsattr when lsattr is not installed
- ISSUE #46929: (noelmcloughlin) 2018.3 regression file.managed.context parsing (refs: #47104)
- PR #47104: (terminalmage) yamlloader: Properly handle colons in inline dicts @ 2018-04-18 16:22:47 UTC
  - b96ce23b3f Merge pull request #47104 from terminalmage/issue46929
  - 33bf6643cd Add additional test for plain scalars
  - 508659b682 yamlloader: Properly handle colons in inline dicts
- ISSUE #46887: (julientravelaer) ldap.managed broken with 2018.3.0 (refs: #47029)
- ISSUE #46859: (cheribral) pillar\_ldap causing TypeError exceptions in python-ldap with unicode objects (refs: #47029)
- PR #47076: (terminalmage) pillar\_ldap: Load config options as str types @ 2018-04-18 16:16:22 UTC
  - PR #47029: (terminalmage) ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types (refs: #47076)
  - c12697b173 Merge pull request #47076 from terminalmage/issue46859
  - c06c859caf pillar\_ldap: Load config options as str types

- **PR #47107:** (twangboy) Fix issues with reg state, add tests @ 2018-04-18 15:53:02 UTC
  - 50bd885ec7 Merge pull request #47107 from twangboy/fix\_46932
  - ae8ab2ab1a Fix tests for py3, enable tearDown
  - 3cf4ac1475 Add integration tests for reg state
  - cc259b146f Cast vdata to appropriate type in reg state
- **ISSUE #46909:** (epelc) Binary *contents\_pillar* with file.managed raises UnicodeDecodeError (refs: #47041)
- **PR #47041:** (terminalmage) Force null bytes to be str types @ 2018-04-18 14:08:25 UTC
  - d6c59696be Merge pull request #47041 from terminalmage/issue46909
  - e4182715be Special check specifically for bytes types
  - ee90dd5d95 Merge branch '2018.3' into issue46909
  - 0e99343a7f Use the same way of defining contents in both file.managed states
  - 5741d287b5 Move back to using null byte check for contents
  - 8e214c9fa9 file.managed: Add test to ensure binary contents work
  - 7b7dc94610 Use salt.utils.stringutils.is\_binary to check if contents are binary
  - e3c969da81 PY3: Ensure binary contents work with file.managed
  - 5d98a8bedd Make salt.utils.stringutils.to\_binary work for bytestrings
  - 1024000369 Force null bytes to be str types
- **PR #47007:** (twangboy) Fix some issues with the win\_servermanager module @ 2018-04-17 20:57:04 UTC
  - 9a9f6524f8 Merge pull request #47007 from twangboy/fix\_46968
  - 432db7c6ec Lint: Remove unused import
  - 10341e8f8b Remove erroneous pop statement
  - 56582f293a Remove redundant try/except block from state`
  - 6ad2427279 Remove unnecessary try/except blocks
  - 92eeaa51bd Put some error checking in the shell command
- **ISSUE #46943:** (Auha) Slack.Engine could not start (refs: #47262, #47109)
- **PR #47109:** (garethgreenaway) [2018.3] fixes to Slack engine @ 2018-04-17 13:56:27 UTC
  - a52137ee36 Merge pull request #47109 from garethgreenaway/46943\_slack\_engine\_fixes
  - 02baa76595 Fixing a bug that occurred when a comment was added to a message sent to Slack by Salt. Also making *slack\_engine:groups\_pillar* optional.
- **PR #47045:** (tankywoo) Fix ba7d00f5 for gentoo pkg.installed method @ 2018-04-17 13:55:45 UTC
  - 6c16a34c44 Merge pull request #47045 from tankywoo/fix-gentoo-pkg-installed
  - 551f4e10cf Fix ba7d00f5 for gentoo pkg.installed
- **PR #47053:** (clan) handle jinja error in <module> level @ 2018-04-16 22:47:54 UTC
  - 86c7cfef56 Merge pull request #47053 from clan/jinja-error
  - a847466946 handle jinja error in <module> level
- **PR #47062:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-16 19:58:32 UTC

- 7bfa608e9f Merge pull request #47062 from rallytime/merge-2018.3
- 59f5880e72 lint fix
- 1ddf8c584b Update old utils files to new new utils files path
- 28a79ebba4 Merge branch '2017.7' into '2018.3'
  - \* 1700a10ebe Merge pull request #46326 from kstreee/fix-client-local
    - 0f358a9c9e Fixes a timing bug of saltnado's client local.
  - \* c3c00316c5 Merge pull request #46913 from lomeroy/2017\_7-fix46877
    - 369a0645ed move exception for clarity
    - 32ce5bfda5 Use configparser serializer object to read psscript.ini and script.ini startup/shutdown script files.
  - \* 9e37cfc9d6 Merge pull request #47025 from terminalmage/fix-server\_id-windows
    - cb0cf89ed3 Fix server\_id grain in PY3 on Windows
  - \* 2e193cfb45 Merge pull request #47027 from rallytime/bp-44508
    - 8e72f362f4 Add priority field to support the latest capirca.
    - 112f92baab Add priority field to support the latest capirca.
  - \* 385fe2bc1e Merge pull request #47020 from rallytime/bp-46970
    - 9373dff52b Update test\_pkgrepo.py
    - 13cf9eb5b1 Removing debugging.
    - a61a8593e5 Removing suse from pkgrepo comments tests. the pkgrepo functions in SUSE pkg module do not support comments.
- **PR #47066:** (terminalmage) Fix regression in handling of environment/saltenv @ 2018-04-16 19:57:12 UTC
  - fa27e64a33 Merge pull request #47066 from terminalmage/issue46979
  - 5c4c0468ad Fix regression in handling of environment/saltenv
- **PR #47051:** (rallytime) Simplify LooseVersion check in `__virtual__` check in `mac_assistive` module @ 2018-04-13 19:43:33 UTC
  - 8761b81a69 Merge pull request #47051 from rallytime/fix-lint
  - d52b3689d9 Simplify LooseVersion check in `__virtual__` check in `mac_assistive` module
- **PR #47057:** (corywright) Fix copy/paste typo in minionfs tutorial @ 2018-04-13 19:43:01 UTC
  - bbb8018b55 Merge pull request #47057 from corywright/fix-minionfs-whitelist-docs
  - 9b7ee97d12 Fix copy/paste typo in minionfs tutorial
- **ISSUE #46931:** (anlutro) file.managed diff is switched when using template in salt-ssh 2018.3 (refs: #47046)
- **PR #47046:** (clan) switch order of file to be diffed @ 2018-04-13 13:40:13 UTC
  - d5afa4a2c5 Merge pull request #47046 from clan/file\_diff
  - bb58605c54 switch order of file to be diffed
- **ISSUE #46985:** (OrlandoArcapix) grafana4\_user.present and grafana4\_org.present states not working in 2018.3.0 (refs: #47048)
- **PR #47048:** (OrlandoArcapix) Issue46985 fix grafana4 state (refs: #47060) @ 2018-04-13 13:34:29 UTC

- ec9251ecd3 Merge pull request #47048 from OrlandoArcapix/Issue46985-fix-grafana4-state
- 259d747414 Remove accidentally added copy of a file
- 6c8c3da74d Return an empty dict instead of 'None' from grafana4 states
- PR #47017: (opdude) Don't encode a unicode string @ 2018-04-13 13:31:33 UTC
  - d8c4c221cf Merge pull request #47017 from Unity-Technologies/hotfix/pip\_windows
  - 838670f626 Don't encode a unicode string
- ISSUE #46917: (boltronics) mysql\_grants.present broken with `database: somedatabase.*` (refs: #46919)
- PR #47019: (rallytime) Back-port #46919 to 2018.3 @ 2018-04-12 19:43:01 UTC
  - PR #46919: (boltronics) Replace failing is and is not tests with == and != (refs: #47019)
  - 5b7544eaa0 Merge pull request #47019 from rallytime/bp-46919
  - 6837d6c138 Replace failing is and is not tests with == and !=
- ISSUE #46887: (julientravelaer) ldap.managed broken with 2018.3.0 (refs: #47029)
- ISSUE #46859: (cheribral) pillar\_ldap causing TypeError exceptions in python-ldap with unicode objects (refs: #47029)
- PR #47029: (terminalmage) ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types (refs: #47076) @ 2018-04-12 19:41:29 UTC
  - ac2d54d78a Merge pull request #47029 from terminalmage/issue46859
  - ab6314247b ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types
  - 7691dee4ed Add to\_str option to decode funcs
- ISSUE #46868: (tjyang) 2017.7.4 to 2018.3.0 upgrade issue: Salt request timed out. The master is not responding (refs: #46930)
- PR #46930: (dwoz) Clean up bad public key headers @ 2018-04-12 18:57:37 UTC
  - e6e07720fa Merge pull request #46930 from dwoz/crptodomekeyfix
  - f2e484ed54 Merge branch '2018.3' into crptodomekeyfix
  - e1995a92ee Fix verify signature test
  - 0ba32118d9 Add test for bad public key without m2crypto
  - a44c356233 Clean up bad public key headers
- ISSUE #46951: (Giandom) Slack engine error using aliases: TypeError unhashable type (refs: #47008)
- PR #47008: (garethgreenaway) [2018.3] Fixing aliases in slack engine @ 2018-04-12 15:24:40 UTC
  - 0e43becc12 Merge pull request #47008 from garethgreenaway/46951\_fixing\_slack\_engine\_aliases
  - dc2a72d44f Fixing aliases in slack engine
- ISSUE #46947: (Giandom) Slack engine groups error (refs: #47009)
- PR #47009: (garethgreenaway) [2018.3] fixes to slack engine documentation @ 2018-04-12 15:20:54 UTC
  - c33de7c82d Merge pull request #47009 from garethgreenaway/46947\_slack\_documentation\_update\_catch\_non\_dicts
  - f0fadbb4ce Fixing indention for slack documentation. Updating try..except to ensure we catch when groups aren't dicts.
- PR #47023: (rallytime) Back-port #46997 to 2018.3 @ 2018-04-12 15:05:24 UTC

- PR #46997: (LukeCarrier) Fix repository (=> repository) typo in sls\_build (refs: #47023)
- PR #44638: (terminalmage) Many improvements to docker network and container states (refs: #46997)
- 68d17c71f1 Merge pull request #47023 from rallytime/bp-46997
- c2c60f4ffc Fix repository (=> repository) typo in sls\_build
- PR #47026: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-12 14:39:41 UTC
  - 9cf3c6406a Merge pull request #47026 from rallytime/merge-2018.3
  - ba70df9d62 Use msgpack utils for loads call, import msgpack for UnpackValueError
  - 34a478dfe5 Update old fopen path with new utils files path
  - 590c7fc13f Merge branch '2017.7' into '2018.3'
    - \* 8f994e7cf9 Merge pull request #46539 from jfoboss/patch-1
      - 6890122e41 Merge pull request #1 from twangboy/pull\_46539
      - 19c3fadbe5 Fix unit test for win\_ntp
      - 826a8d3099 Fixing #46504
    - \* 74d70e95a5 Merge pull request #46999 from gtmanfred/2017.7
      - 791af8f6ce switch pip test package
    - \* 8adaf7f526 Merge pull request #46023 from bloomberg/parallel-orch
      - 0ac0b3ca29 Merge branch '2017.7' into parallel-orch
    - \* 39d65a39cf Merge pull request #46613 from myinitialsarepm/fix\_puppet.fact\_and\_puppet.facts
      - 44ecd13abc Update tests to use cmd.run\_all
      - 7d7d40f541 Merge branch '2017.7' into fix\_puppet.fact\_and\_puppet.facts
      - 0ce1520bd0 Merge branch '2017.7' into fix\_puppet.fact\_and\_puppet.facts
      - 69e1f6f681 Fix puppet.fact and puppet.facts to use stdout.
      - 3d5e69600b address lint issues raised by @isbm
      - a9866c7a03 fix parallel mode py3 compatibility
      - 6d7730864a removing prereq from test orch
      - 6c8a25778f add integration test to runners/test\_state to exercise parallel
      - 2c86f16b39 cherry-pick cdata KeyError prevention from #39832
      - 26a96e8933 record start/stop duration for parallel processes separately
      - e4844bdf2b revisit previous join() behavior in check\_requisites
      - f00a359cdf join() parallel process instead of a recursive sleep
      - 6e7007a4dc add parallel support for orchestrations
- PR #47021: (garethgreenaway) [2018.3] Fixing integration.modules.test\_state\_jinja\_filters.StateModuleJinjaFiltersTest.test\_path @ 2018-04-12 13:12:39 UTC
  - d3be828696 Merge pull request #47021 from garethgreenaway/920\_state\_module\_jinja\_filters\_test\_test\_path\_which
  - 2ccf2c5fe0 Fixing test\_path\_which to check that the filter is available rather than results.
- PR #47022: (corywright) Add auth.file module to auth documentation page @ 2018-04-11 21:11:10 UTC

- 66e8445b82 Merge pull request #47022 from corywright/add-auth-file-module-to-docs
- bd0918fc40 Add auth.file module to auth documentation page
- **PR #45774:** (twangboy) Fix `__virtual__` issue in `mac_system.py` @ 2018-04-11 14:26:13 UTC
  - 12ecfdee93 Merge pull request #45774 from twangboy/mac\_add\_service\_util
  - 5796696617 Fix tests for Py3
  - 7b40218790 Fix lint, remove sentence from docstring
  - 781880f0fc Add `_available_services` function for testing
  - 6080633613 Add `assert_called_with`
  - 1bf70b2033 Add more tests for `available_services`
  - b429fc3e74 Add tests for `mac_utils`
  - b5f67130cc Used `*args` and `**kwargs`
  - ed061617a2 Fix `unicode_literal` issue in `mac_assistive`
  - 82e17e5fc8 Fix `args/kwargs`
  - 455146500a Move some functions into `mac_utils`
  - 125586264b Add `utilsmac_service.py`
- **ISSUE #46953:** (cskowronnek) salt-cloud azurearm [ERROR ] There was a profile error: Parameter 'subscription\_id' must be str. (refs: #47012)
- **PR #47012:** (terminalmage) Azure: ensure `subscription_id` is a str type @ 2018-04-11 13:57:08 UTC
  - 79347f108a Merge pull request #47012 from terminalmage/issue46953
  - 5192622a32 Azure: ensure `subscription_id` is a str type
- **PR #46526:** (Ch3LL) Add tests for new `source_*` minion options @ 2018-04-10 19:56:45 UTC
  - 6503bf8dfa Merge pull request #46526 from Ch3LL/ip\_conf
  - c01180ff47 Patch ZMQ versions for `master_uri` test
  - da38f332a5 Change comment and `salt.utils.network` import
  - e972ebdf1a Add for new `source_*` minion options
- **PR #46993:** (L4rS6) Fix: tuple instead of string @ 2018-04-10 17:07:59 UTC
  - 03907d3fce Merge pull request #46993 from L4rS6/fix-broken-keystone-auth/2018.3
  - e33ba1b3d5 Fix: tuple instead of string
- **PR #46990:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-10 17:07:33 UTC
  - ffaee26540 Merge pull request #46990 from rallytime/merge-2018.3
  - ccc5bad2df Merge branch '2017.7' into merge-2018.3
    - \* ba5421d988 Merge pull request #46991 from gtmanfred/windows
      - 98588c1dc5 use saltstack salt-jenkins
  - 2f1cf3e511 Merge branch '2017.7' into '2018.3'
    - \* 00c4067585 Merge pull request #46975 from gtmanfred/windows
      - 1f69c0d7f8 make sure windows outputs xml junit files

- 4a2ec1bbb3 support new versions of winrm-fs
- b9efec8526 remove libnacl on windows
- 2edd5eaf9e fix path
- b03e272e44 windows work
- \* 3cf2353e41 Merge pull request #46945 from vutny/doc-faq-fix-jinja
  - bdf54e61d [DOC] Fix Jinja block in FAQ page
- \* fc2f728665 Merge pull request #46925 from terminalmage/fix-file.patch-docstring
  - 97695657f0 Remove reference to directory support in file.patch state
- \* eef6c518e1 Merge pull request #46900 from rallytime/bp-46801
  - 6a41e8b457 rename jenkins to jenkinsmod
- \* 71839b0303 Merge pull request #46899 from rallytime/bp-45116
  - b92f908da4 fix adding parameters to http.query from sdb yaml
- **PR #46339:** (DmitryKuzmenko) SSH State test failures @ 2018-04-10 17:06:51 UTC
  - a34b92ae82 Merge pull request #46339 from DSRCorporation/bugs/ssh\_state\_test\_failures
  - bd98c49dc7 Merge branch '2018.3' into bugs/ssh\_state\_test\_failures
  - 6fdc458a7f Increase timeout for run\_run in ShellCase
  - 8e60cccdfb Give background task more chance to start.
  - e0b6878fac One more useful assert for better test results.
  - 92a6c43c73 More logging and assertion fixes. Extended ssh ops timeout.
  - 6ebdd17ac4 Advanced logging in the failing SSH State tests.
- **PR #46989:** (Ch3LL) Fix redis cache log debug line @ 2018-04-10 16:35:12 UTC
  - 9924100c44 Merge pull request #46989 from Ch3LL/redis\_log
  - 6160bc06c6 Fix redis cache log debug line
- **ISSUE #46834:** (oeuftete) strftime filter not found in 2018.3.0 (refs: #46848)
- **ISSUE #46668:** (anlutro) Jinja2 filter strftime stopped working in salt-ssh 2018.3 (refs: #46848, #46744)
- **PR #46848:** (garethgreenaway) [2018.8] salt-ssh jinja filters tests @ 2018-04-10 16:19:51 UTC
  - c6431936cb Merge pull request #46848 from garethgreenaway/testing\_jinja\_filters\_avaiable\_via\_salt\_ssh
  - 5fcda3eff8 Merge branch '2018.3' into testing\_jinja\_filters\_avaiable\_via\_salt\_ssh
  - 0adfee9b11 Updating a couple tests. Fixing check\_whitelist\_blacklist to work with PY3 when non-iterables are passed. Adding warning about lst\_avg results being wrong and future updates in Neon.
  - f3f42146ca Removing expected from strftime and hashsum tests since the results are always different and we are only concerned about the filter being available.
  - 860234c045 Fixing lint.
  - 0891c6b580 fixing docstring
  - c8945e4b2e cleaning up some imports.
  - 0599759e5b cleaning up some test doc strings.

- dceda5eb88 Moving all jinja filter tests into support/jinja\_filters.py. Updaitng integration/ssh/test\_jinja\_filters.py to use those tests. Adding integration/modules/test\_state\_jinja\_filters.py to also use the common jinja filter tests.
- 07d7e3ca01 Adding a new integration test and corresponding state files to test availability of jinja filters when using salt-ssh.
- **ISSUE #46880:** (liquidgecka) rabbitmq\_policy broken in 2018.3.0 (refs: #46973)
- **PR #46973:** (rallytime) New "apply\_to" kwarg in rabbitmq module should be added at the end @ 2018-04-10 14:42:32 UTC
  - **PR #41233:** (dnABic) added parameter apply\_to for rabbitmq policy (refs: #46973)
  - fbbcb7584c Merge pull request #46973 from rallytime/fix-46880
  - 8ce21f982c New "apply\_to" kwarg in rabbitmq module should be added at the end
- **ISSUE #46934:** (d601) GPG encrypted binary data in pillars breaks in 2018.3.0 (refs: #46966)
- **PR #46966:** (terminalmage) Fix traceback when attempting to decode binary data to unicode @ 2018-04-10 14:08:35 UTC
  - 58f59cfbff Merge pull request #46966 from terminalmage/issue46934
  - df43ffdb8f salt.payload.Serial: fix traceback when unpacking binary blob
  - 40a49358c9 gpg renderer: fix tranceback when decrypted ciphertext contains binary data
  - 17a88f6a71 Include exc\_info in pillar render errors to aid in troubleshooting
- **ISSUE #46881:** (SynPrime) Cron.file - source file not found (refs: #46944)
- **PR #46944:** (garethgreenaway) [2018.3] cron.file with salt source URL @ 2018-04-10 13:34:03 UTC
  - e33e792e2a Merge pull request #46944 from garethgreenaway/46881\_Cron\_file\_source\_file\_not\_found
  - 438aafef03 Adding kwargs to calls into file module functions
  - 14d12b1d6b Remove unused imports. Gating tests so they do not run on Windows
  - 623d96f21a Adding dummy cron file for integration/states/test\_cron
  - c8e01871d6 Adding an integration test to test cron.file.
  - ddc55d8f9b Fixing bug that made cron.file unable to use a file via a Salt URL.
- **PR #46937:** (gtmanfred) enable\_ssh\_minions does not work with subset yet @ 2018-04-07 02:54:56 UTC
  - 08e8782f76 Merge pull request #46937 from gtmanfred/2018.3
  - 3fb75e903c enable\_ssh\_minions does not work with subset yet
- **PR #46936:** (gtmanfred) don't copy \_\_pycache\_\_ or .pyc files for kitchen @ 2018-04-06 19:15:46 UTC
  - ac4e7cd73f Merge pull request #46936 from gtmanfred/2018.3
  - 91474878fa don't copy \_\_pycache\_\_ or .pyc files for kitchen
- **ISSUE #46659:** (stamak) [salt-cloud] [new oxygen openstack driver ] no public\_ips and floating\_ips in salt-cloud output (refs: #46912)
- **PR #46912:** (gtmanfred) pull latest vm data after building for openstack shade driver @ 2018-04-06 13:46:42 UTC
  - 8105fd9715 Merge pull request #46912 from gtmanfred/openstack
  - 5ef538f8ad pull latest vm data after building for openstack shade driver

- **PR #46908:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-05 21:27:03 UTC
  - 735ea12960 Merge pull request #46908 from rallytime/merge-2018.3
  - 102e966512 Remove redundant section in log setup
  - 177c686b52 Update old utils paths to new utils paths
  - 0a297e7319 Merge branch '2017.7' into '2018.3'
    - \* d0f5b43753 Merge pull request #44926 from frogunder/whitelisted\_acl
      - 18e460fc30 Merge branch '2017.7' into whitelisted\_acl
      - 1ad4d7d988 fix assert errors
      - e6a56016df update test
      - 19a2244cb7 whitelist\_acl\_test
    - \* 7d822f9cec Merge pull request #46464 from gtmanfred/orchestration
      - 637cdc6b7b fix pylint
      - 0151013ddb document *cli* option for *cmd\_subset*
      - 4a3ed6607d add test for subset in orchestration
      - 3112359dd6 fix salt subset in orchestrator
    - \* 805ed1c964 Merge pull request #46879 from dwoz/cloudtestfix
      - dc54fc53c3 Fix multiple typos causing tests to fail
    - \* f70f6de282 Merge pull request #46647 from twangboy/win\_fix\_test\_grains
      - c179388b0e Fix the tear down function in integration.modules.test\_grains.GrainsAppendTestCase
    - \* 91c078ce12 Merge pull request #46756 from nages13/bugfix-grain-virtual\_subtype
      - 781f5030a4 Merge branch 'bugfix-grain-virtual\_subtype' of <https://github.com/nages13/salt> into bugfix-grain-virtual\_subtype
      - cd1ac4b7f9 Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - 0ace76c0e7 Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - 9eb6f5c0d0 Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - 73d6d9d365 Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - a4a17eba6a Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - bf5034dbdb Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - 8d12770951 Merge branch '2017.7' into bugfix-grain-virtual\_subtype
      - 7e704c0e81 Moved down container check code below hypervisors to validate containers type running in virtual environment. Fixes #46754 & #43405
      - 710f74c4a6 fix grains['virtual\_subtype'] to show Docker on xen kernels
    - \* 058bbbed221 Merge pull request #46799 from garethgreenaway/46762\_prereq\_shenanigans\_tests
      - 13875e78cf Fixing documentation string for test.
      - 3d288c44d4 Fixing test documentation
      - 6cff02ef6a Adding tests for #46788

- \* d9770bf3f8 Merge pull request #46867 from terminalmage/unicode-logging-normalization
  - 7652688e83 Backport string arg normalization to 2017.7 branch
- \* 9eb98b1f6e Merge pull request #46770 from twangboy/fix\_46433
  - 89af0a6222 Merge branch '2017.7' into fix\_46433
  - 67b4697578 Remove unused import (ling)
  - 9302fa5ab0 Clean up code comments
  - b383b9b330 Change the order of SID Lookup
- \* 9c776cffb7 Merge pull request #46839 from gtmanfred/tupletarget
  - 3b7208ce27 match tuple for targets as well
- \* 7db251dc11 Merge pull request #46845 from rallytime/bp-46817
  - 36a0f6d8ca address filehandle/event leak in async run\_job invocations
- \* e3d17ab7bc Merge pull request #46847 from dwoz/missing-strdup
  - 55845f4846 strdup from libc is not available on windows
- \* f2dd79f9c4 Merge pull request #46776 from gtmanfred/2017.7
  - edc1059ee0 fix shrinking list in for loop bug
- **PR #46853:** (terminalmage) Add back date\_format filter @ 2018-04-05 20:33:50 UTC
  - 9a47afc33b Merge pull request #46853 from terminalmage/date\_format\_filter
  - 266d13a665 Add back date\_format filter
- **PR #46882:** (jasperla) Backport #46280 #46849 #46852 to 2018.3 @ 2018-04-05 14:29:12 UTC
  - **PR #46852:** (jasperla) fix creating a nic tag on a link with double 0 in the MAC (refs: #46882)
  - **PR #46849:** (jasperla) Unbreak creating etherstubs on SmartOS (refs: #46882)
  - **PR #46280:** (jasperla) Remove unneeded checks for binaries in SmartOS modules (refs: #46882)
  - a064a3e695 Merge pull request #46882 from jasperla/smartos/backports
  - 47a66975ff fix creating a nic tag on a link with double 0 in the MAC
  - a3cb0e576e Unbreak creating etherstubs on SmartOS
  - e703254990 Remove unneeded checks for binaries in SmartOS modules
- **PR #46873:** (terminalmage) Attempt UTF-8 first when decoding/encoding @ 2018-04-05 14:16:28 UTC
  - 4e5e291c99 Merge pull request #46873 from terminalmage/utf8-first
  - cf28eb74aa Don't log command when output\_loglevel == 'quiet'
  - f59cee28db Remove hacky workarounds to get encode/decode tests to pass on Windows
  - 76e5d81bb4 Remove hacky workaround to get Windows to decode deserialized data properly
  - 0b5729e58a Remove hacky workaround to get git state/exec module to work properly on Windows
  - 22ff48518f Attempt UTF-8 first when decoding/encoding
- **ISSUE #43499:** (tyeapple) zmq setsockopt need to adapt python3 (refs: #46874)
- **PR #46878:** (terminalmage) Backport #46874 to 2018.3 @ 2018-04-05 13:26:04 UTC

- PR #46874: (johnj) Use bytestrings for PY3 compatibility when running setsockopt for zmq.SUBSCRIBE (refs: #46878)
- 1518762465 Merge pull request #46878 from terminalmage/bp-46874
- d9511d04d4 #43499, zmq setsockopt need to adapt python3
- ISSUE #46862: (kivoli) Setting locale.system fails in 2018.3 (refs: #47280, #46869)
- PR #46869: (gtmanfred) Always return dictionary for \_localectl\_status @ 2018-04-05 13:25:14 UTC
  - 67894e3ee9 Merge pull request #46869 from gtmanfred/2018.3
  - 1496e985f7 fix pylint
  - 75425dfd20 fix tests for localemod
  - 2d7c7b5e33 Always return dictionary for \_localectl\_status
- PR #46870: (mirceaulinic) Correct the documentation for two new proxy modules @ 2018-04-04 21:48:41 UTC
  - 58c8ff18e2 Merge pull request #46870 from cloudflare/proxy-doc
  - f4b6184476 Correct and add the cimc proxy module to autodoc
  - a99bc202b9 Correct & add Panos to autodoc
- PR #46729: (terminalmage) Performance improvement/error catching in expr\_match @ 2018-04-04 20:25:57 UTC
  - d7e4b9d755 Merge pull request #46729 from terminalmage/expr\_match
  - 70cfafe299 Add test case
  - 250039b11f Restore original variable name
  - ae0f112a49 Log an exception when non-string val/expr passed to expr\_match
  - dac42a672b Performance improvement/error catching in expr\_match
- PR #46872: (terminalmage) Backport #46863 to 2018.3 @ 2018-04-04 19:04:40 UTC
  - PR #46863: (TamCore) fixed top function which was broken since commit 002aa88a97e (refs: #46872)
  - e0b383afb5 Merge pull request #46872 from terminalmage/bp-46863
  - be284e5b99 Add skipIf when older mock present
  - db8faaee56 Add unit tests for ext\_nodes master\_tops module
  - ee437f7cbf fixed top function which was broken since commit 002aa88a97e
- PR #46850: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-04 18:07:44 UTC
  - 5c76d98d1a Merge pull request #46850 from rallytime/merge-2018.3
  - a0fcd5c053 Fix test\_cp failure: forgot to add tgt to test when @with\_tempfile is present
  - d0202cab72 Resolve bad merge: there should only be one test\_get\_file\_from\_env\_in\_url test
  - e28f71b418 Lint: use full salt utils path
  - 4ad50bbdee Update old utils paths to new paths
  - 893196d3e6 Merge branch '2017.7' into '2018.3'
    - \* 1941426218 Merge pull request #46838 from gtmanfred/npm
      - bff61dd291 use http registry for npm
    - \* e544254e7b Merge pull request #46823 from rallytime/fix-42312

- dafa820f93 Improve `__virtual__` checks in sensehat module
- \* 37f6d2de35 Merge pull request #46641 from skizunov/develop3
  - c624aa4827 Make LazyLoader thread safe
- \* 989508b100 Merge pull request #46837 from rallytime/merge-2017.7
  - 8522c1d634 Merge branch '2016.11' into '2017.7'
  - 3e844ed1df Merge pull request #46739 from rallytime/2016.11\_update\_version\_doc
  - 4d9fc5cc0f Update release versions for the 2016.11 branch
- \* 307e7f35f9 Merge pull request #46740 from rallytime/2017.7\_update\_version\_doc
  - 7edf98d224 Update 2018.3.0 information and move branch from "latest" to "previous"
  - 5336e866ac Update release versions for the 2017.7 branch
- \* ebf5dd276f Merge pull request #46783 from twangboy/fix\_46680
  - da5ce25ef3 Fix unit tests on Linux
  - b7f4f377cd Add space I removed
  - f1c68a09b5 Fix network.managed test=True on Windows
- \* f652f25cc1 Merge pull request #46821 from rallytime/fix-mantest-failures
  - 209a8029c3 Fix the new test failures from the mantest changes
- \* c460f62081 Merge pull request #46800 from lomeroe/2017\_7-46627
  - 2bee383e9d correct create list item value names if the valuePrefix attribute does not exist on the list item, the value is the value name, other wise, the valuenam a number with the valuePrefix prepended to it
- \* df26f2641e Merge pull request #46675 from dwoz/inspectlib-tests
  - d39f4852d8 Handle non-zero status exception
  - 83c005802b Handle cases where git can not be found
  - 628b87d5c4 Skip test when git symlinks are not configured
- \* 4083e7c460 Merge pull request #46815 from terminalmage/bp-46809
  - 71d5601507 Fix sharedsecret authentication
- \* 3bac9717f4 Merge pull request #46769 from dwoz/wincloudtest
  - eabc234e5d Fix config override name
  - 5c22a0f88d Use absolute imports
  - 810042710d Set default cloud test timeout back to 500 seconds
  - 5ac89ad307 Use winrm\_verify\_ssl option causing tests to pass
  - 71858a709c allow not verifying ssl winrm saltcloud
  - ba5f11476c Adding windows minion tests for salt cloud
- \* f1be939763 Merge pull request #46786 from twangboy/fix\_46757
  - b0053250ff Remove int(), just return -1
  - 7d56126d74 Fixes some lint
  - 49b3e937da Return int(-1) when pidfile contains invalid data

- \* 89bf24b15c Merge pull request #46814 from terminalmage/bp-46772
  - a9f26f2ab8 avoid breaking if AutoRemove is not found
  - 97779c965d fix container removal if auto\_remove was enabled
- \* 5ea4ffbdb6 Merge pull request #46813 from terminalmage/event-debug-log
  - 5d6de3a2eb Get rid of confusing debug logging
- \* e533b7182d Merge pull request #46766 from twangboy/win\_fix\_test\_git
  - 5afc66452c Remove unused/redundant imports
  - 88fd72c52c Use with\_tempfile decorator where possible
- \* 69d450db84 Merge pull request #46778 from terminalmage/salt-jenkins-906
  - bbfd35d3ea Replace flaky SPM man test
- \* c935ffb740 Merge pull request #46788 from garethgreenaway/46762\_prereq\_shenanigans
  - fa7aed6424 Ensure failed tags are added to self.pre.
- \* 395b7f8fdc Merge pull request #46655 from dwoz/pyobjects-46350
  - 5aab442f2 Fix up import and docstring syntax
  - 62d64c9230 Fix missing import
  - 18b1730320 Skip test that requires pywin32 on \*nix platforms
  - 45dce1a485 Add reg module to globals
  - 09f9322981 Fix pep8 wart
  - 73d06f664b Fix linter error
  - 009a8f56ea Fix up environ state tests for Windows
  - b4be10b8fc Fixing cleanUp method to restore environment
- \* af45c49c42 Merge pull request #46632 from dwoz/file-recurse-36802
  - 44db77ae79 Fix lint errors and typo
  - cb5619537f Only change what is essential for test fix
  - eb822f5a12 Fix file.recurse w/ clean=True #36802
- \* 6e9f504ed1 Merge pull request #46751 from folti/2017.7
  - 7058f10381 same top merging strategy works again
- \* d3623e0815 Merge pull request #46691 from Ch3LL/win\_group\_test
  - 7cda825e90 Add groupadd module integration tests for Windows
- \* 14ab50d3f4 Merge pull request #46696 from dwoz/win\_test\_client
  - ec4634fc06 Better explanation in doc strings
  - d9ae2abb34 Fix spilling in docstring
  - b40efc5db8 Windows test client fixes
- **PR #46851: (rallytime) Back-port #46844 to 2018.3 @ 2018-04-04 18:04:59 UTC**
  - **PR #46844: (UtahDave) Fix warning format in 2018.3.0 release notes (refs: #46851)**
  - b808ba7049 Merge pull request #46851 from rallytime/bp-46844

- ab2ccea1af Quick grammar fix in 2018.3.0 release notes
- af7bad3c7f Fix warning format in 2018.3.0 release notes
- **ISSUE #46864:** (femnad) Attribute Error When Invoking Vault Module Method (refs: #46865)
- **PR #46865:** (femnad) Fix Log Line for Vault Token Generation Debug Line @ 2018-04-04 14:52:00 UTC
  - ea56778e03 Merge pull request #46865 from femnad/fix-log-in-vault-runner
  - 01a5b88e7b Fix Log Line for Vault Token Generation Debug Line
- **PR #46836:** (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-04-03 16:54:53 UTC
  - a0e168ccee Merge pull request #46836 from rallytime/merge-2018.3
  - e75ba1f502 Merge branch '2018.3.0rc1' into '2018.3'
    - \* 39235715e6 Merge pull request #46792 from damon-atkins/patch-1
    - \* db5b9464e6 provided an example
    - \* 41e3e1e253 Update windows information in release notes
    - \* 99447fbf49 Added more windows information
    - \* d4241006f2 Update 2018.3.0.rst Windows Items, Group topics
- **ISSUE #46808:** (ezh) Sharedsecret authentication is broken (refs: #46809)
- **PR #46809:** (ezh) Fix sharedsecret authentication (refs: #46815) @ 2018-04-03 16:53:24 UTC
  - 4a358217a0 Merge pull request #46809 from ezh/2018.3-sharedsecret
  - 20db8f03f7 Merge branch '2018.3' into 2018.3-sharedsecret
  - 9df6d18ec7 Fix sharedsecret authentication
- **PR #46820:** (rallytime) [2018.3] Update the latest release information for docs @ 2018-04-03 14:36:31 UTC
  - 1519d7d895 Merge pull request #46820 from rallytime/2018.3\_update\_version\_doc
  - 274f8ee0dd [2018.3] Update the latest release information for docs
- **PR #46731:** (rallytime) Back-port #46024 to 2018.3 @ 2018-04-02 19:00:42 UTC
  - **PR #46024:** (zmedico) Trivial bug fixes for tagify and fire\_args functions (refs: #46731)
  - 07f1141722 Merge pull request #46731 from rallytime/bp-46024
  - ee4ee5b619 fire\_args: fix UnboundLocalError: local variable 'tag'
  - 4ce2c21824 tagify: handle integer suffix list
- **ISSUE #46779:** (anlutro) salt-ssh 2018.3 states with "runas" fail with "Environment could not be retrieved for User" (refs: #46796)
- **PR #46796:** (terminalmage) Fix regression introduced in merge-forward @ 2018-04-02 18:10:22 UTC
  - **PR #46503:** (psyer) Fixes stdout user environment corruption (refs: #46796)
  - 4f31c1062d Merge pull request #46796 from terminalmage/issue46779
  - f8f9d045ac Add regression test
  - e0e4e19ba3 Include extra troubleshooting information
  - dcb0c67309 Fix regression introduced in merge-forward
- **PR #46690:** (dincamihai) Fix unicode handling in pkg.info\_installed @ 2018-03-29 14:10:48 UTC

- 4609a7dd85 Merge pull request [#46690](#) from dincamihai/2018.3
- 980adf8253 Fix unicode handling in pkg.info\_installed
- **PR #46746: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-03-28 21:13:07 UTC
  - e5b3c8fa91 Merge pull request [#46746](#) from rallytime/merge-2018.3
  - e8864b7b0b Merge branch '2017.7' into '2018.3'
    - \* 1222bdbbc00 Merge pull request [#46732](#) from rallytime/bp-46032
      - bf0b962dc0 Workaround python bug in traceback.format\_exc()
    - \* 50fe1e9480 Merge pull request [#46749](#) from vutny/doc-deprecate-copr
      - a1cc55da3d [DOC] Remove mentions of COPR repo from RHEL installation page
    - \* bd1e8bcc7d Merge pull request [#46734](#) from terminalmage/busybox
      - 6502b6b4ff Make busybox image builder work with newer busybox releases
    - \* c09c6f819c Merge pull request [#46742](#) from gtmanfred/2017.7
      - fd0e649d1e only use npm test work around on newer versions
    - \* 3b6d5eca88 Merge pull request [#46743](#) from Ch3LL/mac\_auth
      - 4f1c42c0e3 Workaround getpwnam in auth test for MacOSX
  - d0278345fc Update old utils paths to new utils paths
  - e312efb5e7 Merge branch '2017.7' into '2018.3'
    - \* b548a3e742 Merge pull request [#46171](#) from amaclean199/fix\_mysql\_grants\_comparison
      - 97db3d9766 Merge branch '2017.7' into fix\_mysql\_grants\_comparison
      - 0565b3980e Merge branch '2017.7' into fix\_mysql\_grants\_comparison
      - 8af407173d Merge branch '2017.7' into fix\_mysql\_grants\_comparison
      - 00d13f05c4 Fix mysql grant comparisons by stripping both of escape characters and quotes. Fixes [#26920](#)
    - \* 554400e067 Merge pull request [#46709](#) from vutny/doc-faq-minion-master-restart
      - d0929280fc [DOC] Update FAQ about Salt self-restarting
    - \* 3f21e9cc65 Merge pull request [#46503](#) from psyer/fix-cmd-run-env-corrupt
      - e8582e80f2 Python 3-compatibility fix to unit test
      - 27f651906d Merge pull request [#1](#) from terminalmage/fix-cmd-run-env-corrupt
      - 172d3b2e04 Allow cases where no marker was found to proceed without raising exception
      - 35ad828ab8 Simplify the marker parsing logic
      - a09f20ab45 fix repr for the linter
      - 4ee723ac0f Rework how errors are output
      - dc283940e0 Merge branch '2017.7' into fix-cmd-run-env-corrupt
      - a91926561f Fix linting problems
      - e8d3d017f9 fix bytes or str in find command
      - 0877cfc38f Merge branch '2017.7' into fix-cmd-run-env-corrupt

- 86176d1252 Merge branch '2017.7' into fix-cmd-run-env-corrupt
- 3a7cc44ade Add python3 support for byte encoded markers
- 09048139c7 Do not show whole env in error
- ed94700255 fix missing raise statement
- 15868bc88c Fixes stdout user environment corruption
- \* ac2a6616a7 Merge pull request #46432 from twangboy/win\_locales\_utf8
  - affa35c30d Revert passing encoding
  - a0ab27ef15 Merge remote-tracking branch 'dw/win\_locales\_utf8' into win\_locales\_utf8
  - 9f95c50061 Use default SLS encoding, fall back to system encoding
  - 6548d550d0 Use salt.utils.to\_unicode
  - 8c0164fb63 Add ability to specify encoding in sdecode
  - 2e7985a81c Default to utf-8 on Windows
  - 8017860dcc Use salt.utils.to\_unicode
  - c10ed26eab Add ability to specify encoding in sdecode
  - 8d7e2d0058 Default to utf-8 on Windows
- \* fadc5e4ba4 Merge pull request #46669 from terminalmage/pillar-merge-order
  - b4a1d34b47 Add option to return to pre-2017.7.3 pillar include merge order
- \* b90f0d1364 Merge pull request #46711 from terminalmage/wildcard-versions-info
  - fc7d16f1af Add performance reminder for wildcard versions
- \* 6c80d90bb6 Merge pull request #46693 from dwoz/test\_smtp\_return
  - 5bf850c67f File and Pillar roots are dictionaries
- \* 9a6bc1418c Merge pull request #46543 from dafenko/fix-add-saltenv-pillarenv-to-pillar-item
  - 6d5b2068aa Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
  - 5219377313 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
  - b7d39caa86 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
  - 25f1074a85 Add docstring for added parameters
  - 973bc13955 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
  - 164314a859 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
  - 267ae9f633 Fix missing saltenv and pillarenv in pillar.item
- \* f776040e25 Merge pull request #46679 from vutny/doc-state-pkg
  - 4a730383bf [DOC] Correct examples in *pkg* state module
- \* 47409eaa6e Merge pull request #46646 from twangboy/win\_fix\_test\_local\_cache
  - 8d93156604 Fix *unit.returners.test\_local\_cache* for Windows
- \* 0c2dce0416 Merge pull request #46649 from terminalmage/issue46595
  - e82a1aa1ec Make *server\_id* consistent on Python 3
- \* 4e7466a21c Merge pull request #46588 from UtahDave/no\_crash\_winshell

- b7842a1777 Update error message.
- 95dfdb91ca Don't stacktrace when salt-ssh w/o saltwinshell
- \* 33af3cfc7c Merge pull request #46631 from rallytime/update-pillar-unit-tests
  - 0f728186aa Fix pillar unit test failures: file\_roots and pillar\_roots environments should be lists
- \* d329e7af78 Merge pull request #46640 from terminalmage/file.copy-docs
  - 480c5f8faa Clarify the docs for the file.copy state
- \* ff40590c06 Merge pull request #46642 from vutny/doc-cloud-index
  - 51e6aa54a1 [DOC] Unify cloud modules index header
- \* 83ed40c06a Merge pull request #46619 from rallytime/merge-2017.7
  - bcbddf5d07 Merge branch '2017.7.5' into '2017.7'
  - 19bb725698 Merge pull request #46612 from Ch3LL/7.5\_rn
  - 6076bfa2ee Add changelog to 2017.7.5 release
  - 31c78aef11 Merge pull request #46572 from dmurphy18/update\_XXXbuild
  - c87511570d Merge branch '2017.7.5' into update\_XXXbuild
  - cdd768fa4d Merge pull request #46577 from gtmanfred/2017.7.5
  - 78cbf7b5cd Fix npm issue
  - c76f7eb028 enable debug logging on the minionlog
  - e6682c660c Merge pull request #46551 from terminalmage/salt-jenkins-885
  - 703b5e7e65 Change versionadded to show that 2018.3.0 will not have this function
  - 010d260d06 Rewrite failing Suse pkg integration test
  - f3f5dec239 zypper.py: fix version argument being ignored
  - 214f2d6ad3 Add pkg.list\_repo\_pkgs to zypper.py
  - 0a541613f2 Additon of -sa flag to allow for revision numbers other than -0 or -1
  - bd62699ccb Merge pull request #46563 from gtmanfred/2017.7.5
  - 8d5ab72983 virtualenv version too old for python3.6
  - 2916708124 Merge pull request #46561 from gtmanfred/2017.7.5
  - 2c39ac6dfb disable verbose
  - ee3bff6e32 Merge pull request #46537 from rallytime/bp-46529
  - 289c7a228f retry if there is a segfault
  - 1271536a89 Merge pull request #46519 from rallytime/man-pages-2017.7.5
  - 782a5584f5 Update man pages for 2017.7.5
- \* df12135439 Merge pull request #46584 from twangboy/lgpo-46568
  - 661017104b Detect disabled reg\_multi\_sz elements properly
- \* 2fd3aa487c Merge pull request #46624 from twangboy/win\_fix\_installer
  - fa0b0efe46 Fix some installer script inconsistencies

- \* f038e3c452 Merge pull request #46571 from garethgreenaway/46552\_onfail\_and\_require
  - 152c43c843 Accounting for a case when multiple onfails are used along with requires. Previously if you have multiple states using 'onfail' and two of those states using a 'require' against the first one state, the last two will run even if the 'onfail' isn't met because the 'require' is met because the first state returns true even though it didn't execute. This change adds an additional hidden variable that is used when checking requisities to determine if the state actually ran.
- \* 2677330e19 Merge pull request #46520 from gtmanfred/2017.7
  - caefedc095 make sure utils is empty for pickling for windows
  - 2883548e6b pass utils to the scheduler for reloading in modules
- \* 7bc3c2e588 Merge pull request #46531 from terminalmage/issue44299
  - b70c3389da Fix case where no comments specified
  - ce391c53f4 Add regression test for #44299
  - c3e36a6c94 Fix regression in yumpkg.\_parse\_repo\_file()
  - f0c79e3da3 Slight modification to salt.utils.pkg.rpm.combine\_comments()
- \* b80edb5d26 Merge pull request #46567 from dwoz/runtest-n-wart
  - 3b6901e19d Honor named tests when running integration suites
- \* 1dcd22e767 Merge pull request #46580 from twangboy/win\_update\_docs\_dism
  - d52b99d7a3 Clarify some issues with msu files in win\_dism.py
- \* 0a68c22332 Merge pull request #46541 from gtmanfred/metadata
  - 19bd1d9db5 handle user-data for metadata grains
- **ISSUE #46668:** (anlutro) Jinja2 filter strftime stopped working in salt-ssh 2018.3 (refs: #46848, #46744)
- **PR #46744:** (garethgreenaway) [2018.3] Ensure salt.utils.dateutils is available for templates via salt-ssh @ 2018-03-28 21:09:46 UTC
  - ef68df7f3a Merge pull request #46744 from garethgreenaway/46668\_jinja2\_filter\_strftime\_unavailable
  - 0b30955c00 Including salt.utils.dateutils so various jinja\_filters are available when using salt-ssh.
- **ISSUE #46334:** (sjorge) [2018.3.0rc1] Stacktrace on call to nacl.dec (refs: #46426)
- **PR #46720:** (rallytime) Bump deprecation notices in nacl module & runner to Neon @ 2018-03-27 21:15:46 UTC
  - **PR #46426:** (garethgreenaway) [2018.3.0rc1] fixes to nacl module & runner (refs: #46639, #46720)
  - 65bb37effd Merge pull request #46720 from rallytime/bump-nacl-deprecation
  - 5102c0310c Bump deprecation notices in nacl module & runner to Neon
- **PR #46733:** (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-03-27 18:46:43 UTC
  - c83d9e66fe Merge pull request #46733 from rallytime/merge-2018.3
  - 00d4eb26f3 Merge branch '2018.3.0rc1' into '2018.3'
- **PR #46565:** (twangboy) Create reg salt util (2018.3) @ 2018-03-26 22:03:33 UTC
  - 0faced1d54 Merge pull request #46565 from twangboy/win\_fix\_cmd\_powershell\_2018.3
  - 5ee64e9b0e Fix lint (spelling error)
  - 0de54ed953 Additional tests

- fc9ecd75e2 Skip unit.state.test\_reg unless on Windows
- aa98bdf250 Fix some lint
- e0d201a96f Make sure the docs are correct for the tests
- f15f92318d Add tests for salt.utils.win\_reg
- f7112b19a2 Submit #46527 against 2018.3
- **ISSUE #46334:** (sjorge) [2018.3.0rc1] Stacktrace on call to nacl.dec (refs: #46426)
- **PR #46639:** (terminalmage) Use the correct path for nacl certificates in Windows @ 2018-03-26 19:20:10 UTC
  - **PR #46426:** (garethgreenaway) [2018.3.0rc1] fixes to nacl module & runner (refs: #46639, #46720)
  - dd52368f90 Merge pull request #46639 from terminalmage/nacl-default-path
  - 2f7660fe35 Use the correct path for nacl certificates in Windows
- **PR #46416:** (dincamihai) Fix cp.push empty file @ 2018-03-26 17:52:47 UTC
  - 2efef52a3e Merge pull request #46416 from dincamihai/fix-cp.push-empty-file
  - 536ba0fa1e Fix cp.push empty file
- **PR #46643:** (mcalmer) fix docker return @ 2018-03-26 15:52:31 UTC
  - 84579e7652 Merge pull request #46643 from mcalmer/fix-docker-return
  - 3ceb63f607 fix checking test results
  - af64632bf3 add unit test for failed login
  - 0fc7989236 make it possible to use login, pull and push from module.run and detect errors
- **PR #46650:** (Ch3LL) Mirror libnacl imports in test from the nacl module @ 2018-03-26 14:48:40 UTC
  - c67afbeb36 Merge pull request #46650 from Ch3LL/nacl\_test
  - 9fef8bc431 Mirror libnacl imports in test from the nacl runner
  - f11d58a8e9 Mirror libnacl imports in test from the nacl module
- **PR #46645:** (terminalmage) Add Unicode / Python 3 update to 2018.3.0 release notes @ 2018-03-26 14:43:53 UTC
  - 03b58a01cf Merge pull request #46645 from terminalmage/release-notes
  - 986c7bcdade Rewrite unicode/py3 section
  - 064bc83276 Add Unicode / Python 3 update to 2018.3.0 release notes
- **ISSUE #46150:** (whyte wolf) With chocolately.version some packages don't work with check\_remote=True (refs: #46661)
- **PR #46661:** (Kimol) Chocolatey - Lowered name of local and remote packages before comparing versions. @ 2018-03-26 14:35:39 UTC
  - 308c9ddfc3 Merge pull request #46661 from Kimol/2018.3-fix\_chocolatey\_check\_remote\_packages
  - 52581e7918 Removed trailing whitespace
  - 123a86947c Chocolatey - Added lowering local packages for unifying both local and remote names to lowercase for comparison.
  - 4be1a991c2 Lowered name of available packages before comparing with local packages
- **PR #46569:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 (refs: #46631) @ 2018-03-21 20:57:04 UTC
  - 2e1f7c37f7 Merge pull request #46569 from rallytime/merge-2018.3

- 46ba72fb1c Fix pillar unit test failures: file\_roots and pillar\_roots environments should be lists
- fe2d46dd0c Better merge conflict resolution for setup.py windows changes
- 8886b61576 Update old utils paths to new paths
- 8d1e1e7f94 Merge branch '2017.7' into '2018.3'
  - \* 048b2ba3f6 Merge pull request #46547 from garethgreenaway/46427\_service\_module\_cumulus
    - edd0b11447 Merge branch '2017.7' into 46427\_service\_module\_cumulus
    - ea3c16080e Disable the *service* module on Cumulus since it is using systemd.
  - \* 98e3260b9a Merge pull request #46548 from Ch3LL/profit\_test
    - db96c4e72e check for foo,bar username,password set in profitbrick config
  - \* 79f2a76609 Merge pull request #46549 from Ch3LL/dimension\_test
    - bb338c464c Fix dimensionsdata test random\_name call
  - \* 083846fe0e Merge pull request #46529 from gtmanfred/kitchen
    - 50d6e2c7be retry if there is a segfault
  - \* 5cc11129f1 Merge pull request #46511 from rallytime/bp-45769
    - a8ffceda53 Suppress boto WARNING during decode, reference: <https://github.com/boto/boto/issues/2965>
  - \* 0e90c8ca6f Merge pull request #46493 from terminalmage/issue46207
    - f06ff68f10 salt-call: don't re-use initial pillar if CLI overrides passed
  - \* b11a8fc8e0 Merge pull request #46450 from gtmanfred/salt\_runner
    - 7974ff7264 load grains for salt.cmd runner
  - \* 22d753364b Merge pull request #46337 from gtmanfred/2017.7
    - d6d9e36359 add tests for names and listen/listen\_in
    - 3f8e0db572 let listen\_in work with names
    - 7161f4d4df fix listen to be able to handle names
  - \* b7191b8782 Merge pull request #46413 from meaksh/2017.7-explore-result-in-depth
    - 885751634e Add new unit test to check state.apply within module.run
    - 9f19ad5264 Rename and fix recursive method
    - 1476ace558 Fix Python3 and pylint issue
    - 726ca3044d Explore 'module.run' response to catch the 'result' in depth
  - \* 02a79a2014 Merge pull request #46496 from gtmanfred/kitchen
    - da002f78d0 include virtualenv path for py3 windows
    - fe2efe03ea remove duplicate setup
  - \* 5c4c182d75 Merge pull request #46330 from bdrung/fix\_kubernetes\_test\_create\_deployments
    - 5008c53c44 Fix ValueError for template in AppsV1beta1DeploymentSpec
  - \* c7e05d3ff4 Merge pull request #46482 from rongshengfang/fix-keyerror-in-instance\_present
    - ed8c83e89a Fix KeyError in salt/states/boto\_ec2.py when an EIP is being associated to an existing instance with the instance\_present state.

- \* 573d51afec Merge pull request [#46463](#) from terminalmage/mock-2.0
  - b958b4699c Update requirements files to depend on mock>=2.0.0
- \* a154d35fc7 Merge pull request [#46422](#) from rallytime/bp-46300
  - 829dfde8e8 Change stringutils path to old utils path for 2017.7
  - 91db2e0782 Python 3 support
- \* 2afaca17a1 Merge pull request [#46320](#) from mcalker/warn-kubernetes
  - c493ced415 add warning about future config option change
- \* c7f95581e3 Merge pull request [#46449](#) from bdrung/make-doc-theme-configurable
  - 4a5da2d144 Make documentation theme configurable
- \* 10ce0e9e20 Merge pull request [#46162](#) from rallytime/team-suse-zypper-owner
  - 13a295a3b7 Add *pkg* and *snapper* to team-suse
  - 35c7b7b0d3 Add btrfs, xfs, yumpkg, and kubernetes file to team-suse
  - 485d777ac0 Add team-suse to CODEOWNERS file for zypper files
- \* cac096b311 Merge pull request [#46434](#) from gtmanfred/highstate\_return
  - d18f1a55a7 fix pylint
  - 9e2c3f7991 split return key value correctly
- \* 7dd71101ce Merge pull request [#46455](#) from whyte wolf/Issue\_44452\_unicode\_cloud
  - 5fe474b1a8 .format remove fix for [#44452](#)
- \* 4c8d9026d3 Merge pull request [#46428](#) from twangboy/win\_fix\_reqs
  - e7ab97cc17 Remove six as a hard dep for Salt
  - cc67e5c2ef Set six to 1.11.0
- \* e834d9a63b Merge pull request [#46454](#) from gtmanfred/kitchen
  - b8ab8434a5 fix windows for kitchen
- \* 2886dca88f Merge pull request [#46452](#) from gtmanfred/spm\_cache\_dir
  - 169cf7a4e2 make spm cache\_dir instead of all cachedirs
- \* a188984cd9 Merge pull request [#46446](#) from bdrung/fix-typos
  - 7e6e80be87 heat: Fix spelling mistake of environment
  - a3c54b50f6 Fix various spelling mistakes
- \* e35fc5263c Merge pull request [#46309](#) from bdrung/dynamic-pillarenv
  - 584b451fd1 Support dynamic pillar\_root environment
- \* 35fe9827fe Merge pull request [#46430](#) from terminalmage/issue44032
  - f9f187e915 Improve reliability/idempotence of file.blockreplace state
- \* 2bad0a21c0 Merge pull request [#46429](#) from twangboy/win\_fix\_snmp
  - 8995a9b8de Fix problem with `__virtual__` in win\_snmp
- \* 93a572f229 Merge pull request [#46100](#) from jfindlay/resolv\_scope
  - d5561bedaf tests.unit.grains.core add scoped IPv6 nameserver

- 4e2e62d508 salt.utils.dns parse scope param for ipv6 servers
- \* 5acc1d5c54 Merge pull request #46420 from bdrung/2017.7
  - e48c13d9e0 Fix SSH client exception if SSH is not found
- \* ca6a76e317 Merge pull request #46379 from angeloudy/2017.7
  - 3acb59c74c Merge branch '2017.7' into 2017.7
  - d971e0c08b Fix indent
  - 269514683f Update http.py
  - 908c040ac3 Update http.py
  - 51ba3c135b Update http.py
  - 14aba24111 fix bytes-object required error in python 3
- \* 73f9233557 Merge pull request #46404 from gtmanfred/kitchen
  - c56baa95a8 clone .git for the version tests
  - 3620611b5b fix unhold package for debian
  - 5219f7d2ba fix minion log path
- \* ca28cfd4e4 Merge pull request #46310 from twangboy/win\_update\_installer\_build
  - bcf8b19566 Update the installer build
- \* deccccbeca3 Merge pull request #46316 from twangboy/win\_fix\_dsc
  - 2042d33d59 Fix issues with the DSC module
- **PR #46620:** (rallytime) [2018.3] Merge 2018.3.0rc1 into 2018.3 @ 2018-03-20 22:45:00 UTC
  - 8cdd56b9dc Merge pull request #46620 from rallytime/merge-2018.3.0rc1-into-2018.3
  - b03cda3cea Merge branch '2018.3.0rc1' into '2018.3'
- **PR #46606:** (Ch3LL) add autodoc topics for infoblox state modules @ 2018-03-19 21:35:46 UTC
  - 2d2fe22ae2 Merge pull request #46606 from Ch3LL/infoblox\_docs
  - 6eab6a7dc4 add autodoc topics for infoblox state modules
- **PR #46540:** (s0undt3ch) Some missing *isinstance* checks. @ 2018-03-15 16:17:19 UTC
  - 1191d5b379 Merge pull request #46540 from s0undt3ch/2018.3
  - fa1d668774 Some missing *isinstance* checks. Committed again through a PR.
- **PR #46513:** (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-03-15 15:58:59 UTC
  - 5429438e4b Merge pull request #46513 from rallytime/merge-2018.3
  - aa760334a1 Merge branch '2018.3.0rc1' into '2018.3'
- **ISSUE #43208:** (mitar) Prevent user.present to change uid and gid of existing user (refs: #46502)
- **PR #46502:** (terminalmage) user.present: don't change uid/gid unless explicitly told to @ 2018-03-13 14:25:20 UTC
  - 3e073c7e8a Merge pull request #46502 from terminalmage/issue43208
  - 4106840deb user.present: don't change uid/gid unless explicitly told to
- **PR #46398:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-03-12 20:25:19 UTC

- 7cdb00ca9c Merge pull request #46398 from rallytime/merge-2018.3
- d22e5ba442 Merge fix: return back *wb+* mode in *crypt.gen\_keys*.
- c7dddaf8ce Lint: Use log variable, not logger.
- ca1860cd91 Use new *get\_umask* function in mask calls in *virt.py*
- 19ec7b6de1 Update old *utils* paths with new *utils* paths
- d83727fdf9 Merge branch '2017.7' into '2018.3'
  - \* 95586678c3 Merge pull request #46394 from Ch3LL/mac\_doc
    - 158add6661 change *oxdownload* to *oxdownload-{python\_version}*
    - 21aa848c89 Add *mac py2* and *py3* packages to *mac installation docs*
  - \* 07b5d09ac1 Merge pull request #46338 from rallytime/fix-44831
    - 90771da999 Remove *cmd.wait* deprecation reference in *docs*
  - \* 3849e7a085 Merge pull request #46333 from danlsgiga/issue-42438
    - 3b13f37b44 Revert changes in the code and change docs instead
    - 38114a65d8 Fixes color parameter mismatch and handles 204 responses correctly
  - \* a8f2f1b063 Merge pull request #46322 from terminalmage/issue44935
    - 85ac6a9893 *yamlify\_arg*: don't treat leading dashes as lists
  - \* da5c282cb2 Merge pull request #46327 from samilaine/fix-vmware-cloud-fqdn
    - 4b8dfb326f Modify the way a FQDN is handled in the *vmware cloud provider*.
  - \* 78c45d3786 Merge pull request #46318 from terminalmage/squelch-warnings
    - 5889b36646 Skip type-checking for several *gitfs/git\_pillar/winrepo* params
  - \* bb0d6fc263 Merge pull request #46312 from gtmanfred/2017.7
    - 749ae580ed add *module\_dirs* to *salt ssh thin tarball*
  - \* 88b5f7383d Merge pull request #46242 from redbaron4/fix-46127
    - 06dba51617 Make changes from review
    - 727ebe1056 Merge branch '2017.7' into *fix-46127*
    - 08d1ee8baf Fix Python3 test errors
    - aa9d709015 Pass *env\_vars* to *pip.freeze*
  - \* a0716643e4 Merge pull request #46265 from Ch3LL/profit\_cloud
    - d4893eab4c Add *username/password* to *profitbricks conf* for *cloud tests*
  - \* ed7bffa7e0 Merge pull request #46306 from rallytime/bp-46256
    - 6439bce4a8 Don't install *msgpack 0.5.5*
  - \* 8c2c4e3316 Merge pull request #46208 from terminalmage/audit-umask-usage
    - 9c92aadce8 Disable *blacklisted-function* check for legitimate uses
    - 58a11aaa26 Disable *pylint* check in *salt-ssh shim*
    - ecadf67659 Blacklist *os.umask*
    - 31b1d98fcb Replace direct use of *os.umask* with use of existing context manager

- 82ce546e18 Prevent failed os.makedirs from leaving modified umask in place
- \* 978e869490 Merge pull request #46293 from eliasp/2017.7-44624-py3-compat
  - 2e08b0d9c8 Fix Python3 comparison `TypeError` in `salt.modules.upstart`
- \* bee4a66d0c Merge pull request #46264 from terminalmage/issue46128
  - 68000b7211 Fix incorrect merge conflict resolution
- \* 1e0b3aa348 Merge pull request #46296 from vutny/doc-pillar-get
  - 1faa8331e1 [DOC] Add missing params to `pillar.get` docstring
- \* c490a50452 Merge pull request #45874 from GwiYeong/2017.7-local-client-hotfix
  - 949aefc82b Merge branch '2017.7' into 2017.7-local-client-hotfix
  - 45d663f435 fix for local client timeout bug
- \* 8e8a3a2897 Merge pull request #46261 from rallytime/merge-2017.7
  - 8256ae5ee5 Merge branch '2016.11' into '2017.7'
  - 140ef4d6b9 Merge pull request #46253 from rallytime/doc-banners
  - 07ed8c7db3 Update docbanner for SaltConf18
  - 9fe86ee520 Merge pull request #46179 from wedge-jarrad/cifs-remount-fix
  - 9ca25c4313 Add credentials and secretfile to mount.mounted mount\_invisible\_keys
- **PR #46421:** (bdrung) Skip SSHPasswordTests if ssh binary is not found @ 2018-03-09 16:21:02 UTC
  - 9c089aa4de Merge pull request #46421 from bdrung/skip-ssh-tests-if-ssh-is-missing
  - 3d6f658309 Skip SSHPasswordTests if ssh binary is not found
- **PR #46453:** (bdrung) Fix various spelling mistakes in 2018.3 @ 2018-03-09 14:48:33 UTC
  - **PR #46446:** (bdrung) Fix various typos (refs: #46453)
  - 4cbfde5839 Merge pull request #46453 from bdrung/fix-typos-2018.3
  - 3d37eca847 Fix various spelling mistakes
- **ISSUE #44032:** (PhilippeAB) blockreplace marker\_end isn't applied with newline (refs: #46430)
- **PR #46437:** (terminalmage) Improve reliability/idempotence of file.blockreplace state (2018.3 branch) @ 2018-03-08 15:38:53 UTC
  - **PR #46430:** (terminalmage) Improve reliability/idempotence of file.blockreplace state (refs: #46437)
  - a43d999fb8 Merge pull request #46437 from terminalmage/issue44032-2018.3
  - 4798187035 Improve reliability/idempotence of file.blockreplace state (2018.3 branch)
- **PR #46328:** (dincamihai) Fix openscap push @ 2018-03-07 17:51:41 UTC
  - 0c66507aff Merge pull request #46328 from dincamihai/2018.3.0rc1
  - b5e508f339 Fix openscap push
- **PR #46174:** (twangboy) Fix a unicode issue with the git module on Windows @ 2018-03-06 18:53:53 UTC
  - 82cb2ea5a0 Merge pull request #46174 from twangboy/win\_fix\_test\_git\_2
  - 80e3a47dd4 Add output\_encoding argument to git state, and add docs
  - 661a0687ec Fix git utf-8 issues for Windows

- **PR #46235:** (twangboy) Fix `unit.modules.test_ssh` for Windows @ 2018-03-05 20:39:44 UTC
  - 7690cf8564 Merge pull request #46235 from twangboy/win\_fix\_test\_ssh
  - 9ea02d7045 Use write instead of writelines for Windows
- **PR #46332:** (terminalmage) Update the merge-forward docs to reference the 2018.3 branch @ 2018-03-05 19:39:56 UTC
  - c4f366cdd9 Merge pull request #46332 from terminalmage/merge-forward-docs
  - 0411845cec Update the merge-forward docs to reference the 2018.3 branch
- **PR #46307:** (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-03-03 12:56:07 UTC
  - 241611aca5 Merge pull request #46307 from rallytime/merge-2018.3
  - c9fa21f62c Merge branch '2018.3.0rc1' into '2018.3'
- **PR #46314:** (terminalmage) Merge 2017.7 branch into 2018.3 @ 2018-03-03 12:54:27 UTC
  - 30c34f0c62 Merge pull request #46314 from terminalmage/merge-2017.7-2018.3
  - 61ab47ee70 Merge branch '2017.7' into merge-2017.7-2018.3
    - \* 88a3166589 Merge pull request #46276 from terminalmage/issue44046
      - a14d4daf8c salt.utils.docker.translate\_input: operate on deepcopy of kwargs
    - \* da60399b8f Merge pull request #46183 from oeufete/fix-docker-container-running-host-config-ulimits
      - 5b09644429 Sort lists from Ulimits before comparing
      - 0b80f02226 Update old dockerng doc ref
    - \* 509429f08c Merge pull request #46260 from terminalmage/git\_pillar
      - b1ce2501fd Normalize global git\_pillar/winrepo config items
    - \* a97a3e6fb0 Merge pull request #46101 from jfindlay/openrc\_ret
      - 2eef3c65a6 tests.unit.modules.gentoo\_service add retcode arg
      - 81ec66fd8b modules.gentoo\_service handle stopped retcode
    - \* 1a17593c05 Merge pull request #46254 from rallytime/enterprise-banner
      - f5fae3dedf Update enterprise banner
    - \* 8c50ff32bd Merge pull request #46250 from terminalmage/runner-docs
      - 91b4895087 Add documentation to the fileserver runner
    - \* 53067cca43 Merge pull request #46243 from racker-markh/fix-openstack-private-network-issue
      - 50c1e140f0 Don't check deny private\_ips already in the original list of private\_ips
    - \* 15405c8760 Merge pull request #46239 from terminalmage/issue46109
      - 586d8b0dcf archive.extracted: don't check source file when if\_missing path exists
- **ISSUE #33177:** (robnagler) pillar.stack should not continue after errors (refs: #46287)
- **PR #46287:** (bbinet) Update PillarStack `stack.py` to latest upstream version @ 2018-03-02 21:39:52 UTC
  - 194b0317ac Merge pull request #46287 from bbinet/upstream-pillarstack
  - b14b6f2c95 Update PillarStack `stack.py` to latest upstream version
- **PR #46227:** (Ch3LL) Mock `file_client` call in `sntp` return test @ 2018-02-28 22:12:22 UTC

- 7382654c70 Merge pull request #46227 from Ch3LL/smtp\_file\_client
- 280dc9a2b6 Mock file\_client call in smtp return test
- PR #46232: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-02-28 19:16:37 UTC
  - 123625213e Merge pull request #46232 from rallytime/merge-2018.3
  - 04f24c1794 Lint: fix from a bad merge
  - aad61c77bd Update old utils paths to new paths
  - 7243baf2c0 Merge branch '2017.7' into '2018.3'
    - \* 633e1208e4 Merge pull request #46221 from terminalmage/salt-jenkins-854
      - 0eb012659c Fix hanging tests in integration suite
    - \* 7917277345 Merge pull request #46214 from vutny/formulas-readme-formatting
      - d702846961 [DOC] Replace *note* rST block for GitHub
    - \* a2e099b744 Merge pull request #46203 from Ch3LL/7.5\_release
      - 6ddf3246ce Add 2017.7.5 Release Notes File
    - \* 973b227818 Merge pull request #46201 from rallytime/merge-2017.7
      - 9ac2101baa Merge branch '2016.11' into '2017.7'
      - a4c5417d23 Merge pull request #46132 from rallytime/2016.11\_update\_version\_doc
      - d2196b6df3 Update release versions for the 2016.11 branch
    - \* 89cf2e5061 Merge pull request #46139 from bdrung/os-grains
      - 0b445f2a37 tests: Add unit tests for \_parse\_os\_release()
      - f6069b77ed Fix osfinger grain on Debian
      - 8dde55a761 tests: Add os\_grains test cases for Debian
      - ff02ab9937 tests: Add Ubuntu 17.10 (artful) os\_grains test case
      - 77d5356aba Fix incorrect oscodename grain on Ubuntu
      - 7e62dc9fd2 tests: Support reading os-release files from disk
      - a92ec0db1b Make \_parse\_os\_release() always callable
      - eee1fe5b38 tests: Dissolve \_run\_ubuntu\_os\_grains\_tests
      - 1d6ef731fe tests: Deduplicate \_run\_os\_grains\_tests()
    - \* c8c71e75ca Merge pull request #46133 from rallytime/2017.7\_update\_version\_doc
      - 0ed338e643 Update release versions for the 2017.7 branch
    - \* 390d592aa6 Merge pull request #46185 from terminalmage/issue46124
      - 3b58dd0da0 gitfs: Fix detection of base env when its ref is also mapped to a different env
    - \* 705caa8cca Merge pull request #46148 from rallytime/merge-2017.7
      - 25deebf7a6 Merge branch '2017.7.3' into '2017.7'
      - b5b083fd26 Merge pull request #46074 from Ch3LL/update-7.4
      - 8d0eeeb059 Update 2017.7.4 Release Notes with new fixes
      - 32f3d00e44 Merge pull request #46066 from rallytime/pin-tornado

- 6dc1a3b9dc Pin tornado version in requirements file
- 85761ee650 Merge pull request #46036 from terminalmage/issue43769
- e2140d9a84 Mock the ssh.key\_is\_encrypted utils func
- 169924b3fe Move ssh.key\_is\_encrypted to a utils module temporarily
- 54f4d78f7a Only keep ssh.py in the Windows installer
- 5f04531e1b Keep ssh state and execution modules in the installer
- f2b69f703d git.latest: Fix regression with identity file usage
- \* 10a47dcbc4 Merge pull request #46137 from damon-atkins/2017.7\_fix\_ec2\_pillar2
  - 99e7f6a7d3 update ec2 pillar arguments with better names
- \* d74cb14557 Merge pull request #46145 from terminalmage/issue46004
  - 467ff841cd pillarenv argument should default to None and not the value from opts
  - 2a185855ea Better solution for fixing the opts munging in pillar.show\_pillar runner
  - e2c4702e0c Update tests to reflect changes to the SaltCacheLoader
  - f9301fcc34 Document behavior when orchestration runner invoked with non-orch states
  - 9644579cd0 Instantiate the SaltCacheLoader's fileclient in the \_\_init\_\_
  - f9a6c86e21 salt.runners.pillar.show\_pillar: don't modify master opts
  - e0940a9fc4 Properly detect use of the state.orch alias and add orch jid to kwargs
- **ISSUE #42932:** (bobrik) cmd.run with bg: true doesn't fail properly (refs: #46172, #45932)
- **PR #46172:** (The-Loeki) cmdmod: reimplement of #45932 for Oxygen @ 2018-02-28 19:14:26 UTC
  - **PR #45932:** (The-Loeki) Fix cmd run\_all bg error (refs: #46172)
  - **PR #39980:** (vutny) [2016.3] Allow using bg kwarg for cmd.run state function (refs: #46172, #45932)
  - 20d869c228 Merge pull request #46172 from The-Loeki/fix\_cmd\_run\_all\_bg\_oxygen
  - 3ecf5018d0 Merge branch '2018.3' into fix\_cmd\_run\_all\_bg\_oxygen
  - b5315e817b Merge branch '2018.3' into fix\_cmd\_run\_all\_bg\_oxygen
  - beabf4f06b cmdmod: reimplement of #45932 for Oxygen
- **PR #46238:** (terminalmage) Don't allow salt.utils.files.fopen() to open stdin/stdout/stderr @ 2018-02-28 19:08:23 UTC
  - 687575b582 Merge pull request #46238 from terminalmage/fds-in-fopen
  - fe1527a3c4 Don't allow salt.utils.files.fopen() to open stdin/stdout/stderr
- **PR #46219:** (twangboy) Fix unit.modules.test\_network for Windows @ 2018-02-28 15:45:02 UTC
  - 3da5dcb313 Merge pull request #46219 from twangboy/win\_fix\_inet\_pton
  - 46f1d2cc09 Use six.text\_type instead of six.u
- **PR #46228:** (twangboy) Fix unit.modules.test\_pip for Windows @ 2018-02-28 15:37:49 UTC
  - 44343f8063 Merge pull request #46228 from twangboy/win\_fix\_test\_pip
  - 415821eee9 Fix encoding issue
- **PR #46198:** (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-02-27 15:17:51 UTC

- adc8950bbe Merge pull request #46198 from rallytime/merge-2018.3
- 1b4dc71930 Lint fix
- 776f2ea5d7 Merge branch '2018.3.0rc1' into '2018.3'
- **ISSUE #45849:** (Epiclemonaid) XenServer Provisioning errors out on this line. removing it succeeds. (refs: #46168)
- **PR #46168:** (gtmanfred) driver and provider should be specified @ 2018-02-26 16:17:13 UTC
  - 06d2dff3ac Merge pull request #46168 from gtmanfred/2018.3
  - ac99bd26db driver and provider should be specified
- **PR #46161:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-02-26 15:29:39 UTC
  - 605e5eff73 Merge pull request #46161 from rallytime/merge-2018.3
  - 69ac94baca Update utils paths
  - cffbf52c10 Lint fix: remove extra line
  - 79bed6cff1 Merge branch '2017.7' into '2018.3'
    - \* 0398ce0482 Merge pull request #46135 from rallytime/bp-46088
      - 57a60f62a3 fix kernel subpackages install bug
    - \* 1fcbbd1e02 Merge pull request #46136 from rallytime/bp-46115
      - 0a481d707f update digitalocean salt-cloud driver
    - \* 11e5e8eb86 Merge pull request #45911 from twangboy/win\_fix\_lgpo\_unicode
      - bcde5cc625 Update log statement
      - e9fa53d3b7 Change the Invalid Data Message
      - c818d4b791 Convert reg values to unicode for debug
    - \* 524a6a72a0 Merge pull request #46123 from gtmanfred/2017.7
      - 8d36730ef7 If no pubkey is passed in openmode fail

### 33.2.66 Salt 2018.3.2 Release Notes

Version 2018.3.2 is a bugfix release for *2018.3.0*.

The 2018.3.2 release contains only a small number of fixes, which are detailed below.

This release fixes two critical issues.

The first is Issue #48038, which is a critical bug that occurs in a multi-syndic setup where the same job is run multiple times on a minion.

The second issue is #48130. This bug appears in certain setups where the Master reports a Minion time-out, even though the job is still running on the Minion.

Both of these issues have been fixed with this release.

## Statistics

- Total Merges: 7
- Total Issue References: 2
- Total PR References: 10
- Contributors: 4 ([cro](#), [garethgreenaway](#), [gtmanfred](#), [rallytime](#))

**Warning:** If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
file.mangedaged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:
file.mangedaged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict | json }}
```

## Changelog for v2018.3.1..v2018.3.2

  - [21aaf1cbc4](#) Merge pull request [#48129](#) from [rallytime/release-notes-2018.3.2](#)
  - [0b13be0111](#) Add release notes for 2018.3.2
- **PR #48100:** ([rallytime](#)) Back-port [#48014](#) to 2018.3.2 @ 2018-06-14 12:54:52 UTC

- PR #48014: (cro) Find job pause (refs: #48100)
- 36b99ae80a Merge pull request #48100 from rallytime/bp-48014
- 77feccc5c4 Lint: Add blank line
- 159b052962 One more case where returner doesn't respond
- 91b45b4cc4 Catch two cases when a returner is not able to be contacted--these would throw a stacktrace.
- PR #48099: (rallytime) Back-port #47915 to 2018.3.2 @ 2018-06-14 12:54:23 UTC
  - PR #47915: (garethgreenaway) [2018.3] state runner pause resume kill (refs: #48099)
  - 40c1bfdec9 Merge pull request #48099 from rallytime/bp-47915
  - 3556850058 fixing typo in alias\_function call.
  - 4b0ff496fa Some fixes to the set\_pause and rm\_pause function in the state runner, renaming to in line with the functions in the state module. Including aliases to previous names for back-ward compatibility. Including a soft\_kill function to kill running orchestration states. A new test to test soft\_kill functionality.
- ISSUE #48038: (austinpapp) jobs are not dedup'ing minion side (refs: #48075)
- PR #48097: (rallytime) Back-port #48075 to 2018.3.2 @ 2018-06-14 12:52:44 UTC
  - PR #48075: (garethgreenaway) [2017.7] Ensure that the shared list of jids is passed (refs: #48097)
  - 074a97dcfa Merge pull request #48097 from rallytime/bp-48075
  - e4c719b55f Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.

### 33.2.67 Salt 2018.3.3 Release Notes

Version 2018.3.3 is a security and bugfix release for *2018.3.0*.

#### Statistics

- Total Merges: 548
- Total Issue References: 69
- Total PR References: 341
- Contributors: 55 (Ch3LL, FedericoCeratto, KaiSforza, L4rS6, Lutseslav, The-Loeki, Vaelatern, admd, aesposito91, asenci, astorath, azelezni, babs, bbczeuz, bbinet, brejoc, cro, daa, dmurphy18, dubb-b, dwoz, eliasp, ezh, garethgreenaway, gtmanfred, isbm, jeduardo, kt97679, kuetrzi, linoplt, lomeroy, lusche, mateiw, maxarnold, maxim-sermin, meaksh, mmulqueen, morganwillcock, mtorromeo, nullify005, paulcollinsiii, pritambaral, rallytime, rares-pop, rmarchei, rosscdh, sizgiyaev, sjorge, t0fik, terminalmage, travispaul, twangboy, vinian, weswhet, zerthimon)

**Warning:** If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:  
file.mangaged:  
- source: salt://foo.conf  
- template: jinja  
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters. Another option would be to use Jinja's `tojson` filter.

```
/etc/foo.conf:  
file.mangaged:  
- source: salt://foo.conf  
- template: jinja  
- defaults: {{ mydict | tojson }}
```

### Security Fix

CVE-2018-15751 Remote command execution and incorrect access control when using salt-api.

CVE-2018-15750 Directory traversal vulnerability when using salt-api. Allows an attacker to determine what files exist on a server when querying `/run` or `/events`.

Credit and thanks for discovery and responsible disclosure: nullbr4in, xcuter, koredge, loupos, blackcon, Naver Business Platform

### Changes to win\_timezone

Improves timezone detection by using the `pytz` module.

`timezone.get_offset` and `timezone.get_timezone` now work properly.

Adds `timezone.list` to list supported timezones in either Windows or Unix format.

### New Jinja Filter

The `tojson` filter (from Jinja 2.9 and later) has been ported to Salt, and will be used when this filter is not available. This allows older LTS releases such as CentOS 7 and Ubuntu 14.04 to use this filter.

You can use this filter any time you wish to dump a list or dictionary into an SLS file, to ensure that the result is able to be loaded by the YAML renderer. For example:

```
foo:  
  bar.baz:  
    - some_arg: {{ mydict | tojson }}
```

## MacOSX escape characters with runas

You are now required to escape quotes when using the runas argument with the cmd module on macosx.

Example:

```
cmd.run 'echo \'\'h=\'"baz\'\'\'\' runas=macuser'
```

## Changelog for v2018.3.2..v2018.3.3

Generated at: 2018-09-21 17:45:27 UTC

- **PR #49662:** (dwoz) Fix another bad filename reference in whitelist @ 2018-09-14 22:20:49 UTC
  - 9d8cc0b3f4 Merge pull request #49662 from dwoz/2018.3.3
  - e109023013 Fix another bad filename reference in whitelist
- **PR #49655:** (dwoz) Fix windows test whitelist errors @ 2018-09-14 20:34:56 UTC
  - 6391560d57 Merge pull request #49655 from dwoz/2018.3.3
  - 8a4946478e Fix windows test whitelist errors
- **PR #49641:** (rallytime) Back-port #49632 to 2018.3.3 @ 2018-09-13 16:46:02 UTC
  - **PR #49632:** (garethgreenaway) [2018.3] Fixing integration.states.test\_file.FileTest.test\_directory\_max\_depth (refs: #49641)
  - 3fb3ffdb37 Merge pull request #49641 from rallytime/bp-49632
  - d11a400825 Fixing failing test under python 3.7 caused by changes to how os.makedirs sets initial permissions.
- **PR #49633:** (garethgreenaway) [2018.3.3] Moving test\_build\_whitespace\_split\_regex to TestBuildWhitespac-eRegex @ 2018-09-13 06:57:01 UTC
  - 0096cf10b5 Merge pull request #49633 from garethgreenaway/moving\_test\_into\_correct\_class
  - 370de07617 Lint: Add extra blank line
  - 27b93fcc68 Moving the test\_build\_whitespace\_split\_regex test into the TestBuildWhitespacRegex class.
- **PR #49594:** (rallytime) Back-port #49580 to 2018.3.3 @ 2018-09-10 19:59:41 UTC
  - **PR #49580:** (garethgreenaway) [2018.3] Fixing tests for Python 3.7 (refs: #49594)
  - e3a14e3535 Merge pull request #49594 from rallytime/bp-49580
  - 41a2586fc0 Add file coding line at top of file
  - 7df3bebf53 Fixing lint.
  - 5fee38d1db Fixes various tests that were failing under python 3.7.
- **PR #49589:** (rallytime) Update old utils paths to use new utils paths @ 2018-09-10 16:51:31 UTC
  - 39f9c9c952 Merge pull request #49589 from rallytime/utils-paths
  - 5de2245c11 Update old utils paths to use new utils paths
- **PR #49550:** (rallytime) Back-port #49548 to 2018.3.3 @ 2018-09-07 00:36:05 UTC
  - **PR #49548:** (garethgreenaway) [2018.3] Disabling State boto tests for Python 3.7+ (refs: #49550)
  - 202da7a94f Merge pull request #49550 from rallytime/bp-49548

- 180692ccee Disable various boto tests when run under python 3.7 because of [//github.com/spulec/moto/issues/1706](https://github.com/spulec/moto/issues/1706). which was causing the test suite to hang on unit tests. This PR is disabling the tests in the test\_boto\_vpc state tests.
- **PR #49542:** (twangboy) Update openssl @ 2018-09-06 16:11:34 UTC
  - cae2d61568 Merge pull request #49542 from twangboy/fix\_osx\_build\_3
  - fe02b2276f Add 1.0.2p shasum file
  - 5f06dc2762 Fix issues with osx build scripts on 2018.3.3
- **PR #49536:** (rallytime) Back-port #49524 to 2018.3.3 @ 2018-09-06 16:00:00 UTC
  - **PR #49524:** (garethgreenaway) [2018.3] Disable boto tests under 3.7 (refs: #49536)
  - d9f09da5d9 Merge pull request #49536 from rallytime/bp-49524
  - 9e7203e08a Disable various boto tests when run under python 3.7 because of [//github.com/spulec/moto/issues/1706](https://github.com/spulec/moto/issues/1706). which was causing the test suite to hang on unit tests.
- **PR #49535:** (Ch3LL) Skip test\_virt and pip\_state requirements tests on macosx @ 2018-09-06 15:59:38 UTC
  - cb934bf0b6 Merge pull request #49535 from Ch3LL/skip\_pip\_mac
  - 50237e9daf Skip test\_virt and pip\_state requirements tests on macosx
- **PR #49499:** (rallytime) Pin CherryPy version to < 18.0.0 in requirements files for PY2 @ 2018-09-04 18:52:44 UTC
  - 87d3dfe085 Merge pull request #49499 from rallytime/pin-cherrypy-2018.3.3
  - 9e274335a3 Pin CherryPy version to < 18.0.0 in requirements files for PY2
- **ISSUE saltstack/salt-jenkins#1075:** (Ch3LL) [2018.3.3] arch python3 tests do not finish (refs: #49303, #49451)
- **PR #49467:** (rallytime) Back-port #49451 to 2018.3.3 @ 2018-08-31 17:38:09 UTC
  - **PR #49451:** (gtmanfred) Handle thread shutdown on system exit (refs: #49467)
  - 39fdacc434 Merge pull request #49467 from rallytime/bp-49451
  - b891a0a8d3 add lock for proxy minion process too
  - 72519878c0 start thread in try block
  - b878f01662 use finally instead of catching baseexception
  - de98be6093 use rlock so blocking can be passed in py2
  - d346b42332 import Callable from collections.abc for python3.7
  - d7a410070a Handle thread shutdown on system exit
- **PR #49468:** (rallytime) Back-port #49291 and #49331 to 2018.3.3 @ 2018-08-31 17:37:30 UTC
  - **PR #49331:** (dwoz) Use salt.utils to ensure string type (refs: #49468)
  - **PR #49291:** (dwoz) Add dedent that sets line endings (refs: #49468)
  - 37d1455d69 Merge pull request #49468 from rallytime/bp-49291-and-49331
  - 944f8e96c8 Use salt.utils to ensure string type
  - 6c92ed2021 Fix review nits
  - 0e18b157e3 Re-factor dedent to fix warts
  - b5034067f8 Use salt.utils.to\_\* functions

- 6399d035a4 Add dedent that sets line endings
- **PR #49449: (rallytime)** Mark status test as flaky @ 2018-08-30 18:10:44 UTC
  - 0cda22e7a9 Merge pull request #49449 from rallytime/flaky-test
  - 0f322bb39f Mark status test as flaky
- **PR #49444: (rallytime)** Back-port #49299 to 2018.3.3 @ 2018-08-30 18:10:21 UTC
  - **PR #49299: (dwoz)** Work around cmd.run unicode issues in test for now (refs: #49444)
  - bcc5f1a7c1 Merge pull request #49444 from rallytime/bp-49299
  - b8c5a5bb91 Fix string formatting wart in file state tests
  - 19756022be Fix wart in file state test
  - ba68388342 Work around cmd.run unicode issues in test for now
- **PR #49448: (rallytime)** Back-port #49400 to 2018.3.3 @ 2018-08-30 18:04:29 UTC
  - **PR #49400: (rallytime)** Mark pillar refresh test as flaky (refs: #49448)
  - 38713e2db9 Merge pull request #49448 from rallytime/bp-49400
  - b953fe0079 Mark pillar refresh test as flaky
- **PR #49446: (rallytime)** Back-port #49356 to 2018.3.3 @ 2018-08-30 18:04:01 UTC
  - **PR #49356: (dwoz)** Fix tests that use timed\_subprocess for py3 (refs: #49446)
  - d6ddcab351 Merge pull request #49446 from rallytime/bp-49356
  - 8022b0c3d6 Fix tests that use timed\_subprocess for py3
- **PR #49445: (rallytime)** Back-port #49192 to 2018.3.3 @ 2018-08-30 18:03:44 UTC
  - **PR #49192: (dwoz)** Test fixes flaky test and unicode environment key/value (refs: #49445)
  - 1a67956c0f Merge pull request #49445 from rallytime/bp-49192
  - 20148d4438 Test fixes
- **PR #49443: (rallytime)** Back-port #49197 to 2018.3.3 @ 2018-08-30 18:03:10 UTC
  - **PR #49197: (dwoz)** File state line ending fixes (refs: #49443)
  - 33f59d44de Merge pull request #49443 from rallytime/bp-49197
  - 5fe821978e File state line ending fixes
- **PR #49442: (rallytime)** Back-port #49180 and related fixes to 2018.3.3 @ 2018-08-30 18:02:54 UTC
  - **PR #49186: (dwoz)** Fix typo in #49180 (refs: #49442)
  - **PR #49180: (dwoz)** Cherry-pick test fixes (refs: #49442, #49186)
  - **PR #49167: (dwoz)** Fix remaining file state integration tests (py3) (refs: #49173, #49442)
  - 60758059c3 Merge pull request #49442 from rallytime/bp-49180
  - e155568957 Fix typo
  - 608a1ae7ba Account for file renames
  - e8e6a46a2b Fix directory unit test
  - 2f865c398e Fix is\_windows checks
  - 6460f7f217 Account for normalized dirs in unit tests

- f4b7101a35 Simplify dict keys lookup
- 942b68bfc8 Fix remaining file state integration tests (py3)
- PR #49441: (rallytime) Back-port #49240 to 2018.3.3 @ 2018-08-30 18:02:40 UTC
  - PR #49240: (dwoz) file state test fixes (refs: #49362, #49441)
  - 1f4906346a Merge pull request #49441 from rallytime/bp-49240
  - 22ed452479 Work around listdir encoding issues on py2 windows
  - f5be275835 file state test fixes
- PR #49440: (rallytime) Back-port #49258 to 2018.3.3 @ 2018-08-30 18:02:25 UTC
  - PR #49258: (gtmanfred) flaky tests are flaky (refs: #49440)
  - cc27b67a37 Merge pull request #49440 from rallytime/bp-49258
  - 0191af1423 flaky tests are flaky yo
  - 720b671dda mark orchestration state tests as flaky
- ISSUE #48880: (damntoken) Can't run cmd.run with UTF-8 chars as arguments / parameters. With custom module. (refs: #49322)
- PR #49368: (rallytime) Back-port #49322 to 2018.3.3 @ 2018-08-28 17:15:15 UTC
  - PR #49322: (dwoz) Encode shell commands explicitly. (refs: #49368)
  - af80e64569 Merge pull request #49368 from rallytime/bp-49322
  - 238853b9ec Encode shell commands explicitly.
- PR #49363: (rallytime) Back-port #49245 to 2018.3.3 @ 2018-08-28 17:14:18 UTC
  - PR #49245: (dwoz) Skip grep unit tests on windows (refs: #49363)
  - 0fee3e8786 Merge pull request #49363 from rallytime/bp-49245
  - cc606509d0 Fix is\_windows call - use the right path
  - 5488fba38 Skip grep unit tests on windows
- PR #49361: (rallytime) Back-port #49244 to 2018.3.3 @ 2018-08-28 17:12:58 UTC
  - PR #49244: (dwoz) Test fixes: unit.fileserver.test\_gitfs (refs: #49361)
  - dbcd2fc726 Merge pull request #49361 from rallytime/bp-49244
  - e0909d3a25 Simplify by using to\_unicode helper
  - 4723c69092 Older GitPython version do not have a close method
  - d5fecba716 Fix up fileserver.test\_gitfs tests on windows
  - 4b688f6347 Remove unicode filenames on windows python 2
- PR #49362: (rallytime) Back-port #49240 to 2018.3.3 @ 2018-08-28 17:00:25 UTC
  - PR #49240: (dwoz) file state test fixes (refs: #49362, #49441)
  - b4a1e1d365 Merge pull request #49362 from rallytime/bp-49240
  - 16ca5b9694 Work around listdir encoding issues on py2 windows
  - 7650208dbc file state test fixes
- PR #49365: (rallytime) Back-port #49270 to 2018.3.3 @ 2018-08-28 16:56:23 UTC

- PR #49270: (dwoz) Add async helper to test\_sock\_path\_len (refs: #49365)
- 9ca9a775ff Merge pull request #49365 from rallytime/bp-49270
- 1b3f37a8b8 Add async helper to test\_sock\_path\_len
- PR #49364: (rallytime) Back-port #49243 to 2018.3.3 @ 2018-08-28 16:55:55 UTC
  - PR #49243: (dwoz) Revert newline translation change (refs: #49364)
  - bbf57da16 Merge pull request #49364 from rallytime/bp-49243
  - 5db77c6229 Revert newline translation change
- PR #49347: (Ch3LL) [2018.3.3] Backport #49345 @ 2018-08-28 01:54:00 UTC
  - PR #49345: (gtmanfred) upgrade including linux kernels (refs: #49347)
  - 74b78835b3 Merge pull request #49347 from Ch3LL/bp\_49345\_2018.3.3
  - 7bf5ba83c8 upgrade including linux kernels
- PR #49323: (Ch3LL) Skip nonexistent branch test for git versions <1.7.10 @ 2018-08-25 19:52:48 UTC
  - be6691d91b Merge pull request #49323 from Ch3LL/skip\_git
  - ee3d32f74e Skip nonexistent branch for git versions <1.7.10
- ISSUE #32737: (Lothiraldan) No support for compound matcher in external auth configuration (refs: #49236)
- PR #49313: (rallytime) Back-port #49236 to 2018.3.3 @ 2018-08-24 20:59:16 UTC
  - PR #49236: (terminalmage) Allow compound matching in eauth config expressions (refs: #49313)
  - 64d7b0e4c6 Merge pull request #49313 from rallytime/bp-49236
  - 1a5ef996e3 Add 'minion\_data\_cache: True' to mocked opts for minions unit tests
  - 549f5d5a86 Allow compound matching in eauth config expressions
- ISSUE saltstack/salt-jenkins#1075: (Ch3LL) [2018.3.3] arch python3 tests do not finish (refs: #49303, #49451)
- PR #49311: (rallytime) Back-port #49303 to 2018.3.3 @ 2018-08-24 17:48:23 UTC
  - PR #49303: (gtmanfred) use os.\_exit instead of sys.exit when daemonizing (refs: #49311)
  - 7a89a4c8aa Merge pull request #49311 from rallytime/bp-49303
  - 3fe1387751 use os.\_exit instead of sys.exit when daemonizing
- PR #49294: (Ch3LL) Move run\_function call from \_\_init\_\_ to setup @ 2018-08-24 12:41:35 UTC
  - 7bb356f11e Merge pull request #49294 from Ch3LL/fed\_28\_tests
  - 0a5d44a3db Move run\_function call from \_\_init\_\_ to setup
- PR #49302: (twangboy) Fix installer 2018.3.3 @ 2018-08-24 12:41:14 UTC
  - a607f9332f Merge pull request #49302 from twangboy/fix\_installer\_2018.3.3
  - 68fd37575e Fix erroneous NSSM reference
  - 103f2c289e Remove delete vcredist line
  - 007a16638e Bring installer updates from 2017.7.8 to 2018.3.3
- PR #49241: (terminalmage) Don't silently catch SystemExit @ 2018-08-22 12:57:58 UTC
  - bc0b4ac513 Merge pull request #49241 from terminalmage/salt-jenkins-1078
  - 08d144f2c7 Don't silently catch SystemExit

- c0fdb818f7 Don't use a bare except!
- **PR #49239:** (Ch3LL) Use yaml's safe\_dump in windows ec2 tests @ 2018-08-22 08:48:13 UTC
  - 0fb9ccf60a Merge pull request #49239 from Ch3LL/win\_yaml\_test
  - f5b42dbb24 import salt.utils.yaml
  - 67290eaff7 Use yaml's safe\_dump in windows ec2 tests
- **PR #49182:** (terminalmage) Fix hanging syndic test @ 2018-08-18 12:10:32 UTC
  - 134f125b96 Merge pull request #49182 from terminalmage/salt-jenkins-1078
  - a2d2cd317b Fix hanging syndic test
- **PR #49172:** (Ch3LL) [2018.3.3] cherry pick #49118 @ 2018-08-17 20:54:05 UTC
  - **PR #49118:** (dwoz) Multiple fixes for integration.states.test\_file (refs: #49172)
  - **PR #49088:** (dwoz) Multiple file state test fixes (refs: #49118)
  - **PR #49087:** (dwoz) Filter out scheme's that are not valid (refs: #49118)
  - b3a247bfb Merge pull request #49172 from Ch3LL/bp-49118
  - ce5e17bdb update is\_windows salt.utils to correct path
  - 3fef112409 Multiple fixes for integration.states.test\_file
- **PR #49173:** (Ch3LL) [2018.3.3] cherry pick #49167 @ 2018-08-17 20:30:27 UTC
  - **PR #49167:** (dwoz) Fix remaining file state integration tests (py3) (refs: #49173, #49442)
  - 85ffc8db87 Merge pull request #49173 from Ch3LL/bp-49167
  - a1a298a13c Simplify dict keys lookup
  - 3d26affa10 Fix remaining file state integration tests (py3)
- **PR #49171:** (Ch3LL) [2018.3.3] cherry pick #49103 @ 2018-08-17 20:23:32 UTC
  - **PR #49103:** (dwoz) Install the launcher so we can execute py files (refs: #49171)
  - ee54ea5f73 Merge pull request #49171 from Ch3LL/bp-49103
  - 05a2b91fb2 Install the launcher so we can execute py files
- **PR #49132:** (Ch3LL) [2018.3.3] backport PR #49062 @ 2018-08-17 14:51:50 UTC
  - **PR #49062:** (weswhet) fix memoize on available macOS services (refs: #49132)
  - 58034c9dc3 Merge pull request #49132 from Ch3LL/bp-49062
  - 990fdb6a52 decorator link fix, updating context names, as well as updating macutils tests for latest changes
  - 3ab5d282be fixing an issue with memoize on macOS services, switching to using `__context__` instead
- **PR #49142:** (Ch3LL) Remove -Z script\_arg for cloud tests @ 2018-08-16 16:12:59 UTC
  - 01f8f83cf0 Merge pull request #49142 from Ch3LL/rm\_z\_arg
  - a1ef6a88a6 Remove -Z script\_arg for cloud tests
- **PR #49137:** (Ch3LL) [2018.3.3] Update bootstrap script to latest release (2018.08.15) @ 2018-08-15 19:49:22 UTC
  - a03828884b Merge pull request #49137 from Ch3LL/bootstrap\_2018.3.3
  - eb9a612096 [2018.3.3] Update bootstrap script to latest release (2018.08.15)

- **PR #49110:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-14 17:11:25 UTC
  - b412bff534 Merge pull request #49110 from rallytime/merge-2018.3
  - 4649f60209 Update old utils paths with new paths
  - 49c2a784bb Merge branch '2017.7' into '2018.3'
    - \* d46e23f4c2 Merge pull request #49109 from rallytime/merge-2017.7
      - 3c5527f300 Merge branch '2017.7.8' into '2017.7'
      - 01cf2c71ff Merge pull request #49051 from rallytime/bp-49046
      - fc0817cb35 The osfullname grain differs when using Python2 vs Python3, swapping this out for the "OS" grain which is consistent.
    - \* 8954dd269f Merge pull request #49090 from dwoz/file\_line\_fix
      - 0dca634e3c Search for (but do not include) CRLF line ending
    - \* b99edc3dce Merge pull request #49088 from dwoz/file\_hash\_diffs
      - 054afb8197 Multiple file state test fixes
    - \* 274977b6c4 Merge pull request #49087 from dwoz/url\_file\_test\_fixes
      - 632b65f975 Filter out scheme's that are not valid
    - \* db5fb3232a Merge pull request #49086 from rallytime/new-doc-img
      - 90954203cb Update the DOCBANNER image for saltconf
    - \* af6ec1dce2 Merge pull request #49045 from twangboy/fix\_43164
      - 589456d08f Fix lint errors
      - e79243566d Add rallytime's suggestions
      - d1ae6b3d6d Fix docs for the registry module and state
    - \* a840fea1a1 Merge pull request #49083 from rallytime/bootstrap-2017.7
      - 358e14cdac [2017.7] Update bootstrap script to latest release
    - \* 9db6cd5654 Merge pull request #49059 from twangboy/fix\_37984
      - 7ed45b5b00 Remove import
      - 7fb1edb469 Fix docs to clarify uptime output on Windows
    - \* f9db72f00c Merge pull request #49061 from saltstack/revert-48982-new\_logo\_2017.7
      - 98a8da728b Revert "New logo 2017.7 (WIP)"
    - \* bbcd1869ec Merge pull request #48982 from newwebash/new\_logo\_2017.7
      - 5c1c311f77 Update Salt Conf ad
      - 72dc63c426 Merge branch '2017.7' of <https://github.com/saltstack/salt> into new\_logo\_2017.7
      - 9f4e78a7b9 Revert "Update saltconf ad"
      - 3ab8cdb882 Update saltconf ad
- **ISSUE #48665:** (dgentek) salt-api auth ldap generates a valid token when using bindpw and an invalid request (refs: #48901)
- **PR #48901:** (garethgreenaway) [2018.3] fix to auth/ldap.py @ 2018-08-14 16:10:19 UTC
  - e78fc0e0eb Merge pull request #48901 from garethgreenaway/48665\_auth\_ldap\_valid\_token\_failed\_auth

- d4e4f2e803 Fixing a typo in a comment.
- 2eb167ea42 Fixing issue when a valid token is generated even when invalid user credentials are passed. This change verifies that the binddn credentials are valid, then verifies that the username & password (if not None) are also valid.
- ISSUE #49081: (frogunder) Fluorine - I see error/traceback when running minion in debug mode (refs: #49085)
- PR #49099: (rallytime) Back-port #49085 to 2018.3 @ 2018-08-14 12:42:51 UTC
  - PR #49085: (gtmanfred) fix async call to process manager (refs: #49099)
  - 484c1e0123 Merge pull request #49099 from rallytime/bp-49085
  - 024d9cb843 fix async call to process manager
- ISSUE #49018: (Ch3LL) add MasterPillarUtil tests (refs: #49034)
- PR #49071: (rallytime) Back-port #49034 to 2018.3 @ 2018-08-13 20:15:31 UTC
  - PR #49034: (garethgreenaway) [fluorine] Adding tests for MasterPillarUtil (refs: #49071)
  - bc033da677 Merge pull request #49071 from rallytime/bp-49034
  - 8108a4d31a Adding some tests for the grains, pillar and mine functions in the cache runner. These will also ensure that the relevant functions in salt.utils.master.MasterPillarUtil are functioning properly.
- PR #49077: (rallytime) Back-port #49075 to 2018.3 @ 2018-08-13 20:00:00 UTC
  - PR #49075: (gtmanfred) fix last async issue (refs: #49077)
  - 90c2f026b3 Merge pull request #49077 from rallytime/bp-49075
  - 5e07b8306b fix last async issue
- PR #49096: (rallytime) Update the DOCBANNER image for saltconf @ 2018-08-13 19:59:39 UTC
  - 6942ef1102 Merge pull request #49096 from rallytime/new-doc-img-2018.3
  - 75080705ce Update the DOCBANNER image for saltconf
- PR #49055: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-13 19:20:11 UTC
  - 0e1ed7b923 Merge pull request #49055 from rallytime/merge-2018.3
  - 83a15cb623 Add optimization\_order config to mocked opts
  - ea6883ee55 Update old utils paths to new utils paths
  - 201031fa8a Merge branch '2017.7' into '2018.3'
    - \* 0d2a495378 Merge pull request #49050 from rallytime/merge-2017.7
      - ed6fb8b739 Merge branch '2017.7.8' into '2017.7'
      - 189e28691f Merge pull request #49044 from Ch3LL/vultr\_test
      - 0dedfae4d1 increase timeout on vultr cloud integration test
      - c606a32cf2 Merge pull request #49042 from rallytime/flaky-jinja-test
      - a43d9b4ba6 Mark a jinja template test as flaky
      - 6415b6f73b Merge pull request #49041 from Ch3LL/ec2\_fix
      - cf7f2459b8 [2017.7.8] backport PR #48212
      - 1db036406b Merge pull request #49030 from rallytime/update-client-tests
      - f08ee6c6ae Update netapi client tests

- \* 70be9ac9b1 Merge pull request #49046 from garethgreen-away/1022\_fixing\_test\_failing\_py3\_Debian\_test
  - fa2339bb91 The osfullname grain differs when using Python2 vs Python3, swapping this out for the "OS" grain which is consistent.
- \* 69c9b0afb1 Merge pull request #49036 from cspeidel/doc-fix-netyang
  - f7ac085eb5 minor doc fix in netyang.py
- \* c5f3fd6b2b Merge pull request #48997 from AVeenstra/patch-1
  - 0e535f2c8c Unpacking dict with the six iterator
  - 5e82685b89 Python 3 related fix in highstate\_return.py
- \* c06a3cf531 Merge pull request #49021 from rallytime/merge-2017.7
  - ca82b3d57a Merge branch '2017.7.8' into merge-2017.7
  - f73ba21bc7 Merge pull request #49024 from rallytime/fix-deb-test
  - a9c16d9137 Fix test error in test\_compiler\_jinja check
  - c6f8429e41 Merge branch '2017.7.8' into '2017.7'
  - 6b6d68c615 Merge pull request #49020 from rallytime/fix-grains-test
  - f72a3ac6be Make grains integration test more robust
  - 92d6c25c7f Merge pull request #49002 from rallytime/skip-jinja-deep-error-test
  - 23b66ef8bb Skip test\_jinja\_deep\_error on Debian 8
  - 41d9f11eb3 Merge pull request #48999 from rallytime/fix-boto-test
  - d0136b1be5 Update expected return value in boto test
- \* 2ddb6391a Merge pull request #49010 from Ch3LL/univentioin
  - c09bce9afe Add univentioin OS to debian os\_family mapping
- \* 41bd36842e Merge pull request #48636 from terminalmage/loader-fixes
  - 0441cd56ef Add optimization\_order to mocking
  - 2256fad320 Process pycache files after .py files
  - a78663a301 Lint
  - 0728b5f8b6 Add note about Python 3.5+ only support for optimization\_order
  - 764969ce08 Add a test to confirm that .py files are still loaded correctly
  - 0f60beb6b6 Fix bad copy pasta
  - fbcd142ea2 Add configuration docs for optimization\_order config option
  - 8af2d580f3 Only compile the suffix\_order/map once per LazyLoader instance
  - 4b95e5f313 Don't put \_\_pycache\_\_ dir in the file list
  - e7c10196da Quiet the byte compiling for PY2
  - 9338370477 Add unit tests for loader optimization levels
  - c3622933c1 PY3: Support different optimization levels
  - 6fc8da5bab Add optimization\_order config option with default value
  - dfe423a1e0 Remove commented-out log message

- **PR #49084:** ([rallytime](#)) [2018.3] Update bootstrap script to latest release @ 2018-08-13 18:14:42 UTC
  - [db7ec46875](#) Merge pull request [#49084](#) from rallytime/bootstrap-2018.3
  - [28dc8ce954](#) [2017.7] Update bootstrap script to latest release
- **PR #49052:** ([isbm](#)) Python 3.7 support (backport 2018.3) @ 2018-08-13 13:06:51 UTC
  - [b0d5acbe0d](#) Merge pull request [#49052](#) from isbm/isbm-python37-support-2018.3
  - [4386a9ca1f](#) Merge branch '2018.3' into isbm-python37-support-2018.3
  - [bc85a5fa98](#) Fix configuration setting
  - [47078a300f](#) Remove async keyword, moving it into the kwargs.
  - [31dccc4fdf](#) fix unicode literals
  - [990936992c](#) Keep runner API unchanged
  - [46bafcafef](#) Fix nag-message
  - [5c887ac2ae](#) Support original API
  - [2c22e794d4](#) Use kwargs instead of directly named parameters
  - [7d095491d9](#) Update docstring
  - [9807e8dbb7](#) Add 'async' backward compatibility
  - [e8608aa9be](#) Revert api call: it is about "functionname\_async" suffix.

  - [be07f64bc4](#) Change internal function signatures to avoid reserved word
  - [7d095e0b26](#) Rename async function to asynchronous
  - [35eaebb8a4](#) Fix docstrings
  - [7a597f19b5](#) Fix comments
  - [69920366ae](#) Fix CLI config
  - [173f3d7aa8](#) Fix docstring typo
  - [b7da571624](#) Fix imports
  - [7ec3954bef](#) Rename module to full wording
- **ISSUE #48557:** ([whytewolf](#)) file.line in python3 on windows 2012 r2 is adding extra CR line endings. (refs: [#49026](#))
- **PR #49026:** ([dwoz](#)) Fix file.line line endings @ 2018-08-13 13:05:43 UTC
  - [338ecb70ef](#) Merge pull request [#49026](#) from dwoz/issue\_48557
  - [a4d22fda2f](#) Merge remote-tracking branch 'origin/issue\_48557' into issue\_48557

- \* 702e76cfc9 Merge branch '2018.3' into issue\_48557
  - 6cf93e8fc4 Skip newline in binary mode
  - 2cf80c1595 Fix linter errors
  - baf291b4c8 Fix file.line line endings
- **PR #49038:** (gtmanfred) disable enable\_ssh\_minions to see if it is slowing down 2018.3 tests @ 2018-08-10 18:07:59 UTC
  - 602fed7806 Merge pull request #49038 from gtmanfred/slowtest
  - 6bc44c91c4 remove localhost from tests
  - 7b168a5aac disable enable\_ssh\_minions to see if it is slowing down 2018.3 tests
- **ISSUE #48996:** (jils2013) file.get\_diff not work on version:2018.3.2 (refs: #49033)
- **PR #49033:** (terminalmage) Fix file.get\_diff for remote files @ 2018-08-09 21:06:53 UTC
  - 4eeb75f028 Merge pull request #49033 from terminalmage/issue48996
  - 163aea71c8 Lint
  - d6e5038022 Fix file.get\_diff for remote files
- **ISSUE #48856:** (travispaul) Salt fails to start on NetBSD 8 (refs: #48926)
- **PR #48926:** (travispaul) Handle ifconfig output differently for NetBSD >= 8.0 @ 2018-08-09 20:07:44 UTC
  - b24c96a292 Merge pull request #48926 from travispaul/fix-netbsd-8-new-ifconfig
  - d59b6d8269 Add unit test for NetBSD 8 ifconfig changes
  - 80f8a667d1 Handle ifconfig output differently for NetBSD >= 8.0
- **PR #48803:** (dmurphy18) Support for execution modules and states mount on AIX @ 2018-08-09 17:51:55 UTC
  - 7d6b9ed0a5 Merge pull request #48803 from dmurphy18/aix\_filesystems
  - 92818f816b Fixes for testing
  - 77dd7a1743 Adjust unit tests
  - eaed033cde Updated for review comments and adjusted locking when writing files
  - 5bf9e6085b Update due to review comments
  - 9fb5641dc7 Mount unit tests for modules and states for AIX
  - b28f427432 Save off work after laptop issue
  - e5c2741fe7 module and states mount support for AIX
  - b701e16ad0 Further updates to support for mount on AIX
  - 210076276f Initial support for handling /etc/filesystems on AIX
- **ISSUE #48496:** (icy) Salt-key unable to delete the certificate Test=True (refs: #48929)
- **PR #48929:** (terminalmage) 2 salt-key fixes @ 2018-08-09 17:50:07 UTC
  - 2a38905a8a Merge pull request #48929 from terminalmage/issue48496
  - 7ac10f9eac 2 salt-key fixes
- **ISSUE #47481:** (whytewolf) Oxygen: task.add\_trigger with start\_date stating strtptime needs a string not int. (refs: #49022)
- **PR #49022:** (dwoz) Document time format idiosyncrasies @ 2018-08-09 17:47:12 UTC

- bb9d23bfa1 Merge pull request #49022 from dwoz/47481\_docs
- 313a3d93d6 Document time format idiosyncrasies
- PR #48932: (twangboy) Fix pkg.install when pkg already installed @ 2018-08-09 17:45:51 UTC
  - 9b6a9ff4f1 Merge pull request #48932 from twangboy/fix\_win\_repo
  - 075ea29d29 remove .lower(), fix debug messages
  - d7c2f476ac Remove current: version for latest as well
  - 522ac26459 Fix typo in code comment
  - 47b2898a85 return empty dict on no changes
  - 6532706d2f Make the tests run on Linux
  - cfe55a391a Add tests for pkg.install output
  - 8ec058f498 Clarify code comment
  - 8af2cfd54a Fix issues where current is not returned
- PR #49011: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-09 17:34:18 UTC
  - d7b7a92ef6 Merge pull request #49011 from rallytime/merge-2018.3
  - 02670969d0 Apply fix to ssh init file that was there before merge
  - 7e1f7915e4 Revert "Allow for not being prompted to supply a password to deploy keys to a minion with salt-ssh"
  - 00416d54d1 Revert "add key-deploy test"
  - c26fa0d6c4 Mark orchestration test as expensive
  - fceb6d8d6f Update old utils paths to use new paths
  - 3e6445a9d6 Merge branch '2017.7' into '2018.3'
    - \* b49eeca6e9 Merge pull request #49003 from rallytime/boto-test-2017.7
      - 1a23bb233f Update expected return value in boto test
    - \* 51eed1fdfb Merge pull request #48988 from rallytime/merge-2017.7
      - df8699e2e7 Merge branch '2017.7.8' into '2017.7'
      - a1e54634dc Merge pull request #48976 from rallytime/tornado
      - 0bd838ab6c Skip unreliable tornado tests
      - 22713be9c1 Merge pull request #48979 from rallytime/bp-48959
      - 03aa0e49b0 Merge pull request #48970 from Ch3LL/back\_48962
      - 3ce1b8a3c9 Update the elif block to only be true for versions below Debian 9.
      - e6cea5e3c7 Merge pull request #48968 from rallytime/man-pages
      - 64fe3be41a Update man pages for 2017.7.8 release
    - \* 10fd4661ff Merge pull request #48978 from gtmanfred/2017.7
      - 6108363f82 clean up gemfile
    - \* 5b2423e527 Merge pull request #48959 from rallytime/flaky-tests
      - aaf986d728 Mark one grains test as flaky & convert to pytest notation

- e7e5abcf48 Mark 2 matcher tests as flaky
- \* 79994ecab4 Merge pull request #48962 from garethgreenaway/1022\_test\_service\_disable\_debian\_part\_deux
  - 9e71551b36 Update the elif block to only be true for versions below Debian 9.
- \* 1a1bda00cb Merge pull request #48960 from dwoz/block\_replace\_tests
  - 94ac2b4fc7 Multiple block replace test fixes
- \* 93b862f350 Merge pull request #48957 from whytewolf/beacons\_log\_doc\_change
  - a77fd16869 Update salt.beacons.log to reflect that re module is used for matching.
- \* 0245cffb07 Merge pull request #48955 from terminalmage/service-systemd
  - 23f87bd536 Don't load service.py if minion is running a non-sysvinit init system
- \* 848d583438 Merge pull request #48950 from KaiSforza/kitchenfix-2017.7
  - 5242cb143a Added a quote to kitchen Jenkinsfiles
- \* 928d688d65 Merge pull request #48943 from rallytime/flaky-tests
  - 668da57ab9 Mark some shell and runner integration tests as flaky
- \* cd42510d3a Merge pull request #48940 from rallytime/bp-48852
  - fa4ef92e79 Record all the artifacts from the build
- \* 43649a68be Merge pull request #48935 from garethgreenaway/1045\_test\_pkg\_015\_installed\_held\_centos
  - 0bb10107b6 Merge branch '2017.7' into 1045\_test\_pkg\_015\_installed\_held\_centos
  - 24d5e6a22f Fixing the test\_pkg\_015\_installed\_held test to be able to successfully run on CentOS
- \* 2421e2a570 Merge pull request #47100 from gtmanfred/ssh
  - 5b443af7ae add key-deploy test
  - a131c9beeb Allow for not being prompted to supply a password to deploy keys to a minion with salt-ssh
- \* d541bd6446 Merge pull request #48891 from damon-atkins/2017.7\_win\_pkg.list\_pkgs\_not\_found
  - a4af1dbfb1 Fix win\_pkg issues introduced Jan 2018. If DisplayVersion does not exist it should return version as "Not Found"
- \* 5f6a56f5dc Merge pull request #48896 from rallytime/bp-48730
  - 57aa204c9d Merge branch '2017.7' into bp-48730
  - 4995922584 Forgot variable in signature
  - 0503bc18b6 Fix batch install using pkgng
- \* 0c64bba865 Merge pull request #48933 from garethgreenaway/1022\_debian\_8\_failing\_service-test
  - 280d1d2ad2 Fixing failing test, integration.modules.test\_service.ServiceModuleTest.test\_service\_disable\_does on Debian 8 and higher.
- \* 0c3d2c6a09 Merge pull request #48922 from rallytime/cache-doc-error
  - 8ca89df7e8 Update backticks on job\_cache docs
- \* 8d1fc4f8e5 Merge pull request #48866 from Ch3LL/cmd\_win\_tests

- 905da13653 Merge branch '2017.7' into cmd\_win\_tests
- \* 57d58e7541 Merge pull request #48920 from rallytime/bp-48904-2017.7
  - a55f92954a No rehashing in parallel
  - 3be11e06fe Add docs for new escape kwarg
  - 391bb8a411 use a specific path for just the cmd.\_run call
  - 62c66ba489 make sure we lower the check on shell
  - 9312a993a5 Add cmd module integration tests for windows and fix space in path issue
- **ISSUE #48123:** (c-wicklein) file.directory with recurse fails when it encounters a broken symbolic link (refs: #48985)
- **PR #48985:** (garethgreenaway) [2018.3] Fix to salt/modules/file.py @ 2018-08-09 15:03:09 UTC
  - 3325b7d4c0 Merge pull request #48985 from garethgreenaway/48123\_file\_directory\_recurse\_fails\_broken\_symlink
  - 10c4eca206 Merge branch '2018.3' into 48123\_file\_directory\_recurse\_fails\_broken\_symlink
  - a404cc030f Fixing the issue when using the file.directory state with recurse if the directory contains a broken symbolic link. This fix adds an additional conditional, is\_link, before running lsattr since lsattr does not work on symlinks and causes issues when that symlink is broken.
- **ISSUE #47695:** (AmbicaY) Continuous error in the proxy minion logs (refs: #49019)
- **PR #49019:** (garethgreenaway) [2018.3] Fix to scheduler when global enabled key is present @ 2018-08-09 13:06:26 UTC
  - d353c02a8c Merge pull request #49019 from garethgreenaway/47695\_fixing\_scheduler\_bug\_when\_enabled\_is\_present
  - aff1b8f6d4 Lint.
  - 8935c08141 Fixing a bug that occurs if the "enabled" key is present in the scheduler items dictionary. Adding a test to ensure scheduler runs as expected when that key is present.
- **PR #49023:** (The-Loeki) Salt SSH appends IdentityFile=agent-forwarding @ 2018-08-09 12:55:59 UTC
  - a56bc7ffb9 Merge pull request #49023 from The-Loeki/patch-1
  - 8b53571c70 Salt SSH appends IdentityFile=agent-forwarding
- **PR #48981:** (Ch3LL) Add warning to mac runas docs about escaping characters @ 2018-08-08 19:43:43 UTC
  - 4590494b50 Merge pull request #48981 from Ch3LL/mac\_runas\_quote
  - 8269b55b84 remove unnecessary spaces in cmdmod.py docs
  - 757daf7d7e add runas macosx warning in 2018.3.3 release notes
  - 4e9e985b14 Add warning to mac runas docs about escaping characters
- **PR #49004:** (rallytime) Port #48999 to 2018.3 @ 2018-08-08 15:32:46 UTC
  - **PR #48999:** (rallytime) Update expected return value in boto test (refs: #49004, #49003)
  - b87bf905c2 Merge pull request #49004 from rallytime/boto-test-2018.3
  - 9f0b9a1073 Update expected return value in boto test
- **PR #48987:** (twangboy) Fix issue with win\_iis.create\_cert\_binding @ 2018-08-08 13:29:06 UTC
  - 630f61e625 Merge pull request #48987 from twangboy/fix\_48786
  - 86d0836f90 Fix issue with iterating over None
- **ISSUE #48777:** (jonasgit) file.recurse fails on file contents encoding not utf-8 (refs: #48934)

- **PR #48934:** ([terminalmage](#)) Properly handle latin-1 encoding in file diffs @ 2018-08-07 21:02:24 UTC
  - [ab1a713bc3](#) Merge pull request #48934 from terminalmage/issue48777
  - [52c64e4d51](#) Fix to\_unicode test
  - [e2d19f40b6](#) Only try latin-1 from get\_diff instead of by default
  - [d39fa889f3](#) Add stringutils.get\_diff to mocks
  - [5b191c9120](#) Fix incorrect use of \_\_salt\_\_ when \_\_utils\_\_ is needed
  - [53ba10ad5f](#) Skip pylint false-positives
  - [f14f4dae22](#) Add unit test for latin-1 fallback, multi-encoding
  - [906644a80f](#) PY3 scoping fix
  - [726dd4331f](#) Add integration test for latin-1 file diffs
  - [2dd1f31d23](#) Use BASE\_FILES instead of redundant STATE\_DIR
  - [612ffb5fe8](#) Use new get\_diff helper in file module
  - [c632265802](#) Make to\_unicode/to\_str/to\_bytes helpers attempt latin-1
  - [2a0cb49b01](#) Add get\_diff to salt.utils.stringutils
- **ISSUE #47766:** ([zerthimon](#)) salt-cloud: openstack driver: crash on instance creation (refs: #48956)
- **PR #48956:** ([gtmanfred](#)) if booted from volume, use string from image @ 2018-08-07 16:39:45 UTC
  - [bad995462c](#) Merge pull request #48956 from gtmanfred/openstack
  - [4cb1636c4b](#) if booted from volume, use string from image
- **ISSUE #48306:** ([davidscholberg](#)) Documentation update for custom returners used for master job cache (refs: #48319)
- **PR #48319:** ([gtmanfred](#)) don't break older returners right now @ 2018-08-06 13:19:43 UTC
  - [71f587edd7](#) Merge pull request #48319 from gtmanfred/jid
  - [084e7f0ef4](#) Merge branch '2018.3' into jid
  - [60661b4cd0](#) document minions required on save\_load
  - [a8c243071d](#) document passing in minions
  - [d49381c0b6](#) don't break save\_load backwards compat
  - [cfcacf953a](#) don't break older returners right now
- **PR #48941:** ([rallytime](#)) Back-port #48912 to 2018.3 @ 2018-08-06 13:09:38 UTC
  - **PR #48912:** ([maxim-sermin](#)) make jboss7.py compatible with 2018.3.0 and later (refs: #48941)
  - [1623e53ef4](#) Merge pull request #48941 from rallytime/bp-48912
  - [3f55b2f89e](#) make jboss7.py compatible with 2018.3.0 and later
- **PR #48897:** ([rallytime](#)) Back-port #48863 to 2018.3 @ 2018-08-05 19:15:51 UTC
  - **PR #48863:** ([admd](#)) Decode file contents for python2 as well (refs: #48897)
  - [070af9d925](#) Merge pull request #48897 from rallytime/bp-48863
  - [0ee1940232](#) Merge branch '2018.3' into bp-48863
  - [f40b966d99](#) decode file contents for python2 as well

- **PR #48928:** (Ch3LL) fix test\_runas integration test for macosx @ 2018-08-05 14:24:13 UTC
  - abd7f1312d Merge pull request #48928 from Ch3LL/mac\_runas
  - 3d6455dbcd remove unnecessary comment in setup
  - 8e30db0217 move destructivetest to testname
  - 708dec8740 add destructivetest to setup and teardown for runas test
  - c0730ff968 fix test\_runas integration test for macosx
- **PR #48899:** (Ch3LL) remove base\_top\_file file in teardown and add sleep @ 2018-08-05 14:23:42 UTC
  - dbd300ff70 Merge pull request #48899 from Ch3LL/unit\_state
  - 0272cadff8 Merge branch '2018.3' into unit\_state
  - 5896c7fc36 remove base\_top\_file file in teardown and add sleep
- **PR #48898:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-05 14:23:19 UTC
  - ffa1fcc682 Merge pull request #48898 from rallytime/merge-2018.3
  - 1f093cef4a Merge branch '2018.3' into merge-2018.3
  - b3a5aa49d7 Merge branch '2017.7' into '2018.3'
    - \* e79ccb35b1 Merge pull request #48876 from Vaelatern/make-network-learning-optional
      - a4905b0e5d Make IP\_LEARNING optional
    - \* f8bfab4f9f Merge pull request #48890 from Ch3LL/cmd\_test
      - acda4ed9ab add sleep in test\_cmd integration test
    - \* 52722f6ded Merge pull request #48885 from rallytime/flaky-tests-shadow
      - da871a2d57 Mark shadow module integration test as flaky
    - \* bf0895656e Merge pull request #48884 from rallytime/flaky-tests-matchers
      - 38d9eae537 Merge branch '2017.7' into flaky-tests-matchers
    - \* a567666938 Merge pull request #48868 from terminalmage/fix-loader-race
      - 5f1169b9a2 Fix race when SIGTERM/SIGINT received while lazyloading a module
    - \* 0ca0b6f2f2 Merge pull request #48883 from terminalmage/salt-jenkins-1023
      - c61f75cb50 Fix failing git worktree tests
      - 3660dff13c Separate compound matcher tests into individual tests
    - \* a84f5155a1 Merge pull request #48869 from Ch3LL/mac\_shell\_tests
      - 3734b1ec89 Catch socket.error exception in testprogram
    - \* 7f56b8bf44 Merge pull request #48867 from rallytime/skip-tornado-test
      - 7320aa9104 Skip unreliable tornado test.
- **PR #48893:** (Ch3LL) handle when ca\_certs is None in utils.http @ 2018-08-03 20:30:48 UTC
  - 848e26ed0b Merge pull request #48893 from Ch3LL/http\_tests
  - 16d251f7ff Merge branch '2018.3' into http\_tests
  - 5674ddd2a handle when ca\_certs is None in utils.http
- **PR #48903:** (Vaelatern) Wrap ElementTree.tostring to make strs, not bytes @ 2018-08-03 19:12:34 UTC

- PR #48877: (Vaelatern) Wrap ElementTree.tostring to make str, not bytes (refs: #48903)
- f1adf56017 Merge pull request #48903 from Vaelatern/improve-salt-cloud-python3-virt
- c45447fe0b Wrap ElementTree.tostring to make str, not bytes
- PR #48900: (Ch3LL) skip getpwnam check on mac in unit test\_cmdmod @ 2018-08-03 16:38:51 UTC
  - d23471262d Merge pull request #48900 from Ch3LL/cmd\_unit
  - b82dd708be skip getpwnam check on mac in unit test\_cmdmod
- PR #48921: (rallytime) Back-port #48904 to 2018.3 @ 2018-08-03 15:17:15 UTC
  - PR #48904: (KaiSforza) No rehashing in parallel (refs: #48921, #48920)

  - b504625f61 No rehashing in parallel
- PR #48877: (Vaelatern) Wrap ElementTree.tostring to make str, not bytes (refs: #48903) @ 2018-08-02 19:28:56 UTC
  - 1e150923aa Merge pull request #48877 from Vaelatern/improve-salt-cloud-libvirt-python3-libvirt
  - fb7885315c Wrap ElementTree.tostring to make str, not bytes
- PR #48824: (rallytime) Bump deprecation in win\_servermanager state to Neon @ 2018-08-02 18:01:34 UTC
  - 1fb7d9431b Merge pull request #48824 from rallytime/win\_servermanager\_deprecations
  - 6ef5412528 Bump deprecation in win\_servermanager state to Neon
- ISSUE #37512: (ChristianBeer) What's the precedence if multiple master configurations are specified? (refs: #48888)
- PR #48888: (terminalmage) Explicitly document the configuration override priority @ 2018-08-02 16:57:18 UTC
  - ec8e07e8ce Merge pull request #48888 from terminalmage/issue37512
  - 7dce7cde14 Explicitly document the configuration override priority
- PR #48871: (dwoz) Remove unicode key pairs from environ after test @ 2018-08-01 22:33:41 UTC
  - d4bb3a0963 Merge pull request #48871 from dwoz/test\_cleanup
  - f2e15e7f1d Do not re-define tearDown
  - 4f8a191a69 Remove unicode key pairs from environ after test
- PR #48843: (isbm) Prevent u'something' to appear in help info. @ 2018-08-01 20:38:58 UTC
  - bec79e83a3 Merge pull request #48843 from isbm/isbm-log-level-names-fix-2
  - a63686180d Merge branch '2018.3' into isbm-log-level-names-fix-2
  - 783c96ac72 Prevent u'something' to appear in help info.
- PR #48855: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-01 17:44:59 UTC
  - a8376b537a Merge pull request #48855 from rallytime/merge-2018.3
  - 44998c208e Lint: Fix undefined logger variable
  - 92c9317a25 Update old utils paths to use new paths
  - 15bfba7143 Merge branch '2017.7' into '2018.3'
    - \* 05f2d65de3 Merge pull request #48853 from rallytime/bp-48850
    - 3c33ee554a Skip tests in integration.shell.test\_master

- \* 8a1285239a Merge pull request #48426 from garethgreen-away/46689\_fixing\_pkg\_held\_when\_package\_is\_installed
  - 9b0f5dd212 Fixing indentation, removing some unnecessary conditionals.
  - 727964ab55 One last cleanup.
  - 11cb86e6eb General cleanup in pkg state, reducing duplicate code. Fixing the requires\_salt\_modules decorator, sys.doc was returning too much information for the event to handle. This change specifically calls sys.doc with the module name.
  - 16fb6ae635 Make sure pkg.hold and pkg.unhold are available before running the test.
  - 998651102d Fixing a situation when a package is already installed via salt or manually and a state attempts to set that package to be held. Previously the holding/unholding logic was only being run against packages that were being installed. This change moves the holding logic outside and runs it against all desired packages. Adding a new test to test holding logic.
- \* c8e69431ff Merge pull request #47734 from OrlandoArcapix/Issue47689-pip-state-performance
  - 662bd1f780 Merge branch '2017.7' into Issue47689-pip-state-performance
  - 66936b4f41 Changed string comparison in pip test to match new confirmation string - ref PR #47734.
  - bb5939d6ef Merge branch '2017.7' into Issue47689-pip-state-performance
  - d6a49ae41c Merge branch '2017.7' into Issue47689-pip-state-performance
  - d4083fc9d1 Merge branch 'Issue47689-pip-state-performance' of github.com:OrlandoArcapix/salt into Issue47689-pip-state-performance
  - 779b5fa785 Merge branch '2017.7' into Issue47689-pip-state-performance
  - f3653349ab Removed whitespaces at end of added comments lines
  - db11f2ff4b Merge branch '2017.7' into Issue47689-pip-state-performance
  - eac0178de2 Ref: #47689 - document additional kwarg passed to pip.\_check\_if\_installed function
  - 0d19803106 Merge branch '2017.7' into Issue47689-pip-state-performance
  - d3678bf2f3 #47689 fix lint errors
  - 4fec8f6bcc #47698 improve run-speed of pip package state checks by only loading the current package list once when checking multiple packages
- \* 83a5b3cc47 Merge pull request #48844 from AVeenstra/fix-python3-incompatibility
  - f238779a62 Merge branch '2017.7' into fix-python3-incompatibility
  - 6b1805afc6 Fixed Python 3 incompatibility in methods in nilrt\_ip and debian\_ip.
- \* 136ff6735a Merge pull request #48662 from slaws/fix-retention-schedule-48637
  - 3c8f5f5b3d pylint fix
  - 5539eff39e Excluding relative dirs in state.file.retention\_schedule
- \* 1fc04f281b Merge pull request #48840 from gtmanfred/docs
  - 8d2d268c4a fix links in pkg doc.
- \* 0a19f845ea Merge pull request #48834 from gtmanfred/slutil
  - f9441d2bef read output of stringio if it is readable

- \* 2e00939a6e Merge pull request #48788 from Ch3LL/timezone\_windows
  - de95a6a215 add unused import to timezone test file
  - 22e424859e add unused import to import
  - 0840fc3117 disable pylint import error
  - f09d1a2c7e Add timzeon windows integration tests and fix get\_zone
- **ISSUE #48659:** (dstoliker) file.grep with glob (\*) in path produces file not found error (refs: #48830)
- **PR #48830:** (garethgreenaway) [2018.3] Fixes to file.grep @ 2018-07-31 21:30:04 UTC
  - e23ba01cd2 Merge pull request #48830 from garethgreenaway/48659\_file\_grep\_glob\_fix
  - 0791b0a03c FileGrepTestCase tests back to 2018.3
  - 2e01c55e7e Fixing a bug that prevents specifying wildcards for filenames.
- **PR #48814:** (isbm) dmidecode race conditions check @ 2018-07-31 20:48:29 UTC
  - 9fda70b3d0 Merge pull request #48814 from isbm/isbm-2018.3-smbios-bugfix
  - 5f1141dc05 Merge branch '2018.3' into isbm-2018.3-smbios-bugfix
  - b00ee5feef Update clean clause
  - b1b2e9c222 Remove multiple returns and combine logic to just one clause
  - fd77f760ee Rephrase explanatory comment
  - 1031e06443 Remove unnecessary code
  - c379b7e4ed Get rid of global variable
- **PR #48804:** (Ch3LL) Use brew path from which cmd in mac\_brew module @ 2018-07-31 20:24:33 UTC
  - 3d16a63ff2 Merge pull request #48804 from Ch3LL/mac\_brew
  - e818c752b3 Merge branch '2018.3' into mac\_brew
  - 41e3d17f29 Use brew path from which cmd in mac\_brew module
- **PR #48836:** (dwoz) Fix unicode directory listing on py2 @ 2018-07-31 20:22:53 UTC
  - 950c1014aa Merge pull request #48836 from dwoz/unicode\_names\_py2
  - 47e158b9f0 Optomize if statement
  - 9b462394b2 Fix unicode directory listing on py2
- **PR #48847:** (terminalmage) Update file.blockreplace docs to reflect changed functionality @ 2018-07-31 18:11:30 UTC
  - baf8c5784a Merge pull request #48847 from terminalmage/issue48695
  - e2bdf7fb92 Update file.blockreplace docs to reflect changed functionality
- **PR #48587:** (twangboy) Fix lgpo issue on Py3 @ 2018-07-31 18:05:58 UTC
  - 644a1f4ff8 Merge pull request #48587 from twangboy/fix\_lgpo
  - a42621c817 Write file in normal mode
  - bfcdbeca3b Fix lgpo issue on Py3
- **PR #48796:** (Ch3LL) Remove fake su used in integration tests @ 2018-07-31 17:08:54 UTC
  - 2bacc23481 Merge pull request #48796 from Ch3LL/remove\_su

- d3b7f2cb18 Remove fake su used in integration tests
- **ISSUE #38310:** (ghost) Unable to checkout external pillar git repo using its git tag (refs: #48689)
- **PR #48689:** (linoplt) Fix ext\_pillar remote checkout using tag (pygit2) @ 2018-07-31 16:15:58 UTC
  - 00d06bda76 Merge pull request #48689 from linoplt/fix\_38310\_pygit2\_checkout\_ext\_pillar\_remote\_using\_tag
  - eb4361dcc2 Merge branch '2018.3' into fix\_38310\_pygit2\_checkout\_ext\_pillar\_remote\_using\_tag
  - c20977e3bc Merge branch '2018.3' into fix\_38310\_pygit2\_checkout\_ext\_pillar\_remote\_using\_tag
  - b0157c215b Fix ext\_pillar remote checkout using tag (pygit2)
- **PR #48838:** (sizgiyaev) Fixed: added additional return code 200 for succeeded vault api request @ 2018-07-31 16:14:22 UTC
  - 5e14e36195 Merge pull request #48838 from sizgiyaev/fix-vault-policy-state
  - 02d09c6281 Fixed: added additional return code 200 for succeeded api request
- **PR #48714:** (dwoz) Always transfer bytes from filesaver roots @ 2018-07-30 22:37:13 UTC
  - 69f81214d1 Merge pull request #48714 from dwoz/state\_echo\_fix
  - ce3ed43dab Always use unix line endings
  - d5e60090bc Merge pull request #2 from terminalmage/state\_echo\_fix
    - \* 52fc1c955d Simplify file contents in roots filesaver test
    - \* b6f73e8e57 Remove trailing whitespace on what should be a blank line
  - 95329acb1e Filesaver transfers bytes
  - aa34a80997 Always transfer bytes from filesaver roots
- **PR #48822:** (Ch3LL) Fix salt-ssh state.sls\_id TypeError key must be a string @ 2018-07-30 20:29:29 UTC
  - 16ca4ec2eb Merge pull request #48822 from Ch3LL/ssh\_2018\_id
  - 01f6a15da0 Fix salt-ssh state.sls\_id TypeError key must be a string
- **ISSUE #47999:** (arthurlogilab) Carbon returner failing when run through scheduler on log.trace (refs: #48757)
- **PR #48791:** (rallytime) Back-port #48757 to 2018.3 @ 2018-07-27 21:30:44 UTC
  - **PR #48757:** (kuetrzi) Update carbon\_return.py (refs: #48791)
  - 488f6716d4 Merge pull request #48791 from rallytime/bp-48757
  - f440ebe91f Update carbon\_return.py
- **PR #48799:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-27 21:30:13 UTC
  - fae29f4257 Merge pull request #48799 from rallytime/merge-2018.3
  - 487458ad4b Update old utils paths to use new utils paths
  - 436510796f Merge branch '2017.7' into '2018.3'
    - \* 8e61f3dce0 Merge pull request #48742 from frogunder/45014
      - f08058b043 Merge branch '45014' of <https://github.com/frogunder/salt> into 45014
      - 757fde70c6 Merge branch '2017.7' into 45014
      - 33c20c1ec0 fix tests
      - a7a914060d add windows integration tests for states.file

- \* d74f47b340 Merge pull request #48795 from rallytime/fix-48417
  - 5123b17ffd Update linting docs to contain .testing.pylintrc use
- \* bbea9ae936 Merge pull request #48789 from rallytime/bp-48783
  - 682a05bebe Threshold was wrong
  - d4ca0e3a97 test: except for OSError only
  - 4547231909 Only run lint checks against changed files
- \* 41464d4b39 Merge pull request #48731 from zer0def/virt-runner-init-args
  - a1fa081ad0 Documentation to missing parameters in virt.init runner.
  - 365ebdf539 Fixed `enable_vnc` runner arg being passed into `seed_cmd` module arg in `virt.init`.
- \* 169afea16a Merge pull request #48749 from Ch3LL/logo\_docs
  - 73b1fc29f0 Update Saltstack Logo banner on docs.saltproject.io
- **ISSUE #48020:** (calvinhp) mine.get not returning data in a state.orchestrate sls (refs: #48765)
- **PR #48765:** (FedericoCeratto) [2018.3] Fix mine.get not returning data @ 2018-07-27 18:01:06 UTC
  - bd67d2a805 Merge pull request #48765 from FedericoCeratto/fix\_mine.get\_not\_returning\_data
  - 7183a6e0e8 Workaround for #48020
- **PR #48747:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-26 18:14:34 UTC
  - 6978ce5d1d Merge pull request #48747 from rallytime/merge-2018.3
  - 4122da40b5 Merge branch '2017.7' into '2018.3'
    - \* 781c6a6c36 Merge pull request #48743 from rallytime/saltconf-ad-2017.7
      - 6df8fd8652 Update DOCBANNER with new SaltConf18 image
    - \* ce4e22224e Merge pull request #48720 from Ch3LL/mac\_file\_path
      - 01d25fae19 Fix test\_managed\_source\_hash\_indifferent\_case on macosx to correct tmp path
    - \* 4b9f037d43 Merge pull request #48719 from Ch3LL/service\_mac\_state
      - f44a2fc349 Enable service if disabled before running state service tests
    - \* b2431eab10 Merge pull request #48715 from rallytime/flaky-tests
      - 7332cce567 [2017.7] Mark some tornado tests as flaky
    - \* 801eae3b8d Merge pull request #48672 from frogunder/45012
      - 0747f2e58a add service enabled test
- **ISSUE #48676:** (djneades) salt-ssh should not target wrong minion from roster file as a result of reverse-DNS lookups (refs: #48771)
- **PR #48771:** (gtmanfred) only do reverse dns lookup on ips for salt-ssh @ 2018-07-26 15:41:40 UTC
  - 5ea43817ab Merge pull request #48771 from gtmanfred/2018.3
  - 535fb8f8e7 only do reverse dns lookup on ips for salt-ssh
- **PR #48752:** (garethgreenaway) [2018.3] Fix when state file is integers @ 2018-07-25 15:03:02 UTC
  - f2ef2d3ef6 Merge pull request #48752 from garethgreenaway/fix\_state\_file\_all\_integers
  - 790801c67e Fixing a case where the state module would fail if the state file being passed was all integers. Added a new tests for this edge case.

- **ISSUE #46896:** (Poil) Proxy + file.managed => Comment: Failed to cache xxx invalid arguments to setopt (refs: #48754)
- **PR #48754:** (lomerroe) send proxy/ca\_cert parameters as strings (not unicode) to tornado httpclient @ 2018-07-25 14:55:42 UTC
  - 030c921914 Merge pull request #48754 from lomerroe/fix-tornado-proxy
  - d33056704b pass proxy\_user, proxy\_password, proxy\_host, and ca\_certs through salt.utils.stringutils.to\_str()
- **PR #48769:** (Ch3LL) Update Saltstack Logo banner on docs.saltproject.io @ 2018-07-25 14:47:19 UTC
  - 1eee4b136b Merge pull request #48769 from Ch3LL/update\_doc\_2018.3
  - 0cb4bac798 Update Saltstack Logo banner on docs.saltproject.io
- **PR #48760:** (dwoz) Multiple windows test fixes @ 2018-07-25 11:55:27 UTC
  - 19afa3b023 Merge pull request #48760 from dwoz/test\_file\_fixes
  - a89019e956 Multiple windows test fixes
- **PR #48753:** (dwoz) Finally fix prepend for real @ 2018-07-25 00:07:15 UTC
  - e6dace3959 Merge pull request #48753 from dwoz/fix\_prepend
  - 0d1e8ab3f8 Merge branch '2018.3' into fix\_prepend
- **PR #48756:** (dwoz) os.uname is not available on py2 windows @ 2018-07-24 23:38:32 UTC
  - 8aef6d9960 Merge pull request #48756 from dwoz/core\_grains\_fix
  - b7a37ecf11 os.uname is not available on py2 windows
- **ISSUE #48536:** (whytewolf) diskusage beacon does not recognize tmpfs disks in linux. (refs: #48718)
- **PR #48718:** (garethgreenaway) [2018.3] beacon diskusage fixes @ 2018-07-24 17:45:26 UTC
  - 062fe7cccf Merge pull request #48718 from garethgreenaway/48536\_beacon\_diskusage\_fixes
  - 38a65e8fb3 Fixing test\_diskusage\_nomatch and test\_diskusage\_match\_regex
  - 6ecca166ff Updating psutil.disk\_partitions to pull in all mounts not just the physical ones. Check to see if the mount point from the configuration ends with a \$ (regular expression end of line) if not we add one in to ensure that a simple / does not end up matching all mount points. Updating tests accordingly.
- **PR #48711:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-24 17:38:58 UTC
  - e873621009 Merge pull request #48711 from rallytime/merge-2018.3
  - ea5c063237 Update old utils paths to use new paths
  - e740d3b208 Merge branch '2017.7' into '2018.3'
    - \* 689c231d2b Merge pull request #48691 from Ch3LL/win\_repo\_pkg\_test
      - 4b7d6d80c5 Remove unnecessary jinja in curl.sls file
      - 2bedadfadfb Add windows pkg module integration tests
    - \* 83e4bba916 Merge pull request #48635 from nbraud/acme
      - 3673bae9de modules/acme: explicitly ignore the perms return value
      - 1800a231e8 Fixup some schema expectations
      - 8c718cb417 acme: Make the private key mode configurable
      - 917dea6761 modules/acme: Use file.check\_perms ret-morphing powers

- d2241ceb2d module/acme: Do not exit early when the certificate already exists
- 98af0db826 modules/acme: Set the private key filemode to 0640
- \* 85991680c8 Merge pull request #48345 from twangboy/fix\_48169
  - ead19725b6 Merge branch '2017.7' into fix\_48169
  - 653fbc383 Fix some docs errata
  - 8898e5ff11 Add warn\_until Fluorine
  - 707906ac15 Fix unit.state.test\_powercfg
  - 32c5014eb6 Fix unit tests
  - 0d9c56e540 Add some more logging
  - b20453de9f Use minutes to set
  - 7dc7eb11c2 Fix documentation to denote seconds when setting
- \* 96447ce541 Merge pull request #48656 from Ch3LL/windows\_ip\_mod
  - 90c3f568b1 Add windows ip module integration tests
- \* 0c5fff3dc8 Merge pull request #48638 from twangboy/fix\_vcredist
  - e30d17099d Use goto instead of if statement
  - e1042fa084 Remove vcredist for Py3
- \* 1ebd96d909 Merge pull request #48664 from Ch3LL/srv\_disable\_mac
  - f1fbfad387 move the disable call up in try block
  - f60d21bda4 reverse assertion order for service disable test
  - 3727d1b3b9 switch try/except to match 2018.3
  - fb953c2369 [2017.7] Fix service.disabled test for macosx
- \* 3da3cf2f3f Merge pull request #48625 from Ch3LL/ssh\_state
  - f590eb2b02 Update state.py
  - 9790ee3d0d Follow up to PR #48555
- \* 33812f78f1 Merge pull request #48673 from Ch3LL/mac\_port
  - 87dd85a220 Use different pub and ret ports for testprogram integration tests
- \* 5f6a7c4d89 Merge pull request #48675 from Ch3LL/mac\_disable
  - c78efab828 Fix mac service.disable tests
- \* 93d2f51d2b Merge pull request #48658 from wyardley/wyardley-npm-json-output-2017
  - 7ff3c9c5ff Improve handling of npm json output (#43138)
- \* 3e293b0513 Merge pull request #48678 from OrlandoArcapix/fix-npm-dryrun-test
  - 851a404f6b Fix for issue #48677 - return True when no changes are to be made with npm.bootstrap with test=true
- \* 07a1f6520f Merge pull request #48580 from rallytime/fix-46884
  - 736b382e91 Don't error on retcode 0 in libcrypto.OPENSSL\_init\_crypto call
- \* 9874429741 Merge pull request #48628 from terminalmage/testinfra

- 5ace9f01ec Fix NameError in testinfra module
- \* 0d4c80205f Merge pull request #48651 from gtmanfred/pylint-2017.7
  - b6ee52f859 handle pyzmq for python3.4
- \* 160ae29cf2 Merge pull request #48647 from gtmanfred/pylint-2017.7
  - ff818c4ca2 disable checks on pylint
- \* 47b1032efa Merge pull request #48593 from pritambaral/fix/2017.7-importlib-pyc-loading-order
  - add7894dee loader: Fix suffix order when importlib is used
- \* 9da7b2ec8d Merge pull request #48630 from dubb-b/pipeline-updates
  - 8594a8dd05 Adding PY\_COLORS=1 as PY\_COLORS = 1 instead
  - 314b0e3599 Adding PY\_COLORS=1 for python programs to use ANSI Colors
  - b705e8f7a5 Adding correct spacing to options section
  - 9d8a7e07db Adding options to Jenkins pipeline builds
- \* a8ae2adf64 Merge pull request #48633 from saltstack/revert-48610-2017.7
  - bab4a769d4 Revert "only run pylint on files that change"
- \* 6e32bb7f74 Merge pull request #48614 from rallytime/bp-48562
  - cb654bbf2c Add timeouts to all s3 queries
- \* 1b6e6388f8 Merge pull request #48588 from garethgreenaway/48415\_event\_send\_multi\_master
  - fab25af1a9 Adding some quick documentation about why we are setting ret=True following the channel.send.
  - bf78f4b188 If the channel send is successful and does not raise an exception, we set ret to True, in case a previous exception from a previous channel send to another master has sent it to False.
  - 8d1551c5fb When using Salt multi-master, if we encounter a salt master that has not accepted the minion key yet we should not exit right away, rather continue on and try the next salt master available in the list.
- \* 24ffda49ba Merge pull request #48610 from gtmanfred/2017.7
  - 779d1a3dcb only run pylint on files that change
- \* 5391dd0a8d Merge pull request #48584 from Ch3LL/mac\_user\_grp
  - 585ee9db90 Fix grp import for mac in test\_user integration test
- \* 61572b6780 Merge pull request #48555 from Ch3LL/ssh\_id
  - f69932f506 fix pylint
  - 70e36764ee Add more tests for salt-ssh state.sls\_id
  - dab80e805c Fix state.sls\_id to run on ssh minion and not master
- \* aa6dcf39e8 Merge pull request #48583 from Ch3LL/mac\_flaky\_tests
  - 4ba2299a87 import flaky decorator on mac tests
  - 811220b41e Add flaky decorator to mac\_system and mac\_timezone tests
- \* 6973152057 Merge pull request #48534 from xetix/fix-zypper-latest\_version
  - 9985f0b4c1 Lint: remove extra blank line

- 5fbead8a36 Merge branch '2017.7' into fix-zypper-latest\_version
- 56ac449271 Merge branch 'fix-zypper-latest\_version' of <https://github.com/xetix/salt> into fix-zypper-latest\_version
- 44e87f5a0f Adding testcase for this fix.
- b354c6863c Fix behaviour of function latest\_version in zypper module when multiple packages are passed to function. Function now properly return dict with empty string as version if latest packages is already installed, and multiple packages are passed to function
- db35d0c1e1 Adding testcase for this fix.
- d2513757ed Fix behaviour of function latest\_version in zypper module when multiple packages are passed to function. Function now properly return dict with empty string as version if latest packages is already installed, and multiple packages are passed to function
- \* 10124034cb Merge pull request #48582 from dwoz/test\_prepend\_fix
  - f37571e0bd Merge branch '2017.7' into test\_prepend\_fix
- \* 13f67335f3 Merge pull request #48564 from dwoz/test\_prepend\_fix
  - 136ddf5f54 Finally fix prepend for real
  - 66b25e65bf Fix failing prepend test
- \* b8ce27729f Merge pull request #48558 from dwoz/test\_file\_fix
  - c858bf477f Remove which mock to get the test passing
- \* a15c65202d Merge pull request #48552 from KaiSforza/jenkins-junit-2017
  - 72b1830974 Set up junit in jenkins
- \* f73108026e Merge pull request #48550 from gtmanfred/2017.7
  - d5c603d9b6 add posargs to tox pylint
- \* 113b0426f8 Merge pull request #48535 from asnell/asnell-patch-2
  - d328f6e43d Update manage\_file helptext
- **PR #48744:** (rallytime) [2018.3] Update DOCBANNER with new SaltConf18 image @ 2018-07-24 17:15:40 UTC
  - 6c7f1c549d Merge pull request #48744 from rallytime/saltconf-ad-2018.3
  - dbc1f8b772 Update DOCBANNER with new SaltConf18 image
- **PR #48726:** (dwoz) Skip test when syslog not available @ 2018-07-24 16:12:44 UTC
  - 04ab17a4d6 Merge pull request #48726 from dwoz/syslogtest
  - 00f04cfd59 Skip test when syslog not available
- **PR #48727:** (dwoz) Windows compatible cp test @ 2018-07-24 14:41:34 UTC
  - af837424aa Merge pull request #48727 from dwoz/file\_cp\_test\_fix
  - 6e7824266b Windows compatible cp test
- **ISSUE #40004:** (te-af-github) svn changes report (refs: #47510)
- **ISSUE #21025:** (RobertFach) svn.export reports invalid change data (2014.7.x) (refs: #47510)
- **PR #48710:** (rallytime) Back-port #47510 to 2018.3 @ 2018-07-23 21:11:18 UTC
  - **PR #47510:** (daa) Fix svn export invalid changes data (refs: #48710)
  - 04125b077d Merge pull request #48710 from rallytime/bp-47510

- ebcd3b1c6b fixed test for svn.export
- e79f4aa5cc put name under "new" key in changes dictionary to be in line with svn.latest
- 163f99089c made svn.export changes data dictionary, fixes #21025, #40004
  - \* 3a941055c1 Use *salt.utils.platform.is\_windows*
  - \* 33e48f7ad7 Finally fix prepend for real
- PR #48699: (*terminalmage*) Add missing release notes mention of file.blockreplace changes @ 2018-07-23 13:34:32 UTC
  - e1dd10be70 Merge pull request #48699 from terminalmage/issue48695
  - 7ad832c901 Add missing release notes mention of file.blockreplace changes
- PR #48700: (*dwoz*) Call sync\_modules to fix Windows test case @ 2018-07-22 22:23:48 UTC
  - ab44a05fe4 Merge pull request #48700 from dwoz/ext\_mod\_test
  - d731e6bf8e Call sync\_all to fix Windows test case
- PR #48653: (*terminalmage*) docker\_container.running: Fix regression in test mode @ 2018-07-20 19:15:47 UTC
  - 6a494205f2 Merge pull request #48653 from terminalmage/docker-unboundlocal
  - b0440871a0 Merge branch '2018.3' into docker-unboundlocal
  - 9515dd17ff docker\_container.running: Fix regression in test mode
- ISSUE #47059: (*OrlandoArcapix*) Some states incorrectly return None instead of an empty dict when there are no changes (refs: #48685)
- ISSUE #46985: (*OrlandoArcapix*) grafana4\_user.present and grafana4\_org.present states not working in 2018.3.0 (refs: #48685)
- PR #48685: (*bbinet*) Use empty dict for 'changes' instead of None @ 2018-07-20 17:12:43 UTC
  - PR #48671: (*bbinet*) Few fixes to the grafana module and states (refs: #48685)
  - 266c6f250e Merge pull request #48685 from bbinet/none-changes
  - 842eb3da24 Use empty dict for 'changes' instead of None
- PR #48670: (*bbinet*) Add the "traverse" jinja filter @ 2018-07-20 16:36:21 UTC
  - 5a6f7a085c Merge pull request #48670 from bbinet/traverse
  - 32b6d22cf2 Fix RST syntax issue in doc
  - 37a41226d5 Add the "traverse" jinja filter
- PR #48594: (*pritambaral*) Backport 48418 @ 2018-07-20 14:57:19 UTC
  - PR #48418: (*pritambaral*) Fix multi-sls *salt.state* orchestration in masterless systems (refs: #48594)
  - ff11763fd3 Merge pull request #48594 from pritambaral/bp-48418
  - adcee28b84 Fix multi-sls *salt.state* orchestration in masterless systems
- ISSUE #48184: (*mmulqueen*) Invalid DMI prevents salt-minion from running (refs: #48440)
- PR #48440: (*mmulqueen*) Make core.py tolerant of invalid chars in DMI data @ 2018-07-20 14:48:07 UTC
  - PR #48216: (*Ch3LL*) Fix UnicodeDecodeError when reading file to determine virtual grain (refs: #48440)
  - 111908f519 Merge pull request #48440 from mmulqueen/patch-1
  - 5bbbd74cd Make core.py tolerant of invalid chars in DMI data

- **PR #48663:** (Ch3LL) [2018.3] Fix service.disabled test for macosx @ 2018-07-20 14:32:22 UTC
  - 4e77b242f2 Merge pull request #48663 from Ch3LL/srv\_disable\_mac\_2018
  - bddfbd75d2 reverse assertion order for service disable test
  - 2bfaf7fe89 Fix service.disabled test for macosx
- **PR #48304:** (Ch3LL) Fix macosx grains when swapusage returns comma @ 2018-07-20 14:30:59 UTC
  - dfc1582475 Merge pull request #48304 from Ch3LL/swap\_mac
  - 5d6135e1e2 Fix macosx grains when swapusage returns comma
- **PR #48671:** (bbinet) Few fixes to the grafana module and states (refs: #48685) @ 2018-07-20 13:58:02 UTC
  - 9d7eabd24e Merge pull request #48671 from bbinet/grafana-fixes
  - 3c5083f550 Add support for dry run (test=True) of grafana states
  - 7e7ae8ace7 influxdb: fix conflicts in function arg names with client\_args
  - 73a24b774a Ignore readOnly option when diffing
  - 81f0cf8a3f Add missing profile argument to grafana4.get\_user\_data
- **PR #48650:** (gtmanfred) [2018.3] handle pyzmq for python3.4 @ 2018-07-18 17:34:37 UTC
  - e828167114 Merge pull request #48650 from gtmanfred/pylint-2018.3
  - 3c1882077e handle pyzmq for python3.4
- **PR #48648:** (gtmanfred) [2018.3] disable checks on pylint @ 2018-07-18 16:21:37 UTC
  - a6f8acf4dc Merge pull request #48648 from gtmanfred/pylint-2018.3
  - 7c34c2965e disable checks on pylint
- **PR #48634:** (dwoz) Sync modules for state tests @ 2018-07-17 20:33:06 UTC
  - 01c9c59a97 Merge pull request #48634 from dwoz/state-module-test-fix
  - 9dfd2ae392 Sync modules for state tests
- **PR #48585:** (astorath) replaced meta tag @ 2018-07-16 14:11:02 UTC
  - fb7bfc757c Merge pull request #48585 from astorath/fix-vault-meta
  - 42fd3d5f67 replaced meta tag
- **PR #48579:** (Ch3LL) Fix python2 syslog returner expecting string bytes not unicode @ 2018-07-13 19:50:16 UTC
  - 4b16537a29 Merge pull request #48579 from Ch3LL/fix\_syslog
  - d8288a0ffc add unicode type for syslog test for tag
  - 17e69382d5 Fix python2 syslog returner expecting string bytes not unicode
- **ISSUE #48542:** (calvinhp) Missing state git.cloned is listed in the docs as new for 2018.3.2 (refs: #48547)
- **PR #48547:** (gtmanfred) fix git.cloned doc versionadded @ 2018-07-13 18:46:25 UTC
  - 3549ce408d Merge pull request #48547 from gtmanfred/git.cloned
  - b596a945ea Merge branch '2018.3' into git.cloned
  - e41f4922a0 fix git.cloned doc versionadded
- **ISSUE #48110:** (whytewolf) file.line on windows not treating unix line endings correctly. (refs: #48503)
- **PR #48503:** (rallytime) Back-port #46291 to 2018.3 @ 2018-07-13 17:14:47 UTC

- PR #48380: (twangboy) Detect and preserve line endings (refs: #48503)
- PR #46291: (t0fik) Line mixed line ends (refs: #48503)
- PR #45498: (t0fik) Added support for mixed line ending in file (refs: #46291)
- ee257a1f91 Merge pull request #48503 from rallytime/bp-46291
- 8bc71688ea Remove /sr.\* pattern from test
- 5e2e2a63fa Update file unit tests to handle "writelines" change
- 5d38aa8b33 Update file.line to use writelines instead of joining
- d0b6e82ecb Add 'name' as the passed in filepath for test\_line\_insert\_ensure\_before\_first\_line test
- d8920cb61f Update test\_line\_insert\_ensure\_before\_first\_line to use new mock\_open methodologies
- 475f075d8e Handle list of lines instead of strings in file.line func
- b9ddd53b04 Added comments
- f3517a1852 List comprehension replaced
- adfa3aed0d Empty match on delete or replace not causing IndexError exception
- 5169b1f7fd Comprehensions converting to unicode replaced by salt.utils.data.decode\_list
- d3e8679e05 Removed regex compilation
- f29815b49b Fixed file permissions
- d2af81e9c7 Make integration green. Added test for mode ensure insert before first line
- 9b7df671a5 file.line function refactored
- 3af551ebe1 /sr.\* pattern should raise exception
- 935a9b9d56 test\_line\_insert\_end fixed
- 7d6e3ad2e2 Make tests green
- 75a7e368a6 Setting end of line
- 489e381100 Added \_set\_line\_eol and \_get\_eol functions
- aacbb8c0e2 line function refactored to work on list
- de668166f9 \_regex\_to\_static refactored to work on lists
- 464eef6fe1 \_get\_line\_indent renamed to \_set\_line\_indent
- ISSUE #48507: (emersonveenstra) mysql\_grants.present escape option incorrectly reports failure (refs: #48561)
- PR #48561: (garethgreenaway) [2018.3] fixes to grants in mysql module @ 2018-07-13 14:24:58 UTC
  - 2d923f2943 Merge pull request #48561 from garethgreenaway/48507\_mysql\_grants\_incorrect\_failure
  - 14c59da72c Following a successful grant application in the MySQL module, the new grant and the desired grant are mismatched because the new grant from Mysql included hashmarks. This change adds the replace which is included for other items such as database name and username.
- PR #48529: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-12 17:59:35 UTC
  - 5b5a930449 Merge pull request #48529 from rallytime/merge-2018.3
  - f9b8c4b257 Use () when using with\_tempfile decorator in tests
  - d3190ca0c0 Update old utils paths to new utils paths
  - 29b05ffdd1 Merge branch '2017.7' into '2018.3'

- \* 0c0c05c2bc Merge pull request #48527 from saltstack/revert-48525-2017.7
  - 18d06c1a93 Revert "add kazoo for testing zookeeper."
- \* 05bad3e71c Merge pull request #48526 from twangboy/rollback\_certifi-win32
  - 361b3cdc2f Rollback python-certifi-win32
- \* db066effe4 Merge pull request #48521 from Martin819/2017.7
  - d5d01f6698 Fix for GlusterFS 4.0 and above
- \* ed0bd2bbec Merge pull request #48525 from gtmanfred/2017.7
  - d7a6bff2b2 add kazoo for testing zookeeper.
- \* ad5a959ab9 Merge pull request #48388 from garethgreenaway/48277\_2017\_7\_file\_roots\_wrong
  - 6f11da35a7 Fixing a few things in the new test.
  - cf747b14ec Fixing lint issue
  - 16d36c79c8 When pillar items are compiled a new render is instantiated but the file\_roots is the pillar\_roots. This change forces the \_\_opts\_\_['file\_roots'] to be set to what is set in actual\_file\_roots for all renderers once compile\_pillar has finished. Adding a test when this situation is run via a orchestration runner.
- \* 38df812257 Merge pull request #48512 from gtmanfred/npm
  - 9ba0f6b3a0 pin pm and grunt packages for npm tests
- \* 04ba31147f Merge pull request #48513 from rallytime/merge-2017.7
  - a466a4880f Merge branch '2017.7.7' into '2017.7'
  - cfd21ed22c Merge pull request #48172 from rallytime/2017.7.7-release-notes
  - a0ad794132 Update release notes for 2017.7.7
  - 8af4452134 Merge pull request #48157 from gtmanfred/2017.7.7
  - d8209e8a40 always listen when gathering job info
  - b98c52ee51 Merge pull request #48140 from rallytime/man-pages-2017.7.7
  - 8893bf0d4c Update man pages for 2017.7.7
  - baa0363336 Merge pull request #48136 from gtmanfred/2017.7.7
  - fce1c31146 bootstrap kitchen branch tests with 2017.7.6
  - b0ba08f4d9 Merge pull request #48134 from rallytime/release-notes-2017.7.7
  - 217005b8f1 Add missing v for tag reference
  - d53569d1e3 Add release notes file for 2017.7.7
  - 084de927fe Merge pull request #48098 from rallytime/bp-48075-2017.7.7
  - e4e62e8b3a Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.
- \* f0352ea95a Merge pull request #48514 from gtmanfred/2017.7
  - 739bf92599 upgrade dependencies for pytest tests
- \* 5372b60137 Merge pull request #48491 from grokrecursion/group-fix-v2
  - 1556b37221 fixed pylint errors

- f6d9177dab fixed indentation for pep8
- b9556bf923 v2 try of gid converted to integer
- \* 16d3daab3c Merge pull request #48375 from Ch3LL/file\_copy
  - d16a790775 Add mode to \_makedirs call in file.copy
  - 2cbcb4fd26 Add user and group to mkdirs cmd in file.copy
- \* d38951b1b3 Merge pull request #48490 from KaiSforza/cifikes
  - 9fe7199af5 Mark failed if anything is found
  - 6749a6bf19 Stop archiving the docs
- **PR #48553:** (KaiSforza) Set up junit in jenkins @ 2018-07-12 16:24:01 UTC
  - a95b8efd8a Merge pull request #48553 from KaiSforza/jenkins-junit-2018
  - 412ffcc956 Set up junit in jenkins
- **PR #48551:** (gtmanfred) add posargs to tox pylint @ 2018-07-12 14:35:25 UTC
  - c4aed02740 Merge pull request #48551 from gtmanfred/2018.3
  - a6a286af28 add posargs to tox pylint
- **PR #48533:** (terminalmage) Fix UnicodeDecodeError in sh beacon @ 2018-07-12 13:38:43 UTC
  - 260da0d545 Merge pull request #48533 from terminalmage/sh-beacon
  - 7ac5ac06c9 Fix UnicodeDecodeError in sh beacon
- **ISSUE #48519:** (Lutseslav) Mysql module alter\_db quotation missing (refs: #48520)
- **PR #48520:** (Lutseslav) Add quotes to schema name in ALTER DATABASE. @ 2018-07-11 19:15:08 UTC
  - 8761ac2589 Merge pull request #48520 from Lutseslav/fix-alter-databases-with-special-symbols
  - d088b00ff2 Merge branch '2018.3' into fix-alter-databases-with-special-symbols
  - 59629e9757 Merge branch '2018.3' into fix-alter-databases-with-special-symbols
  - da8336712e Add quotes to schema name in ALTER DATABASE.
- **PR #48528:** (gtmanfred) add 2018.3 requirements for tox/pytest tests @ 2018-07-11 18:13:40 UTC
  - ad4f7efafd Merge pull request #48528 from gtmanfred/2018.3
  - 221559358a add 2018.3 requirements for tox/pytest tests
- **ISSUE #48336:** (JuanManuelVizcainoAbad) file.directory (refs: #48399, #48398)
- **PR #48508:** (rallytime) [2018.3] Fix 2 bugs found in the file.check\_perms function @ 2018-07-11 15:03:32 UTC
  - **PR #48399:** (garethgreenaway) [2017.7] fixes to module/file.py (refs: #48508)
  - **PR #48398:** (garethgreenaway) [2018.3] fixes to module/file.py (refs: #48508)
  - 70e5fcb8a5 Merge pull request #48508 from rallytime/fix-file-bug
  - 0747eb5476 Move comment string join and test/changes check to bottom of file.check\_perms
  - aefa1dbe21 Fix up bad merge - remove extra section of "mode" changes
- **ISSUE #48277:** (dvenckus) init.sls with included states fails with more than one, 'Template was specified incorrectly: False' (refs: #48388, #48389)
- **ISSUE #46986:** (github-abcde) opts file\_roots gets overwritten with pillar\_roots in orchestration run (refs: #48388, #48389)

- **PR #48389:** (garethgreenaway) [2018.3] reset file\_roots for renderers after compile\_pillar @ 2018-07-11 13:13:33 UTC
  - 5a0b274bf1 Merge pull request #48389 from garethgreenaway/48277\_2018\_3\_file\_roots\_wrong
  - 4b492fa633 Removing unused start\_time variable from test\_orchestration\_with\_pillar\_dot\_items test.
  - 30c5855d20 Fixing a few things in the new test.
  - 36b7253418 Fixing lint issue
  - ab6abfad31 When pillar items are compiled a new render is instantiated but the file\_roots is the pillar\_roots. This change forces the \_\_opts\_\_['file\_roots'] to be set to what is set in actual\_file\_roots for all renderers once compile\_pillar has finished. Adding a test when this situation is run via a orchestration runner.
- **ISSUE #48342:** (jeffclay) UnicodeDecodeError when using cache mysql (refs: #48495)
- **PR #48495:** (garethgreenaway) [2018.3] Fix to mysql cache module @ 2018-07-10 12:54:10 UTC
  - f9fd1a889a Merge pull request #48495 from garethgreenaway/48342\_mysql\_cache\_unicode
  - 0029f19033 Ensure the query\_string is a bytestring, otherwise an attempt will be made to convert the mspack data to unicode which will result in a UnicodeDecodeError error.
- **PR #48487:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-09 18:38:00 UTC
  - fc3eeef6b3 Merge pull request #48487 from rallytime/merge-2018.3
  - 54341d1a8d Update old utils paths to use new utils paths
  - 68aabff0cf Merge branch '2017.7' into '2018.3'
  - 22cd4206c4 Merge pull request #48472 from gtmanfred/2017.7
    - \* c7a3a7d8bd update jenkins tests to use tox for lint
    - \* 44aaac1d33 use tox to run pylint
  - 27ea8f35ea Merge pull request #48476 from twangboy/fix\_dependencies
    - \* b0087d425c Add license info
    - \* 935f9b560c Fix dependencies
  - acf42864aa Merge pull request #48399 from garethgreenaway/48336\_2017\_7\_ensure\_chmod\_setuid\_with\_chown
    - \* 8efd33320f Normalize the mode before we compare it.
    - \* f894f0ecb8 Setting the mode with setuid or setgid bits in addition to setting the owner and group will force the setuid & setgid bits to reset. This change ensures that we set the mode after setting the owner & group.
  - 6166ff6b78 Merge pull request #48471 from gtmanfred/2017.7
    - \* 392ab4e51f Add some configurations to tox
  - 6234d9b15d Merge pull request #48433 from discogestalt/fix-redis.hmset

  - 51e5fbfa1d SDB cache module: AttributeError: 'Cache' object has no attribute 'set'
- \* 731ec0a11a Merge pull request #48037 from terminalmage/fix-custom-types-sync-docs
  - 052ae83c4b Update versionchanged
  - 8b1bd0eda2 Update test to reflect changed argument name
  - 5e75936198 Change 2018.3.2 to 2018.3.3
  - c53ad603fc Rename sync -> sync\_mods per review suggestion
  - e4d67c5fd8 Update docs to include references to new "sync" argument
  - cb8e6f9fb8 Remove redundant mocking
  - bc3ad795e9 Add test for sync argument to state.sls
  - f81ccd1fdd Add sync option to state.apply/state.sls
  - 8289b07e24 Fix documentation on when custom types are synced
- \* 0bae927048 Merge pull request #48249 from rallytime/2017.7.7-release-notes-update
  - 36032c8ee7 Update release notes for 2017.7.7
- \* 8e06471817 Merge pull request #48242 from asnell/asnell-patch-1
  - f66bf60073 Add sample list data via command line pillar
- **PR #48364:** (dubb-b) Changing debug to info for logging @ 2018-06-28 20:48:24 UTC
  - c5746deb5f Merge pull request #48364 from dubb-b/2018.3
  - d8260b6628 Changing debug to info for logging
- **PR #48354:** (rallytime) [2018.3] Merge forward from 2018.3.2 to 2018.3 @ 2018-06-28 20:26:31 UTC
  - 0202493b60 Merge pull request #48354 from rallytime/merge-2018.3.2-to-2018.3
  - fface7cc74 Merge branch '2018.3.2' into '2018.3'
- **PR #48347:** (dwoz) Fixes fileserver maintenance process on Windows @ 2018-06-28 13:17:42 UTC
  - bbabbbf76b Merge pull request #48347 from dwoz/sigfix
  - ccdf5029f Remove unneeded attribute

- \* e8362adf71 fopen does not support encoding
- \* 487161ba8f Fix file encoding on windows
- \* fc760685ee Fix multiple git module tests
- **PR #47975:** ([terminalmage](#)) Add a new git.cloned state @ 2018-06-27 20:53:42 UTC
  - 67303d7901 Merge pull request #47975 from terminalmage/issue47937
  - 34b24bb7fa Merge branch '2018.3' into issue47937
- **PR #48323:** ([Ch3LL](#)) Update release versions for the 2018.3 branch @ 2018-06-27 13:44:58 UTC
  - 5b8d55428e Merge pull request #48323 from Ch3LL/update\_version\_doc\_2018.3
  - b4548aca56 Update release versions for the 2018.3 branch
- **PR #48326:** ([Ch3LL](#)) Remove In Progress Warning for 2018.3.2 Release @ 2018-06-27 13:43:16 UTC
  - 7cf403e313 Merge pull request #48326 from Ch3LL/rn\_remove\_in\_prog
  - dfce1ad5ed Remove In Progress Warning for 2018.3.2 Release
- **PR #48301:** ([terminalmage](#)) Fix typos in new mock\_open docs @ 2018-06-25 19:08:14 UTC
  - 60ffad5126 Merge pull request #48301 from terminalmage/docs
  - 6c33345f05 Fix typos in new mock\_open docs
- **PR #48292:** ([rallytime](#)) Back-port #48288 to 2018.3 @ 2018-06-25 19:07:11 UTC
  - **PR #48288:** ([rmarchei](#)) fix lsattr.get in file.check\_perms (refs: #48292)
  - 4760f87153 Merge pull request #48292 from rallytime/bp-48288
  - d6620573bb fix lsattr.get in file.check\_perms
- **PR #48296:** ([rallytime](#)) Back-port #48258 to 2018.3 @ 2018-06-25 19:04:41 UTC
  - **PR #48258:** ([nullify005](#)) preserve tuples for ldap modification operations (refs: #48296)
  - 27207fc510 Merge pull request #48296 from rallytime/bp-48258
  - 8b7f36f264 preserve tuples for ldap modification operations
- **ISSUE #48204:** ([zerthimon](#)) State mysql\_user.present Exception with mysql 8.0.11 (refs: #48275, #48228)
- **PR #48275:** ([garethgreenaway](#)) [2018.3] Follow up fix to MySQL user for password management @ 2018-06-25 13:23:35 UTC
  - d5265da945 Merge pull request #48275 from garethgreenaway/mysql\_fix\_followup
  - bb024b9115 Removing unnecessary code.
  - 8b542e1745 With MySQL versions 8.0.11 and beyond, since the PASSWORD function has been removed we need to hash the password string before comparing when checking if the user exists.
- **PR #48286:** ([terminalmage](#)) Don't load the grains again when printing them via salt-call -g @ 2018-06-25 13:19:18 UTC
  - 1f306525a7 Merge pull request #48286 from terminalmage/caller-print\_grains
  - caa62c051f Don't load the grains again when printing them via salt-call -g
- **PR #48279:** ([terminalmage](#)) Add documentation/further enhancements to rewritten mock\_open @ 2018-06-25 13:12:30 UTC
  - 27a0e95174 Merge pull request #48279 from terminalmage/mock\_open-docs

- 65c575ae9c Fix spelling error
- 830a624ce8 Ignore IOError when tearing down filehandles not opened for reading
- 3b6356f4b0 Raise TypeError when trying to read from filehandles not opened for reading
- 09aae0c82b Add more examples and information on strict string types
- 8c069d105d Add some mock\_open docs
- a13d1fe1a0 Update mock\_open usage to reflect read\_data type enforcement
- 374a8ce31f Add more mock\_open tests
- 0f06adb008 Improve code-reuse in mock\_open tests
- 0e8c83bac6 2 MockFH enhancements:
- **ISSUE #48141:** (zerthimon) salt-api request causes exception (refs: #48236)
- **PR #48236:** (garethgreenaway) [2018.3] Fix to cmd\_batch @ 2018-06-25 12:58:49 UTC
  - 6ee856631b Merge pull request #48236 from garethgreenaway/48141\_salt\_api\_local\_batch
  - aea4f7ae14 Fixing test\_local\_batch
  - ce3e1eaf2c Removing sort.
  - 83accf3b20 Fixing test\_local\_batch
  - ff14b99752 Fixing a typo in the comment.
  - 85cef126e0 Adding note about why salt.utils.versions is being re-imported. Adding a test for local\_batch.
  - 808805fd3d Fixing cmd\_batch to work correctly when called via salt-api.
- **ISSUE #48204:** (zerthimon) State mysql\_user.present Exception with mysql 8.0.11 (refs: #48275, #48228)
- **PR #48228:** (garethgreenaway) [2018.3] Fixes to mysql module @ 2018-06-22 15:44:00 UTC
  - 09b036c26e Merge pull request #48228 from garethgreenaway/48204\_mysql\_user\_password\_exception
  - 1b2ffcef1d Updating the mysql module to not use the PASSWORD when MySQL is version 8.0.11 or higher, where the PASSWORD function has been removed.
- **PR #48252:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-22 15:13:42 UTC
  - 67cb5563ef Merge pull request #48252 from rallytime/merge-2018.3
  - 84ec655c24 Merge branch '2017.7' into '2018.3'
    - \* a172f9de84 Merge pull request #48226 from terminalmage/fix-alias-docstring
      - fb237272f5 Don't display "None" in SaltInvocationError when Salt installed using -OO
      - 90c90f5d5c Fix docstring construction in alias\_function when Salt installed using -OO
    - \* c6a0207cae Merge pull request #48227 from Ch3LL/fix\_win\_tests
      - 236773e3e9 Skip new sha256 files on repo.saltstack.com/windows
    - \* 6929423528 Merge pull request #48131 from bowmanjd-lms/fix-apk-python3
      - f5d2835299 Merge branch '2017.7' into fix-apk-python3
      - 022f9cba50 Fix py3-incompatible dict.keys()[x] call in apk.py
    - \* 868c17377f Merge pull request #48185 from DSRCorporation/bugs/47901\_future\_done\_exception
      - 5f63316311 Merge branch '2017.7' into bugs/47901\_future\_done\_exception

- 9f2dbf94cb Don't call `.exception()` on future unless it's done.
- \* 80a3e37c2e Merge pull request #48192 from twangboy/fix\_pip\_version\_2017.7
  - 59ae2cc5fc Use `--disable-pip-version-check` for `build_env_#.ps1`
- \* 12e2b8882a Merge pull request #48201 from zer0def/lxc-bootstrap-fixes
  - 6f6d3d40d4 Take `lxcp` into account when bootstrapping new containers. Version comparison fixes.
- \* e079fce38d Merge pull request #48190 from terminalmage/fix-vfstab-test
  - 8d70d14362 Fix `mount.vfstab` unit test
- \* c8b9cec986 Merge pull request #48115 from KaiSforza/pr-lint-2017
  - 494727ab39 Add docs, kitchen tests
  - 317023bb20 Move `.jenkins` to `.ci` for future
  - dedc313cee Make it parallel so we don't fail right away
  - cd13426726 Add a `.jenkins` file to run `pylint`
- \* fc1752b721 Merge pull request #48174 from terminalmage/docker-update-mine
  - 9af09e0127 Mock `config.get` due to changes in `_refresh_mine_cache`
  - c5802ad465 Fix the version number in `versionadded`
  - d403ae58d7 Add unit test for `docker.update_mine`
  - 44c275698a Actually it's more than just add/remove that updates the mine
  - 0cb6996b07 Add release notes mention of `docker.update_mine` config option
  - de05097b20 Add docs for new config option
  - 04c55a9178 Add note in `mine.get_docker` docstring about new config item
  - 4e456255c0 Allow mine update to be disabled using new config option
- ISSUE #48029: (vinian) syndic failed to auth when restart salt-master on syndic master (refs: #48034)
- PR #48034: (vinian) restart salt-syndic when salt-master restart @ 2018-06-21 20:12:37 UTC
  - 9f0bd90c5b Merge pull request #48034 from vinian/restart-salt-syndic-when-salt-master-restart
  - f7652d8c8b restart salt-syndic when salt-master restart
- PR #48250: (rallytime) Update release notes for 2018.3.2 @ 2018-06-21 18:30:21 UTC
  - ab2ba942ad Merge pull request #48250 from rallytime/2018.3.2-release-notes-update
  - 19c104b6cd Update release notes for 2018.3.2
- PR #48166: (terminalmage) Add trace logging and optimize file handling in `grains.core.os_data` @ 2018-06-21 18:02:33 UTC
  - 51928ff050 Merge pull request #48166 from terminalmage/salt-jenkins-1000
  - b73df0ab00 Change `call_args` to `call.args` to reflect changes to `MockFH`
  - 0c2cc07704 remove unused import
  - b8c0a55cf3 Add test for `tell()`
  - 1cbe89fee Implement `tell()` for `filehandle` iteration
  - efb8f49d42 Add tests for `read_data` being a list, and containing unicode or bytestrings

- 38df912fa6 Operate on a copy of the read\_data
- 71eeae1240 Update mount module unit tests to reflect changes in mock\_open
- 16c414e120 Update nfs3 module tests to reflect changes in mock\_open
- b7eab25d6c Update grub\_legacy module tests to reflect changes in mock\_open
- cc002b8fd7 Update new network unit test to reflect changes in mock\_open
- a8f11594f1 Update new core grains tests to reflect changes in mock\_open
- 84ce18d956 Update crypt unit tests to reflect changes in mock\_open
- 67c036dc2d Add MockCall to tests.support.mock to track calls
- 2556a1e13d Remove unused import
- fd9d700157 Add additional docs to MockOpen class
- 6acb4c83ec Update newly added test to reflect renaming of handles attribute
- 77e5288d42 Update fibre\_channel grains tests to reflect changes in mock\_open
- ed40371a06 Update timezone module tests to reflect changes in mock\_open
- fc0aa9934f Track call\_count in MockOpen
- 2598d2453a Update snapper module tests to reflect changes in mock\_open
- 51b3faa7b4 Add support for passing multiple strings for a given match in read\_data
- 55487c175c Fix mock\_open call to use new multifile syntax
- 7f516ef73a Update puppet module tests to reflect changes in mock\_open
- 33a97c4ecc Update btmp beacon tests to reflect changes in mock\_open
- bc027cfa94 Update wtmp beacon tests to reflect changes in mock\_open
- f5823252bb Track call args/kwargs in MockFH
- 335591ca90 Mock the seek function in MockFH
- 7eb4b1ae1c Update cp.push test to reflect changes to mock\_open
- 2be19cfa89 Report correct location when reading using explicit size and EOF reached
- 5ec95ba5ca On second thought, actually implement tell()
- 19022eb9e5 Add tell mock to MockFH
- 4b5a393445 Update junos tests to reflect changes to mock\_open
- 278a222b09 Update dnstool tests to reflect changes to mock\_open
- 4e67955572 Replace the rest of mock\_open with a class
- 75307a47c5 Update linux\_sysctl tests to reflect changes to mock\_open
- 05c68fd5d9 Use explicit config file and fix remaining mac\_sysctl tests
- 836fde9a30 Allow Python 2 to accept an exception as read\_data
- 543385fd02 Add writelines\_calls property
- 42fa842456 Make read funcs mocks so their calls can be tracked
- 675f03c58f Update mac\_sysctl tests to reflect new mock\_open behavior
- 3d2c41d395 Update file module tests to reflect new mock\_open behavior

- b9200dbc3e add a dict containing the handles to the mock\_open return object
- 852ba4b982 Add mocked close() function to MockFH
- f6b46bc608 Remove unused import
- 20f60a769b Add blank lines to appease linter
- 48d7cfa6d3 Add multifile tests for mock\_open
- 1861e9b944 mock\_open: rewrite multi-file support
- 5e6b539770 Use function for empty string
- cb2620ad2b Update core grains tests to reflect EAFF changes
- 5d09b178d7 Separate mocked file contents per filename, not glob
- 875102f538 Modify mock\_open to support multiple file paths
- 096ace74df Move lsb\_release parsing into its own function
- 6a0828beed Add unit tests for mock\_open
- 8ba6cadac7 More mock\_open bugfixes
- 329dea218e Add a bunch of logging for linux os\_data core grains
- 2c64b270df Add timestamp to the minion's log\_fmt\_console
- **PR #48216:** (Ch3LL) Fix UnicodeDecodeError when reading file to determine virtual grain (refs: #48440) @ 2018-06-20 16:53:41 UTC
  - 6072d1ef9c Merge pull request #48216 from Ch3LL/grains\_unicode
  - c4334f3f14 Fix UnicodeDecodeError when reading file to determine virtual grain
- **PR #48212:** (Ch3LL) Fix python3 ec2 salt-cloud TypeError when installing salt (refs: #49041) @ 2018-06-20 16:00:21 UTC
  - 77a75ebdcf Merge pull request #48212 from Ch3LL/py3\_ec2
  - b0d75f459a Fix python3 ec2 salt-cloud TypeError when installing salt
- **ISSUE #47984:** (jeduardo) x509 module/state writing wrong certificate serial number to CRL (refs: #47986, #48080)
- **PR #48209:** (rallytime) Back-port #47986 to 2018.3 @ 2018-06-20 13:44:17 UTC
  - **PR #48080:** (lusche) Bugfix #47984 messed up cert serial (refs: #48209)
  - **PR #47986:** (jeduardo) Fix serial number writing into CRL files with the x509 module (refs: #48209)
  - de614d31f5 Merge pull request #48209 from rallytime/bp-47986
  - f4b3bd5d2c Changed salt.utils.fopen to salt.utils.files.fopen
  - 8686872909 Fixed typos, removed repeated unit tests, and applied code fixes suggested by linter.
  - 382df48a72 Removed useless new line
  - 5aa99d14c4 Added unit tests for CRL creation and certificate revocation with CRL
  - cc12844922 Fixed a problem where the OpenSSL bindings refuse to consume unicode strings.
  - 399cf08860 Stopped converting the certificate hexadecimal serial number to an integer in order to avoid breaking CRLs.
- **PR #48210:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-06-20 13:43:19 UTC

- 1f88df6e89 Merge pull request #48210 from rallytime/merge-2018.3
- dae65da256 Merge branch '2018.3.1' into '2018.3'
- **PR #48186:** (rallytime) Add autodoc module for saltcheck.py @ 2018-06-19 19:03:55 UTC
  - 5b4897f050 Merge pull request #48186 from rallytime/saltcheck-docs
  - 314fc2d889 Clean up some doc references
  - da7603d879 Add autodoc module for saltcheck.py
- **PR #48191:** (twangboy) Use the --disable-pip-version-check option @ 2018-06-19 18:13:44 UTC
  - 7274a33c80 Merge pull request #48191 from twangboy/fix\_pip\_check
  - 5c00fce6bf Use the --disable-pip-version-check option
- **ISSUE #48122:** (pasmon) Salt minion 2017.7.6 disregards "bin\_env" in pip state (refs: #48189)
- **PR #48189:** (gtmanfred) If pip binary is passed to bin\_env, use that pip binary (refs: #48207) @ 2018-06-19 18:08:13 UTC
  - 96f79b0674 Merge pull request #48189 from gtmanfred/pip
  - 96c59f3d93 If pip binary is passed to bin\_env, use that pip binary
- **PR #48165:** (terminalmage) Fix regression with top\_file\_merging\_strategy=same @ 2018-06-19 18:03:07 UTC
  - 71e385501b Merge pull request #48165 from terminalmage/issue48144
  - 92ac2a2d6a Remove unused imports
  - 15a44d5dd4 Remove redundant top file merging tests
  - 12100d9bd3 Add more top file merging tests
  - 0ed686cb3f Add unit test for show\_top with "same" merging strategy
  - 35e5492fb7 Revert 7058f10 / 3df6fa7
- **ISSUE #46806:** (ezh) Lack of debug messages on authentication fail. (refs: #46807, #48179)
- **PR #48179:** (ezh) 2018.3 auth @ 2018-06-19 14:16:40 UTC
  - **PR #46807:** (ezh) Reduce initial authentication setup complexity (refs: #48179)
  - 2a8e1c6539 Merge pull request #48179 from ezh/2018.3-auth
  - 9ed2d2ec55 Fix integration.shell.test\_key and integration.shell.test\_runner
  - 26a6f79730 Fix integration tests test\_list\_acc\_wrong\_eauth, test\_salt\_run\_with\_wrong\_eauth
  - b84c4321c4 Add more verbose debug messages for auth subsystem
- **PR #48188:** (gtmanfred) allow virtual aliases to be used for the driver name @ 2018-06-18 21:49:16 UTC
  - 0231008cf8 Merge pull request #48188 from gtmanfred/2018.3
  - 45249d3e10 allow virtual aliases to be used for the driver name
- **PR #48116:** (KaiSforza) Add jenkinsfiles to define tests in 2018 @ 2018-06-18 21:27:10 UTC
  - 0f95238dca Merge pull request #48116 from KaiSforza/pr-lint-2018
  - f158bed5bd Add docs, kitchen tests
  - 904a70c187 Move .jenkins to .ci for future
  - 365fa0e51f Make it parallel so we don't fail right away

- e594979745 Add a .jenkins file to run pylint
- **ISSUE #48146:** (rmarchei) mysql\_query.run: exception on 2018.3 (refs: #48164)
- **PR #48164:** (garethgreenaway) [2018.3] Fixes to mysql state @ 2018-06-18 13:10:20 UTC
  - 60c9490bdc Merge pull request #48164 from garethgreenaway/48146\_mysql\_output\_to\_file
  - a040643a82 Accounting for certain situations when the query result is not a string, but actually a dictionary.
- **ISSUE #48113:** (gaetanquentin) state file.line has error and erase file content completely, while with mode test=true it is ok (refs: #48156)
- **PR #48156:** (garethgreenaway) [2018.3] Unicode fixes for file.line @ 2018-06-17 19:34:08 UTC
  - 85ebcbd3f2 Merge pull request #48156 from garethgreenaway/48113\_ensure\_writing\_strings\_with\_file\_dot\_line
  - 5a9ef0d1ae Unless we're using py2 and Windows, ensure we're writing out a string when using file.line.
- **PR #48161:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-17 19:33:29 UTC
  - 33400e72db Merge pull request #48161 from rallytime/merge-2018.3
  - 0733fa1b02 Update utils path for which function to new path
  - 398cc78224 Merge branch '2017.7' into '2018.3'
  - df2a156338 Merge pull request #48061 from garethgreenaway/port\_47049\_2017\_7
    - \* 7c472fed51 Fixing failing test\_set\_hwclock\_aix test.
    - \* ccb0acc958 Porting #47049 to 2017.7.
  - 5ec3cf2dd4 Merge pull request #48143 from Ch3LL/fix\_long\_job
    - \* 48b5d2e9d3 Add timeout argument to run\_salt for ShellCase
  - e1e566d1f8 Merge pull request #48135 from rallytime/release-notes-2017.7
    - \* 7a97f157b3 Add missing v for tag reference
    - \* 2f2b69ed37 Add "in progress" notation to 2017.7.7 release notes
    - \* 06a1151a63 Add release notes file for 2017.7.7
    - \* 885b2862ce Move 2017.7.7 release notes to 2017.7.8
  - ac9dabbfaa Merge pull request #48105 from rallytime/merge-2017.7
    - \* cdb45874de Merge branch '2017.7.6' into '2017.7'
      - 16916d6bd2 Merge pull request #47880 from gtmanfred/2017.7.6
      - 987ae6358b quote python\_version in requirements.txt
      - 27670168ea Merge pull request #47875 from rallytime/release-notes-dot-six
      - 58dee4c829 Remove sentence about the release being in progress
      - b3dcb7330e Remove "in progress" too
      - 99e1df7823 Update 2017.7.6 release notes: remove "unreleased" text
      - 1f0bada07c Merge pull request #47873 from gtmanfred/2017.7.6
      - a1c1b5b5cf allow tornado 5.0 to be installed only for python2
  - 2da56a69d9 Merge pull request #48101 from rallytime/update-doc-refs-2017.7
    - \* 7ba6f5fb36 Update 2017.7.7 reference to 2017.7.8

- 5a0e3d46e7 Merge pull request #48091 from terminalmage/fix-file\_roots-monkeypatching
  - \* 6fe711ad76 Reverse monkeypatching after test\_symlink\_list finishes
- 053b019a8f Merge pull request #48088 from rallytime/update\_version\_doc\_2017.7
  - \* 1b8d1c936b Remove "in progress" info for 2017.7.6 release notes
  - \* 9a0f4d190a Update release versions for the 2017.7 branch
- d6d2c5ee18 Merge pull request #48075 from garethgreenaway/48038\_jobs\_are\_not\_deduping\_minion\_side
  - \* c537b3275b Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.
- aa33cc0b0c Merge pull request #48071 from terminalmage/gitfs-docs
  - \* 24545204b3 Fix inaccurate gitfs\_saltenv example in GitFS Walkthrough
- fb4ceacb88 Merge pull request #48053 from rallytime/bp-48040
  - \* 265b22b194 states/github.py fix for incorrect positional argument
- f37dcaac6d Merge pull request #48024 from gtmanfred/2017.7
  - \* 56b074ab27 allow specifying a different state to run on converge
  - \* cc9c4b4d5a add pytest coverage and xml junits
- ISSUE #48145: (max-arnold) Failed to load ext\_pillar saltclass: can only assign an iterable (refs: #48155)
- PR #48155: (max-arnold) Do not fail on empty saltclass classes (fix for #48145) @ 2018-06-15 20:21:28 UTC
  - 9aa9a83b10 Merge pull request #48155 from max-arnold/2018.3
  - 63ab02c648 Do not fail on empty saltclass classes declaration #48145
  - 3d4fcbe3aa Add test for issue #48145
- PR #48104: (twangboy) Fix *unit.modules.test\_win\_status* @ 2018-06-15 17:05:34 UTC
  - 152c09cc0c Merge pull request #48104 from twangboy/fix\_test\_win\_status
  - 1ec3f436ee Fix test\_error\_logged\_if\_process\_get\_owner\_fails
- PR #48147: (brejoc) Fix for sorting of multi-version packages @ 2018-06-15 17:03:18 UTC
  - 8cf03110d4 Merge pull request #48147 from brejoc/2018.3-multi-version-fix
  - 90ed25447d Switching to salt.utils.versions like linter suggested
  - ed09574073 Fix for sorting of multi-version packages (bsc#1097174 and bsc#1097413)
- PR #47956: (dmurphy18) Improved support for mount on AIX @ 2018-06-15 13:40:01 UTC
  - 2edc5f5442 Merge pull request #47956 from dmurphy18/aix\_mount\_support
  - f2a3e321db Improved support for mount on AIX
- ISSUE #48012: (Timandes) Found UnicodeDecodeError when trying to start Salt Master (refs: #48081)
- PR #48081: (terminalmage) Fix UnicodeDecodeError when parsing hosts file with non-ascii @ 2018-06-15 12:41:13 UTC
  - c05c176782 Merge pull request #48081 from terminalmage/issue48012
  - 8d2fb0bf25 Fix cp.push test
  - e230a7223f Fix definition of test data for wttmp/btmp beacon tests
  - 82874a8c10 Import six like we do everywhere else

- 54f9a2ab54 Remove unused import
- 767cc7e87f fix tabs
- db19636f56 Get rid of additional newline append
- 7427e192ba Fix more crappy mocking
- 4eaa5789ce Fix crappy mocking
- 248467edac Add regression test for `_generate_minion_id()`
- 5e62d6d45f Fix UnicodeDecodeError when parsing hosts file with non-ascii
- e6a4744f85 Use `errno` instead of hard-coding error 2
- ff63f36932 Fixes / enhancements for `mock_open`
- **PR #48133: (rallytime)** Updates the 2018.3.2 and 2018.3.3 release notes files @ 2018-06-14 21:21:15 UTC
  - **PR #48129: (rallytime)** Add release notes for 2018.3.2 (refs: #48133)
  - 5d92e2763a Merge pull request #48133 from rallytime/release-notes-2018.3
  - afe1e91972 Add "in progress" notation to 2018.3.2 release notes
  - 3e4272ac09 Add release notes for 2018.3.2
  - 88c584cb0d Move 2018.3.2 release notes to 2018.3.3
- **PR #48103: (terminalmage)** Fix for `gitfs` base env being pinned to commit ID @ 2018-06-14 16:29:24 UTC
  - 0e3f846836 Merge pull request #48103 from terminalmage/gitfs-base-pinned-to-commit
  - 31ab2fe8de Fix for `gitfs` base env being pinned to commit ID
- **PR #48077: (twangboy)** Fix issue with `salt.utils.parsers` on Windows @ 2018-06-14 16:22:57 UTC
  - 4b6f1c7f75 Merge pull request #48077 from twangboy/fix\_parsers
  - 0f7d7691a2 Call logger in each case
  - 0e99dd741c Fix logic for non-root
  - 2d2534a688 Fix parsers for Windows, fix tests
- **PR #48096: (twangboy)** Fix `unit.utils.test_which` on Windows @ 2018-06-14 13:15:14 UTC
  - 80332b32a7 Merge pull request #48096 from twangboy/fix\_test\_which
  - d26fc56f13 Use `os.sep` for paths
- **PR #48102: (rallytime)** [2018.3] Update 2018.3.2 references to 2018.3.3 @ 2018-06-14 13:14:26 UTC
  - 66b2200913 Merge pull request #48102 from rallytime/update-doc-refs-2018.3
  - 1c9bcce3d8 Update 2018.3.2 references to 2018.3.3
- **PR #48109: (rallytime)** Back-port #47851 to 2018.3 @ 2018-06-14 13:09:04 UTC
  - **PR #47851: (rares-pop)** Fixup! add `master.py:FileserverUpdate **kwargs` (refs: #48109)
  - 2902ee0b14 Merge pull request #48109 from rallytime/bp-47851
  - e9dc30bf8e Fixup! add `master.py:FileserverUpdate **kwargs`
- **ISSUE #47925: (JonGriggs)** GitFS looking for files in the master branch only (refs: #47943)
- **PR #47943: (terminalmage)** Make sure we set the effective environment when `lock_saltenv` is True @ 2018-06-13 20:02:00 UTC

- 2529292568 Merge pull request [#47943](#) from terminalmage/issue47925
- 534e1a7100 Merge branch '2018.3' into issue47925
- **PR #48089:** (rallytime) Update release versions for the 2018.3 branch @ 2018-06-13 14:03:44 UTC
  - 9e1d0040e4 Merge pull request [#48089](#) from rallytime/update\_version\_doc\_2018.3
  - fad6a0991e Remove "in progress" info for 2018.3.1 release notes
  - a3b3b0a0e1 Remove "in progress" info for 2017.7.6 release notes
  - f9be1b9125 Update release versions for the 2018.3 branch
- **PR #48054:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-13 12:58:46 UTC
  - b10b7355a0 Merge pull request [#48054](#) from rallytime/merge-2018.3
  - 508d70fabf Update old utils paths to use new paths
  - 3d2ea16c3a Merge branch '2017.7' into '2018.3'
    - \* ffee3576ec Merge pull request [#48044](#) from twangboy/wua\_add\_fail\_code
      - d41d0c25eb Add faile code for WinHTTP send/receive error
    - \* 871a910fcb Merge pull request [#48009](#) from dwoz/winswarmfix
      - 5027c7bb84 minionswarm runs on windows
    - \* 0dcaead36d Merge pull request [#47968](#) from gtmanfred/2017.7
      - ae1b0d28bb pass LANG and HOME into tox commands
      - 8d15b93d00 remove tox virtualenvs from doc tests
      - e1872e2036 simplify tox.ini
      - 81bd01f5af add tests.txt for running tests with tox requirements
      - 556a2067fc fix masterapi test to use testing directory for configs
      - 5a41f484ef add EXPENSIVE\_TESTS
      - 055cd5a6ba set DESTRUCTIVE\_TESTS environment variable for pytest
    - \* 42dd6b83eb Merge pull request [#47978](#) from twangboy/fix\_test\_pkg
      - 8bb36b3a4b Add try/finally, fix typo in 7zip def file
    - \* a67b21ef3d Merge pull request [#47959](#) from twangboy/fix\_test\_service
      - 0cd47aa81e Remove unused import
      - d4b42540e3 Fix failing test when service doesn't exist
    - \* b81d482067 Merge pull request [#47983](#) from garethgreenaway/backport\_47843\_2017\_7
      - 7b7fb1f5d5 Adding missing test sls file.
      - 54e51bc627 Backporting [#47843](#) to 2017.7, updating test for 2017.7.
    - \* d56ddad22c Merge pull request [#47533](#) from twangboy/fix\_47178
      - 24717cbc21 Change version added to 2017.7.7
      - 0592f1bac2 Fix issues with functions that user mkdirs on Windows
    - \* 5c56b8c755 Merge pull request [#47827](#) from twangboy/fix\_47791
      - fbbd91f09e Add more descriptive debug message

- 365f81651b Fix deprecated exception handling
- 8dd6710b93 Use local instead of network
- 980d99d74b Fix issue when archive is on mapped drive
- **PR #48060:** (gtmanfred) mark test as expensive @ 2018-06-13 12:58:21 UTC
  - c83818e4f9 Merge pull request #48060 from gtmanfred/2018.3
  - 914935c4d4 Merge branch '2018.3' into 2018.3
- **PR #48057:** (terminalmage) Fix link without target in 2018.3.0 release notes @ 2018-06-11 18:50:17 UTC
  - a4eb41623d Merge pull request #48057 from terminalmage/docs-2018.3
  - 20f71ff6f6 Fix link without target in 2018.3.0 release notes
  - d8c035e5e5 mark test as expensive
- **PR #48042:** (terminalmage) Switch to trace level logging for further test failure troubleshooting @ 2018-06-11 14:03:48 UTC
  - 0f9a3122df Merge pull request #48042 from terminalmage/salt-jenkins-1000
  - b33a0b5eaa Switch to trace level logging for further test failure troubleshooting
- **PR #48041:** (terminalmage) salt.utils.hashutils: Only decode to utf-8 on Windows @ 2018-06-11 13:31:41 UTC
  - 6c5389189a Merge pull request #48041 from terminalmage/hashutils-fix-windows
  - 58c7cd33d7 salt.utils.hashutils: Only decode to utf-8 on Windows
- **PR #48014:** (cro) Find job pause @ 2018-06-08 13:48:45 UTC
  - dcae209951 Merge pull request #48014 from cro/find\_job\_pause
  - 440aa67c4f Lint: Add blank line
  - 7b0e99a511 One more case where returner doesn't respond
  - 5abeedf882 Catch two cases when a returner is not able to be contacted--these would throw a stacktrace.
- **PR #47915:** (garethgreenaway) [2018.3] state runner pause resume kill @ 2018-06-07 16:08:30 UTC
  - ea85f882bc Merge pull request #47915 from garethgreenaway/state\_runner\_pause\_resume\_kill
  - 2ecbe9c034 fixing typo in alias\_function call.
  - 4377e0cc08 Some fixes to the set\_pause and rm\_pause function in the state runner, renaming to in line with the functions in the state module. Including aliases to previous names for back-ward compatibility. Including a soft\_kill function to kill running orchestration states. A new test to test soft\_kill functionality.
- **PR #48002:** (rallytime) Back-port #47923 to 2018.3 @ 2018-06-07 15:25:39 UTC
  - **PR #47923:** (isbm) Prevent crash if files in file.recurse (refs: #48002)
  - 5c11fcde60 Merge pull request #48002 from rallytime/bp-47923
  - 9465e5f1e9 Use to\_unicode from stringutils avoid deprecation warning
  - 73d33cbfc3 Prevent crash if files in file.recurse
- **PR #48003:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-07 15:25:19 UTC
  - 3d0a087c71 Merge pull request #48003 from rallytime/merge-2018.3
  - a6533a9332 Merge branch '2017.7' into '2018.3'

- \* 998a1c13d5 Merge pull request #47966 from mbunkus/fix-postfix-prefix-free-key-names-assumption
  - 0ae402d1b5 Fix postfix.set\_main's assumption of prefix-free key names
- \* df50ce7b1b Merge pull request #47824 from twangboy/fix\_setup.py
  - 4538b3abb3 Remove 'len-as-condition' disablement
  - d4efcc3c8b Skip lint errors
  - 1b3977f8d4 Remove m2crypto download for Windows
- \* 3e91a31134 Merge pull request #47922 from damon-atkins/2017.7\_win\_pkg\_keys\_fix
  - 7129203b1b Merge branch '2017.7' into 2017.7\_win\_pkg\_keys\_fix
- \* 8008fca2f6 Merge pull request #47933 from terminalmage/add-pillar.get-docs
  - 4eb022b675 Clarify pillar.get docs
- \* ab565bfaa3 Merge pull request #47944 from terminalmage/fix-git.detached-docs
  - 1d082b4389 Replace use of deprecated argument name in git.detached docstring
  - 6253793cb6 Merge branch '2017.7' into 2017.7\_win\_pkg\_keys\_fix
  - 4ce0fe6546 win\_pkg under py3 keys returns a view instead of a list, wrap keys in list()
- PR #48022: (morganwillcock) win\_wua state: fix function name in examples @ 2018-06-07 15:03:52 UTC
  - 0a05212f60 Merge pull request #48022 from morganwillcock/patch-1
  - 443f4d6f21 win\_wua state: fix function name in examples
- ISSUE #47546: (ender8282) archive.extracted fails when archive includes files with non-ascii names with 2018.3.0 (refs: #48015, #47572)
- PR #48015: (garethgreenaway) [2018.3] more unicode nonsense in archive module @ 2018-06-07 14:44:55 UTC
  - 406efb161e Merge pull request #48015 from garethgreenaway/47546\_more\_unicode\_nonsense
  - f457f9cb84 Adding a test to ensure archive.list returns the right results when a tar file contains a file with unicode in its name.
  - 9af49bc595 Ensure member names are decoded before adding to various lists.
- ISSUE #47955: (frogunder) 2018.3.1 Creating Windows machine in Amazon using salt-cloud fails. (refs: #47989)
- PR #47989: (dwoz) Properly decode password from aws using m2crypto @ 2018-06-06 20:44:28 UTC
  - 1ce7d6c38a Merge pull request #47989 from dwoz/awscld
  - 23ab2727be Fix linter errors
  - 6c8daa2b85 Properly decode password from aws using m2crypto
- PR #47976: (terminalmage) Capture and log output of processes that timed out and were killed @ 2018-06-06 19:17:08 UTC
  - 76068c83f5 Merge pull request #47976 from terminalmage/salt-jenkins-1000
  - 41e5a75027 Add catch\_timeout to run\_script
  - 551ada8e4d Capture and log output of processes that timed out and were killed
- PR #47990: (terminalmage) Docs fixes in 2018.3 release branch @ 2018-06-06 17:15:17 UTC
  - f12a52736e Merge pull request #47990 from terminalmage/2018.3-docs

- f89d2ccd30 Clean up Sphinx warnings
- f5fc936865 Add clarifying comment so that we don't break this
- 94849780ac fix docs build error due to IndexError
- **PR #47982:** (twangboy) Fix *unit.modules.test\_win\_dns\_client* tests @ 2018-06-06 15:02:10 UTC
  - 9d56af3cad Merge pull request #47982 from twangboy/fix\_test\_win\_dns\_client
  - 2dcdf6788c Force string to ModuleType
- **PR #47985:** (twangboy) Fix *unit.states.test\_reg* test failure @ 2018-06-06 14:56:03 UTC
  - 1b4c72345b Merge pull request #47985 from twangboy/fix\_test\_reg
  - 4ce551811f Remove the unnecessary *to\_unicode* stuff
  - 863ded39fa Mock *reg.cast\_vdata*
- **ISSUE #47236:** (MorphBonehunter) x509.private\_key\_managed broken after upgrade to 2018.3.0 (refs: #47957)
- **PR #47957:** (garethgreenaway) [2018.8] Ensure x509 passphrase is a string @ 2018-06-05 13:27:33 UTC
  - 84100570f7 Merge pull request #47957 from garethgreenaway/47236\_ensure\_passphrase\_is\_a\_string
  - 99bad3cca6 removing unnecessary change
  - e22df8473d Ensuring that when a passphrase is passed in, it is returned as a string from the passphrase callback.
    - \* d0cf06a24d Make sure we set the effective environment when *lock\_saltenv* is True
      - 8da6ce45dc Finish the docstring for *git.cloned* state
      - 4a8260a5e5 Add tests for *git.cloned* state
      - 311179da05 Add *git.cloned* state
- **PR #47926:** (dmurphy18) Backport of PR 47808 to 2018.3, improved grains support for AIX @ 2018-06-04 19:31:24 UTC
  - **PR #47808:** (dmurphy18) Updated AIX support for grains reported (refs: #47926)
  - c355da9e0d Merge pull request #47926 from dmurphy18/backport\_pr47808
  - ac15d2093a Backport of PR 47808 to 2018.3, improved grains support for AIX
- **PR #47927:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-04 18:55:12 UTC
  - a46e42ab11 Merge pull request #47927 from rallytime/merge-2018.3
  - 5baab66f4b Lint: Whitespace fix
  - 7e1d278d19 Update old utils paths to use new utils paths
  - 3273bbdab7 Merge branch '2017.7' into '2018.3'
    - \* a2b588299b Merge pull request #47860 from terminalmage/state-writing-docs
      - 8cb33d3dec Quiet the linter
      - af51e16f23 Use more elegant RST syntax
      - 91cd57d1e0 Update mocking to reflect changes in service module
      - b9ace5a859 Fix crappy mocking
      - bc9e3acef3 Lint fixes
      - d37f7e4f04 Add 2017.7.6 release notes

- 9dddeefab Improve documentation on syncing states
- f465fa3ca7 Add best practices docs for writing states
- 93ee5ee2b0 Fix all Sphinx warnings
- 64b9b4d0b8 Clarify that name would override the id declaration
- \* d2f3377b5b Merge pull request #47877 from dwoz/sleep\_audit
  - ebc7cde9cb Revert job chunk wait time change
- \* 735e92093e Merge pull request #47917 from dwoz/winsuite
  - 118601ebd6 Fix windows tests suite breakage
- \* 63efb76d51 Merge pull request #47822 from Ch3LL/win\_user\_test
  - 3a691b405f add user\_home path for both windows and linux
  - 788abf771e Add user state integration tests to windows
- \* b9da4f1221 Merge pull request #47876 from doesitblend/add-file-read-windows
  - 3f7e7ec327 Add file.read function to Windows module
- \* cbe2ecfae8 Merge pull request #47882 from frogunder/45013
  - 38d114a2d2 add whoami test
- **PR #47931: (rallytime) Back-port #47913 to 2018.3 @ 2018-06-04 14:39:16 UTC**
  - **PR #47913: (rares-pop) Fixup! beacons/avahi\_announce.py finding grains (refs: #47931)**
  - 4db1f8c603 Merge pull request #47931 from rallytime/bp-47913
  - c51e732f4d Fixup! beacons/avahi\_announce.py finding grains
- **PR #47930: (rallytime) Back-port #47725 to 2018.3 @ 2018-06-04 14:38:58 UTC**
  - **PR #47725: (bbczeuz) network\_settings beacon: Update example to follow new cfg convention (refs: #47930)**
  - d05a6c70d3 Merge pull request #47930 from rallytime/bp-47725
  - 5c666409f3 Spelling fix
  - cfe0a5bb42 network\_settings: Fix doc using new list/dict syntax
- **PR #47557: (L4rS6) fix broken rabbitmq list policies in rabbitmq version 3.7 @ 2018-06-04 13:25:07 UTC**
  - 484d83014b Merge pull request #47557 from L4rS6/fix-broken-rabbitmq-list-policies
  - 6d7ef27557 Merge branch '2018.3' into fix-broken-rabbitmq-list-policies
  - e043ea2833 refactored list\_policies code and added more tests
  - eea81feb7b fix broken rabbitmq list policies in rabbitmq version 3.7
- **PR #47949: (terminalmage) Continued troubleshooting on salt-jenkins 1000 @ 2018-06-04 13:17:14 UTC**
  - 866a2fbf5e Merge pull request #47949 from terminalmage/salt-jenkins-1000
  - 9c369c6aa8 Remove temp logging from test
  - af02d5ba7b Add result logging to run\_script, make returns DRY
- **PR #47941: (terminalmage) Update test logging for salt-jenkins @ 2018-06-03 02:40:56 UTC**
  - 0b85d1273f Merge pull request #47941 from terminalmage/salt-jenkins-1000

- fb66368af9 Update test logging for salt-jenkins 1000
- **PR #47924:** (Ch3LL) Catch all exceptions in git import for salt.utils.gitfs @ 2018-06-01 21:06:58 UTC
  - 58b5f2b4dd Merge pull request #47924 from Ch3LL/mac\_gitpy
  - 75c51ad69b Catch all exceptions in git import for salt.utils.gitfs
- **ISSUE #47269:** (isdig) Reopen Windows Minion That Has IAM Role Cannot Access to S3 (refs: #47879)
- **PR #47879:** (dwoz) Fix ami role usage warts #47269 @ 2018-06-01 14:11:55 UTC
  - b88ec5258d Merge pull request #47879 from dwoz/ami\_role\_fix
  - 3884c2cf5f Fix ami role usage warts #47269
- **PR #47788:** (twangboy) Use pytz to calculate timezones @ 2018-05-31 18:33:20 UTC
  - b09596982b Merge pull request #47788 from twangboy/fix\_47559
  - 0d229c6182 Merge branch '2018.3' into fix\_47559
  - 9e612ec9e7 Fix markup in release notes
  - 60499d18f0 Skip test if pytz not present
  - 72cc361c7b Move pytz to 3rd party import, add to \_\_virtual\_\_
  - b8a6488688 Update \_\_virtual\_\_ function
  - 9923176b68 Use \_\_utils\_\_, fix unit tests
  - 73e033f555 Return offset in the same format as Unix
  - 5656183c5e Add timezone.list, add 2018.3.2 release notes
  - 986f6c9b2a Use pytz to calculate timezones
- **PR #47899:** (terminalmage) salt-jenkins issue 1000 @ 2018-05-31 18:24:49 UTC
  - ae73cb3947 Merge pull request #47899 from terminalmage/salt-jenkins-1000
  - 25afc932f7 WIP salt-jenkins issue 1000
- **PR #47753:** (Ch3LL) Add stderr launchctl helper class and fix service mac tests @ 2018-05-31 18:16:57 UTC
  - 8f78e3aef6 Merge pull request #47753 from Ch3LL/service\_mac
  - 185c9e9ae2 only stop service if its running
  - e15e674955 Add stderr launchctl helper class and fix service mac tests
- **PR #47908:** (meaksh) Align SUSE salt-master.service 'LimitNOFILES' limit with upstream Salt @ 2018-05-31 18:13:27 UTC
  - 828bf39695 Merge pull request #47908 from meaksh/2018.3-align-suse-salt-master-service
  - efe308013a Align SUSE salt-master.service 'LimitNOFILES' limit with upstream Salt
- **PR #47868:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-30 21:20:38 UTC
  - b4bac9b41b Merge pull request #47868 from rallytime/merge-2018.3
  - e5d386e91c Update solaris core grains test
  - 267f09c1a0 Lint: Remove unused import
  - 120ee16b70 Replace old utils paths with new utils paths
  - dc32b67c03 Merge branch '2017.7' into '2018.3'

- \* 4b28e510f1 Merge pull request #47853 from dwoz/py3-cloud-test
  - c2f8aef7c5 Fix for py3 ec2 cloud tests
- \* 215efa6b73 Merge pull request #47847 from garethgreen-away/47833\_reactor\_runner\_documentation
  - 03676712de Adding some addition documentation to the reactor runner indicating that the reactor system must be active prior to using it.
- \* 0bf651b470 Merge pull request #47846 from Ch3LL/p\_refresh\_test
  - 019edad8e4 Fix flaky refresh pillar integration test
- \* 799fce979d Merge pull request #47552 from twangboy/fix\_46981
  - cffc9b7806 Merge branch '2017.7' into fix\_46981
  - 81308a4a44 Add release notes for 2017.7.7
  - 008af0ac6b Fix unit tests
  - 87097eefb6 Add comments about how get is returning data
  - f1f1bfc5c1 Show GPO settings, raise error if trying to set gpo managed settings
- \* ffc2ebc373 Merge pull request #47691 from lomeroe/solaris\_product\_grains
  - 6889befc6b Merge branch '2017.7' into solaris\_product\_grains
  - 49053bc106 lint fix
  - 6f185c9179 another lint fix
  - dbffba6876 fix tons of errors in my tests
  - 8c9355d34c Lint fix
  - b29ec75da7 Update regexes in core grains for detecting the 'product' grain on Solaris Sparc systems. Additionally, copy the 'product' grain to 'productname' to be consistent with other OSes.
- \* 96b7c0cc76 Merge pull request #47778 from Ch3LL/win\_state\_pkg
  - e1786de6b0 Merge branch '2017.7' into win\_state\_pkg
  - f8c467d3e6 Fix text editor error
  - 872e162137 Add test\_pkg integration state tests to windows
- \* 6f934c2259 Merge pull request #47823 from Ch3LL/win\_dns\_test
  - 7848114d6a Add win\_dns module integration tests for windows
- \* e63e04602d Merge pull request #47838 from rallytime/bp-47810
  - bd2b62fa66 better debug message
  - 83565c55df Address PR feedback
  - 50bce3a2f3 make decode\_linode\_plan\_label a private function
  - 2ba4fc4cea fix raising when a 'GB' format invalid plan is supplied
  - 3afb50d5a2 slight cleanup
  - 319fbd3406 match quotation mark types properly
  - 95e0202223 more consistent use of parens in logged warning

- f52926ca87 log a warning when the user supplied a label we could decode but was not in the proper format
- 121303d827 reduce complexity of get\_plan\_id by moving decoding of the user-supplied label to its own function
- cf534c7314 Fix Linode plan selection
- \* 9ef6e60617 Merge pull request #47805 from twangboy/add\_sign.bat
  - 66d8b0331a Add sign.bat script for signing packages
- \* 93420950d3 Merge pull request #47500 from dwoz/winuser
  - 0ca5224cbf Merge branch '2017.7' into winuser
  - e5948902af Use salt utils method for this\_user
  - a056a293f1 Centralize test username lookup
  - 6a6ab69722 Get the current username on windows
- \* 552526f309 Merge pull request #47802 from rallytime/bp-40892
  - bb357da084 add minion function to reload beacon #35960
- \* c9ccccf53b9 Merge pull request #47816 from Ch3LL/disable\_windows
  - 2509d36888 Add windows to service disable ERROR check in tests
- \* 2cb6634c6b Merge pull request #47773 from frogunder/45011
  - 7c9b0bda33 add win\_servermanager.list\_available test
- \* e65dece202 Merge pull request #47807 from dwoz/winrmtests
  - 1f1cc1357a Increase instance size for cloud tests
  - be8dcd21f1 Try an even bigger timeout
- **PR #47900:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-30 18:09:41 UTC
  - 21550dbd2d Merge pull request #47900 from rallytime/merge-2018.3.1-to-2018.3
  - 2801eecb26 Merge branch '2018.3.1' into '2018.3'
- **ISSUE #30367:** (paulfanelli) salt-run orchestration via state.sls always successful; it is ignoring state return value (refs: #47843)
- **PR #47843:** (garethgreenaway) [2018.3] orchestration results False when function is False (refs: #47983) @ 2018-05-30 17:21:54 UTC
  - a0bf565741 Merge pull request #47843 from garethgreenaway/30367\_orch\_return\_false\_when\_function\_fails
  - 09242697b8 Merge branch '2018.3' into 30367\_orch\_return\_false\_when\_function\_fails
- **PR #47866:** (rallytime) Back-port #47814 to 2018.3 @ 2018-05-29 19:55:24 UTC
  - **PR #47814:** (travispaul) Bugfixes and unit tests for pkgin module (refs: #47866)
  - da6f7a5538 Merge pull request #47866 from rallytime/bp-47814
  - d50c0ab96b Lint test\_pkgin.py
  - 4dac0b4a31 pkgin latest\_version bugfix
  - 4ae0313797 Bugfixes and unit tests for pkgin module
- **PR #47865:** (rallytime) Back-port #47600 to 2018.3 @ 2018-05-29 19:54:44 UTC

- PR #47600: (travispaul) Prevent crash on NetBSD and OpenBSD when no swap is configured. (refs: #47865)
- d9e7f2b5b1 Merge pull request #47865 from rallytime/bp-47600
- f9f464fa51 Prevent crash on NetBSD and OpenBSD when no swap is configured.
- PR #47221: (azelezni) Fix boto\_ec2 unused parameter "network\_interfaces" @ 2018-05-29 14:41:35 UTC
  - 61561a8279 Merge pull request #47221 from azelezni/fix-boto\_ec2-network\_interfaces
  - 03ee0023eb Fix unused network\_interfaces parameter
  - 1ece61ddfa Fix unused network\_interfaces parameter
  - 3e074be9c3 Fixing lint
  - 02609b6e61 Adding state files for new test.
  - 377e34c689 Updating function in saltmod to ensure that the result is a failure if the function being run returns as False.
- PR #47850: (rallytime) Fix autodoc for new swarm module @ 2018-05-26 01:53:16 UTC
  - c4d828c986 Merge pull request #47850 from rallytime/swarm-autodoc
  - 467c8fa45c Fix autodoc for new swarm module
- PR #47800: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-26 01:17:40 UTC
  - 30b31c5db5 Merge pull request #47800 from rallytime/merge-2018.3
  - 9e3ce39e8c Typo: test\_type --> text\_type
  - 8877489386 Fix bad merge caught by test in zpool state
  - c328450be2 Update old utils paths to new paths
  - 4abfd26e86 Merge branch '2017.7' into '2018.3'
    - \* 46618d2ce7 Merge pull request #47765 from meaksh/2017.7-fix-zypper-error-reading-repo
      - 4475ba19b8 Prevent zypper from parsing repo configuration from not .repo files
    - \* 0e87559ee3 Merge pull request #47781 from rallytime/update-linode-sizes
      - a90c1b760e Update cloud test profile and docs to use new Linode size labels
    - \* 3ddc56cb9b Merge pull request #47748 from rallytime/merge-2017.7
      - b75f5ae38e Merge branch '2017.7.6' into '2017.7'
      - edf94c915e Merge pull request #47775 from gtmanfred/2017.7.6
      - 548f65d056 catch UnsupportedOperation with AssertionError
      - 17596f3025 Merge branch '2017.7.6' into '2017.7'
      - 8c38ecd75f Merge pull request #47769 from gtmanfred/2017.7.6
      - 3fdcf0fa82 skip test that breaks test suite
      - e458f4a031 Merge branch '2017.7.6' into '2017.7'
      - 0d5b473ce2 Merge pull request #47747 from Ch3LL/rn\_2017.7.6
      - d4aa83b92d Add changelog to 2017.7.6 release notes
      - 8a5b34f7d9 Merge pull request #47702 from damon-atkins/2017.7.6\_fix\_pkg.latest\_state
      - adcc094e08 Merge branch '2017.7.6' into 2017.7.6\_fix\_pkg.latest\_state

- d610c192d9 Merge pull request #47700 from yannj-fr/2017.7.6
- 961c1ef61e fix roots modification time check
- 2a73e905df Merge branch '2017.7.6' into 2017.7.6
- 266749420f Merge pull request #47632 from gtmanfred/2017.7.6
- 2c50c0d2f5 fix pylint
- 4a29057b16 Fix last test for tornado
- 550ef2e272 allow using tornado 5.0
- 62e468448b handle new `_create_stream` in tornado 5.0
- 2643c356af Merge pull request #47720 from rallytime/bp-47692-2017.7.6
- 6e5cb36839 Default windows to m1.small for ec2-classic
- 20d9785244 fix roots modification time check
- aef37dd1ce fix roots modification time check
- d51662e053 Ensure `targeted_pkgs` always contains value for non-windows.
- 83b4224cf8 Adjusted based on feed back.
- 12f983ce9f Whitespace lint issues
- 075d3d3c49 `pkg.install` execution module on windows ensures the software package is installed when no version is specified, it does not upgrade the software to the latest. This is per the design. `pkg.latest` must provide the versions to install to `pkg.install`
- \* 0ddc864f90 Merge pull request #47779 from dwoz/winrmtests
  - d5eafe9d53 Use common timeout variable
  - 7e948eb540 Increase ec2 cloud timeouts to 1000
- \* 17c4c8443c Merge pull request #47430 from baniobloom/vpc\_association\_not\_found
  - 0f1d007f91 added catch for `VPCAssociationNotFound`
- \* 9c5dde1449 Merge pull request #47525 from baniobloom/duplicate\_sec\_group\_rule
  - dcc35df489 if we are trying to add the same rule then we are already in the desired state, return true
- \* 536ce2fa42 Merge pull request #47772 from gtmanfred/2017.7
  - 67756a50fd lock down dependencies for kitchen-salt
- \* 12b330f049 Merge pull request #47749 from terminalmage/issue47717
  - cd484bef69 Fix "dnf list upgrades" parsing
- \* 5cd18b9e70 Merge pull request #47755 from dwoz/winrmtests
  - 57dd89e6c3 Default to ec2 classic compatible images
  - f89668920a Be explicit about winrm setting
- \* f45a96ba1d Merge pull request #47668 from Ch3LL/win\_pkg\_test
  - a8981024de Add `pkg.latest_version` windows test
- \* 7b12444dfa Merge pull request #47750 from dwoz/cloudtest
  - 63b722ba21 Allow `ssh_interface` to default to `public_ips`

- \* 27fbb42210 Merge pull request #47737 from dwoz/win\_timeout
  - e88833a07d Cloud test fixup
- \* 1a93f060fb Merge pull request #47729 from UtahDave/fix\_get\_info\_doc
  - 443a2d72a2 fix cli example to match function name
- \* 00a13761c7 Merge pull request #47682 from terminalmage/issue47182
  - d0243e8f23 Suppress spurious lint failure
  - 3b449f11fc Add regression test for excludes issue
  - 28a7d2b81c Skip \_\_exclude\_\_ in find\_sls\_ids
- \* 518f7bcc62 Merge pull request #47708 from darkpixel/47696-do-not-enumerate-none
  - 54e9bf9ec9 Merge branch '2017.7' into 47696-do-not-enumerate-none
- \* cad062eaa7 Merge pull request #47681 from rallytime/merge-2017.7
  - 6c06cb3ae3 Merge branch '2017.7.6' into '2017.7'
- \* fd2d45d9c2 Merge pull request #47683 from Ch3LL/mac\_user\_test
  - 5a1b25b9c7 Remove unnecessary setUp in states.test\_user test for mac
- \* f323799c42 Merge pull request #47692 from dwoz/win\_instance\_type
  - 20b6070d54 Default windows to m1.small for ec2-classic
- \* 990ece5cd5 Merge pull request #47665 from gtmanfred/cloud
  - fd8a02decb use dictupdate to update the providers dictionary and merge lists
- \* a2ed8cbb7f Merge pull request #47151 from zer0def/configparser-defaultsect
  - a8f2ad977e Merge branch '2017.7' into configparser-defaultsect
  - cca2a806c9 Made interaction with [DEFAULT] section in ConfigParser as sane as upstream permits.
- \* e6fb8342ef Merge pull request #47673 from terminalmage/bp-45808
  - 454291ad62 Fix errors when attempting to cache files with long names or URLs
- \* b0446aab07 Merge pull request #47670 from gtmanfred/2017.7
  - dfd5a8715f add a pytest.ini and update a dependency for kitchen
- \* 0d06da6944 Merge pull request #47626 from gtmanfred/2017.7
  - 418364a533 make dev\_python27.txt have the same message as dev\_python34.txt
  - d53b44d10f remove lock file
  - 493ed7f93d use the toml dict format
  - e0f7cc1447 add proxy tests decorator to pytest confstest
  - 0a621dd0ec add Pipfile for managing dependencies in salt
  - f78b81db94 simplify dev and base.txt to single files
- \* a07a8906a0 Merge pull request #47578 from Ch3LL/mac\_service\_disabled
  - 6032a01f55 change disable check for upstart service on ubuntu14
  - 33b4cfbc5b Change service assertion check for systemd platforms

- 14896f9743 change codeauthor and class name
- 502c5bdf5 Ensure mac\_service.disabled is correctly querying services

95d4488f01 Merge branch '2017.7.6' into 47696-do-not-enumerate-none  
 16c2153385 Merge pull request #47667 from Ch3LL/mac\_user\_enable  
 ba40d3d1a1 Update test\_mac\_user\_enable\_auto\_login to test both py2 and py3  
 a4921e86c9 Merge pull request #47645 from Ch3LL/py3\_rm\_pip  
 225d90ad4c query the pip path for test test\_issue\_2087\_missing\_pip  
 e441733ac1 Merge pull request #47646 from rallytime/bp-47601-and-47643  
 9e1d1a5ef8 Fix typo  
 4e94609136 Remove unwanted file  
 0109249c78 use ignore-undefined-variable  
 37caecb7f4 Ignore pylint WindowsError  
 c1135d90c7 Better doc string  
 e53d6b9ed9 Skip tests when we can not use runas  
 041e4c6ddb Wrap properties loop with a check for None. Closes GH-47696

- **PR #47581:** (twangboy) Add get\_encoding salt util @ 2018-05-25 20:40:07 UTC
  - da9eaa1825 Merge pull request #47581 from twangboy/fix\_47274
  - ff6600f25e Merge branch '2018.3' into fix\_47274
  - 6eff2f847b Add suggested changes
  - e27e9fd1e7 Fix tests on Py3
  - f398cbbdda Use os.linesep.join instead of textwrap.dedent
  - 771392e299 Fix unit tests, add newline=" to io.open
  - c0f735dde3 Remove comment
  - 6d877bb48b Add comment
  - 9f369d3f22 Remove to\_encoding, create get\_encoding
  - 68be0f9ed2 Add is\_encoding salt util
- **ISSUE #47694:** (thuhak) utils/boto and utils/boto3 load error (refs: #47726)
- **PR #47726:** (gtmanfred) rename boto to botomod @ 2018-05-25 20:37:37 UTC
  - b860d95b2c Merge pull request #47726 from gtmanfred/2018.3
  - 43997a466e fix tests
  - 59180e09a8 switch all salt.utils.boto\* calls to \_\_utils\_\_ calls
  - 7e30f459c9 rename boto to botomod
- **ISSUE #47701:** (babs) elasticsearch.index\_template\_present state with check\_definition: True fails. (refs: #47703)
- **PR #47803:** (rallytime) Back-port #47703 to 2018.3 @ 2018-05-23 20:12:30 UTC

- PR #47703: (babs) Fix elasticsearch.index\_template\_present with check\_definition (refs: #47803)
- 2a270162d0 Merge pull request #47803 from rallytime/bp-47703
- 8fce0c562d Fix elasticsearch with check\_definition
- PR #47804: (rallytime) Back-port #47761 to 2018.3 @ 2018-05-23 20:11:55 UTC
  - PR #47761: (zerthimon) Fix userdata in openstack instances (refs: #47804)
  - 780043e6fd Merge pull request #47804 from rallytime/bp-47761
  - b7bc306333 Fix userdata in openstack instances
- PR #47776: (garethgreenaway) [2018.3] Fixes to failing \_before\_connect tests @ 2018-05-23 15:10:35 UTC
  - 1efe891c42 Merge pull request #47776 from garethgreenaway/970\_two\_minion\_unit\_tests\_failing
  - a5011b49ab Merge branch '2018.3' into 970\_two\_minion\_unit\_tests\_failing
  - ef24f72169 Fixing unit.test\_minion.MinionTestCase.test\_beacons\_before\_connect and unit.test\_minion.MinionTestCase.test\_scheduler\_before\_connect.
- PR #47783: (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-23 14:51:56 UTC
  - 4a6ca67883 Merge pull request #47783 from rallytime/merge-2018.3
  - 1adb8ea27f Merge branch '2018.3.1' into '2018.3'
- PR #47149: (meaksh) [2018.3] Strip trailing commas on Linux user's GECOS fields @ 2018-05-22 21:18:49 UTC
  - f8a6a85d28 Merge pull request #47149 from meaksh/2018.3-remove-trailing-commas-on-linux-user-gecos-fields
  - 60ec3230db Merge branch '2018.3' into 2018.3-remove-trailing-commas-on-linux-user-gecos-fields
- ISSUE #46938: (racooper) Beacons documentation update for 2018.3 (refs: #47740)
- PR #47740: (garethgreenaway) [2018.3] Updating Beacon topic to include list based configuration for Beacons @ 2018-05-21 13:58:01 UTC
  - 19f4137b63 Merge pull request #47740 from garethgreenaway/46938\_beacons\_documentation
  - 5d23ef4dd8 Updating Beacon topic to include list based configuration for Beacons
- PR #47710: (terminalmage) salt.loader: add error logging when whitelist lookup fails @ 2018-05-18 16:56:18 UTC
  - 22807ac756 Merge pull request #47710 from terminalmage/fix-loader-whitelist
  - 6192391b7b Add additional missing modules to whitelist
  - 7192c38f66 Change key -> function to make log message more clear
  - 91f9fd38fd Fix loader whitelists in unit tests
  - d4f2662e5b Add error logging when whitelist lookup fails
- PR #47680: (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-17 21:30:27 UTC
  - b91c0f5647 Merge pull request #47680 from rallytime/merge-2018.3
  - 9b1773a763 Merge branch '2018.3.1' into '2018.3'
- PR #47545: (dmurphy18) Fix non-root build and signing for rpm packages @ 2018-05-17 21:20:10 UTC
  - dbf12f9be2 Merge pull request #47545 from dmurphy18/fix\_nonroot\_build
  - 220f887fa6 Fixed review comment, changed file.chown to file.makedirs\_perms

- b15a1652b5 Changed versionadded from 2018.3.1 to 2018.3.2, to reflect when change should be accepted
- 90eb03e375 Additional error checking and minor cleanup
- 40d77e03d2 Correct building rpms with non-root user
- **ISSUE #47546:** ([ender8282](#)) archive.extracted fails when archive includes files with non-ascii names with 2018.3.0 (refs: [#48015](#), [#47572](#))
- **PR #47572:** ([garethgreenaway](#)) [2018.3] archive module, filenames with Unicode characters @ 2018-05-17 20:41:11 UTC
  - 69056e5b67 Merge pull request [#47572](#) from garethgreenaway/47546\_archive\_non\_ascii\_filenames
  - 5e97b8b44a Updating with requested changes.
  - cc1aa75a2f only convert to bytes when using Python2
  - 0fe32f4066 Updating integration/modules/test\_archive to include filenames with unicode characters.
  - 5a9cadd125 Accounting for when files in an archive contain non-ascii characters
- **PR #47661:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-16 15:53:36 UTC
  - cb04d9c37e Merge pull request [#47661](#) from rallytime/merge-2018.3

- 907d182dea Fix regression in table outputter due to unicode strings
- **PR #47617:** (aesposito91) Update napalm.py @ 2018-05-15 15:44:35 UTC
  - d1a1a594e9 Merge pull request #47617 from aesposito91/2018.3
  - 9f5d201dd7 Update napalm.py
- **ISSUE #46871:** (guettli) Sentry Logging Handler (refs: #47649)
- **PR #47649:** (paulcollinsiii) Some additional details about Sentry for the docs @ 2018-05-15 15:41:36 UTC
  - 049abe2850 Merge pull request #47649 from paulcollinsiii/sentry\_docs
  - 2a8dfd65d7 Some additional details about Sentry for the docs
- **PR #47642:** (garethgreenaway) [2018.3] Updating templates used by salt-extend for unicode goodness @ 2018-05-15 15:38:26 UTC
  - 8a21b864df Merge pull request #47642 from garethgreenaway/unicode\_update\_salt\_extend\_templates
  - 68d73f7afc Updating the templates that the salt-extend utility uses to include unicode\_literals & print\_function
    - \* 0232a6e1ad Add 'other' as valid kwargs for 'user.add' method
    - \* ff861d9089 Merge branch '2018.3' into 2018.3-remove-trailing-commas-on-linux-user-gecos-fields
- **PR #47603:** (terminalmage) Move/merge more test modules @ 2018-05-14 20:48:43 UTC
  - 99f53c0a9f Merge pull request #47603 from terminalmage/more-test-renaming
  - d612bd27e4 Move/merge more test modules
- **PR #47640:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-14 17:59:06 UTC
  - cc3daa88f3 Merge pull request #47640 from rallytime/merge-2018.3
  - 2827c56399 Merge branch '2018.3.1' into '2018.3'
    - \* f1680f1d9b Do make comparisons in a single line
    - \* 7dea455c12 Add unit test for new method 'user.chother'
    - \* 694882632c Add 'other' attribute to GECOS fields to avoid inconsistencies with chfn
    - \* 6c089c9de1 Fix unsupported chars checking on GECOS fields
    - \* d5c9ca0fbc Add unit tests for GECOS fields
    - \* ed940c4f58 Strip trailing commas on Linux user GECOS fields
- **PR #47589:** (Ch3LL) Remove duplicate file id in watch\_any doc example @ 2018-05-10 22:06:00 UTC
  - 4ec63dd041 Merge pull request #47589 from Ch3LL/watch\_any\_doc
  - 8cb97a48f5 Add additional state to watch\_any doc example
  - f7223a3bbf Remove duplicate file id in watch\_any doc example
- **PR #47564:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-10 19:13:36 UTC
  - 9836a7e62b Merge pull request #47564 from rallytime/merge-2018.3
  - 295e302fcf Lint: Fix syntax error from bad merge-conflict resolution

- 25f03ae425 Merge branch '2017.7' into '2018.3'
- 291d3d3bd8 Merge pull request #47540 from terminalmage/cmdmod-home-fix
  - \* e4b277f82e Fix corner case where runas user's HOME env value is incorrect
- 49af577b3e Merge pull request #47547 from terminalmage/gitfs-tutorial
  - \* 806ffb298a Add masterless mode docs to gitfs tutorial
- 476ba053d1 Merge pull request #47538 from terminalmage/pip-docs
  - \* 98e8ffeba4 Fix/clarify some of the pip module documentation
- 7cc8d9d30a Merge pull request #47524 from dwoz/whitelistlines
  - \* 2605ff8712 Gracefully handle blank lines in whitelist.txt
- f1a5b13072 Merge pull request #47527 from dwoz/test\_file\_name
  - \* 4aea7ca571 Update doc string
  - \* b3289e5a1c Fix test file name
- e9c1723175 Merge pull request #47408 from Ch3LL/skip\_diskusage
  - \* 068da8ad7d Merge branch '2017.7' into skip\_diskusage
  - \* 1a7ffb4e0d return error if diskusage not available
  - \* 10bd63a976 Skip status.diskusage integration tests on macsox
- 2f50ff7bc8 Merge pull request #47480 from baniobloom/ConflictingDomainExists
  - \* d22ed7dffa added handling for the aws error ConflictingDomainExists
- 7f53be6e92 Merge pull request #47444 from terminalmage/render\_state-spurious-error
  - \* a1e9fe00fd Skip trying to render a template for a nonexistent SLS file
- 50b9c4d79d Merge pull request #47478 from terminalmage/rename-pip-state-test
  - \* 9f7a9ebeb9d Rename pip state test modules to match naming convention
- e78ac0f9b7 Merge pull request #47505 from dwoz/win\_dsc\_fixes
  - \* d1fcb40d1c Raise proper invocation errors
- 0d4d5047d8 Merge pull request #47499 from dwoz/win\_run\_timeout\_again
  - \* c6697b9f16 Move kill process tree and re-use it
- 6a4d0380b1 Merge pull request #47493 from dwoz/win\_run\_timeout
- fec1233dc4 Add support for windows timeout to run\_salt
- **PR #47565:** (rallytime) Back-port #47440 to 2018.3 @ 2018-05-10 18:15:50 UTC
  - **PR #47440:** (kt97679) fix for the race condition, details are here: <https://github.com/saltstack/salt/pull/47440> (refs: #47565)
  - b22657ff9e Merge pull request #47565 from rallytime/bp-47440
  - 7c43417d46 addressed feedback
  - 1abe05207c fix for the race condition, details are here: <https://github.com/saltstack/salt/issues/33223#issuecomment-386117236>
- **PR #47590:** (Ch3LL) Fix firewall prune\_services deprecation warning @ 2018-05-10 17:01:48 UTC
  - 17e0fdca6c Merge pull request #47590 from Ch3LL/firewall\_warn

- d29b8e0ae2 Fix firewalld prune\_services deprecation warning
- PR #47568: (terminalmage) salt.serializers.yaml/yamlex: remove invalid multi\_constructor (refs: #47598) @ 2018-05-10 16:21:09 UTC
  - 2fcb108d71 Merge pull request #47568 from terminalmage/salt-jenkins-971
- ISSUE #38671: (MikeSpaceG) zpool.get error (refs: #47224)
- PR #47563: (rallytime) Back-port #47224 to 2018.3 @ 2018-05-10 16:18:07 UTC
  - PR #47224: (sjorge) Zpool zol fixes (refs: #47563)
  - e3ee7053fb Merge pull request #47563 from rallytime/bp-47224
  - 1d191445a7 FIX #38671 - zpool.get should support older zfs version
  - 23705b12cb zpool.scub docs should mention pause is not always available
  - d73885aa5c Make sure the docs mention that createboot is only available on illumos
- PR #47569: (Ch3LL) Update salt.utils.path mock in virtual core test @ 2018-05-10 15:18:31 UTC
  - 8e26624db3 Merge pull request #47569 from Ch3LL/core\_virt
- PR #47576: (rallytime) [2018.3] Small Documentation Fixes @ 2018-05-10 14:08:11 UTC
  - fc93715eea Merge pull request #47576 from rallytime/doc-updates
  - ca927fc14b Add extra lines that are needed for proper code-block formatting
  - b330d763a4 Remove infoblox state autodoc file

### 33.2.68 Salt 2018.3.4 Release Notes

Version 2018.3.4 is a bugfix release for *2018.3.0*.

#### State Changes

- The *host.present* state can now remove the specified hostname from IPs not specified in the state. This can be done by setting the newly-added `clean` argument to `True`.

#### Statistics

- Total Merges: 531
- Total Issue References: 111
- Total PR References: 412
- Contributors: 76 (5uper5hoot, Ch3LL, ClaudiuPID, Giandom, KaiSforza, MTechnology, ManicoW, Orange-Dog, ShantonRU, The-Loeki, Yxnt, aarnaud, amendlik, angeloudy, bartlaarhoven, bbh-kmd, bbinet, bdrung, bergmannf, bluesliverx, bornwitbugs, brejoc, cachedout, casselt, cro, cstarke, dgmorrisjr, dmurphy18, dubb-b, dwoz, frogunder, garethgreenaway, gtmanfred, isbm, jacobweinstock, jgleissner, jodok, jpsv, jyurdal, kiemlicz, kunal-bajpai, lexvella, lomeroe, m03, madrisan, mat813, mattp-, max-arnold, mchugh19, meaksh, michaelgibson, nhavens, pirogoeth, rallytime, rkrieger, rmarcinik, rongzeng54, rwaweber, s0undt3ch, sathieu, sheagcraig, silenius, sunyq, t0fik, terminalmage, terrible-broom, thebluesnevrdie, thetaurean, tlemarchand, tonybaloney, twangboy, waynew, weswhet, whytewolf, yosnoop, zwo-bot)

## Changelog for v2018.3.3..v2018.3.4

Generated at: 2019-02-06 20:56:17 UTC

- **PR #51525:** (twangboy) Backport 51095 to 2018.3.4 @ 2019-02-06 20:20:37 UTC
  - a37fb7d Merge pull request #51525 from twangboy/backport\_51095\_2018.3.4
  - b6acc92 Backport 51095
- **PR #51520:** (frogunder) Update man pages for 2018.3.4 @ 2019-02-06 18:42:13 UTC
  - 602ddc8 Merge pull request #51520 from frogunder/man\_pages
  - 0cbe3f8 Update man pages for 2018.3.4
- **ISSUE #51428:** (yosnoop) salt.utils.dns.lookup fails with dig method on EL7 (refs: #51429)
- **PR #51429:** (yosnoop) The +noel is supported much wider than +noclass @ 2019-02-06 17:48:48 UTC
  - 1f981c6 Merge pull request #51429 from yosnoop/replace-noclass-with-noel-for-dig
  - 5231e73 Merge branch '2018.3.4' into replace-noclass-with-noel-for-dig
  - 14e6fb7 In case the test machine can't resolve
  - 95e8a2f The +noel is supported much wider than +noclass
  - a00d708 Test dig options for salt.utils.dns.lookup
- **ISSUE #49226:** (defanator) salt-cloud grains inheritance from provider to profile (2018 vs 2016) (refs: #51366)
- **PR #51441:** (Ch3LL) Backport #51366 into 2018.3.4 @ 2019-02-06 17:42:19 UTC
  - **PR #51366:** (dwoz) Cloud provider and profile configs are merged [2018.3] (refs: #51441)
  - 209ef32 Merge pull request #51441 from Ch3LL/bp-51366
  - 5bc466e Fix python 3 path for shell test cases
  - 5351e5c Add testing path to run\_script commands
  - 2d8a364 Fix linter issues
  - 9b8718a Cloud provider and profile configs are merged
- **PR #51458:** (twangboy) Add Py2 Warning for Py2 Installer @ 2019-02-06 17:33:02 UTC
  - 90a8682 Merge pull request #51458 from twangboy/add\_py2\_warning
  - 05522c0 Merge branch '2018.3.4' into add\_py2\_warning
- **PR #51460:** (twangboy) Update installer mac 2018.3.4 @ 2019-02-06 17:31:18 UTC
  - b492021 Merge pull request #51460 from twangboy/update\_installer\_mac\_2018.3.4
  - 3c92688 Merge branch '2018.3.4' into update\_installer\_mac\_2018.3.4
- **PR #51471:** (twangboy) Fix the failing dns test on Windows @ 2019-02-03 22:03:34 UTC
  - 892d98c Merge pull request #51471 from twangboy/fix\_test\_win\_dns\_client
  - c9f6b01 Merge branch '2018.3.4' into fix\_test\_win\_dns\_client
- **PR #51462:** (ShantonRU) Fix insecure SQL queries in MySQL module @ 2019-02-01 21:19:20 UTC
  - a05305d Merge pull request #51462 from ShantonRU/fix-insecure-sql-queries-in-mysql-module-1
  - d3ef2cb Merge branch '2018.3.4' into fix-insecure-sql-queries-in-mysql-module-1
  - f47dda6 Fix improper use of socket authentication in mysql.user\_chpass

- ed62a2f Fix insecure SQL queries in mysql.user\_chpass
  - \* 33922c9 Fix the failing dns test on Windows
- **PR #51445:** ([terminalmage](#)) Remove custom grains module from 2018.3 branch @ 2019-02-01 16:48:13 UTC
  - 48936c2 Merge pull request #51445 from terminalmage/fix-custom-grains-rollback
  - 191235d Remove custom grains module from 2018.3 branch
  - 72fd1a2 Roll back icon change
  - 7dd1704 Add welcome\_py2.rtf
  - c93e9e3 Add Py2 Warning to installer package
  - b658900 Add Py2 Warning for Py2 Installer
- **PR #51438:** ([twangboy](#)) Add missing raise statement @ 2019-01-30 20:04:05 UTC
  - a880e42 Merge pull request #51438 from twangboy/fix\_raise\_2018.3.4
  - 5830fad Add missing raise statement
- **PR #51432:** ([Ch3LL](#)) Backport #51324 into 2018.3.4 @ 2019-01-30 17:51:50 UTC
  - **PR #51324:** ([garethgreenaway](#)) [2018.3] Fixes to x509 module and test (refs: #51432)
  - 28b898c Merge pull request #51432 from Ch3LL/bp-51324
  - bd41ff0 Fixing various bits in x509 module and unit test to ensure tests are passing on python2 & python3
- **PR #51377:** ([twangboy](#)) Fix issue when directory doesn't exist in LGPO module (2018.3.4) @ 2019-01-29 17:33:25 UTC
  - 01717d2 Merge pull request #51377 from twangboy/fix\_auditpol\_2018.3.4
  - 19e5181 Fix issue when directory doesn't exist
- **PR #51338:** ([Ch3LL](#)) Backport #51207 into 2018.3.4 @ 2019-01-27 23:44:59 UTC
  - **PR #51207:** ([twangboy](#)) Backport 50771 to 2018.3 (refs: #51338)
  - **PR #50771:** ([terminalmage](#)) Fix failing opensuse tests (refs: #51207)
  - 43a9d2f Merge pull request #51338 from Ch3LL/bp-51207
  - 345ae67 Backport PR# 50771 to 2018.3 branch
- **ISSUE #51158:** ([AndreiPashkin](#)) saltmod.state doesn't respect "roster" argument (refs: #51170)
- **PR #51337:** ([Ch3LL](#)) Backport #51170 into 2018.3.4 @ 2019-01-27 23:44:24 UTC
  - **PR #51170:** ([dwoz](#)) Honor roster system for ssh orchestrations (refs: #51337)
  - 3dcd11d Merge pull request #51337 from Ch3LL/bp-51170
  - 4e85505 Merge branch '2018.3.4' into bp-51170
- **ISSUE #50221:** ([tkaehn](#)) file.managed: contents\_pillar and pillar.file\_tree with keep\_newline is broken in 2018.3.3 (refs: #51252)
- **PR #51340:** ([Ch3LL](#)) Backport #51252 into 2018.3.4 @ 2019-01-27 23:42:49 UTC
  - **PR #51252:** ([dwoz](#)) Preserve newlines from pillar data for file.managed [2018.3] (refs: #51340)
  - 7656aa5 Merge pull request #51340 from Ch3LL/bp-51252
  - e74a6c6 Fix py3 managed.file test failure
  - 6f2c7cf Remove un-needed log statement

- 824950c Fix 50221 regression test on Windows
- 1840af9 preserve newlines from pillar data for file.managed
- PR #51290: (s0undt3ch) [2018.3.4] Fix minion start @ 2019-01-25 15:14:47 UTC
  - e90ca1d Merge pull request #51290 from s0undt3ch/hotfix/fix-network
  - da3aace Merge branch '2018.3.4' into hotfix/fix-network
  - 04f16b8 Fix tests. We no longer get *ipaddress* instances back.
  - c3fa82a Fix minion start issue
    - \* c893dc4 Fix saltmod roster test
    - \* b61854f Roster defines the roster system not a file
    - \* 484bab4 Fix linter
    - \* 5e2db2f Honor roster file for ssh orchestrations
- PR #51317: (terminalmage) Fix regression in dynamic pillarenv @ 2019-01-25 09:29:44 UTC
  - c8db7e3 Merge pull request #51317 from terminalmage/fix-pr-50417
  - 4be2891 Merge branch '2018.3.4' into fix-pr-50417
- PR #51311: (twangboy) Fix failing test *unit.states.test\_file.TestFileState.test\_managed* on Windows @ 2019-01-24 21:09:35 UTC
  - e246fdb Merge pull request #51311 from twangboy/fix\_test\_file.test\_managed
  - f4177e0 Remove mode parameter on Windows
  - 4c4ded3 Fix regression in dynamic pillarenv
- ISSUE #51195: (littleski) fstab improperly escaped when spaces are used in options (refs: #51226)
- ISSUE #27160: (martinadolfo) salt.states.mount persistence error using spaces in route (refs: #39593)
- PR #51292: (Ch3LL) Backport #51226 into 2018.3.4 @ 2019-01-24 11:11:34 UTC
  - PR #51226: (garethgreenaway) [2018.3] Handle spaces in fstab opts, similar fix to #39593 (refs: #51292)
  - PR #39593: (zwo-bot) Fix issue #27160 - escape whitespaces in fstab entry in module mount when persist=True (refs: #51226)
  - 40b20126 Merge pull request #51292 from Ch3LL/bp-51226
  - aba114e Merge branch '2018.3.4' into bp-51226
- PR #51295: (Ch3LL) Backport #51279 into 2018.3.4 @ 2019-01-24 11:10:19 UTC
  - PR #51279: (twangboy) Backport \_\_context\_\_ support from develop (refs: #51295)
  - fc0bec5 Merge pull request #51295 from Ch3LL/bp-51279
  - 5c4a7a4 Merge branch '2018.3.4' into bp-51279
- PR #51293: (Ch3LL) Backport #51233 into 2018.3.4 @ 2019-01-24 09:17:49 UTC
  - PR #51233: (Ch3LL) Backport #51105 to 2018.3 (refs: #51293)
  - PR #51105: (garethgreenaway) [develop] Report permission changes in test mode (refs: #51233)
  - dacd1ea Merge pull request #51293 from Ch3LL/bp-51233-2
  - a155fd7 Accounting for when permissions are not returned from file.check\_perms, eg. windows systems.
  - 53ba068 When test=True and there are permissions changes, report it.

- d2eba77 Remove network.py patch
- d431c71 Add `__context__` support
  - \* de6c13d Handle spaces in fstab opts, similar fix to #39593
- **ISSUE #51248:** (johnnybubonic) "[WARNING ] The file\_roots parameter is not properly formatted, using defaults" (refs: #51278)
- **PR #51278:** (dwoz) Warn about proper validation option @ 2019-01-22 22:13:13 UTC
  - 1abffb2 Merge pull request #51278 from dwoz/issue51248
  - c614198 Use pillar roots validation method
  - 0d2b0c6 Fix linter warnings
  - 5b98895 Fix wart in pillar\_roots validation
- **PR #51230:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-18 19:50:10 UTC
  - e53e9b1 Merge pull request #51230 from Ch3LL/merge-2018.3
  - 0ef7675 Merge branch '2017.7' into '2018.3'
  - 4a12c5f Merge pull request #50852 from mirceaulinic/fix-capirca
    - \* fa91267 Merge branch '2017.7' into fix-capirca
    - \* 71913ff Merge branch '2017.7' into fix-capirca
    - \* 6fc3484 Lint?
    - \* 3d56750 Extra newline for lint
    - \* 5176cd8 Improve the Capirca and related modules for ACL config generation
  - 3f4759b Merge pull request #50923 from astronouth7303/patch-2
    - \* 4f631a6 Document {% include %}
  - 210e817 Merge pull request #51111 from s0undt3ch/2017.7
    - \* 08e0ae7 Update to salt-bootstrap v2019.01.08
- **ISSUE #51211:** (sathieu) file\_roots envs with slash leads to "No such file or directory: '/var/cache/salt/master/file\_lists/roots/.foo/bar.w'" (refs: #51212)
- **ISSUE #48132:** (BenjaminSchiborr) Dynamic File Roots (refs: #51212)
- **PR #51212:** (sathieu) Allow slashes in file\_roots envs. @ 2019-01-17 17:29:18 UTC
  - 26008ef Merge pull request #51212 from sathieu/file\_roots\_slash
  - b769f18 Allow slash in file\_roots envs
  - f9437e2 Test for file\_roots envs with slash leads to "No such file or directory"
- **PR #51209:** (garethgreenaway) [2018.3] Back-port PR #51124 to 2018.3 @ 2019-01-17 13:28:32 UTC
  - **PR #51124:** (Ch3LL) Handle encoding when opening file for both py2/py3 (refs: #51209)
  - 5916282 Merge pull request #51209 from garethgreenaway/bp-51124
  - 82acce4 Handle encoding when opening file for both py2/py3
- **PR #51184:** (twangboy) Fix win\_lgpo\_auditpol salt util on Windows @ 2019-01-16 18:08:01 UTC
  - 094bd33 Merge pull request #51184 from twangboy/fix\_auditpol
  - 2e68d35 directly call cmd.run\_all

- **PR #51191:** (Ch3LL) Backport #50918 into 2018.3 @ 2019-01-16 18:02:19 UTC
  - **PR #50918:** (twangboy) Fix `test_debian_ip` on Windows (refs: #51191)
  - ac71922 Merge pull request #51191 from Ch3LL/bp-50918
  - 7300d84 Skip debian tests on Windows
  - 4622433 Fix `test_debian_ip` on Windows
- **ISSUE #49883:** (kiemlicz) salt-cloud azurearm is not working (refs: #51144)
- **PR #51144:** (jgleissner) 2018.3 azurearm py3 @ 2019-01-15 16:46:35 UTC
  - e7f53a3 Merge pull request #51144 from jgleissner/2018.3-azurearm-py3
  - 3178f1a msazure.py: remove unused imports
  - 99a4b9d azurearm: fix `list_locations`
  - aebe34b azurearm: fix `show_instance` function
  - d80669f msazure: fix `object_to_dict` for python 3
- **PR #51171:** (twangboy) Add random sleep time to avoid overloading Windows @ 2019-01-15 16:45:33 UTC
  - 1206f92 Merge pull request #51171 from twangboy/fix\_crypt
  - 6caa93b Add random sleep time to avoid overloading Windows
- **PR #51174:** (jpsv) Update OpsGenie to use their V2 API (2018.3) @ 2019-01-15 16:44:54 UTC
  - a96deed Merge pull request #51174 from jpsv/2018.3
  - 055823e Update opsgenie.py
  - 501c8df Merge branch '2018.3' into 2018.3
  - 220aa8a Update opsgenie.py
  - 5dc21cc Update to from V1 API to V2
  - f93ce7c Update to V2 API
- **ISSUE #42280:** (michaelgibson) make ldap eauth 2 factor compatible (refs: #42426, #45347)
- **PR #51010:** (amendlik) Allow unauthenticated bind for listing LDAP groups @ 2019-01-15 16:43:42 UTC
  - **PR #45811:** (gtmanfred) Fix ldap eauth (refs: #51010)
  - **PR #45347:** (amendlik) LDAP group membership (refs: #51010)
  - **PR #42426:** (michaelgibson) adding 2-factor auth capability to ldap eauth module - #42280 (refs: #45347)
  - 563d487 Merge pull request #51010 from amendlik/ldap-groups
  - cd336ed Merge branch '2018.3' into ldap-groups
  - 94f8ee4 Update unit tests for auth.ldap
  - 08e36d0 Allow unauthenticated bind for listing LDAP groups
- **PR #51112:** (s0undt3ch) [2018.3] Update to salt-bootstrap v2019.01.08 @ 2019-01-15 16:42:09 UTC
  - 6dc3752 Merge pull request #51112 from s0undt3ch/2018.3
  - 4f1d846 Update to salt-bootstrap v2019.01.08
- **PR #51097:** (terminalmage) Fix improper exception raises (2018.3) @ 2019-01-15 16:38:25 UTC
  - b19c990 Merge pull request #51097 from terminalmage/fix-keyerror-raise

- a3c0b49 Fix poorly-written test
- c0ff7b1 Fix more incorrect exception raises
- f11dbcc Fix improper KeyError raise
- **PR #51169:** (twangboy) More descriptive error when missing GitPython or PyGit2 @ 2019-01-15 16:37:44 UTC
  - 8920a86 Merge pull request #51169 from twangboy/fix\_git\_state
  - f2d1180 More descriptive error when missing GitPython or PyGit2
- **ISSUE #51160:** (amendlik) Minion crashes with long hostname under Python 3 (refs: #51173, #51161)
- **PR #51173:** (dwoz) Avoid exceptions by passing bytes to idna @ 2019-01-15 16:32:31 UTC
  - **PR #51161:** (amendlik) Ignore exceptions when generating the minion ID (refs: #51173)
  - 58eede6 Merge pull request #51173 from dwoz/issue51160
  - 11cc7b3 Remove un-needed test
  - 0f87812 Merge develop, Revert exception handling
  - 7365a1a Pass bytes to idna
- **PR #51147:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-15 02:05:51 UTC
  - 06854cf Merge pull request #51147 from Ch3LL/merge-2018.3
  - d39d8b7 Merge branch '2018.3' into merge-2018.3
- **ISSUE #51160:** (amendlik) Minion crashes with long hostname under Python 3 (refs: #51173, #51161)
- **PR #51161:** (amendlik) Ignore exceptions when generating the minion ID (refs: #51173) @ 2019-01-14 22:47:54 UTC
  - b79c09e Merge pull request #51161 from amendlik/long-hostname
  - 6fcc4ad Merge branch '2018.3' into long-hostname
- **ISSUE #51067:** (rkrieger) KeyError u'manufacturer' causes salt-minion crash on start with OpenBSD arm64 system (refs: #51159)
- **ISSUE #3:** (thatch45) libvirt module (refs: #51159)
- **PR #51159:** (rkrieger) Prevent crash by testing for 'manufacturer' in osdata on OpenBSD @ 2019-01-14 18:08:22 UTC
  - 1424734 Merge pull request #51159 from rkrieger/fix-issue-51067
  - 1440ccf Prevent crash by testing for 'manufacturer' in osdata on OpenBSD
  - 1a4e307 Ignore exceptions when generating the minion ID
- **PR #51146:** (terminalmage) Fix invalid assignment in vsphere module @ 2019-01-12 21:44:33 UTC
  - 5e37326 Merge pull request #51146 from terminalmage/fix-vsphere-tuple-issue
  - 5d60022 Fix invalid assignment in vsphere module
- **PR #51154:** (twangboy) Add support for Advanced Audit policies @ 2019-01-12 21:43:27 UTC
  - fad8621 Merge pull request #51154 from twangboy/auditpol
  - 9064376 Add support for Advanced Audit policies
- **PR #51151:** (Ch3LL) Backport #51061 to 2018.3 @ 2019-01-12 03:18:44 UTC
  - **PR #51061:** (garethgreenaway) [fluorine] fix to salt.utils.vt.Terminal (refs: #51151)

- f7a100c Merge pull request #51151 from Ch3LL/bp\_51061
- ffd4e27 When writing output to stdout we want to ensure that the data is a string not bytes. Under py2 the salt.utils.data.encode function results in a string but under py3 the result is a bytestring. Swapping out salt.utils.data.encode for salt.utils.stringutils.to\_str.
- **PR #51150:** (Ch3LL) Back-port #49508 to 2018.3 @ 2019-01-12 03:18:19 UTC
  - **PR #49508:** (bergmannf) Fix X509 remote signing on python3 (refs: #51150)
  - 3a50a57 Merge pull request #51150 from Ch3LL/bp-49508
  - 7ae53ad Do not silently ignore errors.
  - deb0134 Convert to string before sending via 'publish'.
  - 651c551 Use to\_str salt.utils when writing to a file.
- **ISSUE #50433:** (zerthimon) Wildcard grant fails in mysql\_grants.present in mysql 8.x (refs: #51152)
- **PR #51152:** (garethgreenaway) [2018.3] Fixes to mysql module to handle ALL PRIVILEGES grant @ 2019-01-12 03:17:15 UTC
  - 8bb589d Merge pull request #51152 from garethgreenaway/50433\_handle\_grants\_better
  - f7caa4d Fixing lint
  - e8c8c0f Adding some tests to ensure "ALL PRIVILEGES" is handled correctly in 8.0 and 5.6
  - b4bfd9f Add additional grants. Adding logic to handle when ALL or ALL PRIVILEGES is passed for the grant, including some logic to handle the fact that the grants are split when show grants is run for a particular user.
    - \* 74edfd9 Fix pylint
    - \* 81a3d47 Merge branch '2017.7' into '2018.3'
    - \* 8a76a19 Merge pull request #50858 from jasonarewhy/bugfix-2017.7/ubuntu-networking-searchdomain
      - 3395a3d Merge branch '2017.7' into bugfix-2017.7/ubuntu-networking-searchdomain
      - 69d25aa update debian\_ip test
      - a6b896c get searchdomain in Ubuntu 12+
- **ISSUE #50849:** (Super5hoot) MySQL version needs to be decoded (refs: #51133)
- **PR #51133:** (Super5hoot) Fixes mysql server version comparison. @ 2019-01-10 16:45:38 UTC
  - dda1ebb Merge pull request #51133 from Super5hoot/issue-#50849
  - ec14e13 Fixes mysql server version comparison.
- **PR #50878:** (max-arnold) Fix profile outputter docs @ 2019-01-08 18:32:40 UTC
  - 9d4321d Merge pull request #50878 from max-arnold/output-docs
  - d7403da Fix profile outputter docs
- **PR #51076:** (OrangeDog) Typos in index\_template\_present documentation @ 2019-01-08 18:25:20 UTC
  - ce87504 Merge pull request #51076 from OrangeDog/patch-1
  - 568e4fb Revert add -> check
  - 4d7ebe7 Typos in index\_template\_present documentation
- **PR #51081:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-07 20:34:16 UTC

- d08abf4 Merge pull request #51081 from garethgreenaway/merge-2018.3
- 027804a Merge branch '2018.3' into merge-2018.3
- ISSUE #50966: (klafkoff) 2018.3.3 missing a patch to salt/modules/nxos.py (refs: #51080)
- PR #51080: (garethgreenaway) [2018.3] Fix to nxos module @ 2019-01-07 18:07:25 UTC
  - 335088b Merge pull request #51080 from garethgreenaway/50966\_nxos\_ensure\_kwargs\_list
  - 230a66b Merge branch '2018.3' into 50966\_nxos\_ensure\_kwargs\_list
  - 629dc25 Ensure kwargs is a list before we attempt to loop through. Similar fix to <https://github.com/rallytime/salt/commit/430c462f34eb4eedf2384e06fbee8dc19b8026f6> in the proxy module.
    - \* a20791b Merge branch '2018.3' into merge-2018.3
- PR #51079: (terminalmage) Fix shadow.set\_date/shadow.set\_expire on F28 @ 2019-01-07 16:28:36 UTC

- PR #51018: (garethgreenaway) [fluorine] Merge forward from 2017.7 to 2018.3 @ 2019-01-01 23:11:02 UTC
  - b4774a8 Merge pull request #51018 from garethgreenaway/merge-2018.3
    - \* 773bf31 Use gpg's --batch in apt-key adv during repo key add
      - 9386aab Merge branch '2017.7' into merge-2018.3
      - 998feca Merge pull request #51030 from terminalmage/issue38502
      - 6dbd81f Add unit test to ensure we don't diff bare repos
  - 12f7583 Merge branch '2017.7' into merge-2018.3

- 4529150 Merge pull request #50977 from rallytime/config-docs
  - \* 43c39e7 Add documentation to master config docs for job\_cache\_store\_endtime
  - \* 887cd07 Add some salt-api options to the master config docs
  - \* 0d49746 Fix some formatting in master config docs
- 409594b Merge pull request #50991 from twangboy/requests\_2017.7
  - \* 32b9d2a Update requests for osx
  - \* 413dc72 Merge branch '2017.7' of <https://github.com/saltstack/salt> into requests\_2017.7
- e053074 Merge pull request #50983 from garethgreenaway/bp-50885
  - \* 09a8e6e fix a del in cloud vmware that crash when the key isn't there
  - \* 4196690 Update requests to 2.21.0
  - \* 23f78b0 Upgrade requests to 2.20.1
- PR #50990: (twangboy) Requests 2018.3 @ 2018-12-31 20:19:01 UTC
  - c53723a Merge pull request #50990 from twangboy/requests\_2018.3
  - e8b9233 Update requests on osx
  - b22856f Update requests to 2.21.0
  - 242389b Merge branch '2018.3' of <https://github.com/saltstack/salt> into requests\_2018.3
  - 0d4b799 Upgrade requests to 2.20.1
- PR #51004: (twangboy) Add tests for the win\_wusa state and module @ 2018-12-31 20:03:30 UTC
  - cecd108 Merge pull request #51004 from twangboy/win\_wusa
  - 0e92528 Merge branch '2018.3' into win\_wusa
  - c0d2495 Fix lint, add test docs
  - 1750270 Add state tests for win\_wusa
  - 6285b64 Update win\_wusa and add tests
- PR #51014: (madrison) ssh module: missing space in error message @ 2018-12-31 19:59:19 UTC
  - 3e0515b Merge pull request #51014 from madrisan/patch-1
  - ab980fb ssh module: missing space in error message
- PR #50883: (terminalmage) Backport #49622 to 2018.3 branch @ 2018-12-31 19:58:11 UTC
  - PR #49622: (angeloudy) fix command line options (refs: #50883)
  - 582d6b4 Merge pull request #50883 from terminalmage/bp-49622
  - c93dbfa Update archive.py
  - 925a9c9 Update archive.py
  - ed2bed3 fix command line options
- PR #50945: (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.8 @ 2018-12-30 00:05:47 UTC
  - fd9711b Merge pull request #50945 from garethgreenaway/merge-2017.7
  - 43b3fa4 Merge branch '2018.3' into merge-2017.7
- ISSUE #50854: (Ch3LL) [fluorine] windows stops when cannot connect to master (refs: #50855)

- **PR #51006:** (dwoz) Let minions try to connect to master indefinitely @ 2018-12-28 21:10:39 UTC
  - **PR #50855:** (dwoz) Let minions try to connect to master indefinitely (refs: #51006)
  - b8615e1 Merge pull request #51006 from dwoz/backport\_50855
  - 5563631 Let minions try to connect to master indefinitely
- **ISSUE #50989:** (mpx8701) SLS error (An exception occurred in this state: Traceback) (refs: #51005)
- **PR #51005:** (garethgreenaway) [2018.3] Fixes to junos state module @ 2018-12-28 20:51:31 UTC
  - cfed697 Merge pull request #51005 from garethgreenaway/50989\_fixing\_junos\_state\_arguments
  - d4ac180 Fixing the arguments accepted by cli function in the junos state module which are passed along to the cli function in junos module, so they align.
  - 3cfa8e Merge branch '2018.3' into merge-2017.7
- **PR #50982:** (twangboy) Fix issue with LGPO when returning empty dict (2018.3) @ 2018-12-26 19:58:12 UTC
  - daa591b Merge pull request #50982 from twangboy/fix\_lgpo\_2018.3
  - d942934 Get rid of requests import (CaseInsensitiveDict)
    - \* 6170fa5 Merge branch '2018.3' into merge-2017.7
- **ISSUE #46886:** (bbh-kmd) Unable to get salt-minion to call salt-call with alternate configuration (refs: #50959)
- **PR #50984:** (garethgreenaway) Back-port PR #50959 to 2018.3 @ 2018-12-26 19:29:54 UTC
  - **PR #50959:** (bbh-kmd) #46886: Use correct path to config\_dir when running salt from alternate placement. (refs: #50984)
  - 110bc66 Merge pull request #50984 from garethgreenaway/bp-50959
  - 20fa5c9 Update sudo.py
- **PR #50958:** (bdrung) Fix twilio version checking @ 2018-12-25 10:46:15 UTC
  - 8fc89a0 Merge pull request #50958 from bdrung/fix-twilio
  - df8d7b9 Fix twilio version checking
    - \* d89c9b5 Merge branch '2018.3' into merge-2017.7
- **ISSUE #50947:** (cachedout) Log full of IPv6 warnings (refs: #50962)
- **PR #50962:** (terminalmage) Remove redundant overrides for ip\_address/ip\_interface @ 2018-12-21 22:04:34 UTC
  - bb87822 Merge pull request #50962 from terminalmage/ipv6-warnings
  - 773b983 Merge branch '2018.3' into ipv6-warnings
  - f3b1254 Remove redundant overrides for ip\_address/ip\_interface
    - \* cea01e7 Updating valigdate\_tgt to ensure tests pass.
    - \* cdc7825 yet another lint fix.
    - \* f44a87e One last lint fix.
    - \* 45f363b Fixing various lint errors.
    - \* 6a65bf9 Merge branch '2017.7' into merge-2017.7
    - \* 747dd69 Merge pull request #50876 from terminalmage/issue50153
      - 676a12a Fix compound matching in eauth

- \* 07fca64 Merge pull request #50909 from damon-atkins/jenkins\_pylint
  - da1fc32 change params.CHANGE\_BRANCH to env.CHANGE\_BRANCH
- \* e7f0ab6 Merge pull request #50873 from Ch3LL/bp-50740
  - 5fd9ed9 Merge branch '2017.7' into bp-50740
- \* 2f77b2d Merge pull request #50869 from garethgreenaway/50848\_mysql\_exception\_test
  - 3767d4f Merge branch '2017.7' into 50848\_mysql\_exception\_test
  - af3e145 Cleanup.
  - b85c5bf Adding a test to ensure exception handling is correct.
  - 4242e64 Merge branch '2017.7' into bp-50740
- \* a5caab7 Merge pull request #50872 from Ch3LL/bp-50864
  - fc9c64b fix typo in file.managed documentation
  - fd73f86 Catch UnicodeDecodeErrors in id verification
- PR #50937: (Ch3LL) Fix external\_pillars documentation @ 2018-12-20 19:15:20 UTC
  - 49f2a35 Merge pull request #50937 from Ch3LL/pillar\_doc
  - 1f01489 Fix external\_pillars documentation
- ISSUE #50919: (dpkirchner) state.apply test documentation unclear (refs: #50940)
- PR #50940: (terminalmage) Fix confusing state module documentation @ 2018-12-20 18:29:26 UTC
  - 4213527 Merge pull request #50940 from terminalmage/issue50919
  - 3318927 Fix confusing state module documentation
- PR #50929: (twangboy) Fix `unit.utils.test_lgpo_netsh` on Windows for Py3 (2018.3) @ 2018-12-20 17:50:37 UTC
  - 421e4f4 Merge pull request #50929 from twangboy/fix\_test\_lgpo\_netsh\_2018.3
  - 01f9beb Fix failing lgpo netsh tests
- PR #50917: (dwoz) Cherry pick test fixes from fluorine @ 2018-12-19 17:56:19 UTC
  - b08b7e1 Merge pull request #50917 from dwoz/test\_fixes
  - 16d10fb Fix linter warnings
  - b22f827 Increase and standardize ShellCase timeouts
  - a5c8c18 Do not pass unicode in environment
- PR #50913: (bdrung) Fix documentation build @ 2018-12-19 16:03:55 UTC
  - 59df6b4 Merge pull request #50913 from bdrung/fix-doc-build
  - ecdb452 doc: Introduce MOCK\_MODULES\_MAPPING
  - cf64824 doc: Move mock\_decorator\_with\_params up
  - 08ef669 doc: Address pylint issues in conf.py
  - 67a3e37 doc: Mark preamble variable as raw string
  - b1e6080 doc: Fix reference to salt executors
  - e48b324 doc: Replace xa0 (non-breaking space) by spaces
  - b973e7a doc: Fix iterating over the Mock object in Python 3

- bb29948 doc: Do not mock non-existing `__mro_entries__` attribute
- e6cf3c4 Do not mock json when building the documentation
- 4acaf45 Fix sphynx error about `tornado.version_info`
- **ISSUE #50892:** ([cruscio](#)) `archive.extracted_source_hash` is case sensitive (refs: [#50906](#))
- **PR #50906:** ([garethgreenaway](#)) [2018.3] Ensure `source_hash` returned from `get_source_sum` is lowercase. @ 2018-12-19 04:22:23 UTC
  - f4e6b88 Merge pull request [#50906](#) from garethgreenaway/50892\_archive\_extracted\_source\_hash\_case\_sensitive
  - bcf8f06 fixing lint
  - 543ec7b Ensure `source_hash` returned from `get_source_sum` is lowercase.
- **PR #50867:** ([Ch3LL](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-12-14 21:32:23 UTC
  - b95b44f Merge pull request [#50867](#) from Ch3LL/merge-2018.3
  - 512293f Remove `dunder_dictionaries.rst`. Was added to `modules/developing.rst`
  - 89b4e09 Merge branch '2017.7' into '2018.3'
  - 858cfac Merge pull request [#50863](#) from 5uper5hoot/fix-issue-50848
    - \* c90d201 Unpack exception args in python3 compatible way.
  - e28b2ba Merge pull request [#50752](#) from kstreee/fix-memory-leak
    - \* 98cc63a Fixes a memory leak un-cleared stream connections.
  - 1f57602 Merge pull request [#50837](#) from Ch3LL/pyren\_doc
    - \* a873019 Clarify py render docs when data context is available
  - fdff675 Merge pull request [#50844](#) from twangboy/fix\_grains
    - \* 473f4d7 Fix some unrelated lint
    - \* fd1a072 Fix grains for future windows releases
  - 32dfaba Merge pull request [#50816](#) from dubb-b/2017.7
    - \* dc7ff48 Pinning bootstrap to the tagged version of salt.
  - b1e5f3f Merge pull request [#50709](#) from mattLLVW/service\_unmask
    - \* b199255 Merge branch '2017.7' into `service_unmask`
    - \* 38addd1 salt style guideline
    - \* 823c4ad Implement unmask in `states.services`
    - \* 91a6bf5 Functional unmask, must add tests
  - e4e9563 Merge pull request [#50633](#) from astronouth7303/loader-docs
    - \* 03e3168 `whitelist_modules` is linked via `enable_whitelist_modules` for some reason? idk
    - \* 5ca1f8e Typos
    - \* 7cb1a87 Add a quick index of loader-related settings
    - \* 318ca48 Make a note to not import modules
    - \* 6294658 Merge remote-tracking branch 'origin/2017.7' into `loader-docs`
    - \* 678958e Editing

- \* 9d59629 Merge branch '2017.7' into loader-docs
- \* 374d0e9 Finish the last sections
- \* 98da110 Migrate Dynamic Module Distribution to Modular Systems.
- \* 1bdd49d Add more links and write some system summaries
- \* bd3796a Update TOC
- \* 3a9ab1b Merge dunderers into developing, expand to cover all dunderers.
- \* d06739a Add short writeups for a bunch of systems.
- \* 705e7e4 Add a bunch of cross linking
- \* 40f9b16 Add missing module type sections
- \* 172d8c2 Refactor headings
- \* 53154a0 Oops, missed that
- \* 0dcd341 Possible horrific use of toctrees? maybe
- \* bed3509 Refactor, add a TOC
- \* f647c1d Fill in some missing modules
- \* 9d4b596 Merge branch '2017.7' into loader-docs
- \* 26468df Add missing blank line
- \* 205fea9 Some more revising
- \* d4a8f7e Remove some code from some links
- \* 65e4199 I feel like it should be up there
- \* d44f5ce Rephrase footnote
- \* 125e46e Add section on how modules get loaded, including giant table of names
- \* 5bfc6c6 Update reference to modules/index
- \* 4b096c1 Move all the module-development documentation into a single folder
- dcdb9b2 Merge pull request #50750 from bewing/pepa12
  - \* 9931a41 Fix last key detection in pepa key\_value\_to\_tree
- cb85d5d Merge pull request #50733 from marmarek/patch-3
  - \* 1011421 Report salt-call exit code from ssh\_py\_shim.py
- b086ff3 Merge pull request #50756 from GwiYeong/local-client-fix
  - \* c488092 fix local client missing minion return
- **ISSUE #50850:** (akrus) key\_cache: sched prints error messages in logs (refs: #50859)
- **PR #50859:** (garethgreenaway) [2018.3] Fixes for key\_cache and python3 @ 2018-12-13 23:57:07 UTC
  - 216fa14 Merge pull request #50859 from garethgreenaway/50850\_python\_key\_cache\_file\_binary
  - ebc9a01 When reading and writing the key cache file, when using Python3, ensuring the file is read & written in binary mode.
- **PR #50828:** (twangboy) Fix issues with lgpo state and util @ 2018-12-13 16:37:33 UTC
  - 6b45aad Merge pull request #50828 from twangboy/fix\_lgpo

- 05baa95 Merge branch '2018.3' into fix\_lgpo
- **PR #50843:** (bdrung) Fix RemoveCapacityFromDiskgroupTestCase require pyvmomi @ 2018-12-12 20:36:32 UTC
  - 6ea059d Merge pull request #50843 from bdrung/fix-tests
  - 0d00ae4 Fix RemoveCapacityFromDiskgroupTestCase require pyvmomi
- **ISSUE #50829:** (ghost) process.absent UnicodeDecodeError (refs: #50839)
- **PR #50839:** (terminalmage) Fix UnicodeDecodeError in ps module @ 2018-12-12 19:59:12 UTC
  - 14d7d1d Merge pull request #50839 from terminalmage/issue50829
  - 3a3d9b7 Ensure that unicode types returned from compatibility funcs
  - 1a00abc Add unit test for \_get\_proc\_cmdline
  - 9eaa2ed Remove extraneous comments
- **ISSUE saltstack/salt#49393:** (Poil) file.directory recurse not always changing perms (refs: #50653)
- **PR #50653:** (lexvella) Check file\_mode in file.directory and \_check\_directory @ 2018-12-12 16:30:52 UTC
  - 264a042 Merge pull request #50653 from lexvella/2018.3
  - 4ea9386 Merge branch '2018.3' into 2018.3
  - 42e4ab3 Merge branch '2018.3' into 2018.3
  - 79f6b42 Check file\_mode in file.directory and \_check\_directory
    - \* 1233e2b Fix some lint
    - \* 56c0e55 Fix issues with lgpo state and util
- **ISSUE #45026:** (angeloudy) bytes error in mysql module (refs: #50823)
- **PR #50823:** (terminalmage) salt.modules.mysql: Decode fetch results before making string comparisons @ 2018-12-11 21:04:41 UTC
  - a8ad17a Merge pull request #50823 from terminalmage/issue45026
  - ec8e116 Decode fetch results before making string comparisons
- **PR #50817:** (dubb-b) Adding git 'v' to the bootstrap options @ 2018-12-11 17:28:10 UTC
  - e31e731 Merge pull request #50817 from dubb-b/2018.3
  - 48fc01f Adding git 'v' to the bootstrap options
- **PR #50780:** (twangboy) Add netsh mechanism in the LGPO module @ 2018-12-10 22:09:20 UTC
  - 9b6b39c Merge pull request #50780 from twangboy/lgpo\_netsh
  - 5eea728 Fix some lint
  - f077783 Add some tests
  - 2dde12a Fix one more lint item
  - c55b7b4 Fix some lint
  - 1247598 Add more policies
  - b2b9795 Fix overly long lines
  - f18d1aa Add additional policies that use netsh
  - cb50648 Add versionadded tags

- 00cbf26 Add the netsh mechanism to the lgpo module
- **PR #50783:** (sathieu) gitfs/git\_pillar: Fix UnicodeDecodeError while cleaning stale refs @ 2018-12-10 20:34:53 UTC
  - 0351296 Merge pull request #50783 from sathieu/gitfs\_stalerefs\_unicode
  - ef160a6 gitfs/git\_pillar: Fix UnicodeDecodeError while cleaning stale refs
- **ISSUE #45867:** (Nick2253) Icinga2 Module uses incorrect paths (refs: #50615)
- **PR #50765:** (ClaudiuPID) Fix icinga2 cert path @ 2018-12-10 18:10:24 UTC
  - **PR #50615:** (ClaudiuPID) Fixes icinga2 certs path for newer versions 2.8+ (refs: #50765)
  - deadf9c Merge pull request #50765 from ClaudiuPID/fix-icinga2-cert-path
  - ce1842e Merge branch '2018.3' into fix-icinga2-cert-path
  - 31878d5 Pylint fixes
  - 47bfa1 Migrated to cmd.run\_all and tested on working srv
  - a1dddce Fixes icinga2 certs path for newer versions 2.8+
- **PR #50692:** (terminalmage) Update a couple test modules to use with\_tmpdir/with\_tempfile decorators @ 2018-12-10 17:24:02 UTC
  - 9f8289b Merge pull request #50692 from terminalmage/update-tests
  - 36a4a1a Merge branch '2018.3' into update-tests
  - be14517 Make x509 tests use tempfiles instead of hard-coding them
  - a394cd7 Update file integration tests to use decorator for tempdirs
- **ISSUE #32245:** (tkwilliams) git\_pillar should permit automatic mapping of environment to branch a-la gitfs (refs: #50768)
- **PR #50768:** (sathieu) git\_pillar: Add support for all\_saltenvs parameter @ 2018-12-10 16:39:37 UTC
  - 3a71567 Merge pull request #50768 from sathieu/git\_pillar\_all\_saltenvs
  - e971412 git\_pillar: Add support for all\_saltenvs parameter
- **ISSUE #48801:** (dstoliker) salt.states.user.present - mindays, warndays, and inactdays won't return to salt's default values (refs: #50796)
- **PR #50796:** (dwoz) Fix #48801 min, max, inact, and warn changes @ 2018-12-10 16:30:14 UTC
  - 12a8447 Merge pull request #50796 from dwoz/issue48801
  - 6b95223 fix linter errors
  - 87a04df Fix #48801 min, max, inact, and warn changes
- **ISSUE #46388:** (dynek) IPv4 & v6 network configuration on Debian (refs: #49355)
- **ISSUE #40262:** (pjediny) Salt enforces configuration from /etc/network/interfaces.d/\* to /etc/network/interface (refs: #49355)
- **ISSUE #38672:** (valentin2105) IPv6 Network states is incomplete (refs: #49355)
- **PR #50804:** (Ch3LL) Back-port #49355 to 2018.3 @ 2018-12-10 16:21:31 UTC
  - **PR #49355:** (MTecknology) Improve management of interfaces in debian-based distributions (refs: #50804)
  - **PR #46980:** (MTecknology) Fix broken rendering debian\_eth.jinja. (refs: #49355)

- b266e8b Merge pull request #50804 from Ch3LL/bp-49355
- d34eade Use a temp file instead of /etc/network/interfaces for unit tests.
- 622c354 Support reading multiple addresses from interface files.
- 15c34fe Support unicode in space-delimited list; fixes unit tests in py2.
- 0b59561 Added documentation about debian interfaces.d/\*. (Fixes: #40262)
- 1b096fb Removed python lint.
- 6e41225 Finished adding support for multiple IP addresses.
- 4c7df5f Cleaned up documentation/examples in states.network:
- 601f434 Added support for -ipaddr and -ipv6ipaddr to modules.debian\_ip().
- 638f899 Added support for loopback devices to modules.debian\_ip(). (Fixes: #38672)
- cf61c8d Added a bunch of unit tests for modules.debian\_ip.build\_interface().
- b905cf6 Added support for dns\_{nameservers,search} being a list or string.
- **PR #50767:** (dwoz) Make sure ldap passwords are honored @ 2018-12-05 22:59:17 UTC
  - dc9414c Merge pull request #50767 from dwoz/ldap\_no\_pass
  - 67aa591 Fix linter errors
  - be3945a Remove crufty import
  - 91f50a4 Add more ldap auth tests for ZD-2993
  - 055a8d5 Make sure ldap passwords are honored
- **ISSUE #50364:** (sathieu) git\_pillar mountpoint ignores the root parameter (refs: #50626)
- **PR #50626:** (sathieu) git\_pillar: Allow root and mountpoint parameters together @ 2018-12-05 17:46:59 UTC
  - 60aa0d5 Merge pull request #50626 from sathieu/git\_pillar\_mountpoint\_and\_root
  - 5423c27 git\_pillar: Allow root and mountpoint parameters together
- **PR #50745:** (bbinet) Fix grafana dashboard updating when nothing has changed @ 2018-12-04 19:26:32 UTC
  - c02387e Merge pull request #50745 from bbinet/fix-grafana-dashboard-update
  - 7019d47 Fix grafana dashboard updating when nothing has changed
- **PR #50737:** (garethgreenaway) [develop] Merge forward from 2017.7 to 2018.8 @ 2018-12-04 16:02:13 UTC
  - ae81498 Merge pull request #50737 from garethgreenaway/merge-2017.7
  - fde8db5 Merge branch '2017.7' into merge-2017.7
  - 246c055 Merge pull request #50718 from dwoz/run\_run\_timeout
    - \* ecd8486 Honor run\_run timeout for shell tests
  - 979b3aa Merge pull request #50702 from damon-atkins/jenkins\_pylint
    - \* 5936066 ensure archiveArtifacts are always collected. Use CHANGE\_BRANCH to detect merge-forward
  - 22acaaa Merge pull request #50632 from astronouth7303/loader-exception-handler
    - \* 0f72815 Merge branch '2017.7' into loader-exception-handler
  - d9e7be1 Merge pull request #50670 from damon-atkins/jenkins\_pylint

- \* b6d1605 ci/lint corrected filenames and test condition on full lint Also fix CODEOWNER team name
  - 194801a Merge branch 'loader-exception-handler' of github.com:astronouth7303/salt into loader-exception-handler
  - dadeb0d Merge branch '2017.7' into loader-exception-handler
  - 8697744 Use single quotes per style guide
  - 07868f1 Improve logging output
  - fb05bd5 Eat an exception from an entry point instead of letting it kill the system.
- **PR #50685:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-30 18:46:07 UTC
  - edaa9fe Merge pull request #50685 from Ch3LL/merge\_2018.3
  - d46aff0 Merge branch 2017.7 into 2018.3
    - \* 6dc3afc Merge pull request #50672 from garethgreenaway/49691\_file\_replace\_search\_only\_return\_false
      - 7e7df06 lint
      - 6b73c76 When using file.replace, with the search\_only option, if the pattern does not exist in the file then we should return False.
    - \* 1236b51 Merge pull request #50659 from garethgreenaway/49954\_gem\_installed\_less\_than\_greater\_than\_support
      - 0ec8bcf When using the gem installed state, when passing a version that includes greater than or less than symbols, ensure that the installed versions meets that requirement.
    - \* 6317f3a Merge pull request #50583 from damon-atkins/jenkins\_pylint
      - 2d1f51c Fix lint only changes, full lint on merge forwards - lint only changes previous diff picked up out of data files, when the branch was out of date. - full limit on merge forward to pick up changes in the lint checks between versions. - update CODEOWNERS for .ci/\*
    - \* 15bf09a Merge pull request #50605 from Oloremo/fix-supervisord-dead-state-idempotency
      - ba3f281 Merge branch '2017.7' into fix-supervisord-dead-state-idempotency
      - cf9ab84 Merge branch '2017.7' into fix-supervisord-dead-state-idempotency
      - af386a2 Fixed the supervisord.dead state idempotency
- **ISSUE #50016:** (abednarik) State augeas.change do not update config file (refs: #50690)
- **PR #50690:** (garethgreenaway) [2018.3] fixes to augeas\_cfg module @ 2018-11-30 18:44:42 UTC
  - 7cb2405 Merge pull request #50690 from garethgreenaway/50016\_ensure\_path\_is\_str
  - cec7cb4 Older versions of python-augeas need the path passed to aug.match to be a string.
- **ISSUE #49392:** (Poil) hosts not replacing existing entry (refs: #50657)
- **PR #50657:** (terminalmage) Rewrite host.present state to allow for removal of entries not matching IP @ 2018-11-29 17:58:40 UTC
  - a5c7639 Merge pull request #50657 from terminalmage/issue49392
  - 2ddb587 Add release notes for new "clean" option
  - e4946f9 Rename "remove" argument to "clean"
  - 7fd3bce Add remove parameter to host.present state
  - 2671a30 Add unit tests for host.present state

- 30f1b85 Remove non-matching IPs from hosts file
- ec297a0 Performance improvements in hosts module
- d1c2038 Add generic ip address validation function
- 9f54720 Add ignore ability to process\_read\_exception
- **ISSUE #48759:** (MyIgel) acme.cert: Fail to update certificate after adding aliases / missing --expand (refs: #50683)
- **PR #50683:** (garethgreenaway) [2018.3] Fixes to acme module when adding aliases to existing certificate @ 2018-11-29 17:46:54 UTC
  - b604785 Merge pull request #50683 from garethgreenaway/48759\_adding\_aliases\_include\_expand
  - 3940a0f When adding alises to an existing Certbot certificate, if we see a message about expanding in the stderr returned from cmd.run\_all we should rerun the cmd with --expand included.
- **ISSUE #50406:** (glkappe) salt-ssh can't use Mongo returner (refs: #50664)
- **PR #50664:** (garethgreenaway) [2018.3] Fix to logic for configuring returners @ 2018-11-28 05:24:30 UTC
  - 15f9ae4 Merge pull request #50664 from garethgreenaway/50406\_salt\_ssh\_returner\_configuration
  - 3525411 When pulling values out of the available configuration for returners we should always default to using keys for those returners, eg. mongo.user for the username. Otherwise in certain situations, eg. when using salt-ssh we will end up with the wrong value for the user.
- **PR #50652:** (twangboy) Fix *unit.utils.test\_mac\_utils* on Windows @ 2018-11-27 20:45:41 UTC
  - afbcf03 Merge pull request #50652 from twangboy/fix\_test\_mac\_utils
  - c4cb729 Fix path issues with the tests
- **PR #50640:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-26 22:33:22 UTC
  - 61a824f Merge pull request #50640 from garethgreenaway/merge-2017
  - 409c98f Merge branch '2018.3' into merge-2017
- **ISSUE #50403:** (prometheanfire) tornado 5.1.1 is not co-installable with salt on python2.7 (refs: #50639)
- **PR #50639:** (dwoz) Handle pipenv like version restrictions @ 2018-11-26 19:42:11 UTC
  - 20a2de3 Merge pull request #50639 from dwoz/pipfix
  - 9c6f653 Handle pipenv like version restrictions
    - \* fced78b lint
    - \* 45a1aa3 Merge branch '2017.7' into merge-2017
    - \* b2cf134 Merge pull request #50463 from dwoz/zmqpubserv
      - a289e3c Merge branch '2017.7' into zmqpubserv
    - \* 6679242 Merge pull request #50590 from garethgreenaway/bp-50333
      - 1f5aa4b pkg.installed currently fails when sources is used along with hold: True. This was due to a change in #48426 that swapped out sending the pkgs variable for the desired variable instead. This caused problems with pkg.hold because desired and sources are always populated, and pkg.hold can only include one or the other. This change just includes desired in the call to pkg.hold since desired has the same value for sources.
      - 39e811b Add issue url to tests
      - c4d7a43 Add debug log when connecting

- 4f81432 Set subscribe via sockopt for better compatibility
- 6882209 More reliable pub server publishing
- **ISSUE #49957:** ([whytewolf](#)) salt-master scheduled items ignore maxrunning. (refs: [#50130](#))
- **PR #50130:** ([garethgreenaway](#)) [2018.3] Fixes to schedule maxrunning on master @ 2018-11-26 18:35:35 UTC
  - 5b7ab35 Merge pull request [#50130](#) from garethgreenaway/49957\_master\_schedule\_ignoring\_maxrunning
  - 2f6dac9 Updating test\_maxrunning\_master to Mock get\_running\_jobs.
  - abda0a4 Reverting changes to doc/conf.py.
  - 6d072fc Some additional cleanup.
  - 4bd0406 Adding integration.scheduler.test\_maxrunning to ignore list.
  - 45e160d Adding integration.scheduler.test\_maxrunning to filename\_map.yml
  - 2201a46 Fixing lint
  - 6c0ee32 removing unused cache\_jobs function from utils/master.py
  - c2ed1d4 Adding some logging when the cache files are unable to be removed.
  - 44940d6 Ensure minion tests using minion options.
  - 722be43 Fixing lint
  - 65b4421 Adding some master specific functions to utils/masters.py to determine if a Salt process is running. Updating utils/schedule.py to use the appropriate running function either from utils/master.py or utils/minion.py depending on where the scheduled job is running. Adding tests to test maxrunning in scheduled jobs for both the minion and master.
  - 0d65304 Swapping manual mocking to autodoc\_mock\_imports
- **ISSUE #50542:** ([doug-stratoscale](#)) mysql.user\_exists doesn't work with Mysql 8.0.13 (refs: [#50551](#))
- **PR #50551:** ([garethgreenaway](#)) [2018.3] Fixes to verify\_login in mysql module @ 2018-11-26 17:44:25 UTC
  - 26759c2 Merge pull request [#50551](#) from garethgreenaway/50542\_mysql\_ensure\_verify\_login\_uses\_connection\_host
  - 96742aed4 Merge branch '2018.3' into 50542\_mysql\_ensure\_verify\_login\_uses\_connection\_host
  - eb510a6 Merge branch '2018.3' into 50542\_mysql\_ensure\_verify\_login\_uses\_connection\_host
  - 6d2309d Merge branch '2018.3' into 50542\_mysql\_ensure\_verify\_login\_uses\_connection\_host
  - db89b27 Merge branch '2018.3' into 50542\_mysql\_ensure\_verify\_login\_uses\_connection\_host
  - 0284323 Ensure that verify\_login is using the host from the connection\_args and not the host associated with the user. Adding a test to ensure user\_exists when the passed host is the MySQL wildcard %.
- **PR #50619:** ([s0undt3ch](#)) Don't squash tracebacks and Unicode fixes @ 2018-11-26 17:04:31 UTC
  - 14c4fd5 Merge pull request [#50619](#) from s0undt3ch/2018.3
  - a4771d2 UNICODE!
  - 72205a5 DO! NOT! SQUASH! TRACEBACKS!
- **ISSUE #50562:** ([soostdijck](#)) scheduled highstate ignores blackout (refs: [#50586](#))
- **PR #50586:** ([garethgreenaway](#)) [2018.3] minion\_blackout for scheduled jobs @ 2018-11-23 11:15:38 UTC
  - 59809a1 Merge pull request [#50586](#) from garethgreenaway/50562\_minion\_blackout\_scheduler
  - 48673b7 Adding some defaults for minion\_blackout code when pillar & grains are not available in opts. Removing some debugging code.

- 9f422b2 Moving the minion\_blackout code to the start of the try...except. Adding a test to ensure we get a log.exception when minion\_blackout is True.
- 2bf8fa5 Adding support for minion\_blackout for jobs that are run from the Salt scheduler.
- **PR #50576:** (garethgreenaway) Back-port PR #50549 to 2018.3 @ 2018-11-21 14:39:55 UTC
  - **PR #50549:** (cachedout) Add security credits to release notes (refs: #50576)
  - 5c28179 Merge pull request #50576 from garethgreenaway/bp-50549
  - 807068d Typo fix
  - 2ef8307 Typo fix
  - 7c8957a Typo fix
  - c1ca603 Merge branch '2018.3' into bp-50549
  - b163380 Add security credits to release notes
- **PR #50599:** (terminalmage) Merge Sphinx fixes from 2017.7 to 2018.3 @ 2018-11-21 13:31:18 UTC
  - c9531d8 Merge pull request #50599 from terminalmage/merge-2018.3
  - ba82b07 Merge remote-tracking branch 'upstream/2017.7' into merge-2018.3
  - 1b8a8ac Merge pull request #50592 from terminalmage/docs-2017.7
    - \* db15776 Remove overline from section title
    - \* 8127dd5 Disable unused shorturls plugin
- **ISSUE #50254:** (jmcook1) file.line adding line every time (refs: #50366)
- **PR #50366:** (t0fik) 2018.3 fix issue50254 @ 2018-11-20 20:31:30 UTC
  - 60b4622 Merge pull request #50366 from jdsieci/2018.3-fix-issue50254
  - a9b9fa2 Fixed pylint warnings
  - 342786b Issue #50254 fixed
  - 1ab59e7 Added integration tests
  - 110f74f Added unit tests reproducing issue
- **ISSUE #50558:** (angeloudy) 'test=True' does not work with artifactory.download (refs: #50580)
- **ISSUE #50155:** (mikemartino) artifactory.downloaded state is not respecting test=True (refs: #50580)
- **PR #50580:** (garethgreenaway) [2018.3] Adding test=True to artifactory.download. @ 2018-11-20 16:37:14 UTC
  - 735c9f4 Merge pull request #50580 from garethgreenaway/50155\_artifactory\_download\_state\_test\_true
  - 7dd57d0 Lint.
  - 3661ee0 Adding test=True to artifactory.download.
- **ISSUE #46292:** (asymetrixs) win\_wua should have possibility to specify source file (refs: #50397)
- **PR #50577:** (garethgreenaway) Back-port PR #50397 to 2018.3 @ 2018-11-19 21:28:42 UTC
  - **PR #50397:** (tlemarchand) Add Win WUSA management, to install Windows Update files (.msu). (refs: #50577)
  - 015834d Merge pull request #50577 from garethgreenaway/bp-50397
  - dd2d872 Documentation
  - af6d21f Import unicode\_literals from future and add versionadded tag

- 09dc09d Disable powershell modules list Add list\_kbs function
- 05852d0 pchanges to changes named parameters
- 16525e4 Add Win WUSA management, to install Windows Update files (.msu).
- **PR #50570:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-19 20:04:05 UTC
  - 12e0d80 Merge pull request #50570 from garethgreenaway/merge-2018.3
  - 4c85119 merge-forward 2017.7 to 2018.3
  - 02238a7 Merge pull request #50520 from dwoz/issue\_50459
    - \* 1aa2e34 Simplifie and portable homedir lookup
    - \* f14f747 Fix windows home dir lookup
    - \* d3620c3 Always set .gitconfig dir to user's home
  - edd9738 Merge pull request #50532 from dubb-b/2017.7
    - \* 009e52d Adding tag to ec2 cloud tests
  - b0446f5 Merge pull request #50500 from terminalmage/2017.7-docs
    - \* 870a364 Set docs jenkins job to treat warnings as errors
    - \* e03bdcd Update docs references for states with func\_alias
    - \* 8a2c08f Disable custom sphinx automodule
- **ISSUE #50266:** (4815162342lost) grains.virtual show incorrect info (refs: #50519)
- **PR #50519:** (garethgreenaway) [2018.3] Fix to virtual core grain @ 2018-11-16 23:42:18 UTC
  - 6fba83c Merge pull request #50519 from garethgreenaway/50266\_core\_virtual\_grain\_fixes
  - dcae2f0 Merge branch '2018.3' into 50266\_core\_virtual\_grain\_fixes
- **PR #50427:** (sathieu) Backports git\_pillar tests improvements to 2018.3 @ 2018-11-16 16:37:29 UTC
  - **PR #50425:** (sathieu) git\_pillar: Add tests for mountpoint parameter (refs: #50427)
  - **PR #50407:** (sathieu) git\_pillar: Add tests for root parameter (refs: #50427)
  - **PR #50378:** (sathieu) Don't fail on git\_pillar tests when destructive tests are not enable (refs: #50427)
  - 84edd62 Merge pull request #50427 from sathieu/bp-git\_pillar\_tests
  - 12ea1cc git\_pillar: Add tests for mountpoint parameter
  - fce467e git\_pillar: Add tests for root parameter
  - ba150a5 Don't fail on git\_pillar tests when destructive tests are not enable
- **PR #50530:** (terminalmage) Enable proxy/ssh daemons when filename mapping causes those tests to be run @ 2018-11-15 23:03:06 UTC
  - 4651481 Merge pull request #50530 from terminalmage/salt-jenkins-1209
  - fbee11d Enable proxy/ssh daemons when filename mapping causes those tests to be run
  - 4f30611 lint
  - 4f9eb95 Fixing a typo in the \_virtual function, should be checking for existing grains in osdata not grains. Updating the detection to look for /sys/bus/xen/drivers/xenconsole instead of specifically looking for any files under /sys/bus/xen/drivers. Some systems that are not running as Xen PV hosts include files under that location, particular Oracle Linux.

- **ISSUE #50224:** (mruepp) Augeas changes state with setm not working (refs: #50526)
- **PR #50526:** (terminalmage) Work around augeas' lack of unicode support @ 2018-11-15 17:33:26 UTC
  - 6c07ba4 Merge pull request #50526 from terminalmage/issue50224
  - ee246ed Work around augeas' lack of unicode support
- **PR #50503:** (terminalmage) Set jenkins docs job to treat any warnings as errors (2018.3 branch) @ 2018-11-14 19:30:24 UTC
  - d83da51d Merge pull request #50503 from terminalmage/2018.3-docs
  - a4fc108 Fix docs configuration for renamed logstash engine
  - 5b06464 Set docs jenkins job to treat warnings as errors
  - 9b6c669 Update docs references for states with func\_alias
  - 62b5d40 Disable custom sphinx automodule
- **ISSUE #48343:** (bornwitbugs) CPU Beacon TypeError (refs: #50514)
- **PR #50514:** (bornwitbugs) Load beacon fix @ 2018-11-14 19:20:33 UTC
  - fa2f4a5 Merge pull request #50514 from bornwitbugs/load\_beacon\_fix
  - e59ced6 Merge branch '2018.3' of github.com:saltstack/salt into load\_beacon\_fix
- **PR #50509:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-14 17:52:06 UTC
  - a50377b Merge pull request #50509 from Ch3LL/merge-2018.3
  - 178dab3 Merge branch 2017.7 into 2018.3
  - c00fd43 Merge pull request #50493 from rallytime/bp-50362
    - \* 60559cf Remove flaky test
    - \* a696a8f Fix test\_matcher on Windows
  - 3cac1d0 Merge pull request #50494 from terminalmage/2017.7-docs
    - \* d561b26 Late import to fix docs build errors
  - 0829944 Merge pull request #50479 from Ch3LL/digital\_ocean\_location
    - \* 917781d Lint: Add blank line
    - \* 3583519 Update digital ocean location for cloud tests
  - accf681 Merge pull request #50480 from terminalmage/docs
    - \* c34690e Don't import obsolete Directive class from Sphinx
  - 2e9b3d2 Merge pull request #50478 from rallytime/update-bootstrap-docs
    - \* 66b078c Update the bootstrap script documentation to point to bootstrap repo
- **PR #50502:** (twangboy) Add definition for RestrictRemoteSAM @ 2018-11-14 14:30:38 UTC
  - 55b4914 Merge pull request #50502 from twangboy/lgpo\_2018.3
  - fe92a3a Add definition for RestrictRemoteSAM
- **ISSUE #48734:** (oddfellow) salt-run jobs.list\_jobs has Target: unknown-target (refs: #50328)
- **ISSUE #43453:** (kunal-bajpai) Runner job load is never saved to job cache (refs: #43454)
- **PR #50328:** (rallytime) Fix issue with salt-run jobs.list\_jobs where Target: unknown-target @ 2018-11-13 19:49:58 UTC

- PR #43454: (kunal-bajpai) Fix save\_load which is never called for returner jobs (refs: #50328)
- c1dde7e Merge pull request #50328 from rallytime/fix-48734
- 2c51cf9 Make target test job more specific to reduce test flakiness
- caace3f Rewrite job cache target test to be more robust
- b29fcfa New test must be py3 compatible...oops. :)
- c684c29 Fix issue #48734
- 6859e0e Add regression test for issue #48734
- PR #50499: (dwoz) Fix 2018.3 build @ 2018-11-13 18:46:54 UTC
  - 351faeb Merge pull request #50499 from dwoz/build\_fix
  - 5754b4a Fix 2018.3 build
- PR #50496: (terminalmage) Fix 2018.3 docs build warnings @ 2018-11-13 17:21:09 UTC
  - 6f4b23f Merge pull request #50496 from terminalmage/2018.3-docs
  - cb25641 Fix header underline length to avoid another sphinx warning
  - 9272f7b Fix more sphinx build errors
  - 18a8104 Late import to fix docs build errors
  - d457132 Fix sphinx build warnings in 2018.3 branch
- ISSUE #50227: (sheagraig) mac\_utils \_available\_services will fail with malformed launchd plists present (refs: #50228)
- PR #50492: (rallytime) Back-port #50228 and #50443 to 2018.3 @ 2018-11-13 16:59:15 UTC
  - PR #50443: (weswhet) fix when checking for service Label on macOS (refs: #50492)
  - PR #50228: (sheagraig) Fix 50227 malformed plists (refs: #50492, #50443)
  - 6b272c1 Merge pull request #50492 from rallytime/bp-50228-and-50443
  - 7879a2d Fix logging format
  - f578392 Lint Fix: add mock\_open import
  - e5b999b add try/except when checking for service Label
  - 3c36bdd Fix linting errors.
  - fab57de Write tests to handle invalid launchd plist XML.
  - bb429b0 Condense service result assertions, add a binary plist test.
  - a809fef Factor out another helper function, implement broken symlink test.
  - 216f7ef Update testing for mac\_utils services.
  - 89d8267 Fix trailing-slash bug in User LaunchAgent appending.
  - 0e23b6e Handle bad plists by ignoring them, with py2 and py3 specific approaches
  - fa44149 Avoid *AttributeError* when checking for exception types.
  - fd62b33 Add secondary exception handler for malformed plists.
  - ae6f49b Make test correctly generate a double exception.
- PR #50486: (twangboy) Back port lgpo from Fluorine @ 2018-11-13 09:40:17 UTC

- da980d9 Merge pull request #50486 from twangboy/lgpo\_2018.3
- bbbc07b Back port lgpo from Fluorine
- ISSUE #50218: (ata-sql) git.latest with unless command fails after upgrade to 2018.3.3 (refs: #50456)
- PR #50456: (terminalmage) Two bugfixes @ 2018-11-13 06:06:52 UTC
  - 7dd3438 Merge pull request #50456 from terminalmage/issue50218
  - 6143408 Add unit test for TimedProc regression
  - e234abd Add support for list of commands in git states' onlyif/unless
  - cbf05c8 TimedProc: Don't assume args is a string
  - 87de250 Exit gracefully when mod\_run\_check raises exception
- PR #50455: (dubb-b) Adding the released version as the bootstrap minion. @ 2018-11-12 22:52:53 UTC
  - d8514e6 Merge pull request #50455 from dubb-b/2018.3
  - fb61482 adding git
  - 181b8a4 removing stable
  - fc93ad6 Adding the released version as the bootstrap minion.
- PR #50483: (rallytime) Back-port #50272 to 2018.3 @ 2018-11-12 22:45:05 UTC
  - PR #50272: (jyurdal) Fix out of order docker Env comparison (refs: #50483)
  - cfb3351 Merge pull request #50483 from rallytime/bp-50272
  - 0f02da7 Remove unnecessary u prefix from string literals
  - fc26ae8 Add unit test for comparing containers with the same env vars
  - cf7cb4b extra blank line after function definition(pylint)
  - 1de9ce3 Compare sorted docker environment
- PR #50481: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-12 22:44:15 UTC
  - 360ae6a Merge pull request #50481 from rallytime/merge-2018.3
  - 1517bb3 Update old utils paths to use new paths
  - d8e7c47 Merge branch '2017.7' into '2018.3'
  - e5f97cd Merge pull request #50467 from dwoz/test\_kitchen\_up
    - \* 8c5e93e Use patched version of test-kitchen until next release
  - b16ff9c Merge pull request #50469 from dwoz/minion\_timeout\_test
    - \* 57f702d Fix linter warning
    - \* 686153a Fix up integration.minion.test\_timeout
  - 45b438e Merge pull request #50470 from dwoz/set\_time\_flaky
    - \* 794ba17 Reset date and time after changing
  - c85561e Merge pull request #50442 from rallytime/replace-docbanner
    - \* 193325d Update docbanner hyperlink
  - 7200568 Merge pull request #50439 from rallytime/bootstrap-contributing-docs
    - \* d2158aa Add bootstrap section to contributing docs

- cca7a36 Merge pull request #50441 from rallytime/replace-docbanner
  - \* 2af92bd Update SaltConf doc banner
- 1e72d20 Merge pull request #50414 from flassman/backmerge-for-typeerror-windows-python3
  - \* 20fff15 use exc.winerror not exc[0] to avoid python3 TypeError
- 93095cb Merge pull request #50415 from flassman/pass-cwd-to-runas\_system
  - \* 0113137 cwd needs to be passed from runas() to runas\_system()
- **ISSUE #50461:** (absolutejam) elementaryOS 'pkg' \_\_virtual\_\_ returned false (refs: #50468)
- **PR #50468:** (garethgreenaway) [2018.3] Adding elementary override to grains/core.py @ 2018-11-12 16:41:57 UTC
  - 3aaad17 Merge pull request #50468 from garethgreenaway/50461\_fix\_elementary\_os\_family\_grain
  - 77e8dcc On later versions of elementary, the os\_family is being populated as elementary. In order for the aptpkg module to function, we need to override is to be Debian.
- **ISSUE #50311:** (marek-obuchowicz) pkg.installed state fails even though it succeeded (refs: #50590, #50333)
- **ISSUE #46689:** (mxork) pkg.installed: hold: True not applied to a package which is already installed. (refs: #48426)
- **PR #50333:** (garethgreenaway) [2018.3] Fix to pkg.installed for sources and hold: True (refs: #50590) @ 2018-11-08 18:02:33 UTC
  - **PR #48426:** (garethgreenaway) [2017.7] fixes to states/pkg.py (refs: #50333)
  - d9179fb Merge pull request #50333 from garethgreenaway/50311\_pkg\_installed\_fails\_sources\_hold
  - 7bc9b3d Merge branch '2018.3' into 50311\_pkg\_installed\_fails\_sources\_hold
  - 6e96728 pkg.installed currently fails when sources is used along with hold: True. This was due to a change in #48426 that swapped out sending the pkgs variable for the desired variable instead. This caused problems with pkg.hold because desired and sources are always populated, and pkg.hold can only include one or the other. This change just includes desired in the call to pkg.hold since desired has the same value for sources.
- **PR #50434:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-08 17:40:39 UTC
  - 193c80a Merge pull request #50434 from rallytime/merge-2018.3
  - 83dfbb2 Merge branch '2017.7' into '2018.3'
    - \* ef4509e Merge pull request #50370 from dwoz/pubd\_msg\_logs
      - 58ced12 log jid to payload size
      - 3c537b5 Log message flow to publish daemon
- **PR #50417:** (meaksh) Get the right target when using "\_\_env\_\_" on git\_ext\_pillar to avoid merging problems @ 2018-11-08 17:07:03 UTC
  - 73ce80f Merge pull request #50417 from meaksh/2018.3-fix-git\_pillar-\_\_env\_\_-solving-for-merging
  - 71af32d Remove unicode references
  - b7af5e5 Test git\_ext\_pillar across multiple repos using \_\_env\_\_
  - 59894e2 Resolve target branch when using \_\_env\_\_
- **ISSUE #50292:** (dstoliker) sysctl in test=True mode results in [ERROR ] Could not open sysctl file (refs: #50423)
- **PR #50423:** (garethgreenaway) [2018.3] Fixes to sysctl modules and state @ 2018-11-08 14:13:00 UTC

- e9464c9 Merge pull request #50423 from garethgreenaway/50292\_no\_error\_log\_test\_true
- 95a7f12 Adding file check and empty list return to freebsd\_sysctl.py
- 469c090 Adding a check to see if the config file exists, if not then return an empty list so we get the would be changes. Adding a test for this functionality.
- **ISSUE #50420:** (weswhet) mac\_system virtual function fails to load on 2018.3.3 (refs: #50421)
- **PR #50421:** (weswhet) fixing an issue on mac\_system where the virtual function wouldnt load @ 2018-11-07 21:57:44 UTC
  - fccf875 Merge pull request #50421 from weswhet/fix-mac\_system-loader
  - 042445d fixing an issue on mac\_system where the virtual function wouldnt load
- **PR #50409:** (casselt) Fix test mode for mount state if device\_name\_regex is used. @ 2018-11-07 16:04:45 UTC
  - d2fc910 Merge pull request #50409 from casselt/mount-device\_name\_regex-test-mode-fix
  - 56d5a32 Fix test mode for mount state if device\_name\_regex is used.
- **PR #50383:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-06 15:51:53 UTC
  - c2fda9d Merge pull request #50383 from rallytime/merge-2018.3
  - e993692 Merge branch '2017.7' into '2018.3'
    - \* cd7c95f Merge pull request #50128 from mgomersbach/fix-py3-reload-compat
      - e453e82 Satisfy pylint, use naming instead of W or E classification
      - d20581c Merge branch 'fix-py3-reload-compat' of github.com:mgomersbach/salt into fix-py3-reload-compat
      - 48c6a4f Merge branch '2017.7' into fix-py3-reload-compat
      - 5cd9741 Satisfy pylint
      - a2838db Satisfy pylint checks
      - 05c598c Fix import error by utilizing six and strict version spec
      - 95174e6 Merge branch '2017.7' into fix-py3-reload-compat
      - ab8b5b4 Update workaround to root of file
      - 37ab1f8 Update workaround to root of file
      - 253ab11 Workaround for py2 builtin, =<3.3 imp and >=3.4 libimport quirks, solves #50127
    - \* aa6b149 Merge pull request #50354 from rallytime/version\_num\_docs
      - 0621f7d Add a few more feature release codenames to the version\_numbers doc
    - \* 6472100 Merge pull request #50359 from dwoz/clitest
      - 18b5d43 Increase cli batch test timeout for increased reliability
    - \* 99c8f35 Merge pull request #50345 from dwoz/pub\_d\_logging
      - fd58523 Fix linter warnings
      - 5e1db3c Fix ZMQ PubServer daemon logging works on winndows
      - 8899832 Configure logging for ZMQ PubServer daemon
    - \* 44f7af4 Merge pull request #50350 from dubb-b/2017.7
      - 346a831 Updating the AMI's and sizes for the test run.

- \* b947a18 Merge pull request #50274 from rallytime/bp-41472
  - 0a1e607 When the minion key is denied by the master then exit status 77 (permission denied)
- \* 4725acd Merge pull request #50195 from damon-atkins/jenkins\_pylint
  - eb13407 capture some extra info
- \* ab8e845 Merge pull request #50329 from twangboy/fix\_cloud\_winrm
  - cf5fb04 Check WinRM port before initiating connection
- \* e535b38 Merge pull request #50252 from dwoz/backport\_fs\_fix
  - 59ac284 Do not allow age to be a negative number
- ISSUE #49523: (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
  - PR saltstack/salt#50174: (rallytime) Back-port #50146 to 2018.3 (refs: #50231)

  - PR #50235: (rallytime) Don't encode the return values in utils/vt.py (refs: #50236)
  - PR #50231: (rallytime) Revert "Back-port #50146 to 2018.3" (refs: #50236)
  - PR #50230: (rallytime) Add various ssh tests to the filemap for salt/utils/vt.py changes (refs: #50291, #50235)
  - PR #50174: (rallytime) Back-port #50146 to 2018.3 (refs: #50236)
  - PR #50146: (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #`saltstack/salt`#50174`\_`\_, #50174, #50231, #50236)
  - 46c7dc2d Merge pull request #50236 from rallytime/fix-cloud-vt
  - c1984c9 Fix salt-cloud UnicodeEncodeError when writing to stdout
- ISSUE #50062: (whytewolf) max\_event\_size does not always trim large events. (refs: #50382)
- PR #50382: (garethgreenaway) [2018.3] Fix to utils/dicttrim.py to honor max\_event\_size with nested dictionaries @ 2018-11-05 20:04:06 UTC
  - ed4fa87 Merge pull request #50382 from garethgreenaway/50062\_max\_event\_size\_does\_not\_always\_trim\_large\_events
  - 039f3d1 Increase limit for trimming.
  - 7f77bfe Adding test for utils/dicttrim.py
  - 9b55ac7 Adding \_trim\_dict\_in\_dict to utils/dicttrim.py to be called from trim\_dict when data contains a nested dictionary. This will ensure that values will still be trimmed correctly.
- PR #50387: (rallytime) Back-port #50339 to 2018.3 @ 2018-11-05 20:03:15 UTC
  - PR #50339: (bartlaarhoven) The driver requires dependency, not the other way around. (refs: #50387)
  - 493d653 Merge pull request #50387 from rallytime/bp-50339
  - a3f264d Lint: Add extra blank line
  - bd18412 The driver requires dependency, not the other way around.
- ISSUE #41342: (githubcdr) beacons.state does not save as list (refs: #50347)
- PR #50347: (garethgreenaway) [2018.3] Fixes to beacon state module @ 2018-11-05 14:19:41 UTC
  - 3022b7d Merge pull request #50347 from garethgreenaway/41342\_beacon\_state\_module\_fixes
  - 8885d1f Merge branch '2018.3' into 41342\_beacon\_state\_module\_fixes

- c2354a9 Fixing beacon state test. Adding a reset function to beacon module to clear out beacon configuration. Useful for tests runs to ensure bits are left over between runs.
- 2390f47 Adding SaltReturnAssertsMixin back in
- 677d090 Remove zookeeper reference.
- f3dee43 Updating the beacon state module to ensure that the format of the beacon data that is being sent along to the beacon execution module is in the right format.
- **ISSUE #41583:** (seanjnkns) mount.swap for swap file test=True results wrong (refs: #50358)
- **PR #50358:** (garethgreenaway) [2018.3] fixes to function mount.swap in mount state @ 2018-11-05 14:16:50 UTC
  - 929525a Merge pull request #50358 from garethgreenaway/41583\_mount\_swap\_test\_true\_wrong\_results
  - b8ded8b Updating the swap function in the mount.swap function also check the device name when checking the fstab data. Updating tests to reflect new behavior.
    - \* d07c84d reordering ret dictionary in load test to ascending order
    - \* f704128 fixing type in load beacon module and adding option validators to config check function along with mock default values in test, fixes #48343
    - \* 4114a4f fixing type in load beacon module and adding option validators to config check function along with mock default values in test
- **ISSUE #49225:** (onnodb) [win\_lgpo] lgpo\_set always reports failure; Registry.pol corruption (refs: #50006)
- **ISSUE #48782:** (mike2523) [win\_lgpo] Causes corrupt Registry.pol file (refs: #50006)
- **PR #50006:** (lomerio) Correct more issues in lgpo @ 2018-11-02 16:32:29 UTC
  - 3ffa392 Merge pull request #50006 from lomerio/issue48782\_2018.3
  - dc58252 update to use a single line if statement when dealing with prepended text
  - 0e011ad add runTest method to class for PY2
  - 377ec09 add a test for #47784
  - 0a14505 change backslashes in comment string to fix lint error
  - 02181d3 add fix/test for #50079
  - 05f2951 more lint fixes
  - 94b3335 lint fixes in test
  - 2a79626 update test to actually work
  - 42840ec add missing comma in function call
  - c283f50 Log a warning message instead of an exception when a SID cannot be converted to a username (for user rights assignments)
  - 271bd70 capture and print exception information
  - bc94b8e update method for creating size field of \*\*delvals items for py3 compatibility
  - d9fe28a fix clobbering of admx\_search\_results which was keeping some policies from being properly detected
- **PR #50340:** (garethgreenaway) [2018.3] Backporting #48087 to 2018.3 @ 2018-11-01 18:15:37 UTC
  - **PR #48087:** (mat813) Fix patching sysctl.conf on FreeBSD. (refs: #50340)
  - 12de4b9 Merge pull request #50340 from garethgreenaway/backport\_48087\_to\_2018\_3

- 56c87ff Backporting #48087 to 2018.3

  - PR #49752: (jodok) add support for clonenum parameter (refs: #50275)
  - 5e46434 Merge pull request #50275 from rallytime/bp-49752
  - e463d99 Merge branch '2018.3' into bp-49752
  - 1e10c6e add support for clonenum parameter
- ISSUE #47425: (raddessi) states/netyang.managed ignores models when passed as a kwarg (refs: #50301)
- PR #50316: (rallytime) Back-port #50301 to 2018.3 @ 2018-11-01 16:32:04 UTC
  - PR #50301: (tonybaloney) Fixes issues raised in #47425 for states.netyang (refs: #50316)
  - 51e333a Merge pull request #50316 from rallytime/bp-50301
  - 367b689 Merge pull request #32 from tonybaloney/bp50301
    - \* 529687a update test assertions
  - ba526ad remove unused import
  - 220e57f create 2 simple unit tests for the netyang state module and fix issue in #47425
  - 20bf306 reproduce bug in 47425
- PR #50290: (twangboy) Fix test\_state for Windows @ 2018-10-31 19:28:34 UTC
  - af1075b Merge pull request #50290 from twangboy/fix\_test\_state
  - 69c02fc Fix some lint and some typos
  - d184013 Fix typo
  - 92b5ea0 Create salt util that copies file security info
- ISSUE #50050: (terminalmage) Backport runtests.py's --from-filenames functionality to 2018.3 branch (refs: #50308, #50291)
- PR #50291: (rallytime) Back-port #50230 to 2018.3 @ 2018-10-31 19:22:25 UTC
  - PR #50230: (rallytime) Add various ssh tests to the filemap for salt/utills/vt.py changes (refs: #50291, #50235)
  - 045d81c Merge pull request #50291 from rallytime/bp-50230
  - 1aae681 Merge branch '2018.3' into bp-50230
  - 1ef712a Add various ssh tests to the filemap for salt/utills/vt.py changes
- PR #50315: (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-10-31 14:16:34 UTC
  - 00437aa Merge pull request #50315 from rallytime/merge-2018.3
  - 422465e Merge branch '2018.3.3' into '2018.3'
  - 4d9e2a0 Merge pull request #50088 from vulnbe/fix-incorrect-id-handling-2018-3-3
  - 619f2f2 Fix incorrect id handling in file state
- PR #50309: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-30 16:07:25 UTC
  - 84ee7a3 Merge pull request #50309 from rallytime/merge-2018.3
  - 381a59d Merge branch '2017.7' into '2018.3'
  - 11fa33e Merge pull request #50295 from dubb-b/remove-cloud-change

- \* 80982ad Removing an un needed change and maybe fixing the lint error
- e00c507 Merge pull request #50287 from whytewolf/boto\_vpc
  - \* 5a39644 minor correction to boto\_vpc.route\_table\_present example, subnet\_names was on wrong indent level
- 37ae06c Merge pull request #50280 from gtmanfred/2017.7
  - \* 5808074 fix InstallRequirement.from\_line for pip 18.1
- **ISSUE #50050:** ([terminalmage](#)) Backport runtests.py's --from-filenames functionality to 2018.3 branch (refs: #50308, #50291)
- **PR #50308:** ([rallytime](#)) Fix matcher grain file @ 2018-10-30 15:27:47 UTC
  - **PR #50182:** ([terminalmage](#)) Backport runtests.py modifications from develop to 2018.3 (refs: #50308)
  - b805bab Merge pull request #50308 from rallytime/test-fixes
  - f238522 Fix matcher grain file
- **PR #50270:** ([terrible-broom](#)) apt: speedup installing packages with '>=' or '<=' and reduced memory... @ 2018-10-30 13:24:36 UTC
  - 57fe6cd Merge pull request #50270 from terrible-broom/feature/apt-cache-show-instead-of-dump
  - 6c1b05a Lint: add extra blank line
  - a4df706 fix review notes
  - d059edd apt: speedup installing packages with '>=' or '<=' and reduced memory consumption
- **PR #50293:** ([gtmanfred](#)) update jenkins version for 2018.3 @ 2018-10-29 23:39:34 UTC
  - 6a65402 Merge pull request #50293 from saltstack/jenkins
  - fe6fbc4 update jenkins version for 2018.3
  - **PR saltstack/salt-jenkins#1182:** ([gtmanfred](#)) clean up salt.utils for using 2018.3.3 (refs: #50289)
- **PR #50289:** ([gtmanfred](#)) ignore empty line in localectl status output @ 2018-10-29 21:39:07 UTC
  - 935f181 Merge pull request #50289 from gtmanfred/2018.3
  - fb43061 fix test
  - 5eb0e37 add extra space to localemod test
  - e8dc8ba if line in output of localectl is empty, ignore it
- **PR #50276:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-29 19:05:15 UTC
  - 10ba8b4 Merge pull request #50276 from rallytime/merge-2018.3
  - f05abb0 Merge branch '2017.7' into '2018.3'
    - \* 6ae8a33 Merge pull request #50281 from dubb-b/add\_subnet
      - 4fdcf7c Lint: Add extra blank line
      - cebfd8a Fixing lint error
      - 0da6301 Merge branch '2017.7' of <https://github.com/saltstack/salt> into add\_subnet
      - 2df6115 Adding subnetID so it knows the right VPC to build the node in.
  - a0cfbdc Merge branch '2017.7' into '2018.3'
    - \* b94a43b Merge pull request #50184 from ethanculler/fix-minion-return-exception-with-return

- 283d41c Merge branch '2017.7' into fix-minion-return-exception-with-return
- a4e54d7 Added handling for minion return exceptions containing the word "return"
- \* 6b009b4 Merge pull request #50258 from dubb-b/fix\_cloud\_ec2
  - 6a1e9f0 Adding securitygroupname as the config instead of securitygroup
- \* 3e1aac9 Merge pull request #50251 from gtmanfred/2017.7
  - 061e599 bump salt version to 2017.7.8
- \* fe9bc81 Merge pull request #50233 from Ch3LL/bp-50232
  - f83460d change order of search engine ids
  - bf3f217 Update search engine IDs for releases
- **PR #50282: (twangboy) Fix `unit.beacons.test_diskusage` on Windows @ 2018-10-29 18:37:13 UTC**
  - 0f1dc08 Merge pull request #50282 from twangboy/fix\_test\_diskusage
  - fd369dd Mock `is_windows` = False
- **PR #50182: (terminalmage) Backport `runtests.py` modifications from develop to 2018.3 (refs: #50308) @ 2018-10-29 16:25:07 UTC**
  - f7c2f04 Merge pull request #50182 from terminalmage/issue50050
  - 113d76e Revert "Move jinja templating tests alongside `salt/utils/jinja.py`'s tests"
  - 3057ca4 Lint fix: add extra blank line in `core.py`
  - 8968f9d Revert "Rename `test_map_conf` test file to respect naming convention"
  - 85a9395 Remove `saltclass` pillar unit test for list expansion
  - 3d95673 Use `get_config_dir()` instead of `self.config_dir`
  - e8b3a62 Add init file back in for `unit/client` pkg
  - d527dd2 Rename `states/test_libvirt.py` into `states/test_virt.py`
  - ab4a670 Remove `pgjsonb` returner unit tests
  - 68ab3ee Remove "test\_custom" from grains section of `filename_map`
  - 6814698 Remove `test_error` from scheduler tests
  - c55dcf0 Add init file back in for `integration/cloud/clouds` pkg
  - f485b4a enable testing only filemaps
  - dfa05b9 Remove test files for beacons that don't exist in 2018.3
  - 85612cf `runtests.py`: Fix `IndexError` in `--from-filenames`
  - 25097f9 Make sure `from-filenames` intersect with `names-file`
  - ed864ce `runtests.py`: Accept modified file list from a text file
  - 059754c Add some doc tests to the filemap that should run on every PR
  - b1ee2e5 Set a default value for the filename map path
  - 5ea1024 Add documentation explaining naming convention for test files
  - 8f790c0 Fix conflicting dict key in filename map
  - f2e5512 Evan Moar Lint

- 65fef9a Moar Lint
- 39c2455 Lint
- dd20f12 Make sure we always run the module names test
- 2ac939e Add test to check test module names and make sure they match the naming convention
- 785d298 Add integration.netapi.rest\_tornado.test\_app to filename map
- 662ca0d Rename files to match naming convention
- 186d333 Add back changes lost in cherry-pick
- a236531 Add back test accidentally deleted when cherry-picking
- eaa4da3 Rename providers to clouds to respect naming convention
- 85b96de Rename some files to avoid them being identified as test modules
- bfb6015 Rename/consolidate salt.utils unit tests to conform to naming convention
- 84749dd Consolidate and move salt-ssh unit tests to proper location
- 71825a5 Consolidate and move loader tests to test/unit/test\_loader.py
- 8326a09 Rename test\_map\_conf test file to respect naming convention
- 6d9c2eb Move jinja templating tests alongside salt/utils/jinja.py's tests
- 1ef43a3 Add additional paths to the filename map
- 75e6731 Use the new helper to get the test mods
- c3dc8ec Add function to get all of the test modules
- c5593bc Rename custom\_grains.py so it's not identified as a test module
- 330c211 Consolidate saltclass pillar unit tests into single module
- a642619 Rename test\_pgjsonb returner test file to match naming convention
- 6433c48 Don't import old module name
- a97e032 Move helper outside of for loop
- 3f1b6fd Add more unit test mapping
- ac3406d Fill out the filename map a bit
- 07d6f2a Enhancements to --from-filenames, --filename-map options
- b851a41 Don't run unit or integration tests unnecessarily
- 569276b Add an initial filename\_map
- 44199b1 Add --from-filenames and --filename-map options to parser
- **PR #50267: (m03)** Fix missing aptly config paths @ 2018-10-29 13:27:23 UTC
  - 1e8b092 Merge pull request #50267 from m03/fix-aptly-config-paths-20183
  - 319bb31 Fix missing aptly config paths
- **PR #50232: (Ch3LL)** Update search engine IDs for releases (refs: #50233) @ 2018-10-25 20:15:08 UTC
  - ab0b022 Merge pull request #50232 from Ch3LL/search\_latest
  - 3452d9b change order of search engine ids
  - c9546df Update search engine IDs for releases

- **ISSUE #49523:** (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
  - PR saltstack/salt#50174: (rallytime) Back-port #50146 to 2018.3 (refs: #50231)
- **PR #50231:** (rallytime) Revert "Back-port #50146 to 2018.3" (refs: #50236) @ 2018-10-25 20:12:15 UTC
  - PR #50146: (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #saltstack/salt`#50174`\_`\_`, #50174, #50231, #50236)
  - 1c8cdf9 Merge pull request #50231 from saltstack/revert-50174-bp-50146
  - c76ac1b Revert "Back-port #50146 to 2018.3"
- **ISSUE #50132:** (ManicoW) XCP-ng packages and services management (refs: #50140)
- **PR #50172:** (rallytime) Back-port #50140 to 2018.3 @ 2018-10-25 14:00:32 UTC
  - PR #50140: (ManicoW) Adding XCP-ng support (refs: #50172)
  - 8dd4f43 Merge pull request #50172 from rallytime/bp-50140
  - 02e0ea0 lint fix
  - 819c46c fix lint errors and code factorization
  - 8aa3598 Fix lint error
  - 9092c4e Adding support for XCP-ng
  - c516bc5 Adding XCP-ng to os family map
- **PR #50063:** (twangboy) Use long when setting REG\_QWORD @ 2018-10-25 13:45:03 UTC
  - 9ad43f2 Merge pull request #50063 from twangboy/fix\_50039
  - 5fdb7d Disable lint error
  - 84b8dd6 Add tests
  - 4644bb6 Use long when setting REG\_QWORD
- **ISSUE #49965:** (nkrishnakishor) Beacon: Usage in windows (refs: #50188)
- **PR #50188:** (garethgreenaway) [2018.3] fixes to diskusage beacon @ 2018-10-25 13:41:19 UTC
  - 01b083e Merge pull request #50188 from garethgreenaway/49965\_beacon\_diskusage\_windows
  - 1f0ab27 Merge branch '2018.3' into 49965\_beacon\_diskusage\_windows
  - 42b3203 Fixing lint
  - f65fa57 Fixing a bug in the diskusage beacon that prevented it from working on Windows. Adding a couple tests to test functionality on Windows.
- **PR #50214:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-25 13:38:40 UTC
  - 9ea51c0 Merge pull request #50214 from rallytime/merge-2018.3
  - 897145c Merge branch '2017.7' into '2018.3'
    - \* 017d394 Merge pull request #50202 from Ch3LL/\_2017.7.8
      - d520f9a Add tests with filename in token data
      - d45f6c7 Add empty token salt-api integration tests
      - 652dbf6 Ensure that tokens are hex to avoid hanging/errors in cherryppy
    - \* f28a4fa Merge pull request #50211 from channias/fix-spm-modules-install

- 9b203d5 Fix broken install of additional modules in SPM packages
- \* 6b4e07b Merge pull request #50212 from dwoz/test\_no\_fail
  - 7f613ac Do not fail if process already ended
- \* 85e22d2 Merge pull request #50207 from Ch3LL/2update\_version\_doc\_2017.7
  - 198d25c Add 2017.7.8 previous release
  - d4e26ac Update release versions for the 2017.7 branch
- \* d035695 Merge pull request #50205 from Ch3LL/rn\_2017.7.8
  - 71ee68b [2017.7.8] remove in progress and add security details
- \* ce341f2 Merge pull request #50180 from max-arnold/2017.7
  - 881a521 Revert curly braces example for nested dictionaries
- \* 622bb51 Merge pull request #50026 from damon-atkins/jenkins\_pylint
  - aebce88 Merge branch '2017.7' into jenkins\_pylint
  - 5f708fa use awk to create the other files, so git does not need to search again
  - 6b96a24 Adjust jenkins linting process, only run stage if required, use git diff to find files, instead of find, report on status, changed and deleted files, lint only changed files.
- \* aa66d1b Merge pull request #50158 from vutny/doc/2017.7/fix-http-tutorial
  - fe2d70d [DOC] Fix JSON payload example in HTTP tutorial
- **ISSUE #50162:** (rbthomp) Scheduled job runs in endless loop when using when: and splay: together. (refs: #50216)
- **PR #50216:** (garethgreenaway) [2018.3] Fixes to scheduler, list of whens plus splay @ 2018-10-25 13:31:26 UTC
  - 51b3fa4 Merge pull request #50216 from garethgreenaway/50162\_when\_plus\_splay\_endless\_loop
  - 685509f Fixing an issue when a combination of the when parameter as a list plus using the splay parameter would cause the schedule to continuously run jobs in an endless loop, regardless of if their scheduled time had been reached. Also fixing a related issue where scheduled jobs that rely on `_next_fire_time` were not being run as the corrected splayed time but rather running at the original scheduled time. Adding new tests.
- **PR #50190:** (dwoz) Fix test\_managed\_file\_with\_grains\_data on Windows @ 2018-10-24 22:43:35 UTC
  - 43303fb Merge pull request #50190 from dwoz/grains\_template\_test
  - b77db48 Fix test\_managed\_file\_with\_grains\_data on Windows
- **PR #50187:** (garethgreenaway) [2018.3] Adding fixes to scheduler tests to 2018.3 @ 2018-10-24 19:45:32 UTC
  - **PR #49871:** (garethgreenaway) [fluorine] Updating scheduler tests for OS X (refs: #50187)
  - 462314b Merge pull request #50187 from garethgreenaway/port\_49871\_to\_2018\_3
  - 25e7cb6 Merge branch '2018.3' into port\_49871\_to\_2018\_3
  - d232dfb Update test\_eval.py
  - d8d8559 Fixing lint
  - 76e6232 Removing unnecessary debugging lines
  - d2d0622 Back porting #49871 to 2018.3. Adding some additional changes to ensure they are passing on OS X.

- **PR #50201:** (Ch3LL) [2018.3] Ensure that tokens are hex to avoid hanging/errors in cherry py @ 2018-10-24 19:44:23 UTC
  - 8ad9a1b Merge pull request #50201 from Ch3LL/\_2018.3.3
- **PR #50208:** (Ch3LL) Update release versions for the 2018.3 branch @ 2018-10-24 15:52:19 UTC
  - 88673ad Merge pull request #50208 from Ch3LL/2update\_version\_doc\_2018.3
  - cdbf493 Add 2017.7.8 previous release
  - 6f775e7 Update release versions for the 2018.3 branch
- **PR #50206:** (Ch3LL) [2018.3.3] remove in progress and add security details @ 2018-10-24 15:50:50 UTC
  - db8ef1e Merge pull request #50206 from Ch3LL/rn\_2018.3.3
  - 896caa1 Add 2016.11.10 release notes to 2018.3 branch
  - 1e34158 [2018.3.3] remove in progress and add security details
- **PR #50200:** (rallytime) Back-port #50181 to 2018.3 @ 2018-10-24 15:49:59 UTC
  - **PR #50181:** (cro) Testinfra has a python packaging issue that is making version 1.17.0 fail to install some places (refs: #50200)
  - 3d3db70 Merge pull request #50200 from rallytime/bp-50181
  - f3e5399 Ignore testinfra 1.17.0
- **ISSUE #49523:** (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
- **PR #50174:** (rallytime) Back-port #50146 to 2018.3 (refs: #50236) @ 2018-10-23 18:16:45 UTC
  - **PR #50146:** (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #`saltstack/salt`#50174`\_`\_, #50174, #50231, #50236)
  - 5f904dd Merge pull request #50174 from rallytime/bp-50146
  - 601a5b8 Improve handling of non-ascii characters in terminal output. (Fixes: #49523)
- **ISSUE #50142:** (m03) stringutils.to\_none AttributeError: 'module' object has no attribute 'tex\_type' (refs: #50143)
- **PR #50173:** (rallytime) Back-port #50143 to 2018.3 @ 2018-10-23 17:13:55 UTC
  - **PR #50143:** (m03) Fix #50142, stringutils.to\_none (refs: #50173)
  - **PR #45429:** (terminalmage) [PY3] Add unicode\_literals to salt.utils modules (R-S) (refs: #50143)
  - 1cd0339 Merge pull request #50173 from rallytime/bp-50143
  - f5d6080 Add test\_to\_none
  - c0ce36b Fix #50142, stringutils.to\_none
- **PR #50171:** (terminalmage) Fix invalid RST link in docker\_network docs @ 2018-10-23 13:40:36 UTC
  - 9331f1e Merge pull request #50171 from terminalmage/docs
  - 7ea1d6c Fix invalid RST link in docker\_network docs
- **PR #50161:** (rmarcinik) Add a missing result for task.info @ 2018-10-23 13:31:43 UTC
  - 16eece3 Merge pull request #50161 from rmarcinik/patch-1
  - 9848f06 Add a missing result for task.info

- **PR #50136:** ([terminalmage](#)) Add some debug logging before and after states gather pillar data @ 2018-10-22 14:40:38 UTC
  - 28bc5e3 Merge pull request #50136 from terminalmage/debug-logging
  - 8592a0b Add some debug logging before and after states gather pillar data
- **ISSUE #50129:** ([kmatsoukas](#)) Call to network.get\_route fails when interface name contains a dash (refs: #50147)
- **PR #50147:** ([garethgreenaway](#)) [2018.3] Fix to modules/network.py @ 2018-10-22 14:31:03 UTC
  - 593c7ff Merge pull request #50147 from garethgreenaway/50129\_network\_get\_route\_fails\_dash\_in\_name
  - 8fa87e3 Update test\_network.py
  - 3117969 Fixing scenario where the interface for the default route has a dash in it, regular expression used in get\_route currently doesn't not account for this.. Adding some additional tests for network.get\_route.
- **PR #50156:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-22 14:24:39 UTC
  - 5c7a7d9 Merge pull request #50156 from rallytime/merge-2018.3
  - 87e20fd Merge branch '2017.7' into '2018.3'
  - 1a90c4f Merge pull request #50144 from dwoz/winrm\_fs\_release
    - \* 0951d85 Use newest winrm-fs release
  - e096560 Merge pull request #50113 from rallytime/bp-49989
    - \* 27c7ac9 Increase centos7-py2 kitchen pr timeout to 8 hours
- **PR #50148:** ([MTecknology](#)) Proxmox fixups @ 2018-10-22 11:55:10 UTC
  - ce375f4 Merge pull request #50148 from MTecknology/proxmox-fixups
  - 4959947 Race condition still exists at one second timeout.
  - 3a62f74 Add support for setting root ssh pubkey to proxmox containers.
- **PR #50085:** ([dwoz](#)) Fix test\_win\_pkg yet again @ 2018-10-19 18:16:16 UTC
  - 0ece06e Merge pull request #50085 from dwoz/win\_pkg\_redux
  - f22630e Merge branch '2018.3' into win\_pkg\_redux
  - 0b033a6 Do not allow age to be a negative number
  - a24d8b8 Debug file list cache
  - 9f5722a The test is not a flush problem
  - 071f8a0 Add cache file name to list cache log
  - 128c2c5 Flush and sync file contents
  - 7d361d8 Add debug log when file list is returned from cache
- **PR #49980:** ([twangboy](#)) Add support for AddPrinterDrivers @ 2018-10-19 13:19:41 UTC
  - 0069247 Merge pull request #49980 from twangboy/lgpo\_add\_printer\_drivers
  - 76c9301 Add support for AddPrinterDrivers
- **PR #50114:** ([rallytime](#)) Back-port #50061 to 2018.3 @ 2018-10-19 11:46:03 UTC
  - **PR #50061:** ([rongzeng54](#)) pkg.install bugfix (refs: #50114)
  - de23c83 Merge pull request #50114 from rallytime/bp-50061
  - 1f09104 Add unit test for pkg.install with epoch

- af253c6 pkg.install bugfix
- **ISSUE #50074:** (bigpick) Arista EOS Salt Minion - Debug Log Flooded with Repeated Message (refs: #50115)
- **PR #50115:** (garethgreenaway) [2018.3] Apply scheduler fixes and tests from #49104 to 2018.3 @ 2018-10-19 11:45:31 UTC
  - **PR #49104:** (garethgreenaway) [fluorine] Fixes to scheduler for jobs with seconds, minutes, etc. (refs: #50115)
  - 9188bec Merge pull request #50115 from garethgreenaway/apply\_49104\_to\_2018\_3
  - adb1e79 Apply scheduler fixes and tests from #49104 to 2018.3
- **PR #50119:** (terminalmage) Squelch spurious errors logged in unit tests @ 2018-10-19 11:42:31 UTC
  - e892042 Merge pull request #50119 from terminalmage/boto-tests
  - 91812ff Squelch spurious errors logged in unit tests
- **PR #50120:** (terminalmage) Fix bad merge conflict resolution @ 2018-10-19 11:38:35 UTC
  - 35449b4 Merge pull request #50120 from terminalmage/salt-jenkins-1137
  - 1ddfd26 Fix bad merge conflict resolution
- **PR #50013:** (Giandom) Passed kwargs to db\_exists in db\_remove method @ 2018-10-18 11:28:30 UTC
  - 5123488 Merge pull request #50013 from Giandom/2018.3
  - 9c91df3 Merge branch '2018.3' into 2018.3
  - 06bb245 Merge branch '2018.3' into 2018.3
  - 04a99e0 Passed kwargs to db\_remove
- **PR #50092:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-17 19:57:07 UTC
  - aa94f60 Merge pull request #50092 from rallytime/merge-2018.3
  - 8609064 Update old utils paths to use new paths
  - a984ad8 Merge branch '2017.7' into '2018.3'
    - \* 7ec3840 Merge pull request #49794 from twangboy/fix\_groupadd\_test
      - 3d3b67d Gate for Windows
      - decfa52 Check value of result instead of entire dict
    - \* e562838 Merge pull request #50028 from bashed/fix-windows-virtual-grain
      - 8129ac6 removed whitespaces
      - 82fa866 Fix #50015, Windows grain defaults to physical as unix grain
- **ISSUE #50073:** (jorotenev) boto\_cloudfront update distribution fails (refs: #50082)
- **PR #50082:** (garethgreenaway) [2018.3] Fixing a typo in the boto\_cloudfront @ 2018-10-17 19:35:00 UTC
  - d1f2c5d Merge pull request #50082 from garethgreenaway/50073\_fixing\_typo\_boto\_cloudfront
  - b5b90a1 Fixing a typo in the boto\_cloudfront.
- **PR #50090:** (garethgreenaway) [2018.3] Fix to utils/vault.py @ 2018-10-17 13:57:30 UTC
  - 05bd2a0 Merge pull request #50090 from garethgreenaway/fix\_vault\_sdb\_runner\_test
  - 444a4e5 Merge branch '2018.3' into fix\_vault\_sdb\_runner\_test

- 14f3fac Merge pull request #50056 from rallytime/bp-50029
- 2e46a78 Expose docs for Ansible modules
- PR #50064: (rallytime) Back-port #50022 to 2018.3 @ 2018-10-16 09:09:47 UTC
  - PR #50022: (bluesliverx) Make test check\_pillar more lenient (refs: #50064)
  - f3fe4b6 Merge pull request #50064 from rallytime/bp-50022
  - 40da3ce Make test check\_pillar more lenient
- ISSUE #49988: (whytewolf) currently http error logging of urls contains full URL including passwords. (refs: #50066)
- PR #50066: (garethgreenaway) [2018.3] Redact any passwords from source paths @ 2018-10-16 09:08:25 UTC
  - c2a46ce Merge pull request #50066 from garethgreenaway/49988\_redact\_passwords\_in\_source
  - 27ef1e0 Redact any passwords that are in http/https based source paths.
- PR #50068: (garethgreenaway) [2018.3] Updating salt.utils.mac\_utils @ 2018-10-16 09:07:10 UTC
  - ab2cb51 Merge pull request #50068 from garethgreenaway/1140\_mac\_system\_tests\_2018\_3\_failing
  - eedeacb Updating another reference to salt.utils.mac\_utils to use \_\_utils\_\_
  - 6ef5ce4 Due to a previous PR the test\_sdb\_runner in sdb.test\_vault was failing because of a exception that was being swallowed in the test\_run\_run function. The cause was that when vault related functions were being run, if they were being run on the master then they were being forced to run through the \_get\_token\_and\_url\_from\_master() function, which is pull the id element out of the grains dictionary. When the call was taking place from a runner, the exception was popping up since there is no id when called from a runner. This fix checks to see if the id exists in the dictionary first, if it is there then \_get\_token\_and\_url\_from\_master() is called, otherwise \_use\_local\_config is called.
- PR #49987: (terminalmage) Make Pillar no longer munge file\_roots @ 2018-10-15 21:58:08 UTC
  - 4c4bb5a Merge pull request #49987 from terminalmage/pillar\_roots
  - f59506d Update tests to reflect behavior changes
  - 58f5fde Make Pillar no longer munge file\_roots
- PR #50065: (rallytime) Back-port #50044 to 2018.3 @ 2018-10-15 21:32:37 UTC
  - PR #50044: (mchugh19) add saltclass info from release notes to docs (refs: #50065)
  - 1e377ac Merge pull request #50065 from rallytime/bp-50044
  - 1eaaab7 Doc title formatting must match doc name length
  - 6ac26b6 add saltclass docs from release notes
- PR #50038: (s0undt3ch) Don't squash the traceback @ 2018-10-15 20:36:55 UTC
  - 8a6b435 Merge pull request #50038 from s0undt3ch/2018.3
  - 852257a Don't squash the traceback
- PR #50054: (rallytime) Back-port #50004 to 2018.3 @ 2018-10-15 20:36:03 UTC
  - PR #50004: (kiemlicz) <https://github.com/saltstack/salt/issues/49883> (refs: #50054)
  - dbfd7ee Merge pull request #50054 from rallytime/bp-50004
  - 88e3202 <https://github.com/saltstack/salt/issues/49883>

- **PR #50057:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-15 20:35:46 UTC
  - a9e9974 Merge pull request #50057 from rallytime/merge-2018.3
  - 1b5b018 Merge branch '2017.7' into '2018.3'
    - \* 9eb17ea Merge pull request #50047 from rallytime/bp-49605
      - e3a0f7b Add gce fix to 2017.7.9 release notes
      - e6d86fc document GCE instance credentials configuration
      - c3a0d1b allow empty service\_account\_private\_key in GCE driver
    - \* 6cdd390 Merge pull request #50017 from gtmanfred/iptables
      - e552e4f Use parse\_known\_args when checking iptables rules
    - \* a6a66b9 Merge pull request #50012 from dwoz/norm\_log
      - f96b29d Use normal log formatting and add jid
    - \* 15f86b2 Merge pull request #50001 from kyentei/doc-fix-gpg
      - 3d6ee3e Fix gpg state Documentation
    - \* 7a235d7 Merge pull request #50000 from kyentei/doc-fix-lvm
      - c2f3d87 Fix LVM state documentation
    - \* 4edd094 Merge pull request #49999 from kyentei/doc-fix-proxy
      - a180ed7 Fix proxy documentation
    - \* 58d2302 Merge pull request #49998 from kyentei/doc-fix-process
      - edd4f40 Fix documentation on process.py
    - \* 411635b Merge pull request #49997 from kyentei/doc-fix-mysql
      - 01059cc Fix documentation for mysql processlist
- **PR #50060:** (rallytime) [2018.3] Fix some pylint issues that have popped up recently @ 2018-10-15 20:35:22 UTC
  - f1bcb1f Merge pull request #50060 from rallytime/fix-lint
  - a8f4f39 Merge branch '2018.3' into fix-lint
- **ISSUE #49927:** (thetarean) File Tree external pillar fails to render templates in python 3 (refs: #49943)
- **PR #50052:** (rallytime) Back-port #49943 to 2018.3 @ 2018-10-15 20:06:20 UTC
  - **PR #49943:** (thetarean) Coerce string when calling compile\_template\_str (refs: #50052)
  - b26b21c Merge pull request #50052 from rallytime/bp-49943
  - d336dec Handle non-ASCII chars during template data decode
  - 435afb7 Adjusted import to expose stringutils namespace
  - 958c630 Coerce string when calling compile\_template\_str
  - e73f13d [2018.3] Fix some pylint issues that have popped up recently
- **PR #49809:** (Ch3LL) Add additional asserts to help investigate test\_win\_pkg failure @ 2018-10-13 18:00:09 UTC
  - fef7669 Merge pull request #49809 from Ch3LL/win\_pkg\_flaky
  - f795b60 Merge pull request #7 from dwoz/win\_pkg\_flaky
    - \* beaab2a Fix win\_pkg test

- 75809b4 Merge pull request #6 from dwoz/win\_pkg\_flaky
  - \* e5ea3f1 Try running fsync to avoid fs caching race condition
- fd5e842 Merge pull request #5 from dwoz/win\_pkg\_flaky
  - \* c386826 Log results of cache\_dir for now
- 2cd4058 Merge pull request #4 from dwoz/win\_pkg\_flaky
  - \* 1005b91 Debug win\_pkg
- 9dce5cc Fix the assertion message order
- 18e9a28 Add additional asserts to help investigate test\_win\_pkg failure
- **PR #49983: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-11 13:27:34 UTC
  - 8949873 Merge pull request #49983 from rallytime/merge-2018.3
  - f8e73e8 Merge branch '2017.7' into '2018.3'
    - \* a8a3811 Merge pull request #49972 from rallytime/release-notes-2017.7.9
      - 6c00003 Add 2017.7.9 release notes file
    - \* 8de58d6 Merge pull request #49974 from rallytime/bp-49940
      - a70358a Update mod\_watch() description for all states.
      - bf3d064 Another attempt to clean up service.mod\_watch description.
      - 165b799 Clean up documentation/language in service state. (Fixes #40819)
    - \* d68e5d3 Merge pull request #49978 from whyte wolf/inotify\_doc\_change
      - b4d9523 using an exclude list that does not list every operating system leaves open the possibility that it would work on those not listed
    - \* 89cbbb6 Merge pull request #49934 from rallytime/fix-49925
      - 216fd64 Remove event\_publisher\_pub\_hwm and salt\_event\_pub\_hwm from documentation
- **PR #49979: (cachedout)** Update license date and include NOTICE @ 2018-10-11 12:57:21 UTC
  - c7d2482 Merge pull request #49979 from cachedout/license\_update
  - b4f148e Break out support and contributing docs into separate files
  - 1dd0e34 Update license date and include NOTICE
- **PR #49973: (rallytime)** Add 2018.3.4 release notes file @ 2018-10-10 17:46:04 UTC
  - ef61fc6 Merge pull request #49973 from rallytime/release-notes-2018.3.4
  - 32e7d90 Add 2018.3.4 release notes file
- **PR #49975: (rallytime)** Back-port #49958 to 2018.3 @ 2018-10-10 17:44:56 UTC
  - **PR #49958: (garethgreenaway)** [fluorine] Fixes to mac\_system.py (refs: #49975)
  - 7d8f10c Merge pull request #49975 from rallytime/bp-49958
  - a229a50 Swap the call for mac\_utils.available\_services to use \_\_utils\_\_ so mac\_utils.available\_services has access to \_\_context\_\_
- **PR #49946: (isbm)** osversion/osversion\_info/osmajorrelease grains fixes @ 2018-10-10 14:01:05 UTC
  - c912d3a Merge pull request #49946 from isbm/isbm-osversion\_info-fixes
  - a17ba35 Fix proper part name in the string-bound CPE

- 9d49607 Expand unit test to verify part name
- a6b7d01 Remove linebreak
- 5376886 Keep CPE\_NAME only for opensuse series
- 8af3904 Add part parsing
- e202b41 Prevent possible crash if CPE\_NAME is wrongly written in the distro
- 712083d Add unit test for broken CPE\_NAME
- 1306ddb Add unit test for v2.3 of CPE format
- 04b61d3 Add unit test for WFN format of CPE\_NAME
- 035690f Override VERSION\_ID from os-release, if CPE\_NAME is given
- 08e235b Remove unnecessary linebreak
- 853e163 Add CPE\_NAME parsing
- **ISSUE #48204:** (zerthimon) State mysql\_user.present Exception with mysql 8.0.11 (refs: #49918)
- **PR #49918:** (garethgreenaway) [2018.3] Fixes to MySQL module @ 2018-10-10 14:00:11 UTC
  - 18fb5df Merge pull request #49918 from garethgreenaway/48204\_mysql\_user\_password\_exception\_part\_deux
  - 92c0680 Merge branch '2018.3' into 48204\_mysql\_user\_password\_exception\_part\_deux
  - 71e53a3 Cleanup of debugging.
  - dd96c13 Fixing lint.
  - ac7da89 Tweaking a couple tests to account for new scenarios with later versions.
  - 4320c43 Removing \_\_mysql\_hash\_password, no longer needed.
  - 0475acf Removing unnecessary empty line.
  - 9265195 Updating the mysql update to handle changes in version 8.0.11 where PASSWORD was removed. Updating unit tests.
- **PR #49961:** (dmurphy18) Fix aix grains test for prtconf present @ 2018-10-10 13:38:02 UTC
  - 1c2e5be Merge pull request #49961 from dmurphy18/fix\_aix\_grains
  - f38d543 Correct test for AIX grains prtconf
- **ISSUE #49205:** (ereslibre) Compound targeting includes unexpected targets in the result (refs: #49897, #49907)
- **PR #49907:** (brejoc) 2018.3 fix for list compound targeting @ 2018-10-10 13:33:40 UTC
  - **PR #49897:** (brejoc) 2017.7 fix for list compound targeting (refs: #49907)
  - **PR #49435:** (brejoc) No longer passes missing in list compound engine (refs: #49897, #49907)
  - e427306 Merge pull request #49907 from brejoc/2018.3-fix-for-list-compound-targeting
  - 1bcadb9 Merge branch '2018.3' into 2018.3-fix-for-list-compound-targeting
  - 649c46c Adds check for engine before adding the additional engine argument
  - 7d0b20c Minor fix for def test\_batch\_run\_grains\_targeting
  - 0d64716 Ignore missing minions only when excluding them with 'not'
  - 6a5f3cd No longer passes missing in list compound engine
- **ISSUE #48599:** (angeloudy) module ldap3 "TypeError: ('expected a byte string in the list'" (refs: #48666)

- **PR #49947:** (rallytime) Back-port #48666 to 2018.3 @ 2018-10-09 17:48:20 UTC
  - **PR #48666:** (angeloudy) values need to be bytes when writing back to ldap (refs: #49947)
  - 143c723 Merge pull request #49947 from rallytime/bp-48666
  - 5166917 Update ldap3.py
  - 05e55bd values need to be bytes when writing to ldap
  - 0d749e6 values need to be bytes when writing back to ldap
- **PR #49948:** (rallytime) Skip pillar refresh test @ 2018-10-09 15:20:52 UTC
  - dbf994e Merge pull request #49948 from rallytime/skip-flaky-test
  - df11c39 Skip pillar refresh test
- **PR #49938:** (s0undt3ch) Handle missing `pkg_resources` package @ 2018-10-09 13:41:09 UTC
  - 614d172 Merge pull request #49938 from s0undt3ch/2018.3
  - b1c2928 Handle missing `pkg_resources` package
- **PR #49942:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-09 13:38:04 UTC
  - bce12c3 Merge pull request #49942 from rallytime/merge-2018.3
  - 91534ee Merge branch '2017.7' into '2018.3'
    - \* 327796e Merge pull request #49911 from dubb-b/slack-pr
      - 57e630c Adding failure messages for PR.
    - \* cf1df79 Merge pull request #49900 from dwoz/presence\_wart
      - 7bd34f6 Connect before processing presence
    - \* 8c4707d Merge pull request #49899 from twangboy/fix\_49892
      - a66765f Remove arrInstalled artifact
- **PR #49930:** (isbm) Get `os_family` for RPM distros from the RPM macros @ 2018-10-09 13:31:52 UTC
  - a30c053 Merge pull request #49930 from isbm/isbm-osarch-bugfix
  - f8a75f1 Fix imports
  - 70d3de0 Strip and stringify the return for the osarch
  - a248371 Get `os_family` for RPM distros from the RPM macros.
- **PR #49868:** (dwoz) windows shell tests @ 2018-10-08 17:32:20 UTC
  - 99c5dba Merge pull request #49868 from dwoz/shelltests
  - 9997f45 Merge branch '2018.3' into shelltests
- **PR #49875:** (dwoz) Add spm tests to Windows suite @ 2018-10-05 18:13:07 UTC
  - eee82d3 Merge pull request #49875 from dwoz/win\_spm\_tests
  - e76a751 Use `os.path.split` for more consistency
  - bc54d15 Fix wart in spm on windows
  - df5e271 Add spm tests for windows
- **PR #49872:** (twangboy) Fix issues with windows file permissions when using `reset=True` @ 2018-10-05 13:52:07 UTC

- c0e2404 Merge pull request [#49872](#) from twangboy/fix\_49861
- 01bd847 Gate the win\_function a little better
- bcd366 Skip on non-windows systems
- 02f6335 Fix some lint
- 8ecbe0e Add tests for check\_perms
- d6e7512 Fix issues with file permissions
- **ISSUE #49582:** (UtahDave) lgpo doesn't seem to allow for unsetting a gpo setting (refs: [#49902](#))
- **ISSUE #48661:** (mike2523) win\_lgpo: User Rights Assignment policies (refs: [#49902](#))
- **PR #49902:** (lomeroe) lgpo better comments on user right assignments @ 2018-10-05 13:41:16 UTC
  - d3a909f Merge pull request [#49902](#) from lomeroe/issue48661\_2018.3
  - 760d8f4 Merge branch '2018.3' into issue48661\_2018.3
  - f72ca81 add comments on user right assignment policies when they are already set and note if cumulative\_rights\_assignment is True that the particular user is already granted the right
    - \* 75dd5ab Merge branch '2018.3' into shelltests
- **PR #49896:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-04 21:00:24 UTC
  - 4eb43af Merge pull request [#49896](#) from rallytime/merge-2018.3
  - 41c8b31 Merge branch '2017.7' into '2018.3'
  - b959033 Merge pull request [#49739](#) from twangboy/fix\_49660
    - \* f3400ad Merge branch '2017.7' into fix\_49660
    - \* 0a4f5fc Merge branch '2017.7' into fix\_49660
    - \* 1f9bbc8 Populate changes dictionary
  - 71669bd Merge pull request [#49885](#) from dwoz/gemfile
    - \* 791e3ff Use dwoz/winrm-fs for chunked downloads
    - \* f3999e1 Move vagrant to its own group
  - 0662e37 Merge pull request [#49870](#) from KaiSforza/ci\_actually\_fail
    - \* 9ef9206 Actually catch the exception when we fail
      - 19072f0 Use os.path.split for more consistency
      - 6c22459 Merge remote-tracking branch 'origin/shelltests' into shelltests
      - 43b292f Merge branch '2018.3' into shelltests
      - 876c040 Fix wart in test\_cp module
      - 9e6ff11 Add syndic tests to whitelist.txt for Windows
      - 9cab293 Fix wart in spm on windows
      - 58e9d1b Add spm tests to whitelist.txt for Windows
      - 7393610 Add more shell integration tests to whitelist
      - ce85d60 Add shell.test\_key to whitelist and fix wart
      - 6fbadd7 Skip tests not valid on windows

- 9debf29 Add shell cp tests and fix them
- 8bfa634 Fix warts in integration.shell.test\_matcher
- 45d2142 Fix wart in test\_cp module
- 0e4fbc5 Add syndic tests to whitelist.txt for Windows
- f72ad01 Fix wart in spm on windows
- 4141cc8 Add spm tests to whitelist.txt for Windows
- 02ad722 Add more shell integration tests to whitelist
- 48275c0 Add shell.test\_key to whitelist and fix wart
- e5edff4 Skip tests not valid on windows
- a389729 Add shell cp tests and fix them
- **ISSUE #49744:** (MTecknology) Group state cannot force empty group membership (refs: #49745)
- **PR #49745:** (MTecknology) Remove all users from group when members list is empty. @ 2018-10-03 13:48:40 UTC
  - 85478cd Merge pull request #49745 from MTecknology/fix-49744
  - 61afb5d Merge branch '2018.3' into fix-49744
  - 269bde2 Merge branch '2018.3' into fix-49744
  - 0b5d916 Modify if structure, as requested.
  - f57ce67 Remove all users from group when members list is empty. (Fixes #49744)
- **PR #49867:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-03 13:23:35 UTC
  - 05cd56b Merge pull request #49867 from rallytime/merge-2018.3
  - b53c3e6 Update old utils paths to use new utils paths
  - a65c60d Merge branch '2017.7' into '2018.3'
    - \* 7fa2043 Merge pull request #49858 from Paulo-Nunes/fix-requisite-doc
      - fb6f818 Edit requisite documentation
    - \* 0587fbc Merge pull request #49828 from dwoz/testslencoding
      - 2b323df Merge branch '2017.7' into testslencoding
      - 7ce1b64 Use utf-8 encoding for salt-runtests.log
    - \* 15ccffd Merge pull request #49848 from terminalmage/fix-version-rst-2017.7
      - af2dddb Fix badly formatted versionadded directive
    - \* 297031b Merge pull request #49777 from terminalmage/issue49738
      - 8a9945e Update test docstring to reflect switch to using SHA1
      - 7ddfd72 Switch from base64 encoding to sha1 digest for unique cache filename
      - 0e26dc6 Explicitly import salt.utils.hashutils
      - dca90d7 Skip parallel states test on Windows until we can get it to work
      - 5a11067 Add additional info to the assert to aid in troubleshooting
      - cb19086 Remove/replace unnecessary setUp/tearDown

- b3e9678 Fix parallel states with long ID dec or name
- \* 98c9372 Merge pull request #49763 from twangboy/fix\_49730
  - 99bc8f1 Merge branch '2017.7' into fix\_49730
  - 7a9278b Fix broken tests, add new tests
  - 2cd1509 Merge branch '2017.7' into fix\_49730
  - defba1c Merge branch '2017.7' into fix\_49730
  - af1ed1c Add/fix tests
  - 5005a4d Only clear dns entries if you pass []
  - 048561e Add ability to clear DNS entries on static DNS
- PR #49876: (KaiSforza) Actually catch the exception when we fail @ 2018-10-03 12:26:58 UTC
  - 42b540b Merge pull request #49876 from KaiSforza/ci\_actually\_fail\_2018
  - c88a81d Actually catch the exception when we fail
- PR #49852: (terminalmage) Rename logstash engine filename to make it work with the loader @ 2018-10-02 17:42:10 UTC
  - 1c8def9 Merge pull request #49852 from terminalmage/issue49627
  - 559cf1b Rename logstash engine filename to make it work with the loader
- PR #49850: (rallytime) Back-port #49798 to 2018.3 @ 2018-10-02 17:40:29 UTC
  - PR #49798: (mattp-) saltnado: teach runner about full\_return (refs: #49850)
  - 675df25 Merge pull request #49850 from rallytime/bp-49798
  - 4b6dcd7 saltnado: teach runner about full\_return
- ISSUE #49204: (mchugh19) file.directory state fails if directory contains an invalid symlink (refs: #49209, #49827)
- PR #49846: (rallytime) Back-port #49650 and #49827 to 2018.3 @ 2018-10-01 20:05:24 UTC
  - PR #49827: (dgmorrisjr) fixing mis-spelling of lattr in file.py, referencing #49204 (refs: #49846)
  - PR #49650: (Yxnt) fix aliyun cloud typeerror (refs: #49846)
  - 93d064a Merge pull request #49846 from rallytime/bp-49650
  - fb7fed7 referencing #49204, fixing mis-spelling of lattr on line 4514 per request from @gtmanfred
  - ec9fa92 use stringutils instead of hard code
  - a307ae0 fix aliyun cloud typeerror
- ISSUE #49520: (doesitblend) Multi-master DNS Issue - minion connect fail (refs: #49764)
- PR #49764: (garethgreenaway) [2018.3] Adding retry\_dns\_count to minion @ 2018-10-01 14:20:03 UTC
  - ec97806 Merge pull request #49764 from garethgreenaway/49520\_multimaster\_dns\_issue\_fix
  - 30ccc5e Merge branch '2018.3' into 49520\_multimaster\_dns\_issue\_fix
  - 741928b Fixes per request from @rallytime.
  - 04c5983 Moving the check for an empty self.minions into a io\_loop.call\_later call.
  - 44ee2ec Updating default for retry\_dns\_count
  - 75f64a6 Removing unnecessary code.

- e66dc18 Updating the `resolve_dns` function in `minion.py` to include a new minion configuration option which will control how many attempts will be made when the master hostname is unable to be resolved before giving up.
- **PR #49847:** ([terminalmage](#)) Fix badly formatted versionadded directive (2018.3 branch) @ 2018-10-01 14:04:27 UTC
  - abdab68 Merge pull request #49847 from terminalmage/fix-version-rst-2018.3
  - a127548 Fix badly formatted versionadded directive
- **ISSUE #49043:** ([awerner](#)) Unicode broken with `file.blockreplace` on Python2 (refs: #49782)
- **PR #49782:** ([dwoz](#)) Fix issue 49043 @ 2018-10-01 13:43:02 UTC
  - aca87ab Merge pull request #49782 from dwoz/issue-49043
  - b7d904f Merge branch '2018.3' into issue-49043
  - ed35633 Revert diff newline change
  - 2a901e9 Fix issue 49043
- **ISSUE #49671:** ([mchugh19](#)) Vault execution module broken in pillar lookups (refs: #49820)
- **PR #49820:** ([garethgreenaway](#)) [2018.3] Fixing vault when being used from Pillar @ 2018-10-01 13:40:25 UTC
  - 1a41d1b Merge pull request #49820 from garethgreenaway/49671\_fixing\_vault\_pillar
  - a57872f Merge branch '2018.3' into 49671\_fixing\_vault\_pillar
  - 5f13219 Merge branch '2018.3' into 49671\_fixing\_vault\_pillar
  - b0ba2ec Fixing the scenario when vault values are used in Pillar, but due to a previous change the minion was not being granted token based access.
- **PR #49842:** ([rallytime](#)) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-10-01 13:21:42 UTC
  - bf9c175 Merge pull request #49842 from rallytime/merge-2018.3
  - 81b0aa7 Add "in progress" notation back to the 2018.3.3 release notes
  - 0e76103 Merge branch '2018.3.3' into '2018.3'
- **PR #49839:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-30 16:32:53 UTC
  - e6382cb Merge pull request #49839 from rallytime/merge-2018.3
  - 179e4b1 Merge branch '2017.7' into '2018.3'
  - fd46d35 Merge pull request #49823 from dubb-b/timeout\_addition
    - \* b25ac9f Adding some changes for the status
    - \* f6d9679 Updating syntax to be better and with new lines
    - \* 855ffe6 Adding timeout to all pipelines so that the build aborts
- **PR #49815:** ([isbm](#)) Bugfix/rework: IPv6 scope errors (bp) @ 2018-09-28 19:44:59 UTC
  - fccc08c Merge pull request #49815 from isbm/isbm-ipv6-scope-errors-2018.3
  - c14f26f Reverse skipping tests: if no ipaddress
  - bb37ba0 Add IPv6 scoped test
  - facb34a Add additional check
  - 615b09a Lintfix: W0611

- 3ce265e Remove unnecessary manipulation with IPv6 scope outside of the IPv6Address object instance
- c314e1c Revert method remapping with pylint updates
- 0a86112 Lintfix refactor: remove duplicate returns as not needed
- 5932a0d Lintfix
- f52ea0b Add Py3.4 old implementation's fix
- 1c02a31 Fix wrong type swap
- 54233ca Do not use introspection for method swap
- 12038ea Simplify checking clause
- 7f2208b Fix py2 case where the same class cannot initialise itself on Python2 via super.
- cefb16b Add extra detection for hexadecimal packed bytes on Python2. This cannot be detected with type comparison, because bytes == str and at the same time bytes != str if compatibility is not around
- 379ead4 Lintfix: mute not called constructors
- 66ec29c Add scope on str
- f5644bf Add logging to the ip\_interface
- 8bb5438 Add real exception message
- 693e4d4 Move docstrings to their native places
- 77f1c44 Remove duplicated code
- 40d0e6b Use ternary operator instead
- d05999e Remove multiple returns
- 3fde850 Remove unnecessary operator
- deb0b4e Remove duplicated code
- 8e62633 Remove unnecessary variable for import detection
- 7a6ea3b Remove multiple returns and add check for address syntax
- b40e1e1 Add debugging to the ip\_address method (py2 and py3)
- cab5f62 Add logging
- eeab9f2 Isolate Py2 and Py3 mode
- 49b32b7 Check version via object
- 1ae94f1 Override standard IPv6Address class
- 5e970ea Fix unicode imports in compat
- bbeec4d Fix ipaddress import
- 561c99e Remove unused import
- 0498e94 Fix ipaddress imports
- b4f1a72 Add missing docstrings
- **PR #49784: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-28 17:29:30 UTC
  - 804d52c Merge pull request #49784 from rallytime/merge-2018.3
  - c6b9d18 Merge branch '2018.3' into merge-2018.3

- 26461f9 Add helper import comments
- 22f055c Merge branch '2017.7' into '2018.3'
  - \* d2a193b Merge pull request #49792 from KaiSforza/fixscriptedpipes
    - 5b16996 Fix the new pipelines
- dd27d80 Merge branch '2017.7' into '2018.3'
  - \* 8a71a43 Merge pull request #49774 from KaiSforza/declarativeToScripted
    - cae88f2 Move all pipelines to be fully scripted
  - \* 8fe8aac Merge pull request #49736 from mattLLVW/fix-file-touch
    - 1da9f34 Fix test opts in append, prepend states/file.py
- **PR #49790:** (weswhet) fixing an issue where sentry logger would fail to get tags from grain... @ 2018-09-28 13:39:04 UTC
  - d191b08 Merge pull request #49790 from weswhet/fixing-sentry-logger-2018.3
  - 201697d fixing an issue where sentry logger would fail to get tags from grains and some other lint fixes for this file
- **ISSUE #49626:** (PabloLemos) target grains ip\_interface no return received (refs: #49791)
- **PR #49791:** (terminalmage) Fix 3 bugs in subdict matching @ 2018-09-28 13:38:34 UTC
  - 4d9fc7c Merge pull request #49791 from terminalmage/issue49626
  - 6795472 Add clarifying comment
  - ac0f800 Fix 3 bugs in subdict matching
- **PR #49806:** (isbm) Bugfix: zypper ZYPPER\_EXIT\_NO\_REPOS exit code @ 2018-09-28 13:20:36 UTC
  - 52b0472 Merge pull request #49806 from isbm/isbm-zypper-errcode-6-bp
  - 756ef77 Update error list for zypper
  - 5b02548 Add error logging
- **ISSUE saltstack/salt-jenkins#1121:** (rallytime) [2018.3] 4 related tests failing on 2018.3 Python 3 (refs: #49795)
- **PR #49795:** (gtmanfred) fix test\_managed\_file\_with\_grains\_data @ 2018-09-26 22:48:36 UTC
  - fee6701 Merge pull request #49795 from gtmanfred/tests
  - cf5c179 fix test\_managed\_file\_with\_grains\_data
- **PR #49786:** (rallytime) Back-port #49759 to 2018.3 @ 2018-09-26 18:22:01 UTC
  - **PR #49759:** (mattp-) runners.state.orch: generate jid if missing (refs: #49786)
  - 04e5869 Merge pull request #49786 from rallytime/bp-49759
  - df3791c state.orch: generate jid if missing
- **PR #49770:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-25 19:03:25 UTC
  - 4138683 Merge pull request #49770 from rallytime/merge-2018.3
  - d9ed59b Merge branch '2017.7' into '2018.3'
  - f664515 Merge pull request #49760 from Ch3LL/raid\_docs
    - \* 0eb90c1 Add mdadm as dependency in mdadm state docs
  - d5a75bf Merge pull request #49749 from erwindon/docufix

- \* bae678 fixed link in documentation
  - 5ef2def Merge pull request #49703 from twangboy/fix\_49675\_2017.7
    - \* 9127222 Merge branch '2017.7' into fix\_49675\_2017.7
    - \* 4f54422 Fix reboot needed detection
  - b5726d2 Merge pull request #49718 from vutny/doc/2017.7/add-missing-mock-kwarg
    - \* 3e19176 [DOC] Add missing *mock* argument for *state.apply*
- PR #49757: (bbinet) Fix influxdb\_user state when test=True @ 2018-09-24 19:14:22 UTC
  - db6f68a Merge pull request #49757 from bbinet/fix-influxdb\_user-test
  - 0d9ef4b Fix influxdb\_user state when test=True
- PR #49679: (dwoz) Add more tests to whitelist @ 2018-09-22 17:46:50 UTC
  - ec2386e Merge pull request #49679 from dwoz/whitelist
  - 0a3d95f Fix linter issues
  - 4c457c9 Close handles only if they exist
  - a44b37a Merge remote-tracking branch 'saltstack/2018.3' into whitelist
- PR #49722: (meaksh) Fixes some issues on the Zypper module @ 2018-09-21 13:38:03 UTC
  - 6a3e127 Merge pull request #49722 from meaksh/2018.3-fix-zypper-issue-on-python3
  - bb9cb6e Fix wrong queryformat for zypper list\_provides
  - d40c034 Fix index error when running on Python 3
- PR #49720: (cstarke) Separate prlctl and prlsrvctl checks into each requiring function @ 2018-09-21 13:32:46 UTC
  - e7bbb83 Merge pull request #49720 from cstarke/2018.3
  - b0be6aa Add documentation for prlctl and prlsrvctl binary requirement
  - 4f8476b Fix tests; add test for CommandExecutionError
  - 3c96dd2 Fix tests for parallels module
  - 9034c4e Add import for CommandExecutionError
  - 752b6f8 Separate prlctl and prlsrvctl checks into each requiring function
- PR #49615: (terminalmage) ping\_interval: use service.restart instead of signaling @ 2018-09-21 13:26:41 UTC
  - f745e43 Merge pull request #49615 from terminalmage/ping-interval
  - b49b018 Move service name logic to a separate function
  - 2fddb3 ping\_interval: use service.restart instead of signaling
- PR #49731: (terminalmage) Add warning about using jinja filters to dump dicts in Jinja @ 2018-09-21 13:16:04 UTC
  - 0a530d2 Merge pull request #49731 from terminalmage/jinja-filter-warning
  - 8393560 Add warning about using jinja filters to dump dicts in Jinja
- PR #49696: (jgleissner) loosen azure sdk dependencies in azurearm cloud driver @ 2018-09-20 19:17:15 UTC
  - 91acb82 Merge pull request #49696 from jgleissner/2018.3-azurearm-deps
  - 467e017 remove unused import from azurearm driver

- bad28b6 loosen azure sdk dependencies in azurearm cloud driver
- **PR #49684:** (twangboy) Detect when system needs reboot after domain join @ 2018-09-20 16:17:50 UTC
  - d434e36 Merge pull request #49684 from twangboy/fix\_49675
  - 3600467 Fix some try/except blocks, mark a lazy test
  - 871c11a Fix other functions in the same manner
  - 1b5bc66 Merge branch '2018.3' into fix\_49675
  - 95e6f54 Detect when system needs reboot after domain join
    - \* 9048970 Add some debug info to assert
    - \* 536fce6 Increase function timeout
    - \* ed4de63 Fix file serialize test
    - \* 5ac3738 Merge remote-tracking branch 'saltstack/2018.3' into whitelist
- **PR #49710:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-19 18:05:50 UTC
  - 936cae5 Merge pull request #49710 from rallytime/merge-2018.3
  - d19c67f Merge branch '2017.7' into '2018.3'
  - 6bd85b5 Merge pull request #49706 from garethgreenaway/1120\_remove\_mock\_os\_path\_join
    - \* f4ccc75 Removing mocking of os.path.join from two tests, one of which was failing when used with coverage argument. No reason we should be mocking os.path.join.
  - c38dc61 Merge pull request #49692 from rallytime/bp-49688
    - \* fde7575 Order the runtests suites
      - 1f60753 Do not use close\_fds on Windows OS
      - 4a54c7c Fix file serialize test
      - 0ec1e1e Increase timeout on flaky test
      - 6ae924b Skip test that is not applicable on windows
      - 5980200 Increase timeout on flaky test
      - 1757edd Increase ModuleTest.run\_function timeout
      - 7c7353c Add more tests to whitelist
- **PR #49708:** (rallytime) Back-port #49555 to 2018.3 @ 2018-09-19 13:12:12 UTC
  - **PR #49555:** (bergmannf) Change StringIO and BytesIO imports (refs: #49708)
  - b082f79 Merge pull request #49708 from rallytime/bp-49555
  - ed25416 Change StringIO import in python2 to import the class.
- **PR #49707:** (rallytime) Back-port #49702 to 2018.3 @ 2018-09-19 13:09:10 UTC
  - **PR #49702:** (rallytime) Mark orchestration test as expensive (refs: #49707)
  - 0e97d9e Merge pull request #49707 from rallytime/bp-49702
  - 7ff24e5 Mark orchestration test as expensive
- **PR #49693:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-18 20:05:28 UTC
  - 0c4005d Merge pull request #49693 from rallytime/merge-2018.3

- b39dacf Merge branch '2017.7' into '2018.3'
- 37cbd27 Merge pull request #49685 from rallytime/pillar-headings
  - \* 02b2d54 Split intro docs for cmd\_yamlex pillar into shorter lines.
  - \* c4cbe5b Fix heading line-lengths
- 9bad295 Merge pull request #49689 from terminalmage/2017.7-docs
  - \* 7e5bab7 Fix docs build errors (2017.7 branch)
- **PR #49674:** (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-18 13:37:00 UTC
  - a12176d Merge pull request #49674 from rallytime/merge-2018.3
  - 7bcb809 Merge pull request #31 from dwoz/merge-2018.3
    - \* cb35ebb Account for filename changes
  - f3b122f Merge branch '2018.3.3' into '2018.3'
- **PR #49593:** (dwoz) Add more tests to whitelist for Windows @ 2018-09-17 14:57:44 UTC
  - e636dac Merge pull request #49593 from dwoz/add\_whitelist
  - 2e1bf13 Merge branch '2018.3' into add\_whitelist
  - 2340a58 Fix runner returns test on Windows
  - f908cde Merge branch '2018.3' into add\_whitelist
  - be5fccf Fix linter - blank lines
  - e51b0f8 Fix binary file manage test
  - 9e3b44d Fix linter issues
  - ca1b05e Fix multiple issues in x509 module and state
  - e603e7a Fix encoding issues in file and x509 states
  - 7f93c7f Fix map file loading on windows
  - 2959da0 Add some runners test files to whitelist
  - bee2902 Make windows file remove return like others
  - 5770b05 Fix hitelist file order
  - 10ec8be Fix linter issues
  - ccbcb55 Add more tests to whitelist for Windows
- **PR #49639:** (isbm) Retire MD5 checksum for pkg mgmt plugins @ 2018-09-17 14:51:54 UTC
  - 7823839 Merge pull request #49639 from isbm/isbm-yumnotify-md5
  - 11a94ca Remove an empty line
  - adb8324 Use SHA256 algorithm for zyppnotify plugin
  - 27001cf Use SHA256 algorithm for yumnotify plugin
- **PR #49652:** (rallytime) [2018.3] Merge forwrad from 2018.3.3 to 2018.3 @ 2018-09-14 21:20:39 UTC
  - aecbe12 Merge pull request #49652 from rallytime/merge-2018.3
  - a8a3820 Merge branch '2018.3.3' into '2018.3'
- **PR #49646:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-14 13:30:22 UTC

- 530e281 Merge pull request [#49646](#) from rallytime/merge-2018.3
- 186f57e Merge branch '2017.7' into '2018.3'
- 3c8ec8a Merge pull request [#49644](#) from rallytime/mark-flaky-test
  - \* be8a187 Mark grains test as flaky
- 8ac66f1 Merge pull request [#49643](#) from rallytime/bp-49642
  - \* accef8c Skip some unreliable tests
- 7a75d5e Merge pull request [#49597](#) from rallytime/bp-47232
  - \* c477b70 Fixed usage of ipaddress
- 2f6cdd9 Merge pull request [#49614](#) from rallytime/bp-49546
  - \* 0f3881a Skip flaky test on Python 3
- **PR [#49642](#): (rallytime) Skip some unreliable tests (refs: [#49643](#)) @ 2018-09-13 18:24:43 UTC**
  - bb1dcd Merge pull request [#49642](#) from rallytime/flaky-tests
  - 8e74d1c Skip some unreliable tests
- **PR [#49629](#): (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-13 14:00:08 UTC**
  - e319ecc Merge pull request [#49629](#) from rallytime/merge-2018.3
  - b628ad7 Merge branch '2018.3.3' into '2018.3'
- **PR [#49632](#): (garethgreenaway) [2018.3] Fixing integration.states.test\_file.FileTest.test\_directory\_max\_depth @ 2018-09-13 13:51:56 UTC**
  - 93d43fa Merge pull request [#49632](#) from garethgreenaway/fixing\_failing\_test\_python\_3\_7
  - 588f744 Fixing failing test under python 3.7 caused by changes to how os.makedirs sets initial permissions.
- **PR [#49580](#): (garethgreenaway) [2018.3] Fixing tests for Python 3.7 @ 2018-09-12 16:33:35 UTC**
  - 7042fc0 Merge pull request [#49580](#) from garethgreenaway/fixing\_failing\_test\_python\_3\_7
  - b6afdae Fixing lint.
  - d2fb68c Fixes various tests that were failing under python 3.7.
- **PR [#49606](#): (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-12 14:26:33 UTC**
  - ab19082 Merge pull request [#49606](#) from rallytime/merge-2018.3
  - c168268 Update old utils paths to use new paths
  - 19598d8 Merge branch '2017.7' into '2018.3'
    - \* aa560c5 Merge pull request [#49595](#) from rallytime/merge-2017.7
      - 09247a3 Merge branch '2017.7.8' into '2017.7'
      - 4d865b4 Merge pull request [#49560](#) from rallytime/pkgng-fix
      - f3e1534 [2017.7.8] Use correct path for is\_true function
      - 92369f0 Merge pull request [#49541](#) from twangboy/fix\_osx\_build\_2
      - 750d3fa Remove trusted host switches
      - 397296f Merge pull request [#49539](#) from twangboy/fix\_osx\_build\_2
      - 6b42e73 Fix issues with build script on OSX

- \* e8171de Merge pull request #49596 from terminalmage/kill-bare-excepts-with-fire
  - 729dc08 Kill bare excepts with fire
- \* 63b6643 Merge pull request #49578 from twangboy/fix\_49566
  - 6a5a69c Merge branch '2017.7' into fix\_49566
- \* f9a01b7 Merge pull request #49584 from terminalmage/squelch-varstack-error
  - c79a823 Squelch error logging when varstack is not installed
- \* d4d2b36 Merge pull request #49579 from dwoz/flaky\_test
  - db40df Increase timeout for flaky git test
- \* 5cbe60b Merge pull request #49570 from rallytime/doc-fixes
  - de80bda Fix docstring + import order, move pylint disable to own line
  - 393bc0f Fix doc build errors in saltnado documentation
  - 6105ebb Use setup.py clean --all
- **PR #49620:** (dwoz) Adding passing windows nacl runner tests to whitelist @ 2018-09-12 14:19:11 UTC
  - 0ce91d6 Merge pull request #49620 from dwoz/nacltest
  - 51500ac Adding passing windows nacl runner tests to whitelist
- **PR #49532:** (meaksh) Fix wrong 'recurse' behavior on for linux\_acl.present/absent states @ 2018-09-12 14:16:15 UTC
  - c1f97c4 Merge pull request #49532 from meaksh/2018.3-fix-linux\_acl-recursive-problems
  - cf27069 Fix some pylint issues
  - a0ed59d Fix recursive cases on linux\_acl.absent state
  - 4a01849 Add unit tests to cover recursive cases of linux\_acl states
  - f739b6f Fix typo on variable name
  - dc6d1d7 Fix wrong recurse behavior on for linux\_acl.present state
- **ISSUE #49027:** (lachlanmunro) x509.certificate\_managed certificate is mangled on process under py3 m2crypto (refs: #49561)
- **ISSUE #49008:** (lachlanmunro) x509.certificate\_managed state fails under py3 m2crypto with "int too large" (refs: #49561)
- **PR #49561:** (dwoz) x509 module and state bug fixes @ 2018-09-11 14:01:43 UTC
  - 283e7d7 Merge pull request #49561 from dwoz/m2crypto\_test
  - 5e591ea Merge branch '2018.3' into m2crypto\_test
- **PR #49592:** (dwoz) Fix binary file manage test @ 2018-09-10 23:03:18 UTC
  - 4478a44 Merge pull request #49592 from dwoz/bin\_file\_fix
  - 8556c3d Fix binary file manage test
- **PR #49571:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-10 12:58:15 UTC
  - 9004422 Merge pull request #49571 from rallytime/merge-2018.3
  - a00aba9 Merge branch '2017.7' into '2018.3'
    - \* 5d267a2 Merge pull request #49547 from rallytime/bp-49518

- 4bb09f7 Skip service module integration tests on CentOS 7
- \* 4948071 Merge pull request #49549 from rallytime/codeowners-duplicate
  - 4b257d2 Remove duplicate comment in CODEOWNERS file
  - faafe74 Merge branch '2018.3' into m2crypto\_test
- PR #49577: (dwoz) Multiple unittest fixes for 2018.3 Python 3 Windows @ 2018-09-08 05:53:38 UTC
  - 4669a9a Merge pull request #49577 from dwoz/unit\_test\_fixes
  - aa07b3f Multiple unittest fixes for 2018.3 Python 3 Windows
- PR #49533: (silenius) [cherry-pick] Optimize postgres groups management @ 2018-09-07 18:58:57 UTC
  - 8b971e5 Merge pull request #49533 from silenius/2018.3.3
  - 7eb8d6c Postgress module unit test fix.
  - b56aedc Optimize postgres groups management
- PR #49543: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-07 18:19:32 UTC
  - 1a41b47 Merge pull request #49543 from rallytime/merge-2018.3
  - cf508a4 Merge branch '2017.7' into '2018.3'
    - \* 75a3b52 Merge pull request #49527 from terminalmage/remove-special-envs-handling
      - 1478a76 Remove special handling for file\_envs fileserver func
    - \* 13f1d26 Merge pull request #49512 from rallytime/merge-2017.7
      - de7ef3d Add "in progress" notation back to 2017.7.8 release notes
      - edad2dc Merge branch '2017.7.8' into '2017.7'
      - d24c96f Merge pull request #49505 from Ch3LL/rn\_7.8\_2
      - d40b644 Update 2017.7.8 ChangeLog with new fixes
      - 0d7b173 Merge pull request #49498 from rallytime/pin-cherrypy-2017.7.8
      - 81a6155 Pin CherryPy version to < 18.0.0 in requirements files for PY2
      - 52ab2c0 Merge pull request #49466 from rallytime/bp-49461
      - 5842800 Revert "Allow for not being prompted to supply a password to deploy keys to a..."
      - 1bbe7df Merge pull request #49284 from twangboy/fix\_installer\_osx
      - a112eaa Fix path to libsodium tarball
      - e0e8779 Merge pull request #49272 from twangboy/fix\_installer\_more
      - a8f054b Add 64bit binaries for KB2999226 to the x86 installer
      - 0eb6ddf Merge pull request #49218 from twangboy/fix\_installer
      - e8a1d2f Add more descriptive error when KB not found
      - 71737ea Suppress all ui on vcredist installation
      - 7dae9bb Fix Windows and OSX installers
      - e484f26 Merge pull request #49116 from twangboy/fix\_installer
      - 1227095 Add nonfatal switch to VCRedist
      - 0b9f2f8 Merge pull request #49113 from Ch3LL/rn\_7.8

- f6b70bb Add changelog to 2017.7.8 release notes
- \* 208cfe6 Merge pull request [#49515](#) from rallytime/update-codeowners
  - 1faab8b Add some files to the CODEOWNERS files for team-core to own
- \* 34e5174 Merge pull request [#49327](#) from twangboy/fix\_win\_service
  - 74e944b Mark test\_service\_status\_running as flaky
  - c69560c Merge branch '2017.7' into fix\_win\_service
  - 53e2e05 Merge branch '2017.7' into fix\_win\_service
  - cf3d287 Merge branch '2017.7' into fix\_win\_service
  - 1641851 Fix the name of the \_cmd\_quote test
  - 97567af Skip tests on Linux systems
  - 0ca9cd1 Fix some lint
  - 3800966 Add tests
  - b0d646d Add more details to the functioning of \_cmd\_quote
  - a9856e2 Fix issues with win\_service
- **ISSUE [#49452](#):** ([gtmanfred](#)) [[python3.7](#)] remove usage of collections.abc stuff from the collections shim (refs: [#49487](#))
- **PR [#49487](#):** ([garethgreenaway](#)) [2018.3] Swapping out collections imports @ 2018-09-07 15:36:04 UTC
  - baafd6e Merge pull request [#49487](#) from garethgreenaway/49452\_collections\_abc
  - 2fb3ef7 Merge branch '2018.3' into 49452\_collections\_abc
  - ebfd7f9 Merge branch '2018.3' into 49452\_collections\_abc
  - b27e86b Swapping out the version check for a try...except on the import from collections.abc with a fallback to importing from collections.
  - d118a9f Updating various imports that have been moved from collections to collections.abc, and will be deprecated in collections beginning in 3.8.
    - \* abc9c1a Fix linter issues
    - \* 8e42384 Fix multiple issues in x509 module and state
    - \* 2a52158 Fix encoding issues in file and x509 states
    - \* 49a6da7 Fix map file loading on windows
- **PR [#49528](#):** ([dwoz](#)) Fix merge wart @ 2018-09-06 23:12:39 UTC
  - 06935e9 Merge pull request [#49528](#) from dwoz/mergetests
  - 6a4f823 Fix merge wart
- **PR [#49548](#):** ([garethgreenaway](#)) [2018.3] Disabling State boto tests for Python 3.7+ @ 2018-09-06 21:50:10 UTC
  - 3298e70 Merge pull request [#49548](#) from garethgreenaway/1075\_disable\_boto\_tests\_part\_deux
  - 0f5191e Disable various boto tests when run under python 3.7 because of [//github.com/spulec/moto/issues/1706](#). which was causing the test suite to hang on unit tests. This PR is disabling the tests in the test\_boto\_vpc state tests.
- **PR [#49521](#):** ([terminalmage](#)) Fix \_get\_hash in splay executor @ 2018-09-06 14:06:54 UTC
  - c346825 Merge pull request [#49521](#) from terminalmage/fix-splay-executor

- bbb8fe8 Fix `_get_hash` in splay executor
- PR #49526: (terminalmage) Prevent lookup error when trying to lookup fileserver function from LazyDict @ 2018-09-06 14:01:30 UTC
  - 3f7c89c Merge pull request #49526 from terminalmage/fix-backends-error-logging
  - 1f0288e Prevent lookup error when trying to lookup fileserver function from LazyDict
- PR #49524: (garethgreenaway) [2018.3] Disable boto tests under 3.7 @ 2018-09-06 13:35:18 UTC
  - bf939f9 Merge pull request #49524 from garethgreenaway/1075\_disable\_boto\_tests
  - 5ec5578 Disable various boto tests when run under python 3.7 because of [//github.com/spulec/moto/issues/1706](https://github.com/spulec/moto/issues/1706). which was causing the test suite to hang on unit tests.
- PR #49511: (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-05 19:52:25 UTC
  - f73f2e5 Merge pull request #49511 from rallytime/merge-2018.3
  - 3ffc6c2 Merge branch '2018.3.3' into '2018.3'
- PR #49500: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-04 19:02:31 UTC

  - ec258e2 Add integration tests for yaml and json filters
  - f5f16cf Ensure that we don't feed jinja2.Markup() a str type

### 33.2.69 Salt 2018.3.5 Release Notes

Version 2018.3.5 is a CVE-fix release for *2018.3.0*.

#### Security Fix

##### CVE-2019-17361

With the Salt NetAPI enabled in addition to having a SSH roster defined, unauthenticated access is possible when specifying the client as SSH. Additionally, when the `raw_shell` option is specified any arbitrary command may be run on the Salt master when specifying SSH options.

### 33.2.70 Salt 2017.7.0 Release Notes - Codename Nitrogen

#### 33.2.71 Python 3

The 2017.7 Salt Release adds initial Python 3 support.

The default Python version of Salt will remain Python 2, although Python 3 packages will be supplied for users who want to help test this new feature.

#### 33.2.72 Python 2.6 Deprecation

Salt will no longer support Python 2.6. We will provide `python2.7` packages on our [repo](#) for RedHat and CentOS 6 to ensure users can still run Salt on these platforms.

As this will impact the installation of additional dependencies for salt modules please use pip packages if there is not a package available in a repository. You will need to install the `python27-pip` package to get access to the correct `pip27` executable: `yum install python27-pip`

#### 33.2.73 Known Issues

The following salt-cloud drivers have known issues running with Python 3. These drivers will not work with Python 3, and Python 2.7 should be used instead:

- Joyent
- When running under Python 3, users who require Unicode support should ensure that a locale is set on their machines. Users using the `C` locale are advised to switch to a UTF-aware locale to ensure proper functionality with Salt with Python 3.

#### Remember to update the Salt Master first

Salt's policy has always been that when upgrading, the minion should never be on a newer version than the master. Specifically with this update, because of changes in the fileclient, the 2017.7 minion requires a 2017.7 master.

Backwards compatibility is still maintained, so older minions can still be used.

More information can be found in the [Salt FAQ](#)

## States Added for Management of systemd Unit Masking

The `service.masked` and `service.unmasked` states have been added to allow Salt to manage masking of systemd units.

Additionally, the following functions in the `systemd` execution module have changed to accommodate the fact that indefinite and runtime masks can co-exist for the same unit:

- `service.masked` - The return from this function has changed from previous releases. Before, `False` would be returned if the unit was not masked, and the output of `systemctl is-enabled <unit name>` would be returned if the unit was masked. However, since indefinite and runtime masks can exist for the same unit at the same time, this function has been altered to accept a `runtime` argument. If `True`, the minion will be checked for a runtime mask assigned to the named unit. If `False`, then the minion will be checked for an indefinite mask. If one is found, `True` will be returned. If not, then `False` will be returned.
- `service.unmasked` - This function used to just run `systemctl is-enabled <unit name>` and based on the return from this function the corresponding mask type would be removed. However, if both runtime and indefinite masks are set for the same unit, then `systemctl is-enabled <unit name>` would show just the indefinite mask. The indefinite mask would be removed, but the runtime mask would remain. The function has been modified to accept a `runtime` argument, and will attempt to remove a runtime mask if that argument is set to `True`. If set to `False`, it will attempt to remove an indefinite mask.

These new `runtime` arguments default to `False`.

## Pillar Encryption

Beginning in 2016.3.0 the CLI pillar data passed to several functions could conditionally be passed through a renderer to be decrypted. This functionality has now been extended to pillar SLS files as well. See [here](#) for detailed documentation on this feature.

## Grains Changes

- The `osmajorrelease` grain has been changed from a string to an integer. State files, especially those using a templating language like Jinja, may need to be adjusted to account for this change.
- Add ability to specify disk backing mode in the VMWare salt cloud profile.

## State Module Changes

- The `service.running` and `service.dead` states now support a `no_block` argument which, when set to `True` on systemd minions, will start/stop the service using the `--no-block` flag in the `systemctl` command. On non-systemd minions, a warning will be issued.
- The `module.run` state has dropped its previous syntax with `m_` prefix for reserved keywords. Additionally, it allows running several functions in a batch.

---

**Note:** It is necessary to explicitly turn on the new behavior (see below)

---

```
# Before
run_something:
  module.run:
    - name: mymodule.something
    - m_name: 'some name'
```

(continues on next page)

(continued from previous page)

```

- kwargs: {
  first_arg: 'one',
  second_arg: 'two',
  do_stuff: 'True'
}

# After
run_something:
  module.run:
    - mymodule.something:
      - name: some name
      - first_arg: one
      - second_arg: two
      - do_stuff: True

```

Since a lot of users are already using `module.run` states, this new behavior must currently be explicitly turned on, to allow users to take their time updating their SLS files. However, please keep in mind that the new syntax will take effect in the next feature release of Salt (Oxygen) and the old usage will no longer be supported at that time.

Another feature of the new `module.run` is that it allows calling many functions in a single batch, such as:

```

run_something:
  module.run:
    - mymodule.function_without_parameters:
    - mymodule.another_function:
      - myparam
      - my_other_param

```

In a rare case that you have a function that needs to be called several times but with the different parameters, an additional feature of "tagging" is to the rescue. In order to tag a function, use a colon delimiter. For example:

```

run_something:
  module.run:
    - mymodule.same_function:1:
    - mymodule.same_function:2:
      - myparam
      - my_other_param
    - mymodule.same_function:3:
      - foo: bar

```

The example above will run `mymodule.same_function` three times with the different parameters.

To enable the new behavior for `module.run`, add the following to the minion config file:

```

use_superseded:
  - module.run

```

- The default for the `fingerprint_hash_type` option used in the present function in the `ssh` state changed from `md5` to `sha256`.

## Execution Module Changes

- Several functions in the `systemd` execution module have gained a `no_block` argument, which when set to `True` will use `--no-block` in the `systemctl` command.
- In the `solarisips` `pkg` module, the default value for the `refresh` argument to the `list_upgrades` function has been changed from `False` to `True`. This makes the function more consistent with all of the other `pkg` modules (The other `pkg.list_upgrades` functions all defaulted to `True`).
- The functions which handle masking in the `systemd` module have changed. These changes are described above alongside the information on the new states which have been added to manage masking of `systemd` units.
- The `pkg.list_repo_pkgs` function for yum/dnf-based distros has had its default output format changed. In prior releases, results would be organized by repository. Now, the default for each package will be a simple list of versions. To get the old behavior, pass `byrepo=True` to the function.
- A `pkg.list_repo_pkgs` function has been added for both *Debian/Ubuntu* and Arch Linux-based distros.
- The `system` module changed its return format from "HH:MM AM/PM" to "HH:MM:SS AM/PM" for `get_system_time`.
- The default for the `fingerprint_hash_type` option used in the `ssh` execution module changed from `md5` to `sha256`.

## Proxy Module Changes

The `proxy_merge_grains_in_module` configuration variable introduced in 2016.3, has been changed, defaulting to `True`.

The connection with the remote device is kept alive by default, when the module implements the `alive` function and `proxy_keep_alive` is set to `True`. The polling interval is set using the `proxy_keep_alive_interval` option which defaults to 1 minute.

The developers are also able to use the `proxy_always_alive`, when designing a proxy module flexible enough to open the connection with the remote device only when required.

## Wildcard Versions in `pkg.installed` States

- The `pkg.installed` state now supports wildcards in package versions, for the following platforms:
  - SUSE/openSUSE Leap/Thumbleweed
  - Debian/Ubuntu
  - RHEL/CentOS
  - Arch Linux

This support also extends to any derivatives of these distros, which use the `aptpkg`, `yumpkg`, or `pacman` providers for the `pkg` virtual module.

Using wildcards can be useful for packages where the release name is built into the version in some way, such as for RHEL/CentOS which typically has version numbers like `1.2.34-5.el7`. An example of the usage for this would be:

```
mypkg:
  pkg.installed:
    - version: '1.2.34*'
```

### Master Configuration Additions

- *syndic\_forward\_all\_events* - Option on multi-syndic or single when connected to multiple masters to be able to send events to all connected masters.
- *eauth\_acl\_module* - In case external auth is enabled master can get authenticate and get the authorization list from different auth modules.
- *keep\_acl\_in\_token* - Option that allows master to build ACL once for each user being authenticated and keep it in the token.

### Minion Configuration Additions

- *pillarenv\_from\_saltenv* - When set to True (default is False), the *pillarenv* option will take the same value as the effective saltenv when running states. This would allow a user to run `salt '*' state.apply mysls saltenv=dev`, and the SLS for both the state and pillar data would be sourced from the dev environment, essentially the equivalent of running `salt '*' state.apply mysls saltenv=dev pillarenv=dev`. Note that if *pillarenv* is set in the minion config file, or if *pillarenv* is provided on the CLI, it will override this option.

### salt-api Changes

The `rest_cherryypy` netapi module has received a few minor improvements:

- A CORS bugfix.
- A new `/token` convenience endpoint to generate Salt eauth tokens.
- A proof-of-concept JavaScript single-page application intended to demonstrate how to use the Server-Sent Events stream in an application. It is available in a default install by visiting the `/app` URL in a browser.

### Python API Changes

#### `expr_form` Deprecation

The *LocalClient*'s `expr_form` argument has been deprecated and renamed to `tgt_type`. This change was made due to numerous reports of confusion among community members, since the targeting method is published to minions as `tgt_type`, and appears as `tgt_type` in the job cache as well.

While `expr_form` will continue to be supported until the 2019.2.0 release cycle (two major releases after this one), those who are using the *LocalClient* (either directly, or implicitly via a *netapi module*) are encouraged to update their code to use `tgt_type`.

## full\_return Argument in LocalClient and RunnerClient

An `full_return` argument has been added to the `cmd` and `cmd_sync` methods in `LocalClient` and `RunnerClient` which causes the return data structure to include job meta data such as `retcode`.

This is useful at the Python API:

```
>>> import salt.client
>>> client = salt.client.LocalClient()
>>> client.cmd("*", "cmd.run", ["return 1"], full_return=True)
{'jerry': {'jid': '20170520151213898053', 'ret': '', 'retcode': 1}}
```

As well as from salt-api:

```
% curl -b /tmp/cookies.txt -sS http://localhost:8000 \
  -H 'Content-type: application/json' \
  -d '[{
    "client": "local",
    "tgt": "*",
    "fun": "cmd.run",
    "arg": ["return 1"],
    "full_return": true
  }]'

{"return": [{"jerry": {"jid": "20170520151531477653", "retcode": 1, "ret": ""}
→}]}
```

## Jinja

### Filters

New filters in 2017.7.0:

- `to_bool`
- `exactly_n_true`
- `exactly_one_true`
- `quote`
- `regex_search`
- `regex_match`
- `uuid`
- `is_list`
- `is_iter`
- `min`
- `max`
- `avg`
- `union`
- `intersect`

- *difference*
- *symmetric\_difference*
- *is\_sorted*
- *compare\_lists*
- *compare\_dicts*
- *is\_hex*
- *contains\_whitespace*
- *substring\_in\_list*
- *check\_whitelist\_blacklist*
- *date\_format*
- *str\_to\_num*
- *to\_bytes*
- *json\_decode\_list*
- *json\_decode\_dict*
- *rand\_str*
- *md5*
- *sha256*
- *sha512*
- *base64\_encode*
- *base64\_decode*
- *hmac*
- *http\_query*
- *is\_ip*
- *is\_ipv4*
- *is\_ipv6*
- *ipaddr*
- *ipv4*
- *ipv6*
- *network\_hosts*
- *network\_size*
- *gen\_mac*
- *mac\_str\_to\_bytes*
- *dns\_check*
- *is\_text\_file*
- *is\_binary\_file*
- *is\_empty\_file*

- `file_hashsum`
- `list_files`
- `path_join`
- `which`

## Logs

Another new feature - although not limited to Jinja only - is being able to log debug messages directly from the template:

```
{%- do salt.log.error('logging from jinja') -%}
```

See the `logs` paragraph.

## Network Automation

### NAPALM

Introduced in 2016.11, the modules for cross-vendor network automation have been improved, enhanced and widened in scope:

- Manage network devices like servers: the NAPALM modules have been transformed so they can run in both proxy and regular minions. That means, if the operating system allows, the salt-minion package can be installed directly on the network gear. Examples of such devices (also covered by NAPALM) include: Arista, Cumulus, Cisco IOS-XR or Cisco Nexus.
- Not always alive: in certain less dynamic environments, maintaining the remote connection permanently open with the network device is not always beneficial. In those particular cases, the user can select to initialize the connection only when needed, by specifying the field `always_alive: false` in the `proxy configuration` or using the `proxy_always_alive` option.
- Proxy keepalive: due to external factors, the connection with the remote device can be dropped, e.g.: packet loss, idle time (no commands issued within a couple of minutes or seconds), or simply the device decides to kill the process. In 2017.7.0 we have introduced the functionality to re-establish the connection. One can disable this feature through the `proxy_keep_alive` option and adjust the polling frequency specifying a custom value for `proxy_keep_alive_interval`, in minutes.

New modules:

- `Netconfig state module` - Manage the configuration of network devices using arbitrary templates and the Salt-specific advanced templating methodologies.
- `Network ACL execution module` - Generate and load ACL (firewall) configuration on network devices.
- `Network ACL state` - Manage the firewall configuration. It only requires writing the pillar structure correctly!
- `NAPALM YANG execution module` - Parse, generate and load native device configuration in a standard way, using the OpenConfig/IETF models. This module contains also helpers for the states.
- `NAPALM YANG state module` - Manage the network device configuration according to the YANG models (OpenConfig or IETF).

- *NET finder* - Runner to find details easily and fast. It's smart enough to know what you are looking for. It will search in the details of the network interfaces, IP addresses, MAC address tables, ARP tables and LLDP neighbors.
- *BGP finder* - Runner to search BGP neighbors details.
- *NAPALM syslog* - Engine to import events from the napalm-logs library into the Salt event bus. The events are based on the syslog messages from the network devices and structured following the OpenConfig/IETF YANG models.
- *NAPALM Helpers* - Generic helpers for NAPALM-related operations. For example, the *Compliance report* function can be used inside the state modules to compare the expected and the existing configuration.

New functions:

- *Configuration getter* - Return the whole configuration of the network device.
- *Optics getter* - Fetches the power usage on the various transceivers installed on the network device (in dBm).

New grains: *Host*, *Host DNS*, *Username* and *Optional args*.

### Custom Refspecs in GitFS / git\_pillar / winrepo

It is now possible to specify the refspecs to use when fetching from remote repositories for GitFS, git\_pillar, and winrepo. More information on how this feature works can be found [here](#) in the GitFS Walkthrough. The git\_pillar and winrepo versions of this feature work the same as their GitFS counterpart.

### git\_pillar "mountpoints" Feature Added

See [here](#) for detailed documentation.

### Big Improvements to Docker Support

The old *docker* state and execution modules have been moved to *salt-contrib*. The *dockerng* execution module has been renamed to *docker* and now serves as Salt's official Docker execution module.

The old *dockerng* state module has been split into 4 state modules:

- *docker\_container* - States to manage Docker containers
- *docker\_image* - States to manage Docker images
- *docker\_volume* - States to manage Docker volumes
- *docker\_network* - States to manage Docker networks

The reason for this change was to make states and requisites more clear. For example, imagine this SLS:

```
myuser/appimage:
  docker.image_present:
    - sls: docker.images.appimage

myapp:
  docker.running:
    - image: myuser/appimage
```

(continues on next page)

(continued from previous page)

- **require:**
- **docker:** myuser/appimage

The new syntax would be:

```
myuser/appimage:
  docker_image.present:
    - sls: docker.images.appimage

myapp:
  docker_container.running:
    - image: myuser/appimage
    - require:
      - docker_image: myuser/appimage
```

This is similar to how Salt handles MySQL, MongoDB, Zabbix, and other cases where the same execution module is used to manage several different kinds of objects (users, databases, roles, etc.).

---

**Note:** With the [Moby announcement](#) coming at this year's [DockerCon](#), Salt's `docker` execution module (as well as the state modules) work interchangeably when `docker` is replaced with `moby` (e.g. `moby_container.running`, `moby_image.present`, `moby_inspect_container`, etc.)

---

The old syntax will continue to work until the 2019.2.0 release of Salt. The old `dockerng` naming will also continue to work until that release, so no immediate changes need to be made to your SLS files (unless you were still using the old `docker` states that have been moved to [salt-contrib](#)).

The `docker_container.running` state has undergone a significant change in how it determines whether or not a container needs to be replaced. Rather than comparing individual arguments to their corresponding values in the named container, a temporary container is created (but not started) using the passed arguments. The two containers are then compared to each other to determine whether or not there are changes, and if so, the old container is stopped and destroyed, and the temporary container is renamed and started.

Salt still needs to translate arguments into the format which `docker-py` expects, but if it does not properly do so, the `skip_translate` argument can be used to skip input translation on an argument-by-argument basis, and you can then format your SLS file to pass the data in the format that the `docker-py` expects. This allows you to work around any changes in Docker's API or issues with the input translation, and continue to manage your Docker containers using Salt. Read the documentation for `skip_translate` for more information.

---

**Note:** When running the `docker_container.running` state for the first time after upgrading to 2017.7.0, your container(s) may be replaced. The changes may show diffs for certain parameters which say that the old value was an empty string, and the new value is `None`. This is due to the fact that in prior releases Salt was passing empty strings for these values when creating the container if they were undefined in the SLS file, where now Salt simply does not pass any arguments not explicitly defined in the SLS file. Subsequent runs of the state should not replace the container if the configuration remains unchanged.

---

## New SSH Cache Roster

The *SSH cache Roster* has been rewritten from scratch to increase its usefulness. The new roster supports all minion matchers, so it is now possible to target minions identically through *salt* and *salt-ssh*.

Using the new `roster_order` configuration syntax it's now possible to compose a roster out of any combination of grains, pillar and mine data and even Salt SDB URLs. The new release is also fully IPv4 and IPv6 enabled and even has support for CIDR ranges.

## Salt-SSH Default Options

Defaults for rosters can now be set, so that they don't have to be set on every entry in a roster or specified from the commandline.

The new option is *roster\_defaults* and is specified in the master config file:

```
roster_defaults:
  user: daniel
  sudo: True
  priv: /root/.ssh/id_rsa
  tty: True
```

## Blacklist or Whitelist Extmod Sync

The modules that are synced to minions can now be limited.

The following configuration options have been added for the master:

- *extmod\_whitelist*
- *extmod\_blacklist*

and for the minion:

- *extmod\_whitelist*
- *extmod\_blacklist*

## Additional Features

- The *mine.update* function has a new optional argument `mine_functions` that can be used to refresh mine functions at a more specific interval than scheduled using the `mine_interval` option. However, this argument can be used by explicit schedule. For example, if we need the mines for `net.lldp` to be refreshed every 12 hours:

```
schedule:
  lldp_mine_update:
    function: mine.update
    kwargs:
      mine_functions:
        net.lldp: []
    hours: 12
```

- The `salt` runner has a new function: *salt.execute*. It is mainly a shortcut to facilitate the execution of various functions from other runners, e.g.:

```
ret1 = __salt__["salt.execute"]("*", "mod.fun")
```

## New Modules

### Beacons

- `salt.beacons.log`

### Cache

- `salt.cache.redis_cache`

### Engines

- `salt.engines.stalekey`
- `salt.engines.junos_syslog`
- `salt.engines.napalm_syslog`

### Execution modules

- `salt.modules.apk`
- `salt.modules.at_solaris`
- `salt.modules.boto_kinesis`
- `salt.modules.boto3_elasticache`
- `salt.modules.boto3_route53`
- `salt.modules.capirca_acl`
- `salt.modules.freebsd_update`
- `salt.modules.grafana4`
- `salt.modules.heat`
- `salt.modules.icinga2`
- `salt.modules.kubernetesmod`
- `salt.modules.logmod`
- `salt.modules.mattermost`
- `salt.modules.namecheap_dns`
- `salt.modules.namecheap_domains`
- `salt.modules.namecheap_ns`
- `salt.modules.namecheap_users`
- `salt.modules.namecheap_ssl`
- `salt.modules.napalm`

- `salt.modules.napalm_acl`
- `salt.modules.napalm_yang_mod`
- `salt.modules.pdbedit`
- `salt.modules.solrcloud`
- `salt.modules.statuspage`
- `salt.modules.zonecfg`
- `salt.modules.zoneadm`

### Grains

- `salt.grains.metadata`
- `salt.grains.mdata`

### Outputters

- `salt.output.table_out`

### Pillar

- `salt.pillar.postgres`
- `salt.pillar.vmware_pillar`

### Returners

- `salt.returners.mattermost_returner`
- `salt.returners.highstate_return`

### Roster

- `salt.roster.cache`

### Runners

- `salt.runners.bgp`
- `salt.runners.mattermost`
- `salt.runners.net`

## SDB

- *salt.sdb.yaml*
- *salt.sdb.tism*
- *salt.sdb.cache*

## States

- *salt.states.boto\_kinesis*
- *salt.states.boto\_efs*
- *salt.states.boto3\_elasticache*
- *salt.states.boto3\_route53*
- *salt.states.docker\_container*
- *salt.states.docker\_image*
- *salt.states.docker\_network*
- *salt.states.docker\_volume*
- *salt.states.elasticsearch*
- *salt.states.grafana4\_dashboard*
- *salt.states.grafana4\_datasource*
- *salt.states.grafana4\_org*
- *salt.states.grafana4\_user*
- *salt.states.heat*
- *salt.states.icinga2*
- *salt.states.influxdb\_continuous\_query*
- *salt.states.influxdb\_retention\_policy*
- *salt.states.kubernetes*
- *salt.states.logadm*
- *salt.states.logrotate*
- *salt.states.msteams*
- *salt.states.netacl*
- *salt.states.netconfig*
- *salt.states.netyang*
- *salt.states.nix*
- *salt.states.pdbedit*
- *salt.states.solrcloud*
- *salt.states.statuspage*
- *salt.states.vault*

- `salt.states.win_wua`
- `salt.states.zone`

## Deprecations

### General Deprecations

- Removed support for aliasing `cmd.run` to `cmd.shell`.
- Removed support for Dulwich from *GitFS*.
- Beacon configurations should be lists instead of dictionaries.
- The `PidfileMixin` has been removed. Please use `DaemonMixin` instead.
- The `use_pending` argument was removed from the `salt.utils.event.get_event` function.
- The `pending_tags` argument was removed from the `salt.utils.event.get_event` function.

### Configuration Option Deprecations

- The `client_acl` configuration option has been removed. Please use `publisher_acl` instead.
- The `client_acl_blacklist` configuration option has been removed. Please use `publisher_acl_blacklist` instead.
- The `win_gitrepos` configuration option has been removed. Please use the `winrepo_remotes` option instead.
- The `win_repo` configuration option has been removed. Please use `winrepo_dir` instead.
- The `win_repo_mastercachefile` configuration option has been removed. Please use the `winrepo_cachefile` option instead.

### Module Deprecations

The `git` execution module had the following changes:

- The `fmt` argument was removed from the `archive` function. Please use `format` instead.
- The `repository` argument was removed from the `clone` function. Please use `url` instead.
- The `is_global` argument was removed from the `config_set` function. Please use `global` instead.
- The `branch` argument was removed from the `merge` function. Please use `rev` instead.
- The `branch` argument was removed from the `push` function. Please use `rev` instead.

The `glusterfs` execution module had the following functions removed:

- `create`: Please use `create_volume` instead.
- `delete`: Please use `delete_volume` instead.
- `list_peers`: Please use `peer_status` instead.

The `htpasswd` execution module had the following function removed:

- `useradd_all`: Please use `useradd` instead.

The `img` execution module has been removed. All of its associated functions were marked for removal in the 2017.7.0 release. The functions removed in this module are mapped as follows:

- `mount_image/mnt_image`: Please use `mount.mount` instead.
- `umount_image`: Please use `mount.umount` instead.
- `bootstrap`: Please use `genesis.bootstrap` instead.

The `smartos_virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `virtualenv_mod` execution module had the following changes:

- The `package_or_requirement` argument was removed from both the `get_resource_path` and the `get_resource_content` functions. Please use `package` instead.
- The `resource_name` argument was removed from both the `get_resource_path` and `get_resource_content` functions. Please use `resource` instead.

The `win_repo` execution module had the following changes:

- The `win_repo_source_dir` option was removed from the `win_repo` module. Please use `winrepo_source_dir` instead.

The `xapi` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `zypper` execution module had the following function removed:

- `info`: Please use `info_available` instead.

## Pillar Deprecations

- Support for the `raw_data` argument for the `file_tree` ext-pillar has been removed. Please use `keep_newline` instead.
- SQLite3 database connection configuration previously had keys under `pillar`. This legacy compatibility has been removed.

### Proxy Minion Deprecations

- The `proxy_merge_grains_in_module` default has been switched from `False` to `True`.

### Salt-API Deprecations

- The `SaltAPI.run()` function has been removed. Please use the `SaltAPI.start()` function instead.

### Salt-Cloud Deprecations

- Support for using the keyword `provider` in salt-cloud provider config files has been removed. Please use `driver` instead. The `provider` keyword should now only be used in cloud profile config files.

### Salt-SSH Deprecations

- The `wipe_ssh` option for `salt-ssh` has been removed. Please use the `ssh_wipe` option instead.

### State Deprecations

The `apache_conf` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_module` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_site` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `chocolatey` state had the following functions removed:

- `install`: Please use `installed` instead.
- `uninstall`: Please use `uninstalled` instead.

The `git` state had the following changes:

- The `config` function was removed. Please use `config_set` instead.
- The `is_global` option was removed from the `config_set` function. Please use `global` instead.
- The `always_fetch` option was removed from the `latest` function, as it no longer has any effect. Please see the [2015.8.0](#) release notes for more information.
- The `force` option was removed from the `latest` function. Please use `force_clone` instead.
- The `remote_name` option was removed from the `latest` function. Please use `remote` instead.

The `glusterfs` state had the following function removed:

- `created`: Please use `volume_present` instead.

The `openvswitch_port` state had the following change:

- The `type` option was removed from the `present` function. Please use `tunnel_type` instead.

## Build Notes

### Windows Installer Packages

Windows Installer packages have been patched with the following PR: [42347](#)

## 33.2.74 Salt 2017.7.1 Release Notes

Version 2017.7.1 is a bugfix release for [2017.7.0](#).

### Statistics

- Total Merges: 16
- Total Issue References: 12
- Total PR References: 31
- Contributors: 11 (Ch3LL, TiteiKo, garethgreenaway, gtmanfred, llua, rallytime, seedickcode, skizunov, terminalmage, twangboy, whiteinge)

### Security Fix

**CVE-2017-12791** Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: [Vernhk@qq.com](mailto:Vernhk@qq.com)

### Changelog for v2017.7.0..v2017.7.1

*Generated at: 2018-05-26 20:28:44 UTC*

- **ISSUE** [saltstack/salt-jenkins#460](#): (Ch3LL) decorator tests failing on python3 (refs: [#42548](#))
- **PR** [#42595](#): (gtmanfred) make sure to pass arg as well @ 2017-07-28 16:21:58 UTC
  - **PR** [#42548](#): (gtmanfred) pass in empty kwarg for reactor (refs: [#42595](#))
  - [a50fe5433a](#) Merge pull request [#42595](#) from gtmanfred/2017.7.1
  - [8f73804b24](#) make sure to pass arg as well
- **PR** [#42597](#): (rallytime) Back-port [#42590](#) to 2017.7.1 @ 2017-07-28 00:20:01 UTC
  - **PR** [#42590](#): (TiteiKo) Fix missing tornado import (refs: [#42597](#))
  - [3b583330de](#) Merge pull request [#42597](#) from rallytime/bp-42590
  - [8818b06f22](#) Fix missing tornado import
- **ISSUE** [#42404](#): (gabekahen) [2017.7] file.managed with `cmd_check` "No such file or directory" (refs: [#42411](#))
- **ISSUE** [#33708](#): (pepinje) visudo check command leaves cache file in /tmp (refs: [#38063](#), [#42411](#))

- **PR #42598:** (rallytime) Back-port #42411 to 2017.7.1 @ 2017-07-28 00:19:13 UTC
  - **PR #42411:** (seedickcode) Fix file.managed check\_cmd file not found - Issue #42404 (refs: #42598)
  - **PR #38063:** (llua) tmp file clean up in file.manage - fix for #33708 (refs: #42411)
  - 76f1e53e10 Merge pull request #42598 from rallytime/bp-42411
  - 190cdb8693 Fix file.managed check\_cmd file not found - Issue #42404
- **PR #42564:** (rallytime) Back-port #42555 to 2017.7.1 @ 2017-07-26 17:32:02 UTC
  - **PR #42555:** (Ch3LL) add changelog to 2017.7.1 release notes (refs: #42564)
  - 5c7def9a43 Merge pull request #42564 from rallytime/bp-42555
  - 7bcaa5a4cc small markup fix for title
  - d066b599ca add changelog to 2017.7.1 release notes
- **ISSUE saltstack/salt-jenkins#460:** (Ch3LL) decorator tests failing on python3 (refs: #42548)
- **PR #42548:** (gtmanfred) pass in empty kwarg for reactor (refs: #42595) @ 2017-07-26 00:41:20 UTC
  - 711b742c54 Merge pull request #42548 from gtmanfred/2017.7.1
  - 0257c1dc32 pass in empty kwarg for reactor
  - b948e980d2 update chunk, not kwarg in chunk
- **ISSUE #42519:** (xuhcc) Error when installing package from file under Arch Linux (refs: #42522)
- **PR #42522:** (gtmanfred) pacman wildcard is only for repository installs @ 2017-07-24 20:51:05 UTC
  - 50c1635dcc Merge pull request #42522 from gtmanfred/2017.7.1
  - 7787fb9e1b pacman wildcard is only for repository installs
- **PR #42508:** (rallytime) Back-port #42474 to 2017.7.1 @ 2017-07-24 20:49:51 UTC
  - **PR #42474:** (whiteinge) Cmd arg kwarg parsing test (refs: #42508)
  - **PR #39646:** (terminalmage) Handle deprecation of passing string args to load\_args\_and\_kwarg (refs: #42474)
  - 05c07ac049 Merge pull request #42508 from rallytime/bp-42474
  - 76fb074433 Add a test.arg variant that cleans the pub kwarg by default
  - 624f63648e Lint fixes
  - d246a5fc61 Add back support for string kwarg
  - 854e098aa0 Add LocalClient.cmd test for arg/kwarg parsing
- **ISSUE #42427:** (grichmond-salt) Issue Passing Variables created from load\_json as Inline Pillar Between States (refs: #42435)
- **PR #42472:** (rallytime) Back-port #42435 to 2017.7.1 @ 2017-07-24 15:11:13 UTC
  - **PR #42435:** (terminalmage) Modify our custom YAML loader to treat unicode literals as unicode strings (refs: #42472)
  - 95fe2558e4 Merge pull request #42472 from rallytime/bp-42435
  - 5c47af5b98 Modify our custom YAML loader to treat unicode literals as unicode strings
- **ISSUE #42374:** (tyhunt99) [2017.7.0] salt-run manage.versions throws exception if minion is offline or unresponsive (refs: #42436)

- **PR #42473:** (rallytime) Back-port #42436 to 2017.7.1 @ 2017-07-24 15:10:29 UTC
  - **PR #42436:** (garethgreenaway) Fixes to versions function in manage runner (refs: #42473)
  - 5b99d45f54 Merge pull request #42473 from rallytime/bp-42436
  - 82ed919803 Updating the versions function inside the manage runner to account for when a minion is offline and we are unable to determine its version.
- **ISSUE #42381:** (zebooka) Git.detached broken in 2017.7.0 (refs: #42399)
- **ISSUE #38878:** (tomlaredo) [Naming consistency] git.latest "rev" option VS git.detached "ref" option (refs: #38898)
- **PR #42471:** (rallytime) Back-port #42399 to 2017.7.1 @ 2017-07-24 15:09:50 UTC
  - **PR #42399:** (rallytime) Update old "ref" references to "rev" in git.detached state (refs: #42471)
  - **PR #38898:** (terminalmage) git.detached: rename ref to rev for consistency (refs: #42399)
  - 3d1a2d3f9f Merge pull request #42471 from rallytime/bp-42399
  - b9a4669e5a Update old "ref" references to "rev" in git.detached state
- **ISSUE #42400:** (Enquier) Conflict in execution of passing pillar data to orch/reactor event executions 2017.7.0 (refs: #42031)
- **PR #42470:** (rallytime) Back-port #42031 to 2017.7.1 @ 2017-07-24 15:09:30 UTC
  - **PR #42031:** (skizunov) Fix: Reactor emits critical error (refs: #42470)
  - 09766bccbc Merge pull request #42470 from rallytime/bp-42031
  - 0a0c6287a4 Fix: Reactor emits critical error
- **ISSUE #41949:** (jrporcaro) Event returner doesn't work with Windows Master (refs: #42027)
- **PR #42469:** (rallytime) Back-port #42027 to 2017.7.1 @ 2017-07-21 22:41:02 UTC
  - **PR #42027:** (gtmanfred) import salt.minion for EventReturn for Windows (refs: #42469)
  - d7b172a15b Merge pull request #42469 from rallytime/bp-42027
  - ed612b4ee7 import salt.minion for EventReturn for Windows
- **PR #42466:** (rallytime) Back-port #42452 to 2017.7.1 @ 2017-07-21 19:41:24 UTC
  - **PR #42452:** (Ch3LL) update windows urls to new py2/py3 naming scheme (refs: #42466)
  - 8777b1a825 Merge pull request #42466 from rallytime/bp-42452
  - c10196f68c update windows urls to new py2/py3 naming scheme
- **PR #42439:** (rallytime) Back-port #42409 to 2017.7.1 @ 2017-07-21 17:38:10 UTC
  - **PR #42409:** (twangboy) Add Scripts to build Py3 on Mac (refs: #42439)
  - fceaaf41d0 Merge pull request #42439 from rallytime/bp-42409
  - 8176964b41 Remove build and dist, sign pkgs
  - 2c14d92a07 Fix hard coded pip path
  - 82fdd7c2e1 Add support for Py3
  - 2478447246 Update Python and other reqs
- **ISSUE #42403:** (astronouth7303) [2017.7] Pillar empty when state is applied from orchestrate (refs: #42433)
- **PR #42441:** (rallytime) Back-port #42433 to 2017.7.1 @ 2017-07-21 17:37:01 UTC

- PR #42433: (terminalmage) Only force saltenv/pillarenv to be a string when not None (refs: #42441)
- 660400560b Merge pull request #42441 from rallytime/bp-42433
- 17f347123a Only force saltenv/pillarenv to be a string when not None

### 33.2.75 Salt 2017.7.2 Release Notes

Version 2017.7.2 is a bugfix release for 2017.7.0.

#### Statistics

- Total Merges: 329
- Total Issue References: 73
- Total PR References: 236
- Contributors: 47 (Ch3LL, CorvinM, DmitryKuzmenko, Giandom, Mapel88, Mareo, SuperPommeDeTerre, The-Loeki, abulford, amendlik, blarghmatey, brejoc, cachedout, carsonoid, cro, damon-atkins, darcoli, dmurphy18, frankiexyz, garethgreenaway, gtmanfred, hibbert, isbm, ixs, jettero, jmarinero, justincbeard, kkoppel, llua, lomeroy, m03, mcalmer, mirceaulinic, morganwillcock, nhavens, pabloh007, rallytime, seedickcode, shengis, skizunov, terminalmage, the-glu, thusoy, twangboy, vitaliyf, vutny, whiteinge)

#### Security Fix

**CVE-2017-14695** Directory traversal vulnerability in minion id validation in SaltStack. Allows remote minions with incorrect credentials to authenticate to a master via a crafted minion ID. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

**CVE-2017-14696** Remote Denial of Service with a specially crafted authentication request. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

#### Changelog for v2017.7.1..v2017.7.2

Generated at: 2018-05-26 21:06:12 UTC

- PR #43868: (rallytime) Back-port #43847 to 2017.7.2 @ 2017-10-03 12:00:52 UTC
  - PR #43847: (cachedout) Fix to module.run (refs: #43868)
  - dd0b3388cf Merge pull request #43868 from rallytime/bp-43847
  - e21d8e9583 Use six.iterkeys() instead of dict.keys()
  - c297ae5557 Improve failures for module.run states
  - 782e67c199 Lint
  - a6c2d78518 Fix typo found by @s0undt3ch
  - 0cac15e502 Fix to module.run [WIP]
- PR #43871: (rallytime) Add updated release notes to 2017.7.2 branch @ 2017-10-03 11:59:29 UTC
  - 47af4ae38a Merge pull request #43871 from rallytime/update-release-notes
  - 2337904656 Add updated release notes to 2017.7.2 branch
- PR #43756: (gtmanfred) split build and install for pkg osx @ 2017-09-26 20:51:28 UTC

- 88414d5f73 Merge pull request #43756 from gtmanfred/2017.7.2
- f7df41fa94 split build and install for pkg osx
- ISSUE #43077: (Manoj2087) Issue with deleting key via wheel (refs: #43330)
- PR #43585: (rallytime) Back-port #43330 to 2017.7.2 @ 2017-09-19 17:33:34 UTC
  - PR #43330: (terminalmage) Fix reactor regression + unify reactor config schema (refs: #43585)
  - 89f629233f Merge pull request #43585 from rallytime/bp-43330
  - c4f693bae8 Merge branch '2017.7.2' into bp-43330
- ISSUE #43447: (UtahDave) When using Syndic with Multi Master the top level master doesn't reliably get returns from lower minion. (refs: #43526)
- PR #43586: (rallytime) Back-port #43526 to 2017.7.2 @ 2017-09-19 15:36:27 UTC
  - PR #43526: (DmitryKuzmenko) Forward events to all masters syndic connected to (refs: #43586)
  - abb7fe4422 Merge pull request #43586 from rallytime/bp-43526
  - e076e9b634 Forward events to all masters syndic connected to.
  - 7abd07fa07 Simplify client logic
  - b5f10696c2 Improve the reactor documentation
  - 7a2f12b96a Include a better example for reactor in master conf file
  - 531cac610e Rewrite the reactor unit tests
  - 2a35ab7f39 Unify reactor configuration, fix caller reactors
  - 4afb179bad Un-deprecate passing kwargs outside of 'kwarg' param
- PR #43551: (twangboy) Fix preinstall script on OSX for 2017.7.2 @ 2017-09-18 18:35:35 UTC
  - 3d3b09302d Merge pull request #43551 from twangboy/osx\_fix\_preinstall\_2017.7.2
  - c3d9fb63f0 Merge branch '2017.7.2' into osx\_fix\_preinstall\_2017.7.2
- PR #43509: (rallytime) Back-port #43333 to 2017.7.2 @ 2017-09-15 21:21:40 UTC
  - PR #43333: (damon-atkins) Docs are wrong cache\_dir (bool) and cache\_file (str) cannot be passed as params + 1 bug (refs: #43509)
  - 24691da888 Merge pull request #43509 from rallytime/bp-43333-2017.7.2
  - b3dbafb035 Update doco
  - 5cdcdbf428 Update win\_pkg.py
  - c3e16661c3 Docs are wrong cache\_dir (bool) and cache\_file (str) cannot be passed on the cli (#2)
  - f33395f1ee Fix logic in /etc/paths.d/salt detection
- PR #43440: (rallytime) Back-port #43421 to 2017.7.2 @ 2017-09-11 20:59:53 UTC
  - PR #43421: (gtmanfred) Revert "Reduce fileclient.get\_file latency by merging \_file\_find and ... (refs: #43440)
  - 8964cacbf8 Merge pull request #43440 from rallytime/bp-43421
  - ea6e661755 Revert "Reduce fileclient.get\_file latency by merging \_file\_find and \_file\_hash"
- PR #43377: (rallytime) Back-port #43193 to 2017.7.2 @ 2017-09-11 15:32:23 UTC
  - PR #43193: (jettero) Prevent spurious "Template does not exist" error (refs: #43377)

- PR #39516: (jettero) Prevent spurious "Template does not exist" error (refs: #43193)
- 7fda186b18 Merge pull request #43377 from rallytime/bp-43193
- 842b07fd25 Prevent spurious "Template does not exist" error
- ISSUE #42459: (iavael) Broken ldap groups retrieval in salt.auth.ldap after upgrade to 2017.7 (refs: #43283)
- PR #43315: (rallytime) Back-port #43283 to 2017.7.2 @ 2017-09-05 20:04:25 UTC
  - PR #43283: (DmitryKuzmenko) Fix ldap token groups auth. (refs: #43315)
  - 85dba1e898 Merge pull request #43315 from rallytime/bp-43283
  - f29f5b0cce Fix for tests: don't require 'groups' in the eauth token.
  - 56938d5bf2 Fix ldap token groups auth.
- ISSUE #43259: (mahesh21) NameError: global name '\_\_opts\_\_' is not defined (refs: #43266)
- PR #43266: (gtmanfred) switch virtualbox cloud driver to use \_\_utils\_\_ @ 2017-08-30 18:36:20 UTC
  - 26ff8088cb Merge pull request #43266 from gtmanfred/virtualbox
  - 382bf92de7 switch virtualbox cloud driver to use \_\_utils\_\_
- ISSUE #42936: (Mapel88) bug in win\_iis module & state - container\_setting (refs: #43073)
- PR #43073: (Mapel88) Fix bug #42936 - win\_iis module container settings @ 2017-08-30 18:34:37 UTC
  - ee209b144c Merge pull request #43073 from Mapel88/patch-2
  - b1a3d15b28 Remove trailing whitespace for linter
  - 25c8190e48 Fix pylint errors
  - 1eba8c4b8e Fix pylint errors
  - 290d7b54af Fix plint errors
  - f4f32421ab Fix plint errors
  - ec20e9a19a Fix bug #43110 - win\_iis module
  - 009ef6686b Fix dictionary keys from string to int
  - dc793f9a05 Fix bug #42936 - win\_iis state
  - 13404a47b5 Fix bug #42936 - win\_iis module
- PR #43254: (twangboy) Fix `unit.modules.test_inspect_collector` on Windows @ 2017-08-30 15:46:07 UTC
  - ec1bedc646 Merge pull request #43254 from twangboy/win\_fix\_test\_inspect\_collector
  - b401340e6c Fix `unit.modules.test_inspect_collector` on Windows
- ISSUE #43241: (mirceaulinic) Error whilst collecting napalm grains (refs: #43255)
- PR #43255: (gtmanfred) always return a dict object @ 2017-08-30 14:47:15 UTC
  - 1fc7307735 Merge pull request #43255 from gtmanfred/2017.7
  - 83b0bab34b opt\_args needs to be a dict
- PR #43229: (twangboy) Bring changes from #43228 to 2017.7 @ 2017-08-30 14:26:55 UTC
  - PR #43228: (twangboy) Win fix pkg.install (refs: #43229)
  - fa904ee225 Merge pull request #43229 from twangboy/win\_fix\_pkg.install-2017.7
  - e007a1c26e Fix regex, add .

- 23ec47c74c Add \_ to regex search
- b1788b1e5f Bring changes from #43228 to 2017.7
- PR #43251: (twangboy) Skips `unit.modules.test_groupadd` on Windows @ 2017-08-30 13:56:36 UTC
  - 25666f88f7 Merge pull request #43251 from twangboy/win\_skip\_test\_groupadd
  - 5185071d5a Skips `unit.modules.test_groupadd` on Windows
- PR #43256: (twangboy) Skip mac tests for user and group @ 2017-08-30 13:18:13 UTC
  - a8e09629b2 Merge pull request #43256 from twangboy/win\_skip\_mac\_tests
  - cec627a60b Skip mac tests for user and group
- ISSUE #42279: (dafyddj) `win_lgpo` matches multiple policies due to `startswith()` (refs: #43116, #43156, #43166, #43226)
- PR #43226: (lomeroy) Fixes for issues in PR #43166 @ 2017-08-29 19:05:39 UTC
  - PR #43166: (lomeroy) Backport #43116 to 2017.7 (refs: #43226)
  - PR #43156: (lomeroy) Backport #43116 to 2017.7 (refs: #43166)
  - PR #43116: (lomeroy) Fix 42279 in develop (refs: #43166, #43156)
  - PR #39773: (twangboy) Make `win_file` use the `win_dacl` salt util (refs: #43226)
  - ac2189c870 Merge pull request #43226 from lomeroy/fix\_43166
  - 0c424dc4a3 Merge branch '2017.7' into fix\_43166
  - 324cfd8d1e correcting bad format statement in search for policy to be disabled (fix for #43166) verify that file exists before attempting to remove (fix for commits from #39773)
- PR #43227: (twangboy) Fix `unit.fileserver.test_gitfs` for Windows @ 2017-08-29 19:03:36 UTC
  - 6199fb46dc Merge pull request #43227 from twangboy/win\_fix\_unit\_test\_gitfs
  - c956d24283 Fix `is_windows` detection when `USERNAME` missing
  - 869e8cc603 Fix `unit.fileserver.test_gitfs` for Windows
- PR #43217: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-28 16:36:28 UTC
  - 6adc03e4b4 Merge pull request #43217 from rallytime/merge-2017.7
  - 3911df2f4b Merge branch '2016.11' into '2017.7'
  - 5308c27f9f Merge pull request #43202 from garethgreenaway/42642\_2016\_11\_augeas\_module\_revert\_fix
    - \* ef7e93eb3f Reverting this change due to it breaking other uses.
  - f16b7246e4 Merge pull request #43103 from aogier/43101-genesis-bootstrap
    - \* db94f3bb1c better formatting
    - \* e5cc667762 tests: fix a leftover and simplify some parts
    - \* 13e5997457 lint
    - \* 216ced69e5 allow comma-separated pkgs lists, quote args, test deb behaviour
    - \* d8612ae006 fix `debootstrap` and enhance packages selection/deletion via cmdline
  - 4863771428 Merge pull request #42663 from StreetHawkInc/fix\_git\_tag\_check
    - \* 2b5af5b59d Remove refs/tags prefix from remote tags
    - \* 3f2e96e561 Convert set to list for serializer

- \* 2728e5d977 Only include new tags in changes
- \* 4b1df2f223 Exclude annotated tags from checks
- \* 389c037285 Check remote tags before deciding to do a fetch #42329
- **PR #43201:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-25 22:56:46 UTC
  - a563a9422a Merge pull request #43201 from rallytime/merge-2017.7
  - d40eba6b37 Merge branch '2016.11' into '2017.7'
    - \* 4193e7f0a2 Merge pull request #43199 from corywright/disk-format-alias
      - f00d3a9ddc Add *disk.format* alias for *disk.format\_*
    - \* 5471f9fe0c Merge pull request #43196 from gtmanfred/2016.11
      - ccd2241777 Pin request install to version
    - \* ace2715c60 Merge pull request #43178 from terminalmage/issue43143
      - 2640833400 git.detached: Fix traceback when rev is a SHA and is not present locally
    - \* 12e9507b9e Merge pull request #43179 from terminalmage/old-deprecation
      - 3adf8ad04b Fix missed deprecation
    - \* b595440d90 Merge pull request #43171 from terminalmage/salt-utils-warning
      - 7b5943a31a Add warning about adding new functions to salt/utils/\_\_init\_\_.py
    - \* 4f273cac4f Merge pull request #43173 from Ch3LL/add\_branch\_docs
      - 1b24244bd3 Add New Release Branch Strategy to Contribution Docs
- **PR #42997:** (twangboy) Fix *unit.test\_test\_module\_names* for Windows @ 2017-08-25 21:19:11 UTC
  - ce04ab4286 Merge pull request #42997 from twangboy/win\_fix\_test\_module\_names
  - 2722e9521d Use `os.path.join` to create paths
- **ISSUE #26995:** (jhouse) Issue with `artifactory.downloaded` and `snapshot` artifacts (refs: #43006)
- **PR #43006:** (SuperPommeDeTerre) Try to fix #26995 @ 2017-08-25 21:16:07 UTC
  - c0279e491e Merge pull request #43006 from SuperPommeDeTerre/SuperPommeDeTerre-patch-#26995
  - 30dd6f5d12 Merge remote-tracking branch 'upstream/2017.7' into SuperPommeDeTerre-patch-#26995
  - f42ae9b8cd Merge branch 'SuperPommeDeTerre-patch-#26995' of <https://github.com/SuperPommeDeTerre/salt> into SuperPommeDeTerre-patch-#26995
    - \* 50ee3d5682 Merge remote-tracking branch 'remotes/origin/2017.7' into SuperPommeDeTerre-patch-#26995
    - \* 0b666e100b Fix typo.
    - \* 1b8729b3e7 Fix for #26995
  - e314102978 Fix typo.
  - db11e1985b Fix for #26995
- **ISSUE #43162:** (MorphBonehunter) `docker_container.running` interference with `restart_policy` (refs: #43184)
- **PR #43184:** (terminalmage) `docker.compare_container`: Perform boolean comparison when one side's value is `null/None` @ 2017-08-25 18:42:11 UTC
  - b6c5314fe9 Merge pull request #43184 from terminalmage/issue43162

- 081f42ad71 `docker.compare_container`: Perform boolean comparison when one side's value is null/None
- **PR #43165:** ([mirceaulinic](#)) Improve napalm state output in debug mode @ 2017-08-24 23:05:37 UTC
  - 688125bb4f Merge pull request #43165 from cloudflare/fix-napalm-ret
  - c10717dc89 Lint and fix
  - 1cd33cbaa9 Simplify the `loaded_ret` logic
  - 0bbea6b04c Document the new `compliance_report` arg
  - 3a906109bd Include compliance reports
  - 3634055e34 Improve napalm state output in debug mode
- **PR #43155:** ([terminalmage](#)) Resolve image ID during container comparison @ 2017-08-24 22:09:47 UTC
  - a6a327b1e5 Merge pull request #43155 from terminalmage/issue43001
  - 0186835ebf Fix docstring in test
  - a0bb654e46 Fixing lint issues
  - d5b2a0be68 Resolve image ID during container comparison
- **PR #43170:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-24 19:22:26 UTC
  - c071fd44c8 Merge pull request #43170 from rallytime/merge-2017.7
  - 3daad5a3a2 Merge branch '2016.11' into '2017.7'
    - \* 669b376abf Merge pull request #43151 from ushmodin/2016.11
      - c5841e2ade `state.sls` hangs on `file.recurse` with `clean: True` on windows
- **ISSUE #43040:** ([darcoli](#)) `gitFS ext_pillar` with branch name `__env__` results in empty pillars (refs: #43041)
- **PR #43168:** ([rallytime](#)) Back-port #43041 to 2017.7 @ 2017-08-24 19:07:23 UTC
  - **PR #43041:** ([darcoli](#)) Do not try to match `pillarenv` with `__env__` (refs: #43168)
  - 034c325a09 Merge pull request #43168 from rallytime/bp-43041
  - d010b74b87 Do not try to match `pillarenv` with `__env__`
- **PR #43172:** ([rallytime](#)) Move new `utils/__init__.py` funcs to `utils.files.py` @ 2017-08-24 19:05:30 UTC
  - **PR #43056:** ([damon-atkins](#)) `safe_filename_leaf(file_basename)` and `safe_filepath(file_path_name)` (refs: #43172)
  - d48938e6b4 Merge pull request #43172 from rallytime/move-utils-funcs
  - 5385c7901e Move new `utils/__init__.py` funcs to `utils.files.py`
- **ISSUE #43043:** ([pabloh007](#)) `docker.save` and `docker.load` problem (refs: #43061)
- **PR #43061:** ([pabloh007](#)) Have `docker.save` use the image name when valid if not use image id, i... @ 2017-08-24 16:32:02 UTC
  - e60f586442 Merge pull request #43061 from pabloh007/fix-save-image-name-id
  - 0ffc57d1df Have `docker.save` use the image name when valid if not use image id, issue when loading and image is `savid` with id issue #43043
- **ISSUE #42279:** ([dafyddj](#)) `win_lgpo` matches multiple policies due to `startswith()` (refs: #43116, #43156, #43166, #43226)
- **PR #43166:** ([lomerio](#)) Backport #43116 to 2017.7 (refs: #43226) @ 2017-08-24 15:01:23 UTC

- PR #43156: (lomeroy) Backport #43116 to 2017.7 (refs: #43166)
- PR #43116: (lomeroy) Fix 42279 in develop (refs: #43166, #43156)
- 9da57543f8 Merge pull request #43166 from lomeroy/bp-43116-2017.7
- af181b3257 correct fopen calls from salt.utils for 2017.7
- f74480f11e lint fix
- ecd446fd55 track xml namespace to ensure policies w/duplicate IDs or Names do not conflict
- 9f3047c420 add additional checks for ADM policies that have the same ADMX policy ID (#42279)
- PR #43056: (damon-atkins) safe\_filename\_leaf(file\_basename) and safe\_filepath(file\_path\_name) (refs: #43172) @ 2017-08-23 17:35:02 UTC

  - \* 0d3789f0c6 Fix pkg.install salt-minion using salt-call
- b9f4f87aa5 Merge pull request #42798 from s-sebastian/2016.11
  - \* 1cc86592ed Update return data before calling returners
- **ISSUE #42842:** (Giandom) retrieve kwargs passed with slack engine (refs: #42884)
- **PR #42884:** (Giandom) Convert to dict type the pillar string value passed from slack @ 2017-08-16 22:30:43 UTC
  - 82be9dceb6 Merge pull request #42884 from Giandom/2017.7.1-fix-slack-engine-pillar-args
  - 80fd733c99 Update slack.py
- **PR #42963:** (twangboy) Fix *unit.test\_fileclient* for Windows @ 2017-08-16 14:18:18 UTC
  - 42bd553b98 Merge pull request #42963 from twangboy/win\_unit\_test\_fileclient
  - e9febe4893 Fix unit.test\_fileclient
- **PR #42964:** (twangboy) Fix *salt.utils.recursive\_copy* for Windows @ 2017-08-16 14:17:27 UTC
  - 7dddeeea8d Merge pull request #42964 from twangboy/win\_fix\_recursive\_copy

- 121cd4ef81 Fix `salt.utils.recursive_copy` for Windows
- **ISSUE #42943:** ([mirceaulinic](#)) `extension_modules` defaulting to `/var/cache/minion` although running under proxy minion (refs: [#42946](#))
- **PR #42946:** ([mirceaulinic](#)) `extension_modules` should default to `$CACHE_DIR/proxy/extmods` @ 2017-08-15 21:26:36 UTC
  - 6da4d1d95e Merge pull request [#42946](#) from cloudflare/px\_extmods\_42943
  - 73f9135340 `extension_modules` should default to `/proxy/extmods`
- **PR #42945:** ([Ch3LL](#)) [2017.7] Add `clean_id` function to `salt.utils.verify.py` (refs: [#43035](#)) @ 2017-08-15 18:04:20 UTC
  - 95645d49f9 Merge pull request [#42945](#) from Ch3LL/2017.7.0\_follow\_up
  - dcd92042e3 remove extra doc
  - 693a504ef0 update release notes with cve number
- **ISSUE #42427:** ([grichmond-salt](#)) Issue Passing Variables created from `load_json` as Inline Pillar Between States (refs: [#42435](#))
- **PR #42812:** ([terminalmage](#)) Update custom YAML loader tests to properly test unicode literals @ 2017-08-15 17:50:22 UTC
  - **PR #42435:** ([terminalmage](#)) Modify our custom YAML loader to treat unicode literals as unicode strings (refs: [#42812](#))
  - 47ff9d5627 Merge pull request [#42812](#) from terminalmage/yaml-loader-tests
  - 9d8486a894 Add test for custom YAML loader with unicode literal strings
  - a0118bcece Remove bytestrings and use `textwrap.dedent` for readability
- **PR #42953:** ([Ch3LL](#)) [2017.7] Bump latest and previous versions @ 2017-08-15 17:23:28 UTC
  - 5d0c2198ac Merge pull request [#42953](#) from Ch3LL/latest\_2017.7
  - cbecf65823 [2017.7] Bump latest and previous versions
- **PR #42951:** ([Ch3LL](#)) Add Security Notice to 2017.7.1 Release Notes @ 2017-08-15 16:49:56 UTC
  - 730e71db17 Merge pull request [#42951](#) from Ch3LL/2017.7.1\_docs
  - 1d8f827c58 Add Security Notice to 2017.7.1 Release Notes
- **PR #42868:** ([carsonoid](#)) Stub out required functions in `redis_cache` @ 2017-08-15 14:33:54 UTC
  - c1c8cb9bfa Merge pull request [#42868](#) from carsonoid/redisjobcachefix
  - 885bee2a7d Stub out required functions for redis cache
- **PR #42810:** ([amendlik](#)) Ignore error values when listing Windows SNMP community strings @ 2017-08-15 03:55:15 UTC
  - e192d6e0af Merge pull request [#42810](#) from amendlik/win-snmp-community
  - dc20e4651b Ignore error values when listing Windows SNMP community strings
- **PR #42920:** ([cachedout](#)) `pid_race` @ 2017-08-15 03:49:10 UTC
  - a1817f1de3 Merge pull request [#42920](#) from cachedout/pid\_race
  - 5e930b8cbd If we catch the pid file in a transitory state, return None
- **PR #42925:** ([terminalmage](#)) Add debug logging to troubleshoot test failures @ 2017-08-15 03:47:51 UTC

- 11a33fe692 Merge pull request #42925 from terminalmage/f26-debug-logging
- 8165f46165 Add debug logging to troubleshoot test failures
- PR #42913: (twangboy) Change service shutdown timeouts for salt-minion service (Windows) @ 2017-08-14 20:55:24 UTC
  - a537197030 Merge pull request #42913 from twangboy/win\_change\_timeout
  - ffb23fbe47 Remove the line that wipes out the cache
  - a3becf8342 Change service shutdown timeouts
- PR #42800: (skizunov) Fix exception when master\_type=disable @ 2017-08-14 20:53:38 UTC
  - ca0555f616 Merge pull request #42800 from skizunov/develop6
  - fa5822009f Fix exception when master\_type=disable
- PR #42679: (mirceaulinic) Add multiprocessing option for NAPALM proxy @ 2017-08-14 20:45:06 UTC
  - 3af264b664 Merge pull request #42679 from cloudflare/napalm-multiprocessing
  - 9c4566db0c multiprocessing option tagged for 2017.7.2
  - 37bca1b902 Add multiprocessing option for NAPALM proxy
  - a2565ba8e5 Add new napalm option: multiprocessing
- ISSUE #42611: (nhavens) selinux.boolean state does not return changes (refs: #42612)
- PR #42657: (nhavens) back-port #42612 to 2017.7 @ 2017-08-14 19:42:26 UTC
  - PR #42612: (nhavens) fix for issue #42611 (refs: #42657)
  - 4fcdab3ae9 Merge pull request #42657 from nhavens/2017.7
  - d73c4b55b7 back-port #42612 to 2017.7
- PR #42709: (whiteinge) Add token\_expire\_user\_override link to auth runner docstring @ 2017-08-14 19:03:06 UTC
  - d2b6ce327a Merge pull request #42709 from whiteinge/doc-token\_expire\_user\_override
  - c7ea631558 Add more docs on the token\_expire param
  - 4a9f6ba44f Add token\_expire\_user\_override link to auth runner docstring
- ISSUE #42803: (gmcwhistler) master\_type: str, not working as expected, parent salt-minion process dies. (refs: #42848)
- ISSUE #42753: (grichmond-salt) SaltReqTimeout Error on Some Minions when One Master in a Multi-Master Configuration is Unavailable (refs: #42848)
- PR #42848: (DmitryKuzmenko) Execute fire\_master asynchronously in the main minion thread. (refs: #42918) @ 2017-08-14 18:28:38 UTC
  - c6a7bf02e9 Merge pull request #42848 from DSRCorporation/bugs/42753\_mmater\_timeout
  - 7f5412c19e Make lint happier.
  - ff66b7aaf0 Execute fire\_master asynchronously in the main minion thread.
- PR #42911: (gtmanfred) cloud driver isn't a provider @ 2017-08-14 17:47:16 UTC
  - 6a3279ea50 Merge pull request #42911 from gtmanfred/2017.7
  - 99046b441f cloud driver isn't a provider
- PR #42860: (skizunov) hash\_and\_stat\_file should return a 2-tuple @ 2017-08-14 15:44:54 UTC

- 4456f7383d Merge pull request #42860 from skizunov/develop7
- 5f85a03636 hash\_and\_stat\_file should return a 2-tuple
- **PR #42889:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-14 14:16:20 UTC
  - c6ca7d639f Merge pull request #42889 from rallytime/merge-2017.7
  - fb7117f2ac Use salt.utils.versions.LooseVersion instead of distutils
  - 29ff19c587 Merge branch '2016.11' into '2017.7'
    - \* c15d0034fe Merge pull request #41977 from redmatter/fix-dockerng-network-ignores-test
      - 1cc2aa503a Fix dockerng.network\_\* ignoring of tests=True
    - \* 3b9c3c5671 Merge pull request #42886 from sarcasticadmin/adding\_docs\_salt\_outputs
      - 744bf954ff Adding missing output flags to salt cli
    - \* e5b98c8a88 Merge pull request #42882 from gtmanfred/2016.11
      - da3402a53d make sure cmd is not run when npm isn't installed
    - \* 5962c9588b Merge pull request #42788 from amendlik/saltify-timeout
      - 928b523797 Remove waits and retries from Saltify deployment
    - \* 227ecddd13 Merge pull request #42877 from terminalmage/add-cron-state-virtual
      - f1de196740 Add virtual func for cron state module
    - \* ab9f6cef33 Merge pull request #42859 from terminalmage/gitpython-git-cli-note
      - 35e05c9515 Add note about git CLI requirement for GitPython to GitFS tutorial
    - \* 682b4a8d14 Merge pull request #42856 from gtmanfred/2016.11
      - b458b89fb8 skip cache\_clean test if npm version is >= 5.0.0
    - \* 01ea854029 Merge pull request #42864 from whiteinge/syndic-log-root\_dir
      - 4b1f55da9c Make syndic\_log\_file respect root\_dir setting
- **PR #42898:** (mirceaulinic) Minor eos doc correction @ 2017-08-14 13:42:21 UTC
  - 4b6fe2ee59 Merge pull request #42898 from mirceaulinic/patch-11
  - 93be79a135 Index eos under the installation instructions list
  - f903e7bc39 Minor eos doc correction
- **PR #42883:** (rallytime) Fix failing boto tests (refs: #42959) @ 2017-08-11 20:29:12 UTC
  - 1764878754 Merge pull request #42883 from rallytime/fix-boto-tests
  - 6a7bf99848 Lint fix: add missing space
  - 43643227c6 Skip 2 failing tests in Python 3 due to upstream bugs
  - 7f46603e9c Update account id value in boto\_secgroup module unit test
  - 7c1d493fdd @mock\_elb needs to be changed to @mock\_elb\_deprecated as well
  - 3055e17ed5 Replace @mock\_ec2 calls with @mock\_ec2\_deprecated calls
- **PR #42885:** (terminalmage) Move weird tearDown test to an actual tearDown @ 2017-08-11 19:14:42 UTC
  - b21778efac Merge pull request #42885 from terminalmage/fix-f26-tests
  - 462d653082 Move weird tearDown test to an actual tearDown

- **ISSUE #42870:** ([boltronics](#)) `webutil.useradd` marked as deprecated:: 2016.3.0 by mistake? (refs: [#42887](#))
- **PR #42887:** ([rallytime](#)) Remove extraneous "deprecated" notation @ 2017-08-11 18:34:25 UTC
  - [9868ab6f3b](#) Merge pull request [#42887](#) from rallytime/fix-42870
  - [71e7581a2d](#) Remove extraneous "deprecated" notation
- **PR #42881:** ([gtmanfred](#)) fix vmware for python 3.4.2 in `salt.utils.vmware` @ 2017-08-11 17:52:29 UTC
  - [da71f2a11b](#) Merge pull request [#42881](#) from gtmanfred/vmware
  - [05ecc6ac8d](#) fix vmware for python 3.4.2 in `salt.utils.vmware`
- **ISSUE #42843:** ([brejoc](#)) Kubernetes module won't work with Kubernetes Python client > 1.0.2 (refs: [#42845](#))
- **PR #42845:** ([brejoc](#)) API changes for Kubernetes version 2.0.0 (refs: [#43039](#)) @ 2017-08-11 14:04:30 UTC
  - [c7750d5717](#) Merge pull request [#42845](#) from brejoc/updates-for-kubernetes-2.0.0

- ISSUE #42707: (cro) Service module and state fails on FreeBSD (refs: #42708)
- PR #42708: (cro) Do not change the arguments of the function when memoizing @ 2017-08-08 13:47:01 UTC
  - dcf474c47c Merge pull request #42708 from cro/dont\_change\_args\_during\_memoize
  - a260e913b5 Do not change the arguments of the function when memoizing
- PR #42783: (rallytime) Sort lists before comparing them in python 3 unit test @ 2017-08-08 13:25:15 UTC
  - PR #42206: (rallytime) [PY3] Fix test that is flaky in Python 3 (refs: #42783)
  - ddb671b8fe Merge pull request #42783 from rallytime/fix-flaky-py3-test
  - 998834fbac Sort lists before comparing them in python 3 unit test
- PR #42721: (hibbert) Allow no ip sg @ 2017-08-07 22:07:18 UTC
  - d69822fe93 Merge pull request #42721 from hibbert/allow\_no\_ip\_sg
  - f58256802a allow\_no\_ip\_sg: Allow user to not supply ipaddress or securitygroups when running boto\_efs.create\_mount\_target
- ISSUE #42538: (marnovdm) docker\_container.running issue since 2017.7.0: passing domainname gives Error 500: json: cannot unmarshal array into Go value of type string (refs: #42769)
- PR #42769: (terminalmage) Fix domainname parameter input translation @ 2017-08-07 20:46:07 UTC
  - bf7938fbe0 Merge pull request #42769 from terminalmage/issue42538
  - 665de2d1f9 Fix domainname parameter input translation
- PR #42388: (The-Loeki) pillar.items pillar\_env & pillar\_override are never used @ 2017-08-07 17:51:48 UTC
  - 7bf2cdb363 Merge pull request #42388 from The-Loeki/patch-1
  - 664f4b577b pillar.items pillar\_env & pillar\_override are never used

- **PR #42770:** ([rallytime](#)) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-08-07 16:21:45 UTC
  - 9a8c9ebffc Merge pull request #42770 from rallytime/merge-2017.7.1-into-2017.7
  - 6d17c9d227 Merge branch '2017.7.1' into '2017.7'
- **PR #42768:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-07 16:21:17 UTC
  - c765e528d0 Merge pull request #42768 from rallytime/merge-2017.7
  - 0f75482c37 Merge branch '2016.11' into '2017.7'
    - \* 7b2119fee Merge pull request #42669 from garethgreenaway/42642\_2016\_11\_augeas\_module\_fix
      - 24413084e2 Updating the call to shlex\_split to pass the posix=False argument so that quotes are preserved.
    - \* 30725769ed Merge pull request #42629 from xiaoanyunfei/tornadoapi
      - 1e13383b95 tornado api
    - \* f0f00fcee1 Merge pull request #42655 from whiteinge/rest\_cherryppy-reenable-stats
      - deb6316d67 Fix lint errors
      - 6bd91c8b03 Reenable cpstats for rest\_cherryppy
    - \* 21cf15f9c3 Merge pull request #42693 from gilbsgilbs/fix-rabbitmq-tags
      - 78fccdc7e2 Cast to list in case tags is a tuple.
      - 287b57b5c5 Fix RabbitMQ tags not properly set.
    - \* f2b0c9b4fa Merge pull request #42574 from sbojarski/boto-cfn-error-reporting
      - 5c945f10c2 Fix debug message in "boto\_cfn.\_validate" function.
      - 181a1beecc Fixed error reporting in "boto\_cfn.present" function.
    - \* bc1effc4f2 Merge pull request #42623 from terminalmage/fix-unicode-constructor
      - fcf45889dd Fix unicode constructor in custom YAML loader
- **PR #42651:** ([gtmanfred](#)) python2- prefix for fedora 26 packages (refs: #42851) @ 2017-08-07 14:35:04 UTC
  - 3f5827f61e Merge pull request #42651 from gtmanfred/2017.7
  - 8784899942 fix syntax
  - 178cc1bd81 make sure names are correct
  - f179b97b52 add py3 for versionlock
  - 1958d18634 python2- prefix for fedora 26 packages
- **ISSUE #42688:** ([hibbert](#)) salt.modules.boto\_efs module Invalid type for parameter Tags - type: <type 'dict'>, valid types: <type 'list'>, <type 'tuple'> (refs: #42689)
- **PR #42689:** ([hibbert](#)) boto\_efs\_fix\_tags: Fix #42688 invalid type for parameter tags @ 2017-08-06 17:47:07 UTC
  - 791248e398 Merge pull request #42689 from hibbert/boto\_efs\_fix\_tags
  - 157fb28851 boto\_efs\_fix\_tags: Fix #42688 invalid type for parameter tags
- **ISSUE #42705:** ([hbruch](#)) salt.states.docker\_container.running replaces container on subsequent runs if oom\_kill\_disable unsupported (refs: #42745)
- **PR #42745:** ([terminalmage](#)) docker.compare\_container: treat null oom\_kill\_disable as False @ 2017-08-05 15:28:20 UTC

- 1b3407649b Merge pull request [#42745](#) from terminalmage/issue42705
  - 710bdf6115 docker.compare\_container: treat null oom\_kill\_disable as False
- **ISSUE #42649:** (tehsu) local\_batch no longer working in 2017.7.0, 500 error (refs: [#42704](#))
- **PR #42704:** (whiteinge) Add import to work around likely multiprocessing scoping bug @ 2017-08-04 23:03:13 UTC
  - 5d5b22021b Merge pull request [#42704](#) from whiteinge/expr\_form-warn-scope-bug
  - 03b675a618 Add import to work around likely multiprocessing scoping bug
- **ISSUE #42741:** (kkoppel) docker\_container.running keeps re-creating containers with links to other containers (refs: [#42743](#))
- **PR #42743:** (kkoppel) Fix docker.compare\_container for containers with links @ 2017-08-04 16:00:33 UTC
  - 888e954e73 Merge pull request [#42743](#) from kkoppel/fix-issue-42741
  - de6d3cc0cf Update dockermod.py
  - 58b997c67f Added a helper function that removes container names from container HostConfig:Links values to enable compare\_container() to make the correct decision about differences in links.
- **ISSUE #42668:** (UtahDave) Minions under syndics don't respond to MoM (refs: [#42710](#))
- **ISSUE #42545:** (paul-mulvihill) Salt-api failing to return results for minions connected via syndics. (refs: [#42710](#))
- **PR #42710:** (gtmanfred) use subtraction instead of or @ 2017-08-04 15:14:14 UTC
  - 03a7f9bbee Merge pull request [#42710](#) from gtmanfred/syndic
  - 683561a711 use subtraction instead of or
- **PR #42670:** (gtmanfred) render kubernetes docs @ 2017-08-03 20:30:56 UTC
  - 005182b6a1 Merge pull request [#42670](#) from gtmanfred/kube
  - bca17902f5 add version added info
  - 4bbfc751ae render kubernetes docs
- **PR #42712:** (twangboy) Remove master config file from minion-only installer @ 2017-08-03 20:25:02 UTC
  - df354ddabf Merge pull request [#42712](#) from twangboy/win\_build\_pkg
  - 8604312a7b Remove master conf in minion install
- **PR #42714:** (cachedout) Set fact gathering style to 'old' for test\_junos @ 2017-08-03 13:39:40 UTC
  - bb1dfd4a42 Merge pull request [#42714](#) from cachedout/workaround\_jnpr\_test\_bug
  - 834d6c605e Set fact gathering style to 'old' for test\_junos
- **PR #42481:** (twangboy) Fix `unit.test_crypt` for Windows @ 2017-08-01 18:10:50 UTC
  - 4c1d931654 Merge pull request [#42481](#) from twangboy/win\_unit\_test\_crypt
  - 102509029e Remove chown mock, fix path seps
- **PR #42654:** (morganwillcock) Disable ZFS in the core grain for NetBSD @ 2017-08-01 17:52:36 UTC
  - 8bcefb5e67 Merge pull request [#42654](#) from morganwillcock/zfsgrain
  - 49023deb94 Disable ZFS grain on NetBSD
- **ISSUE #42421:** (bfilipek) archive.extracted on Windows failed when dir not exist (refs: [#42453](#))

- **PR #42453:** (gtmanfred) don't pass user to makedirs on windows @ 2017-07-31 19:57:57 UTC
  - 5baf2650fc Merge pull request #42453 from gtmanfred/makedirs
  - 559d432930 fix tests
  - afa7a13ce3 use logic from file.directory for makedirs
- **PR #42603:** (twangboy) Add runas\_passwd as a global for states @ 2017-07-31 19:49:49 UTC
  - fb81e78f71 Merge pull request #42603 from twangboy/win\_fix\_runas
  - 0c9e40012b Remove deprecation, add logic to state.py
  - 464ec34713 Fix another instance of runas\_passwd
  - 18d6ce4d55 Add global vars to cmd.call
  - 6c71ab6f80 Remove runas and runas\_password after state run
  - 4ea264e3db Change to runas\_password in docs
  - 61aba35718 Deprecate password, make runas\_password a named arg
  - 41f0f75a06 Add new var to list, change to runas\_password
  - b9c91eba60 Add runas\_passwd as a global for states
- **PR #42541:** (Mareo) Avoid confusing warning when using file.line @ 2017-07-31 19:41:58 UTC
  - 75ba23c253 Merge pull request #42541 from epita/fix-file-line-warning
  - 2fd172e07b Avoid confusing warning when using file.line
- **PR #42625:** (twangboy) Fix the list function in the win\_wua execution module @ 2017-07-31 19:27:16 UTC
  - 3d328eba80 Merge pull request #42625 from twangboy/fix\_win\_wua
  - 1340c15ce7 Add general usage instructions
  - 19f34bda55 Fix docs, formatting
  - b17495c9c8 Fix problem with list when install=True
- **ISSUE #42514:** (rickh563) *module.run* does not work as expected in 2017.7.0 (refs: #42602)
- **PR #42602:** (garethgreenaway) Use superseded and deprecated configuration from pillar @ 2017-07-31 18:53:06 UTC
  - 25094ad9b1 Merge pull request #42602 from garethgreenaway/42514\_2017\_7\_superseded\_deprecated\_from\_pillar
  - 2e132daa73 Slight update to formatting
  - 74bae13939 Small update to something I missed in the first commit. Updating tests to also test for pillar values.
  - 928a4808dd Updating the superseded and deprecated decorators to work when specified as pillar values.
- **PR #42621:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-28 19:45:51 UTC
  - b7cd30d3ee Merge pull request #42621 from rallytime/merge-2017.7
  - 58dcb58a47 Merge branch '2016.11' into '2017.7'
    - \* cbf752cd73 Merge pull request #42515 from gtmanfred/backslash
      - cc4e45656d Allow not interpreting backslashes in the repl
    - \* 549495831f Merge pull request #42586 from gdubroeucq/2016.11
      - 9c0b5cc1d6 Remove extra newline

- d2ef4483e4 yumpkg.py: clean
- a96f7c09e0 yumpkg.py: add option to the command "check-update"
- \* 6b45debf28 Merge pull request #41988 from redmatter/fix-dockerng-network-matching
  - 9eea796da8 Add regression tests for #41982
  - 3369f0072f Fix broken unit test test\_network\_absent
  - 0ef6cf634c Add trace logging of dockerng.networks result
  - 515c612808 Fix dockerng.network\_\* name matching
- ISSUE #34245: (Talkless) ini.options\_present always report state change (refs: #41690)
- PR #42618: (rallytime) Back-port #41690 to 2017.7 @ 2017-07-28 19:27:11 UTC
  - PR #41690: (m03) Fix issue #34245 with ini.options\_present reporting changes (refs: #42618)
  - d48749b476 Merge pull request #42618 from rallytime/bp-41690
  - 22c6a7c7ff Improve output precision
  - ee4ea6b860 Fix #34245 ini.options\_present reporting changes
- ISSUE #42588: (ixs) salt-ssh fails when using scan roster and detected minions are uncached (refs: #42589)
- PR #42619: (rallytime) Back-port #42589 to 2017.7 @ 2017-07-28 19:26:36 UTC
  - PR #42589: (ixs) Fix ssh-salt calls with scan roster for uncached clients (refs: #42619)
  - e671242a4f Merge pull request #42619 from rallytime/bp-42589
  - cd5eb93903 Fix ssh-salt calls with scan roster for uncached clients
- ISSUE #41982: (abulford) dockerng.network\_\* matches too easily (refs: #42006, #41988)
- PR #42006: (abulford) Fix dockerng.network\_\* name matching @ 2017-07-28 15:52:52 UTC
  - PR #41988: (abulford) Fix dockerng.network\_\* name matching (refs: #42006)
  - 7d385f8bdc Merge pull request #42006 from redmatter/fix-dockerng-network-matching-2017.7
  - f83960c02a Lint: Remove extra line at end of file.
  - c7d364ec56 Add regression tests for #41982
  - d31f2913bd Fix broken unit test test\_network\_absent
  - d42f781c64 Add trace logging of docker.networks result
  - 8c00c63b55 Fix dockerng.network\_\* name matching
- ISSUE #12587: (Katafalkas) salt-cloud custom functions/actions (refs: #42616)
- PR #42616: (amendlik) Sync cloud modules @ 2017-07-28 15:40:36 UTC
  - ee8aee1496 Merge pull request #42616 from amendlik/sync-clouds
  - ab21bd9b5b Sync cloud modules when saltutil.sync\_all is run
- PR #42601: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-27 22:32:07 UTC
  - e2dd443002 Merge pull request #42601 from rallytime/merge-2017.7
  - 36a1bcf8c5 Merge branch '2016.11' into '2017.7'
  - \* 4b16109122 Merge pull request #42339 from isbm/isbm-jobs-scheduled-in-a-future-bsc1036125

- bbba84ce2d Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc#1036125)
- \* 6c5a7c604a Merge pull request #42077 from vutny/fix-jobs-scheduled-with-whens
  - b1960cea44 Fix scheduled job run on Master if *when* parameter is a list
- \* f9cb536589 Merge pull request #42414 from vutny/unify-hash-params-format
  - d1f2a93368 DOCS: unify hash sum with hash type format
- \* 535c922511 Merge pull request #42523 from rallytime/fix-42375
  - 685c2cced6 Add information about returning a tuple with an error message
  - fa466519c4 Add a mention of the True/False returns with `__virtual__()`
- \* 0df0e7e749 Merge pull request #42527 from twangboy/win\_wua
  - 0373791f2a Correct capatlization
  - af3bcc927b Document changes to Windows Update in 10/2016
- \* 69b06586da Merge pull request #42551 from binocvlar/fix-lack-of-align-check-output
  - c4fabaa192 Remove '-s' (--script) argument to parted within align\_check function
- \* 9e0b4e9faf Merge pull request #42573 from rallytime/bp-42433
  - 0293429e24 Only force saltenv/pillarenv to be a string when not None
- \* e931ed2517 Merge pull request #42571 from twangboy/win\_add\_pythonpath
  - d55a44dd1a Avoid loading user site packages
  - 9af1eb2741 Ignore any PYTHON\* environment vars already on the system
  - 4e2fb03a95 Add pythonpath to batch files and service
- \* de2f397041 Merge pull request #42387 from DSRCorporation/bugs/42371\_KeyError\_WeakValueDict
  - e721c7eee2 Don't use *key in weakvaluedict* because it could lie.
- \* 641a9d7efd Merge pull request #41968 from root360-AndreasUlm/fix-rabbitmqctl-output-handler
  - 76fd941d91 added tests for rabbitmq 3.6.10 output handler
  - 3602af1e1b Fix rabbitmqctl output handler for 3.6.10
- \* 66fede378a Merge pull request #42479 from gtmanfred/interface
  - c32c1b2803 fix pylint
  - 99ec634c6b validate ssh\_interface for ec2
- \* a925c7029a Merge pull request #42516 from rallytime/fix-42405
  - e3a6717efa Add info about top file to pillar walk-through example to include edit.vim
- **ISSUE #42148:** (sjorge) [2017.7.0rc1] use\_superseded and module.run changes from release notes do nothing? (refs: #42270)
- **PR #42290:** (isbm) Backport of #42270 @ 2017-07-27 22:30:05 UTC
  - **PR #42270:** (The-Loeki) State module.run/wait misses args when looking for kwargs (refs: #42290)
  - 22eea389fa Merge pull request #42290 from isbm/isbm-module\_run\_parambug\_42270\_217
  - e38d432f90 Fix docs

- 1e8a56eda5 Describe function tagging
- 1d7233224b Describe function batching
- 1391a05d5e Bugfix: syntax error in the example
- 8c71257a4b Call unnamed parameters properly
- 94c97a8f25 Update and correct the error message
- ea8351362c Bugfix: args gets ignored alongside named parameters
- 74689e3462 Add ability to use tagged functions in the same set
- **PR #42251:** (twangboy) Fix `unit.modules.test_win_ip` for Windows @ 2017-07-27 19:22:03 UTC
  - 4c20f1cfbb Merge pull request #42251 from twangboy/unit\_win\_test\_win\_ip
  - 97261bfe69 Fix `win_inet_pton` check for malformed ip addresses
- **PR #42255:** (twangboy) Fix `unit.modules.test_win_system` for Windows @ 2017-07-27 19:12:42 UTC
  - 2985e4c0e6 Merge pull request #42255 from twangboy/win\_unit\_test\_win\_system
  - acc0345bc8 Fix unit tests
- **PR #42528:** (twangboy) Namespace `cmp_to_key` in the pkg state for Windows @ 2017-07-27 18:30:23 UTC
  - a573386260 Merge pull request #42528 from twangboy/win\_fix\_pkg\_state
  - a040443fa1 Move `functools` import inside `pylint` escapes
  - 118d5134e2 Remove namespaced function `cmp_to_key`
  - a02c91adda Namespace `cmp_to_key` in the pkg state for Windows
- **ISSUE #42521:** (rickh563) `chocolatey.installed` broken on 2017.7.0 (refs: #42534)
- **PR #42534:** (jmarinero) Fixes `AttributeError` thrown by `chocolatey` state @ 2017-07-27 17:59:50 UTC
  - 62ae12bcd9 Merge pull request #42534 from jmarinero/2017.7
  - b242d2d6b5 Fixes `AttributeError` thrown by `chocolatey` state Fixes #42521
- **ISSUE #40354:** (exc414) CentOS 6.8 Init Script - Sed unterminated address regex (refs: #42557)
- **ISSUE #37312:** (gtmanfred) CLI flags should take overload settings in the config files (refs: #42557)
- **PR #42557:** (justincbeard) Fixing output so `--force-color` and `--no-color` override master and min... @ 2017-07-27 17:07:33 UTC
  - 52605c249d Merge pull request #42557 from justincbeard/bugfix\_37312
  - ee3bc6eb10 Fixing output so `--force-color` and `--no-color` override master and minion config color value
- **PR #42567:** (skizunov) Fix `disable_<tag-name>` config option @ 2017-07-27 17:05:00 UTC
  - ab33517efb Merge pull request #42567 from skizunov/develop3
  - 0f0b7e3e0a Fix `disable_<tag-name>` config option
- **PR #42577:** (twangboy) Compile scripts with `-E -s` params for Salt on Mac @ 2017-07-26 22:44:37 UTC
  - 30bb941179 Merge pull request #42577 from twangboy/mac\_scripts
  - 69d5973651 Compile scripts with `-E -s` params for python
- **PR #42524:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-26 22:41:06 UTC
  - 60cd078164 Merge pull request #42524 from rallytime/merge-2017.7

- 14d8d795f6 Merge branch '2016.11' into '2017.7'
  - \* 1bd5bbccc2 Merge pull request #42509 from clem-compilatio/fix-42417
    - 72924b06b8 Fix `_assign_floating_ips` in `openstack.py`
  - \* 4bf35a74de Merge pull request #42464 from garethgreenaway/2016\_11\_remove\_tmp\_identity\_file
    - ff24102d51 Uncomment the line that removes the temporary identity file.
  - \* e2120dbd0e Merge pull request #42443 from garethgreenaway/42357\_pass\_args\_kwargs\_correctly
    - 635810b3e3 Updating the slack engine in 2016.11 to pass the args and kwrgs correctly to `LocalClient`
  - \* 8262cc9054 Merge pull request #42200 from shengis/sqlite3\_fix\_row\_absent\_2016.11
    - 407b8f4bb3 Fix #42198 If `where_args` is not set, not using it in the delete request.
  - \* d9df97e5a3 Merge pull request #42424 from gotten4/2016.11
    - 1c0574d05e Fix error message when tornado or pycurl is not installed
- PR #42575: (rallytime) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-07-26 22:39:10 UTC
  - 2acde837df Merge pull request #42575 from rallytime/merge-2017.7.1-into-2017.7
  - 63bb0fb2c4 pass in empty kwarg for reactor
  - 2868061ee4 update chunk, not kwarg in chunk
  - 46715e9d94 Merge branch '2017.7.1' into '2017.7'
- PR #42555: (Ch3LL) add changelog to 2017.7.1 release notes @ 2017-07-26 14:57:43 UTC
  - 1d93e92194 Merge pull request #42555 from Ch3LL/7.1\_add\_changelog
  - fb69e71093 add changelog to 2017.7.1 release notes
- PR #42266: (twangboy) Fix `unit.states.test_file` for Windows @ 2017-07-25 20:26:32 UTC
  - 07c2793e86 Merge pull request #42266 from twangboy/win\_unit\_states\_test\_file
  - 669aaee10d Mock file exists properly
  - a4231c9827 Fix ret mock for linux
  - 0c484f8979 Fix unit tests on Windows
- PR #42484: (shengis) Fix a potential Exception with an explicit error message @ 2017-07-25 18:34:12 UTC
  - df417eae17 Merge pull request #42484 from shengis/fix-explicit-error-msg-x509-sign-remote
  - 0b548c72e1 Fix a potential Exception with an explicit error message
- ISSUE saltstack/salt-jenkins#396: (Ch3LL) Python3 Fix Test: `JoyentTest.test_instance` (refs: #42529)
- ISSUE #41720: (rallytime) [Py3] Some salt-cloud drivers do not work using Python 3 (refs: #42529)
- PR #42529: (gtmanfred) Fix joyent for python3 @ 2017-07-25 16:37:48 UTC
  - 0f25ec76f9 Merge pull request #42529 from gtmanfred/2017.7
  - b7ebb4d81a these drivers do not actually have an issue.
  - e90ca7a114 use salt encoding for joyent on 2017.7
- PR #42465: (garethgreenaway) [2017.7] Small fix to `modules/git.py` @ 2017-07-24 17:24:55 UTC
  - 488457c5a0 Merge pull request #42465 from garethgreenaway/2017\_7\_remove\_tmp\_identity\_file

- 1920dc6079 Uncomment the line that removes the temporary identity file.
- **ISSUE #23516:** (dkiser) BUG: cron job scheduler sporadically works (refs: #42077)
- **PR #42107:** (vutny) [2017.7] Fix scheduled jobs if *when* parameter is a list @ 2017-07-24 17:04:12 UTC
  - **PR #42077:** (vutny) Fix scheduled job run on Master if *when* parameter is a list (refs: #42107)
  - **PR #41973:** (vutny) Fix Master/Minion scheduled jobs based on Cron expressions (refs: #42077)
  - 4f044999fa Merge pull request #42107 from vutny/2017.7-fix-jobs-scheduled-with-whens
  - 905be493d4 [2017.7] Fix scheduled jobs if *when* parameter is a list
- **PR #42506:** (terminalmage) Add PER\_REMOTE\_ONLY to init\_remotes call in git\_pillar runner @ 2017-07-24 16:59:21 UTC
  - 6eaa0763e1 Merge pull request #42506 from terminalmage/fix-git-pillar-runner
  - 6352f447ce Add PER\_REMOTE\_ONLY to init\_remotes call in git\_pillar runner
- **PR #42502:** (shengis) Fix azure\_rm query to show IPs @ 2017-07-24 15:54:45 UTC
  - b88e645f10 Merge pull request #42502 from shengis/fix\_azure\_rm\_request\_ips
  - 92f1890701 Fix azure\_rm query to show IPs
- **PR #42180:** (twangboy) Fix *unit.modules.test\_timezone* for Windows @ 2017-07-24 14:46:16 UTC
  - c793d83d26 Merge pull request #42180 from twangboy/win\_unit\_test\_timezone
  - 832a3d86dd Skip tests that use os.symlink on Windows
- **PR #42474:** (whiteinge) Cmd arg kwarg parsing test @ 2017-07-24 14:13:30 UTC
  - **PR #39646:** (terminalmage) Handle deprecation of passing string args to load\_args\_and\_kwargs (refs: #42474)
  - 083ff00410 Merge pull request #42474 from whiteinge/cmd-arg-kwarg-parsing-test
  - 0cc0c0967a Lint fixes
  - 66093738c8 Add back support for string kwargs
  - 622ff5be40 Add LocalClient.cmd test for arg/kwarg parsing
  - 9f4eb80d90 Add a test.arg variant that cleans the pub kwargs by default
- **PR #42425:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-21 22:43:41 UTC
  - c91a5e539e Merge pull request #42425 from rallytime/merge-2017.7
  - ea457aa0a5 Remove ALIASES block from template util
  - c673b64583 Merge branch '2016.11' into '2017.7'
    - \* 42bb1a64ca Merge pull request #42350 from twangboy/win\_fix\_ver\_grains\_2016.11
      - 8c048403d7 Detect Server OS with a desktop release name
    - \* 0a72e56f6b Merge pull request #42356 from meaksh/2016.11-AliasesLoader-wrapper-fix
      - 915d94219e Allow checking whether a function is available on the AliasesLoader wrapper
    - \* 10eb7b7a79 Merge pull request #42368 from twangboy/win\_fix\_build\_2016.11
      - a7c910c31e Remove build and dist directories before install
    - \* 016189f62f Merge pull request #42370 from rallytime/merge-2016.11
      - 0aa5dde1de Merge branch '2016.3' into '2016.11'

- e9b0f20f8a Merge pull request #42359 from Ch3LL/doc-update-2016.3
- dc85b5edbe [2016.3] Update version numbers in doc config for 2017.7.0 release
- \* f06a6f1796 Merge pull request #42360 from Ch3LL/doc-update-2016.11
  - b90b7a7506 [2016.11] Update version numbers in doc config for 2017.7.0 release
- \* e0595b0a0f Merge pull request #42319 from rallytime/config-docs
  - b40f980632 Add more documentation for config options that are missing from master/minion docs
- \* 78940400e3 Merge pull request #42352 from CorvinM/issue42333
  - 526b6ee14d Multiple documentation fixes
- **ISSUE #42357:** (Giandom) Salt pillarenv problem with slack engine (refs: #42443, #42444)
- **PR #42444:** (garethgreenaway) [2017.7] Fix to slack engine @ 2017-07-21 22:03:48 UTC
  - 10e4d9234b Merge pull request #42444 from garethgreenaway/42357\_2017\_7\_pass\_args\_kwargs\_correctly
  - f411cfc2a9 Updating the slack engine in 2017.7 to pass the args and kwargs correctly to LocalClient
- **PR #42461:** (rallytime) Bump warning version from Oxygen to Fluorine in roster cache @ 2017-07-21 21:33:25 UTC
  - 723be49fac Merge pull request #42461 from rallytime/bump-roster-cache-deprecations
  - c0df0137f5 Bump warning version from Oxygen to Fluorine in roster cache
- **ISSUE #42374:** (tyhunt99) [2017.7.0] salt-run manage.versions throws exception if minion is offline or unresponsive (refs: #42436)
- **PR #42436:** (garethgreenaway) Fixes to versions function in manage runner @ 2017-07-21 19:41:07 UTC
  - 09521602c1 Merge pull request #42436 from garethgreenaway/42374\_manage\_runner\_minion\_offline
  - 0fd39498c0 Updating the versions function inside the manage runner to account for when a minion is offline and we are unable to determine its version.
- **ISSUE #42427:** (grichmond-salt) Issue Passing Variables created from load\_json as Inline Pillar Between States (refs: #42435)
- **PR #42435:** (terminalmage) Modify our custom YAML loader to treat unicode literals as unicode strings (refs: #42812) @ 2017-07-21 19:40:34 UTC
  - 54193ea543 Merge pull request #42435 from terminalmage/issue42427
  - 31273c7ec1 Modify our custom YAML loader to treat unicode literals as unicode strings
- **ISSUE #42381:** (zebooka) Git.detached broken in 2017.7.0 (refs: #42399)
- **ISSUE #38878:** (tomlaredo) [Naming consistency] git.latest "rev" option VS git.detached "ref" option (refs: #38898)
- **PR #42399:** (rallytime) Update old "ref" references to "rev" in git.detached state @ 2017-07-21 19:38:59 UTC
  - **PR #38898:** (terminalmage) git.detached: rename ref to rev for consistency (refs: #42399)
  - 0b3179135c Merge pull request #42399 from rallytime/fix-42381
  - d9d94fe02f Update old "ref" references to "rev" in git.detached state
- **ISSUE #42400:** (Enquier) Conflict in execution of passing pillar data to orch/reactor event executions 2017.7.0 (refs: #42031)
- **PR #42031:** (skizunov) Fix: Reactor emits critical error @ 2017-07-21 19:38:34 UTC

- bd4adb483d Merge pull request #42031 from skizunov/develop3
- 540977b4b1 Fix: Reactor emits critical error
- ISSUE #41949: (jrporcaro) Event returner doesn't work with Windows Master (refs: #42027)
- PR #42027: (gtmanfred) import salt.minion for EventReturn for Windows @ 2017-07-21 19:37:03 UTC
  - 3abf7ad7d7 Merge pull request #42027 from gtmanfred/2017.7
  - fd4458b6c7 import salt.minion for EventReturn for Windows
- PR #42454: (terminalmage) Document future renaming of new rand\_str jinja filter @ 2017-07-21 18:47:51 UTC
  - 994d3dc74a Merge pull request #42454 from terminalmage/jinja-docs-2017.7
  - 98b661406e Document future renaming of new rand\_str jinja filter
- PR #42452: (Ch3LL) update windows urls to new py2/py3 naming scheme @ 2017-07-21 17:20:47 UTC
  - 4480075129 Merge pull request #42452 from Ch3LL/fix\_url\_windows
  - 3f4a918f73 update windows urls to new py2/py3 naming scheme
- ISSUE #42404: (gabekahen) [2017.7] file.managed with cmd\_check "No such file or directory" (refs: #42411)
- ISSUE #33708: (pepinje) visudo check command leaves cache file in /tmp (refs: #42411, #38063)
- PR #42411: (seedickcode) Fix file.managed check\_cmd file not found - Issue #42404 @ 2017-07-20 21:59:17 UTC
  - PR #38063: (llua) tmp file clean up in file.manage - fix for #33708 (refs: #42411)
  - 33e90be1fe Merge pull request #42411 from seedickcode/check\_cmd\_fix
  - 4ae3911f01 Fix file.managed check\_cmd file not found - Issue #42404
- PR #42409: (twangboy) Add Scripts to build Py3 on Mac @ 2017-07-20 21:36:34 UTC
  - edde31376a Merge pull request #42409 from twangboy/mac\_py3\_scripts
  - ac0e04af72 Remove build and dist, sign pkgs
  - 9d66e273c4 Fix hard coded pip path
  - 7b8d6cbbd2 Add support for Py3
  - aa4eed93c8 Update Python and other reqs
- ISSUE #42403: (astronouth7303) [2017.7] Pillar empty when state is applied from orchestrate (refs: #42433)
- PR #42433: (terminalmage) Only force saltenv/pillarenv to be a string when not None (refs: #42573) @ 2017-07-20 21:32:24 UTC
  - 82982f940d Merge pull request #42433 from terminalmage/issue42403
- PR #42408: (CorvinM) Fix documentation misformat in salt.states.file.replace @ 2017-07-20 00:45:43 UTC
  - a71938cefe Merge pull request #42408 from CorvinM/file-replace-doc-fix
  - 246a2b3e74 Fix documentation misformat in salt.states.file.replace
- PR #42347: (twangboy) Fixes problem with Version and OS Release related grains on certain versions of Python @ 2017-07-19 17:05:43 UTC
  - d385dfd19d Merge pull request #42347 from twangboy/win\_fix\_ver\_grains
  - ef1f663fc9 Detect server OS with a desktop release name
- PR #42366: (twangboy) Remove build and dist directories before install @ 2017-07-19 16:37:41 UTC
  - eb9e4206c9 Merge pull request #42366 from twangboy/win\_fix\_build

- 0946002713 Add blank line after delete
- f7c0bb4f46 Remove build and dist directories before install
- **PR #42373:** (Ch3LL) Add initial 2017.7.1 Release Notes File @ 2017-07-19 16:28:46 UTC
  - af7820f25d Merge pull request #42373 from Ch3LL/add\_2017.7.1
  - ce1c1b6d28 Add initial 2017.7.1 Release Notes File
- **PR #42150:** (twangboy) Fix `unit.modules.test_pip` for Windows @ 2017-07-19 16:01:17 UTC
  - 59e012b485 Merge pull request #42150 from twangboy/win\_unit\_test\_pip
  - 4ee24202fc Fix unit tests for test\_pip
- **PR #42154:** (twangboy) Fix `unit.modules.test_reg_win` for Windows @ 2017-07-19 16:00:38 UTC
  - ade25c6b34 Merge pull request #42154 from twangboy/win\_unit\_test\_reg
  - 00d9a52802 Fix problem with handling REG\_QWORD in list values
- **PR #42182:** (twangboy) Fix `unit.modules.test_useradd` for Windows @ 2017-07-19 15:55:33 UTC
  - 07593675e2 Merge pull request #42182 from twangboy/win\_unit\_test\_useradd
  - 8260a71c07 Disable tests that require pwd in Windows
- **PR #42364:** (twangboy) Windows Package notes for 2017.7.0 @ 2017-07-18 19:24:45 UTC
  - a175c40c1d Merge pull request #42364 from twangboy/release\_notes\_2017.7.0
  - 96517d1355 Add note about patched windows packages
- **PR #42361:** (Ch3LL) [2017.7] Update version numbers in doc config for 2017.7.0 release @ 2017-07-18 19:23:22 UTC
  - 4dfe50e558 Merge pull request #42361 from Ch3LL/doc-update-2017.7
  - dc5bb301f7 [2017.7] Update version numbers in doc config for 2017.7.0 release
- **PR #42363:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-18 18:40:48 UTC
  - 587138d771 Merge pull request #42363 from rallytime/merge-2017.7
  - 7aa31ff030 Merge branch '2016.11' into '2017.7'
    - \* b256001760 Merge pull request #42353 from terminalmage/fix-git-test
      - 14cf6ce322 is\_windows is a function, not a property/attribute
    - \* 866a1febb4 Merge pull request #42264 from rallytime/fix-41116
      - bd638880e3 Add mono-spacing to salt-minion reference for consistency
      - 30d62f43da Update minion restart section in FAQ doc for windows
    - \* 9a707088ad Merge pull request #42275 from terminalmage/issue42194
      - 663874908a pkg.installed: pack name/version into pkgs argument
    - \* e588f235e0 Merge pull request #42269 from rallytime/fix-41721
      - f2250d474a Add a note about using different styles of quotes.
      - 38d9b3d553 Add some clarity to "multiple quotes" section of yaml docs
    - \* 5aaa214a75 Merge pull request #42282 from rallytime/fix-42152
      - f032223843 Handle libcloud objects that throw RepresenterErrors with --out=yaml

- \* fb5697a4bc Merge pull request #42308 from lubyou/42295-fix-file-absent-windows
  - 026ccf401a Force file removal on Windows. Fixes #42295
- \* da2a8a518f Merge pull request #42314 from rallytime/fix-42267
  - c406046940 Add clarification to salt ssh docs about key auto-generation.
- \* acadd54013 Merge pull request #41945 from garethgreenaway/41936\_allow\_identity\_files\_with\_user
  - 44841e5626 Moving the call to cp.get\_file inside the with block to ensure the umask is preserved when we grab the file.
  - f9ba60eed8 Merge pull request #1 from terminalmage/pr-41945
  - 1b6026177c Restrict set\_umask to mkstemp call only
  - 68549f3496 Fixing umask to we can set files as executable.
  - 4949bf3ff3 Updating to swap on the new salt.utils.files.set\_umask context\_manager
  - 8faa9f6d92 Updating PR with requested changes.
  - 494765e939 Updating the git module to allow an identity file to be used when passing the user parameter
- \* f90e04a2bc Merge pull request #42289 from CorvinM/bp-41543
  - 357dc22f05 Fix user creation with empty password
- \* a91a3f81b1 Merge pull request #42123 from vutny/fix-master-utils-import
  - 6bb8b8f98c Add missing doc for `utils_dirs` Minion config option
  - f1bc58f6d5 Utils: add example of module import
- \* e2aa5114e4 Merge pull request #42261 from rallytime/minor-doc-fix
  - 8c76bbb53d Some minor doc fixes for dnstutil module so they'll render correctly
- \* 3e9dfbc9cc Merge pull request #42262 from rallytime/bp-42224
  - c31ded341c Remove duplicate instruction in Openstack Rackspace config example
- \* 7780579c36 Merge pull request #42181 from garethgreenaway/42137\_backport\_fix\_from\_2017\_7
  - a34970b45b Back porting the fix for 2017.7 that ensures the order of the names parameter.
- \* 72537868a6 Merge pull request #42253 from gtmanfred/2016.11
  - 53e25760be Only use unassociated ips when unable to allocate
- \* b2a4698b5d Merge pull request #42252 from UtahDave/2016.11local
  - e6a9563d47 simple doc updates
- \* 781fe13be7 Merge pull request #42235 from astronouth7303/patch-1-2016.3
  - 4cb51bd03a Make note of dig partial requirement.
  - 08e7d8351a Abolish references to *dig* in examples.
- \* 83cbd76f16 Merge pull request #42215 from twangboy/win\_iis\_docs
  - c07e22041a Add missing config to example
- \* 274946ab00 Merge pull request #42211 from terminalmage/issue40928
  - 22a18fa2ed Only pass a saltenv in orchestration if one was explicitly passed (2016.11)

- \* 89261cf06c Merge pull request #42173 from rallytime/bp-37424
  - 01addb6053 Avoid Early Convert ret['comment'] to String
- \* 3b17fb7f83 Merge pull request #42175 from rallytime/bp-39366
  - 53f7b987e8 Pass sig to service.status in after\_toggle
- \* ea16f47f0a Merge pull request #42172 from rallytime/merge-2016.11
  - b1fa332a11 Merge branch '2016.3' into '2016.11'
  - 8fa1fa5bb1 Merge pull request #42155 from phsteve/doc-fix-puppet
  - fb2cb78a31 Fix docs for puppet.plugin\_sync so code-block renders properly and sync is spelled consistently
- \* 6307b9873f Merge pull request #42176 from rallytime/bp-42109
  - 686926daf7 Update aws.rst - add Debian default username
- \* 28c4e4c3b7 Merge pull request #42095 from terminalmage/docker-login-debugging
  - bd27870a71 Add debug logging to dockerng.login
- \* 2b754bc5af Merge pull request #42119 from terminalmage/issue42116
  - 9a268949e3 Add integration test for 42116
  - 1bb42bb609 Fix regression when CLI pillar override is used with salt-call
- \* 8c0a83cbb5 Merge pull request #42121 from terminalmage/issue42114
  - d14291267f Fix pillar.get when saltenv is passed
- \* 687992c240 Merge pull request #42094 from terminalmage/quiet-exception
  - 47d61f4edf Prevent command from showing in exception when output\_loglevel=quiet
- \* dad255160c Merge pull request #42163 from vutny/fix-42115
  - b27b1e340a Fix #42115: parse libcloud "rc" version correctly
- \* 2a8ae2b3b6 Merge pull request #42164 from Ch3LL/fix\_kerb\_doc
  - 7c0fb248ec Fix kerberos create\_keytab doc
- \* 678d4d4098 Merge pull request #42141 from rallytime/bp-42098
  - bd80243233 Change repo\_ng to repo-ng
- \* c8afd7a3c9 Merge pull request #42140 from rallytime/bp-42097
  - 9c4e132540 Import datetime
  - 1435bf177e require large timediff for ipv6 warning
- \* c239664c8b Merge pull request #42142 from Ch3LL/change\_builds
  - e1694af39c Update builds available for rc1
- **PR #42340:** (isbm) Bugfix: Jobs scheduled to run at a future time stay pending for Salt ... @ 2017-07-18 18:13:36 UTC
  - 55b7a5cb4a Merge pull request #42340 from isbm/isbm-jobs-scheduled-in-a-future-2017.7-bsc1036125
  - 774d204d65 Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc#1036125)
- **PR #42327:** (mirceaulinic) Default skip\_verify to False @ 2017-07-18 18:04:36 UTC
  - e72616c5f1 Merge pull request #42327 from mirceaulinic/patch-10

- c830573a2c Trailing whitespaces
  - c83e6fc696 Default skip\_verify to False
- **ISSUE #42151:** (sjorge) Doc errors in jinja doc for develop branch (refs: #42179)
- **PR #42179:** (rallytime) Fix some documentation issues found in jinja filters doc topic @ 2017-07-18 18:01:57 UTC
  - ba799b2831 Merge pull request #42179 from rallytime/fix-42151
  - 798d29276e Add note about "to\_bytes" jinja filter issues when using yamll\_jinja renderer
  - 1bbff572ab Fix some documentation issues found in jinja filters doc topic
- **ISSUE #42076:** (abulford) dockerng.volume\_present test looks as though it would cause a change (refs: #42087, #42086)

- ed89cd0b93 Use os.sep for path seps
- **PR #42309:** (terminalmage) Change "TBD" in versionadded to "2017.7.0" @ 2017-07-17 17:11:45 UTC
  - be6b211683 Merge pull request #42309 from terminalmage/fix-versionadded
  - 603f5b7de6 Change "TBD" in versionadded to "2017.7.0"
- **PR #42206:** (rallytime) [PY3] Fix test that is flaky in Python 3 (refs: #42783) @ 2017-07-17 17:09:53 UTC
  - acd29f9b38 Merge pull request #42206 from rallytime/fix-flaky-test
  - 2be4865f48 [PY3] Fix test that is flaky in Python 3
- **PR #42126:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-17 17:07:19 UTC
  - 8f1cb287cf Merge pull request #42126 from rallytime/merge-2017.7
- **PR #42078:** (damon-atkins) pkg.install and pkg.remove fix version number input. @ 2017-07-05 06:04:57 UTC
  - 4780d7830a Merge pull request #42078 from damon-atkins/fix\_convertflt\_str\_version\_on\_cmd\_line
  - 09d37dd892 Fix comment typo
  - 7167549425 Handle version=None when converted to a string it becomes 'None' parm should default to empty string rather than None, it would fix better with existing code.
  - 4fb2bb1856 Fix typo
  - cf55c3361c pkg.install and pkg.remove on the command line take number version numbers, store them within a float. However version is a string, to support versions numbers like 1.3.4
- **PR #42105:** (Ch3LL) Update releasecandidate doc with new 2017.7.0rc1 Release @ 2017-07-04 03:14:42 UTC
  - 46d575acbc Merge pull request #42105 from Ch3LL/update\_rc
  - d4e7b91608 Update releasecandidate doc with new 2017.7.0rc1 Release
- **ISSUE #41885:** (astronouth7303) Recommended pip installation outdated? (refs: #42099)
- **PR #42099:** (rallytime) Remove references in docs to pip install salt-cloud @ 2017-07-03 22:13:44 UTC
  - d38548bbbd Merge pull request #42099 from rallytime/fix-41885
  - c2822e05ad Remove references in docs to pip install salt-cloud
- **ISSUE #42076:** (abulford) dockerng.volume\_present test looks as though it would cause a change (refs: #42087, #42086)
- **PR #42086:** (abulford) Make result=true if Docker volume already exists (refs: #42087) @ 2017-07-03 15:48:33 UTC
  - 81d606a8cb Merge pull request #42086 from redmatter/fix-dockerng-volume-present-result
  - 8d549685a7 Make result=true if Docker volume already exists
- **ISSUE #25842:** (shikhartanwar) Running salt-minion as non-root user to execute sudo commands always returns an error (refs: #42021)
- **PR #42021:** (gtmanfred) Set concurrent to True when running states with sudo @ 2017-06-30 21:02:15 UTC
  - 7160697123 Merge pull request #42021 from gtmanfred/2016.11
  - 26beb18aa5 Set concurrent to True when running states with sudo
- **PR #42029:** (terminalmage) Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips @ 2017-06-30 20:58:56 UTC

- b784fbbdf8 Merge pull request #42029 from terminalmage/host\_to\_ips
- 26f848e111 Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips
- PR #42055: (dmurphy18) Upgrade support for gnupg v2.1 and higher @ 2017-06-30 20:54:02 UTC
  - e067020b9b Merge pull request #42055 from dmurphy18/handle\_gnupgv21
  - e20cea6350 Upgrade support for gnupg v2.1 and higher
- PR #42048: (Ch3LL) Add initial 2016.11.7 Release Notes @ 2017-06-30 16:00:05 UTC
  - 74ba2abc48 Merge pull request #42048 from Ch3LL/add\_11.7
  - 1de5e008a0 Add initial 2016.11.7 Release Notes

### 33.2.76 Salt 2017.7.3 Release Notes

Version 2017.7.3 is a bugfix release for 2017.7.0.

#### Statistics

- Total Merges: 501
- Total Issue References: 94

#### Windows Changes

##### pkg Execution Module`

Significant changes (PR #43708 & #45390, damon-atkins) have been made to the pkg execution module. Users should test this release against their existing package sls definition files.

- `pkg.list_available` no longer defaults to refreshing the winrepo meta database.
- `pkg.install` without a `version` parameter no longer upgrades software if the software is already installed. Use `pkg.install version=latest` (or simply use a `pkg.latest` state to get the old behavior).
- `pkg.list_pkgs` now returns multiple versions if software installed more than once.
- `pkg.list_pkgs` now returns `Not Found` when the version is not found instead of `(value not set)` which matches the contents of the sls definitions.
- `pkg.remove` will wait up to 3 seconds (normally about a second) to detect changes in the registry after removing software, improving reporting of version changes.

- `pkg.remove` can remove `latest` software, if `latest` is defined in `sls` definition.
- Documentation was update for the execution module to match the style in new versions, some corrections as well.
- All install/remove commands are prefix with `cmd.exe shell` and `cmdmod` is called with a command line string instead of a list. Some `sls` files in `saltstack/salt-winrepo-ng` expected the commands to be prefixed with `cmd.exe` (i.e. the use of `&`).
- Some execution module functions results, now behave more like their Unix/Linux versions.

## cmd Execution Module

Due to a difference in how Python's `subprocess.Popen()` spawns processes on Windows, passing the command as a list of arguments can result in problems. This is because Windows' `CreateProcess` requires the command to be passed as a single string. Therefore, `subprocess` will attempt to re-assemble the list of arguments into as string. Some escaped characters and quotes can cause the resulting string to be incorrectly-assembled, resulting in a failure to execute the command.

Salt now deals with these cases by joining the list of arguments correctly and ensuring that the command is passed to `subprocess.Popen()` as a string.

## Changelog for v2017.7.2..v2017.7.3

Generated at: 2018-05-26 21:36:50 UTC

- **ISSUE #45743:** (frogunder) Multi-master PKI not working on Py3 (refs: #45755)

  - PR #45634: (Ch3LL) Add different service name for Mac 10.13 test (refs: #45649)
  - 7934372b7b Merge pull request #45649 from rallytime/bp-45634
  - 1c78fc23ea Add different service name for Mac 10.13 test
- PR #45654: (twangboy) Merge forward #45638 @ 2018-01-24 14:59:14 UTC
  - PR #45638: (twangboy) Win fix shell info (refs: #45654)
  - 770f0c4664 Merge pull request #45654 from twangboy/win\_fix\_shell\_info\_2017.7.3
  - 5bb01aeb8c Merge forward #45638
- PR #45653: (rallytime) Back-port #45611 to 2017.7.3 @ 2018-01-24 05:20:11 UTC
  - PR #45611: (terminalmage) Fix unnecessary/incorrect usage of six.binary\_type (refs: #45653)
  - 6fc293da46 Merge pull request #45653 from rallytime/bp-45611
  - 0a6b06d8ea Fix unnecessary/incorrect usage of six.binary\_type
- PR #45642: (rallytime) Back-port #45636 to 2017.7.3 @ 2018-01-23 22:00:30 UTC
  - PR #45636: (Ch3LL) Fix mac service and pkg tests for 10.13 (refs: #45642)
  - 0a07e0d259 Merge pull request #45642 from rallytime/bp-45636
  - df0ad54c9a remove unnecessary variable for test
  - acb14fd43d fix pylint
  - a9b12cd1ea Fix mac service and pkg tests for 10.13
- PR #45645: (rallytime) Back-port #45606 to 2017.7.3 @ 2018-01-23 21:54:45 UTC
  - PR #45606: (terminalmage) Fix bug affecting salt-ssh when root\_dir differs from the default (refs: #45645)
  - f37a5b6d8d Merge pull request #45645 from rallytime/bp-45606
  - d52d96f30a Fix bug affecting salt-ssh when root\_dir differs from the default
- PR #45641: (rallytime) Back-port #45508 to 2017.7.3 @ 2018-01-23 21:18:39 UTC
  - PR #45508: (frogunder) fix test\_archive test for mac on 2017.7 branch (refs: #45641)
  - e659793c09 Merge pull request #45641 from rallytime/bp-45508
  - e6917a291e fix test\_archive test for mac on 2017.7 branch
- PR #45604: (rallytime) Back-port #45582 to 2017.7.3 @ 2018-01-22 16:54:15 UTC
  - PR #45582: (terminalmage) Two salt-ssh fixes (refs: #45604)
  - ced3269ae8 Merge pull request #45604 from rallytime/bp-45582
  - bc8a450cc7 Remove state.py utils file from thin list
  - 629e6c9674 Further fixes to for salt-ssh test under heavy load

- 0dff596b59 Add salt/utls/state.py to thin tarball
- a61afda100 Pass on OSError if thin tarball already removed
- **PR #45591:** (gtmanfred) mark minion\_blackout tests as flaky @ 2018-01-22 00:14:31 UTC
  - 4672baa6c8 Merge pull request #45591 from gtmanfred/2017.7.3
  - f7fd35fc4a test updating the minion blackout timeout to 10 seconds
- **PR #45585:** (rallytime) Back-port #45579 to 2017.7.3 @ 2018-01-22 00:13:59 UTC
  - **PR #45579:** (terminalmage) Test suite stability fixes (refs: #45585)
  - 2a992f9017 Merge pull request #45585 from rallytime/bp-45579
  - 0292c8345b Lint fix: use six's map
  - 108d8cbeef Use correct utls path for 2017.7
  - a38f4cb6d6 Restrict pyzmq optimizations to pyzmq >= 14.3.0
  - 58ad558346 Fix event unpack
- **PR #45573:** (gtmanfred) update 2017.7.3 tests @ 2018-01-20 20:05:13 UTC
  - 19cd97ed3b Merge pull request #45573 from gtmanfred/2017.7.3
  - bd3cb47fa7 fix mock for opensuse
  - 808e26e69a test simple website
- **PR #45570:** (gtmanfred) Fix tests for 2017.7.3 @ 2018-01-20 15:01:21 UTC
  - e72d81ef22 Merge pull request #45570 from gtmanfred/2017.7.3
  - 1f71f301ba specify checking man page path
  - 2ddbcb45c1 fix pkg\_resources for usage with testing pip
  - 0ba39a7108 switch systemd-journald for sshd for arch service test
- **PR #45538:** (gtmanfred) Backport test fixes to 2017.7.3 @ 2018-01-19 14:39:44 UTC
  - 7bc60c56d4 Merge pull request #45538 from gtmanfred/2017.7.3
  - 801e0639b6 Merge branch '2017.7.3' into 2017.7.3
- **PR #45533:** (rallytime) Back-port #45529 to 2017.7.3 @ 2018-01-18 22:52:29 UTC
  - **PR #45529:** (Ch3LL) Fix UnboundLocalError for pacman pkg installs (refs: #45533)
  - 8ad65e3359 Merge pull request #45533 from rallytime/bp-45529
  - 6d56c64d88 Fix UnboundLocalError for pacman pkg installs
    - \* 8d907ee1a0 fix moto version
    - \* 1241ab5fc6 fix test boto imports
    - \* f4b6367cf9 fix fedora pkg test
- **ISSUE #45394:** (dmurphy18) git.latest fails when "depth" is used with a non-default branch (refs: #45399)
- **PR #45442:** (rallytime) Back-port #45399 to 2017.7.3 @ 2018-01-17 17:20:48 UTC
  - **PR #45399:** (terminalmage) Fix git.latest failure when rev is not the default branch (refs: #45442)
  - 7379f9e3e5 Merge pull request #45442 from rallytime/bp-45399
  - 590a6db626 Lint: use support TMP path instead of integration TMP path

- c081b2c62c Fix git.latest failure when rev is not the default branch
- PR #45468: (twangboy) Fix some issues with reg.py @ 2018-01-16 22:23:47 UTC
  - ee5090f69b Merge pull request #45468 from twangboy/win\_reg
  - a0d21c6354 Fix some issues with reg.py
- ISSUE #44913: (ari) FreeBSD packaging install performance regression (refs: #45174)
- PR #45434: (rallytime) Back-port #45174 to 2017.7.3 @ 2018-01-14 12:43:16 UTC
  - PR #45174: (eradman) Do not force pkg reinstall on FreeBSD (refs: #45434)
  - ef7a896eb6 Merge pull request #45434 from rallytime/bp-45174
  - b310ff7ab8 Do not force pkg reinstall on FreeBSD
- PR #45395: (rallytime) Back-port #45380 to 2017.7.3 @ 2018-01-12 18:49:20 UTC
  - PR #45380: (twangboy) Backport changes from #45308 (refs: #45395)
  - PR #45308: (twangboy) Fix `integration.modules.test_state` for Windows (refs: #45380)
  - c3fdd1dcc4 Merge pull request #45395 from rallytime/bp-45380
  - 0356b3d56f Backport changes from #45308
- ISSUE #44107: (anlutro) salt-ssh 2017.7 doesn't work with Python 3, missing backports\_abc (refs: #45294)
- PR #45294: (gtmanfred) include backports\_abc @ 2018-01-11 18:18:16 UTC
  - f7da716d32 Merge pull request #45294 from gtmanfred/2017.7
  - 3633ceea7 Merge branch '2017.7' into 2017.7
  - 29806e4496 ignore salt.ext in pylint
  - 8b597a4890 include backports\_abc
- ISSUE #43130: (boltonics) module.run documentation issues (refs: #45381)

  - f77a3e9cd4 Merge pull request #45381 from gtmanfred/module.run
  - 230e899192 fix module.run docs
- ISSUE #43995: (dragonpaw) Using zmq built with --enable-draft breaks Salt (refs: #45368)
- PR #45368: (DmitryKuzmenko) Fixes to work with pyzmq with --enable-drafts @ 2018-01-11 17:53:16 UTC
  - 8efd29f4d9 Merge pull request #45368 from DSRCorporation/bugs/zmq\_draft
  - 7622e355cf Minor: removed a stale comment.
  - 00f31bf9b5 Fixes to work with pyzmq with --enable-drafts
- PR #45371: (rallytime) Back-port #45158 to 2017.7 @ 2018-01-11 17:51:38 UTC
  - PR #45158: (terminalmage) Fix `integration.modules.test_state.StateModuleTest.test_exclude` (refs: #45371)
  - 22c3efda06 Merge pull request #45371 from rallytime/bp-45158
  - 3565bc2bf2 Don't use include-test SLS in orch tests
  - 8bc17e0d7a Fix `integration.modules.test_state.StateModuleTest.test_exclude`
- PR #45387: (renner) Set SHELL environment variable @ 2018-01-11 16:23:21 UTC

- PR #40630: (mateiw) develop: SUSE specific changes to salt-api.service (refs: #45387)
- PR #40620: (mateiw) SUSE specific changes to salt-api.service (refs: #40630, #45387)
- 3a0e2de995 Merge pull request #45387 from renner/patch-2
- 530ddd2d29 Set SHELL environment variable
- PR #45388: (terminalmage) Fix loader error in 2017.7 tests @ 2018-01-11 16:13:53 UTC
  - dcf98a2260 Merge pull request #45388 from terminalmage/fix-test-loader-error
  - 5473c085d9 Fix loader error in 2017.7 tests
- PR #45382: (terminalmage) Skip flaky test on 2017.7 branch @ 2018-01-11 14:23:05 UTC
  - d15f9e1020 Merge pull request #45382 from terminalmage/salt-jenkins-686
  - ff3039db6c Skip flaky test on 2017.7 branch
- PR #45369: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-10 22:14:05 UTC
  - dbe21b2c0d Merge pull request #45369 from rallytime/merge-2017.7
  - f65e091df8 Merge branch '2016.11' into '2017.7'
    - \* 0959ae4ea3 Merge pull request #45327 from lomeroy/bp-44861\_2016.11
      - 784139f734 Check for values other than 0 or 1
    - \* a6db5f95f0 Merge pull request #45268 from damon-atkins/2016.11\_win\_pkg\_pkg\_install\_latest
      - 325a9f0f66 Update 2016.11.9.rst
      - 4da9200b9c Update 2016.11.9.rst
      - 126aee36ac Update 2016.11.9.rst
      - 1c01967943 Update 2016.11.9.rst
      - a0d89882b8 Fix pkg.install packagename version=latest i.e. if on an old version upgrade to the latest
- PR #45379: (rhoths) Minor spelling/grammar fixes in the highstate returner documentation @ 2018-01-10 20:09:52 UTC
  - 55979b3a48 Merge pull request #45379 from rhoths/rhoths-doc-highstate-1
  - afbbd492cd Minor spelling/grammar fixes in highstate returner
- PR #45358: (UtahDave) gate the minion data cache refresh events. @ 2018-01-10 17:21:05 UTC
  - PR #45299: (garethgreenaway) [2017.7] config gate auth\_events (refs: #45358)
  - 541e59fa75 Merge pull request #45358 from UtahDave/gate\_data\_cache\_refresh
  - 379b6cd23e should be *self*, not *salt*
  - a82e158f2d gate the minion data cache refresh events.
- PR #45297: (Ch3LL) Allow macosx service state tests to check for pid return @ 2018-01-09 20:47:24 UTC
  - fb87010461 Merge pull request #45297 from Ch3LL/mac\_service\_state
  - 4e569b5802 Allow macosx service state tests to check for pid return
- PR #45351: (dmurphy18) Update debbuild to explicitly include source code for Debian, Ubuntu @ 2018-01-09 17:21:51 UTC
  - beedf6e815 Merge pull request #45351 from dmurphy18/upd\_debbuild

- 478dc70092 Update debbuild flags
- **PR #45299:** (garethgreenaway) [2017.7] config gate auth\_events (refs: #45358) @ 2018-01-09 15:00:30 UTC
  - 66da9b47bc Merge pull request #45299 from garethgreenaway/config\_gate\_auth\_events
  - 9a15ec3430 Updating versionadded string. Fixing typo.
  - edfc3dc078 Adding in documentation for *auth\_events* configuration option
  - 3ee4eabffd Fixing small typo
  - 6a28bddcc9 Adding some code to config gate if auth\_events are sent
- **PR #44856:** (Ch3LL) Add state.running ssh integration test @ 2018-01-08 21:40:50 UTC
  - 8d04c2b3d4 Merge pull request #44856 from Ch3LL/running\_test
  - 9a35a73711 add time limit to while loop
  - aeb5f4e248 Add state.running ssh integration test
- **ISSUE saltstack/salt-jenkins#675:** (rallytime) [2017.7] unit.states.test\_file.TestFileState.test\_directory is failing on Fedora 27 and CentOS 6 (refs: #45295)
- **PR #45295:** (gtmanfred) test directory that doesn't exist @ 2018-01-08 20:59:53 UTC
  - d0e5e70277 Merge pull request #45295 from gtmanfred/test\_directory
  - e6178fe6d4 Merge branch '2017.7' into test\_directory
  - 24114e91c1 test was different slightly on 2017.7
  - d20fc93625 test directory that doesn't exist
- **ISSUE saltstack/salt-jenkins#678:** (rallytime) [2017.7] Proxy Minion Tests for Py3 are failing (refs: #45302)
- **PR #45302:** (gtmanfred) fix proxy tests for py3 on 2017.7 @ 2018-01-08 17:41:58 UTC
  - f49b204b75 Merge pull request #45302 from gtmanfred/proxyp3
  - b295ec0429 make dummy proxy module py3 compatible
  - 8736e21f65 fix starting proxy minion on py3
  - e2824a7253 fix py3 tests
- **PR #45279:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-08 17:26:49 UTC
  - eea7158e82 Merge pull request #45279 from rallytime/merge-2017.7
  - 8025b14584 Merge branch '2016.11' into '2017.7'
    - \* 1c5e905b61 Merge pull request #45256 from rallytime/bp-45034
      - 68f971b38f Apply test fixes from #45034 to parsers\_test.py
      - 9454236694 Fix for pidfile removal logging
- **PR #44853:** (gtmanfred) remove not from vault utils @ 2018-01-05 17:43:18 UTC
  - dab4a8cff3 Merge pull request #44853 from gtmanfred/vault
  - bfee1cead6 set role for loading minion config
  - c5af2e5048 if utils is not loaded, load it
  - 6a5e0f9ac1 remove not from vault utils
- **PR #45277:** (rallytime) Back-port #45025 to 2017.7 @ 2018-01-05 15:35:53 UTC

- PR #45025: (steverweber) Fix pillar include merge order (refs: #45277)
- f09d0e5fdb Merge pull request #45277 from rallytime/bp-45025
- 942c14bb29 pillar body overrides includes
- 1152202fdc fix pillar includes from merging over the current sls defines
- PR #45276: (rallytime) Back-port #45260 to 2017.7 @ 2018-01-05 14:45:40 UTC
  - PR #45260: (gtmanfred) Make some kitchen-salt tests blue (refs: #45276)
  - fc84f1104f Merge pull request #45276 from rallytime/bp-45260
  - 9ab1af738f switch kitchen-salt to use rsync transport to preserve symlinks
  - cf98ed472e fix up symlinks
- ISSUE #43340: (syphernl) Upgrading Salt via Salt results in dying minions and broken dpkg (refs: #45255)
- PR #45255: (rallytime) Back-port #44427 to 2017.7 @ 2018-01-04 21:46:17 UTC
  - PR #44427: (samodid) use KillMode=process for salt-minion.service (refs: #45255)
  - ff9880c498 Merge pull request #45255 from rallytime/bp-44427
  - 6ceafbbf3a use KillMode=process for salt-minion.service
- ISSUE #23454: (HontoNoRoger) SLS rendering error with Salt-SSH (pydsl) (refs: #45251)
- PR #45251: (forksaber) Fix #23454 : make pydsl work with salt-ssh @ 2018-01-04 21:33:09 UTC
  - e715eb603f Merge pull request #45251 from forksaber/salt-ssh-pydsl
  - b3660d5190 [#23454] make pydsl work with salt-ssh
- PR #45254: (Ch3LL) Add darwin value for ssh grain items tests on MacOSX @ 2018-01-04 21:31:35 UTC
  - 2934b60d53 Merge pull request #45254 from Ch3LL/fix\_mac\_grain\_ssh
  - b4b59b89cd remove platform from salt.utils call for 2017.7
  - 85e853a63d Add darwin value for ssh grain items tests on MacOSX
- PR #45135: (twangboy) Fix win\_dacl problems with SIDs @ 2018-01-04 21:01:48 UTC
  - af2d880303 Merge pull request #45135 from twangboy/win\_fix\_dacl
  - b31e08946a Merge branch '2017.7' into win\_fix\_dacl
  - 35a417f510 Fix win\_dacl problems with SIDs
- ISSUE #43806: (Ch3LL) Add spm man Test to Auto Test Suite (refs: #44930)
- PR #44930: (frogunder) man\_spm\_test @ 2018-01-04 20:58:02 UTC
  - d0a3770035 Merge pull request #44930 from frogunder/man\_spm
  - 48e6953e1f fix\_string\_error
  - c9fa4ed2a7 man\_spm\_test
- PR #45259: (Ch3LL) Fix MacOSX Service Status Check and integration test @ 2018-01-04 14:25:01 UTC
  - 543eebf411 Merge pull request #45259 from Ch3LL/fix-mac-service-test
  - 74e6ed60ea Fix MacOSX Service Status Check and integration test
- PR #45263: (sumeetisp) Updating python version for 2017.7 @ 2018-01-04 14:16:26 UTC
  - bbbd1872a7 Merge pull request #45263 from sumeetisp/2017.7

- e3a5ee3a08 Merge branch '2017.7' into 2017.7
- 71aea9a3bc Merge pull request #1 from sumeetisp/sumeetisp-python-version
  - \* 1b4806e2b9 Updating python version
- **PR #45244:** (twangboy) Fix search/replace in Py3 @ 2018-01-04 14:02:22 UTC
  - d46e1197be Merge pull request #45244 from twangboy/win\_fix\_portable.py
  - e3a8279c01 Get path to python binary based on executable
  - 03aec37040 Fix search/replace in Py3
- **PR #45233:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-03 15:34:00 UTC
  - eba360870a Merge pull request #45233 from rallytime/merge-2017.7
  - a3d251b2cd Merge branch '2016.11' into '2017.7'
    - \* b75f50afe3 Merge pull request #45235 from rallytime/bp-45209
      - 2d0a9bbf7e enable UsePAM for ssh tests
  - 5d9a1e91e9 Merge branch '2016.11' into '2017.7'
    - \* 3ab962b01a Merge pull request #44965 from gtmanfred/2016.11
      - a5d8a6340e check if VALUE is a string\_type
    - \* 40fb30f63f Merge pull request #45232 from rasathus/2016.11
      - 7a2bd8f49b Merge branch '2016.11' into 2016.11
      - de53c45c29 Backport #27160 to 2016.11
- **PR #45175:** (amendlik) Pkg uptodate @ 2018-01-02 17:38:36 UTC
  - 693cc807e8 Merge pull request #45175 from amendlik/pkg-uptodate
  - 4f514a29a7 Merge branch '2017.7' into pkg-uptodate
- **PR #45226:** (gtmanfred) Update kitchen to use runtests verifier on 2017.7 @ 2017-12-31 18:13:28 UTC
  - 1b3f3ba1be Merge pull request #45226 from gtmanfred/2017.7
  - 4f3b089e0e fix copying back
  - f56f062a6a download xml for junit
  - 7cc342a5d6 use new runtests verifier
- **PR #45221:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-30 18:08:29 UTC
  - 7d3a6cbc65 Merge pull request #45221 from rallytime/merge-2017.7
  - 508599e159 Merge branch '2016.11' into '2017.7'
  - 707ef55175 Merge pull request #45161 from lomeroc/bp-44944\_2016.11
    - \* 0a4c6b5a83 remove references to six.unichr
    - \* f3196d795d lint fixes for static regexes
    - \* 11b637d108 lint fixes
    - \* c14d6282ad do not decode registry.pol file wholesale, but instead decode individual elements of the file
  - 6f52034e08 Merge pull request #45199 from gtmanfred/status

- \* fb07f9ea7d status.pid returns pid ids not process names
- **ISSUE #45176:** (thuhak) osquery execution module doesn't work with attrs parameter (refs: #45204)
- **PR #45204:** (garethgreenaway) [2017.7] Fixes to osquery module & addition of unit tests @ 2017-12-30 13:25:38 UTC
  - abed378981 Merge pull request #45204 from garethgreenaway/45176\_fixes\_to\_osquery\_module
  - dc933e9e24 Fixing typo
  - d834bd1b6f Fixing some minor lint issues.
  - 4738205154 Fixing a bug when attributes are passed to various osquery module functions.
    - \* 66884334d9 Update states.pkg for Python3 compatibility
    - \* 2a7d76ad6e Fail pkg.uptodate if expected packages are not upgraded
    - \* 29ef67bac2 Test pkg.uptodate with failed upgrades
    - \* 23ab93353b Produce changes dict for pkg.uptodate dry-run mode
    - \* 7c67ec39d9 Add tests for pkg.uptodate state
- **PR #45203:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-29 01:11:03 UTC
  - 5991d8ca15 Merge pull request #45203 from rallytime/merge-2017.7
  - 430c913c8c Merge branch '2016.11' into '2017.7'
    - \* d3381e27d0 Merge pull request #45118 from garethgreenaway/44728\_nodegroups\_seq
      - 0ff811de70 Swapping import to be the old path for 2016.11
      - b3e2f388f5 Fix to allow nodegroups to include sequences
    - \* f969aca3a3 Merge pull request #45127 from twangboy/win\_fix\_pkg
      - 14639739f2 Fix issue with 1641 return code
    - \* dc357b39f0 Merge pull request #45137 from twangboy/win\_fix\_reg\_tests
      - b6f4ef8d73 Catch correct error type in list\_keys and list\_values
    - \* 0aa1662731 Merge pull request #45130 from rallytime/api-groups
      - 2dcc8df845 Resolve groups for salt api
    - \* 7dc3cc4641 Merge pull request #45114 from twangboy/win\_fix\_pam
      - cf5eae1f77 Move pam library load to try/except block
- **PR #45201:** (rallytime) [2017.7] Check for running on python3 before decoding bytes @ 2017-12-28 22:59:14 UTC
  - **PR #45090:** (angeloudy) fix TypeError in python 3 (refs: #45201)
  - 882267314f Merge pull request #45201 from rallytime/fix-jinja-template-test-failure
  - b4af3bdff8 Check for running on python3 before decoding bytes
- **PR #45200:** (rallytime) [2017.7] Fix docstring integration test failure @ 2017-12-28 22:58:34 UTC
  - **PR #44552:** (Da-Juan) pip\_state: Check if available upgrades fulfill version requirements. (refs: #45200)
  - 2e18398f12 Merge pull request #45200 from rallytime/fix-docstring-test-failure
  - a26d4795bd [2017.7] Fix docstring integration test failure
- **PR #45186:** (rallytime) Back-port #44922 to 2017.7 @ 2017-12-28 19:02:51 UTC

- PR #44922: (dincamihai) Fix salt-master for old psutil (refs: #45186)
- 67d97303b5 Merge pull request #45186 from rallytime/bp-44922
- 6970fe8103 Fix salt-master for old psutil
- PR #44624: (eliasp) Fix Traceback when using the `service.enabled` state on non-booted systems @ 2017-12-28 10:58:43 UTC
  - 30d7f7257a Merge pull request #44624 from eliasp/fix-upstart-utmp-exception
  - 43d44e051a Do not blindly assume presence of either `/var/run/utmp` or `/run/utmp`, none of both might be available (e.g. on non-booted systems).
- PR #45183: (twangboy) Add libnacl dependency @ 2017-12-27 22:08:32 UTC
  - 3832e7b227 Merge pull request #45183 from twangboy/win\_add\_libnacl\_2017.7
  - b46845888d Add libnacl dependency
- ISSUE #44928: (rcallphin) Duplicating master token when no match for Minion policy (Vault Module) (refs: #44966)
- PR #44966: (rcallphin) Fix bug with vault runner creating token on empty policy @ 2017-12-22 20:30:37 UTC
  - fbbf33574e Merge pull request #44966 from rcallphin/fix-bug-vault-empty-policy
  - 7f327ab760 Lint: Remove extra whitespace
  - 04ab6a5e9d Merge branch '2017.7' into fix-bug-vault-empty-policy
  - 5be463bb46 Merge branch '2017.7' into fix-bug-vault-empty-policy
  - 48d9cc3674 Fix bug with vault runner creating token on empty policy
- PR #44552: (Da-Juan) pip\_state: Check if available upgrades fulfill version requirements. (refs: #45200) @ 2017-12-22 19:25:17 UTC
  - 487207f61d Merge pull request #44552 from Da-Juan/avoid\_unneeded\_pip\_install
  - 49a6a8f02e Merge branch '2017.7' into avoid\_unneeded\_pip\_install
  - 3a8e62493d pip\_state: Check if available upgrades fulfill version requirements
  - 62252d74d9 pip\_state: Compare versions using `pkg_resources.parse_version`
  - 5219ab974c Add `list_all_versions` function to pip module
- PR #45090: (angeloudy) fix TypeError in python 3 (refs: #45201) @ 2017-12-22 18:11:13 UTC
  - 5ae26f0c09 Merge pull request #45090 from angeloudy/2017.7
  - cf411f8984 Merge branch '2017.7' into 2017.7
  - 177fd18671 fix TypeError in python 3
- ISSUE #44315: (whytewolf) `cmd.* cwd` does not escape spaces. 2017.7.2 (refs: #45134)
- PR #45134: (garethgreenaway) [2017.7] fix to `cmd.script` for `cwd` with space @ 2017-12-22 15:31:24 UTC
  - a1946730a9 Merge pull request #45134 from garethgreenaway/44315\_cmd\_script\_cwd\_with\_space
  - 48eafe3206 Adding some tests to tests `cmd.script` with `cwd`
  - 8dfcf71b08 Adding `_cmd_quote` to handle cases when the current working directory for `cmd.script` might have a space in it.
- PR #44964: (Giandom) added-highstate-output-to-slack-engine @ 2017-12-21 21:32:01 UTC
  - f41adfc913 Merge pull request #44964 from Giandom/2017.7-added-highstate-output-to-slack-engine

- 4526c158f1 added-highstate-output-to-slack-engine
- 573a0a4143 added-highstate-output-to-slack-engine
- 9a6e03ce6e added-highstate-output-to-slack-engine
- **PR #45124:** (gtmanfred) enable using kitchen-salt with ec2 on 2017.7 @ 2017-12-21 19:11:27 UTC
  - b49ee97938 Merge pull request #45124 from gtmanfred/2017.7
  - d0586013eb fix pylint
  - 59e2e56d13 chmod the xml files before trying to copy
  - a5c1410e23 catch IOError when copying xml files back
  - 23bd38ad66 enable using kitchen-salt on ec2
- **PR #45087:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-20 22:24:51 UTC
  - 42e894570d Merge pull request #45087 from rallytime/merge-2017.7
  - fe81e2d39a Merge branch '2016.11' into '2017.7'
    - \* 7e128e8f15 Merge pull request #45100 from rallytime/bp-45070
      - 0bdb46dab9 add clouds modules to index
    - \* bdf93f339d Merge pull request #45098 from rallytime/bp-45092
      - 80b6bd6813 Fix integration.states.test\_pip.PipStateTest.test\_pip\_installed\_weird\_install
  - 4f21a2bbfd Merge branch '2016.11' into '2017.7'
    - \* 324b7d4058 Merge pull request #44078 from rossengeorgiev/fix-41044
      - a81a6fe23c fix #41044; allow for date param to be 0
    - \* 48a59761df Merge pull request #44970 from rallytime/update-bootstrap-script
      - b2c8057427 Update bootstrap script to latest release: 2017.12.13
    - \* 637fdaed58 Merge pull request #45069 from rallytime/bp-45040
      - aa438e1605 Installation Fails on headless machines.
    - \* 4d6d640381 Merge pull request #44969 from rallytime/bp-41305
      - 5c4bee43dc correct accept\_vpc\_peering\_connection
    - \* 10de468f13 Merge pull request #45031 from terminalmage/fix-mysql-returner
      - f3bd12c27c Fix invalid exception class in mysql returner
    - \* 9a7406207f Merge pull request #44972 from terminalmage/bp-44958
      - a416bf0112 No need to manually do connect\_pub, use listen=True in run\_job
      - 3ec004bd2e Fix a race condition in manage runner
    - \* 1032ca3290 Merge pull request #44385 from gtmanfred/schedule
      - 9e15c38da2 add comma
      - 855d933cb7 schedule should be a dict
  - **PR #45112:** (Ch3LL) Fix spm big file build test to check /tmp @ 2017-12-20 22:09:21 UTC
    - 9550e742ac Merge pull request #45112 from Ch3LL/fix-arch
    - 1bd7110a14 Fix spm big file build test to check /tmp

- **ISSUE #44303:** (mwerickso) boto3\_route53 module times out on retries (refs: #44976)
- **PR #45068:** (rallytime) Back-port #44976 to 2017.7 @ 2017-12-20 16:31:22 UTC
  - **PR #44976:** (tkwilliams) Fix bad variable name in boto3\_route53 module - resolves #44303 (refs: #45068)
  - 71f9c7ee49 Merge pull request #45068 from rallytime/bp-44976
  - 0ca0f37805 44303 - resolves #44303
- **ISSUE #44961:** (golmaal) The archive tar function fails to untar file when dest argument is passed (refs: #44983)
- **PR #45099:** (rallytime) Back-port #44983 to 2017.7 @ 2017-12-20 14:41:22 UTC
  - **PR #44983:** (golmaal) Ref:44961 - Modified archive.tar to add dest at the end of the tar cmd (refs: #45099)
  - 54a33c0e1d Merge pull request #45099 from rallytime/bp-44983
  - 23361de8a2 Ref:44961 - Modified archive.tar to add dest argument at the end of the tar cmd.
- **ISSUE #43533:** (Ch3LL) Add status.pid Test to Auto Test Suite (refs: #44650)
- **PR #44650:** (frogunder) add status.pid test @ 2017-12-19 16:21:09 UTC
  - e0d7b330fa Merge pull request #44650 from frogunder/status
  - 904c0da893 Merge branch '2017.7' into status
  - 619bd2be1e fix lint error
  - d406cb07a3 add status.pid test
- **ISSUE #44516:** (doesitblend) Windows PY3 Minion Returns UTF16 UnicodeError (refs: #45161, #44944)
- **PR #44944:** (lomerio) win\_lgpo registry.pol encoding updates (refs: #45161) @ 2017-12-19 14:42:49 UTC
  - 422d8b8f1b Merge pull request #44944 from lomerio/update\_regpol\_encoding
  - 07d04c7bc7 lint fixes for static regexes
  - d17c46ce41 lint fixes
  - ab8e431729 do not decode registry.pol file wholesale, but instead decode individual elements of the file
- **PR #44938:** (The-Loeki) Libcloud dns fixes @ 2017-12-18 15:47:18 UTC
  - d9a4b9681e Merge pull request #44938 from The-Loeki/libcloud\_dns\_fixes
  - 276e8828ae libcloud\_dns: pylint fix
  - c994423286 Merge branch '2017.7' into libcloud\_dns\_fixes
- **PR #44951:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-16 13:16:24 UTC
  - 5137be01ec Merge pull request #44951 from rallytime/merge-2017.7
  - a0d2dd2069 Lint fix
  - 9db4179462 Merge branch '2016.11' into '2017.7'
    - \* 68d901b12c Merge pull request #44770 from cruscio/2016.11
      - e2682bf441 Fix minion ping\_interval documentation
    - \* d4ab55ec47 Merge pull request #44335 from gtmanfred/2016.11
      - 3f1268d67f fix patching for python 2.6
      - 1d0bd5bb32 Merge branch '2016.11' into 2016.11
      - f02b02032d Merge pull request #4 from terminalmage/pr-44335

- b4eb1527a6 Add test for PR 44335
- a30af3252e add docker-ce to docker subtype grains check
- **PR #44995:** (twangboy) Fix `unit.modules.test_file` for Windows @ 2017-12-15 17:05:49 UTC
  - 698b04779e Merge pull request #44995 from twangboy/win\_fix\_atomicfile
  - 8316481944 Comment the salt import
  - fe34f0c877 Set owner properly on Windows
- **ISSUE #44934:** (vernondcole) `http.wait_for_successful_query` does not pause for documented intervals (refs: #44968)
- **PR #44968:** (gtmanfred) fix http wait for state @ 2017-12-14 20:06:01 UTC
  - 2e1a57b9bc Merge pull request #44968 from gtmanfred/http
  - ca6936f6eb fix http wait for state
    - \* c72db283d5 libcloud\_dns: Further fixes to state output, pylint fixes
    - \* e9bbc23b11 Merge branch '2017.7' into libcloud\_dns\_fixes
- **ISSUE #44811:** (xuhcc) `rbenv.installed` fails when `rbenv` installed globally (refs: #44900)
- **PR #44900:** (xuhcc) Fix `TypeError` during `rbenv` ruby installation when `rbenv` is not found @ 2017-12-14 17:37:14 UTC
  - c4f0894689 Merge pull request #44900 from xuhcc/rbenv-ret-fix
  - fdd8310c31 Merge branch '2017.7' into rbenv-ret-fix
  - bfd0972d25 Fix `TypeError` during `rbenv` ruby installation when `rbenv` is not found
- **PR #44974:** (twangboy) Skip `test_log_created` on Windows @ 2017-12-14 13:59:25 UTC
  - f0c2cf3cec Merge pull request #44974 from twangboy/win\_skip\_test\_parsers
  - 40665d7b08 Skip `test_log_created` on Windows
- **ISSUE #44820:** (msteed) Custom returner breaks manage runner (refs: #44958)
- **PR #44958:** (terminalmage) Fix a race condition in manage runner (refs: #44972) @ 2017-12-13 15:20:36 UTC
  - dad2d723ca Merge pull request #44958 from terminalmage/issue44820
  - ef749abfc6 No need to manually do `connect_pub`, use `listen=True` in `run_job`
  - 2ac70cfab5 Fix a race condition in manage runner
- **PR #44956:** (terminalmage) Avoid traceback when bogus value in pidfile @ 2017-12-13 14:30:12 UTC
  - db58345abb Merge pull request #44956 from terminalmage/fix-get\_pidfile
  - d66f3a98d7 Avoid traceback when bogus value in pidfile
- **ISSUE #44932:** (knine) ACLs Not Completely Verified (refs: #44945)
- **PR #44945:** (gtmanfred) Fix handling of effective acls @ 2017-12-12 21:49:34 UTC
  - e8e3b3c8ff Merge pull request #44945 from gtmanfred/2017.7
  - 66bb755751 add test for effective acls
  - 0ff52a93dd use last entry in acl
- **PR #44942:** (rallytime) Update README with SaltConf18 info @ 2017-12-12 21:47:23 UTC
  - 47dc7b7afb Merge pull request #44942 from rallytime/readme-saltconf-update

- d1317c44e2 Update README with SaltConf18 info
- **ISSUE #44665:** (mvivaldi) Documentation of salt renders jinja (refs: #44943, #44895)
- **PR #44943:** (mvivaldi) Fix for the jinja documentation @ 2017-12-12 20:20:41 UTC
  - 7572982419 Merge pull request #44943 from mvivaldi/filters-doc
  - d23ac4eabc Fix for the jinja documentation
- **ISSUE #43417:** (damon-atkins) win\_pkg: pkg.install and pkg.remove general issues (refs: #44832, #43708)
- **PR #44832:** (damon-atkins) win\_pkg: Merge full copy of 2016.11 with many fixes and improvements to 2017.7 @ 2017-12-12 18:30:06 UTC
  - 465cacad83 Merge pull request #44832 from damon-atkins/2017.7\_replace\_with\_newer\_2016.11\_win\_pkg
  - a4f0b41ba2 Should be a smaller change set since recent update from 2016.11
  - 695334b201 Merge branch '2017.7\_replace\_with\_newer\_2016.11\_win\_pkg' of github.com:damon-atkins/salt into 2017.7\_replace\_with\_newer\_2016.11\_win\_pkg
    - \* 843e204582 Merge branch '2017.7' into 2017.7\_replace\_with\_newer\_2016.11\_win\_pkg
  - 4b60b1ec84 Merge remote branch 'refs/remotes/upstream/2017.7' into 2017.7\_replace\_with\_newer\_2016.11\_win\_pkg
  - b46f818a57 Raise a PR to fix 2016 issues committed here, fixed issues with merge.
  - 32ef1e12ae Merge branch '2017.7' into 2017.7\_replace\_with\_newer\_2016.11\_win\_pkg
  - 494835c3f2 I backported develop and applied a long list of fixes to 2016.11 this brings these fixes into 2017.7 - Software was not always being removed, general if & was in the string or msi was downloaded to uninstall the software - pkg.list\_upgrades failed. Added support for 'latest' and 'Not Found' for version\_cmp() to fix this. - output fixes - pkg.list\_available no longer forces a pkg.refresh\_db this is no longer required, as by default it will update if older than 6 hours - cmd /s /c is prefixed for all commands i.e. installs and removes. - cmd are now strings, instead of a list when using cmd.run. As windows only supports strings. And the " were being broken
- **PR #44754:** (twangboy) Fix inet\_pton for Windows on Py3 @ 2017-12-12 14:04:20 UTC
  - a811a92b17 Merge pull request #44754 from twangboy/win\_fix\_inet\_pton
  - 25a20109fe Merge branch '2017.7' into win\_fix\_inet\_pton
  - 849b99eb34 Merge branch '2017.7' into win\_fix\_inet\_pton
  - df1e6a202b Use salt.ext.six
  - 5ac8112585 Use six to ensure unicode value
  - 9b5d8c421b Handle unicode values
- **PR #44931:** (pkruk) add missing parenthesis to keep integration with python3 @ 2017-12-12 13:49:39 UTC
  - 53b34e24cd Merge pull request #44931 from pkruk/fix-missing-parenthis
  - b1ed739b44 Merge branch '2017.7' into fix-missing-parenthis
  - 4f1b1f12d2 Merge branch 'fix-missing-parenthis' of https://github.com/pkruk/salt into fix-missing-parenthis
    - \* 3475d3fa01 add missing parenthesis to keep integration with python3
  - adf38cacfb add missing parenthesis to keep integration with python3
    - \* ad55e33f57 libcloud\_dns: fix state output

- \* a68d594e3a libcloud\_dns: copy args before deleting from them
- **PR #44891:** (twangboy) Fix issue with unsafe path in Windows jenkins tests @ 2017-12-11 21:10:43 UTC
  - ba6146250a Merge pull request #44891 from twangboy/win\_fix\_verify
  - 7232579167 Allow test suite file\_roots as a safe path
- **PR #44921:** (Ch3LL) Add test to ensure log files are created @ 2017-12-11 18:24:16 UTC
  - 85160fd297 Merge pull request #44921 from Ch3LL/log\_test
  - 3bb58fb577 skip salt-key log creation test
  - 6a379195bc Add test to ensure log files are created
- **PR #44787:** (rallytime) GroupAdd test: Add destructive test decorator to entire class @ 2017-12-11 18:14:18 UTC
  - 54d29a61cb Merge pull request #44787 from rallytime/groupadd-destructive-clean
  - 817ac002b0 Add destructive test decorator to test class
- **ISSUE #44665:** (mvivaldi) Documentation of salt renders jinja (refs: #44943, #44895)
- **PR #44895:** (mvivaldi) Jinja Filters doc @ 2017-12-11 15:32:07 UTC
  - 0292e3612a Merge pull request #44895 from mvivaldi/filters-doc
  - 62409d608a Added Escape Filters and Set Theory Filters in jinja documentation
- **PR #44879:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-10 16:53:44 UTC
  - **PR #44855:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 (refs: #44879)
  - df28f312ac Merge pull request #44879 from rallytime/merge-2017.7
  - 23c5a4ca3e Merge branch '2016.11' into '2017.7'
    - \* bb1f8dceaf Merge pull request #44579 from roaldnefs/fix-cron-identifier
      - df73a4c051 Merge branch '2016.11' into fix-cron-identifier
    - \* af0131fa1f Merge pull request #44852 from damon-atkins/2016.11\_win\_pkg\_typo\_n\_fix
      - 0e7c19084f Lint: Remove extra whitespace
      - 7c7e21f94d Fix spelling typo, and fix backwards compatible minion option for repo location
    - \* 88c0d66b4e Merge pull request #44794 from terminalmage/issue44365
      - 3b8b6f25e6 Remove debugging line
      - 153bf45b03 Fix regression in file.managed when source\_hash used with local file
    - \* c8bb9dfbbb Merge pull request #44738 from rallytime/bump-oxygen-warnings
      - ead3c569e1 Bump deprecation warnings from Oxygen to Fluorine
    - \* 88e3aab00d Merge pull request #44741 from gtmanfred/rhip
      - 439dc8dce6 if gateway is not specified use iface
      - 3ec4329307 Merge branch '2016.11' into fix-cron-identifier
      - 99fa05a456 Fix for bug in cron state
      - 97328faeac Fix for bug in cron module
- **PR #44880:** (UtahDave) Determine windows hardware arch correctly @ 2017-12-08 22:24:09 UTC
  - 8e14bc3941 Merge pull request #44880 from UtahDave/2017.7local

- 6e3c7ac1ac Merge branch '2017.7' into 2017.7local
- **PR #44861:** (twangboy) Fix win\_lgpo for unknown values (refs: #45327) @ 2017-12-08 18:52:05 UTC
  - dc51174670 Merge pull request #44861 from twangboy/win\_fix\_lgpo\_invalid\_value
  - 89f65e19ff Check for values other than 0 or 1
- **PR #44621:** (isbm) Bugfix: errors in external pillar causes crash, instead of report of them @ 2017-12-08 18:46:56 UTC
  - f5a143f8c5 Merge pull request #44621 from isbm/isbm-bsc1068446-2017.7
  - 0d2675c4fe Use variable, instead of direct value
  - 1ddc47da0a Add unit test for \_get\_pillar\_errors when external pillar is clean and internal contains errors
  - 68480d5dc9 Add unit test for \_get\_pillar\_errors when both external and internal pillars contains errors
  - 218a59e93b Add unit test for \_get\_pillar\_errors when external pillar has errors and internal is clean
  - 3ce19356c2 Add unit test for \_get\_pillar\_errors when external and internal pillars are clean
  - 67034139d9 Fix unit test: wrong error types in side effect
  - d9359bca13 Bugfix: unit test mistakenly expects pillar errors as a string, while it is a list
  - 8c2bdc696b Bugfix: do not pull '\_errors' from unchecked objects
  - d5e30999c7 Remove unused variable (no exception, within the try/finally block)
  - aad668d559 Fix and clarify docstring.
  - c2c47e4e71 Rename function from ambiguous name
  - 265de8e61c Bugfix the logic according to the exact described purpose of the function.
    - \* dae9c6aa5c Determine windows hardware arch correctly
- **PR #43379:** (twangboy) Fix file.managed on Windows with test=True @ 2017-12-07 21:10:43 UTC
  - abe089ad54 Merge pull request #43379 from twangboy/win\_fix\_file.managed
  - edcd581ca5 Merge branch '2017.7' into win\_fix\_file.managed
  - a27bb6993a Fix py3 error
  - 0ff9fa498a Fix test\_directory
  - 187bc1e61e Add back the try/finally blocks
  - d7241d004f Fix 2 more tests
  - d5dd42aebc Fix integration tests for Windows
  - d56bc9aae9 Fix typo
  - af5565859e Use file functions for symlink and remove
  - 72ac59c991 Fix some more integration tests for Linux
  - 3f0499cbc4 Fix some integration tests
  - a24b964ea5 Fix unit test to handle new Exception
  - e3c3845f73 Raise CommandExecutionError when file doesn't exist
  - 4602f499a2 Remove loader module mixin, add linux paths
  - 99b27c037f Add tests to avoid future regression

- 5c215ed8c2 Fix documentation formatting
- 6a4e77e4b9 Return empty or unmodified dict on file not found
- **ISSUE #44565:** (arthurlogilab) NameError: global name '\_\_jid\_event\_\_' is not defined when running a runner in the scheduler (refs: #44570)
- **PR #44570:** (gtmanfred) Include client mixin globals in scheduler for runner modules @ 2017-12-07 20:23:33 UTC
  - cf4cbcd340 Merge pull request #44570 from gtmanfred/2017.7
  - 7b17f9f63c Merge branch '2017.7' into 2017.7
- **PR #44494:** (skizunov) Fix broken *beacons\_before\_connect* feature @ 2017-12-07 18:24:49 UTC
  - **PR #38289:** (skizunov) Add config options for running beacons/scheduler before connect (refs: #44494)
  - febb913743 Merge pull request #44494 from skizunov/develop2
  - 7adcfbf8ec Merge branch '2017.7' into develop2
- **ISSUE #44298:** (skjaro) ipset state check problem (refs: #44356)
- **ISSUE #39552:** (Xiami2012) ipset.check new implementation by @lingonl has countless critical bugs (refs: #44356)
- **PR #44512:** (rallytime) Back-port #44356 to 2017.7 @ 2017-12-07 14:44:50 UTC
  - **PR #44356:** (skjaro) Fix ipset state with multiple entries and subtypes separated with comma (refs: #44512)
  - 284a817565 Merge pull request #44512 from rallytime/bp-44356
  - 6f92c71834 Merge branch '2017.7' into bp-44356
  - 9a325146df Fix lint violation
  - 5aac729855 Fix check multiple entries with subtypes separated with comma
- **PR #44748:** (twangboy) Fix auto login support for OSX @ 2017-12-07 14:22:23 UTC
  - 74ee7ce541 Merge pull request #44748 from twangboy/osx\_fix\_auto\_login
  - 068e463870 Fix lint, add integration tests
  - 3df886df75 Fix lint, add gtmanfreds change
  - 16cb24614f Add kcpassword functionality
- **PR #44842:** (twangboy) Win fix lgpo unicode on Py3 issue @ 2017-12-07 14:21:14 UTC
  - b60cca174c Merge pull request #44842 from twangboy/win\_fix\_lgpo
  - efe77999d1 Gate log.debug statement behind successful pop
  - 1c0ec79cd1 Fix py3 issue
- **PR #44843:** (twangboy) Fix 2 typos in lgpo module @ 2017-12-06 17:56:44 UTC
  - bb58e2fec0 Merge pull request #44843 from twangboy/win\_fix\_lgpo\_typo
  - c8f93e6dd7 Fix 2 types, shorten line lengths for spellchecking
- **PR #44827:** (mz-bmcqueen) add more clone options to virtualbox and add better dhcp handling @ 2017-12-06 15:02:23 UTC
  - d6c37ea19c Merge pull request #44827 from mz-bmcqueen/2017.7
  - 4ead3014b7 Merge branch '2017.7' into 2017.7

- b7ce154014 Merge branch '2017.7' of <https://github.com/mz-bmcqueen/salt> into 2017.7
  - \* 2f80f431b3 Merge branch '2017.7' into 2017.7
- c2018c9021 fix pylint complaints
- c38ff74261 add more clone options to virtualbox and add better dhcp handling
- PR #44824: (Ch3LL) Add spm -y and -f arg integration tests @ 2017-12-05 21:49:32 UTC
  - 019169ed61 Merge pull request #44824 from Ch3LL/spm\_args
  - d8f81d2e4d fix pylint
  - 61ac5cf157 Add spm -y and -f arg integration tests
- PR #44742: (Ch3LL) Add salt-cloud action rename integration test @ 2017-12-05 17:44:50 UTC
  - 59b930668c Merge pull request #44742 from Ch3LL/cloud\_action\_test
  - 951d09ca2f remove unnecessary try/except block
  - c329ced7ee Add salt-cloud action rename integration test
- ISSUE #42676: (mind-code) Changes in Pillar defined Beacons only apply after Minion restart (refs: #44771)
- PR #44771: (garethgreenaway) [2017.7] Back porting #44071 @ 2017-12-05 17:16:06 UTC
  - PR #44071: (garethgreenaway) [develop] Various fixes to beacons (refs: #44771)
  - 10442d9211 Merge pull request #44771 from garethgreenaway/42676\_backport\_44071
  - ec2a8b2032 Merge branch '2017.7' into 42676\_backport\_44071
  - 180971203e Updating minion to respond to list\_available events for beacons
  - db6fcfe62 Adding list\_available which is used by the add function to verify that a becaon exists.
  - e9e0318bc6 Backporting fixes related to having beacons in pillar from #44071
- PR #44784: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-05 17:13:49 UTC
  - PR #44732: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 (refs: #44784)
  - 23d151b40a Merge pull request #44784 from rallytime/merge-2017.7-1
  - 3d9eafc4bd Lint: Remove extra empty lines at end of files
  - 239f3511bf Merge branch '2016.11' into '2017.7'
    - \* 97e0cf569c Merge pull request #44699 from jfindlay/attr\_file
      - 9e5a40ea7c Merge branch '2016.11' into attr\_file
      - 5c34607f6c utils/files remove temp file upon move failure
    - \* 7434e0afdf Merge pull request #44714 from rallytime/fix-44556
      - 1bbe1abeb2 Allow --static option to display state runs with highstate output
    - \* 998d714ee7 Merge pull request #44517 from whytewolf/publish\_port\_doc\_missing
      - 4b5855283a missed one place where i didn't chanbge master\_port from my copy to publish\_port
      - e4610baea5 update doc to have publish port
    - \* 6169b52749 Merge pull request #41279 from Ch3LL/add\_grain\_tests
      - 1b64f15692 Merge branch '2016.11' into add\_grain\_tests

- \* dc6de050a9 Merge pull request #44563 from creideiki/pgjsonb-timestamps-44544
  - 231e412ca4 Merge branch '2016.11' into pgjsonb-timestamps-44544
- \* 4369df020b Merge pull request #44602 from rallytime/fix-44601
  - ff303fd060 Handle timeout\_monitor/TimeoutError issues for new versions of CherryPy
- \* 4a4756fc37 Merge pull request #44604 from lorengordon/doc-exclude
  - c4a6c40eb3 Documents the exclude argument in state execution module
  - 15c445e6b9 Send Unix timestamps to database in pgjsonb
  - 095f1b7d7a Merge branch '2016.11' into add\_grain\_tests
- \* 91d46d4cfc Merge pull request #44434 from whytewolf/1837
  - d148e39dda change from md to rst for code reference
  - 955e305bda fix bad english, as requested by cachedout
  - 7256fcc1c9 update note to take into account grains\_cache
  - 7a2981585e Merge branch '2016.11' into 1837
  - aca0405b26 add a note that describes grain rebuilding on restart and refresh
  - 9ea4db4224 mock socket.getaddrinfo
  - 78a07e30f4 add more fqdn tests and remove some of the mocking
  - 5dbf4144ce add ipv6 in opts
  - eabc1b4f9c Add fqdn and dns core grain tests
- \* a3bd99317f Merge pull request #44321 from gvengel/fix-file-line-diff-output
  - 69a50204a6 Add newline for lint.
  - ef7b6bbb81 Fixed issue with file.line on Windows running Python 2.
  - 8f89c99fa5 Fix FileModuleTest setUp and tearDown to work on Windows.
  - 3ac5391f5f Namespace missing functions for file.line on Windows.
  - b2b8f075b9 Fixed test to work on Windows.
  - 5a5a2dd026 Added integration test for issue #41474
  - 24d7315f1a Fix file.line diff formatting.
- \* 9ca563718d Merge pull request #43708 from damon-atkins/2016.11\_43417\_Backport\_and\_Fixes
  - 04d03ea6b8 Updated comment
  - 1dd565e585 Merge remote branch 'upstream/2016.11' into 2016.11\_43417\_Backport\_and\_Fixes
  - dd48ba2616 Merge remote branch 'upstream/2016.11' into 2016.11\_43417\_Backport\_and\_Fixes
  - a0d08598bf dco fix
  - 9467899fc6 Merge remote branch 'upstream/2016.11' into 2016.11\_43417\_Backport\_and\_Fixes
  - 6dc180fd0e doco fixes
  - 2496a42ea4 lint fix

- 2c937fbe19 Merge remote branch 'upstream/2016.11' into 2016.11\_43417\_Backport\_and\_Fixes
- c9c8c48a4d all remove/install commands are passed to cmd.exe /s /c and commands are passed as strings to cmdmod
- 350244bd93 typo in comments and doc strings.
- ec31f5a9bd 2017.11/develop version() was ignoring saltenv setting.
- b314549a32 Backport of develop to 2016.11 with additional bug fixes
- \* 68ea22188e Merge pull request #44477 from rallytime/bp-44424
  - 4a9f8dcc96 Fix #44423: Handle index=None and index=0 distinctly
- \* 2c89050a24 Merge pull request #44483 from terminalmage/issue44034
  - a9db8becea salt-call: account for instances where \_\_pillar\_\_ is empty
- \* b5c2028680 Merge pull request #44489 from whyte wolf/1956\_log-granular-levels
  - 9cdeb4e903 update log-granular-levels to describe what they are filtering on
- \* ea07f9c54c Merge pull request #44193 from twangboy/win\_fix\_reg
  - 44d6d9f46d Remove unused import (lint)
  - f7502436bd Fix various issues
  - 221e6e3b91 make salt.utils.to\_unicode return none when passed none
  - ce41acc788 Fix many issues with reg.py
  - 4a19df1f7f Use six.text\_type instead of str
  - 1b12acd303 Check type before casting
  - 03fa37b445 Cast vdata to its proper type
- \* ed8da2450b Merge pull request #43863 from nicholasmhughes/fix-atomicfile-permission-copy
  - ea852ec5d3 remove index use with stat module attributes
  - dbeeb0e917 fixes #38452 atomicfile only copies mode and not user/group perms
- **PR #44788:** (kris-anderson) Example yaml of influxdb\_user state @ 2017-12-04 14:28:45 UTC
  - 4643a112e7 Merge pull request #44788 from kris-anderson/example-yaml-of-influxdb-user-state
  - afd23d058c converted yaml example to use 2 spaces
  - 29e410c1ea added a code-block example of how the yaml should be formatted
- **ISSUE #42713:** (boltronics) 2017.7.0 master upgrade breaks mine data on non-glob matching on minions (refs: #44735)
- **PR #44735:** (gracinet) Backported issue #42713 to 2017.7 @ 2017-12-04 01:43:23 UTC
  - 4ebac09f60 Merge pull request #44735 from gracinet/42713\_backport\_2017.7
  - 6806d83314 Merge branch '2017.7' into 42713\_backport\_2017.7
  - fb586c6dce Backported issue #42713 to 2017.7
- **PR #44766:** (twangboy) Fix unit.utils.test\_process for Windows @ 2017-12-02 13:15:53 UTC
  - 06ce7b7328 Merge pull request #44766 from twangboy/win\_fix\_test\_process
  - a5737e8fc3 Fix lint errors

- be96de09cc Fix pickling error by decorating
- ISSUE #44083: (ari) `timezone.system` fails when `/etc/localtime` is missing on FreeBSD (refs: #44605)
- PR #44716: (rallytime) Back-port #44605 to 2017.7 @ 2017-12-01 23:12:24 UTC
  - PR #44605: (campbellmc) Add handling for FreeBSD in `timezone.zone_compare` (refs: #44716)
  - f8b8a8966d Merge pull request #44716 from rallytime/bp-44605
  - 9d43221422 Correct indentation
  - d6e28ebd1 Add handling for FreeBSD in method `zone_compare` to avoid exception when `/etc/localtime` file does is absent. This is valid configuration on FreeBSD and represents UTC.
- ISSUE #41869: (mirceaulinic) Thorium: unable to execute runners (refs: #44781)
- PR #44781: (mirceaulinic) Correct the thorium runner @ 2017-12-01 22:55:52 UTC
  - 8ed6287762 Merge pull request #44781 from cloudflare/thorium-fix-41869
  - 83c73a69cb Instance the Runner class instead of the RunnerClient as we're running on the Master
  - b72b7c5402 Correct the thorium runner
- PR #44466: (twangboy) Fix `unit.modules.test_disk` for Windows @ 2017-12-01 22:31:42 UTC
  - 52596be102 Merge pull request #44466 from twangboy/win\_fix\_test\_disk
  - 5615862f23 Fix some lint
  - 627d5ab0c9 Mock `salt.utils.which`
  - e5a96fe00f Skip test `fstype` on Windows
- ISSUE #42763: (xuhcc) `acme.cert` state falsely reports about renewed certificate (refs: #44667)
- PR #44719: (rallytime) Back-port #44667 to 2017.7 @ 2017-12-01 15:20:49 UTC
  - PR #44667: (oarmstrong) Fix `acme.cert` to run certbot non-interactively (refs: #44719)
  - b9ad4bba2d Merge pull request #44719 from rallytime/bp-44667
  - 3d85a260c4 Fix `acme.cert` to run certbot non-interactively
- ISSUE #44744: (brmzkw) `roster_defaults` breaks salt-ssh globbing (refs: #44747)
- PR #44747: (gtmanfred) use a copy so `roster_defaults` doesn't mangle @ 2017-12-01 15:13:48 UTC
  - d23192c492 Merge pull request #44747 from gtmanfred/roster\_defaults
  - 911411ed8f add unit test
  - eefcfc719c use a copy so `roster_defaults` doesn't mangle
- ISSUE #44694: (thuhak) state module `at.absent` doesn't work (refs: #44717)
- PR #44717: (garethgreenaway) [2017.7] Fixes to `at` module @ 2017-12-01 14:37:05 UTC
  - 20f20ad9e1 Merge pull request #44717 from garethgreenaway/44694\_at\_absent\_failing\_to\_find\_jobs
  - 1f2b3c5f46 Merge branch '2017.7' into 44694\_at\_absent\_failing\_to\_find\_jobs
  - 3bb385b44e removing debugging logging
  - 7f0ff5a8b0 When passing IDs on the command line convert them all the strings for later comparison.
  - 99e436add4 When looking for job ids to remove based on the `tag_name` the comparison was comparing an INT to a STR, so the correct job id was not being returned.
- ISSUE #44136: (dupsatou) `KeyError: 'runas'` after updating to latest salt in yum repo. (refs: #44695)

- **PR #44695:** (gtmanfred) pop None for runas and runas\_password @ 2017-12-01 14:35:01 UTC
  - 6e61aa787f Merge pull request #44695 from gtmanfred/pop
  - 0efb90b6f7 Merge branch '2017.7' into pop
- **PR #44725:** (whytewolf) document note suggesting systemd-run --scope with cmd.run\_bg @ 2017-11-30 19:18:06 UTC
  - 20391c54c0 Merge pull request #44725 from whytewolf/1919\_cmd.run\_no\_daemons
  - 4b11f8d66d add quick documentation suggesting systemd-run --scope if using cmd.run\_bg with systemd
- **ISSUE #42300:** (mirceaulinic) Grains state doesn't work (fine) with proxy minions (refs: #44760)
- **ISSUE #42074:** (mirceaulinic) How to configure static grains for proxy minions (refs: #44549)
- **PR #44760:** (mirceaulinic) Fix the grains.setvals execution function when working with proxy minions @ 2017-11-30 18:27:02 UTC
  - **PR #44549:** (mirceaulinic) Allow proxy minions to load static grains (refs: #44760)
  - 85451ae977 Merge pull request #44760 from cloudflare/px-grains-set-42300
  - 655139d01c Different path to the static grains file when running under a proxy minion
  - 3eec8dbc63 Dummy proxy: catch EOFError instead of IOError
- **ISSUE #44583:** (creideiki) Using splay in cron schedule throws exception "unsupported operand type(s) for +: 'NoneType' and 'int'" (refs: #44640)
- **PR #44640:** (vutny) Fix #44583: splay with cron-like scheduled jobs @ 2017-11-30 15:30:41 UTC
  - 06fb80b69c Merge pull request #44640 from vutny/fix-cron-schedule-splay
  - d1f247e49e Add basic unit tests for schedule util eval func
  - 6ff8e75ac6 Fix #44583: splay with cron-like scheduled jobs
- **PR #44712:** (Ch3LL) Add pillar ssh integration tests @ 2017-11-30 15:29:33 UTC
  - e5a1401b82 Merge pull request #44712 from Ch3LL/ssh\_pillar\_items
  - 97ec0e6ea0 Merge branch '2017.7' into ssh\_pillar\_items
  - c7f5af1274 Add pillar ssh integration tests
- **PR #44763:** (mirceaulinic) Just a small improvement to the Thorium documentation @ 2017-11-30 14:38:03 UTC
  - 2e1c946990 Merge pull request #44763 from cloudflare/thorium-doc
  - f8d69dd0ba Add thorium\_roots configuration example
  - 4610fb4e62 thorium\_roots not thorium\_roots\_dir
- **PR #44531:** (mirceaulinic) Add deprecation notes for the NAPALM native templates @ 2017-11-30 14:18:56 UTC
  - 8ba2df1ea0 Merge pull request #44531 from cloudflare/deprecate-napalm-tpl
  - b462776d8b Add deprecation notes for the NAPALM native templates
- **PR #44737:** (twangboy) Skip unit.transport.test\_ipc for Windows @ 2017-11-29 19:18:21 UTC
  - 7bde48282e Merge pull request #44737 from twangboy/win\_skip\_test\_ipc
  - 4e0359b603 Skip IPC transport tests in Windows, not supported
- **PR #44629:** (Ch3LL) Add masterless state.highstate integration test @ 2017-11-29 19:05:23 UTC
  - c5206113ce Merge pull request #44629 from Ch3LL/high\_masterless

- 9b7421b261 Change check to the state id
- 9cc853e3d5 Add masterless state.highstate integration test
- **PR #44613:** (Ch3LL) Add pillar.items test for masterless @ 2017-11-29 14:43:11 UTC
  - 2dc3e5c42a Merge pull request #44613 from Ch3LL/pillar\_masterless
  - 2c2e1e2332 Merge branch '2017.7' into pillar\_masterless
  - 69134e83ca Change order of local kwarg in run\_call method
  - b3b5ecc6ff Add pillar.items test for masterless
- **PR #44659:** (Ch3LL) Add state.sls\_id to ssh wrapper and tests @ 2017-11-29 14:41:47 UTC
  - cc05481026 Merge pull request #44659 from Ch3LL/ssh\_sls\_id
  - 04b5a3dd4e Add state.sls\_id to ssh wrapper and tests
- **PR #44698:** (Ch3LL) Add salt-ssh mine.get integration test @ 2017-11-28 22:15:29 UTC
  - 642eed11e1 Merge pull request #44698 from Ch3LL/mine\_ssh
  - f6a72acfe3 Merge branch '2017.7' into mine\_ssh
  - 9e67babf85 Add teardown to remove ssh dir
  - f90b4f7653 Add salt-ssh mine.get integration test
- **PR #44697:** (Ch3LL) Sort the show\_top results for test\_state\_show\_top test @ 2017-11-28 20:35:41 UTC
  - 5d82df5667 Merge pull request #44697 from Ch3LL/show\_top\_test
  - 974db59dc1 convert the assert to a union set instead
  - add43c4cfe Sort the show\_top results for test\_state\_show\_top test
- **PR #44608:** (Ch3LL) Add jinja to ssh sls test file @ 2017-11-27 22:00:28 UTC
  - f2f6817e86 Merge pull request #44608 from Ch3LL/ssh\_jinja
  - df669b551d Merge branch '2017.7' into ssh\_jinja
  - ca97517795 Add jinja to ssh sls test file
- **ISSUE #33957:** (ghost) grains.setval doesn't setval if set in /etc/salt/minion (refs: #44663)
- **PR #44663:** (whyte wolf) Update notes around grains topic, and salt.modules.grains and salt.state.grains @ 2017-11-27 21:33:38 UTC
  - 04b97bcfad Merge pull request #44663 from whyte wolf/ZD1777\_ensure\_understanding\_of\_minion\_config\_over\_grains\_file
  - c9122e4b85 fixed pylint error, and updated description on at the top the the module and state.
  - 7fb208b5ad Update note in topics/grains to reflect that not all grains are ignored. only those set in the minion config
- **PR #44332:** (mirceaulinic) Improve the net.load\_config execution function @ 2017-11-27 21:22:18 UTC
  - 364deee6ac Merge pull request #44332 from cloudflare/improve-net-load
  - cd0bac87e6 Merge branch '2017.7' into improve-net-load
  - 6d861f9a74 Disable pylint warning
  - 3a0945ce3d Merge pull request #11 from tonybaloney/gh\_44332\_clone
    - \* 88ef9f18fc ignore lint error on import
    - \* 25427d845e convert key iterator to list as python 3 won't index an iterator

- bce50154e5 Merge branch '2017.7' into improve-net-load
- ba4a62769c Fix trailing spaces
- 0a47a7acbf Merge pull request #10 from tonybaloney/gh\_44332\_clone
  - \* ba0280e727 linting updates
  - \* 78b90f3d0c add remaining tests
  - \* 386c4e5791 add tests for all the getters
- f3d2d1aaaa Merge pull request #9 from tonybaloney/gh\_44332\_clone
  - \* c63222358b update tests with correct assertions and mock methods on device instance
  - \* b69c559c52 fix kwargs typo
- edea76d3f3 Improve the net.load\_config function
- **PR #44664:** (mvivaldi) Patch 1 @ 2017-11-27 21:17:20 UTC
  - b6a1ed06b8 Merge pull request #44664 from mvivaldi/patch-1
  - 4551999ec7 Update jinja.py
  - ae13d57307 Update file.py
